

What does an ideal utopian city look like?

24 31 0 2 83

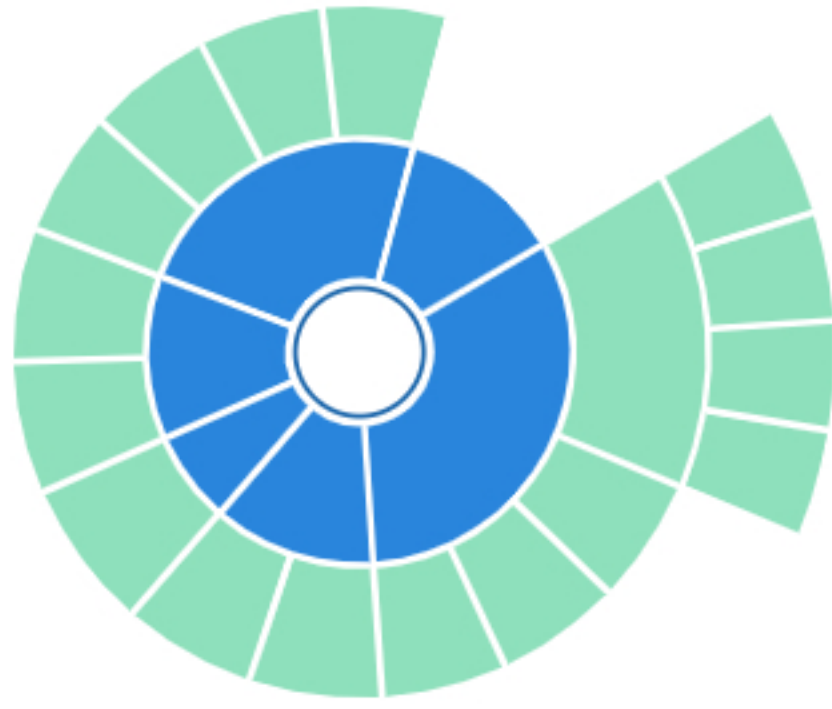

Background
Ideal involves being livable, self-sustainable, and least damaging to its environment.

This discussion will be separated by category (as there are [different types](#)). Examples of utopias are technological [EPCOT](#), religious [Auroville, India](#), and eco [Masdar City](#), Abu Dhabi. [Retrofuturism](#) and the [Reform movement](#) provide even more ideas.

How would you design a utopian city to be great and self-sustaining, especially one that you would like to live in? Since most ideas of them do not succeed, this discussion fosters more ideas to hopefully lead to one that does succeed. Even talking about how a utopia failed and how to resolve that issue to continue its run is a start.

Humanity is facing situations of expansion that requires innovators to help it succeed without creating much damage in the long-term. With climate change and the world population growing megacities, thinking about designing cities to house populations of unprecedented scale is important to do. Also, as humanity ventures into space, how we design our habitats in different extreme environments (that humans cannot normally live in) will also benefit from this discussion.
