Because everything's vegetarian, it's easy to customize it to serve vegan foods.

"Cala's robot is essentially a fully operational restaurant in a box. It preps and cooks pasta, plates it, and cleans up afterward using a cartesian coordinate system robot. While the company is on its gen-2 robot, you can get an idea of how the Cala bot works by watching the video of the gen one below. The current generation machine can prepare up to 400 pasta dishes in one hour."
