

# What features comprise a post-scarcity civilization?

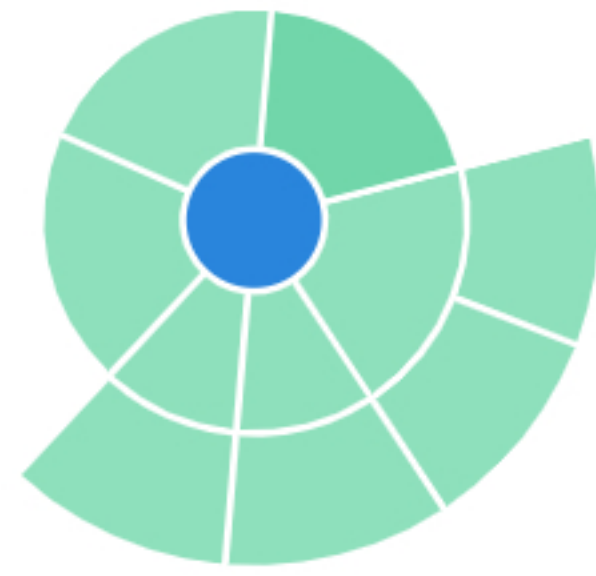

11 18 1 2 65

## Background

I.e. what are some elements that are part of a [post-scarcity society](#) that would not be seen, say, today that much, because they are unique to post-scarcity. Or, they are seen in today's world, because they share common elements.

Either way here's the layout of the discussion: list them all and then discuss the pros/cons of having them in post-scarcity underneath. For the top-level only, the pros side would be what is part of a post-scarcity world and the cons side is what is not part of it. Topics could be anything: economic, governmental, social, environmental, etc.
