

Does A College Degree Guarantee A Job?

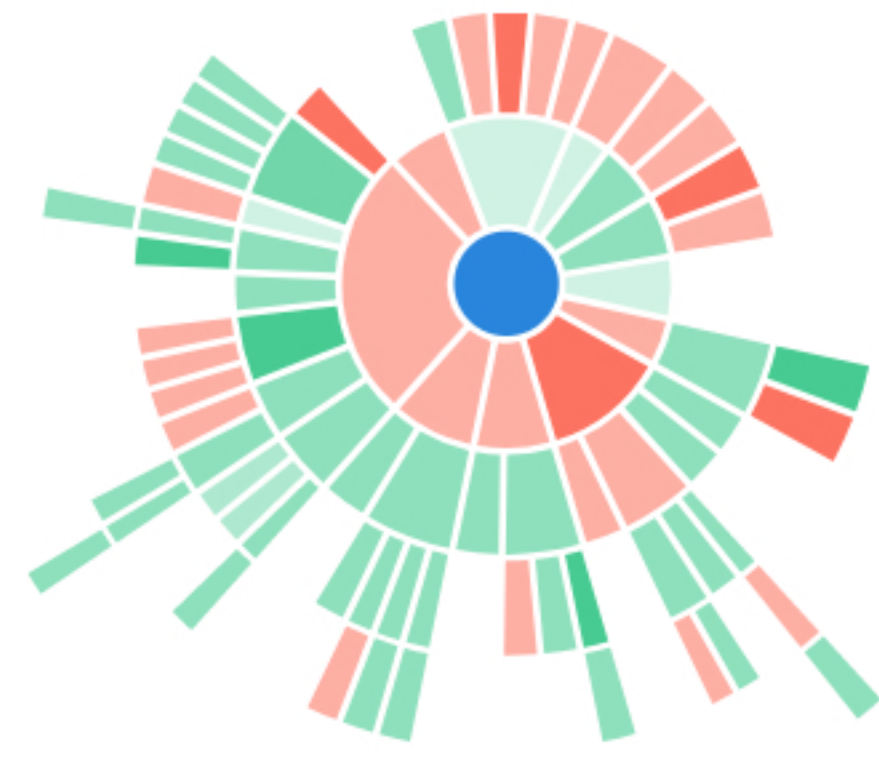

79 484 22 31 1.7k

Background

Many entities (schools, experts...) advocate for going to college, as it will be fun and lead to a well-paying job at the end. Is that true though? Factors and events like the student debt at over \$1 trillion, tuition rates going up, higher admission standards, and the Great Recession causing many people to lose their jobs tell a different story. Maybe college is just hype instead of producing results.

This discussion sorts out the issues to see if college really is valuable towards getting a job in this day and age.
