
**What is the best measure to decrease climate change?**

2mo ago
**theBeuselaer (37)**

We can plant much more trees.

SUGGESTED CON ··· 1

Without a proper understanding, planting trees, or carbon offsetting as it is conveniently commoditised nowadays, is a dangerous development. It gives people and organisations the opportunity to appear to be no longer a part of the problem. It can prolong the status quo and hinder the move towards real change.

---

4mo ago
**Hintzen (1)**

What is the best measure to decrease climate change?

SUGGESTED THESIS ··· 1

Just tell the earth to stop being mean

---

4mo ago
**Peroxis (1)**

Politicians aren't taking the problem seriously. People have to pressure them by vowing the vote for the parties that make it their highest priorities.

SUGGESTED CON ··· 3

Large political change can take a long time

---

4mo ago
**PotatoMan (11)**

More research and development (R&D).

SUGGESTED PRO ··· 1

Find a way to recycle everything. If we don't need to produce new material, we won't have to produce more materials in polluting factories.

---

4mo ago
**PotatoMan (11)**

Catch planetary heat and shoot it into space (like a worldwide AC, putting it into containers that go into space, etc.).

SUGGESTED PRO ···

If it works in a room, it works on a planet.

---

4mo ago
**SuperGirl (247)**

Rethink and redesign infrastructure

SUGGESTED PRO ··· 12

Create giant flood barriers.

---

4mo ago
**SuperGirl (247)**

More research and development (R&D).

SUGGESTED PRO ··· 7

We find a more commercialy viable solution to climate change.

---

4mo ago
**Ranga (1)**

What is the best measure to decrease climate change?

SUGGESTED THESIS ···

stinky peepee poopoo

---

4mo ago
**DrFluffy (21)**

What is the best measure to decrease climate change?

SUGGESTED THESIS ··· 3

Veganism by decreasing the population of animals we eat we can reduce the total methane in the air.

---

5mo ago
**Sur (4)**

What is the best measure to decrease climate change?

SUGGESTED THESIS ··· 2

Using renewable energy is a very good measure since it can play a huge role in fighting against climate change. Reduce, reuse, recycle should be followed. Every country should plant about a million trees or more than a million every year. Beach cleaning machines should be used in every countries beach and the plastic that is collected should be recycled. This is kollavenkatasivasurya@gmail.com

---

7mo ago
**helenaitco (94)**

Change our behaviors.

SUGGESTED PRO ··· 1

Less consumption

---

7mo ago
**MaxPower4 (1)**

Capitalism is based on exploitation* for profit. A transformation into another system may provide a chance towards finding the best measure to prevent it.

SUGGESTED CON ··· 1

Enable innovation by removing barriers to markets dominated by monopolies.

8mo ago
**greeno1 (1)**

More research and development (R&D).

SUGGESTED PRO ··· 1

Nuclear energy is the best solution for replacing non-renewable energy sources: greater research and development into nuclear energy is vital.

---

9mo ago
**deactivated-akxoqm0v (2)**

Do nothing (politically, behaviorally, etc.).

SUGGESTED PRO ··· 8

Humans are a virus - all we do is consume and destroy. The world is trying to save itself by creating an environment in which we can no longer exist. Climate change is a defense mechanism of the earth provided as evidence in the increase in natural disasters. Earth wants to correct it's mistake of creating humans. At this point there is no way to stop it.

---

9mo ago
**pragmat (72)**

People who are wealthier tend to be more conscious and capable to help the planet. If we help people become more wealthy, there's a great chance more people will team together to end the climate change issue.

SUGGESTED CON ··· 1

Consciousness does not have an effect on the issue. Wealthier people tend to pollute the most as they use airplanes and other highly-polluting forms of transportation

---

9mo ago
**c_m (1)**

Do nothing (politically, behaviorally, etc.).

SUGGESTED CON ··· 6

This is not a viable suggestion. The original poster wanted something that will FIGHT climate change. This is not helping. We need to fight climate change and if idiots like you who don't believe in it actually lift the rock off your head you will see we are already getting the consequences of climate change. The Amazon Fires, the Australian Fires rising sea levels etc. The science is there. Wake up, boomer.

---

10mo ago
**Hubertus (129)**

If people don't live on Earth, then the climate won't get worse from human activity.

---

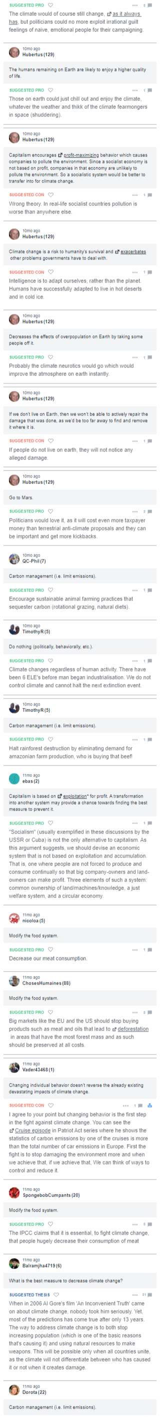
2

What is the best measure to decrease climate change?

4mo ago
**Hintzen (1)**

SUGGESTED THESIS ··· 1

Just tell the earth to stop being mean



SUGGESTED PRO ••• 3

The climate would of course still change, as it always has, but politicians could no more exploit irrational guilt feelings of naive, emotional people for their campaigning.

10mo ago
**Hubertus (129)**

The humans remaining on Earth are likely to enjoy a higher quality of life.

SUGGESTED PRO ••• 1

Those on earth could just chill out and enjoy the climate, whatever the weather and thikk of the climate fearmongers in space (shuddering).

10mo ago
**Hubertus (129)**

Capitalism encourages profit-maximizing behavior which causes companies to pollute the environment. Since a socialist economy is not based on profit, companies in that economy are unlikely to pollute the environment. So a socialistic system would be better to transfer into for climate change.

SUGGESTED CON ••• 1

Wrong theory. In real-life socialist countries pollution is worse than anywhere else.

10mo ago
**Hubertus (129)**

Climate change is a risk to humanity's survival and exacerbates other problems governments have to deal with.

SUGGESTED CON ••• 1

Intelligence is to adapt ourselves, rather than the planet. Humans have successfully adapted to live in hot deserts and in cold ice.

10mo ago
**Hubertus (129)**

Decreases the effects of overpopulation on Earth by taking some people off it.

SUGGESTED PRO ••• 1

Probably the climate neurotics would go which would improve the atmosphere on earth instantly.

10mo ago
**Hubertus (129)**

If we don't live on Earth, then we won't be able to actively repair the damage that was done, as we'd be too far away to find and remove it where it is.

SUGGESTED CON ••• 1

If people do not live on earth, they will not notice any alleged damage.

10mo ago
**Hubertus (129)**

Go to Mars.

SUGGESTED PRO ••• 2

Politicians would love it, as it will cost even more taxpayer money than terrestrial anti-climate proposals and they can be important and get more kickbacks.

10mo ago
**QC-Phil (7)**

Carbon management (i.e. limit emissions).

SUGGESTED PRO ••• 1

Encourage sustainable animal farming practices that sequester carbon (rotational grazing, natural diets).

10mo ago
**TimothyR (5)**

Do nothing (politically, behaviorally, etc.).

SUGGESTED PRO ••• 1

Climate changes regardless of human activity. There have been 6 ELE's before man began industrialisation. We do not control climate and cannot halt the next extinction event.

10mo ago
**TimothyR (5)**

Carbon management (i.e. limit emissions).

SUGGESTED PRO ••• 1

Halt rainforest destruction by eliminating demand for amazonian farm production, who is buying that beef!

11mo ago
**ebas (2)**

Capitalism is based on exploitation* for profit. A transformation into another system may provide a chance towards finding the best measure to prevent it.

SUGGESTED PRO ••• 1

"Socialism" (usually exemplified in these discussions by the USSR or Cuba) is not the only alternative to capitalism. As this argument suggests, we should devise an economic system that is not based on exploitation and accumulation. That is, one where people are not forced to produce and consume continually so that big company-owners and land-owners can make profit. Three elements of such a system: common ownership of land/machines/knowledge, a just welfare system, and a circular economy.

11mo ago
**nicoloa (5)**

Modify the food system.

SUGGESTED PRO ••• 1

Decrease our meat consumption.

11mo ago
**ChosesHumaines (88)**

Modify the food system.

SUGGESTED PRO ••• 3

Big markets like the EU and the US should stop buying products such as meat and oils that lead to deforestation in areas that have the most forest mass and as such should be preserved at all costs.

11mo ago
**Vader43468 (1)**

Changing individual behavior doesn't reverse the already existing devastating impacts of climate change.

SUGGESTED CON ••• 1

I agree to your point but changing behavior is the first step in the fight against climate change. You can see the Cruise episode in Patriot Act series where he shows the statistics of carbon emissions by one of the cruises is more than the total number of car emissions in Europe. First the fight is to stop damaging the environment more and when we achieve that, if we achieve that, We can think of ways to control and reduce it.

11mo ago
**SpongebobCumpants (20)**

Modify the food system.

SUGGESTED PRO ••• 3

The IPCC claims that it is essential, to fight climate change, that people hugely decrease their consumption of meat

11mo ago
**Balramjha4719 (6)**

What is the best measure to decrease climate change?

SUGGESTED THESIS ••• 31

When in 2006 Al Gore's film 'An Inconvenient Truth' came on about climate change, nobody took him seriously. Yet, most of the predictions has come true after only 13 years. The way to address climate change is to both stop increasing population (which is one of the basic reasons that's causing it) and using natural resources to make weapons. This will be possible only when all countries unite, as the climate will not differentiate between who has caused it or not when it creates damage.

11mo ago
**Dorota (22)**

Carbon management (i.e. limit emissions).

SUGGESTED PRO ♡ ••• 1

Demand stringent measures for good production, so that only CO2-neutral goods could be produced in the Future.

---

11mo ago
**Dorota (22)**

What is the best measure to decrease climate change?

SUGGESTED THESIS ♡ ••• 1

Cool the Earth by geoengeneering, thickening the ice on Arctic sea. Ice reflects sunlight and thus cools the Earth.

---

11mo ago
**Dorota (22)**

Carbon management (i.e. limit emissions).

SUGGESTED PRO ♡ ••• 1

Restore soils and capture carbon in that soil. Soil can store a large amount of carbon.

---

11mo ago
**Dorota (22)**

Carbon management (i.e. limit emissions).

SUGGESTED PRO ♡ ••• 1

Plant huge forests and capture carbon in forest trees

---

11mo ago
**sanssensei (5)**

Corporations should be fined for excessive carbon emissions.

SUGGESTED CON ♡ ••• 1

Raising costs by taxes or other means creates hardship for the poor. It also causes people to have to work harder to pay the taxes /costs, and this in turn contributes to carbon emissions

---

11mo ago
**sanssensei (5)**

All world citizens should get and have a vested interest in global survival and need personal investment and action in solving imminent threats to existence like human propagated climate change.

SUGGESTED PRO ♡ ••• 3

Reduce the earths population to less than 1 billion, using methods which are already dramatically reducing the fertility rate

---

11mo ago
**Hubertus (129)**

Capitalism encourages profit-maximizing behavior which causes companies to pollute the environment. Since a socialist economy is not based on profit, companies in that economy are unlikely to pollute the environment. So a socialistic system would be better to transfer into for climate change.

SUGGESTED CON ♡ ••• 1

Companies will comply with legal regulations. Environmental laws, limiting what companies (and individuals) can do, are the responsibility of politics, i.e. parliament. Therefore, the real problem is with law making not with the companies, so it does not help to blame the latter if the former are at fault.

---

11mo ago
**Hubertus (129)**

Capitalism is based on exploitation* for profit. A transformation into another system may provide a chance towards finding the best measure to prevent it.

SUGGESTED CON ♡ ••• 8

The bad situation in long-time socialist economies demonstrates that nature is exploited much more in socialism. For example, North Korea has a "a barren landscape that is teetering on collapse, ravaged by decades of environmental degradation."

---

11mo ago
**stuartreynolds (9)**

Tackle energy.

SUGGESTED CON ♡ ••• 2

There is little incentive for energy suppliers to consider supplying low/non-carbon emitting alternatives to current high-carbon emitting methods.

---

11mo ago
**stuartreynolds (9)**

Capitalism is based on exploitation* for profit. A transformation into another system may provide a chance towards finding the best measure to prevent it.

SUGGESTED CON ♡ ••• 1

No evidence has been presented that capitalism is better or worse than competing economic system at alternating activities that are harmful to the environment.

---

11mo ago
**stuartreynolds (9)**

Changing individual behavior doesn't reverse the already existing devastating impacts of climate change.

SUGGESTED CON ♡ ••• 1

There is no evidence that this is true. In contrast, its clear that is everyone stopped behaviors emitting carbon and methane, then carbon and methane levels will fall over time as they are captured by natural process.

---

12mo ago
**Hubertus (129)**

Have a new economics system (or mode).

SUGGESTED CON ♡ ••• 7

The root cause for the problems lies not in the economic system but in the "flawed democracy" political system.

---

12mo ago
**Hubertus (129)**

Capitalism is based on exploitation* for profit. A transformation into another system may provide a chance towards finding the best measure to prevent it.

SUGGESTED CON ♡ ••• 8

Capitalist democracies have a much cleaner environment than countries ruled by the implied alternative, i.e. communist party ruled countries. There's nothing green about socialism.

---

12mo ago
**LJR20 (3)**

Do nothing (politically, behaviorally, etc.).

SUGGESTED CON ♡ ••• 1

I'm no expert, but that's an incredibly bad idea. If too much CO2 gets into the atmosphere, it will cause a runaway greenhouse effect that will melt ice in the north and south releasing methane gas trapped under the ice. Methane from the worst mass extinction of all time, the Permian extinction in which almost 90% of all life on earth was killed. That's not good.

---

12mo ago
**rakvat (74)**

Modify the food system.

SUGGESTED PRO ♡ ••• 6

The reduction of meat production will reduce methane emissions and provide free space for forests.
