"Tevel's flying robot drones use artificial intelligence to help farmers pick billions of dollars' worth of fruit currently going to waste. Now, accredited investors can invest early alongside trusted venture capitalists. "

Warning: must be an accredited investor to invest

Article about fundraising progress:

Tevel raises \$20M for its flying fruit-picking robots

posted: FEB 1, 2021

"“Farmers are struggling today with recruiting fruit pickers, a situation that puts the whole industry at risk,” said Tevel founder and CEO Yaniv Maor.

“The situation in orchards is worse than in greenhouses, for a few reasons. Fruit season in the orchard is shorter than for greenhouses and orchards are mostly located in remote villages [where] the local labor is not available, and the imported labor is not sufficient,” he told *AFN*.

“Tevel supplies autonomous harvesting on demand – anytime, anywhere, any capacity. Our flying robots gently pick the fruit without bruising it [and] they almost don’t leave any fruit on the trees.””
