#### UNIVERSITY OF CALIFORNIA, SANTA BARBARA MISSION STATEMENT

The University of California, Santa Barbara is a leading research institution that also provides a comprehensive liberal arts learning experience. Because teaching and research go hand in hand at UC Santa Barbara, our students are full participants in an educational journey of discovery that stimulates independent thought, critical reasoning, and creativity. Our academic community of faculty, students, and staff is characterized by a culture of interdisciplinary collaboration that is responsive to the needs of our multicultural and global society. Our commitment to public service is manifested through the creation and distribution of knowledge that advances the well-being of our state, nation, and world. All of this takes place within a living and learning environment like no other, as we draw inspiration, opportunity, and advantage from the beauty and resources of UC Santa Barbara's extraordinary location at the edge of the Pacific Ocean.

#### ACCREDITATION

The University of California, Santa Barbara is fully accredited by the Accrediting Commission for Senior Colleges and Universities, Western Association of Schools and Colleges, 985 Atlantic Ave., Suite 100, Alameda, California 94501, (510) 748-9001. Accreditation documents are available for review in the Office of the Executive Vice Chancellor, Cheadle Hall 5105A.

#### EQUAL OPPORTUNITY AND NONDISCRIMINATION

The University of California, in accordance with applicable Federal and State law and University policy, does not discriminate on the basis of race, color, national origin, religion, sex, gender identity, pregnancy<sup>1</sup>, physical or mental disability, medical condition (cancer related or genetic characteristics), ancestry, marital status, age, sexual orientation, citizenship, or service in the uniformed service<sup>2</sup>. The University also prohibits sexual harassment. This nondiscrimination policy covers admission, access, and treatment in University programs and activities.

Inquiries regarding the University's student-related nondiscrimination policies may be directed to the Office of Equal Opportunity, Telephone: (805) 893-2701.

---

<sup>1</sup> *Pregnancy* includes pregnancy, childbirth, and medical conditions related to pregnancy or childbirth.

<sup>2</sup> Service in the uniformed services includes membership, application for membership, performance of service, application for service, or obligation for service in the uniformed services.

## *A Word from the Chancellor*

**W**elcome to the 2009-10 academic year at UC Santa Barbara! This catalog is a valuable guidebook for the year ahead. I refer to it often, and I hope you will too. I encourage you to take time to familiarize yourself with the exciting and diverse courses, programs, and extracurricular activities available to all of us on this campus.

We have a tradition here at UC Santa Barbara of emphasizing both our undergraduate and graduate programs, and a balance of academic and extracurricular campus life. We work collaboratively to foster a friendly and supportive environment in which students, staff, and faculty from richly diverse backgrounds and perspectives can explore and learn together.

This is an extraordinary place. We are one of only 62 institutions elected to membership in the prestigious Association of American Universities. Our distinguished professors are leaders in their fields and are recognized nationally and internationally with numerous accolades, including five Nobel Prizes since 1998.

Thank you for your partnership in advancing UC Santa Barbara's quality and stature as one of the top research universities in the world. We are so glad to have you as part of our community of scholars, and of our UCSB family.

Sincerely,

HENRY T. YANG

*"If there's a  
more beautiful  
campus than this  
one at the edge  
of the Pacific, we  
haven't seen it."  
—Newsweek*

*Studying outside  
Davidson Library.*

# A Campus Like No Other

**P**alm-framed vistas of the blue Pacific and the golden Santa Ynez Mountains. The scent of eucalyptus mixed with the saltwater breeze. Breathtaking natural beauty combined with enormous intellectual vitality. This is the University of California, Santa Barbara, and there is no other campus quite like it.

*The UCSB campus occupies a 1,055-acre site at the edge of the Pacific Ocean.*

Here on the edge of the Pacific, in a setting removed from urban pressures and distractions but vibrant with cultural and academic activity, many of the country's most promising students join a community of scholars whose accomplishments are internationally recognized and whose skills as teachers are evident each day in classrooms and laboratories.

In the humanities and the arts as well as in engineering and the sciences, UC Santa Barbara introduces students to novel ways of thinking, learning, and conducting research.

## The Highest Quality

Pioneering research is a critical component of the highest quality education.

*Storke Tower:  
a campus landmark.*

***The renowned faculty includes five winners of Nobel Prizes and scores of elected members of national and international academies and societies.***

UCSB's 1,086-member faculty includes five Nobel Prize winners and scores of elected members of national and international academies and societies as well as dozens of winners of Guggenheim and Fulbright Fellowships. The campus is one of only 62 research-intensive institutions elected to membership in the prestigious Association of American Universities.

Within this community of scholars, the life of the mind, the pursuit of knowledge, and the experience of growth, both personal and intellectual, are the hallmarks of daily life.

### Colleges and Schools

UCSB enrolls 20,700 students, about 2,900 of them at the graduate level. Competition for admission is keen. In recent years the campus has enrolled the most academically competitive and ethnically diverse classes in its history.

More than 200 majors, degrees, and credentials are offered through UCSB's five schools and the Graduate Division. The College of Letters and Science alone offers 80 majors. The College of Creative Studies offers talented students an alternative approach for pursuing advanced, independent work in the arts, mathematics, or the sciences. The College of Engineering offers degree programs in five disciplines.

*UCSB philosopher Aaron Zimmerman teaches an introductory ethics course in Embarcadero Hall in Isla Vista, the adjacent community that is home to a majority of UCSB's students.*

The university also has two professional schools: the Donald Bren School of Environmental Science and Management, and the Gevirtz Graduate School of Education.

### About UC Santa Barbara

The preeminent scholarship, instruction, and public service that define UCSB have helped shape its identity as a place of enormous and exceptional possibility — a magnet for innovation.

Originally a small, independent teachers' college, Santa Barbara joined the renowned University of California system in 1944 and has since grown to be an integral and important part of public postsecondary education in the state.

Recognition of UCSB's academic quality takes many forms. One of the most prestigious is support from the National Science Foundation. The campus is now home to 11 national centers and institutes, eight of which are sponsored by the NSF, including the Materials Research Laboratory, the National Center for Ecological Analysis and Synthesis, the Southern California Earthquake Center, and the renowned Kavli Institute for Theoretical Physics.

The California NanoSystems Institute—one of the California Institutes for Science and Innovation—focuses on dramatic breakthroughs in materials, devices, and resulting technologies, made possible by controlling form and function at the nanoscale. The institute is a research partnership with UCLA. New research buildings at both campuses house the institute.

At the interdisciplinary Carsey-Wolf Center for Film, Television, and New Media, scholars study everything from silent films to the latest in digital media and satellite communications in the context of a strong liberal arts and sciences curriculum. Construction of a privately funded state-of-the-art facility for the center is under way.

### The Community

The vast majority of students live within walking distance of their classes. Seven miles of bikeways link this close-knit academic community, giving

*Daily more than 15,000 cyclists traverse seven miles of campus bikeways to attend classes and campus events.*

*The new Marine Science Building.*

***More than  
a quarter of all  
undergraduates are  
involved in original  
research, working  
on teams with  
graduate students  
and professors.***

***Students at UCSB learn in a variety of settings, including traditional lecture halls, small seminar rooms, laboratories, and carefully selected locations in the field.***

students easy access to a rich array of social, cultural, academic, and athletic events.

Another distinguishing characteristic of the campus is its proximity to two very different communities. Isla Vista, the adjacent community that is home away from home to a majority of UCSB's students, is a place for social and civic growth, where students serve on local boards and county committees. Nearby Santa Barbara — an energetic, mid-sized city with a deep concern for history, the arts, and the environment — is highly regarded for its cultural and recreational resources.

### **The Campaign for UC Santa Barbara**

The Campaign for UC Santa Barbara thus far has raised more than \$530 million in philanthropic support from alumni and friends for programs, projects, and facilities to ensure UCSB's excellence for future generations. During the campaign, generous donors have established 55 new endowed chairs to help build and support the teaching and research of the university's distinguished faculty, and 136 new endowed fellowships to attract and support outstanding graduate students.

***Davidson Library is a center for  
research, with 2.9 million books and  
bound journals.***

## UCSB Libraries

The UCSB Libraries consist of the Donald C. Davidson Library and the Arts Library, which house approximately 2.9 million books and journals and an extensive collection of maps, technical reports, government documents, manuscripts, satellite imagery, and audio recordings.

As a member of the California Digital Library, the Association of Research Libraries, and the Center for Research Libraries, the UCSB Libraries participate in cooperative programs with other major national research libraries to provide collections and services for the UCSB community.

The general collection and several specialized units and services are located in Davidson Library. Examples include the Sciences and Engineering Library, the Map and Imagery Laboratory, the Curriculum Laboratory, the East Asian Library, and the Ethnic and Gender Studies Library.

Also located in Davidson Library is the Department of Special Collections, whose holdings include rare books, manuscripts, and several distinguished collections, including the Performing Arts Collection, the Wyles Collection on the American West, the Skofield Printers' Collection, and the California Ethnic and Multicultural Archives.

The Arts Library is a full-service branch library that supports academic programs in art and music. In addition to the substantial book and journal collections, the Arts Library collection includes auction and exhibition catalogs, more than 60,000 sound recordings, and music scores.

Contact the UCSB Libraries at (805) 893-2478, or visit [www.library.ucsb.edu](http://www.library.ucsb.edu)

## Computing Facilities

Computing facilities on campus are readily available to all registered UCSB students. Instructional Computing (IC) has an Open Access lab with both Macintosh and Windows computers for general student use. Access to instructional labs is designated by course requirements. Computing facilities set aside for use by classes are IC labs and include the Media Center and Language Lab, the Life Sciences Computing Facility, and the Phelps

***The campus is home to eleven national centers and institutes, including eight that are sponsored by the National Science Foundation.***

Hall Computer Laboratory. For more information please call (805) 893-5252, or visit [www.ic.ucsb.edu](http://www.ic.ucsb.edu)

### Instructional Development

Instructional Development enhances teaching and research at UCSB through media, educational consulting, production, and classroom support.

It offers expertise in various teaching methods, curriculum development, testing, and evaluation. The Instructional Improvement Program provides financial support for faculty involved in innovative instructional projects. This enables faculty to teach in the most effective manner.

Instructional Development also provides numerous technological aids to support the educational process, including student learning and language laboratories, comprehensive media production, and presentation support.

### University Art Museum

The University Art Museum (UAM) stimulates active learning about art and its role in society through a changing schedule of world-

class exhibitions and unique educational partnerships. Offering access to original works of art and working in partnership with other campus resources, the UAM contributes to the development of critical thinking and visual literacy, supporting the university's goals of education, research, and service.

In addition to its impressive roster of exhibitions, publications, and programs, the Museum houses a Fine Arts Collection of more than 8,500 works and has earned an international reputation for its Architecture and Design Collection (ADC) of historical materials documenting the built environment of California and the Southwest. Containing the archives of more than 90 designers, the ADC includes architectural drawings, photographs, manuscript material, and three-dimensional objects, models, and furniture by noted

architects R.M. Schindler and Irving Gill, among others.

Scholarly exhibitions, publications, lectures, symposia, and youth programs extend the Museum's reach to the campus and the community. UCSB students can engage with the Museum through its exhibitions and programs, as well as through primary research on its distinguished collections. Each year selected student interns earn course credits as they learn about Museum practices and serve as gallery guides for Museum visitors.

Open throughout the year, the Museum offers enjoyment and encourages inquiry. For more information, please call (805) 893-2951, or visit [www.uam.ucsb.edu](http://www.uam.ucsb.edu)

*UC Santa Barbara's Arts & Lectures program presents many world-renowned performance groups, such as the Alvin Ailey Dance Theatre, on campus as well as at downtown Santa Barbara venues.*

## Arts & Lectures

Arts & Lectures promotes the arts as an integral and necessary facet of education that elevates the human spirit and provokes the imagination, inspires personal discovery and intellectual inquiry, and sustains an inclusive and diverse community. It presents an innovative, unique, entertaining, and diverse program of exceptional performances, films, and lectures to enhance the educational experience at UCSB, foster artistic excellence and creativity, and connect the campus to the richly varied communities of the Central Coast.

Arts & Lectures presents performances featuring touring artists from all over the world—first-rate dancers, classical and world musicians, performance artists, and theater companies. It screens films—international cinema, independent films, documentaries, and the best Hollywood movies, and occasionally, restored silent classics. It operates an Artists-in-Residence program that includes master classes, lecture-demonstrations, open rehearsals, and classroom discussions at UCSB in addition to visits to local schools.

Contact the Ticket Office at (805) 893-3535 to join the mailing list, or visit [www.artsandlectures.ucsb.edu](http://www.artsandlectures.ucsb.edu)

*World leaders, such as former British Prime Minister Tony Blair, and other notable artists, writers, and visionaries are brought to campus by Arts & Lectures to inform, entertain, and inspire.*

# Academic Units

## *College of Creative Studies*

The College of Creative Studies at UCSB is unique in the UC system. It enrolls undergraduate students with demonstrated talent for independent work in the arts, mathematics, or the sciences. Majors are offered in art (painting, sculpture, and book arts), biology, chemistry/biochemistry, computer science, literature, mathematics, music composition, and physics. Work in the college leads to the bachelor of arts degree in all majors (with the exception of Computer Science, B.S. only), and, optionally, to the bachelor of science degree in chemistry, mathematics, and physics. In 2008-09, approximately 350 students were enrolled in the college.

## *College of Engineering*

The College of Engineering offers professional undergraduate education leading to the bachelor of science degree in five disciplines: chemical, computer, electrical, and mechanical engineering, and computer science. The chemical, electrical, and mechanical engineering programs are accredited by the Engineering Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012 – telephone (410) 347-7700. The computer science program is accredited by the Computing Accreditation Commission of ABET, 111 Market

Place, Suite 1050, Baltimore, MD 21202-4012 – telephone (410) 347-7700. The college currently has a combined undergraduate and graduate enrollment of approximately 2,200 students.

## *College of Letters and Science*

The College of Letters and Science, which enrolls more than 16,000 undergraduates, is the largest undergraduate college on the UCSB campus. The college offers some 80 majors and nearly 40 minors, including a number of interdisciplinary programs, and awards four degrees: bachelor of arts, bachelor of science, bachelor of fine arts, and bachelor of music. In addition, college departments offer a wide range of minors to students interested in pursuing a second area of study.

## *Graduate Division*

UCSB offers advanced programs of study and research leading to the doctor of philosophy, doctor of musical arts, doctor of education, master of arts, master of education, master of environmental science and management, master of fine arts, master of music, and master of science through the Graduate Division. Programs leading to California teaching and service credentials are also offered. Under policies set by the UCSB Graduate Council, the Graduate

Division recruits students and processes their applications to all graduate programs, promotes diversity at the graduate level, secures and awards graduate financial support, and administers graduate students' academic records.

## *Bren School of Environmental Science and Management*

The Bren School of Environmental Science and Management is a professional school that trains graduate students in rigorous interdisciplinary approaches to environmental problem solving. The School fosters an integrated view of the environment that focuses not only on identifying problems, but also on solving them by integrating legal, political, economic, and business perspectives. The School offers two graduate degrees. The Master of Environmental Science and Management is a professional degree intended for students who will enter or re-enter the workforce upon completion of the program. The Ph.D. is a research-oriented degree the cornerstone of which is an original work of research presented as a dissertation.

## *Gevirtz Graduate School of Education*

The Gevirtz Graduate School of Education (GGSE) prepares researchers, teachers, and administrators in education and professional psychology. Three-quarters of the graduate students are working on their doctor of philosophy or master of arts degrees. Another one-fourth are enrolled in the teaching credential and M.Ed. program to qualify for elementary and secondary school teaching. A number of students not only work on advanced degrees but also qualify for advanced specialist or service credentials in school psychology or special education. An Ed.D. in Educational Leadership, a joint program with Cal Poly San Luis Obispo, is also offered.

***Bren Hall is the home of the Bren School of Environmental Science and Management and a remarkable example of sustainable design and construction. It was designated the "greenest" laboratory building in America by the U.S. Green Building Council when it was completed in 2002.***

| Educational Studies               |  |
| Teacher Preparation               |  |
| Mathematics and Science Education |  |

‡ Declaration of the Individual and Interdisciplinary Studies majors is subject to the approval of the Executive Committee of the College of Letters and Science.

## Admission to this major is contingent upon successful completion of all courses in preparation for the major with the designated grade-point average. Students who are completing these preparatory requirements will have "pre-major" status.

**Please note:** Concentrations do not appear on transcripts or diplomas. Emphases appear **only** on transcripts (not on diplomas).

## Graduate Degrees & Majors

### College of Engineering

|  |             |
|--|-------------|
| Chemical Engineering .....             | M.S., Ph.D. |
| <i>with optional emphasis in:</i>      |             |
| Computational Science and Engineering  |             |
| Computer Science .....                 | M.S., Ph.D. |
| <i>with optional emphases in:</i>      |             |
| Cognitive Science                      |             |
| Computational Science and Engineering  |             |
| Technology and Society                 |             |
| Electrical & Computer Engineering .... | M.S., Ph.D. |
| <i>with emphases in:</i>               |             |
| Communications, Control, and           |             |
| Signal Processing                      |             |
| Computer Engineering                   |             |
| Electronics and Photonics              |             |
| <i>with optional emphasis in:</i>      |             |
| Computational Science and Engineering  |             |
| Materials .....                        | M.S., Ph.D. |
| Mechanical Engineering .....           | M.S., Ph.D. |
| <i>with optional emphasis in:</i>      |             |
| Computational Science and Engineering  |             |
| Media Arts and Technology .....        | M.S., Ph.D. |
| <i>with emphasis in:</i>               |             |
| Multimedia Engineering                 |             |
| <i>with optional emphasis in:</i>      |             |
| Technology and Society                 |             |

### College of Letters and Science

|  |               |
|--|---------------|
| Anthropology .....                                 | M.A., Ph.D.   |
| <i>with optional Ph.D. emphases in:</i>            |               |
| Ancient Mediterranean Studies                      |               |
| Global Studies                                     |               |

\* The master's degree program is open to those students who are also entering the Ph.D. program and may be awarded to students after fulfillment of the master's level requirements.

# Additional Academic Programs

*Students in the UCSB Washington Center Program.*

## *UCSB Washington Center Program*

The UCSB Washington Center Program supports and supervises undergraduate students who pursue internships, research, and creative activities in the nation's capital. This residential program is open through a competitive application process to upper-division students in all majors. Students may participate during any academic quarter, or during the summer, and earn eight units of internship credit (INT 192DC) and four units of independent study credit (INT 199DC). Students receive credit toward graduation with INT 192DC and INT 199DC, but need consent from their department to apply the units to their major. Students who meet the financial need and other eligibility criteria will be considered for a President's Washington Scholarship to help cover supplemental costs associated with the program. A minimum GPA of 2.8 is required.

The UCSB Washington Center also offers a unique opportunity for UCSB faculty members and graduate students to teach and pursue research in the Washington, D.C. area. UCSB faculty members and graduate students in residence advise interns on research procedures and the writing of major research papers. UCSB faculty, along with faculty from other participating UC campuses, offer upper-division courses at the Center in diverse academic fields; students may receive credit for any of these courses. Information is available on-line at: [www.ucdc.ucsb.edu](http://www.ucdc.ucsb.edu), or contact the campus office by email at [ucdc@lts.ucsb.edu](mailto:ucdc@lts.ucsb.edu).

## *The University of California Center in Sacramento Program*

The University of California Center in Sacramento Program (UCCS) is a residential academic program that combines an internship with research and coursework. In addition, students have the opportunity to observe public policy processes firsthand in our state's capital. Admission to the UCCS Program is open through a competitive application process to upper-division undergraduates from all majors. Students maintain full-time enrollment at UCSB while working in a structured internship with an agency or organization of their choice in Sacramento. Students earn eight units of internship credit (INT 192SA) and four units of independent study credit (INT 199SA). The program is offered during any academic quarter, including summer session. For more information visit the program's Web site: <http://ucds.universityofcalifornia.edu>. Application materials may be obtained from staff in the Undergraduate Research and Creative Activities (URCA) Office, North Hall 2105.

## *Summer Sessions*

There are two six-week summer sessions offered each year at UCSB. The Summer Sessions program includes over 600 lower- and upper-division courses ranging from anthropology to writing. Nine-week sequence courses in foreign languages are also offered as well as special study undergraduate courses, and some graduate courses. A few courses are also offered off campus at the UCSB Ventura and Santa Maria Centers.

Summer Sessions also includes graduate institutes in **French and Francophone Studies** and **Hispanic Languages and Culture**. These residential six-week institutes provide master's level training structured for the needs and schedules of high school and college teachers and other working professionals coming from all over the United States and Canada. The program, which can be completed in three intensive summer sessions, is ideal for teachers who cannot pursue their studies during the academic year because of professional obligations.

Two special pre-college programs for high-school students are offered during the summer sessions:

The **UCSB Early Start Program** offers qualified high-school students, who have completed their sophomore year, college-level lower-division academic courses ranging from anthropology to statistics. Students can receive full university credit and will experience college life in a supervised environment.

The **Summer Research Mentorship Program** matches highly motivated high-school students

with an active researcher or scholar who serves as faculty advisor and research supervisor. Students earn university credit while gaining research experience.

Summer Sessions also offers two innovative programs, **Freshman Summer Start**, and **Transitions**, designed for admitted UCSB freshmen and transfer students. These programs include academic courses and special activities designed to give student participants a comprehensive introduction to the university while getting a head start on their studies. **Freshman Summer Start**, and **Transitions** are designed to help new students make successful transitions to the vibrant academic life of the campus.

The Summer Sessions Online Catalog, posted during spring, contains a full list of courses and information regarding Summer Sessions fees, rules, and regulations. Application forms for summer session, special institutes, and programs are available from the UCSB Summer Sessions Office, Student Affairs Administrative Services Building (SAASB) 2214. Telephone: (805) 893-2047.

## *Education Abroad Program*

The University of California offers international study programs in cooperation with 130 partner institutions and colleges in over 30 countries throughout the world. Over 4,500 UC students, primarily undergraduates, are expected to take part in this program. Participating students remain registered on their home campuses while studying abroad and receive full academic credit for their work. EAP opportunities are also open to qualified graduate students who have completed at least one full year of graduate work and have the support of their academic department and graduate dean. A detailed statement of the projected program of study is required.

Over 1,300 international students will attend the University of California under the auspices of the Education Abroad Program (EAP). Selection of UC students requires the following: serious academic goals and a clear plan for integrating EAP studies into the student's UC degree program; maturity, flexibility, and the ability to succeed within the host culture; willingness to abide by program regulations; endorsement by the EAP Selection Committee; and completion of language and other specific requirements. Language prerequisites and GPA requirements vary by program.

University of California faculty, who serve as directors at many Study Centers, provide academic counsel to students while abroad. Full credit is granted for courses satisfactorily completed, and approved courses are recorded on official UC transcripts. With careful planning, study abroad should not delay progress toward

## Summary of EAP Opportunities and Countries, 2009–2010

<sup>H</sup> The regular academic year begins in January or February rather than during the fall.

\*3rd qtr. freshmen permitted in spring first-year German program.

graduation. Application of units earned abroad toward major or college requirements depends upon UC departmental or college criteria.

The cost of studying on EAP is comparable to the cost of studying at UCSB. In some cases, EAP may cost less.

While on EAP, students are eligible for financial assistance. Those already receiving UC

financial aid continue to receive grants, loans, and scholarships while abroad. Aid is based on the cost of studying at each EAP location and on individual need. Students who do not currently receive UC financial support may qualify for financial aid while on EAP. In addition to UC financial aid, EAP provides support through various scholarships and grants. Campus

scholarships may also be available, based on country, academic merit, or academic field of study. Students should contact the Campus EAP Office and Financial Aid Office for additional information.

The Campus EAP Office is located in South Hall 2431. An advisor there can provide full details about the academic programs abroad,

requirements, and application procedures. Staff will put students in touch with recent participants and academic advisors. Academic catalogs and detailed course listings are available. Most EAP applications are due six to eight months before departure for the program. See your Campus EAP Office and consult the EAP Web site for exact deadlines. Course listings for each EAP location are also available online at [eap.ucsb.edu](http://eap.ucsb.edu).

## Extended Learning Services

Extended Learning Services (ELS) is an academic department of UCSB and serves as an important link between the university and the community. Its two divisions—Extension and Off Campus Studies—provide high quality university-level educational experiences to help people enhance their careers, improve their professional competencies, enrich their personal lives, and participate in part-time degree programs.

### UCSB Extension

As the continuing education division of UCSB, Extension offers certificate programs, courses, and seminars for personal and professional development on a year-round basis. Courses are open to the general public, including UCSB students. UCSB Extension is supported by student fees and receives no state funds.

### UCSB Extension Professional Certificate Programs

Professional Certificate Programs are an integrated curriculum of postgraduate-level credit courses totaling 140 hours or more of instruction that provide in-depth academic study of a professional field and prepare individuals to enter a new career or advance within their current profession. Curricula are designed to address the full range of subjects within a discipline, allowing students to develop a fundamental knowledge of the field as well as study specialized individual topics. Courses are graded and require exams and out-of-class assignments.

Professional Certificates are available in the following fields: Business Accounting, CPA Accounting, Gifted and Talented Education (GATE), Human Resource Management, Marketing, Mediation & Dispute Resolution, Paralegal, Professional Accounting, Professional Financial Planning, Project Management, Teaching English to Speakers of Other Languages (TESOL).

### Open Enrollment in UCSB Courses Through Extension

The Open Enrollment Program is a cooperative arrangement between the campus and Extension that enables qualified individuals to enroll in undergraduate and graduate courses on a space available basis without being formally admitted to UCSB. Open enrollment is not open to UCSB students who have been academically disqualified from UCSB or who are on reinstatement probation or subject to disqualification. Open Enrollment is ideal for those who are considering returning to school, preparing to enter UCSB, seeking to complete a

few units to graduate, or desiring to take specific UCSB courses for professional reasons. Upon petition, units earned may be used by matriculated UCSB students to satisfy degree requirements; however, this coursework does not fulfill academic residency requirements. Participation in Open Enrollment does not constitute admission to UCSB. Course credits are recorded at Extension. If accepted toward a degree, UCSB coursework completed through Open Enrollment at Extension in fall 2000 or later will be used by the UCSB Registrar to calculate a student's UC grade-point-average.

Additional information about all of UCSB Extension's programs, including Open Enrollment, is available by telephone: (805) 893-4200 or on the Web site at [www.extension.ucsb.edu](http://www.extension.ucsb.edu).

### Programs for International Students

The University Immersion Program (UIP) provides the opportunity for international students to enroll in UCSB academic and/or professional development courses.

For more information, please contact: UCSB Extension, Phone (805) 893-4200. Web site: [www.extension.ucsb.edu/ip](http://www.extension.ucsb.edu/ip)

### Off Campus Studies

Off Campus Studies (OCS) offers an innovative way for students to complete their upper-division coursework and earn a bachelor of arts degree in Ventura. Majors offered at Ventura include anthropology, English, history, interdisciplinary studies, political science, psychology, and sociology. Students attend courses on a part- or full-time basis at the UCSB Center in Ventura. OCS is the only program of its kind throughout the nine-campus UC system, utilizing both live instruction and interactive distance learning formats for classes. OCS students are fully admitted to the university, pay standard registration and other fees, and receive individual academic counseling and advising from admission through graduation.

Information is available at the OCS Office, (805) 893-4056; or at the UCSB Ventura

Center, 3585 Maple Street, Suite 112, Ventura, CA 93003; (805) 644-7261. Web site: [www.ocs.ucsb.edu/](http://www.ocs.ucsb.edu/)

### UCSB Ventura Center

The Center provides a Ventura County site for UCSB Extension, Off Campus Studies, and Summer Session programs, with day, evening, and weekend classes available. Academic counseling and advising for Off Campus Studies and registration for UCSB Extension and Off Campus Studies programs are available. The Center is located at 3585 Maple Street, Suite 112, Ventura, CA 93003. Telephone (805) 644-7261. Web site: [www.ocs.ucsb.edu/ventura/](http://www.ocs.ucsb.edu/ventura/)

## Air Force Reserve Officers Training Corps (ROTC) Program

Director: Captain Victoria Citrowske ([vcitrowske@ucla.edu](mailto:vcitrowske@ucla.edu))  
Telephone: (310) 825-1742  
Fax: (310) 825-3055  
Web site: [www.sscnet.ucla.edu/afrotc](http://www.sscnet.ucla.edu/afrotc)

Air Force Reserve Officer Training Corps (AFROTC) educates and trains highly qualified undergraduate and graduate students for commissioning as officers in the United States Air Force. AFROTC offers a variety of two, three and four-year scholarships, many of which pay the full cost of college tuition, books and administrative fees.

The program consists of a one credit hour academic course for first and second year students, and a three credit hour course for third and fourth year students. All students also participate in a weekly two-hour leadership laboratory that facilitates application of leadership theory.

Students attending UCSB can participate in AFROTC at UCLA. For more information, please contact the UCLA Department of Aerospace Studies at (310) 825-1723.

Students meet with representatives from corporations and graduate schools at annual recruitment events.

# Research at UCSB

## Office of Research

Research is one of the University of California's three fundamental missions, along with teaching and public service. Researchers at UCSB investigate the physical world humans inhabit and the social and cultural systems we construct, in search of new knowledge and deeper understanding. The quality of teaching at the university is enhanced by integrating both the products and the methods of research into the classroom. UCSB is also committed to educating scholar-teachers for the future. Researchers communicate the fruits of their research not only to the academic community but also to the larger society in the service of the public good.

The role of the Office of Research is to provide the support UCSB researchers need to meet these goals. It seeks to expand and improve the research program throughout the University: in arts, education, the environment, engineering, humanities, natural and social sciences. The primary criteria for selecting research directions are the potential for UCSB researchers to make truly significant advances and the alignment of the research with the educational program.

In fiscal year 2008, the Office of Research processed 1,195 contract and grant awards totaling \$194 million. This is twice the amount of research funding awarded to UCSB ten years ago.

The vice chancellor for research, head of the Office of Research, is the principal campus officer in matters of research policy and administration. He is also responsible for promoting the research program and for articulating the importance of research to the educational mission of the university. The role of the vice chancellor is to:

- Supervise the Office of Research,
- Work with the academic leadership on campus to set research policy and priorities and to implement the strategic plan for research,
- Promote interdisciplinary research initiatives,
- Administer several multidisciplinary research units, including seven Organized Research Units (ORUs) and the seven UC Natural Reserve sites managed by UCSB,
- Help maintain good relationships among the university, government, industry, and private foundations,
- Coordinate the maintenance of common research infrastructure, including cyber-infrastructure,
- Enhance ways in which the educational and research missions of the university mutually reinforce each other,
- Oversee compliance with research regulations and policies,
- Serve as the designated Institutional Official to monitor the care and use of animals in university activities and provide oversight of animal facilities,
- Appoint members and oversee mandated regulatory committees, including the Human Subjects Committee, the Conflict of Interest Com-

mittee, the Animal Care and Use Committee, the Embryonic Stem Cell Research Oversight Committee, and the Advisory Committee on the Repatriation of Human Remains.

The Office of Research:

- Solicits, facilitates, negotiates, and accepts grants and contracts that support research, training, and public service,
- Ensures that award administration complies with university policies and agreements with sponsors,
- Manages campus intellectual property, including patents, copyrights, and material transfer agreements, through the Office of Technology and Industrial Alliances,
- Interacts with the UC Office of the President and other UC campuses regarding research policies, funding, administration, and inter-campus research opportunities,
- Consults with faculty on locating and soliciting extramural research support and disseminates information to campus researchers on funding opportunities,
- Supports researchers in their competition for research funding, especially for large research centers,
- Compiles and reports statistical information about external funding and publicizes campus research awards.

For more information on the Office of Research, please visit our Web site at [www.research.ucsb.edu](http://www.research.ucsb.edu).

## National Research Centers

UC Santa Barbara is home to a number of national research centers. All centers offer specialized research opportunities and a multidisciplinary environment for study at the undergraduate, graduate, and postdoctoral levels.

### Center for Nanotechnology in Society (CNS-UCSB)

The NSF Center for Nanotechnology in Society at UCSB serves as a national research and education center, a network hub among researchers and educators concerned with nanotechnologies' societal impacts, and a resource base for studying these impacts in the US and abroad.

Funded by the National Science Foundation, the Center addresses education for a new generation of social science and nanoscience professionals, and CNS-UCSB researchers focus on a linked set of social and environmental issues regarding the domestic US and global creation, development, commercialization, production, consumption, and control of specific kinds of nanoscale technologies.

The CNS also explores methods for public participation in discussing the future of nanotechnologies in the United States and abroad and supports a broad range of education and outreach activities. Web site: [www.cns.ucsb.edu](http://www.cns.ucsb.edu)

### Institute for Collaborative Biotechnologies (ICB)

The Institute for Collaborative Biotechnologies is an Army-sponsored University Affiliated Research Center led by UCSB, and in partnership with MIT and Caltech.

Within the ICB, more than 50 faculty and more than 100 graduate students and post-doctoral researchers collaborate as interdisciplinary teams composed of molecular biologists, chemists and physicists, together with mechanical, electrical, computer, and chemical engineers. These teams conduct basic research which seeks to elucidate and harness the power of complex biological mechanisms in order to accelerate the development of advances in biologically based or biologically inspired sensors, electronic, optical and magnetic materials, information processing techniques, network control systems and cognitive neuroscience.

More information about ICB researchers and projects can be found at [www.icb.ucsb.edu](http://www.icb.ucsb.edu).

### International Center for Materials Research (ICMR)

The International Center for Materials Research (ICMR), supported by the National Science Foundation, provides a national and global forum for promoting international research collaboration and education in materials science and engineering. The goals of the ICMR are to

- enable ground-breaking discoveries in materials science and engineering by facilitating international, multidisciplinary research collaborations,
- provide opportunities for young researchers to develop the skills needed to excel in a global research environment, and
- integrate materials research experiences with an awareness of environmental and developing world issues into engineering curricula.

We achieve these goals through international schools, workshops and research programs (hosted both at UC Santa Barbara and at our many International Partner Institutions), exchange programs for undergraduates, graduate students and junior researchers, and developments in curriculum in collaboration with the Institute for Engineering Partnerships with Emerging Regions. Telephone: (805) 893-5850. Web site: [www.icmr.ucsb.edu](http://www.icmr.ucsb.edu)

### Kavli Institute for Theoretical Physics (KITP)

The National Science Foundation's Kavli Institute for Theoretical Physics, initiated in 1979 on the UCSB campus, brings together physicists from all over the world to collaborate on cross-disciplinary problems. Areas of study include elementary particles and nuclei, condensed-matter physics, astrophysics, and cosmology.

Approximately 80 researchers are in residence at the institute at any given time. One of the major centers of theoretical physics in the world, the institute is housed in its own innovative building near the east entrance to the campus. Telephone: (805) 893-4111. Web site: [www.kitp.ucsb.edu](http://www.kitp.ucsb.edu)

## Materials Research Laboratory (MRL)

The Materials Research Laboratory at the University of California, Santa Barbara, was established in September 1992 and was recently renewed (2005-2011) as an NSF-funded Materials Research Science and Engineering Center. The multi-disciplinary role of the MRL is reflected in the current involvement of over 31 faculty from eight departments plus 60 research students and postdocs. Its primary role is to support ground-breaking interdisciplinary research, training and education through the study of materials with chemical and structural complexity in which self-assembly and multiple length-scales play an important role. The research programs require input from multiple areas, leading to results that are greater than the individual components. The central facilities, seminar rooms, research offices, and the MRL administration are housed in a 21,000-square-foot MRL building, which opened in March 1997 and was expanded in 2005.

The scientific and engineering activities of the UCSB-MRL focus on the following four major interdisciplinary research groups (IRGs): Specific, Reversible and Programmable Bonding in Supra- and Macromolecular Materials; Oxides as Semiconductors; Soft Cellular Materials; and Nanostructured Composites; together with seed projects, central facilities, educational outreach programs, and a technology outreach program. Associated programs include the Mitsubishi Chemical Center for Advanced Materials (MC-CAM), the International Center of Materials Research (ICMR), and the ConvEne IGERT program. Web site: [www.mrl.ucsb.edu](http://www.mrl.ucsb.edu)

## National Center for Ecological Analysis and Synthesis (NCEAS)

The National Center for Ecological Analysis and Synthesis (NCEAS) was established by the National Science Foundation with additional support from the University of California and UCSB. The center sponsors working groups, sabbatical fellows, postdoctoral associates, and distributed graduate seminars focusing on the integration of existing ecological information and new analytical techniques into basic research as well as conservation and resource management issues. NCEAS also is involved in the development of informatics tools that serve the ecological community.

The center provides facilities, services, and high-performance computing capabilities for resident and visiting scientists. Recent research topics have included the ecology of infectious disease, biological response to climate change, human disturbance in aquatic and terrestrial ecosystems, analysis of complex spatial and temporal community dynamics, ecosystem-based management, ecological informatics, and the development of new analytical and statistical methods. Many NCEAS projects are highly interdisciplinary, and may include evolutionary biologists, social and physical scientists, economists, and policy experts, along with ecologists.

The center maintains contacts with a variety of campus entities through collaborative efforts and the involvement of faculty from several departments. Graduate and undergraduate interns are also supported.

In addition to ecological research, the center supports outreach activities, including programs for K-12 education activities. Information about the center is available online at [www.nceas.ucsb.edu](http://www.nceas.ucsb.edu).

## National Nanotechnology Infrastructure Network (NNIN at UCSB)

Nanotech is the UCSB branch of the National Science Foundation's National Nanotechnology Infrastructure Network (NNIN). The goal of the NNIN is to provide a geographically and technologically extensive capability to facilitate research breakthroughs across a broad spectrum of fields, including physics, electronics, optoelectronics, biology, and mechanics. Nanotech, with the resources of a 12,000-square-foot clean room, including a Class 100 optical lithography capability, electron beam lithography, and a full range of fabrication processes, can leverage the fabrication expertise developed through work at UCSB and make it available to a broader community, receiving in turn, a large diversity of fabrication challenges and applications. Web site: [www.nanotech.ucsb.edu](http://www.nanotech.ucsb.edu)

## Pacific-Southwest Regional Center of Excellence (RCE) for Biodefense and Emerging Infectious Disease Research

The center is a consortium of 16 universities and research institutes in California, Arizona, Nevada, and Hawaii. Sponsored by the National Institutes of Health, its mission is to bolster basic biomedical research into bioterrorism agents, such as those that cause anthrax and botulism, and naturally occurring infectious diseases, including West Nile virus, hantavirus and dengue—diseases that are affecting increasing numbers of people worldwide. The center also provides scientific support, expertise, and facilities in response to a national emergency, such as a terrorist attack or an epidemic of a new infectious disease, like the SARS virus.

## Southern California Earthquake Center (SCEC)

The Southern California Earthquake Center (SCEC) is a National Research Center supported by NSF and the U.S. Geological Survey. Established in 1991, SCEC presently represents a cooperative effort among fifteen core institutions including UCSB, the University of Southern California, Caltech, MIT, UCLA, Stanford, Harvard, and the U.S. Geological Survey. USC is the coordinating institution. The mission of the SCEC is to integrate research results into a comprehensive and predictive understanding of earthquake phenomena in Southern California and to transfer this technology to other seismically active areas. The primary objectives of the Center are to estimate earthquake potential, to quantify the likely ground shaking from future earthquakes, and to communicate knowledge of earthquake science to decision-makers and the public. Web site: [www.scec.org](http://www.scec.org)

## UC Center for Environmental Implications of Nanotechnology (UC CEIN)

The UC Center for Environmental Implications of Nanotechnology (UC CEIN) is the nation's

first research institution established to study how nanomaterials interact with the environment and with living systems.

Funded by the National Science Foundation and the U.S. Environmental Protection Agency, the research at UC CEIN is primarily conducted at UCLA and UCSB in conjunction with several partner institutions worldwide. The centers function as a collaborative network and emphasize interdisciplinary research and education.

Within the UC CEIN, research efforts are organized into seven integrated groups in an effort to

- Build a library of standard reference nanomaterials and a database of standard protocols,
- Understand the impacts of different types of nanomaterials on organisms and ecological systems in terrestrial, freshwater, and saltwater environments,
- Design a predictive model of the fate, transport, and ecotoxicology of nanomaterials; and
- Develop guidelines and decision tools for the safe design and use of nanomaterials.

For more information about UC CEIN, go to [www.cein.ucsb.edu](http://www.cein.ucsb.edu).

## Organized Research Units

Organized research units (ORUs) provide unusual opportunities for students and faculty to do basic and applied research in a variety of disciplines. The following ORUs operate outside of the established academic teaching departments at UCSB.

*Note: Neither courses of instruction nor degree programs are offered through the organized research units. Additional information about the units is available from the Office of Research, Cheadle Hall 3227. Telephone: (805) 893-4188.*

### Chicano Studies Institute

The Chicano Studies Institute supports and conducts interdisciplinary basic and applied research on the history, culture, and socio-economic status of Chicanos/Latinos in the United States. Researchers from the social and behavioral sciences, humanities, and education engage a wide range of contemporary and historical social issues including identifying key barriers to employment, recovering systems of cultural production, examining community empowerment, analyzing immigration and settlement, oral traditions and legal disclosure. Each year the institute sponsors faculty work groups, collaborative research projects, lectures, symposia, and publications that reflect this set of concerns.

Developing research initiatives that strengthen the recruitment and retention of faculty, graduate students, and undergraduates involved in Chicana/o and Latina/o Studies are priorities. The Institute, along with the Department of Chicano Studies, supports the unique and prestigious Luis Leal Endowed Chair in Chicano Studies. In addition, the Institute provides opportunities for undergraduates to work on selected faculty research projects and programs.

As the only organized research unit devoted to the study of Chicana/o and Latina/o populations, the Institute is a resource to local community agencies, community leaders, state and

**UCSB researchers plumb the depths of the ocean to advance solutions to global environmental problems.**

national entities as well as to the local campus community. Thus, public service forms an integral part of the Institute's educational mission. Web site: <http://research.ucsb.edu/ccs/>

### **Institute for Computational Earth System Science (ICESS)**

Understanding the coupled Earth system on regional to global scales is the focus of the scientists and graduate students at the Institute for Computational Earth System Science (ICESS). ICESS researchers work across the spectrum of Earth System Science, from extreme climate change to biodiversity and resource conservation to the environmental impacts of nanotechnology to economic impacts. With the goal of increasing our understanding of regional to global environments, including their changes and their impacts on society, ICESS provides an environment in which Earth system scientists can closely collaborate, performing computations not possible in most other research facilities. At ICESS research and research education in Earth system science using computational techniques, Earth remote sensing, in situ observation, numerical modeling and simulation and information management blend to provide unique research opportunities to both undergraduate and graduate students interested in increasing the understanding of Earth as an integrated system.

ICESS houses the Resource Center for SPOT Imagery, which provides UCSB students and researchers with access to high-resolution satellite imagery (spatial resolutions as fine as 2.5 m) for research and educational uses (see [www.spot.ucsb.edu](http://www.spot.ucsb.edu)). Other resources include our state-of-the-art scientific computing facility, Micro-Environmental Imaging & Analysis facility, an optical calibration laboratory, a satellite data acquisition system, a mesoscale model forecasting weather in real-time for California,

a comprehensive library of climate data, and a variety of unique field equipment for the validation and development of Earth remote sensing algorithms.

Additional information can be found at: [www.icess.ucsb.edu](http://www.icess.ucsb.edu).

### **Institute for Crustal Studies (ICS)**

The Institute for Crustal Studies (ICS) fosters interdisciplinary research on the earth's crust and lithosphere, on processes that occur at or affect the earth's surface, and on the evolution of climate and biota through time. Because UCSB resides on a very active plate-tectonic margin, ICS is ideally situated to address problems related to deformation of the earth's surface, seismic and volcanic phenomena, the complex physics of the active solid-earth system, the stratigraphic record of sedimentologic responses to active tectonism, and the interactions among climate, surface processes, and tectonics that shape the skin of the earth. Located in the middle of a major fold-and-thrust belt and within the North American transform boundary, ICS offers an uncommon opportunity to observe, quantify, and model crustal and lithospheric processes. The remarkable diversity of geologic environments and the breadth of geologic history encompassed within Southern California provide a stimulating backdrop for innovative studies of earthquakes and seismology, tectonics and crustal structure, river ecology, groundwater systems, tectonic geomorphology, and paleontology. New technical approaches to crustal studies are being explored through collaborative research projects between the university, government, and industry. ICS is enriched through interdisciplinary research activities involving faculty and students from the departments of biological sciences, engineering, geography, earth science, mathematics, and physics, and from the environmental studies

program.

Information about the Institute is available online at [www.crustal.ucsb.edu](http://www.crustal.ucsb.edu)

### **Institute for Terahertz Science and Technology (ITST)**

The Institute for Terahertz Science and Technology (formerly the Institute for Quantum and Complex Dynamics (IQCD)) fosters interdisciplinary research at the heart of the electromagnetic spectrum, between 0.1 and 10 terahertz (1 terahertz=1 trillion or 10<sup>12</sup> cycles/s). In this frequency range, small molecules rotate, biological molecules bend and twist, electrons in tiny semiconductor devices oscillate between their quantized states, and the universe glows with energy left over from the Big Bang. Transistors, detectors, solid-state lasers, cameras, and more complex technological systems are being developed for this under-served portion of the electromagnetic spectrum. For reference, 1 terahertz lies three orders of magnitude above the frequencies used in cellular telephone communications, and three orders of magnitude below the frequencies of visible light. Researchers from the Departments of Chemistry and Biochemistry, Physics, Mathematics, Electrical and Computer Engineering, and Materials currently participate in interdisciplinary terahertz research through the ITST.

A broad range of shared experimental facilities enables ITST researchers to set the state of the art in terahertz research. A centerpiece of the Institute's infrastructure is UC Santa Barbara's Free-Electron Laser (FEL) facility, which is unique in the world, and provides high-power, tunable electromagnetic radiation between 0.1 and 5 terahertz. The UC Santa Barbara FELs attract visitors and collaborations from all over the world. In addition, several different types of state-of-the-art terahertz spectrometers enable terahertz experiments that are complementary to those conducted with the FELs. The ITST is a "one-stop shop" for terahertz research.

In addition to its core activities in terahertz research, the ITST also welcomes and hosts a broad range of other research activities in science and engineering. The ITST is committed to excellence in research and research administration in a stimulating, comfortable and fun working environment.

ITST educational outreach includes the QUEST Boards program, a "lending library" of hands-on materials that cover all of the California state standards for fourth and sixth grade physical science, and an outreach program in astrophysics.

### **Institute for Social, Behavioral, and Economic Research (ISBER)**

The Institute for Social, Behavioral, and Economic Research (ISBER) offers research development and administrative support for a wide spectrum of research projects. ISBER provides an active program of research development in the social sciences and related areas. Investigators are drawn from the social and behavioral sciences, the humanities and those sciences involved with environmental issues. Areas investigated range from the globalization of industry, archaeology in the Americas, how health care data are acquired and used in research, the economics of criminal justice, to the

sociology of religion. A number of centers have been established to focus on specific areas of interest. These include the Center for Advanced Study of Individual Differences, Center for Evolutionary Psychology, Center for Information Technology and Society, Center for Middle East Studies, Center for Nanotechnology in Society, Center for New Racial Studies, Center on Police Practices and Community, Center for Spatially Integrated Social Science, East Asia Center, Health Data Research Facility, the MesoAmerican Research Center, and the Michael D. Palm Center. Web site: [www.isber.ucsb.edu](http://www.isber.ucsb.edu).

### **Marine Science Institute (MSI)**

The Marine Science Institute (MSI) ranks internationally as a leader in ocean research. MSI supports research projects involving faculty, students, and researchers spanning 14 academic disciplines. Much of MSI's impact arises from the unusual interdisciplinary research that the Institute fosters. Ecology mingles with geography, physics with geology, and chemistry with oceanography to expand our understanding of the ocean world. In addition, MSI takes a broad view of ocean science, looking at interconnections between ocean, freshwater, and terrestrial ecosystems. MSI's faculty and professional researchers stand at the forefront of their fields, regularly redefining our current knowledge of marine science and policy.

The UCSB campus is situated on a promontory overlooking the Pacific Ocean, one of only a handful of universities worldwide located directly on the coast. Surrounded by a rich diversity of coastal habitats, MSI serves as the focal point for ocean-related programs on this unique campus and offers unparalleled opportunities for undergraduate and graduate education. MSI consists of five centers of research activity: the Coastal Research Center, the Ecoinformatics Center, the Marine Biotechnology Center, the National Center for Ecological Analysis and Synthesis, and the Ocean and Coastal Policy Center. In addition, MSI hosts three Long Term Ecological Research programs, one in Antarctica, a second examines linkages between coastal watersheds and kelp forests in the Santa Barbara Channel, and the newest program, the Moorea Coral Reef LTER, studies how to more accurately predict how coral reef ecosystems will respond to environmental change. MSI is also the regional headquarters for the management of seven University of California Reserve System reserve sites, which serve as natural laboratories for field research and teaching. Information about the Institute is available online at [www.msi.ucsb.edu](http://www.msi.ucsb.edu).

### **Neuroscience Research Institute (NRI)**

The mission of the Neuroscience Research Institute is to foster knowledge and understanding of the nervous system by serving as a center for scientific research break-throughs. The NRI is a group of investigators whose collective goal is to create an intellectual atmosphere conducive to exploration at the frontiers of human knowledge where disciplinary boundaries disappear. Investigators in the NRI recognize that the interests of neuroscience extend broadly from repair and prevention of human disease to the principles that underlie the earliest

nervous systems, from the human mind to the single molecular building blocks of the brain. Areas of emphasis include research on vision, neurotrophic molecules and their receptors, the physiology and molecular organization of ion channels, neural development, the response of the central nervous system to injury, neurodegeneration and associated disorders, regenerative capacity of the nervous system, synaptic transmission, neuropharmacology, and evolution of the nervous system. The academic disciplines involved include cell biology, molecular biology, biochemistry, physiology, genetics, developmental biology, biopsychology, biophysics, and bioengineering. NRI's research resources include advanced microscopy, a computer laboratory and computing support, and a proteomics/genomics facility. Information about NRI and its centers, is available online at <http://nri.ucsb.edu>.

## *California Research Center*

### **California NanoSystems Institute (CNSI)**

The California NanoSystems Institute (CNSI) focuses on the extraordinary power and potential of structures designed at the nanometer scale. Established in 2000 as one of four new California Institutes for Science and Innovation (CISI), the CNSI builds upon a visionary investment in future education, research and technological resources, given by the State of California. In partnership with the University of California at Los Angeles, CNSI at UCSB integrates the substantial collaborative strengths of its on-campus participants, comprising a multitude of academic departments and scientific disciplines, and seeks new alliances with industry, universities, and national laboratories.

CNSI researchers will create and utilize new nanoscale building blocks derived from biological, chemical or physical elements and determine robust ways of linking those building blocks together into complex, integrated systems. The formation of sophisticated 'structures by design' that will have impacts on higher-density information processing and storage, new means of biomedical monitoring and treatment, environmental assessment and remediation, and energy-efficient power sources.

CNSI hosts several multi-university research centers, such as the Western Institute for Nanoelectronics (WIN) supported by industrial and state funds, the Center for Polymer and Organic Solids, the Center for Spintronics and Quantum Computation, and two federally-supported multidisciplinary university research initiative (MURI) programs. The Institute also contains the Microsoft Station Q research group focusing on quantum computing.

CNSI supports a number of education programs linking nanosystems research to junior high schools, high schools and community colleges, and supporting research and mentorship opportunities for undergraduate and graduate students.

CNSI facilities will provide centralized capabilities for imaging, characterization and analysis of nanoscale components, foster new

nanofabrication strategies at the interface of the biological and physical sciences, and will serve as an integrative, multidisciplinary environment for researchers and educators working in NanoSystems.

Information about CNSI is available online at: [www.cnsi.ucsb.edu](http://www.cnsi.ucsb.edu)

## *Multicampus Research*

### **Intercampus Research Program on Mexican Literary and Cultural Studies (UC Mexicanistas)**

Director: Sara Poot-Herrera. Email address: [spooth@spanport.ucsb.edu](mailto:spooth@spanport.ucsb.edu)

### **Italian Studies**

At the University of California, scholars working in Italian Studies are widely dispersed across the humanities. The Italian Studies Multicampus Research Group (MRG) unites faculty and graduate students in a multicampus interdisciplinary research unit. The UC ISMRG works closely with its sister organization, the California Interdisciplinary Consortium for Italian Studies (CICIS). CICIS' mission is to foster interdisciplinary and transnational research related to Italian studies in California, and to convene conferences where this research can be promoted, undertaken, presented, and discussed. Web site: [www.ihc.ucsb.edu/italian-studies/index.html](http://www.ihc.ucsb.edu/italian-studies/index.html)

### **Japanese Arts and Globalization**

Director: Miriam Wattles, Email address: [mwattles@arthistory.ucsb.edu](mailto:mwattles@arthistory.ucsb.edu)

### **The Subaltern-Popular Workshop Multicampus Research Group**

The Subaltern-Popular Multicampus Research Group facilitates and promotes research and understanding of the subaltern — the disenfranchised — and the popular, as subjects and modes of inquiry into culture and history. By disclosing the presence of the disenfranchised in everyday cultural formations, its effort is to change the way we study and teach history and culture, and to re-evaluate the role of the humanities and arts in the politics of globalization and the nation-state.

### **Transliterations Project**

Established in 2005 as a UC Multi-Campus Research Group, the Transliterations Project includes scholars in the humanities, arts, social sciences, and engineering in the University of California system. It is establishing working groups to study online reading practices from different perspectives (especially the viewpoint of "social computing"); developing a shared technology framework to improve online reading; publishing a clearinghouse of research reports and demonstration software; and training graduate students working at the intersections of the humanistic, social, and technological disciplines.

### **University of California African Studies Multicampus Research Group**

The African Studies Multicampus Research

Group is a research consortium organized across the University of California campuses. The African Studies MRG will develop an array of activities in Africa that will include three international conferences in Ghana, Senegal, and South Africa, featuring writing competitions for emerging African writers, art exhibitions that will travel abroad, and the restoration, preservation, and screening of African film and media. By combining resources among the ten University of California campuses, the MRG will arrange visiting fellowships for academics from the continent; performances of African cultural groups; graduate student, postdoctoral, and faculty workshops; as well as other events so that African Studies may be further integrated into teaching and research within the humanities across the University of California system and beyond. Web site:

[www.ihc.ucsb.edu/africanstudies/home.html](http://www.ihc.ucsb.edu/africanstudies/home.html)

### **University of California Institute for Research in the Arts (UCIRA)**

The University of California's Institute for Research in the Arts (UCIRA) is a multi-campus research unit dedicated to the support of UC artists and arts innovation in the performing, media, and visual arts. Special attention is particularly given to those concepts, projects and initiatives that transcend traditional boundaries or that fall outside the existing and classical definitions of an arts practice. Through its program opportunities, the UCIRA fosters collaborative research and multi-campus research exchange networks.

The UCIRA provides funding to arts faculty, staff and students for projects with the potential for significant artistic, cultural and social impacts. Projects may include exhibitions, performances, demonstrations, symposia, pedagogical experiments, community exchange, situations and innovative residencies that serve to expand the creative disciplines toward new forms of knowledge production and reflection.

UCIRA projects are intended to reach a broad constituency within and outside the university setting, engaging creative production and discourse within a global context.

As the only state-wide organization representing the arts within the 10 campuses of the UC system, UCIRA also serves as an information and advocacy exchange network for university-based arts education and research at state-wide and national levels.

Through its annual State of the Arts conference, hosted at a different campus site each year, the UCIRA provides a forum to showcase cutting edge and new experimental arts research taking place across the system. Telephone: (805) 893-3098. Web site: [www.ucira.ucsb.edu](http://www.ucira.ucsb.edu)

### **University of California Linguistic Minority Research Institute (UC LMRI)**

The UC Linguistic Minority Research Institute (UC LMRI) is a multicampus research unit of the University of California headquartered at UC Santa Barbara. The institute involves faculty and projects at all ten UC campuses. The LMRI was established in 1984 to conduct research on the education of language minority students in the K-12 education sector with the long-range goal of improving these students' access to college.

The major activities of the LMRI include sponsoring research projects; collaborating with schools and educational agencies; conducting annual meetings, research conferences, institutes, and lectures; disseminating information on language minorities in various ways, including a quarterly newsletter, book publications, and a Web site with electronic mail services; and sponsoring professional development activities.

The Institute is housed in South Hall, Room 4722. Telephone: (805) 893-2250. Facsimile: (805) 893-8673. Email: [lmri@lmri.ucsb.edu](mailto:lmri@lmri.ucsb.edu). Web site: [www.lmri.ucsb.edu](http://www.lmri.ucsb.edu).

## *Affiliated Units*

### **Center for Black Studies Research**

Established in 1970, the Center for Black Studies Research conducts and administers research on the social, historical, cultural, political and economic experiences of people of African descent. Over the years, the center has been a leader in advancing Black Studies scholarship across the disciplines in the social sciences, the humanities and the arts.

The center sponsors a visiting scholars program; publishes three academic journals; supports and disseminates faculty research; organizes and presents seminars, lectures and symposia; supports outreach programs and serves as liaison between the campus and the Santa Barbara community. Phone (805) 893-3914. Web site: <http://research.ucsb.edu/cbs>

### **Engineering Research Centers**

*For information, see the chapter titled "College of Engineering."*

### **Interdisciplinary Humanities Center (IHC)**

The IHC was founded in 1987 to implement the Humanities Initiative begun by the President of the University of California. The IHC encourages interdisciplinary scholarship and instruction by supporting research projects, lectures, seminars, and conferences. In addition, the IHC seeks to broaden the traditional definition of humanistic endeavors by sponsoring activities in the performing and visual arts. By hosting a wide array of interdisciplinary programs and activities, the IHC also serves as a vital link between the campus and the community. The center is housed on the sixth floor of HSSB. Telephone: (805) 893-3907.

Web site: [www.ihc.ucsb.edu](http://www.ihc.ucsb.edu).

## *Natural Reserve System*

The University of California Natural Reserve System (NRS) was founded in 1965 to establish and maintain significant examples of California's diverse aquatic and terrestrial ecosystems for university-level teaching, research, and public service. In addition, many of these sites act as bases for research in nearby natural areas and provide database, housing, and experimental facilities. The thirty-six reserves in the system are open to all qualified individuals and institutions for scholarly work in disciplines ranging

from geology and environmental sciences to anthropology and art.

For more information on the NRS, contact the NRS campus office at 805-893-4127, or email [moore@msi.ucsb.edu](mailto:moore@msi.ucsb.edu), or visit the Web site at <http://nrs.ucop.edu>.

The Santa Barbara campus administers seven reserves: Carpinteria Salt Marsh Reserve, Coal Oil Point Reserve, K.S. Norris Rancho Marino Reserve, Santa Cruz Island Reserve, Sedgwick Reserve, Sierra Nevada Aquatic Research Laboratory (SNARL) and Valentine Camp.

## *Undergraduate Research*

UCSB undergraduates have an extraordinary opportunity: the chance to work with world-class faculty in areas ranging from digital multimedia, marine science, and ethnic studies to next-generation computers, neurodegenerative disease, the performing arts, and systems biology. Professors in nearly every department on campus and more than 80 research units encourage undergraduates to join their research teams in labs, studios, or field locations as distant as Antarctica.

Detailed information about the value of undergraduate research—the other half of a great education—appears on the campus-wide undergraduate research Web site at: [www.research.ucsb.edu/undergrad](http://www.research.ucsb.edu/undergrad). Also included: how to get started, where to find funding, wide-ranging images and student stories, a list of contacts for information about UCSB opportunities and programs, and more. Names, numbers, locations, and e-mail addresses of people who can help are listed for the following areas: the College of Letters and Science's Office of Undergraduate Research and Creative Activities (URCA), the California NanoSystems Institute (CNSI), the Materials Research Laboratory, the College of Creative Studies, the College of Engineering, the Donald Bren School of Environmental Science and Management, the Gevirtz Graduate School of Education, and the Graduate Division. Summer opportunities are linked as well.

**UCSB introduces students to the latest research instruments.**

# Academic Policies and Procedures

Academic policies and procedures described in this chapter apply to all students enrolled at UCSB. They include procedures related to enrollment and attendance, examinations, course credit, the grading system, graduation, and student conduct and responsibility.

Additional academic requirements appear in the chapters “Undergraduate Education at UCSB” and “Graduate Education at UCSB.”

Additional information on certain policies and procedures can be found in the Appendix.

## Enrollment

Each quarter every UCSB student must register in courses and pay fees and any other outstanding financial obligations; each step must be completed at a specific time. Students use the Gaucho On-Line Data System (GOLD) to enroll on the web. Details of the registration procedure are included in the quarterly *Schedule of Classes* which is also available online at: [www.registrar.ucsb.edu/soc.htm](http://www.registrar.ucsb.edu/soc.htm).

When students are admitted to UCSB, their admission is provisional and contingent upon receipt of final official transcripts that verify information supplied in the admission application. Students who fail to provide the Office of Admissions with final transcripts, as well as students whose transcripts fail to verify information supplied in the admission application, may have their admission revoked. Admission may be revoked even if students have enrolled

in, attended, and completed classes at UCSB.

The failure of a student to complete the steps involved in enrollment by the specified deadlines will constitute presumptive evidence that the student has withdrawn from the university. An eligible student who wishes to resume study will be required to file an application for readmission and pay the associated nonrefundable fee. For information concerning readmission, please see the *Absence and Withdrawal* section of this chapter.

Undergraduate students who are subject to academic disqualification may not officially enroll until and unless they are reinstated on academic probation by the dean of their college or school. Students with outstanding financial obligations to the university have not completed enrollment until their financial obligations have been met or they have enrolled in an Office of Billing, Accounts Receivable, and Collections (BARC) payment plan.

### Quarterly Enrollment Limits

**Undergraduates.** Minimum Cumulative Progress (MCP) is a policy, effective Fall 2008, designed and approved by the faculty to provide important guideposts to ensure timely degree completion. The MCP requirement establishes a reasonable expectation of student workload. For undergraduates, the average academic study load is 15 units a quarter; the minimum full-time study load is 12 units. For more information concerning MCP requirements refer to the College of Engineering ([www.engineering.ucsb.edu/current\\_undergraduates/mcp/](http://www.engineering.ucsb.edu/current_undergraduates/mcp/)) and College of Letters and Science ([www.advising.lsc.ucsb.edu/mcp.php](http://www.advising.lsc.ucsb.edu/mcp.php)) Web sites.

### Guideline for Minimum Cumulative Progress (MCP)

| Number of MCP Quarters | Units Completed |
|------------------------|-----------------|
| 1                      | 12              |
| 2                      | 27              |
| 3                      | 42              |
| 4                      | 56              |
| 5                      | 71              |
| 6                      | 86              |
| 7                      | 101             |
| 8                      | 116             |
| 9                      | 132             |
| 10                     | 148             |
| 11                     | 164             |
| 12                     | 180             |

Students who are not able to carry at least 12 units a quarter must petition to register in a deficit program (or part-time status) at the time of registration. Students in the College of Letters and Science and the College of Creative Studies may petition for permanent approval of deficit programs. Under certain conditions, reduced fees may be available through the Office of Student Life for undergraduate students who have advance permission to carry 10 or fewer units a quarter.

**Warning:** Financial aid students who receive a Pell Grant, a Cal Grant A, or a Cal Grant B will have these grants reduced if they receive a fee refund as a result of their deficit load program. In most cases, the financial aid reduction will exceed the fee refund; thus, it is highly recommended that Pell Grant and Cal Grant recipients consult with the Financial Aid Office prior to applying for a deficit load. Students who are approved for a permanent deficit load automatically receive the fee refund and do not have the opportunity to decline it. Students who are on a deficit load program for only one quarter can choose whether to apply for a fee refund.

Even if they don't file for an approved deficit load and don't get a fee refund, students receiving Pell Grants or Cal Grant B Access Grants (also known as Cal B Stipends) will have those grants reduced if they are enrolled in less than 12 units. Additionally, students receiving ACG or SMART Grants will have those grants reduced to zero for any quarter in which they enroll for less than 12 units. This enrollment measurement is taken on census date, the 15th class date of each quarter. Please note that “variable unit” course units will be counted as the number of units shown on the student's registration record

Studying on the campus green.

on census date. The units that a student may earn by the end of the quarter are not what is used in the unit count. The reductions may include billing the student's BARC account for the amount of the reduction. If a student's grant is reduced or cancelled based on census date units, it cannot be increased or reinstated if the student adds more units at a later date.

The maximum number of units allowable for undergraduates each quarter varies among the three colleges; these limits are indicated in the college publications and the *Schedule of Classes*. Students who wish to enroll in more than the maximum number of allowable units must petition for an excess program at the time of registration.

**Graduate students.** Continuous registration is required of all graduate students. The minimal full-time load for graduate students is 8 units per quarter, and a course load of 12 units per quarter is strongly recommended. Students must register for at least 8 units per quarter to be eligible for campus and extramural benefits and services—e.g., to be appointed as graduate student researchers or as teaching assistants, to receive financial aid, and to qualify for student housing. There are no reduced fees for graduate students registering for fewer than 12 units. Departments have authority for individual students' study plans in each major.

**Changes in course enrollment.** After registration, changes in course enrollment for all students can be made only with necessary approvals and no later than the deadlines published in the *Schedule of Classes* for that quarter. Such changes include dropping or adding courses and changing grading options. Unapproved withdrawal from or neglect of a course in which a student has enrolled will result in a failing grade.

## Medical Requirements

1. **Physicals** are required for all intercollegiate athletes and must be completed at Student Health.
2. **Tuberculosis (TB) skin tests** are required for those admitted to the UCSB teaching credential program and for those identified as international students by their Visa status. Tests may be obtained at Student Health for a fee.
3. State law requires the **Hepatitis B vaccination** series be complete by the time of enrollment if you are 18 years of age or younger. The vaccination series requires three injections over a period of four to six months. If you have not already completed the full series, it is important that you see your local health care provider now to complete this requirement.

## Absence and Withdrawal

**Temporary absence during a quarter.** Students enrolled at UCSB who have been or will be absent from classes for a brief period of time for reasons beyond their control should notify their professors as soon as possible. Regardless of the reasons for absence, students will be required to complete all coursework.

If an absence is late in the term and prolonged, making it impossible to complete the coursework on time, a student may petition the instructor to assign an Incomplete (I) grade. To receive an I grade, the student must submit the

*Sharing a light moment in class.*

approved petition to the Office of the Registrar by the last day of the quarter in which the I grade is to be assigned. Refer to "Incomplete Grades" under the "Grading System" section in this chapter for complete regulations. A student who is unable to make this request personally may ask the Office of Student Life to notify each instructor of the circumstances of the absence and to circulate a petition on the student's behalf. If the instructor agrees that an extension of time for completion of the course is justified and approves the petition, a grade of Incomplete will be assigned.

**Complete withdrawal.** After paying fees or enrolling in a BARC payment plan, a student wishing to withdraw for a term without completing the enrollment process must first submit a petition to the Office of the Registrar.

An enrolled student who wishes to withdraw from the university during a quarter without completing the quarter's work must obtain a Petition for Complete Withdrawal from the Office of the Registrar. If the petition and deadline requirements are met and the approval of the college dean is secured, the student's enrollment will be withdrawn without academic penalty. The deadline for undergraduates in the College of Engineering and the College of Letters and Science to submit a completed petition is the last day of instruction for the quarter. When undergraduate students submit the completed petition after the deadline for course withdrawal for the college in which the student is enrolled, the Office of the Registrar will enter a grade of W for each course in which the student is registered. A student who receives permission to withdraw completely during the early weeks of a quarter may be entitled to a partial refund of fees for that quarter as outlined in the *Schedule of Classes*. Students who receive Title IV federal aid will be required to return a prorated portion if they withdraw or have their status lapsed before 60% of the quarter has passed. Upon request, the Office of Student Life will process a Petition for Complete Withdrawal for a student who cannot do so personally. If the dean of the college approves the petition, the student's academic record will reflect the process described above.

Students who enroll and subsequently discontinue work during a quarter without an approved petition for withdrawal will receive an

F, NP (not passed), or U (unsatisfactory) grade, as appropriate, for each course in which they are enrolled for that quarter. Such students are ineligible for any refund of fees, and their future registration privileges may be curtailed or revoked.

Before withdrawing, students are advised to seek counsel from faculty, departmental, and college advisors, and from Counseling Services so as to consider the

full implications of this action. After withdrawal and before future registration, undergraduates must apply for and receive permission to be readmitted. The application deadlines for readmission or reinstatement significantly precede the start of the quarter. The deadlines are published in the *Schedule of Classes*. The opening dates for applying for readmission are noted in the calendar at the beginning of this catalog. Graduate students should contact the Graduate Division.

**Warning.** A newly admitted student who completely withdraws during his/her first quarter of enrollment and prior to or during the third week of instruction will not qualify for readmission. Under this condition the student is required to reapply through the Office of Admissions.

**Withdrawal from a course.** To drop a course after the established deadline for the quarter, students must petition for and obtain the approval of the dean of their college. The dean may direct the Office of the Registrar to enter a grade of W, F, NP (not passed), or U (unsatisfactory), as appropriate, on the student's record, or may cancel the student's enrollment. The dean may also stipulate that future enrollment in the same course be subject to approval. Students should be aware that late withdrawals are granted only under exceptional circumstances. Students should not discontinue class attendance on the assumption that the request will be approved.

**Lapse of status.** Lapse of status is the automatically enforced withdrawal of a student from the university. A student's status may be lapsed (1) for failure to comply with the conditions for admission, (2) for failure to register and enroll in courses by the deadline stated in the *Schedule of Classes*, (3) for failure to settle financial obligations when due or to make satisfactory arrangements with the Billing, Accounts Receivable, and Collections Office (BARC) if payment cannot be made, (4) for failure to respond to official university notices (including failure to remove blocks).

**Leaves of absence.** Graduate students are required to maintain continuous registration. Under extraordinary circumstances graduate students may request a leave of absence from the Graduate Division. For further information concerning leaves of absence for graduate stu-

dents, consult the chapter “Graduate Education at UCSB” or the Graduate Division Web site at [www.graddiv.ucsb.edu](http://www.graddiv.ucsb.edu).

Undergraduate students may request leave of absence when studying abroad through a non-UC sponsored program. For more information regarding the non-UC sponsored leave request refer to the Leaving and Returning section online at [www.registrar.ucsb.edu/stu\\_abr/index.htm](http://www.registrar.ucsb.edu/stu_abr/index.htm).

**Readmission—Undergraduates.** Eligible undergraduate students who wish to register at UCSB after an absence, a complete withdrawal, cancellation, or lapse of their registration, must file an application for readmission with the Office of the Registrar. Eligibility will be determined at the point of application processing. Applications are available on the Registrar’s Web site at [www.registrar.ucsb.edu/read\\_rein.htm](http://www.registrar.ucsb.edu/read_rein.htm).

**Readmission opens** November 1 (of the preceding year) for fall quarter; July 1 (of the preceding year) for winter quarter; October 1 (of the preceding year) for spring quarter. Readmission deadlines are:

**Fall - the second Monday in August**

**Winter - the second Monday in November**

**Spring - the second Monday in February**

These deadlines may be closed without notice, pending enrollment restrictions. The non-refundable application fee is \$60.

Readmission is generally approved for students who were on regular academic status when they left UCSB provided that any college-level work completed in the interim is satisfactory and space is available. Transcripts of all course work undertaken elsewhere must be submitted to the Office of the Registrar to complete the readmission process.

A newly admitted student who completely withdraws during his/her first quarter of enrollment and prior to or during the third week of instruction will not qualify for readmission. Under this condition the student is required to reapply through the Office of Admissions.

Students who are seeking readmission to the College of Letters and Science after having already completed 155 or more units need the approval of the dean. In some cases, they will be required to submit a “Proposed Schedule for Graduation” before readmission will be considered. In general, readmission will be approved only for those students whose proposed schedule leads to graduation within 200 total units. As the proposal must be endorsed by the student’s major department (and minor department if a minor is planned), students should begin this process several months prior to their intended return.

Students in the College of Letters and Science should note the following application deadlines if they are seeking readmission after completion of 155 units or reinstatement after poor academic performance: the second Monday in August for fall quarter; the second Monday in November for winter quarter; the second Monday in February for spring quarter. Those who miss the deadline to apply for their desired quarter will have to apply for readmission (and/or reinstatement) to a later quarter.

Any student returning to UCSB following an absence of three quarters or more (excluding summer) must file a new Statement of Legal Residence (SLR) available online at [www.registrar.ucsb.edu/residenc.htm](http://www.registrar.ucsb.edu/residenc.htm). The deadline for submission of an SLR is two weeks from admission or readmission.

**Reinstatement—Undergraduates.** Students who were on reinstatement probation, or were subject to academic disqualification, or dismissed by dean’s action when they left the university, will not be considered for readmission unless first reinstated by the dean of their college. The dean will establish the conditions of such reinstatement, if approved.

**Reinstatement—Graduates.** Students who wish to register after a break in enrollment must petition for reinstatement through the Graduate Division. Reinstatement is not automatic and requires the approval of the student’s academic department; the student’s record will be evaluated in terms of past academic performance and timely completion of the degree. Students seeking to reinstate who have exceeded the time limit for completion of the master’s and/or doctoral degrees must also submit a plan and timetable for degree completion to their department and the Graduate Division for review and approval.

**Repetition of Courses**

Certain courses may be repeated for credit, and are identified in the course descriptions in this catalog. Repetition of any course other than these is subject to certain regulations, which pertain only to courses completed in the University of California. This policy excludes courses taken through UC Extension, except for UCSB courses completed by Open Enrollment through Extension after spring 2000 and accepted toward the degree. The regulations are as follows:

1. An undergraduate student may repeat only those courses in which a grade of C-, D+, D, D-, F, or NP was awarded. Such courses may be repeated for letter or passed/not passed grades if the courses are so offered and if the student is eligible for that option. In no case, however, shall an NP grade replace an earlier letter grade in the computation of the grade-point average. A course in which an NP has been received may be repeated on a letter-grade basis if so offered.
2. Undergraduates who wish to repeat a course more than once must obtain the prior approval of their college dean at the time of registration.
3. Degree credit for a course will be given only once, but the grade assigned at each enrollment will be permanently recorded on the student’s transcript.
4. In computing the grade-point average of an undergraduate who repeats courses in which grades of C-, D+, D, D-, or F were received, only the most recently earned grade and grade points in each course will be used for the first 16 units repeated (unless the new grade is NP). Second attempts of W graded courses will not be added to this repeat total. In the case of repetitions beyond the 16 units, both initial and repeated grades will be used in the computation of the grade-point average. All grades, however, remain a part of the student’s permanent record.
5. Undergraduate students who plan to repeat a UCSB course at another UC campus, or vice versa, must petition the dean of their college

to establish the equivalency of the courses prior to the intended repetition.

6. Undergraduate students must indicate repeats at the time of registration and when adding courses to their study load.
7. Since many graduate courses are routinely repeated for credit or to earn a better grade, graduate students must consult their academic department if they wish to repeat a class for the purpose of substituting the second grade for the first.

### Additional Enrollment Opportunities

**Concurrent enrollment.** Students who wish to enroll simultaneously in undergraduate courses at UCSB and at another non-UC college-level institution must obtain prior approval from the dean of their college. (For concurrent enrollment at other UC’s, see “Simultaneous Enrollment Program” further on in this section.) UCSB offers a very full curriculum, and therefore concurrent enrollment is rarely approved. Normally, such enrollment is approved only for courses that are not available in the curriculum at UCSB. Graduate students may enroll at another college-level institution while pursuing a graduate degree at UCSB without the approval of the dean of the Graduate Division. See the section titled “Transfer of Credit” in the chapter “Graduate Education at UCSB” for information on the rules governing transfer of credit at UCSB.

Simultaneous enrollment by undergraduates in two colleges or schools at UCSB, such as Engineering and Letters and Science or Creative Studies and Letters and Science, is also subject to the approval of the deans of the colleges or schools involved. Graduate students may enroll in courses in two or more colleges or schools at UCSB without the approval of the dean of the Graduate Division.

**Intercampus Transfer.** Undergraduates may apply for transfer to another University of California campus. The *Application for Undergraduate Admission* is available online at [www.universityofcalifornia.edu/apply](http://www.universityofcalifornia.edu/apply). To ensure

Students at work in the campus library.

admission consideration, students should file their application during the appropriate filing period.

If you are or have been enrolled in a regular UCSB quarter, you may apply for an intercampus transfer to another UC campus provided you have not been registered subsequently in a regular term at another collegiate institution. A \$60.00 nonrefundable fee is required at the time you submit your application. Application filing periods are listed in the “Deadlines” section.

**Intercampus Visitor Program (ICV).** The ICV Program allows qualified undergraduate students at UCSB to take advantage of educational opportunities at other UC campuses. Students may take courses that are not available at their home campus, participate in special programs, or study with a distinguished faculty member at another campus for one quarter. Students must meet the following qualifications:

- Current student in good standing;
- Completed a year at UCSB;
- Maintained a GPA of at least 2.0; and,
- Obtained the approval of their college.

ICV applications are available on the Registrar’s Web site at [www.registrar.ucsb.edu/intercampus.htm](http://www.registrar.ucsb.edu/intercampus.htm). For more information, call the Program Coordinator at (805) 893-8905, or email: [Reg-Undergrad-Visiting-Programs@sa.ucsb.edu](mailto:Reg-Undergrad-Visiting-Programs@sa.ucsb.edu).

Note: The host campus pays the visiting student’s financial aid. If you are a financial aid recipient, you must have a copy of your Free Application for Federal Student Aid (FAFSA) sent to the host campus. To make this change, access your FAFSA information online at [www.fafsa.ed.gov/](http://www.fafsa.ed.gov/).

**Intersegmental Cross Enrollment Program (ICE).** Undergraduate students enrolled in any of the California Community Colleges, a California State University, or a University of California may enroll without formal admission in a maximum of one course per academic term at a campus of either of the other systems. Qualifications for this program include:

- Completion of one term at the home campus;
- 6 unit minimum enrollment at home campus;
- 2.0 GPA at home campus;
- Registered/paid at home campus;
- Prerequisite requirements met; and,
- California resident.

UCSB students should note that credit toward the degree is rarely allowed for coursework taken at a community college or California State University while the student is simultaneously enrolled at UCSB. ICE applications are available on the Registrar’s Web site at [www.registrar.ucsb.edu/intercampus.htm](http://www.registrar.ucsb.edu/intercampus.htm). For more information about the ICE Program, call the Program Coordinator at (805) 893-8905, or email: [Reg-Undergrad-Visiting-Programs@sa.ucsb.edu](mailto:Reg-Undergrad-Visiting-Programs@sa.ucsb.edu).

**Simultaneous Enrollment Program.** UC undergraduate students may enroll, without formal admission and without payment of additional University fees, in courses at another UC campus on a space available basis at the discretion of the appropriate campus authorities on both campuses. Qualifications for this program include:

- Completion of a minimum of 12 units as a matriculated student at the home campus;
- Combined enrollment at both campuses in the current term for a minimum of 12 units as a

matriculated student;

- In good standing; and,
- Appropriate academic preparation as determined by the host campus.

For more information, call the Program Coordinator at (805) 893-8905, or send email to: [Reg-Undergrad-Visiting-Programs@sa.ucsb.edu](mailto:Reg-Undergrad-Visiting-Programs@sa.ucsb.edu).

**Intercampus Exchange Program for Graduate Students (IEPGS).** IEPGS allows qualified graduate students at UCSB to take advantage of educational opportunities at other UC campuses. If approved for IEPGS, students may take courses not available at UCSB, participate in special programs, or study with a distinguished faculty member at another campus for one quarter. Students must meet the following qualifications to be eligible to participate:

- Current student in good standing;
- Completed a year at UCSB;
- Maintained a GPA of at least 3.0;
- Obtained approval of their home department;
- Exchange approved by the Graduate Division.

**Enrollment in UC Extension courses.** A student who wishes to complete courses through UC Extension must obtain prior approval by petition to the dean of the student’s college. With the exception of UCSB Open Enrollment courses, Extension courses are not included in determining grade-point averages. If accepted toward a bachelor’s degree or graduate degree, UCSB courses completed by Open Enrollment through Extension in fall 2000 or later will be used to calculate a student’s UC grade-point average. Courses completed through Extension do not apply toward academic residence requirements.

Undergraduates are not eligible to complete courses by Open Enrollment through UC Extension if they were subject to disqualification or dismissed from the university at the end of their last regular quarter at UCSB. UC Extension courses in the X1-X199 series shall be accepted in fulfillment of unit requirements upon petition to the Registrar’s Office. University Extension credit courses X300 and X400 shall be accepted toward the B.A., B.S., or post-graduate programs leading to recommendations for teacher credentials only within the limitations prescribed by the various colleges and schools. Transfer of these units for fulfilling subject requirements will be determined by the usual procedures governing evaluation of credits gained at other acceptable institutions. Degree credit is not given for Extension courses in the X800 series.

Extension courses may apply to graduate degrees only if approved by the Graduate Council. Extension courses other than courses taken through Open Enrollment may apply to graduate degrees only with the prior approval of the Graduate Division and the academic department. See the section titled “Transfer of Credit” in the chapter “Graduate Education at UCSB” for information on the rules governing the transfer of credit from UC Extension.

## Examinations

### Final examinations

Final examinations are required in all undergraduate courses. The official dates and times of all final examinations are published in the

*Schedule of Classes*. No instructor is authorized to change these times without prior approval of the Undergraduate Council, and students are responsible for arranging their courses so that their final examinations will not conflict. Normally, examinations will be written, and a maximum time period for their completion will be announced in advance. No student will be permitted to exceed this maximum unless it has been predetermined by the Disabled Students Program that this is an appropriate accommodation for which the student is eligible. The maximum time for a final in a non-laboratory course is three hours. Individual exceptions from finals are not permitted except in the case of comprehensive examinations.

### Comprehensive examinations

At the end of a quarter in which an undergraduate student expects to graduate, the major department may (1) examine the student’s competency in the major field, (2) exempt the student from final examinations in courses offered by the department during that quarter, and (3) with the approval of the Undergraduate Council, assign a credit value to such a comprehensive examination.

### Credit by Examination

Students currently registered in any regular term who by reason of advance preparation believe themselves to be adequately grounded in the materials and principles of a given course may petition for credit by examination for any course offered at UCSB, or in any other subject appropriate for inclusion in a University curriculum. If credit is sought in a course not regularly offered at UCSB, the petition must be approved by the Undergraduate Council.

Because of the nature of graduate degree requirements, the credit by examination option is not normally used by graduate students. Under no circumstances can a graduate course be completed through the credit by examination option. Questions may be directed to the Graduate Division.

Students may elect, at the time their petition is initiated, to take the examination on the Passed/Not Passed basis, provided they are eligible for enrollment in a course on that basis during that term and P/NP grading is offered for the course, and they will be assigned the grade they earned in the examination. Failure to pass the examination will be recorded as an F, NP, or U, whichever is appropriate, in the student’s record.

Certain courses, by reason of special features of the instruction, such as extensive laboratory work, may not be considered appropriate for obtaining credit by examination. In addition, credit by examination will not be approved in the following circumstances: (1) if the student has had prior instruction in the topic (including during high school), (2) for the purpose of repeating a course, (3) for courses in subjects in which the student has completed more advanced work, (4) for elementary and intermediate courses in a student’s native language, or (5) for granting credit for a course which the student has attended or audited. All petitions for credit by examination must be approved by the dean of the appropriate college in advance of the date of the examination. Accordingly, each petition for credit by examination must

**Catching up on reading alfresco.**

be submitted to the dean at least three weeks prior to the examination. Ordinarily, credit by examination is limited to 12 units.

### Auditing Courses

During the regular academic year, students may audit a course (sit in unofficially) with the permission of the instructor. During summer sessions there are more formal procedures to follow, as described in the Summer Sessions catalog. Auditors are not expected to do assignments, take examinations, or participate in classroom discussion, and no record of the audited class appears on the student's quarter schedule or UCSB transcript. Students will not be permitted to earn credit by examination in courses which they have audited.

### Dead Week

"Dead Week" is the week prior to final examinations. The purpose of dead week is to allow students time to begin preparation for final examinations without academic obligations beyond the normal class meetings. The giving of any examinations is, therefore, strongly discouraged, especially giving two examinations in the same course within the time span of dead week and finals week.

Further, the scheduling during dead week, by faculty or departments, of non-instructional events for which student participation is mandatory, is also strongly discouraged, and requires advance approval by the Office of Student Life.

## Units of Credit

Credit for academic work at UCSB is expressed in units. Generally, the value assigned to a course is determined at the rate of 1 unit for every 3 hours of student work required each week during a 10-week term. The unit value assigned to a course is determined by the number of class meetings each week and by the student's class preparation time.

### Class Levels

Undergraduate class level is determined by the number of units completed, as follows:

|                        | Units Required |
|------------------------|----------------|
| <b>Lower Division:</b> |                |
| Freshman               | 0.0 - 44.9     |
| Sophomore              | 45 - 89.9      |
| <b>Upper Division:</b> |                |
| Junior                 | 90.0 - 134.9   |
| Senior                 | 135.0 or more  |

## Grading System

The following grades are used to report on the work of UCSB students:

| Undergrad. Courses                          | Graduate Courses   |
|---|--------------------|
| A (excellent)                               | A (excellent)      |
| B (good)                                    | B (good)           |
| C (adequate)                                | C (adequate)       |
| D (barely passing)                          | D (barely passing) |
| F (not passing)                             | F (not passing)    |
| P (passed)                                  | S (satisfactory)   |
| NP (not passed)                             | U (unsatisfactory) |
| I (incomplete)                              | I (incomplete)     |
| IP (in progress)                            | IP (in progress)   |
| W (withdrawal; undergraduate students only) |                    |

The grades A, B, C, and D may be modified by plus (+) or minus (-) suffixes. Grade points for each unit are assigned by the registrar as follows:

|          |         |          |
|----------|---------|----------|
| A+ = 4.0 | A = 4.0 | A- = 3.7 |
| B+ = 3.3 | B = 3.0 | B- = 2.7 |
| C+ = 2.3 | C = 2.0 | C- = 1.7 |
| D+ = 1.3 | D = 1.0 | D- = 0.7 |

F, I, IP, P, NP, S, U and W = 0

Unit credit, but not grade-point credit, is assigned for P and S grades. For a description of the grading system in the College of Creative Studies, see the College of Creative Studies chapter in this catalog.

### Incomplete Grades

The grade Incomplete (I) may be assigned when a student's work is of passing quality but is incomplete.

**Petitioning process.** An Incomplete grade may be placed on a student's record only if the completed Petition for an Incomplete Grade is signed by the instructor and is on file in the Office of the Registrar by the last day of the quarter. In the absence of the petition or of a specific grade other than I, the registrar will record a grade of F, NP, or U. A \$5 Incomplete Grade Processing fee is charged to the student's BARC account for each Incomplete grade.

**Completion deadline.** The student is entitled to have the grade of Incomplete replaced by a passing grade as determined by the instructor concerned, and to receive unit credit and appropriate grade points, upon satisfactory completion of the coursework. Coursework must be completed by the end of the term following the term in which the I grade was reported, whether or not the student is enrolled for the quarter or the course is offered. Unless the work is completed and a grade is reported to the Office of the Registrar by the deadline, the I will be changed automatically to F, NP, or U, as appropriate.

If the instructor is unavailable, the chair of the department in which the course was offered is authorized to supervise completion of the work and to make the appropriate grade change. The instructor and chair also have authority to extend the deadline for completion in the event of unusual circumstances that would clearly impose an unfair hardship on the student if the original deadline were maintained.

An Incomplete grade on the student's record at the time of graduation in a course not necessary for the fulfillment of degree requirements may be removed only up to the end of the fifth week of the term following the date of graduation. An I grade may be removed by the student's submission of completed coursework to the faculty member for the assigning of a new grade. If not removed, the I grade remains an I permanently.

**Grade changes to Incomplete.** A grade may be changed to an I only with the approval of the dean of the student's college and successful completion of the petitioning process.

**Graduate students.** Graduate students should consult "Academic Eligibility for Graduate Students" below, for details on the possible ramifications of I grades.

### In-Progress Grades

The In-Progress grade (IP) may be assigned provisionally in all but the last term of special courses extending over more than one term. In the last term, the grade assigned by the instructor replaces the provisional IP grades for all prior portions of the course. If a student fails to enroll in or complete the final course of a sequence in the next quarter in which it is offered, the IP grades will be replaced by the grade of I. Further changes of that grade will be subject to the conditions covering Incomplete grades. IP designations are not included in the computation of grade-point averages. Courses graded IP are identified in the *Schedule of Classes*.

### Passed/Not Passed Grades

Passed/not passed grades (P/NP) are not included in the computation of university grade-point averages. Courses graded P, however, are acceptable for unit and appropriate degree credit. P grades will be assigned only for coursework equivalent to a C or better on the letter-grade basis. NP grades will be assigned for work equivalent to a C- or below. No credit is given for courses graded NP.

Some undergraduate courses may be offered exclusively on a P/NP basis. These courses are identified in the *Schedule of Classes*. Undergraduate students on academic probation, as well as those in good standing, may take such courses without special approval. Graduate students may take undergraduate courses P/NP with the approval of their graduate advisor, provided the course is offered P/NP.

Undergraduate students may elect the P/NP grading option for courses provided they meet the following conditions:

1. They are in good academic standing (i.e., not on academic probation).
2. The course is open to all qualified students on this basis and is so designated in the *Schedule of Classes*.
3. The course is not required or accepted for the student's major or minor. Courses in

the major or minor, whether lower- or upper-division, in or outside of the major department, must be taken for a letter grade. With prior approval of appropriate faculty committees, a department may specify that certain "major" or "minor" courses may be taken P/NP. Courses for which such approval has been granted are identified in the department entries in this catalog.

4. They elect this option at the time of registration or thereafter, but not later than the end of the seventh week of classes. Students are responsible for determining whether they are qualified to enroll in courses on a P/NP basis according to the requirements stated here.
5. At the time of graduation, they will have completed at least 120, or two-thirds, of their units earned in residence at UCSB on a letter-grade basis. There is no limit on the number of courses that may be taken P/NP during a single quarter. The limitation on the number of units taken P/NP does not apply to students who are majoring exclusively in Creative Studies.
6. They have not been restricted or prohibited from the use of the P/NP option due to having earned an excessive number of NP grades. Students with more than 8 units of NP grades in one quarter or with more than 20 units of NP grades in all terms of university enrollment combined may be so restricted. In the case of repeated courses in which the initial grade was NP, the original NP will not be included in this 20-unit total.
7. Students who take courses in their major department in excess of minimum major or minor requirements may elect the P/NP option for those courses.

### Satisfactory/Unsatisfactory Grades

Graduate students may take graduate courses on a satisfactory/unsatisfactory (S/U) basis provided the course is so offered and their graduate advisor approves. (Courses numbered 200-599 are eligible to be graded S/U, while courses numbered 1-199 are eligible to be graded P/NP.) S grades will be assigned for coursework equivalent to a B or better on the letter-grade basis. U grades will be assigned for work equivalent to a B- or below. In some departments, classes required for the degree must be taken for letter grades. Students electing the S/U grading option should discuss this issue with their graduate advisor.

### Withdrawal Grade

For undergraduate students, the W grade will be assigned when a student withdraws from the university or receives permission to drop a course after the deadline for dropping courses established by the Executive Committee of the college or school in which the student is enrolled. The W grade will be assigned for each course affected, including graduate courses when an undergraduate student has been approved to enroll in a graduate course and subsequently withdraws. Courses in which a W has been entered on the student's record will be disregarded in determining a student's grade-point average and will not be considered as courses attempted in assessing the student's grade-point average for graduation. W grades are not assigned to graduate students. When

*Celebrating commencement.*

graduate students successfully withdraw from a course, it is permanently removed from their transcript.

### Grade Changes

All grades except I and IP are final when submitted to the registrar by the instructor, subject to the provisions noted in "Contested Grades" (below). Thereafter, an instructor may report a grade correction only in the case of clerical or procedural error.

An instructor also may change a grade in the quarter following that in which the original grade was received if the basis for the change is found in work previously accomplished in the course as a part of the student's regular participation in class activity. However, such changes must not create inequities to others whose grades remain unaltered. No final grade (except I) may be revised by reexamination or additional coursework. Further, no letter grade may be changed to P/NP, and no P or NP may be changed to a letter grade unless the change is approved by the dean of the student's college. All grades changed to Incomplete must be accompanied by the necessary Incomplete Grade Petition endorsed by the dean of the student's college.

### Contested Grades

A student may challenge a grade on grounds that it was based on criteria not directly reflective of coursework. Full appeal procedures and review authorities are described in detail in the Appendix.

## Transcripts and Verifications

### Official transcripts

Official transcripts are printed on security paper and display the entire academic history of a student at UCSB. They may be ordered from the Office of the Registrar. Transcripts are sent first class U.S. mail. Current prices for both

transcripts and verifications are available on the Registrar's Web site at [www.registrar.sa.ucsb.edu/ts.htm](http://www.registrar.sa.ucsb.edu/ts.htm).

Currently registered students may also order Official Transcripts by accessing the GOLD system at: <http://my.ucsb.edu>. The fee will be billed to the student's BARC account when ordered through GOLD. Transcripts will not be released if the student has outstanding financial obligations to the university. It currently takes 3-4 working days to process a standard transcript request. Additional information is available on the Office of the Registrar's Web site at: [www.registrar.ucsb.edu/ts.htm](http://www.registrar.ucsb.edu/ts.htm), or by calling (805) 893-3135.

### Official Transcript Orders Paid by Credit Card

Non-current students may order Official Transcripts through our third party credit card vendor using any credit card. Students will need to furnish their seven-digit permanent ID (PERM) or social security number. This service is available only by Web site; the additional expenses incurred through this vendor involve service charges for credit card use. Our credit card vendor can be reached from our Web site at: [www.registrar.sa.ucsb.edu/ts.htm](http://www.registrar.sa.ucsb.edu/ts.htm).

### Verification of Student Status

Official Verifications are printed on security paper with specific statements verifying a student's enrollment, degree status, overall GPA, etc.

If you wish to expedite the delivery of your Verification, call (805) 893-3135 for more information.

Arrangements for Rush and Federal Express services need to be made in advance with the Registrar's Office.

Currently registered students may also order verifications by accessing GOLD. The fee will be billed to the student's BARC account when ordered through GOLD.

Enrollment and degree information of most students is now also available on the UCSB Registrar's Web site at no charge. This service is available for students whose records have been

converted to our new computer system. This includes all students enrolled from 1990 on and many students from previous decades. The Web site is <http://gnet.ucsb.edu/verification/>. This Web site is designed to be used by employers and businesses who just need to verify information without obtaining an official document. To access this information, it will be necessary to have the student's last name and also two of these three pieces of information: first name, first five digits of the student's social security number or birth day and month. Through this Web site the student's dates of attendance and status at UCSB, the student's major and address information and the date the student's degree was awarded can be verified.

Verifications of enrollment for a given academic term cannot be released until the student has registered and is in paid status for that term. Additional information is available on the Office of the Registrar Web site at [www.registrar.ucsb.edu/ts.htm](http://www.registrar.ucsb.edu/ts.htm) or by calling (805) 893-3135.

## Eligibility

### Academic Eligibility for Undergraduates

**Academic probation.** Undergraduate students in the College of Creative Studies, the College of Engineering, and the College of Letters and Science are placed on academic probation if their cumulative grade-point average in the University of California falls below 2.0 (C average) at the end of any quarter. While on academic probation, students are under the supervision of the dean of their college. Students on academic probation will be returned to regular academic status if they raise their cumulative average to 2.0 or above by the end of their second quarter on academic probation.

**Academic disqualification.** Any of the following conditions make undergraduate students in the College of Creative Studies, the College of Engineering, and the College of Letters and Science subject to academic disqualification from further enrollment at UCSB:

1. At the end of any quarter their grade-point average is less than 1.5 for that quarter.
2. Their grade-point average for any quarter falls below 2.0 while they are on academic probation.
3. After two consecutive quarters on academic probation they have not raised their cumulative UC grade-point average to 2.0 or better.
4. While on reinstatement-probation their quarter grade-point average is below 2.2 and their cumulative grade-point average is below 2.0.

Students who are subject to academic disqualification are not eligible to register again at UCSB until and unless they are reinstated on probation by the dean of their college. Students should refer to the college publications for further information concerning academic disqualification.

**Reinstatement.** Undergraduate students subject to academic disqualification may appeal to the dean of their college for reinstatement on probationary status. The dean will decide if a student may be reinstated and may set conditions for reinstatement. Reinstated students may register at UCSB under the conditions set

by their dean and will be subject to the dean's supervision until they have regained regular academic status.

In order to transfer either from one UC campus to another or from one school or college to another on the same campus, students who are on academic probation or subject to academic disqualification must obtain the approval of the dean of the college or school to which transfer is requested. Upon completion of the transfer, the student is subject to the supervision of the dean of that college or school.

### Academic Eligibility for Graduate Students

Academic standards for graduate students at UCSB are determined by the Graduate Council and by individual academic departments. Students must maintain a cumulative grade-point average of at least 3.0 (B) to remain in good standing in the Graduate Division at UCSB and to be awarded a graduate degree. (Note that some departments set a standard higher than 3.0.) Students must also complete university and departmental requirements in a timely manner to remain in good standing. Students with lower grade-point averages are subject to dismissal. On the academic department's recommendation, the Graduate Dean either places such students on academic probation or dismisses them from graduate status. Graduate students carrying more than 12 units of Incompletes, No Record, and/or No Grades may be placed on academic probation and become subject to dismissal. For information concerning academic standards for graduate students, consult the chapter "Graduate Education at UCSB" or the Graduate Division Web site at [www.graddiv.ucsb.edu/academic](http://www.graddiv.ucsb.edu/academic).

In addition to the basic standards of scholarship detailed above, doctoral students who cannot develop a satisfactory dissertation research proposal or form a faculty committee of three members to supervise the dissertation research are subject to dismissal from graduate standing for failure to make satisfactory progress toward the degree. Doctoral students who fail to advance to candidacy within four years of admission become subject to academic probation and possible dismissal. Master's students have four years to complete their degree; doctoral students have seven years. Students must make timely progress toward degree completion to avoid becoming subject to academic probation and possible dismissal.

## Graduation

Undergraduate students are responsible for reviewing records carefully to ensure that they are completing all degree requirements. To assist in preparing for graduation, students should review the following records located in the Academic History section within GOLD.

New Student Profile listing degree requirements and any transfer credit earned is available online to students soon after they are admitted to UCSB.

Credit Memo is a summary available to UCSB students who earned transferable credit from another institution.

Progress Check is an evaluation of how com-

pleted courses and exams are applied toward University and college requirements. This does not include major requirements.

Degree Audit is an evaluation of how completed courses and exams are applied to University, college, and major requirements.

A graduation check is performed by the Office of the Registrar when an undergraduate declares candidacy for graduation. As the graduation check is a final review of records, it occurs too late to be of assistance in deciding which courses to take during the last quarter.

For assistance in reviewing major requirements, students should consult their major department advisor.

Students in the College of Creative Studies are expected to consult with their assigned advisors on a quarterly basis to monitor progress, both in the major and toward graduation.

Graduate students must declare their candidacy for a graduate degree with both their academic departments and the Graduate Division at the beginning of the quarter they intend to complete the degree. A graduate degree cannot be awarded until the student has fulfilled all relevant university and departmental degree requirements, as determined by degree checks conducted by the student's academic department and the Graduate Division. The degree candidate is responsible for correcting any deficiencies found during a final degree check.

### How to Graduate

All candidates for undergraduate degrees must announce their candidacy for graduation on GOLD no later than the second week in the quarter in which the degree is anticipated. (See specific deadlines in the *Schedule of Classes*.) In order to graduate at the end of a given quarter, students must complete all work necessary for the fulfillment of degree requirements (including transfer work and any Incomplete grades) by the last day of the quarter. Students who find that they are not eligible to graduate as planned must withdraw candidacy for that quarter on GOLD. Students must declare candidacy on GOLD for the new date of graduation. The student will not be considered a candidate for a degree until such action is taken.

Graduate students must communicate their intent to graduate with their academic department in order to begin the process of a degree check. This process is finalized by the Graduate Division.

### Commencement ceremonies

Although there are four possible dates of graduation each year (December, March, June, and September), commencement ceremonies are held only once a year in June. Undergraduate students whose names are on the degree list for one of the quarters in the current academic year (including spring and summer candidates for the degree) and who have completed or plan to complete all degree requirements, are eligible to participate in these ceremonies. Information concerning commencement will be sent to potential candidates during spring quarter. Undergraduate students with questions about commencement ceremonies are asked to phone (805) 893-8289. Graduate students may call (805) 893-2277. Graduate students can find information and register for the Graduate Divi-

sion Commencement Ceremony at [www.graddiv.ucsb.edu/commence](http://www.graddiv.ucsb.edu/commence). This Web site is updated around February 1 each year.

## Diplomas

Diplomas are mailed several months after graduation. Students who need official verification of graduation before the diploma is ready may order transcripts from the Office of the Registrar. The degree earned must be indicated on the transcript request. If all degree requirements have been completed prior to the official date of graduation, and if immediate proof that requirements have been met is needed, undergraduate students may request a letter of verification from the Office of the Registrar. Graduate degree candidates who need proof of degree completion prior to receipt of their final transcript should request a letter of degree verification from the Graduate Division.

## Undergraduate honors at graduation

To be eligible for honors at graduation an undergraduate student must have completed at least 76 letter graded units within the University of California, including summer session but excluding UC Extension. UCSB courses taken by open enrollment through Extension, beginning Fall 2000, will be included in UCSB's GPA. If all graduation requirements are met, honors are awarded by each college as approved by the Undergraduate Council. Honors are awarded to the top 20% in the following order:

|            |                |
|------------|----------------|
| Top 2.5%   | Highest Honors |
| Next 6%    | High Honors    |
| Next 11.5% | Honors         |

The grade-point average thresholds for the above honors categories are calculated based on the population of graduates from the preceding academic year.

*Distinction in the Major* is awarded to students who successfully complete a project or thesis with distinction as part of a departmental senior honors program.

*College Honors* are awarded to students in the College of Letters and Science who have completed 135 or more graded units in the University of California with a grade-point average of at least 3.85.

The *Certificate of Academic Excellence* is presented to students who have completed the College of Letters and Science Honors Program.

Because of the advanced nature of graduate degree work, no additional honors are assigned for the award of a graduate degree.

# Student Conduct and Responsibility

## Personal conduct

Students registered in the University of California assume an obligation to act in a manner compatible with the university's function as an educational institution. The publication titled *Campus Regulations Applying to Campus Activities, Organizations, and Students*, available from the Office of Student Life, describes policies and regulations concerning these issues.

Allegations of violations of campus or univer-

# A Statement of Campus Standards

Being a student at a world-class institution confers privilege, prestige, and unique opportunity, but it also obligates you to meet a set of standards and to fulfill certain expectations. I ask only three things from you as a student in our academic community: scholarship, leadership, and citizenship. If you deliver these and hold to the values articulated below, your time at UCSB will be more meaningful and what you take away at graduation will be infinitely more valuable.

## *Integrity in Academic Pursuits*

In an institution where the search for knowledge and truth is the primary goal, integrity in teaching, learning, research, and scholarship is paramount. Dishonesty undermines our common missions. This translates into the obvious: write your own papers, take your own tests, do your own work.

## *Respect and Consideration in Interactions with Others*

The real test of this value comes when we encounter people whose backgrounds, beliefs, and world views differ from our own. If your educational experience is all that it should be, you will graduate prepared to navigate a society that comprises many different kinds of people. You will also graduate having seen and understood different world views, and will perhaps expand your own. These are the key skills of the new century, and your education will be incomplete if you graduate without these abilities.

Mutual respect is a non-negotiable. What this means is that there are some boundaries that should not be crossed. Intolerant and disrespectful behavior, especially regarding race, sexual orientation, gender, ethnicity, and religion, compromises our sense of community and our ability to live and learn together.

## *Free, Open, and Respectful Exchange of Ideas*

Our community requires the respectful exchange of ideas. People should be passionate about what they believe and how they express that belief, but they must also be civil in both word and deed. This principle is particularly important when a community encompasses people who have different backgrounds, world views, etc. I am not talking about political correctness, I am talking about basic respect — about how people treat one another, not about what people think or believe.

## *Contributions to and Participation in the Community*

We should all serve the campus and community while we are here. Contributing to the community can take the form of simply being a good citizen, being considerate of neighbors, cleaning up the campus and community, volunteering at a school or social service in town, or helping to raise money for charity.

— Michael D. Young  
Vice Chancellor for Student Affairs

sity regulations will be investigated by appropriate officials. The university reserves the right to make the final determination in any case of student discipline. All disciplinary actions are administered by virtue of authority vested in or delegated by the chancellor.

## Academic conduct

The core of a university's integrity is its scholastic honesty. Academic dishonesty vitiates the university's educational role and defrauds all who comprise its community. It is expected that students understand and subscribe to the ideal of academic integrity and are willing to bear individual responsibility for their work. Materials submitted to fulfill academic requirements must represent a student's own efforts. Any act of academic dishonesty, such as plagiarism or other forms of cheating, is unacceptable and will be met with disciplinary action.

## Student responsibility

Each student is responsible for compliance with the regulations printed in the General Catalog, college publications, and the *Schedule of Classes*, and with official notices published in the campus newspaper or posted on official bulletin boards. Changes of name or address or both must be reported to the Office of the Registrar immediately.

## Student work

All material, of whatever nature, submitted by a student in satisfaction of all or any portion of a course requirement is the property of the university and is not subject to any claim on the part of the student who has submitted it. Any material produced by a student independent of any course requirement must be removed from university premises no later than the last day of the quarter in which the work was produced. The university assumes no obligation to hold or safeguard such material, and the risk of possible destruction, loss, or other disposition is assumed solely by the student.

## Authority of instructors

Each instructor has the authority to determine whether a student is sufficiently prepared to enter upon or to continue in the study of that instructor's subject. However, an instructor may not exclude a student from a course on political grounds, or for reasons of race, religion, sex, sexual orientation, age, ethnic origin, disability, or for other arbitrary or personal reasons. A student who believes that such criteria were used may challenge the instructor's decision by means of the grievance procedures set forth in the Appendix.

# Undergraduate Education at UCSB

## Admission

The Office of Admissions assists students in preparing for, applying to, and gaining admission to the University of California, Santa Barbara. UCSB typically accepts transfer students only at the junior level. Prospective students and their parents are invited to visit the campus to observe firsthand the opportunities available to them. Tour programs—which include a campus video, information about admission, housing, and financial aid, and a walking tour of campus led by a student guide—are offered most weekdays and on Saturdays in April and October. All tours leave from the Visitor Center. Students may call (805) 893-8175 for recorded tour information, or may refer to our Web site at [www.admissions.ucsb.edu](http://www.admissions.ucsb.edu) for application information.

## Applying for Admission to UCSB

The first step in applying for admission to UCSB is to submit a University of California undergraduate application. Students should apply online and the Application for Undergraduate Admission is available at UC's Web site at [www.universityofcalifornia.edu/apply](http://www.universityofcalifornia.edu/apply).

**When to apply for admission.** To ensure admission consideration, students should file their application during the appropriate filing period.

| Quarter     | Filing Period       |
|-------------|---------------------|
| Winter 2010 | July 1-31, 2009     |
| Spring 2010 | October 1-31, 2009  |
| Fall 2010   | November 1-30, 2009 |

UCSB will accept applications after the filing periods have ended only if the number of applications received to date and the number of enrollment spaces allow. Also, UCSB is not usually open to applications for the winter and spring quarters. Students should contact the Office of Admissions at (805) 893-2881 to inquire about the winter and spring quarter filing status.

**Application restrictions.** UCSB accepts applications from international students for fall quarter only. The College of Letters and Science does not accept applications from senior-level applicants with 135 or more transferable units.

The following majors accept applications for fall quarter only:

**College of Letters and Science**  
Computer Science (B.A.)

**College of Engineering**  
Chemical Engineering  
Computer Engineering  
Computer Science (B.S.)  
Electrical Engineering  
Mechanical Engineering

## University of California Minimum Admission Requirements

All campuses of the University of California have the same minimum admission requirements. These requirements are used to identify the top 12.5 percent of California high school graduates and are based on two principles: (1) that the level of performance in previous academic work is the best predictor of university success, and (2) that the study of certain subjects provides sound preparation for university work.

Students who fulfill these minimum admission requirements are UC-eligible. In the event that UCSB receives applications from more UC-eligible applicants than can be accommodated, it admits students using selection criteria that are more rigorous than the minimum admission requirements.

## Minimum Admission Requirements for Freshmen who are California Residents

Students are considered freshman applicants if they have not enrolled in a regular session at any college-level institution since graduating from high school. Enrollment in college summer session immediately following high school graduation does not affect the status of freshman applicants. There are three ways to satisfy the University's minimum admission requirements for freshman students: eligibility in the statewide context, eligibility in the local context, and eligibility by examination alone. These are the University's minimum admission requirements; satisfying them does not ensure admission to UCSB.

### Eligibility in the Statewide Context

Eligibility in the Statewide Context is the pathway by which most students will attain UC

*The library's top-ranked Map and Imagery Lab features sophisticated technology, such as this Z240 stereoscope, which aids in aerial photo interpretation.*

eligibility. To be eligible in the statewide context, you must satisfy the subject and scholarship requirements described below. For the eligibility index, please refer to the Web site at: [www.universityofcalifornia.edu/admissions/scholarshipreq](http://www.universityofcalifornia.edu/admissions/scholarshipreq).

### Subject Requirement

To satisfy this requirement, students must complete the high school courses listed below with a grade point average defined by the Scholarship Requirement. This sequence of courses is also known as the “a-g” requirements.

Students must take 15 units of high school courses to fulfill the Subject Requirement, and at least 7 of the 15 units must be taken in their last two years of high school. (A unit is equal to an academic year, or two semesters, of study.)

**Applicants from California high schools:** The courses students take to fulfill the “a-g” requirements must be certified by the University as meeting the requirements and must be included on their high school’s UC certified course list. High school counselors or principals will have a copy of this list. The lists are also available at the following Web site:

<https://doorways.ucop.edu/list/>

#### a. History/Social Science: 2 years required

Two years of history/social science, including one year of U.S. history or one-half year of U.S. history and one-half year of civics or American government; and one year of world history, cultures, and geography.

#### b. English: 4 years required

Four years of college preparatory English that include frequent and regular writing, and reading of classic and modern literature.

#### c. Mathematics: 3 years required, 4 years recommended

Three years of college preparatory mathematics that include the topics covered in elementary and advanced algebra and two and three dimensional geometry. Approved integrated math courses may be used to fulfill part or all of this requirement, as may math courses taken in the seventh and eighth grades that your high school accepts as equivalent to its own courses.

#### d. Laboratory Science: 2 years required, 3 recommended

Two years of laboratory science providing fundamental knowledge in at least two of these three disciplines: biology (which includes anatomy, physiology, marine biology, aquatic biology, etc.), chemistry, and physics.

Laboratory courses in earth/space sciences are acceptable if they have as prerequisites or provide basic knowledge in biology, chemistry, or physics. The latter two years of an approved integrated science program may be used to fulfill this requirement. Not more than one year of ninth grade laboratory science can be used to meet this requirement.

#### e. Language Other than English: 2 years required, 3 recommended

Two years of the same language other than English. Courses should emphasize speaking and understanding, and include instruction in grammar, vocabulary, reading, and composition. Courses in language other than English taken in the seventh and eighth grade may be used to fulfill part of this requirement if your

*Undergraduate researchers work with professors to tackle real-world problems.*

high school accepts them as equivalent to its own courses.

#### f. Visual and Performing Arts (VPA): 1 year required

One year of a yearlong approved arts course from a single visual and performing arts discipline chosen from the following: dance, drama/theater, music or visual art.

#### g. College Preparatory Electives: 1 year required

One year (two semesters), in addition to those required in “a-f” above, chosen from the following areas: visual and performing arts (non-introductory level courses), history, social science, English, advanced mathematics, laboratory science, and language other than English (a third year in the language used for the “e” requirement or two years of another language).

### Scholarship Requirement

The Scholarship Requirement defines the grade point average (GPA) students must attain in the “a-g” subjects and ACT Assessment plus Writing or SAT Reasoning Test and SAT Subject Test scores students must achieve to be eligible for admission to the University.

If your GPA is 3.0 or above (3.4 for non-resident applicants), you satisfy the minimum Scholarship Requirement if you achieve the test score total indicated in the **University of California Eligibility Index** available at this Web site: [www.universityofcalifornia.edu/admissions/scholarshipreq](http://www.universityofcalifornia.edu/admissions/scholarshipreq).

The University calculates the GPA in the “a-g” subjects by assigning point values to the grades earned, totaling the points, and dividing the total by the number of “a-g” course units. Points are assigned as follows: A=4 points, B=3 points, C=2 points, D=1 point, and F=0 points.

Only the grades earned in “a-g” subjects in

the 10th, 11th, and 12th grades are used to calculate the GPA. Courses taken in ninth grade can be used to meet the Subject Requirement if the student earns a grade of C or better, but they will not be used to calculate the GPA.

**Honors Courses:** The University assigns extra points for up to four units of University certified honors level and advanced placement courses taken in the last three years of high school: A=5 points, B=4 points, C=3 points. A grade of D in an honors or advanced placement course does not earn extra points.

The courses must be in the following “a-g” subjects: history, English, advanced mathematics, laboratory science, and foreign language, and they must be certified as honors courses by the University. In these fields, as well as in the fields of computer science, social science, and the visual and performing arts, courses that are designed to prepare students for an Advanced Placement Examination of the College Board or a Higher Level Examination of the International Baccalaureate and college courses that are transferable to the University are acceptable honors-level courses.

**D and F Grades:** D and F grades in the “a-g” courses must be repeated or validated. Students should consult with their counselors to determine how these grades can be improved and how the University will use them in evaluating their scholarship record. Grades for repeated courses in which students initially earned a grade of C or better will not be used.

### Examination Requirement

Freshmen applicants must submit scores on an approved core test of mathematics, language arts, and writing. This requirement can be satisfied by taking the following:

- the SAT Reasoning Test, or the ACT Assessment Plus Writing.

- two SAT Subject Tests in two different subject areas: history, literature, mathematics (Math Level 2 only), science, or language other than English.

Students applying for the fall 2010 term must take the tests no later than the December 2009 test dates. Students should be sure to direct the testing agencies to report their scores to each UC campus to which they plan to apply.

*For the ACT:*

American College Testing Program  
Scoring & Reporting  
P.O. Box 451  
Iowa City, IA 52243-0451

*For the SAT Tests:*

College Board ATP  
P.O. Box 6200  
Princeton, NJ 08541-6200

**Eligibility in the Local Context**

Under the Eligibility in the Local Context (ELC) pathway, the top four percent of students at each participating California high school are designated UC eligible and guaranteed admission to one of UC's nine general campuses.

To be considered for ELC, students must complete 11 specific units of the Subject Requirement by the end of the junior year. With the assistance of each participating high school, the University will identify the top four percent of students on the basis of GPA in the required coursework.

The 11 units include: 1 unit of history/social science, 3 units of English, 3 units of mathematics, 1 unit of laboratory science, 1 unit of language other than English, and 2 units chosen from among the other "a-g" requirements.

The University will notify ELC students of their status at the beginning of their senior year. If you are designated UC-eligible through ELC, you must submit the undergraduate application during the November filing period and complete remaining eligibility requirements—including the Subject and Examination Requirements—to be considered fully eligible.

Fully eligible ELC students are guaranteed a spot at one of UC's nine undergraduate campuses, though not necessarily at their first-choice campus or to their first-choice major.

**Eligibility by Examination Alone**

Freshman applicants who do not meet the requirements for Eligibility in the Statewide Context or Eligibility in the Local Context, may be able to qualify for admission to the University by examination alone by achieving high scores on the ACT Assessment plus Writing or SAT Reasoning Test and two SAT Subject Tests.

To qualify for admission to the University by examination alone, students must satisfy the same examination requirement as students who are eligible in the statewide context. Students must achieve a test score total, as calculated according to the UC Eligibility Index (see: [www.universityofcalifornia.edu/admissions/scholarshipreq](http://www.universityofcalifornia.edu/admissions/scholarshipreq)), of at least 3450. Additionally, students who take the SAT Reasoning Test must score at least 580 on each of its three components; students who take the ACT Assessment plus Writing must score at least 25 in math, science, reading and English/writing. All students qualifying by this path must score at least 580

on each of their two SAT Subject Tests.

Students cannot qualify for this path if they have completed 12 or more units of transferable coursework at a college or university after high school, or if they have taken transferable college courses in any subject covered by the SAT Subject Tests.

An applicant who is currently attending high school may qualify for admission to the University by examination alone without completing his or her high school program.

**Minimum Admission Requirements for Freshmen Who are Nonresidents**

There are two paths to UC eligibility for nonresidents at the freshman level. The first is the same as described above under Eligibility in the Statewide Context and the second is the same as described under Eligibility by Examination Alone, with the following exceptions:

**Scholarship Requirement:** If your GPA is 3.4 or above, you satisfy the minimum Scholarship Requirement if you achieve the test score indicated in the Eligibility Index at: [www.universityofcalifornia.edu/admissions/scholarshipreq](http://www.universityofcalifornia.edu/admissions/scholarshipreq).

**Eligibility by Examination Alone:** Students must achieve a test score total, as calculated according to the UC Eligibility Index, of at least 3550 (see [www.universityofcalifornia.edu/admissions/scholarshipreq](http://www.universityofcalifornia.edu/admissions/scholarshipreq)).

**Minimum Admission Requirements for Transfer Students**

UC Santa Barbara typically accepts transfer students at the junior level only. To prepare for entrance as a junior, students are encouraged to identify their intended major as early as possible and take prerequisite courses for their major. All transfer applicants must complete these requirements:

1. Complete 60 semester or 90 quarter units of transferable college credit with a grade point average of at least 2.4 for California residents and at least 2.8 for nonresidents (no more than 14 semester or 21 quarter units may be taken Pass/Not Pass).
2. Complete the following seven-course pattern requirement, earning a grade of C or better in each:
  - Two transferable courses in English composition.
  - One transferable course in mathematics beyond intermediate algebra, such as college algebra, precalculus, or statistics.
  - Four transferable courses from among at least two of the following areas: Arts and humanities, Behavioral and social sciences, Biological and physical sciences.

California Community College students who satisfy the Intersegmental General Education Transfer Curriculum (IGETC) prior to transferring to UC, may satisfy part 2 of the transfer eligibility requirements.

If you were eligible for admission to the university when you graduated from high school – meaning you satisfied the Subject, Scholarship and Examination Requirements, or were identified by the University during your senior year as Eligible in the Local Context – you are eligible for transfer if you have a C (2.0) average in your transferable college coursework. If you met the

Scholarship Requirement in high school but did not satisfy the Subject Requirement, you must take transferable college courses in the missing subjects, earn a C or better in each required course and have an overall C (2.0) average in all transferable coursework to be eligible to transfer.

Visit [www.assist.org](http://www.assist.org) for a list of UC-transferable courses at your community college.

**Minimum Admission Requirements for Nonresident Transfer Students**

The minimum admission requirements for nonresident transfer applicants are the same as those for residents except that nonresidents must have a grade point average of 2.8 or higher in all transferable college coursework.

**Admission Requirements for International Students**

International students are governed by the same undergraduate admission regulations that apply to U.S. students. In addition, nonimmigrant applicants whose native language is not English must demonstrate written and oral competence in English by taking one of the following exams: the Test of English as a Foreign Language (TOEFL) with a minimum score of 550 (213 on the computer-based exam) or 79 on the IBT (internet-based TOEFL); the International English Language Testing System (IELTS) examination (academic modules) with a minimum score of 7.

*UCSB Selection Criteria*

The University makes every effort to provide a place on one of its campuses for all California resident applicants who meet the minimum eligibility requirements and file an application during the appropriate filing period. If the number of applicants exceeds the spaces available—as is often the case—the campus

*A violinist in the UCSB Symphony.*

*An art student in the College of Creative Studies.*

uses criteria that exceed the minimum requirements to select students. Meeting the minimum requirements, therefore, may not be enough to gain admission.

## Freshman Applicants

### *College of Letters and Science and College of Engineering*

Students will be selected on the basis of academic and personal achievement, as assessed through a comprehensive review of the full range of accomplishments presented in the admission application.

Criteria for selection include: high school grade point average; academic preparation in college preparatory coursework; quality of the senior year program; honors, AP, IB, and college courses; scores on required standardized examinations; the context in which the student has achieved admission eligibility; evidence of creative or intellectual achievement; diversity of intellectual and social experience; and personal characteristics of the applicant that would demonstrate leadership, initiative, and ability both to contribute to and to benefit from the educational experience at the University.

### *College of Engineering*

Students are selected by major for all engineering and computer science majors. Only applicants with a solid background in advanced high school mathematics will be considered for admission to engineering. This includes high grades in all math courses through grade 11 and enrollment in pre-calculus or higher

in grade 12. A student not selected for the first choice major will be reviewed for admission to a second choice engineering major and also for general admission to UCSB.

### *College of Creative Studies*

Applicants must submit work in evidence of talent or letters of recommendation for faculty review. Applicants must submit a College of Creative Studies application (available from the College Web site: [www.ccs.ucsb.edu](http://www.ccs.ucsb.edu)) in addition to the regular UC undergraduate application.

Students will be selected on the basis of academic preparation in college preparatory courses, high school grade point average, performance on required standardized tests and on special talent, outstanding achievement, and capacity for excellence in one of the eight academic areas within the College.

## Transfer Applicants

### *College of Letters and Science*

Students will be selected primarily on the basis of academic preparation and performance, as assessed by review of grades earned in UC-transferable coursework and strength of academic preparation for the intended major. Applicants with senior standing will not be admitted.

Some students will be selected on the basis of academic and personal achievement, potential, and experience, as assessed through a comprehensive review of all information provided on the application, including academic performance as described above and academic and

personal information, as described in the admission guidelines.

UCSB accepts junior-level transfers and will give priority consideration to those from California community colleges.

UCSB maintains Transfer Admission Guarantee (TAG) programs with all California community colleges. TAG programs do not apply in all majors. For specific information about the TAG program in your major, please refer to the articulation agreements by major between UCSB and your community college online at [www.assist.org](http://www.assist.org). Also visit: [www.admissions.ucsb.edu/taginfo.asp](http://www.admissions.ucsb.edu/taginfo.asp).

Major preparation requirements are subject to change without notice.

**Biological Sciences:** All biological science majors must attain a grade point average of 2.70 or better in science and math preparatory courses, complete one year of general chemistry with laboratory, and complete a sequence (2-3 terms) of major-applicable general biology with laboratory with no individual grades less than "C". To graduate within two years of transferring, it is strongly recommended that applicants also complete one year of organic chemistry with laboratory, one year of general physics with laboratory, and one year of calculus or calculus with statistics. Any of these courses completed with a grade lower than "C" might not satisfy course prerequisites at UCSB.

For more information, consult the Department of Ecology, Evolution, and Marine Biology and the Department of Molecular, Cellular, and Developmental Biology.

**Economics:** All Economics majors (including all Business Economics and Economics Mathematics majors) must attain a grade point average of 2.75 or better in transferable preparatory courses, complete one principles of microeconomics course, and one principles of macroeconomics course. Business Economics majors are also required to complete one transferable course in statistics and at least one course in calculus. Economics and Economics Mathematics majors must complete two calculus courses prior to transfer.

For more information, consult with the Economics department.

### *College of Engineering*

Students will be selected primarily on the basis of academic preparation and performance, as assessed by review of the following: grades earned in UC-transferable coursework, amount of engineering preparatory coursework completed, and grades earned in preparatory coursework.

Applicants must complete all required units and prerequisites by the end of the spring term preceding enrollment at UCSB.

Preference is given to students who have completed 90 quarter (60 semester) units and who transfer from California community colleges.

### *College of Creative Studies*

Students will be selected on the basis of: academic and personal achievement, potential, and experience, as assessed through a comprehensive review of all information provided on the application, including academic and personal information, as described in the admission guidelines; and, special talent, outstanding achievement, and capacity for excellence in one

of the eight academic areas within the College, as assessed by faculty review. All applicants must submit work in evidence of talent or letters of recommendation for faculty review.

Applicants must submit a College of Creative Studies application, available on the College Web site ([www.ccs.ucsb.edu](http://www.ccs.ucsb.edu)), in addition to the regular UC undergraduate application.

## Intercampus Transfer

Students may apply to transfer from one UC campus to another by submitting the Application for Undergraduate Admission to the campus of their choice. Applications are available online.

## Credit From Other Institutions

UCSB accepts transferable coursework completed with satisfactory grades at accredited institutions, subject to the limitations described below. Most courses in academic subjects are transferable if UC offers a comparable course. Vocational courses and personal enrichment courses do not qualify for transfer credit. In most cases, UCSB will not grant credit for coursework that students complete at other institutions while they are also enrolled at UCSB.

### Community College Limitations

Students may earn unit credit for up to 105 quarter units (70 semester units) of UC-transferable community college coursework.

### Study Abroad Limitations

Study abroad programs sponsored by institutions and organizations other than the University of California's Education Abroad Program (EAP) are of varying quality. In many cases UCSB will not grant credit for completed coursework, even to students who have been issued an official transcript.

## Bachelor's Degree Requirements

To be eligible for a bachelor's degree from the University of California, Santa Barbara, students must meet the general University of California requirements and the appropriate college and major requirements. They must also comply with University regulations governing registration, scholarship, examinations, and student conduct.

## Catalog Years

Official degree and major requirements are listed in the catalog. Undergraduate and graduate students are subject to requirements based on a particular catalog, referred to as the student's "catalog year." The catalog year is determined for new students as the catalog in effect at the time of their entrance to UCSB, provided there is no significant break in enrollment. It is campus policy to introduce changes in graduation requirements such that students who began their careers with UCSB before the change will not be hindered substantially in the orderly pursuit of their degrees. Changes in requirements that increase the number or distribution of courses required normally will not be applied to students with earlier catalog

years, provided there is no significant break in enrollment (see below). For undergraduate and graduate students, the catalog year for university and general education requirements is set as noted above. The catalog year for major requirements is determined by the quarter the major or pre-major is declared, provided there is no significant break in enrollment. Students must petition if they wish to follow a subsequent set of requirements.

Students transferring from other institutions may elect either (1) those major requirements in effect at the time of transfer to UCSB; or (2) those in effect up to two years prior to matriculation, provided that their transcripts from earlier schools indicate commitment to the major within that period and that they have adequate preparation for upper-division coursework.

### Breaks in Enrollment

Effective for undergraduate students admitted fall 1997 or later, students who interrupt their studies at UCSB with one or more breaks totaling nine quarters or more (excluding summer session) will be required to follow a newer catalog year than that of their initial admission. A withdrawal term will be considered as a break in enrollment and will be subject to the nine-quarter limit. Upon their return, students who leave the University will normally be required to fulfill requirements as listed in the catalog published no earlier than three years prior to their final return. They must follow the same catalog year for all degree requirements, including:

- University requirements
- College requirements
- Major requirements.

## General University Requirements

University degree requirements include the University of California Entry Level Writing requirement (formerly called Subject A), the American History and Institutions requirement, the unit requirement, the academic residence requirement, and the grade-point average requirement.

## University of California Entry Level Writing Requirement

All students entering the University of California must demonstrate an ability to write effectively by fulfilling the entry level writing requirement. This requirement may be met in one of seven ways prior to admission:

1. by achieving a score of 680 or higher on the Writing section of the SAT Reasoning Test (or SAT II Subject Test in Writing taken prior to June 2004);
2. by achieving a score of 30 or higher on the ACT Combined English/Writing test;
3. by achieving a score of 3 or higher on the College Board Advanced Placement Examination in English Composition and Literature or English Language and Composition;
4. by achieving a score of 5, 6, or 7 on the higher level English A International Baccalaureate Examination;
5. by achieving a score of 6 or 7 on the standard level English A1 International Baccalaureate Examination;
6. by passing the University of California systemwide Analytical Writing Placement Exam while in high school;
7. by earning a grade of C or higher in a course accepted as equivalent to Writing 2.

Students who have not taken the UC systemwide Analytical Writing Placement Exam and who have not met the entry level writing requirement in one of the other ways listed above will be required to take the examination during their first quarter at UCSB (see the *Schedule of Classes* for examination time and location). An appropriate score on the examination will satisfy the entry level writing requirement. Only one UC examination may be taken—either the systemwide Analytical Writing Placement Exam while in high school or the examination given at UCSB; and neither may be repeated.

Students whose score is unsatisfactory on the UC analytical writing placement examination (systemwide or campus-based) and who enter UCSB without having satisfied the entry level writing requirement in any other way must

*Studying between classes.*

**UCSB is home to the California NanoSystems Institute, one of the original California Institutes for Science and Innovation.**

enroll in Writing 1, 1E, or 1LK within their first year at UCSB. A grade of C or higher in Writing 1, 1E, or 1LK is needed to satisfy the entry level writing requirement. Students who earn a grade of C- or lower in Writing 1, 1E, or 1LK will be required to repeat the course in successive quarters until the requirement is satisfied. Students who are required to complete English as a Second Language courses may satisfy the Entry Level Writing requirement with a grade of C or higher in Linguistics 12.

Once students matriculate at UCSB, they may not fulfill the entry level writing requirement by enrolling at another institution. Further, transfer courses equivalent to Writing 2 or 50 will not be accepted for unit or subject credit unless the entry level writing requirement has already been met. Students will only be allowed to meet the Area A requirement of the General Education Requirements with courses taken after satisfying the entry level writing requirement. The entry level writing requirement must be completed by the end of the third quarter of matriculation. Students who do not meet this deadline will

be blocked from further enrollment at UCSB (ESL students should consult with the Writing Program).

### **American History and Institutions Requirement**

The American History and Institutions requirement is based on the principle that American students enrolled at an American university should have some knowledge of the history and government of their country. Students may meet this requirement in any one of the following ways:

1. by achieving a score of 3 or higher on the College Board Advanced Placement Examination in American History or American Government and Politics; or
2. by passing a non-credit examination in American history or American institutions, offered in the Department of History during the first week of each quarter. Consult the department for further information; or
3. by achieving a score of 650 or higher on the SAT: Subject Test in American History; or

4. by completing one four-unit course from the following list of courses:

*Note: In this context, "course" refers to a one-quarter offering such as History 17A or Religious Studies 151B.*

Anthropology 131

Art History 121A-B-C, 136H

Asian American Studies 1, 2

Black Studies 1, 6, 60A-B, 103, 121, 137E, 169AR-BR-CR

Chicana and Chicano Studies 1A-B-C, 144, 168A-B, 174, 188C

Economics 113A-B, 119

English 133AA-ZZ, 134AA-ZZ, 137A-B, 138C, 191

Environmental Studies 173

Feminist Studies 155A, 159B-C

History 11A, 17A-B-C, 17AH-BH-CH, 105A, 159B-C, 160A-B, 161A-B, 164C, 164IA-IB, 164PR, 165, 166A-B-C, 166LB, 167A-B-C, 168A-B, 168L, 169AR-BR-CR, 169M, 172A-B, 173A-B-S-T, 175A-B, 176A-B, 177, 178A-B, 179A-B

Military Science 27

Political Science 12, 115, 127, 151, 152, 153, 155, 157, 158, 162, 165, 167, 168, 174, 176, 180, 185

Religious Studies 7, 14, 61A-B, 114B, 151A-B, 152

Sociology 137E, 140, 144, 155A, 157

Theater 188A-B

Courses used to fulfill the American History and Institutions requirement may also be applied to General Education or major requirements, or both where appropriate. Equivalent courses taken at other accredited colleges or universities, in UC Extension, or in summer session may be acceptable. Students who transfer to UCSB from another campus of the University of California where the American History and Institutions Requirement has been considered satisfied will automatically fulfill the requirement at UCSB.

International students on a nonimmigrant visa may petition for a waiver of this requirement through the Director of International Students and Scholars.

### **Unit Requirement**

A minimum of 180 quarter units is required for graduation. (Some students in the College of Letters and Science will need at least 184 units to graduate; see General Education Requirements, Area B—Foreign Language for details.) Some majors in the College of Engineering require more than 180 units (See individual majors in the College of Engineering chapter.). These units must be distributed according to the requirements set forth by the faculty of the various colleges, as explained in the following sections of this catalog and in the publications of the colleges.

The acceptability of transfer courses for unit credit is determined by the Office of Admissions. The applicability of such courses toward specific requirements is determined by the col-

lege deans and/or department chairs.

### Academic Residence Requirement

Candidates for a bachelor's degree must be registered in the University for at least three terms to fulfill the University's academic residence requirement. A term is a regular quarter, including summer session, in which a student completes six or more units of resident (on-campus) courses. Each UC summer session in which a student completes at least two units but fewer than six is the equivalent of half a term's residence. In this context, summer session refers to the entire summer session period of twelve weeks and not to an individual summer mini-session.

At least 35 of the final 45 units must be taken in the college or school in which the degree is to be awarded. Courses taken in UC Extension do not satisfy residence requirements.

**College of Letters and Science residence requirement.** Students in the College of Letters and Science must complete at least 27 upper-division units, of which at least 20 must be in the upper-division major, while in residence in the college. In the case of double majors, at least 20 upper-division units must be completed in each major while in residence in the College of Letters and Science. Students who are pursuing an academic minor must complete at least 12 units of the upper-division minor in residence at UCSB. Courses used in satisfaction of residence in one major may not be applied to residence in another major or minor. Courses taken in University Extension and those completed in the University's Education Abroad Program do not apply to the residence requirement.

Credit earned at other institutions does not apply to academic residence. This includes coursework students complete at another campus of the University of California, even while simultaneously enrolled at UCSB. In addition, credit earned at UCSB through the intersegmental cross-enrollment option will not apply to academic residence requirements.

**College of Engineering residence requirement.** Students in the College of Engineering must complete at least 27 upper-division units, of which at least 20 must be in the upper-division major, while in residence in the college. In the case of double majors, at least 20 upper-division units must be completed in each major (i.e., not double counted) while in residence in the College of Engineering. Courses used in satisfaction of residence in one major may not be applied to residence in another major. Courses taken in University Extension and those completed in the university's Education Abroad Program do not apply to the residence requirement.

**Education Abroad (EAP), UC Washington, D.C. (UCDC), and UC Center in Sacramento (UCSAC) Program Participants.** With one modification, students who participate in the University of California Education Abroad program or UCDC program or UCSAC program, are responsible for all academic residence requirements as explained above. For students who participate in EAP, UCDC, or UCSAC as seniors, the rule requiring 35 of the final 45 units in the college or school in which the degree is to be awarded is modified to 35 of

the final 90 units. Students must secure prior approval to use this modification and may graduate without returning to UCSB provided that they have satisfied all degree requirements by the end of their year abroad. Those who have any remaining degree requirements must return to UCSB to complete a minimum of 12 units on campus while fulfilling final degree requirements.

### Grade-Point Average Requirement

At the time of graduation, students in the College of Engineering and the College of Letters and Science must have at least a 2.0 (C) grade-point average in (1) all courses undertaken at the University of California (UC) except those graded passed/not passed; (2) all UC courses required and acceptable for the student's overall major program, both lower- and upper-division; and (3) all UC courses required and acceptable for the student's upper-division major program.

Courses undertaken at any of the UC campuses (with the exception of UC Extension courses) are included in the computation of the grade-point average (GPA). UCSB courses taken by concurrent enrollment through Extension, beginning Fall 2000, will be included in UCSB's GPA.

Courses appropriate for satisfying major requirements must be used in the computation of the grade-point average even if they are in excess of the minimum requirements of the major program. Students who wish to receive recognition for completion of a minor must have earned a grade-point average of at least 2.0 in all courses required and acceptable for the minor, and in all courses required or acceptable for the upper-division major. Courses graded Incomplete, except those taken on a passed/not passed basis, will be included as F grades in final computations. Certain courses designated

as remedial are offered for workload credit only and do not figure in calculation of the GPA.

Students in the College of Creative Studies must, at the time of graduation, have a grade-point average of at least 2.0 (C) in all UC courses that have been undertaken for letter grades.

### College Requirements

Students are required to meet requirements appropriate to their chosen degree, and described under each College's sections in this catalog.

### Major Requirements

To be eligible for graduation, all undergraduates must complete the requirements for a departmental or interdepartmental major in their college with the required grade-point average. As space permits, students may elect any approved major program for which they have met the stated prerequisites.

Major departments and/or committees may require auditions, placement examinations, proposals, specified courses, and/or grade-point averages to determine whether students are qualified for specific courses or for entrance into or continuation in a major.

Students who fail to attain a grade-point average of at least 2.0 in work in their major may, at the option of the major department or committee, be denied the privilege of continuing in that major.

Students in the College of Engineering and the College of Letters and Science normally must complete the major requirements in effect at the time they declare their major, though they may petition to follow a subsequent set of requirements.

Changes in major requirements that increase the number or distribution of courses required normally will not be applied to students continuing in such majors provided there is no significant break in enrollment.

*Undergraduate researchers traveled to Nepal to study climate-tectonic interactions.*

# Graduate Education at UCSB

**Graduate Division, Cheadle Hall 3117**  
**Telephone: (805) 893-2277**  
**Web site: [www.graddiv.ucsb.edu](http://www.graddiv.ucsb.edu)**  
**Dean: Gale M. Morrison**  
**Assistant Dean: Christian Villaseñor**

The University of California, Santa Barbara offers innovative and interdisciplinary graduate programs that are among the finest in the world. At UCSB graduate students are trained to assume leadership positions in academia, private industry and public service. Consistently ranked among the top research universities in the nation, UCSB is a member of the prestigious Association of American Universities. The faculty includes five Nobel laureates, as well as Fellows of the National Academies of Sciences, Engineering and Arts and Sciences, and National Endowment for the Humanities. Most departments offer research experience and undergraduate teaching as part of their graduate training programs, and graduate programs are small enough for faculty members to know and mentor scholars individually.

Recognizing that the future will increasingly call for individuals trained beyond traditional academic boundaries, UCSB is developing graduate opportunities that emphasize new approaches in research and training to address the need for cross-disciplinary and global collaborations. This balance enhances theoretical learning, technical training and independent inquiry. UCSB seeks to achieve a graduate student community reflective of the population at large, and encourages applications from students who bring perspectives that advance UCSB's goals of excellence and diversity.

Enriching UCSB's graduate programs and coursework are national research centers, organized research units and affiliated academic

units which are headquartered at the UCSB campus. They provide students with additional opportunities for research, study and research abroad, and experiential learning. Graduate certificate programs in Management Practice, and College and University Teaching (see "Graduate Programs of Interest" in this section) or special degree emphases complement departmental training and highlight the focus of one's academic interests.

## The Graduate Division

The Graduate Division facilitates and coordinates graduate education and student services for all graduate academic and professional programs at UCSB. Under the supervision of the Graduate Deans and under policy set by the Academic Senate Graduate Council, the Division promotes academic excellence in graduate degree programs, fosters a diverse and inclusive graduate community of domestic and international students, and cultivates an intellectually stimulating and socially supportive climate for all graduate students.

The Graduate Division has many roles. The Admissions as well as Diversity, Recruitment, and Retention units facilitate the successful admission and enrollment of highly qualified and diverse applicants. The Academic Services unit encourages and monitors graduate students' successful progress toward degree completion, enforces academic standards, processes petitions, coordinates financial, academic and career development workshops, and processes all graduate degrees. The Financial Support unit administers fellowship programs, maintains an

extramural funding database, and certifies student eligibility for academic appointments. All are committed to the recruitment, admission, matriculation, and graduation of a diverse and highly qualified graduate student population.

## Application and Admission

The Graduate Division coordinates application services for all graduate academic and professional programs at UCSB. The Division is committed to academic excellence, diversity, and intellectual innovation in graduate education. UCSB offers admission to applicants who have the highest potential for success in graduate study and who are most likely to contribute substantially to academic or professional fields through original research, inspired teaching and professional practice. Committed to the recruitment, admission, and successful academic advancement of a diverse graduate student body, UCSB encourages applications from students who have overcome economic or social disadvantages in pursuing their academic objectives and from those whose perspectives, research topics, or career interests advance the University's goals of excellence and diversity.

## Requirements and Procedure

To be considered for admission to UCSB, applicants must have received a bachelor's degree or its equivalent (with an upper-division grade point average of 3.0 or better) from an accredited university prior to the quarter for which admission is sought. Applicants apply online through the Graduate Division's Web site at: [www.graddiv.ucsb.edu](http://www.graddiv.ucsb.edu) under the *Prospective Students* heading.

A completed application includes:

- An online application;
- Two copies of the applicant's statement of purpose with the appropriate coversheet;
- A nonrefundable fee. (An application fee paid to another University of California campus is not valid for application to UCSB);
- Three letters of recommendation with the appropriate coversheet from professors or others familiar with the applicant's academic work;
- Official Graduate Record Examination (GRE) scores (submitted directly from the Educational Testing Service (ETS) to the Graduate Division, or submitted by the applicant to the Graduate Division only if an official score cannot be sent from ETS). Some departments require a score for the appropriate GRE Subject Test. UCSB's GRE institution code is 4835. A department code is not required;
- Test of English as a Foreign Language (TOEFL) or International English Language Testing Service (IELTS) exam scores, taken within the past two years (if applicable);
- Two official transcripts from each institution attended since high school or secondary school; and,

UCSB's Middle East Ensemble performing.

• Any other supplemental materials required by the department or the Graduate Division. All domestic applicants are required to file the Free Application for Federal Student Aid (FAFSA) as part of the application process by March 2. Web site: [www.fafsa.ed.gov](http://www.fafsa.ed.gov).

Admission decisions are based on the quality of the applicant's academic degrees and record as presented in the application and supporting documents. Also contributing to the decision are evidence of preparation in the proposed field of study, work experience, and the degree to which the individual's goals and research interests are consistent with those of the academic program and its faculty.

When applications are complete, they are submitted to faculty committees for review; recommendations of admission or denial are communicated to the Graduate Division by the admitting department. Due to the large number of applications received, many well-qualified applicants cannot be admitted.

## Application Deadlines

The application deadline to be considered for most fellowship competitions is January 15, although many departments have earlier deadlines. It is important to consult departmental sources for variations. For further details, please consult the prospective department or the Graduate Division Web site at [www.graddiv.ucsb.edu](http://www.graddiv.ucsb.edu). The completed application and all supporting materials must be received by the application deadline or they will not be processed.

Deadlines and specific admission requirements, which may vary by department, are summarized on the Graduate Division Web site as well as in subsequent chapters of this catalog. Further detail may be available in discipline-specific brochures distributed by departments or at: [www.graddiv.ucsb.edu](http://www.graddiv.ucsb.edu) under the *Departments and Programs* heading.

## Admission of International Students and Permanent Residents

International students and permanent residents are governed by the same general admission regulations as those which govern United States citizens. For information and special assistance, students are encouraged to contact the Office of International Students and Scholars at (805) 893-2929. Web site: [www.oiss.ucsb.edu/](http://www.oiss.ucsb.edu/)

**English language requirements for nonnative speakers.** Applicants whose native language is not English are required to take the TOEFL. Exceptions to this requirement will be considered for those students who have completed an undergraduate or graduate degree at an institution whose primary language of instruction is English. The minimum score for consideration is 550 when taking the paper-based TOEFL, or 80 when taking the internet-based test; some departments require a higher score. Applicants must make arrangements to take the TOEFL directly with ETS [www.ets.org](http://www.ets.org). Scores should be reported to UCSB using institution code 4835. TOEFL scores must be no more than two years old at the time of application. UCSB also considers a minimal score of 7 on the IELTS as an alternative to the TOEFL. UCSB does not admit

students conditionally in order to learn English prior to beginning an academic program—an excellent command of written and spoken English is required prior to enrollment.

Once admitted, nonnative speakers of English must meet proficiency requirements in spoken and written English before they will be awarded a degree at UCSB. Such requirements are met through successful performance on the English Language Placement Examination (ELPE), and, if necessary, English as a Second Language (ESL) classes. Prior to the beginning of their first quarter of registration at UCSB, nonnative speakers of English—including both international students and permanent residents—are required to take both the written and oral portions of the ELPE. Based upon the results of this exam, students will be either placed in or exempted from ESL courses. Students for whom the TOEFL requirement has been waived may still be required to take the ELPE. Students visiting UCSB under the Education Abroad Program (EAP) and non-degree reciprocity status are exempt from taking the ELPE; if they later petition for admission to a graduate program to seek a master's degree or doctorate, they must take the ELPE at that time. If EAP or non-degree reciprocity status students wish to take an ESL course, they must first take the ELPE for placement purposes.

**Teaching Assistant (TA) language evaluations.** All international students and permanent residents for whom English is not their native language are required to have their spoken English evaluated before they can be certified for classroom or laboratory teaching responsibilities. Prospective TAs who do not pass the TA language evaluation on their first attempt are required to take ESL classes before they can be reevaluated. TA language evaluations are conducted jointly by the academic departments, the ESL Program, and the Graduate Division.

## Non-degree Status

In exceptional circumstances, applicants who do not wish to study for a degree or a teaching credential may be admitted to graduate status on a non-degree basis. The admission requirements and procedures are the same as those for prospective candidates for degrees, with the exception that many departments do not require the GRE. The applicant must specify the major and must justify, in the statement of purpose, that the plan of study has a definite scholarly or professional goal. A non-degree student is accepted for a maximum of one academic year. Students in non-degree status are not eligible for fellowships, nor are their courses ordinarily accepted for credit toward an advanced degree at UCSB should they decide later to apply for admission into a master's or doctoral program.

## Graduate Degree Programs

### Degrees, Emphases, and Specializations

Graduate degrees at the University of California are granted upon completion of advanced academic study and research. Doctoral degree

candidates are expected to participate in at least one independent research project, as are many master's degree candidates.

Degree titles are posted on transcripts and diplomas for the eight graduate degrees conferred at UCSB:

- Doctor of Education (Ed.D.)
- Doctor of Musical Arts (D.M.A.)
- Doctor of Philosophy (Ph.D.)
- Master of Arts (M.A.)
- Master of Education (M.Ed.)
- Master of Environmental Science and Management (M.E.S.M.)
- Master of Fine Arts (M.F.A.)
- Master of Music (M.M.)
- Master of Science (M.S.)

Some departments offer unique interdisciplinary and/or interdepartmental emphases within a degree objective. An emphasis is a focused area of study that may be offered as a track within a department's degree program, or as an optional interdisciplinary addition to an existing graduate degree program in one or more departments. An emphasis is noted on transcripts, but does not appear on diplomas.

## General Requirements for Graduate Degrees

Graduate Council's minimum requirements for advanced degrees are described below. (See information regarding "Catalog Years" on page 39.) Individual departments often impose additional requirements. Students should consult the academic department for updated and specific requirements in excess of the minimum requirements. Students admitted with deficiencies in background or training must remedy these deficiencies before advancement to candidacy, usually during the first year of residence.

**Academic residence.** Continuous registration is required of all graduate students. Only coursework taken when a student is registered may be counted toward a graduate degree. Graduate students are required to register each quarter by paying fees and officially enrolling in classes.

Graduate students who fail to register are not considered students. If students have been unregistered, departments may ask them to reinstate to graduate standing and register, particularly when they will be consulting with faculty and using University resources. In some cases, students will be required to prove they are still current in the field either by taking classes or by re-taking their qualifying examinations.

To establish residence, a graduate student must be registered and enrolled in courses of instruction, research, or study totaling or equivalent to at least four units of upper division or graduate work during a regular term, or (1) in two consecutive six-week Summer Sessions of at least two units of upper division and/or graduate work as given in a regular term; or (2) enrollment in an eight-week Summer Session enrolled for the equivalent of at least four units. Students in master's programs must register for a minimum of three quarters at UCSB, of which at least one quarter must be a regular session (fall, winter, or spring quarter). In master's programs, attendance in two six-week Summer Sessions may be substituted for one of the three quarters of required residence, but they need not be consecutive.

The minimum academic residence requirement for any doctoral degree is six quarters. Students in doctoral programs will spend at least six quarters in residence at the UCSB campus pursuing a program of full-time study and research; three consecutive quarters of this residence must be completed in regular session before advancement to candidacy. In doctoral programs, attendance in two consecutive six-week Summer Sessions in the same summer may be substituted for one of the six quarters of required residence.

**Language and methodology requirements.** Academic departments set language and methodology requirements for their fields; students should consult the academic department for details.

**Standards of scholarship.** Students must complete university and departmental requirements in a timely manner to remain in good standing. Only upper-division and graduate courses in which a student earns grades of A, B, C, or S may be applied toward the unit requirements for graduate degrees. In courses specifically required for a program—often called core courses—grades of A or B must be earned for the course to count toward degree requirements. Neither lower-division courses numbered 1-99 nor undergraduate independent study courses numbered 198-199 count toward unit requirements for graduate degrees.

Students must maintain a cumulative grade-point average of at least 3.0 to remain in graduate status. (Note that some departments set higher scholarship standards.) Students with less than a 3.0 grade-point average will either be placed on academic probation or dismissed from graduate status by the Graduate Dean upon recommendation of a student's academic department. Graduate students carrying more than 12 units of Incompletes, No Record, and/or No Grades may be placed on academic probation and become subject to dismissal for failing to make timely progress toward degree completion.

Graduate students must complete coursework and have a grade reported to the Office of the Registrar by the end of the term following the term in which the No Grade, No Record, and/or I grade was reported. If not completed by the deadline, the No Grade, No Record, and/or I grade will be changed automatically to an F, NP, or U as appropriate.

*Note: Additional standards of scholarship are described below.*

**Degree deadlines and normative time.** The UCSB Graduate Council has set time limits for degree completion to ensure that students make timely progress toward completion of their degree objectives. Graduate Council requires that graduate degrees be granted only to students who are current in the scholarship of their chosen field. Students who are not making adequate progress toward degree completion in terms of the standards presented below may be dismissed upon the recommendation of their departments. Academic departments may set time limits in addition to the minimum standards described below.

Graduate Council has set four years as the time limit for completion of master's degrees at UCSB. The University of California time limit for completion of a doctoral degree is

seven years from the time of admission to graduate studies. In addition, doctoral students are required to advance to candidacy for the doctorate within four years of admission to graduate studies.

Students who exceed one of these time limits become subject to academic probation and possible dismissal for failing to make timely progress toward degree completion. Students who exceed the degree deadline for either the master's or doctorate must prove they are still current in their field at the time they file for completion of their degree.

Graduate Council's degree deadlines are distinct from normative time, which is the number of years considered to be reasonable by the faculty of the department for completion of a doctorate by a full-time student in that program. Normative time, which varies by department, is measured from the time a student begins graduate studies at UCSB. (See accompanying table for the normative time established in each department.)

**Enrollment Requirements.** Continuous registration is required of all graduate students; the normal course load for graduate students is twelve units per quarter. Graduate students must enroll in at least eight units to be appointed as graduate student researchers or as teaching assistants, to receive fellowships and most forms of financial aid, and to be eligible for campus and extramural benefits and services (University Housing, Student Health Service, etc.).

In general, there are no reduced fees for a reduced course load. Most lending agencies demand repayment of loans if a student is not registered or is carrying less than a normal course load. The Immigration and Naturalization Service requires international students to be engaged in a full course of study while at UCSB.

Graduate students who fail to register lose all status as students, including access to the privileges outlined above. Graduate students who wish to register after a break in enrollment must petition for reinstatement through the Graduate Division. Reinstatement is not automatic and requires the approval of the student's academic department; the student's record will be evaluated in terms of past academic performance and timely completion of the degree. Students who wish to reinstate and have exceeded the time limit for completion of the master's and/or doctoral degrees must also submit a plan and timetable for degree completion to their department and the Graduate Division for review and approval.

**Leaves of absence.** Under certain circumstances, students may petition for a leave of absence that must be approved by the student's department and the Graduate Division. There are six categories of leave: (1) leave for medical emergencies (doctor's note required); (2) leave for pregnancy/parenting needs during the first 12 months after the child's birth or placement in the home (doctor's note, birth certificate, or verification from placement agency); (3) leave to deal with emergencies in the immediate family (explanation of circumstances required); (4) military leave for students required to engage in military service (documentation of call to duty required); (5) research leave for students who will be away from the campus conducting re-

#### NORMATIVE TIMES FOR COMPLETING DOCTORAL PROGRAMS AT UCSB

| Years | Doctoral Program                               |
|-------|--|
| 7     | Anthropology                                   |

\* dependent on additional language requirements

\*\* dependent on whether the student entered with or without a master's degree

search and not using faculty time or University resources (faculty verification required); and (6) a filing fee quarter of leave for students who intend to complete their degree the quarter of the leave request (faculty verification required). Filing fee leaves may not be extended. The above constitute the only grounds for a leave of absence.

Graduate students conducting research outside the state of California for a quarter or more should register in absentia, which entitles them to a reduction of fees and allows them to maintain continuous registration. Students who do not register and who are not on an official leave of absence must seek reinstatement if they wish to return to graduate standing.

Petitions for a leave of absence may be approved on a quarterly basis for up to a career

maximum of three quarters. The three-quarter career limit for research leave is calculated separately from the three-quarter career limit for medical, family emergency, pregnancy/parenting, and military leaves. Extensions beyond the three-quarter career maximum will be granted only in the most extreme or unusual circumstances. Students who reach a career maximum of leaves as described below are still eligible to apply for a filing fee quarter of leave.

Graduate students who are granted leave are not eligible for either teaching assistant or graduate student researcher positions or for campus fellowships or financial aid. Lending agencies do not consider a leave of absence a substitute for registered status. (Continuing students who were on approved leave of absence or who lapsed their status during the spring are not required to file a petition to return to graduate standing for the summer. They should register through Summer Sessions. Students whose status has lapsed during the spring and intended to return to graduate standing in the fall must submit a Reinstatement Petition to the Graduate Division.)

**Transfer of credit.** Credit for upper-division and graduate courses may be transferred to UCSB only if the student was enrolled in a graduate program when the courses were completed and they have not been applied toward a degree already awarded. Graduate students must complete one quarter of residency at UCSB before they can petition to transfer units earned elsewhere. With the permission of the Graduate Division and the academic department, up to eight quarter-units of credit for courses completed with a B or better from an accredited college other than another University of California campus may be transferred as upper-division credit toward a graduate degree. Up to twelve quarter-units may be transferred from another UC campus. With the exception of courses completed through Open Enrollment (formerly Concurrent Enrollment) in UCSB Extension by applicants for graduate admission, course titles of transferred units are not reflected on the UCSB transcript for graduate students, and transferred units are treated as Passed/Not Passed and do not count toward UCSB grade point average. No transfer credit is allowed for any course taken as an undergraduate.

Courses taken through UCSB Summer Sessions immediately preceding fall matriculation may apply toward a graduate degree or teaching credential pending department approval. Ordinarily, no credit is allowed toward an advanced degree for units taken while in non-degree status.

Students who have formally applied to a UCSB graduate program at the time they completed coursework through Open Enrollment at UCSB may transfer up to 12 units of credit and the grade points earned in those units to their graduate program, if admitted. Students must petition their academic department and the Graduate Division for approval. Units taken through Open Enrollment prior to filing an application cannot be transferred.

Graduate students may not take courses through Open Enrollment that can be completed through regular enrollment at UCSB. If such courses are taken, no unit credit will be counted toward fulfillment of degree requirements set by the UCSB Graduate Council.

Graduate students must receive permission from the Graduate Division to take “special” Extension course offerings—i.e., coursework other than Open Enrollment courses. Consult the Graduate Division for a petition and further information.

Since departments are normally interested in the competencies attained in previous coursework rather than in unit credit, students should consult their academic departments and the Graduate Division to determine if a transfer of units is necessary.

**Policy on transfer of units and residency for EAP students.** Education Abroad Program students who successfully change to M.A. or Ph.D. status can transfer to a graduate degree objective up to 12 units taken at UCSB while in EAP status, contingent upon approval by the academic department and Graduate Division and adherence by the students to procedures set up by EAP and the Office of the Registrar for payment of fees and tuition retroactively for the quarter in question.

One quarter of UCSB residency can be granted to EAP students at UCSB who later transfer to graduate status, contingent upon approval by the academic department and Graduate Division and adherence by the students to procedures set up by EAP and the Office of the Registrar for payment of fees and tuition retroactively for the quarter in question. This quarter can be used to fulfill residency requirements for the master’s or Ph.D.

**Final degree requirements.** A graduate degree cannot be awarded until the student has fulfilled all of the Graduate Council and departmental degree requirements, as determined by degree checks conducted by the student’s academic department and the Graduate Division. The student is responsible for correcting any deficiencies found during a final degree check.

**Filing fee.** All students must be in a fee relationship with the University during the quarter their degree is awarded—i.e., they are either registered or pay a filing fee. The filing fee is a reduced fee paid instead of full registration fees during the quarter a student is completing the last requirement for a degree. Payment of the filing fee does not entitle the student to any of the privileges and services that accompany full registration, except for filing. Doctoral degree candidates may use the filing fee to file the dissertation. Because paying the filing fee terminates graduate status, it may be used only by terminal master’s degree students who have finished all requirements with the exception

of the comprehensive exam or filing the thesis. (See the Graduate Handbook for complete information on filing requirements.)

**Changes in degree requirements.** As research or new knowledge develops, departmental requirements may change. Departments may ask students to accept additional or new requirements. In general, a student follows the departmental degree requirements set forth at the time of the student’s admission. If requirements change, the student is given the option of continuing under the original requirements or changing to the revised curriculum.

## Master’s Degree Requirements

In many departments, the master’s degree is considered to be a step toward the doctorate. In some programs, students may pursue a terminal master’s degree. Some departments provide one track for students who will seek the doctoral degree and another track for students who intend to pursue careers outside academia. The Graduate Council’s minimum requirements for the master’s degree are described below. Individual departments often impose additional requirements. Students should consult the department for updated and specific requirements in excess of the minimum requirements.

**Degree plans.** The master’s degree may be obtained in one of two ways: Plan 1 requires a thesis; Plan 2 requires a comprehensive examination or project. Departments may offer one or both of these plans. Students in either plan must satisfy all departmental and UCSB Graduate Council requirements. The study plan for every master’s student must be approved by the department.

**Master’s Plan 1, thesis.** In addition to the submission of an acceptable thesis, this plan requires completion of a minimum of 30 units of upper-division and graduate coursework, of which at least 20 units must be at the graduate level (excluding courses numbered 597 or 598, units for teaching assistant duties or training, or service as a graduate student researcher). A maximum of 10 units of the required 20 graduate units may be in 596 coursework. Some departments also require completion of an examination at the conclusion of coursework.

A master’s thesis committee consists of a minimum of three tenure-track faculty members (also called ladder faculty), at least two of whom must be from the student’s home program. The chair (or one of the co-chairs) must be from the student’s home program. Some departments may require more than three ladder faculty on thesis committees, including a faculty member from another discipline. The chair of this committee advises the student on a course of study and usually directs the thesis research. The committee is nominated by the department chair in consultation with the student and approved by the graduate dean. The Graduate Council will consider written requests for exceptions to thesis committee policy from departments. All committee members must approve the thesis.

The thesis must meet the formatting and filing requirements of the Graduate Council. For details, see the Graduate Division publication, UCSB Guide to Filing Theses and Dissertations, available through the Graduate Division

*Graduate students play a vital role in the UCSB community.*

Web site at [www.graddiv.ucsb.edu](http://www.graddiv.ucsb.edu) under the *Academic Services* heading. The student is also responsible for fulfilling disciplinary norms and requirements affecting content of theses.

**Master's Plan 2, non-thesis option (comprehensive examination or project).** This plan requires completion of at least 36 units of upper-division and graduate coursework plus either (a) a comprehensive final examination set by the major department and administered by a master's committee appointed by the department, or (b) a research project supervised by at least one ladder faculty member and approved by a project committee that includes at least two members of the department's ladder faculty. No fewer than 24 of the 36 units required for the non-thesis option must be in graduate courses in the major subject or in graduate courses related to that subject as approved by a graduate advisor. Teaching and research practica, 597, or 598 courses may not be used to meet this minimum unit requirement. No more than half of the required 24 graduate units may be in 596 coursework.

## Doctoral Degree Requirements

UCSB offers three doctoral degrees: the Doctor of Philosophy (Ph.D.), the Doctor of Musical Arts (D.M.A.), and the Doctor of Education (Ed.D.). The Ph.D. is not a unit-count degree, but a research degree awarded upon demonstration of the student's academic excellence and research capability. To that end, doctoral students must pass doctoral qualifying examinations to demonstrate mastery of their chosen field and produce a dissertation acceptable to their doctoral committee. Doctoral students normally follow a plan of study determined in consultation with their advisors. The D.M.A. is a professional degree with distinct course, performance, and research requirements and the Ed.D. degree is a joint doctoral degree in Educational Leadership offered in conjunction with Cal Poly, San Luis Obispo. Specific degree requirements for each discipline are described in the department's section in this catalog.

**Doctoral committees.** A doctoral committee consists of a minimum of three ladder faculty, two of whom must be from the student's home program; additional members from the department or from other disciplines may be added either to meet departmental requirements for additional members or at the student's discretion. The chair (or one of the co-chairs) must be from the student's home program. In some departments, the same committee conducts qualifying examinations and supervises work on the dissertation; in other departments separate committees are nominated. It is not unusual for doctoral committee membership to change during the course of a student's work on the doctorate.

The doctoral committee is nominated by the department chair in consultation with the student and approved by the graduate dean. The chair of the committee advises the student on a course of study leading to the qualifying examinations and usually serves as director of the student's dissertation research. The Graduate Council may consider written requests for exceptions.

### Qualifying examinations and advancement

**to candidacy.** All doctoral students are required to officially advance to candidacy for the doctorate. In order to officially advance to doctoral candidacy, students must satisfy all course and residence requirements; be registered; fulfill foreign language and/or methodology requirements set by the academic department; pass departmental preliminary and screening examinations; pass oral qualifying examinations administered by the student's doctoral committee (as well as written qualifying examinations in some departments); and pay an advancement to candidacy fee at the Graduate Division. Students who fail to advance to candidacy within four years of admission become subject to academic probation and possible dismissal.

In a few departments, students may petition for the award of the candidate in philosophy (C.Phil.) degree at the time they advance for the doctorate. Students must petition the Graduate Division for the award of the C.Phil. within one year of passing their oral qualifying examination. The C.Phil. degree certifies that a student has completed all doctoral requirements except for the dissertation. The C.Phil. degree is awarded only to Ph.D. candidates on recommendation of departmental faculty in those departments that have elected and been approved by the Graduate Council to award the C.Phil. degree. No applicant will be admitted with a final degree objective of C.Phil.

**Additional standards of scholarship.** In addition to the basic standards of scholarship detailed above, doctoral students who cannot develop a satisfactory dissertation research proposal or form a faculty committee of three members to supervise the dissertation research may be placed on academic probation and become subject to dismissal for failure to make satisfactory progress toward the degree.

Doctoral students are required to complete their degree requirements in a timely manner. As noted above, doctoral students have four years from beginning a doctoral program to officially advance to doctoral candidacy and seven years to complete the doctorate. Academic departments may set time limits for completion in addition to the minimum standards established by the Graduate Council. Students may be recommended for dismissal by their respective departments if they do not make timely progress toward degree completion.

**Dissertation and filing requirements.** The doctoral dissertation must be the result of original research in the field of the candidate's specialization. The candidate's doctoral committee determines the acceptability of the dissertation; all members of the committee must approve the dissertation. Departments may require a defense of the dissertation, or waive the defense if appropriate.

The dissertation must meet the formatting and filing requirements of the Graduate Council. Doctoral students may file one copy of their dissertations electronically. For details, see the Graduate Division's *Guide to Filing Theses and Dissertations*, available at: [www.graddiv.ucsb.edu](http://www.graddiv.ucsb.edu) under the *Academic Services* heading. The student is also responsible for fulfilling disciplinary norms and requirements affecting content of dissertations. Doctoral degree candidates must complete a ProQuest/UMI Dissertation Publishing Agreement, the UCSB Survey

of Doctoral Degree recipients ([www.graddiv.ucsb.edu/exitsurvey](http://www.graddiv.ucsb.edu/exitsurvey)), and a Survey of Earned Doctorates (SED) questionnaire available at the Graduate Division. The Graduate Council requires that dissertations be published through ProQuest to ensure the widest possible dissemination of knowledge. The Survey of Earned Doctorates, conducted by the National Research Council, provides nationwide information on all doctoral degree recipients, their fields, their career plans and other pertinent data. (See the Graduate Handbook for complete information on filing requirements.)

## Graduate Programs of Interest

### Graduate Program Certificates

Enrolled graduate students at UCSB may pursue either of two certificates in addition to their degree. The Graduate Program in Management Practice (GPMP) provides doctoral students a sound introduction in the fundamentals of business management in preparation for successful careers using their graduate training beyond the University. The program includes four courses taught in the College of Letters and Science, College of Engineering, and Donald Bren School of Environmental Science and Management, as well as a 160-hour internship at an approved organization. Information is available at [www.graddiv.ucsb.edu/academic/petitions/interdisciplinaryprograms.htm](http://www.graddiv.ucsb.edu/academic/petitions/interdisciplinaryprograms.htm).

The Certificate in College and University Teaching (CCUT) is designed for doctoral and M.F.A. students who wish to demonstrate superior competence and experience in preparation for teaching at the university or college level. Certificate requirements include completion or attainment of a number of teaching-related skills and experiences culminating in independent instruction of an entire class with the support of a UCSB faculty mentor. Information is available at:

[www.graddiv.ucsb.edu/academic/ccut](http://www.graddiv.ucsb.edu/academic/ccut).

### Intercampus Exchange Program for Graduate Students (IEPGS)

IEPGS allows qualified graduate students at UCSB to take advantage of educational opportunities at other UC campuses. If approved for IEPGS, students may take courses not available at UCSB, participate in special programs, or study with a distinguished faculty member at another campus for one quarter. Students must meet the following qualifications to be eligible to participate in IEPGS:

- Current student in good standing;
- Completed a year at UCSB;
- Maintained a GPA of at least 3.0; and
- Obtained approval of their home department.

### Education Abroad Program

The Education Abroad Program (EAP) offers opportunities for study and research at 130 partner institutions in over 30 countries throughout the world. Graduate students are encouraged to explore opportunities to meet the language requirements of their degree programs, achieve the cultural or contextual understanding needed for study of a particular topic,

or pursue research interests at other top-ranking institutions in their field of study. Students must meet minimum requirements for the program, have completed at least one year of graduate study at UCSB before departure, and secure the support of their academic department and the graduate dean. Further information may be found in the “Additional Academic Programs” chapter of this catalog or at: [eap.ucop.edu](http://eap.ucop.edu).

### Postgraduate Study for International Students Through UCSB Extension

International students who are interested in undertaking advanced study at a major university in the United States but who are unable to enroll for the full period of a degree program can apply to participate in the “University Immersion Program” through UCSB Extension. Refer to the Web site at [www.extension.ucsb.edu](http://www.extension.ucsb.edu) for more information.

## Financing Graduate Education

UCSB provides three main types of support for graduate students: fellowship or merit based support; academic appointments, which provide either departmental teaching or research assistantships; and need-based support, which is offered through the Financial Aid Office.

All domestic students are required to file the Free Application for Federal Student Aid (FAFSA). Web site: [www.fafsa.ed.gov](http://www.fafsa.ed.gov). Although the deadline for priority consideration is March 2nd, apply online now if you wish to be considered for financial support. Information from the FAFSA is used to determine eligibility and fund sources for support packages. UCSB’s Title IV code is 001320.

### UCSB Fellowships

UCSB offers a variety of centrally administered fellowships for both new and continuing graduate students. Awards are made to students on the basis of academic merit and promise of productive scholarship. These fellowship packages are intended to advance the goals of increased excellence and diversity of the graduate research and training programs at UCSB. Some fellowships are multi-year packages that include a combination of fee and nonresident tuition payment, stipend support, and academic apprentice positions. Other fellowships are single-year packages that include stipend and fee payment. Additionally, various fellowships are available to provide support for research costs, payment of in-state fees, and support for students who are in the final stages of their dissertation preparation.

Some fellowships are available to graduate students based on eligibility criteria such as department, degree objective or citizenship/legal residency. Information regarding fellowships for both new and continuing students, along with a description of each support package, is available on the Graduate Division’s Web site at [www.graddiv.ucsb.edu](http://www.graddiv.ucsb.edu) under the Financial Support heading.

In addition to the centrally administered fellowships, academic departments have their own funds available that they may use to recruit

excellent new students and support continuing students. Departmental fellowship support can be in the form of fee payment, nonresident tuition payment, and stipends. Students should consult their academic department for additional information.

### Fellowships for New Students

Incoming students indicate on the application for admission whether or not they are interested in being considered for fellowship support.

All candidates are nominated directly by the academic department. Multi-disciplinary faculty committees select award recipients. The award committees look at the departmental ranking of each nominated candidate, GPA, GRE scores, letters of recommendation, and each candidate’s statement of purpose. All fellowship awards are very competitive.

To be eligible for fellowship awards, students must have filed their application for admission, all supporting documents, and the FAFSA by January 15 or the stated deadline for their department, if earlier.

### Fellowships for Continuing Students

UCSB offers a variety of fellowships to continuing students in an effort to provide support at the various stages of a graduate education. Students may apply directly for some of these awards, while departments must nominate their students for others. To be eligible for these fellowships, students must be registered and in good academic standing for at least three quarters in their graduate program at UCSB.

Multi-disciplinary faculty committees select award recipients. Committee members will review several measures of academic success and merit such as letters of recommendation; UC GPA; timely progress toward the degree; evidence of scholarly production such as publication of original research in scholarly journals, presentation of research at scholarly meetings, or musical performance in public settings. All award selection processes are very competitive.

### Student Appointments

Students may seek either academic apprentice appointments or part-time University staff positions. Graduate students may work up to 50% time during the academic year. Academic apprentice positions provide training for future careers in academic settings and are the largest source of graduate student support on campus. Graduate students may be appointed to a variety of apprentice titles. Students apply directly through their departments for academic apprentice appointments and through the Campus Learning Assistance Services for additional positions. Academic Student Employee Positions currently available are listed on the College of Letters and Science Web site, [www.ltsc.ucsb.edu/asep](http://www.ltsc.ucsb.edu/asep). Teaching assistant, teaching associate, reader, tutor/remedial tutor, and graduate student researcher (GSR) positions of at least 25% pay a salary plus health insurance and partial payment of fees. A GSR appointment of at least 35% provides a monthly salary plus the payment of fees, health insurance, and nonresident tuition if applicable.

Many part-time University staff positions are also available on campus. Jobs are listed at the University’s Career Services Office ([\[career.ucsb.edu\]\(http://career.ucsb.edu\)\) and at the Human Resources Office \(<http://hr.ucsb.edu>\). The Financial Aid Office has information regarding work-study positions. \(\[www.finaid.ucsb.edu\]\(http://www.finaid.ucsb.edu\)\)](http://</a></p>
</div>
<div data-bbox=)

### Need-Based Financial Support

Graduate students may apply for a variety of need-based awards including work-study and loans through the Financial Aid Office. Students must file the FAFSA (Free Application for Federal Student Aid found at [www.fafsa.ed.gov](http://www.fafsa.ed.gov)) each year and provide the Financial Aid Office with supplemental information as requested. The Financial Aid Office’s Web site is: [www.finaid.ucsb.edu](http://www.finaid.ucsb.edu).

### Extramural Funding

There are numerous extramural fellowships available. In addition to gaining funding for graduate school, graduate students are encouraged to conduct a search of extramural funding resources as part of their professional training for life in academia. The funding search may begin with the Graduate Division’s electronic funding newsletter, *The Source*, located at [www.graddiv.ucsb.edu/Source](http://www.graddiv.ucsb.edu/Source). *The Source*—created specifically for UCSB graduate students by the Graduate Division—provides links to financial support information, regularly updated listings of campus competitions and deadlines, national fellowship announcements, and links to various funding sources and databases. UCSB subscribes to the Illinois Researcher and Information Service (IRIS) and Community of Science Funding Opportunities (COS), extramural funding source databases with search capabilities (along with instructions on how to conduct a search). Links to IRIS, COS, and additional funding resources may be found through the Financial Support section at [www.graddiv.ucsb.edu](http://www.graddiv.ucsb.edu). Throughout the academic year, the Graduate Division sponsors presentations that assist graduate students in conducting searches and writing applications for extramural funding. Please check the Graduate Division’s calendar of events for workshop information [www.graddiv.ucsb.edu](http://www.graddiv.ucsb.edu).

The Graduate Division publishes funding opportunities through three electronic mailing lists (subscribe at [www.graddiv.ucsb.edu/Source](http://www.graddiv.ucsb.edu/Source)) during the academic year: HUMFUND – funding opportunities for graduate students in the humanities and fine arts; SOCFUND – funding opportunities for graduate students in the social sciences and education; and SEMFUND – funding opportunities for graduate students in science, engineering, and math.

The Davidson Library provides a variety of directories that describe sources of funding and research opportunities including fellowships, grants, internships, and jobs. Several useful references on proposal and resume preparation are also available.

For assistance with the search and application for extramural funding, consult [www.graddiv.ucsb.edu](http://www.graddiv.ucsb.edu) under the Financial Support heading funding or contact the Peer Funding Advisor in the Graduate Division at [fundingpeer@graddiv.ucsb.edu](mailto:fundingpeer@graddiv.ucsb.edu). For information on any other aspect of graduate student support, contact the Graduate Financial Support unit at [financial@graddiv.ucsb.edu](mailto:financial@graddiv.ucsb.edu).

# Student Services and Activities

*The new Student Resource Building centralizes student services, supports student programs, and provides comfortable areas to meet, study, and socialize.*

Various services and activities are available to UCSB students, including academic counseling, personal counseling, career planning, health care, services to international students, services to students with disabilities, athletic and recreational activities, and numerous student organizations.

Additional information about the services and activities described below may be obtained directly from the appropriate office.

## Student Services

### Academic Advising

Many sources of academic advising are available to students at UCSB. Each college provides advice to its students on matters such as major selection, program planning, academic difficulties, degree requirements, and petitions for exceptions to requirements. Undergraduate and graduate advisors are available in each major department to assist with decisions about majors, careers, and graduate schools. An honors advisor assists students who wish to participate in the College of Letters and Science Honors Program. Telephone: (805) 893-3109. For academic advising related to the College of Engineering Honors Program, please email: [honors@engineering.ucsb.edu](mailto:honors@engineering.ucsb.edu).

Pre-professional advising is available in the College of Letters and Science for students considering careers in business administration and law.

A health professions advisor ([www.ltsc.ucsb.edu/health/](http://www.ltsc.ucsb.edu/health/)) offers special assistance to students who hope to attend medical school or professional school in the health sciences. Special advising services are also available to reentry and

nontraditional students (telephone: 805/893-3109). Advising is available for those interested in the Gevirtz Graduate School of Education as noted below.

Students interested in the credential and degree programs in the Gevirtz Graduate School of Education (GGSE) should contact the following: for multiple subject, single subject, or educational specialist teaching credentials (805) 893-2036 or stop by the Credential Services Office in Education Building 4102; for Teacher Education Program specific information (805) 893-2084 or stop by Education Building 3230; Counseling, Clinical or School Psychology (805) 893-3375 or stop by Education Building 2103; Education (805) 893-3936 or stop by Education Building 3102. Both Credential Services and the Department of Counseling, Clinical, and School Psychology hold regular information meetings. For detailed information on credential and degree requirements, please visit the Web site: [www.education.ucsb.edu](http://www.education.ucsb.edu).

### ACCESS Cards

The ACCESS Card is a full-color UCSB Student ID/Debit Card. It is used as proof of registration and to gain entrance into numerous student services. These include on-campus dining commons, Davidson Library, the computer lab, and the Recreation Center. It also allows free entry to athletic events and free rides on the local bus system. Students may opt to make a deposit to their card and use it as a debit card where purchases are automatically deducted from the balance in their account. ACCESS is accepted at the UCSB Bookstore, campus dining and food outlets, the copy center, the UCen Post Office/Cashier's, A.S. Notetaking/Cashier's and Parking Services as well as select off-campus businesses.

The ACCESS Card has a one-time processing fee of \$20 and is replaced free of charge if damaged for any reason. Students may opt for a free black and white UCSB Student ID Card that has limited uses. There is a \$5 replacement fee if it is damaged for any reason. Both cards have a \$20 replacement fee if lost.

### Campus Learning Assistance Services (CLAS)

Over 7500 students use Campus Learning Assistance Services (CLAS) each year. CLAS helps students increase their mastery of course material through group instruction, one-to-one tutoring and academic skills development. CLAS provides small group instruction in primarily lower-division courses in math, economics, engineering and science. One-to-one services are offered via appointment for English as a Second Language, study skills and writing. Students can also utilize our drop-in centers for economics, foreign language, math, science and writing. Workshops are offered throughout the year on note-taking, time management, reading, exam preparation, memory techniques and other skills per request. CLAS is open M-F with many services extending into the evening hours. To enroll in groups or workshops, or to arrange an appointment, visit CLAS in-person at the Student Resource Building, Room 3210, or on-line at [my.sa.ucsb.edu/clas](http://my.sa.ucsb.edu/clas). For more information, visit our Web site: [www.clas.ucsb.edu](http://www.clas.ucsb.edu) or contact us via telephone: (805) 893-3269.

### Computing Services

#### GOLD System

The GOLD System (Gaucho On-Line Data) enables students to search for open classes by instructor, day and time, requirements satisfied, etc.; register for classes; change their addresses; view registration information including class schedule, grades, and registration appointment times; check fees and financial aid information; and order official transcripts. The GOLD System is accessible at [my.ucsb.edu](http://my.ucsb.edu).

There are computers available for student use in a number of locations across campus (e.g., the Davidson Library and the University Center). These can be used for the GOLD system, student email, and some other computer applications.

#### Student Email

Free email accounts are provided to all students by Instructional Computing. U-Mail, the student email service, is required by both instructors and university administration. Once you open your account you can have your U-Mail forwarded to your Yahoo, Gmail, or any other account of your choosing. For further information see [www.umail.ucsb.edu](http://www.umail.ucsb.edu) or contact the U-Mail Help Desk at (805) 893-5542.

#### Computer Labs

Drop-in computing is provided by Instructional Computing's Open Access Lab at Phelps Hall 1513. Other Instructional Computing labs

in Phelps Hall and Kerr Hall are available for drop-in usage when not in use for instruction. Current schedules are available at [www.ic.ucsb.edu](http://www.ic.ucsb.edu) or by phone at (805) 893-5252.

### Software Workshops

Instructional Computing provides free software workshops throughout the quarter for a variety of popular software programs. Visit [www.ic.ucsb.edu](http://www.ic.ucsb.edu) or call (805) 893-3002.

### Student Web Publishing

The U-Web service, a subsidiary of U-Mail, provides web publishing space for all students. Details are available at [www.uweb.ucsb.edu](http://www.uweb.ucsb.edu) and at the U-Mail Help Desk.

### Student File Storage

The U-Storage service, also a subsidiary of U-Mail, provides safe and reliable storage space for your important files. Details are available at [www.ustorage.ucsb.edu](http://www.ustorage.ucsb.edu) and at the U-Mail Help Desk.

### Career Services

Career Services helps students identify and pursue their career goals. Confidential services are provided for free to all registered students.

Career Planning Services include career counseling, career testing, career group classes and workshops. Explore information about careers and graduate/professional schools in the Career Resources library or online at [www.career.ucsb.edu/](http://www.career.ucsb.edu/).

Career Employment Services educates students about work opportunities, resumé writing, interview techniques, and job search strategies. Career fairs, employer information sessions, and on-campus interviews with employer representatives are provided. Use the Reference Letter Service to apply to graduate or professional school, or if you're a graduate student seeking a job. Local, state, national, and international internship information, advice, and placements are arranged through the Internship Program; part-time, full-time and seasonal job listings are accessed through GauchoLink where you can register online. Services are available in Building 599 as well as online. Telephone: (805) 893-4412. Web site: [www.career.ucsb.edu](http://www.career.ucsb.edu).

### Counseling Services

College life can be stressful and difficult. When you need help sorting out a personal issue, feel overly stressed, anxious or depressed, Counseling Services can provide an objective person to talk with. If these issues are interfering with your academic life or causing academic difficulty, our psychologists can help clarify your values, goals, and identify options. Counseling can help in your relationships with others, and build self-confidence. Meetings are confidential, and no information is released without your consent. Counseling Services provides group therapy on a number of topics.

For stress management and relaxation, come visit the egg and massage chairs and learn techniques to help you cope with the stresses of college life.

We look forward to helping you as you navigate your way through UCSB. Our services are paid for by your registration fee. Please stop by and visit, or call us at (805) 893-4411. Phone consultation is available after hours whenever you need to talk with someone. For more infor-

mation about our services visit: [www.counseling.ucsb.edu](http://www.counseling.ucsb.edu).

### Dining Services

Dining commons are located near each residence hall. Residents are offered a choice of meal plans with their room contracts. Students who live off campus may purchase meals through a quarterly contract. Contract arrangements may be made via the Web site at [www.housing.ucsb.edu/dining/ocmp-info.htm](http://www.housing.ucsb.edu/dining/ocmp-info.htm).

Located on the main level of the UCen are a gourmet coffee-house, a delicatessen, Dominos, Jamba Juice, and a soup and salad bar. On the lower level is Panda Express, Wendy's Hamburgers, and Chilitos Mexican food. All UCen Dining Services facilities are open weekdays, some late night, and several are open weekends. In addition to those located in the UCen, there are several dining options around campus. The Arbor, located across from the library, offers a convenience store, Woodstock's Pizza, Subway, and a walk-up coffee and espresso bar. The Arbor is open seven days a week and most evenings. The Store at Buchanan, at the Buchanan building, is a small convenience store with a separate coffee and espresso cart. Coral Tree Cafe and Courtyard Cafe offer breakfast and lunch selections along with many grab and go items. Additionally there are coffee and espresso carts located at Harold Frank Hall, HSSB, and at the Student Health Center. Telephone: (805) 893-3773.

### Disabled Students Program

The Disabled Students Program (DSP), located in the Student Resource Building (SRB), assists eligible students with disabilities with academic accommodations to assist them with their University educational career. DSP provides interpreters, note takers, readers, advising, and referrals. An inventory of adaptive equipment is also available. Telephone: (805) 893-2668. Web site: [www.dsp.sa.ucsb.edu](http://www.dsp.sa.ucsb.edu).

### Early Childhood Care and Education Services

#### *Orfalea Family Children's Center (OFCC)* *University Children's Center (UCC)*

The Children's Centers serve the childcare needs of students, faculty, and staff by providing a high-quality card-care program for children three months to five years of age in full and half-day placements. OFCC, located on West Campus, cares for children three months to five years of age and UCC cares for children three months to three years of age. Tuition varies depending on the age of the child and the number of days and hours in attendance. California State Department of Education grants are available to subsidize tuition costs for low-income families. In addition, the Centers participate in the Federal Food Program, which provides nutritious meals to children whose families are income eligible. The Centers are open Monday through Friday from 7:30 a.m.-5:30 p.m. For information and to place a child's name on the waiting list, please call the Enrollment Coordinator at (805) 893-3665.

### Educational Opportunity Program (EOP)

EOP counselors assist all students, while focusing on low-income first-generation college

students, over the course of their undergraduate careers in clarifying and addressing academic, personal, career and financial concerns. They assist students in their negotiations with the institution and act as intermediaries, when necessary. Assistance for entering freshmen begins with the Summer Transitional Enrichment Program (STEP), a two-week residential experience. Participants receive English, math and chemistry instruction and complete an academic success course that focuses on time management and understanding the university experience.

EOP counselors also assist second-, third-, fourth-, and fifth-year students (including transfer, re-entry and non-traditional students) through advising, the creation of study and extracurricular plans, goal setting and the sponsoring of academic programs. The goal is to advise and prepare students at each respective class level for their post-graduation plans of graduate/professional school admissions or entry into the work force.

EOP counselors provide cultural programs that facilitate interaction/collaboration among students of all cultural/ethnic backgrounds, allowing them to gain an understanding of and appreciation for similarities and differences in each other and themselves. Through cultural programming, EOP helps create an environment that celebrates and promotes the history, contributions, intellectual heritage, education and growth of students.

EOP counselors are available to mentor students as well as offer referrals and information about support services available on campus and in the community. For further information about these services, please contact EOP at (805) 893-4758 or visit our office located on the second floor of the Student Resource Building. Web site: [www.sa.ucsb.edu/EOP/](http://www.sa.ucsb.edu/EOP/).

### Graduate Students Association

The Graduate Students Association (GSA) represents all UCSB graduate students. GSA is governed by an elected seven-member executive committee, which meets weekly, and an elected general council of graduate student departmental representatives, whose monthly meetings are open to all members. GSA executive committee members sit on and appoint students to various university committees. GSA also distributes a monthly newsletter, and schedules a variety of activities for graduate students. The GSA Lounge (UCen 2502) is open weekdays from 10 a.m. to 5 p.m. Free bagels and coffee are provided weekly, making it a congenial location for graduate students to unwind or study. In addition, the lounge is available to student groups who would like a place to meet. Further information is available from departmental graduate assistants, the GSA Web site at [www.gsa.ucsb.edu](http://www.gsa.ucsb.edu), or the GSA office, UCen 2502. Telephone: (805) 893-3824. Email: [gsa@gsa.ucsb.edu](mailto:gsa@gsa.ucsb.edu).

### Housing & Residential Services

Students at UC Santa Barbara have several choices of housing style and location, including residence halls, apartments, sorority and fraternity houses, and a housing cooperative, all of which are located on or within a mile of the campus. Detailed housing information is available on the housing Web site at

*Studying outside the University Center.*

[www.housing.ucsb.edu](http://www.housing.ucsb.edu).

UCSB operates eight residence halls located on or near the main campus, and space is available to accommodate all incoming freshmen. Various meal plans for “all you can eat” meals are offered in dining facilities close to each residence hall. Many single students find residence hall living an excellent opportunity to become involved with the campus community and meet other students. The contract process for the residence halls is handled at Housing & Residential Services on Channel Islands Road. Telephone: (805) 893-5513. Email: [contracts@housing.ucsb.edu](mailto:contracts@housing.ucsb.edu).

Incoming UCSB freshmen admitted for fall quarter may download residence hall information by mid-May as long as their Statement of Intent to Register (SIR) is submitted by the campus deadline.

**The Community Housing Office (CHO)** serves as a one-stop resource for rental housing information for students living in the community. Students interested in finding off-campus, non-university-owned housing can log onto [www.housing.ucsb.edu](http://www.housing.ucsb.edu) and click on “Rental Listings” to see what’s available. For information about CHO’s other services, such as their 24/7 Rental Advice and Information site, Rental Survival Guide, mediation, or videotaping service, click on “Where Can I Live?” and select “Community Housing Office.” The CHO is located on the 3rd floor (Room 3151) of the University Center, upstairs across from the UCSB Bookstore. The office is open M-F, 8 a.m. to 5 p.m., and can be reached at 805-893-4371.

**The Office of Apartment Living**, located in the Santa Ynez Apartment complex on El Colegio Road, provides information on university-owned, undergraduate, graduate and family student apartments. New single graduate and transfer students are guaranteed housing, provided deadlines are met. Sophomores and upper-division students (juniors and seniors) will continue to be housed through a lottery process. Students with families are eligible for

Family Student Housing. Families with children have priority. Apartment Assignment Services can be reached at (805) 893-4021. Please see [www.housing.ucsb.edu](http://www.housing.ucsb.edu) for application processes and deadlines.

**Campus Conference Services**, located in the Santa Rosa Administrative Center, provides information about the use of Housing & Residential Services’ conference facilities and services in the summer for organizations with educational objectives. Telephone: (805) 893-3072.

**The Office of Residential Life** promotes a self-regulated environment for the residents of University-owned residence halls. Their services foster the residents’ ability to live together respectfully and responsibly in a learning community and promote the academic success of all residents. The residential education program provides a quality living experience as well as opportunities to interact with other residents, faculty and staff. The components of this office include Residential Life administration, Residential Life live-in staff, Assignment Services, Judicial Affairs (including the Residence Hall Review Board), and Student Leadership (including the Residence Halls Association). The central office is located in a beige trailer, TB 335, which is west of Santa Rosa Residence Hall (805-893-3281). There are regional offices in the De Anza Center at Manzanita Village (805-893-6161) and at Santa Catalina (805-893-7473).

### **Office of International Students and Scholars**

The Office of International Students and Scholars, Student Resource Building (SRB), provides academic and personal counseling and assistance to international students. Every non-immigrant student is required to report to the office; students should bring passports and visa documents with them. The office conducts an orientation program at the beginning of the fall quarter and provides information about registration, immigration, and academic and other requirements that will affect the international student’s stay at the university. Telephone: (805) 893-2929. Web site: [www.oiss.ucsb.edu](http://www.oiss.ucsb.edu).

### **MultiCultural Center**

Since 1987 the MultiCultural Center (MCC) has pursued its mission of promoting cultural awareness and understanding, creating an environment that will foster a sense of belonging among students of diverse cultures, class, gender, and sexual orientation, as well as international students at UCSB, and serving as a setting for meaningful cross-cultural interaction.

Located in the University Center, the MCC provides a lounge and gallery, meeting rooms, office space, and a 150-seat theater.

In its quest to promote cultural awareness and understanding, the MCC offers a broad spectrum of events including lectures, panel discussions, films and videos, poetry readings, art exhibits, and musical, dance, and dramatic performances, all of which are open to the general public. Additionally, the MCC lounge provides a comfortable space conducive to studying, relaxation, and interaction.

Students, staff, faculty, and the community are invited to visit the MCC and to take advantage of its many free programs. The MCC is located in the east end of the University Center, and is open Monday through Thursday from

8 a.m. to 10 p.m. and Friday from 8 a.m. to 5 p.m. Telephone: (805) 893-8411.

### **Office of the Ombuds**

The Office of the Ombuds is a place where all members of the UCSB community can go for assistance in resolving conflicts or disputes on an informal basis. It is a confidential, impartial, informal, and independent resource that assists students, staff, and faculty who seek guidance with the informal resolution of any University-related complaint or conflict.

The Office helps individuals identify serious issues, develop resolution options, get information, manage conflict, and learn more productive ways of communicating. Discussing an issue with the Office is not notice to the University about the existence of a problem; all conversations are “off-the-record” and are not a step in any formal grievance process.

The Office is located in Girvetz Hall 1205-K and can be reached at (805) 893-3285.

Web site: [www.ombuds.ucsb.edu](http://www.ombuds.ucsb.edu).

### **Orientation Programs and Parent Services**

New undergraduate students and their parents are encouraged to attend a one- or two-day orientation program offered at various times during the summer and prior to the start of each academic quarter in conjunction with the Colleges of Letters and Science, Engineering, and Creative Studies. Orientation participants have the opportunity to meet faculty, deans, staff, and students; to learn about student services, academic offerings, and enrollment procedures; and to register for courses. During the summer, participants stay in university residence halls and have meals in the dining commons. For new undergraduates not attending orientation, and for all new graduate students, orientation meetings are held during pre-instructional activities at the beginning of each quarter. Details are available in the Schedule of Classes. Orientation Programs also offers a variety of activities each fall for new and returning students. Telephone: (805) 893-3443. Web site: [www.sa.ucsb.edu/orientation](http://www.sa.ucsb.edu/orientation).

### **Transportation & Parking Services**

**Parking Regulations & Permits.** UCSB parking permits are required at all times. Please check the Transportation & Parking Web site at [www.tps.ucsb.edu](http://www.tps.ucsb.edu) for complete, updated parking information.

Parking at UCSB is not assigned; it is provided on a “first-come, first-served” basis. Faculty, staff, and students may park in Faculty, Staff, or Visitor/Student lots with the appropriate permit.

Short-term permits (such as 3 hour, daily, evening, and weekend) are sold at the campus parking office (across from Harder Stadium in Lot 30), and from permit dispensers located throughout campus.

Long-term permits (such as annual and quarterly) are sold online at [www.tps.ucsb.edu](http://www.tps.ucsb.edu), or at the campus parking office.

Valid parking permits are required in all time zones at all times. This includes the time zones in front of on-campus residence halls. For current rate information, please visit our Web site at [www.tps.ucsb.edu](http://www.tps.ucsb.edu).

Valid parking permits are required at all times (7 days per week) in areas marked “Enforced At All Times,” “Reserved,” and “Restricted.” This includes, but is not limited to:

- Service Areas marked 24-Hours
- Restricted Service Areas
- Accessible (Disabled) Spaces (DMV-issued placard required)
- West Campus / Devereux Loop
- Lot 2 (B-1 residential lot)
- Lot 3 (northwest quadrant of lot, near Davidson Library)
- Lot 6 (Faculty and Faculty & Staff in southern part of lot near MSI)
- Lot 12 (Faculty spaces near Phelps Hall)
- Lot 22 (B-2 residential lot)
- Lot 38 (B-3 residential lot)

A valid parking permit is one that: a) has not expired, b) is displayed properly (in the lower left corner on the dashboard/inside of the front windshield), and c) is used to park in a space designated for that specific type of permit.

**Permit Eligibility.** Because parking on campus is extremely limited, students living within two miles of UCSB (including Isla Vista and university-owned off-campus housing) are not eligible to purchase a parking permit. Students living outside the two-mile limit may purchase a Visitor/Student permit and may park in lots designated Visitor/Student. A limited number of parking permits are sold to on-campus, residential students.

Residential parking permits and lot assignments are awarded on a first-come, first-served basis.

**Residential Verification Requirement.** Verification of local residential address, such as a current housing lease agreement, is required in order to purchase a residential student parking permit. At the time of sale, the student will be asked to provide proof of local living address,

such as a current housing lease agreement, utility bill, or BARC statement.

**Parking Meters.** Parking permits are not valid in metered spaces (even with a parking permit, coin payment is still required). Depending on the lot, the maximum time varies from 20 minutes to 4 hours. Meters only accept quarters.

**Campus Liability.** Individuals park on campus at their own risk. Please lock your vehicle. The University of California shall not be liable for any risk or loss of, or damage to, property of individuals, including vehicles or the contents therein, which may result from the use of campus parking services or facilities. Additional information on UCSB parking rules and regulation is available from our Web site at [www.tps.ucsb.edu](http://www.tps.ucsb.edu) or by calling (805) 893-2346.

**Transportation Alternatives Program (TAP).**

Commute to campus by foot, bike, skate, bus, train, carpool, or vanpool. TAP will provide “C” status graduate and undergraduate students living at least two miles from UCSB with six complimentary days of parking per quarter as an incentive for doing their share to clear the air. Graduate students employed by UCSB at least 45%, as well as UCSB faculty, postdocs, and staff receive up to 57 hours of complimentary parking per quarter when they join TAP, as an incentive for doing their share to clear the air. TAP is only available to students, staff, and faculty who qualify for and do not currently own a UCSB parking permit. (Carpools may share one parking permit.)

TAP can help you optimize your commute in other ways. To learn more, please visit the Web site at [www.tap.ucsb.edu](http://www.tap.ucsb.edu) or call (805) 893-2917 for a free commuter consultation on your money-saving options. Please refer to the TAP Web site for updated information or visit the TAP office adjacent to Parking Services in Building 388. Please note, TAP benefits subject to change.

## Peer Services

Many students at UCSB provide services to fellow students in exchange for work experience and either academic credit or a stipend. Peer service opportunities include work as residence assistants and housing advisors, counseling and career peers, peer health educators, veterans’ affairs advisors, Financial Aid peer advisors, and academic peer advisors in the College of Letters and Science.

Additional opportunities exist in the Community Service Organization, a civilian extension of the campus police department; the EOP office; the Women’s Center; Orientation Programs; and the rescue team.

## Student Grievance Procedures

UCSB is in compliance with all legislation that seeks to eliminate discrimination toward students on the basis of race, color, national origin, religion, disability, sex, sexual orientation, or age. (Sexual harassment is considered to be a form of sex discrimination.) Students who wish to file a grievance arising from alleged discrimination must do so at the Office of the Vice Chancellor for Student Affairs, Cheadle Hall 5203. An outline of formal student grievance procedures is contained in the Appendix. Sexual harassment complaints may be filed with the Sexual Harassment Complaint Resolution Officer, Paula Rudolph, 3213 Phelps Hall. Telephone: (805) 893-2546.

## Student Health

Student registration/health fees support some services, but there are still additional charges for these services. To make an appointment, please call (805) 893-3371. For specific information regarding fees, call (805) 893-8141. If you have health questions and would like information or need help scheduling an appointment, please call the Advice Nurse at (805) 893-7129.

### Medical Requirements

1. **Physicals** are required for all intercollegiate athletes and must be completed at Student Health.
2. **Tuberculosis (TB) skin tests** are required for those admitted to the UCSB teaching credential program and for those identified as international students by their visa status. Tests may be obtained at Student Health for a fee.
3. State law requires the **Hepatitis B vaccination** series be complete by the time of enrollment if you are 18 years of age or younger. The vaccination series requires three injections over a period of four to six months. If you have not already completed the full series, it is important that you see your local health care provider now to complete this requirement.

### Medical Services For Enrolled Students

Student Health hours are 8 a.m.-4:30 p.m., Mondays, Tuesdays, and Fridays, 9 a.m.-4:30 p.m. on Wednesdays, and 8 a.m.-7:00 p.m. on Thursdays. We are located across from the Event Center, between the residence halls and Isla Vista, making it easy to access health care on campus. We have our own parking lot with plenty of student parking (C sticker required) as well as metered parking available.

We offer full-service primary care as well as limited specialty care. The following are some of our services available: urgent care, same-day appointments, women’s health (including annual exams), internal medicine, psychiatry, rheumatology, orthopedics, dermatology, pharmacy, laboratory, x-ray, physical therapy, allergy shots, social work, immunizations, travel medicine, wart removal, HIV testing, minor surgery, acupuncture, and health counseling (alcohol & drugs, nutrition, stress management, eating disorders, sexual health). To make an appointment, please call (805) 893-3371.

Eye and/or dental care are provided on a fee-for-service basis. Please call these two clinics directly for fee information and appointments: Dental: (805) 893-2891; Eye: (805) 893-3170.

**UCSB offers special residence halls for students who share common interests.**

In the event of an emergency, students should go directly to one of the local community hospitals. Students should expect to use their medical insurance to cover expenses. All costs incurred will be at the student's expense. Be sure that you have adequate health insurance coverage. For information on university-sponsored health insurance, call the Student Health Insurance Office at (805) 893-2592. If you need emergency transportation, call the Campus Rescue Squad at 9-911. There is a charge for this service.

**Important Note:** Student Health is not equipped to handle life-threatening emergencies and does not provide complete 24-hour coverage. It also does not provide specialty care in many areas. Therefore, any accidents or illnesses which cannot be handled by Student Health will be referred to local hospitals, facilities, or physicians.

#### **Educational Services**

To help students succeed at UCSB, Health Education offers a variety of services including academic classes, internships, professional counseling and professional health educators. We offer group presentations and free individual confidential information and/or counseling, addressing alcohol, tobacco and other drug use; eating disorders; nutrition; relationships; sexual health and stress management. Students who complete training may apply for internships. For detailed information on Health Education Services, call (805) 893-2630.

#### **Student Health Insurance Plan (SHIP - Undergraduate)**

The UC Regents require all registered students to be covered by major medical health insurance while attending school. Students are automatically enrolled in the University's Student Health Insurance Plan (SHIP) unless they complete a waiver form that provides proof of comparable coverage. The waiver form must be submitted each year by the specified deadline. Unless a waiver is granted, students are charged a SHIP fee as part of their registration.

SHIP provides a complete health-care package when combined with the services available

through on-campus Student Health.

SHIP is portable, meaning students receive excellent coverage whether they are on campus, at home, or travelling. (On-campus Student Health provides health care to registered students whether they are enrolled in SHIP or have been granted a waiver.) Insurance premiums are non-refundable to students who withdraw from the university; coverage continues through the end of the quarter. Students may appeal to have an insurance payment refunded by contacting Student Health directly.

For further information, call Student Health at 893-2592 to speak with an insurance advisor. Web site: [www.sa.ucsb.edu/studenthealth/](http://www.sa.ucsb.edu/studenthealth/).

#### **Student Health Insurance Plan (SHIP - Graduate)**

All graduate students are assessed a quarterly fee for mandatory Student Health Insurance (SHIP).

The fee is paid by the appointing department or unit for Teaching Assistants, Teaching Associates, Readers, Tutors/Remedial Tutors, and Graduate Student Researchers, who are appointed 25% time (10 hours per week) or more.

All other graduate students must either pay the fee or waive out of the plan by showing proof of comparable coverage under another insurance policy.

The university student health insurance policy provides year-round and world-wide coverage. Insurance premiums are non-refundable to students who withdraw from the university; coverage continues through the end of the quarter. Students may appeal to have an insurance payment refunded by contacting Student Health directly. Contact the Student Health Service Insurance Office for details regarding coverage. Telephone: (805) 893-2592.

#### **Office of Student Life**

The Office of Student Life houses the Office of the Dean of Students and the Office of Judicial Affairs to provide a centralized location for students to access multiple services. We provide a staff trained to support student success and address a wide variety of needs and concerns

that students articulate while enrolled at UCSB.

Services include advice and support to all class levels through student mentor teams, freshmen services, general assistance with problem solving and referrals, personal emergencies, processing letters of recommendation, and administrative withdrawals. We also plan and schedule many co-curricular activities and educational programs. The staff assists students and organizations with leadership training and development, program planning, fund raising, trustee accounts, publicity and promotion, and special projects. The Office of Student Life provides an organization directory on their Web site that lists the statement of purpose and contact information for approximately 300 campus organizations. If you don't find an organization that interests you, we can help you start one. Telephone: (805) 893-4550 or (805) 893-4569. Web site: [www.sa.ucsb.edu/osl/](http://www.sa.ucsb.edu/osl/).

The protection of scholastic integrity and the prevention of academic dishonesty are fundamental to the mission of the Office of Judicial Affairs. The office provides education about campus regulations and administers the campus judicial process. For more information visit <http://judicialaffairs.sa.ucsb.edu/>. The office also provides education and support for various forms of discriminatory harassment. Hate incidents may be reported to the Hate Incidents Response Coordinator, (805) 893-5016.

#### **UCSB Achievement Program**

The UCSB Achievement Program sponsors various activities to increase access and provide support for students interested in the physical and life sciences, engineering, and the mathematical sciences. Academic workshops are offered each quarter of the academic year for students enrolled in key science, engineering, and mathematics courses. These workshops bring small groups of students together with graduate and undergraduate Achievement Program staff to focus on attaining a high level of success in their coursework. During the academic year and summer, selected students receive support to carry out advanced independent projects under the direction of UCSB faculty. In order to get the experience and skills needed for advanced work, eligible students with little or no research experience can apply for an apprenticeship to work on a team project led by a graduate student.

The Summer Institute in Mathematics and Science, an intensive three-week in-residence experience, is offered in collaboration with the EOP/Summer Transitional Enrichment Program (STEP) to entering freshmen with strong high school preparation in the sciences and mathematics.

The Achievement Program Center is located at South Hall 4631. For more information, students should call (805) 893-8801.

#### **Veterans Benefit Programs**

The Office of the Registrar certifies enrollment for Veterans Chapter benefit recipients to the Veterans Administration (VA) Regional Office in Muskogee, Oklahoma, and applies the California College Fee Waiver for eligible students.

#### **College Fee Waiver Program**

The State of California offers a College Fee Waiver Program to dependents of service-

Of the 20,000 students enrolled at UCSB, about 17,300 are undergraduates.

**UCSB women's basketball: a fan favorite**

connected disabled or service-related deceased veterans. This program is administered by the California Department of Veterans Affairs (CDVA).

Benefits are awarded on an academic-year basis and students are required to reapply each year for continued benefits. If you may be eligible to receive these benefits, contact your local County Veterans Service Office (CVSO). This listing is in the government pages section of your telephone book, under "county government." You may also call CDVA at (800) 952-5626, or visit their Web site at [www.cavso.org](http://www.cavso.org) to learn more about this program.

California Fee Waiver letters of eligibility should be submitted to the Registrar before the fee payment deadline to avoid late fee penalties.

#### **VA Chapter Benefit Programs**

VA Chapter benefit recipients apply for benefits through the Office of the Registrar and the Western Regional VA Office. All students who apply must complete the Veterans Benefit Request form available at: [www.registrar.ucsb.edu/Inter-campus.htm](http://www.registrar.ucsb.edu/Inter-campus.htm).

Those seeking initial verification of eligibility for Chapter benefits should contact the VA Regional Office, P.O. Box 8888, Muskogee, OK 74402, (888) 442-4551 or online at: [www.GIBILL.va.gov](http://www.GIBILL.va.gov).

For more information regarding any of these programs, contact the UCSB VA Benefit Program at: [Reg-Veterans-Benefit-Programs@sa.ucsb.edu](mailto:Reg-Veterans-Benefit-Programs@sa.ucsb.edu).

#### **Women's Center**

The Women's Center works to foster an equitable, inclusive, and safe educational environment for all members of the UCSB community. We strive to empower people of all genders to reach their full potential and to challenge constraining gender norms. The Center provides advocacy, education, resources, and support for students, staff, faculty, and community members. We value and respect all genders, bodies, sexual orientations, socio-economic backgrounds, and

racial and ethnic identities.

The Center provides a wide array of services to meet the needs of the UCSB community. We offer fun, interactive, and educational programs such as invited speaker presentations, films, workshops, and discussion groups. Our Rape Prevention Education Program (RPEP) offers individualized crisis counseling and advocacy for anyone affected by sexual assault, stalking, or domestic violence; educational programs for student groups on gender roles, sexual harassment and sexual assault; and other resources for reducing violence in our community. In conjunction with the Resource Center for Sexual and Gender Diversity, we provide services and advocacy for lesbian, gay, bisexual, transgender students. The physical space of the Women's Center includes a meeting space for re-entry/non-traditional students and their children; a research library open to all students, faculty, and staff; and an art gallery that features gender and social justice themes. A quarterly calendar of activities is available.

The Women's Center is located on the first floor of the Student Resource Building (SRB). Hours are Monday through Thursday, 9 a.m. to 9 p.m., and Fridays from 9 a.m. to 5 p.m. Call (805) 893-3778 for further information or visit the Web site at: [www.sa.ucsb.edu/women'scenter/](http://www.sa.ucsb.edu/women'scenter/).

## *Student Activities*

UCSB students have the opportunity to participate in 300 student organizations. A complete list of all organizations is available on the Office of Student Life Web site at [www.sa.ucsb.edu/campusorgs](http://www.sa.ucsb.edu/campusorgs). Some of the opportunities available to students are described below.

#### **Alumni Affairs**

CSB Alumni Affairs provides services to current students as well as alumni. Alumni Affairs is housed in the Mosher Alumni House, located on Mesa Road adjacent to Campbell Hall. The House is a center for academic, campus, student and alumni activities. Alumni Affairs hires a number of students to work in its numerous departments. It also provides an emergency student loan program. Every year during the last weekend of April, Alumni Affairs hosts an All Gaucho Reunion which includes lectures, athletic events, reunions and entertainment. You can contact Alumni Affairs at (805) 893-2288 or go to their Web site at [ucsalum.com](http://ucsalum.com).

#### **Associated Students**

Associated Students (A.S.) serves as the official undergraduate student government and provides services, employment opportunities and leadership experience. Every undergraduate student is a member upon payment of required quarterly registration fees. A.S. Executive Officers and Legislative Council members, elected annually each spring, represent students and transmit student concerns to the campus administration and academic senate as well as to the appropriate offices within and outside of the UC system. A.S. provides avenues for student involvement not only through elected positions, but also through boards and committees that address a broad range of issues: environment, women/gender, academic affairs, investments,

concerts and events, community service, lobbying, and radio broadcasting.

Associated Students' services include A.S. Publications Service, A.S. Ticket Office, A.S. Cashiers, A.S. Bike Shop, A.S. Legal Resource Center, and the A.S. Short Term Student Loan Program.

Students are invited to stop by the Associated Students offices housed in the University Center. Telephone: (805) 893-2566. Web site: [www.as.ucsb.edu](http://www.as.ucsb.edu).

**Community Affairs Board.** Through the AS/UCSB Community Affairs Board (CAB), students find out about campus and community volunteer opportunities, non-profit agency orientation/training, and one-time community service events. Located in the University Center, UCSB's Volunteer Action Center provides students the opportunity to explore career options, create social action, and gain practical experience. CAB connects students to local nonprofit and human services agencies such as Special Olympics, Best Buddies, Boy's and Girls Club and Transition House. In addition to local agencies students have participated in the community through student-coordinated projects through the Family Literacy Program, Isla Vista Youth Project and Isla Vista Teen Center. Members of CAB fill leadership positions and gain valuable practical experience in the areas of public relations, community outreach, financial management, fund-raising, and volunteer/non-profit management. For more information please call (805) 893-4296 or stop by the CAB office, 2523 University Center. Web site: [www.as.ucsb.edu/cab](http://www.as.ucsb.edu/cab).

**Program Board.** Associated Students Program Board presents a wide variety of educational and cultural events including lectures, concerts, films, sneak previews, Storke Plaza events, and an annual spring Extravaganza. Students involved in Program Board gain experience in planning and organizing events,

**The Recreation Center has a climbing wall, swimming pools, gymnasiums, weight rooms, and squash and racquetball courts.**

managing budgets, negotiating with agents and promoters, running technical equipment, and working with campus and community officials. Program Board members provide leadership to other campus organizations with event planning assistance and gain first-hand experience with the entertainment industry. Program Board also provides job opportunities for students as ushers, production crew, and promotion assistants. Telephone: (805) 893-3536.

**Student Media.** UCSB student publications include student newspapers (*Daily Nexus* and *The Bottom Line*), yearbook (*La Cumbre*), literary magazine (*Spectrum*), journal of undergraduate research (*Discovery*), journal of graduate research (*Thresholds*), and an arts magazine (*Experimental Thinking*). UCSB also has a radio station, KCSB-FM and KJUC-FM Cable. Further information about student media is available in the Storke Publications Building and in the Associated Students main office.

### Exercise & Sport Studies/ Recreation

The Department of Exercise & Sport Studies offers academic minors in Athletic Coaching, Exercise & Health Science, Fitness Instruction and Sport Management as well as a broad-based program of physical activities classes for all ability levels. Academic minor courses are offered throughout the academic year and in summer session.

The Recreation department offers an Adventure Program, twenty sport club teams, Intramural Sports, a variety of special events and a host of open recreation, free play opportunities. The Recreation Center, which includes an aquatics complex, multi-activity indoor arena, three fitness centers, racquetball and squash courts, locker rooms, a climbing wall and two gymnasias, is available for daily use. Additional facilities include all-weather and natural turf play fields, Pauley Track, a campus swimming pool, Robertson Gym, ropes course, aerobics studio, gymnastic area, sailing center, and fifteen tennis courts.

*Reading the Daily Nexus, UCSB's student newspaper, in the University Center.*

Each quarter the department publishes the *Leisure Review*, which includes the schedule for a variety of programs and recreational classes such as pottery, stained glass, ballet, swing and ballroom dancing, yoga, wine tasting, massage, guitar, and sailing, among others. Telephone: (805) 893-3738 or (805) 893-2181. Web site: [www.essr.ucsb.edu](http://www.essr.ucsb.edu).

### Fraternities and Sororities

UCSB hosts more than 30 Greek-letter organizations composed of national and local/regional sororities and fraternities, many of which maintain chapter houses in the student community of Isla Vista. The organizations offer their members leadership, scholarship, community service, and friendship opportunities through participation in a number of on- and off-campus activities. For more information on Greek life, contact the Office of Student Life. Telephone: (805) 893-4550.

### Intercollegiate Athletics

The primary mission of UC Santa Barbara Intercollegiate Athletics is to provide an opportunity for widespread participation in intercollegiate athletics and to enhance the student-athlete's education through competition at the Division I intercollegiate level. Because it demands the successful integration of intercollegiate competition with an academic program, the educational experience of the student-athlete is unique.

In addition, Intercollegiate Athletics is intended to foster a sense of community among faculty, staff, and students on campus and to help provide a reason for friends, alumni, and supporters in the local area and throughout the state to feel a part of UCSB.

The university expects its Intercollegiate Athletics program to provide competitive opportunities for both men and women in a variety of sports.

Intercollegiate Athletics at UCSB is based upon an educational model, not upon a business model. The Intercollegiate Athletics program does not seek to make a profit from its athletic events, but does seek to generate a considerable portion of the revenue necessary to support itself at a level of excellence consistent with the university's standards.

UCSB places the highest priority on the academic progress of student-athletes and provides support systems to assist them in completing their degrees.

The primary mission of UCSB is teaching, research, and service. Associated with this is the development of the full potential of our students in both academic and non-academic settings. The Intercollegiate Athletics program plays a major role in achieving this goal.

The Intercollegiate Athletics program at UCSB is bound by the policies and procedures of the NCAA and the rules of any conference, league, or association of which it is a member.

The Intercollegiate Athletics program at UCSB offers ten varsity sports for men (cross-country, water polo, soccer, basketball, swimming, track and field, baseball, golf, volleyball, and tennis) and nine for women (tennis, volleyball, swimming, track and field, cross-country, softball, basketball, water polo, and soccer).

All of UCSB's intercollegiate teams compete

*UCSB's Intercollegiate Athletics program fields 19 teams that compete at the NCAA Division I level.*

at the Division I level in the NCAA, where many attain national prominence. Telephone: (805) 893-8613.

### Residence Halls Association

The Residence Halls Association (RHA), with its main office located in the San Nicolas Residence Hall lobby, is the governing body of and for students living in university-owned residence halls. RHA coordinates social, educational, and multicultural activities for students living in the residence halls. For event information or to speak with board members, call the RHA Office: (805) 893-4877. Web site: <http://rha.housing.ucsb.edu>.

### University Center (UCen)

The UCen is the focal point for student activities on the UCSB campus. Located within the UCen are the UCSB Bookstore, seven dining facilities, a coffee house, a convenience store, a U.S. Post Office, the UCen Cashier, a copy shop, Kaplan Testing, meeting rooms, the Corwin-Pavilion Conference Center, two computer lounges, and multiple TV monitors. The UCen also houses Associated Students, Graduate Students Association and Lounge, the MultiCultural Center and Theater, the Community Housing Office, and student organization offices. Web site: [www.ucen.ucsb.edu](http://www.ucen.ucsb.edu).

# Fees, Expenses, and Financial Aid

**Billing Office, 1212 Student Affairs and Administrative Services Building (SAASB)**  
**Telephone: (805) 893-3756**

**Financial Aid Office, 2103 Student Affairs and Administrative Services Building (SAASB)**  
**Telephone: (805) 893-2432**  
**Web site: [www.finaid.ucsb.edu](http://www.finaid.ucsb.edu)**

The cost of attending the University of California, Santa Barbara will vary. Generally, however, the total undergraduate costs, including fees, books and supplies, room and board, transportation, and personal expenses for three quarters on campus during the 2008-2009 academic year are estimated to be approximately \$26,000 for residents of California and \$45,000 for nonresidents, including international students. Total graduate student costs including fees, books and supplies, room and board, transportation, and personal expenses for three quarters off campus are estimated to be approximately \$31,000 for residents of California and \$47,000 for nonresidents. A detailed breakdown of estimated expenses is available on the Financial Aid Office Web site at [www.finaid.ucsb.edu](http://www.finaid.ucsb.edu).

The university's accounts receivable billing system (known as Billing, Accounts Receivable, and Collections, or BARC) consolidates debts owed to the university, including fees, campus owned housing expenses, and library fines. Students receive a monthly statement of their account status whenever they have financial obligations to the university. Fee payment deadlines are published quarterly in the Schedule of Classes.

Qualified students are eligible for financial assistance in the form of scholarships, loans, grants, and/or work-study. For more information on UCSB financial aid, students can visit the Financial Aid Office Web site at: [www.finaid.ucsb.edu](http://www.finaid.ucsb.edu)

## Quarterly Fees and Expenses

Fee amounts are summarized in the accompanying chart. Tuition, fees, and other charges are subject to change without notice by the Regents of the University of California. Some specific fees are described below.

### Registration fee

The registration fee is the same for both undergraduate and graduate students. This fee supports such student services as athletic facilities, laboratory fees, outpatient care furnished by Student Health, and counseling and placement services. This fee is charged whether or not students use these services.

### Educational fee

The educational fee is paid by all students registered at UCSB to cover a variety of educational costs as determined by the regents. With the approval of the appropriate college dean, undergraduate students may obtain deficit load

## SUMMARY OF QUARTERLY FEES AND EXPENSES, 2009-2010

*Tuition, fees, and other charges listed below are currently proposed fees and have not yet been approved by the Regents of the University of California. Refer to the Registrar's Web site for a complete breakout of fees and the latest fee information at: [www.registrar.ucsb.edu/feechart.htm](http://www.registrar.ucsb.edu/feechart.htm)*

|                                       | Resident Undergraduate Students | Resident Graduate Students | Nonresident Undergraduate Students | Nonresident Graduate Students |
|---------------------------------------|---------------------------------|----------------------------|------------------------------------|-------------------------------|
| Registration fee                      | \$288.00                        | \$288.00                   | \$288.00                           | \$288.00                      |

| <b>Total for nonresidents</b>         |                                 |                            | <b>\$9,668.72</b>                  | <b>\$7,882.18</b>             |
| Student Health Insurance* (SHIP)      | 306.50                          | 719.00                     | 306.50                             | 719.00                        |

\* Health insurance is mandatory. Students can opt out of the program with proof of comparable insurance from another carrier.  
 \*\* Graduate doctoral students see "Nonresident fee" section on this page.

(or part-time) status prior to the beginning of the quarter. Approval is based upon verifiable reasons of employment, health, or family responsibility. Under certain conditions, reduced educational fees may be available through the Office of Student Life for undergraduate students who have advance permission to carry 10 or fewer units a quarter.

### Student Health Insurance Plan (SHIP)—Undergraduate Students

The UC Regents require all registered students to be covered by major medical health insurance while attending school. Students are automatically enrolled in SHIP unless they complete a waiver form and provide proof of comparable coverage. The waiver form must be submitted each year by the specified deadline. Unless a waiver is granted, students are charged a health insurance fee as part of their registration.

SHIP provides a complete health care package when combined with the services available through Student Health located on-campus. In addition, SHIP is portable, meaning that students receive excellent coverage whether they are on campus, at home, or travelling.

For further information, call Student Health at (805) 893-2592 to speak with an insurance advisor.

### Student Health Insurance Plan (SHIP)—Graduate Students

All graduate students are assessed a quarterly fee for mandatory Graduate Student Health Insurance (SHIP). The fee is paid by the university for teaching and research assistants who have appointments of 25% time (10 hours per week) or more. All other graduate students are responsible for the quarterly premium unless they waive out of the plan. The completed waiver form must be submitted to the Student Health Insurance Advisor prior to the registration fee deadline. Forms are sent to students along with insurance information and are also available at Student Health and at their Web site at [www.sa.ucsb.edu/studenthealth](http://www.sa.ucsb.edu/studenthealth). The university student health insurance policy provides

year-round and worldwide coverage. Contact the Student Health office at (805) 893-2592 for details regarding coverage.

### University Center fee

All students are assessed a University Center (UCen) fee used to repay construction loans. Students enrolled in 5.5 units or fewer are eligible for a full refund of this fee.

### Transit Systems fee

The transit systems fee provides unlimited local Metropolitan Transit District (MTD) bus service for all registered students. Students may ride MTD at no charge by showing their ACCESS card with current registration sticker.

### Nonresident fee

Students who have not been classified as legal residents of California for fee purposes are classified as nonresidents, and are subject to payment of a nonresident fee. Graduate doctoral students should refer to the Appendix concerning the possible reduction of the nonresident fee. Regulations governing residence determination are also outlined in the Appendix. Newly admitted and returning students are required to file a Statement of Legal Residence. Questions concerning residence classification may be referred to the Residence Deputy in the Office of the Registrar at (805) 893-3033.  
 Email: [Reg-Residency@sa.ucsb.edu](mailto:Reg-Residency@sa.ucsb.edu)

## Additional Fees and Expenses

### Application fee

Every applicant for admission or readmission must submit a nonrefundable \$40 fee with the application.

### Deposit fee

A nonrefundable \$100 deposit is required of undergraduates when they return the Statement of Intention to Register at UCSB. The deposit will be applied to the registration fee only if students enroll in the quarter for which they have been admitted.

**REGISTRATION FEE REFUND SCHEDULES**

*The refund schedules are subject to revision, including retroactive revision during the academic year, without notice by the Federal Government or the Regents of the University of California. Please check the Registrar's Web site for the current refund schedule at: [www.registrar.ucsb.edu/feerefunds.htm](http://www.registrar.ucsb.edu/feerefunds.htm). Title IV financial aid includes Pell Grants, Supplemental Educational Opportunity Grant, College Work-Study, Perkins Loan, Direct Loans, Unsubsidized Direct Loans, and Parent Loans for Undergraduate Students (PLUS).*

**Schedule A**

New students receiving federal Title IV financial aid who withdraw in their first quarter of attendance are eligible to receive the following percentage:\*

| 1st day or prior | 2-7 days | 8-14 days | 15-21 days | 22-28 days | 29-35 days | 36-42 days | 43 days or over |
|------------------|----------|-----------|------------|------------|------------|------------|-----------------|
| 100%             | 90%      | 80%       | 70%        | 60%        | 50%        | 40%        | 0%              |

**Schedule B**

All other students (those not eligible for Schedule A refunds) are eligible to receive the following percentage:\*

| 1st day or prior | 2-7 days | 8-18 days | 19-35 days | 36 days or over |
|------------------|----------|-----------|------------|-----------------|
| 100%             | 90%      | 50%       | 25%        | 0%              |

\* Schedules refer to calendar days, including weekends.

**Intercampus Transfer fee**

Undergraduate students who wish to transfer from one UC campus to another must pay a non-refundable \$60 fee with their intercampus transfer application.

**Parking fees**

Fees and parking regulations are subject to change without notice. For complete information on parking permits, regulations, services, free parking incentives available through the Transportation Alternatives Program, etc., see "Transportation and Parking Services" on page 50 in the "Student Services and Activities" section of this publication. For rate information, please refer to our Web site at: [www.tps.ucsb.edu](http://www.tps.ucsb.edu)

**Financial Aid**

All students who will need financial assistance to attend UCSB are encouraged to complete the financial aid application process. Almost everyone thinks first of fees and tuition when considering the cost of a college education. But this is only part of the overall cost of attending a university. There are also living expenses, such as food, housing, books, supplies, transportation, and personal expenses. These can comprise more than half of the cost of your education.

At UCSB, we want every admitted student to be able to attend regardless of his or her financial circumstances. The University views your education as a partnership involving the University, the state of California, the U.S. government, you, and your family. The types of financial assistance programs the University administers include grants, scholarships, loans, and student employment. In order to receive an offer of financial aid from UCSB, a student must be admitted to UCSB in a degree-granting program. Students enrolled through UCSB Extension are not eligible.

**Application Process**

The 2009-10 Free Application for Federal Student Aid (FAFSA) is the application that must be completed to begin the process of applying for financial aid. Students are encouraged to

submit their applications online at [www.fafsa.ed.gov](http://www.fafsa.ed.gov), as this is the preferred mode of application. Paper applications are no longer distributed to high schools and colleges. Students can obtain a paper FAFSA by calling the Federal Student Aid Information Center (FSAIC) toll-free at 1-800-4-FED-AID (1-800-433-3243). Please note the UCSB and Cal Grant deadlines below.

**Deadlines**

To receive priority consideration for funding from UCSB and the California Student Aid Commission (CSAC—the agency that administers the Cal Grant programs), all financial aid applicants must file the FAFSA between January 1, 2009 and March 2, 2009. If filing the paper version of the FAFSA, it is important to obtain a certificate of mailing from the U.S. Postal Ser-

vice as proof that the FAFSA was filed by March 2, 2009. Students may still file the FAFSA after the March 2, 2009 priority filing deadline, but they will only be considered for the federal Pell Grant, ACG, SMART Grant (undergraduates only), and Direct Loan programs.

**Cal Grants**

All undergraduate financial aid applicants who are California residents are required to apply for a new Cal Grant award from the California Student Aid Commission (CSAC) if they are not already a Cal Grant recipient. To apply for a new Cal Grant award, the FAFSA must be submitted by March 2, 2009. Additionally, students must submit the Cal Grant GPA Verification Form to CSAC by March 2, 2009. The Cal Grant GPA Verification Form is available on CSAC's Web site at [www.csac.ca.gov](http://www.csac.ca.gov). Most high schools and colleges automatically file their students' verified GPAs with the Commission. Students should confirm whether their schools will file their GPA for them. If not, they must obtain a GPA Verification Form, get it certified by a school official, and mail it themselves.

**Refunds**

A full refund of fees may be granted to students who withdraw prior to the first day of instruction. Students who withdraw on or after the first day of instruction are eligible to receive partial refunds according to the schedule of refunds listed above. Information about refunds, fees, and deposits is available online at [www.ucop.edu](http://www.ucop.edu). Fee and refund information is subject to change without notice. Financial aid students should refer to page 27 if they are considering enrolling in a "deficit program."

**Taxpayer Relief Act of 1997**

Information on educational tax benefits that may have an impact on students and their families can be found in the Appendix.

# About the Catalog

The following section of this catalog contains (1) information about the offerings and requirements of the colleges and their individual departments, (2) faculty lists, and (3) course lists. The overall organization is alphabetical by university academic unit (College of Creative Studies, College of Engineering, College of Letters and Science, Donald Bren School of Environmental Science and Management, Gevirtz Graduate School of Education), and alphabetical by department within each academic unit, as indicated in the table of contents. Students should read the chapter about their college as well as the entries related to departments of interest.

Because the catalog must be prepared in advance of the academic year it covers, it may not reflect very recent changes in courses, requirements, or faculty. The *Schedule of Classes*, available in the UCSB Bookstore before the opening of each new quarter, contains current information about class offerings and instructors and indicates when and where courses are offered. The Schedule is also available online at [www.registrar.ucsb.edu/soc.htm](http://www.registrar.ucsb.edu/soc.htm). Students who want to plan their schedules before the *Schedule of Classes* is available should contact individual departments to determine when particular courses will be offered.

## Several important matters should be noted:

- Faculty members are occasionally on leave. Department offices are the best source of information about the leave status of faculty members.
- Prerequisites are preparation needed for success in courses. These should be noted with care, as they are enforced at registration. Normally, students will not be able to register for a course for which they have not met the prerequisite(s) as listed in the catalog. Instructors may make an exception upon presentation of evidence of equivalent preparation.
- Some courses are not offered every year; consult the *Schedule of Classes* or the department for authoritative information.
- Admission to UCSB does not guarantee enrollment in any particular class.

## How to read course listings:

Each course listing contains the course number, course title, number of units of credit, name of instructor(s), course prerequisites (if any), course enrollment information (if any), recommended preparation (if any), and course description. A course in which the instructor is listed as Staff may be taught by various instructors.

One or more codes (F, W, S, SS) may appear at the end of a course entry, indicating whether the course is normally offered in the fall, winter, or spring quarter, or in summer session.

## Course numbers are assigned as follows:

**1-99.** Lower-division courses, open to all UCSB students; especially appropriate for freshman and sophomore students; may not be taken for upper-division or graduate credit.

**98-99.** Independent studies courses open to lower-division students. A student may take up to 5 units per quarter, 15 units per year, and 30 units total in all 98, 99, 99AA-ZZ, 198, 199, and 199AA-ZZ independent studies courses combined. Graduate students will not receive credit toward advanced degrees for these courses.

**100-199.** Upper-division courses, ordinarily open to students who have satisfied the prerequisites specified in catalog descriptions of these courses. Prerequisites may include appropriate prior college-level courses or their transfer equivalents, completion of six terms of college work, or a combination of six terms of college work and appropriate prior college courses. Generally, upper-division courses are not recommended for freshman students. No graduate course credit is allowed for upper-division courses even if additional work is completed, but a limited number of upper-division courses may be applied in fulfillment of graduate degree requirements.

**198-199.** Independent studies courses are open to students who (1) have attained upper-division standing (or are approved lower-division students in the College of Creative Studies), (2) have at least a 3.0 grade-point average for the preceding three quarters, (3) can demonstrate appropriate academic background, and (4) have obtained necessary approvals as outlined in the *Schedule of Classes*. A student may take up to 5 units per quarter, 15 units per year, and 30 units total in all 98, 99, 99AA-ZZ, 198, 199, and 199AA-ZZ independent studies courses combined. Graduate students will not receive credit toward advanced degrees for these courses. Unit limits are different for College of Creative Studies majors and are explained in its section of this catalog.

**200-299.** Graduate courses, ordinarily open only to graduate students who have completed at least 12 upper-division units related to the subject matter of the course. Exceptionally well qualified undergraduates, with at least 12 units in the subject and a cumulative grade-point average of 3.0 or higher, may petition to enroll in graduate courses.

**300-399.** Professional preparation courses primarily offered in the Gevirtz Graduate School of Education and the graduate program in Media Arts & Technology. These courses are not applicable to the bachelor's degree in the College of Letters and Science.

**400-499.** Other professional courses (offered by the Donald Bren School of Environmental Science & Management or the Gevirtz Graduate School of Education). These courses are not applicable to the bachelor's degree in the College of Letters and Science.

**500-599.** Courses reserved for advanced study and research, including but not limited to individual study, special topics, group projects, and practica involving teaching assistants or graduate student researchers.

# College of Creative Studies

Building 494, Telephone: (805) 893-2364

E-mail: [info@ccs.ucsb.edu](mailto:info@ccs.ucsb.edu)

Website: [www.ccs.ucsb.edu](http://www.ccs.ucsb.edu)

Dean: Bruce H. Tiffney

Associate Dean: Harry Reese

The College of Creative Studies at UCSB is unique in the University of California. The adjective “creative” is not intended to suggest that students create their own majors, although there is a great deal of flexibility in the Creative Studies programs. Rather, the Creative Studies major is for talented students who are committed to advanced and independent work in one of the disciplines represented in the college. Each of the approximately 350 students enrolled in the college enjoys close individual advising and conscientious academic attention from a faculty committed to undergraduate teaching. Courses offered by the college are designed to allow students to rigorously explore or even modify a field of knowledge rather than merely expose them to a predetermined quantity of fixed subject matter. Through intense creative work and research projects typically reserved for graduate school, students acquire a thorough comprehension of their discipline and are encouraged to begin making original contributions to the field. Most classes in the college are tutorials and small seminars.

In addition to taking courses within the College of Creative Studies, students are guided and encouraged to work within academic departments in the Colleges of Letters and Science and Engineering, taking full advantage of the many courses, extensive research equipment, facilities, and expertise available at UCSB.

Students choose one of the eight majors offered by the College of Creative Studies when they apply for admission. The flexibility in curricular design, however, allows considerable latitude. Ambitious students occasionally complete two majors. When appropriate to their educational goals, students may choose to complete both a CCS major and a major in either the College of Letters and Science or the College of Engineering. Students also have the option to complete one of the many minors now

available through the College of Letters and Science.

Most Creative Studies courses are open to students from other UCSB colleges, although CCS students normally have priority. Permission of the instructor is required to remain enrolled in the course. Because Creative Studies course offerings are not published in the quarterly Schedule of Classes, students should contact the college office for registration details or refer to the College’s homepage at [ccs.ucsb.edu](http://ccs.ucsb.edu).

For more detailed information about the College of Creative Studies, instructions on how to apply, and an application, please refer to our website and admissions.

## Degrees and Majors

Students may earn the bachelor of arts degree in Creative Studies with a major in art, biology, chemistry/biochemistry, literature, mathematics, music composition, or physics. They may also earn the bachelor of science degree in Creative Studies with a major in chemistry/biochemistry, computer science, mathematics, or physics. Qualified students may apply to earn the bachelor of science/master of science degrees in computer science (with the B.S. earned in CCS and the M.S. in the College of Engineering).

All CCS students will have mid-academic-career progress checks with the faculty in their respective majors. The form, content, and timing of this review varies by major and the student’s class standing at the time of admission to CCS. Students not making satisfactory progress as determined by the faculty may be asked to leave their major in CCS.

## Art

Serious students who want to be artists may consider the CCS art program, where they will work with professionals in the areas of painting, sculpture, or book arts. The faculty consists of working artists, selected on the basis of the recognized quality of their art. The program emphasizes development of individual, literate artists.

## Biology

Students interested in laboratory and field research might wish to consider the CCS biology program. It is designed to meet the needs of students who show promise of being able to begin advanced work early in their undergraduate careers. Biology students are expected to engage in independent research from the first year on.

## Chemistry & Biochemistry

This program is ideal for students who are impatient to get into the laboratory and begin research in chemistry or biochemistry. Undergraduates in the CCS major can extend their study of chemistry and biochemistry to a level of inquiry usually associated with graduate school, as they build a foundation of fundamentals and participate in research projects.

## Computer Science

The CCS computer science major provides an accelerated curriculum covering mathematical foundations and programming techniques, quickly leading to more advanced upper-division courses. The broad spectrum of upper-division courses that are offered provides both depth and breadth necessary for future research in computer science.

## Literature

The literature program is for students who have a genuine passion for reading and writing. The readings include major literary figures, periods and genres represented in English, American, and foreign literatures (both in translation and in the original). There are also creative writing courses that emphasize both verse and narrative prose.

## Mathematics

The CCS mathematics program is a special curriculum designed to provide a format for aspiring mathematicians to discuss and solve non-routine problems in the various areas of mathematics. The curriculum was developed to accommodate students who are able to move to a high level of mathematical inquiry at a pace faster than the usual university curriculum would allow.

## Music Composition

The CCS music composition program concentrates on various idioms and techniques of twentieth-century music as they are used in “serious” or “concert hall” works. The instructors are working composers who are concerned with helping students develop their compositional abilities through tutorials, small seminars, and special projects.

## Physics

This program is for physics students with inquisitive minds. Participation is a key factor in the classroom, developing students’ physical intuition and honing the ability to think on one’s feet. The CCS physics program is designed to develop breadth and depth of understanding and provide a solid preparation for undergraduate research and graduate work.

## Admission

Candidates for the college must meet the entrance requirements of the University of California and must complete an additional, separate application to the College of Creative Studies. Before a final decision regarding an applicant's enrollment in the College of Creative Studies will be made, a letter of application and transcripts of the applicant's scholastic record must be received by the college. Two letters of recommendation are required to apply for most majors. Candidates in the arts will submit work in evidence of talent: a portfolio of original work for art; fiction and/or poetry, and critical papers for literature; written scores of musical compositions for music. Work in evidence, such as examples of independent research, is helpful but not essential for candidates in mathematics and the sciences.

**Transfer.** Students may apply at any time for transfer into another academic unit of the university, with appropriate credit granted for their standing in the college. Those applying for transfer to the college, if accepted, will be enrolled at the equivalent College of Creative Studies level. Students are normally expected to spend at least six quarters enrolled in the college to receive a degree from the College of Creative Studies.

## Grading and Unit Requirements

The grading system in the college is focused on accomplishment. It is a combination of pass/no record and variable unit credit. A pass in a college course is given only for work completed at above-average (3.0 or higher) level. For each course in the college, the student may receive any number of units from 0 to 6. Zero (0) is No Record—the course is not recorded on the student's transcript; any number of units from 1 to 6 is Pass. In each course the student enrolls for the specific number of units of work (up to a maximum of six) planned for that course, but at the end of the quarter the instructor makes the final determination of the unit value of the student's work.

Courses taken outside the College of Creative Studies will be graded according to the grading system of the college in which the courses were taken. Students must maintain a 2.0 grade-point average in courses taken for letter grades outside the College of Creative Studies.

Each unit of credit earned is counted toward graduation; 180 quarter-units of credit qualify the student to be evaluated for graduation with a bachelor of arts degree or a bachelor of science degree in the College of Creative Studies.

## Degree Requirements

To receive a bachelor of arts or bachelor of science degree from the College of Creative Studies, a student must meet two sets of requirements: university degree requirements and college degree requirements.

## University Degree Requirements

All undergraduate students must satisfy the UC Entry Level Writing Requirement, American History and Institutions, units completed,

academic residency, and grade-point average requirements. These requirements are described fully in the chapter "Undergraduate Education at UCSB."

## College Degree Requirements

Creative Studies students work closely with their advisors to establish which courses they will complete for their majors. When necessary, CCS students may take basic or introductory courses in the College of Letters and Science to prepare for advanced work.

In addition to completing a major with the guidance of an advisor, each student must fulfill the College of Creative Studies general education requirements. These are designed to accommodate individual interests while still ensuring that each student acquires a broad education. Each student is required to complete a) two courses in fields related to the student's major, as determined in consultation with a CCS advisor; b) eight courses broadly distributed in fields unrelated to the student's major, as determined in consultation with the advisor. These may be selected from courses offered by the College of Creative Studies, the College of Letters and Science, and the College of Engineering.

One of these courses must fulfill the Ethnicity Requirement: a course that concentrates on the intellectual, social and cultural experience, and history of one of the following groups: Native-Americans, African-Americans, Chicanos/Latinos, Asian-Americans. This course may be selected from a list of courses that fulfill the Ethnicity Requirement offered through the College of Letters and Science, or it may be a College of Creative Studies course that is classified as such.

Students in the college work closely with their advisors, reviewing their planned courses of study each quarter. Contingent upon completion of all requirements, the advisor recommends the student for graduation. Final certification for graduation is vested in the College of Creative Studies Executive Committee.

CCS encourages participation in UC's Education Abroad Program which has sites in more than thirty countries around the world. Course work completed abroad often counts toward major and/or elective requirements and many quarter- and semester-long programs accommodate students who have not previously studied a second language.

## Faculty

**Adebisi Agboola**, Ph.D., Columbia University, Associate Professor (number theory)

**Steven Allaback**, Ph.D., University of Washington, Professor (fiction, American literature, fiction writing)

**Caroline Allen**, M.A., UC Santa Barbara, Lecturer (literature)

**Donald Aue**, Ph.D., Cornell University, Associate Professor (organic chemistry)

**Laurel Beckman**, M.F.A., California Institute of the Arts, Assistant Professor (2D integrated digital media, core foundation studies)

**Robyn Bell**, Ph.D., UC Santa Barbara, Lecturer with Security of Employment (literature)

**Kum-Kum Bhavnani**, Ph.D., Cambridge University, Professor (third-world women, cultural studies, feminist studies, critical ethnography, critical psychology)

**Gary H. Brown**, M.F.A., University of Wisconsin, Madison, Professor (drawing and painting, journaling)

**David Cannell**, Ph.D., Massachusetts Institute of Technology, Professor (physics)

**Peter R. Cappello**, Ph.D., Princeton University, Professor (JAVA/internet-based parallel computing, multiprocessor scheduling, market-based resource allocation, self-directed learning)

**Jorge L. Castillo**, Ph.D., Harvard University, Associate Professor (19th- and 20th-century Latin American literature, Latin American poetry, history of ideas)

**Dan Connally**, M.F.A., UC Davis, Lecturer (art) Daryl Cooper, Ph.D., University of Warwick, Professor (topology, group theory)

**Richard Corum**, Ph.D., UC Berkeley, Lecturer (literature)

**Omer Egecioglu**, Ph.D., UC San Diego, Professor (computer science)

**Stuart C. Feinstein**, Ph.D., UC San Francisco, Professor (molecular cell biology and neurobiology)

**Kathleen Foltz**, Ph.D., Purdue University, Associate Professor (cellular and molecular biology, marine invertebrate development)

**John Foran**, Ph.D., UC Berkeley, Professor (development and social change, Middle Eastern studies, Latin American studies, comparative historical methods, social theory, political sociology, social movements, cultural studies)

**Kip Fulbeck**, M.F.A., UC San Diego, Professor (performance studies, video)

**Jeremy Haladyna**, Ph.D., UC Santa Barbara, Lecturer with Security of Employment (music composition)

**Richard D. Hecht**, Ph.D., UC Los Angeles, Professor (history of religions, Judaic studies)

**Gretchen Hofmann**, Ph.D., University of Colorado, Associate Professor (marine animal physiology)

**Leslie A. Hogan**, D.M.A., University of Michigan-Ann Arbor, Lecturer (music composition)

**Murat Karaorman**, Ph.D., UC Santa Barbara, Lecturer (computer science)

**Armand Kuris**, Ph.D., UC Berkeley, Professor (parasitology, marine ecology)

**Leroy Laverman**, Ph.D., UC Santa Barbara, Lecturer with Potential Security of Employment, (chemistry)

**Suzanne Jill Levine**, Ph.D., New York University, Professor (Latin American literature, comparative literature, literary translation)

**Shirley Geok-Lin Lim**, Ph.D., Brandeis University, Professor (Asian American literature, post-colonial literature, ethnic and feminist writing)

**Darren Long**, Ph.D., Cambridge University, Professor (low-dimensional topology)

**James McKernan**, Ph.D., Harvard University, Associate Professor (algebraic geometry)

**Jane Mulfinger**, M.A., Royal College of Art, London, Lecturer (art)

**John Nathan**, Ph.D., Harvard University, Professor (modern Japanese fiction and film)

**Hank Pitcher**, Senior Lecturer with Security of Employment (art)

**Harry Reese**, M.A., Brown University and UC Santa Barbara, Professor (printmaking)

**Francesc Roig**, Ph.D., Amherst, Senior Lecturer with Security of Employment (physics)

**Martin Scharlemann**, Ph.D., University of California, Berkeley, Professor (topology)

**Barry Spacks**, M.A., Indiana University, Visiting Professor (English, creative writing)

**Bruce H. Tiffney**, Ph.D., Harvard University, Professor (evolutionary biology, paleobotany)

**Robert R. Warner**, Ph.D., Scripps Institution of Oceanography, Professor (marine ecology)

**John Wilson**, Ph.D., UC Santa Barbara, Lecturer (literature)

## Emeriti Faculty

**William Ashby**, Ph.D., University of Michigan, Professor (French, linguistics)

**William Kraft**, M.A., Columbia University, Professor (music composition)

**John Ridland**, Ph.D., Claremont Graduate School, Professor (writing, poetry)

**Charles Ryavec**, Ph.D., University of Michigan, Senior Lecturer with Security of Employment (mathematics)

**Max Schott**, M.A., UC Santa Barbara, Lecturer Emeritus (literature)

**Logan Speirs**, M.A., Cambridge University, Associate Professor (English and comparative literature)

**Alan Stephens**, Ph.D., University of Missouri, Professor Emeritus (English)

**Max Weiss**, Ph.D., University of Washington, Professor Emeritus (mathematics)

**Adrian Wenner**, Ph.D., University of Michigan, Professor Emeritus (biology)

**Rosalind Wholden**, M.F.A., UC Los Angeles, Lecturer (art history and criticism)

# Creative Studies Courses

The following list consists of the kinds of courses offered in the college. Art CS 101, for instance, is “Drawing and Painting.” In any quarter there might be as many as 10 sections, each a different course—e.g., “Abstract Painting,” “Figure Drawing,” etc. Students may enroll for different sections simultaneously.

Since these courses are arranged and scheduled after the Schedule of Classes has been printed, interested students should inquire about CCS courses at the beginning of registration for the subsequent quarter. Further information, including detailed descriptions of courses, is available at the College of Creative Studies, or at [ccs.ucsb.edu](http://ccs.ucsb.edu).

## Art

### CS 15. Art Colloquium (1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Students receiving credit will present talks in their

field on material arranged in consultation with the instructor. Credit assigned by the instructor will reflect the extent and quality of participation.

### CS 101. Drawing and Painting (1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Emphasis on the practice and development of making paintings and drawings.

### CS 102. Themes (1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Drawing and painting in sequences, and according to themes.

### CS 104. Prints (1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Emphasis on practice in graphic media (e.g., etching); various methods and materials utilized will be determined by particular faculty interest.

### CS 105. Book Arts (1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

The study and practice of typography; letterpress printing; both traditional and experimental uses of the printing press; and the book arts.

### CS 106. Art Symposium (1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

A continuing series of lectures and presentations by artists and professionals closely associated with the arts.

### CS 107. History, Theory, and Criticism (1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Non-studio emphasis on historical, theoretical, and contemporary ideas and issues. A range of concepts will be discussed, from various approaches, according to the particular interests of faculty and students.

### CS 112. Special Topics (1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

This special studies course allows faculty to design and execute courses that reflect their particular research and teaching.

### CS 120. Sculpture (1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Practice in the design and development of making a sculpture using various materials as determined by particular faculty interest.

### CS 125. Sculpture-Related Studies (1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Non-studio emphasis on generation and development of images, ideas, and imagination through field trips, slides, presentations, and videos. Primarily for sculptors.

### CS 150. Elements of Filmmaking/Video (1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Practice in theory and technique of filmmaking or video. Students learn to use the basic equipment, and make films or videos both individually and in collaboration. Medium utilized is determined by particular faculty interest.

### CS 199. Independent Studies (1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated for credit. Creative Studies students may enroll in a maximum of 24 units of Independent Studies courses per year, with a maximum of 45 units counted towards graduation.*

Serious independent study in art with consenting faculty member.

# Biology

### CS 10. Biology Colloquium (1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Students receiving credit will present talks in their field on material arranged in consultation with the instructor. Credit assigned by the instructor will reflect the extent and quality of participation.

### CS 12. CCS Introductory Biology I (1-6) STAFF

*This variable unit course is normally taken for 1 unit. Designed for majors. Course may not be repeated for credit.*

This course is supplementary to MCDB 1A. It is intended for and open only to CCS students enrolled in MCDB 1A. Students will attend MCDB 1A lectures and also meet for more in-depth consideration and analysis of the lecture materials and their broader implications. (F)

### CS 20. CCS Introductory Biology II - Evolution and Diversity (1-6) STAFF

*Recommended Preparation: This course is intended for first year CCS Biology majors who have completed MCDB 1A and MCDB 1AL. This variable unit course is normally taken for 5 units. Designed for majors.*

Lecture, field and laboratory activities explore the evolutionary origin and diversification of life in a phylogenetic context, from bacteria and archaea to plants, fungi and animals. (W)

### CS 25. Walking Biology (1-6) STAFF

*This variable unit course is normally taken for 4 units. Open to non-majors.*

Field course introducing students to the ecological communities in Santa Barbara County, including oak woodlands, chaparral, coastal dune, salt marsh, sandy beach, rocky inter-tidal, and stream. (S)

### CS 30. CCS Introductory Biology III - Ecology and Physiology (1-6) STAFF

*Recommended Preparation: This course is intended for first year CCS Biology majors who have completed MCDB 1A, MCDB 1AL, and either Biology CS 20, or concurrent enrollment in EEMB 3. This variable unit course is normally taken for 5 units. Designed for majors.*

An integrative approach introduces students to fundamental concepts of population and community ecology, and to plant and animal physiology. Field and laboratory activities illustrate basic principles in ecology and physiology as they influence the distribution and abundance of organisms. (S)

### CS 101. Models and Experiments (1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Interplay between models and experimentation in the development of an understanding of the principles of biology.

### CS 102. Laboratory Project (1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Set up by the student in consultation with the instructor, and concluding with the student's report of progress.

### CS 103. Reading Project (1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Set up by the student in consultation with the instructor, and concluding with the student's report of progress.

### CS 104. Environmental Problem Solving (1-6) STAFF

*Recommended Preparation: Some familiarity with algebra, matrices and basic calculus. This variable unit course is normally taken for 4 units. Open to non-majors.*

Introduction to a variety of techniques for approaching environmental problems. Real-world

situations are used to illustrate the process of problem solving and for thinking quantitatively and creatively about such environmental concerns as energy, water resources, food production and climate change. (S)

### CS 105. Research Presentation

(1-6) STAFF

*Intended for students who have completed or are currently involved in research projects. Designed for Biology majors but open to students from other majors. This variable unit course is normally taken for 2 units. Open to non-majors*

Introduction to the major methods of presenting research results: formal talks, research papers and posters. Students will practice presenting their research in different formats for different audiences. (F)

### CS 109. Advanced Independent Research

(1-6) STAFF

*Prerequisite: consent of instructor.*

Independent research on an original subject under faculty supervision carried out in a biology faculty research group. These advanced projects will attempt research of publishable quality; generally resulting in the preparation of a written report or manuscript for publication.

### CS 199. Independent Studies

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated for credit. Creative Studies students may enroll in a maximum of 24 units of Independent Studies courses per year, with a maximum of 45 units counted towards graduation.*

Serious independent study in biology with consenting faculty member.

## Chemistry/ Biochemistry

### CS 101. Major Unsolved Problems

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Study of some of the major unsolved problems in chemistry/biochemistry, with the aim of developing general experimental and theoretical approaches to these problems.

### CS 102. Project

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Investigation of a specific problem in chemistry/biochemistry, set up in consultation with the instructor, and concluding with the student's report of progress.

### CS 103. Seminar

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Presentation and critical discussion of topics in chemistry/biochemistry.

### CS 104. General Chemistry Seminar

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Accelerated course in general chemistry.

### CS 106. Organic Chemistry Seminar

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Accelerated course in elementary organic chemistry.

### CS 107. Organic Chemistry Laboratory

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Laboratory and discussion section on organic chemistry and spectroscopy, taken in conjunction with Chemistry 7B-C.

### CS 199. Independent Studies

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated for credit. Creative Studies students may enroll in a maximum of 24 units of Independent Studies courses per year, with a*

*maximum of 45 units counted towards graduation.*

Serious independent study in chemistry/biochemistry with consenting faculty member.

## Computer Science

### CS 1A. Computer Programming and Organization I

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated for credit to a maximum of 8 units.*

Introduction to computer science, programming, algorithms and data structures.

### CS 1B. Computer Programming and Organization II

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated for credit to a maximum of 8 units.*

Object oriented programming, operating systems, scripting and assembly languages, graphical user interfaces.

### CS 1L. Programming Laboratory

(1-4) STAFF

*Prerequisite: consent of instructor; concurrent enrollment in Computer Science CS 1A or 1B.*

*May be repeated for credit.*

Laboratory offering hands on Unix and other operating system experience. Small to large scale software development projects.

### CS 2. Foundations of Computer Science

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated for credit to a maximum of 8 units.*

Mathematical foundations of computer science. Including sets, relations, functions, logic, and combinatorics.

### CS 10. Computer Science Colloquium

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated for credit.*

Students receiving credit will present talks in their field on material arranged in consultation with the instructor. Credit assigned by the instructor will reflect the extent and quality of participation.

### CS 20. Special Topics in Computer Science

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated for credit.*

Lectures on a coherent body of computer science topics which are not usually presented in standard computer science courses.

### CS 130A-B-C-D-E-F-G-H. Advanced Topics in Computer Science

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated for credit.*

Advanced topics courses for advanced undergraduates, covering topics not offered in standard computer science courses, combining research orientation and current developments and technologies.

A. Distributed and Network Computing

B. Computer Graphics

C. Computer Architecture

D. Operating Systems

E. Programming Languages, Systems and Technologies

F. Mathematical Theory of Computation

G. Software Systems and Technology

H. General

### CS 150. Group Studies in Computer Science

(1-4) STAFF

*Prerequisite: consent of instructor.*

*May be repeated for credit.*

Group studies intended for a small number of advanced undergraduate students who share an interest in a topic not included in the regular curriculum.

### CS 199. Independent Studies

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated for credit. Creative Studies students may enroll in a maximum of 24 units of Independent Studies courses per year, with a maximum of 45 units counted towards graduation.*

Serious independent study in computer science with consenting faculty member.

## Interdisciplinary Studies

### CS 10. Group Interdisciplinary Studies

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Group studies in an interdisciplinary area.

Supervised by a member of the faculty of the College of Creative Studies.

### CS 120. Advanced Group Interdisciplinary Studies

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Advanced group studies in focussed topics in an interdisciplinary area.

## Literature

### CS 15. Literature Colloquium

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Students receiving credit will present talks in their field on material arranged in consultation with the instructor. Credit assigned by the instructor will reflect the extent and quality of participation.

### CS 101. Writing: Verse

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Practice in the writing of original verse.

### CS 102. Writing: Narrative Prose

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Practice in the writing of fiction.

### CS 103. Writing: Expository Prose

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Practice in the writing of essays and criticism.

### CS 105. Literature Symposium

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

A continuing series of lectures, readings, and presentations by faculty, guest writers, and other professionals in the literary fields.

### CS 110. Genres

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Emphasis on the development of literary forms, represented in the work of major authors, essential traditions. Exploration of ways genre directs and, discovered by a topic, takes individual shape. Intensive reading, substantial exposition.

### CS 111. Literary Structure: Chronological

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Emphasis on periods and influences: intervals during which literary production especially corresponds with or responds to activity in the culture at large. Extensive reading and exposition.

### CS 112. Literary Structure: Nonchronological

(1-6) STAFF

*Prerequisite: consent of instructor.*

*May be repeated each quarter for credit.*

Logical, analogical, cyclical, and repetitive schemes.

**CS 113. Subjects and Materials****(1-6) STAFF***Prerequisite: consent of instructor.**May be repeated each quarter for credit.*

Emphasis on style and content of literary texts: critical investigation of how matter and manner work together in serious literature. Extensive reading and exposition.

**CS 114. Themes and Motifs****(1-6) STAFF***Prerequisite: consent of instructor.**May be repeated each quarter for credit.*

Emphasis on structure and meaning in literary texts: analytic focus on principles of representation, and on recurrent features, in the literature studied. Extensive reading and exposition.

**CS 199. Independent Studies****(1-6) STAFF***Prerequisite: consent of instructor.*

*May be repeated for credit. Creative Studies students may enroll in a maximum of 24 units of Independent Studies courses per year, with a maximum of 45 units counted towards graduation.*

Serious independent study in literature with consenting faculty member.

## Mathematics

**CS 10. Mathematics Colloquium****(1-6) STAFF***Prerequisite: consent of instructor.**May be repeated each quarter for credit.*

Students receiving credit will present talks in their field on material arranged in consultation with the instructor. Credit assigned by the instructor will reflect the extent and quality of participation.

**CS 101. Problem Solving****(1-6) STAFF***Prerequisite: consent of instructor.**May be repeated each quarter for credit.*

Discussion and solution of nonroutine mathematical problems.

**CS 102. Project****(1-6) STAFF***Prerequisite: consent of instructor.**May be repeated each quarter for credit.*

Set up by the student in consultation with the instructor, and concluding with the student's report of progress.

**CS 103. Topics in Modern Algebra****(1-6) STAFF***Prerequisite: consent of instructor.**May be repeated each quarter for credit.*

Topics may include groups; modules; vector spaces; algebras; metric structures on vector spaces; representation theory; multilinear algebra; graded structures; universal properties; a survey of important algebraic structures.

**CS 109. Advanced Independent Research****(1-6) STAFF***Prerequisite: consent of instructor.**May be repeated each quarter for credit.*

Independent research on an original subject under faculty supervision carried out in a mathematics faculty research group. These advanced projects will attempt research of publishable quality; generally resulting in the preparation of a written report or manuscript for publication.

**CS 120. Special Topics****(1-6) STAFF***Prerequisite: consent of instructor.**May be repeated each quarter for credit.*

Lectures on a coherent body of mathematical topics which are not usually presented in standard mathematics courses.

**CS 199. Independent Studies****(1-6) STAFF***Prerequisite: consent of instructor.**May be repeated for credit. Creative Studies*

*students may enroll in a maximum of 24 units of Independent Studies courses per year, with a maximum of 45 units counted towards graduation.*

Serious independent study in mathematics with consenting faculty member.

## Music

**CS 101. Composition****(1-6) STAFF***Prerequisite: consent of instructor.**May be repeated each quarter for credit.*

Individual instruction in composition, usually for one hour per week.

**CS 102. Analysis: Materials****(1-6) STAFF***Prerequisite: consent of instructor.**May be repeated each quarter for credit.*

Small group instruction in theoretical subjects (harmony, composition, orchestrations, etc.).

**CS 103. Analysis: Forms****(1-6) STAFF***Prerequisite: consent of instructor.**May be repeated each quarter for credit.*

Small group instruction in musical forms and their development.

**CS 105. Special Topics****(1-6) STAFF***Prerequisite: consent of instructor.**May be repeated each quarter for credit.*

Individual or small group instruction in selected subjects (individual composers and their works, special compositional techniques, etc.).

**CS 199. Independent Studies****(1-6) STAFF***Prerequisite: consent of instructor.**May be repeated for credit. Creative Studies*

*students may enroll in a maximum of 24 units of Independent Studies courses per year, with a maximum of 45 units counted towards graduation.*

Serious independent study in music with consenting faculty member.

## Physics

**CS 10. Physics Colloquium****(1-6) STAFF***Prerequisite: consent of instructor.**May be repeated each quarter for credit.*

Students receiving credit present talks in their field on material arranged in consultation with the instructor. Credit assigned by the instructor reflects the extent and quality of participation.

**CS 15A. Introduction to Experimental Physics****(1-3) STAFF***Prerequisites: Physics CS 31; consent of instructor; creative studies and physics majors only.*

*Not open for credit to students who have completed Physics 3HL or 13AH.*

Covers the essence of experimental research. Students study three different systems experimentally, and write short Physical Review style articles about the results. Students are responsible for deciding what to measure, how to analyze data, and what conclusions can be reached.

**CS 15B. Experimental Physics****(1-3) STAFF***Prerequisites: Physics CS 15A; consent of instructor; creative studies and physics majors only.*

*Not open for credit to students who have completed Physics 4HL or 13BH.*

Computer control of experiments. Students learn LabView, and use it to measure and generate analog signals using a data acquisition card and a personal computer. Students ultimately use their computers to measure and control the temperature of a copper rod.

**CS 15C. Experimental Physics****(1-3) STAFF***Prerequisites: Physics CS 15B; consent of instructor; creative studies and physics majors only.*

*Not open for credit to students who have completed Physics 5HL or 13CH.*

Design and construction of apparatus, drafting and computer-aided design. Machine shop practice including use of all major machine tools. The class acts as a team to design and, time permitting, build a scientific apparatus for a campus research group.

**CS 31. Newtonian Mechanics****(1-5) STAFF***Prerequisites: consent of instructor; creative studies and physics majors only.*

Vectors. Kinematics. Newton's laws of motion. Work and energy. Conservative forces. Momentum. Conservation of momentum. Center of mass motion. Collisions. Systems with variable mass.

**CS 32. Mechanics and Waves****(1-5) STAFF***Prerequisite: Physics CS 31.*

Oscillatory motion. Rotational motion. Angular momentum. Gravity and central force motion. Elastic waves.

**CS 33. Waves, Kinetic Theory, and Relativity****(1-5) STAFF***Prerequisites: Physics CS 31 and 32; consent of instructor.*

Sound waves. Fluid dynamics. Kinetic theory of matter. The Maxwell-Boltzmann distribution. Specific heat. Entropy. The special theory of relativity. (S)

**CS 34. Electromagnetism****(1-5) STAFF***Prerequisites: consent of instructor; creative studies majors only.*

Electrostatics. DC circuits. Magnetostatics. Vector potential.

**CS 35. Electromagnetism and Optics****(1-5) STAFF***Prerequisites: Physics CS 34; consent of instructor; creative studies majors only.*

Faraday's Law of Induction. Magnetic materials. AC circuits. Maxwell's equations. Electromagnetic waves. Ray optics. Wave optics. Diffraction Theory.

**CS 36. Quantum Physics****(1-5) STAFF***Prerequisites: Physics CS 34 or 35; consent of instructor; creative studies majors only.*

Wave-particle duality. Photons. Matter waves. The uncertainty principle. The Schrodinger equation. Potential wells and barriers. The quantized simple harmonic oscillator. The hydrogen atom.

**CS 109. Advanced Independent Research****(1-6) STAFF***Prerequisite: consent of instructor.**May be repeated each quarter for credit.*

Independent research on an original subject under faculty supervision carried out in a physics faculty research group. These advanced projects will attempt research of publishable quality; generally resulting in the preparation of a written report or manuscript for publication.

**CS 120. Laboratory Project****(1-6) STAFF***Prerequisite: consent of instructor.**May be repeated each quarter for credit.*

Set up by the student in consultation with the instructor, and concluding with the student's report of progress.

**CS 130. Reading Project****(1-6) STAFF***Prerequisite: consent of instructor.**May be repeated each quarter for credit.*

Set up by the student in consultation with the instructor, and concluding with the student's report of progress.

**CS 140. Special Topics****(1-6) STAFF***Prerequisite: consent of instructor.**May be repeated each quarter for credit.*

Lectures on a coherent body of physical topics which are not usually presented in standard undergraduate physics courses.

**CS 199. Independent Studies****(1-6) STAFF***Prerequisite: consent of instructor.**May be repeated for credit. Creative Studies*

*students may enroll in a maximum of 24 units of Independent Studies courses per year, with a maximum of 45 units counted towards graduation.*

Serious independent study in physics with consenting faculty member.

# College of Engineering

## College of Engineering

Office of Undergraduate Studies, Harold Frank Hall, Room 1006; Telephone (805) 893-2809

Dean's Office, Harold Frank Hall, Room 1038

MESA Programs; Telephone (805) 893-8347

Web site: [www.engineering.ucsb.edu](http://www.engineering.ucsb.edu)

Dean: *Matthew V. Tirrell*

Associate Dean for Undergraduate Studies: *Glenn E. Beltz*

Associate Dean for Advancement and Planning: *Kevin Almeroth*

Associate Dean for Research: *Francis Doyle*

Associate Dean for Technology Management Programs: *Gary Hansen*

The College of Engineering at UCSB is noted for its excellence in teaching, research, and service to the community. The college has an enrollment of approximately 1,200 undergraduate students and 700 graduate students with a full-time, permanent faculty of 138. This results in an excellent student to faculty ratio and a strong sense of community in the college.

Our laboratory facilities, both departmental and in our research centers, are state-of-the-art, and most are available to undergraduate as well as graduate students. UCSB has an unusually high proportion of undergraduates who are actively involved in faculty-directed research and independent study projects. The college offers the bachelor of science degree in five disciplines: chemical engineering, computer engineering, computer science, electrical engineering, and mechanical engineering. Graduate degree programs are available in: chemical engineering, computer science, electrical and computer engineering, materials, and mechanical engineering. The undergraduate programs in chemical, electrical, and mechanical engineering are accredited by the Engineering Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012 – telephone (410) 347-7700. The computer science bachelor of science programs is accredited by the Computing Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012 – telephone (410) 347-7700. The Computer Engineering Program is not accredited by a Commission of ABET.

The curriculum for the bachelor of science degree is designed to be completed in four years. Completion of the four-year program provides students with the background to begin professional careers or to enter graduate programs in engineering or computer science, or professional schools of business, medicine,

or law. Our curricula are specifically planned to retain both of these options and to assure that our graduates are equally well prepared to enter industry and graduate study. The college and the university offer a wide variety of career counseling and job placement services.

The Office of Undergraduate Studies in Harold Frank Hall, Room 1006, provides academic advising for all undergraduates in the college. Faculty and academic advisors for the individual majors are also provided by the respective departments. The *College of Engineering Announcement*, which contains detailed information about the various programs and schedules, is published yearly and may be obtained by writing to the College of Engineering, Harold Frank Hall, Room 1006, University of California, Santa Barbara, California 93106-5130. Alternatively, it is available on the web at: [www.engineering.ucsb.edu/current\\_undergraduates](http://www.engineering.ucsb.edu/current_undergraduates)

## Mission Statement

The mission of the College of Engineering is to provide its students a firm grounding in scientific and mathematical fundamentals; experience in analysis, synthesis, and design of engineering systems; and exposure to current engineering practice and cutting edge engineering research and technology. A spirit of entrepreneurship in education, scholarly activity and participation in engineering practice infuses UCSB's College of Engineering.

## Admission

### Freshman Admissions

Applicants desiring to enter the College of Engineering must satisfy the general university admission requirements described in earlier sections of this catalog. The college strongly recommends that students who want to study engineering at UCSB plan their high-school programs to also include the following courses:

|                          |         |
|--------------------------|---------|
| Algebra                  | 2 years |
| Plane Geometry           | 1 year  |
| Pre-calculus/calculus    | 1 year  |
| Physics or Chemistry     | 1 year  |
| <i>(preferably both)</i> |         |

It is strongly recommended that incoming freshmen complete a computer programming course prior to enrollment at UCSB.

A high-school student who is admitted to UCSB and is deficient in one or more of these prerequisites may be required to complete equivalent courses at UCSB. Students lacking these prerequisite high-school courses may be delayed in entering the upper division and in graduating.

Supplemental screening for admission to the College of Engineering is based on further consideration of prior coursework, grades, test scores, and other factors. Any student who is admissible to the university may be accepted by the College of Engineering provided that the college does not have more qualified applicants than openings, in which case preference will be given to advanced-standing students who are ready to enter the upper division and to freshmen.

Students must apply for a specific major in the College of Engineering either as freshmen or as transfer students; in Chemical Engineering, Computer Science, Electrical Engineering, Computer Engineering, or Mechanical Engineering.

### Transfer Admission

Transfer student applicants shall have (1) satisfied the general requirements for admission to the university at the junior level for transfer students, and (2) substantially completed a lower-division engineering or computer science program of not fewer than 90 quarter-units or 60 semester-units.

All transfer applicants must complete the following courses:

|                                      |
|--------------------------------------|
| Calculus for science majors—1 year   |
| Differential Equations               |
| Linear Algebra                       |
| Physics (calculus-based)—3 semesters |

In addition, there are major-specific courses that must be completed:

**Chemical Engineering**—General Chemistry with Labs—1 year; Organic Chemistry with labs – 1 year; and Computer Programming in C or C++.

**Computer Engineering**—General Chemistry—1 semester; Computer Programming—Java; Java course with Data Structures; Circuits and Devices; and Assembly Language or Computer Architecture.

**Computer Science**—General Chemistry—1 semester; Computer Programming—Java; Java course with Data Structures; and Assembly

Language or Computer Architecture.

**Electrical Engineering**—General Chemistry—1 semester; Computer Programming in C or C++; Circuits and Devices; and Assembly Language or Computer Architecture.

**Mechanical Engineering**—General Chemistry—1 semester; Computer Programming in C or C++; Circuits and Devices; Statics; and Dynamics.

The university accepts a maximum of 105 quarter-units or 70 semester-units of credit for college courses completed at a two-year community college.

### Majors with Pre-Major Standing

Some of the College of Engineering majors have pre-major courses that need to be completed before the student can advance to the upper division (junior and senior years). Admission to the lower division does not necessarily guarantee advancement to the upper division. Please review specific pre-major information for Computer Science and Computer Engineering in their specific department sections of the catalog. Continuing students shall have completed substantially all of the lower-division requirements for the major they are pursuing. Students who have not done so should go to the Office of Undergraduate Studies to determine eligibility for upper-division work.

## Degree Requirements

To be eligible for a bachelor of science degree from the College of Engineering, a student must meet two sets of requirements: university degree requirements and college degree requirements.

### University Degree Requirements

All undergraduate students must satisfy university academic residency, UC Entry Level Writing Requirement, American history and institutions, unit, and scholarship requirements. These requirements are described fully in the chapter “Undergraduate Education at UCSB.”

### College Undergraduate Degree Requirements

All undergraduate students must satisfy the preparation for the major, the major, the general education, and scholarship requirements. Preparation for the major and the major requirements for each program offered by the College of Engineering appear in subsequent sections of this catalog.

### General Education Requirements

The aims of the General Education Program in the College of Engineering are to provide a body of knowledge of general intellectual value that will give the student a broad cultural base and meet the objectives of the engineering profession. An appreciation and understanding of the humanities and social sciences are important in making engineers aware of their social responsibilities and enabling them to consider related factors in the decision-making process.

Students in the College of Engineering must complete the General Education requirements in order to qualify for graduation. These requirements may be met with courses satisfactorily

completed on this campus or with equivalent courses completed at another accredited college or university. Once a student has matriculated at UCSB, the writing requirement may be met only with designated UCSB courses. For current information regarding the general education status of courses, please refer to GOLD, the quarterly Schedule of Classes or the College of Engineering General University and General Education Program Requirements Brochure available in the Office of Undergraduate Studies or you may download (PDF) version:

www.engineering.ucsb.edu/current-undergraduates

**The General Education requirements for the College of Engineering are as follows:**

- Students must enroll in Writing 2 or 2E and Writing 50, 50E, or 109ST. Students must complete the University of California Entry Level Writing requirement before enrolling in courses that fulfill the Area A requirement of the General Education Program.

- Six courses are required from areas D, E, F, and G. At least two courses must be from Areas D and E combined. At least two courses must be completed in Areas F and G combined, and at least one of them must be from Area G.

- In the process of fulfilling the General Education area requirements, students must fulfill the following Special Subject Area requirements:

1. **Writing Requirement.** At least four courses designated as writing requirement classes.

2. **Depth Requirement** – Choose one of the following options:

**Option 1:** At least two upper-division courses from two separate departments, in each of which a course has already been completed. All courses used towards this requirement must also fulfill areas D, E, F or G.

**Option 2:** Complete a three-course sequence from the list of approved sequences.

3. **Ethnicity Requirement.** One course that focuses on the history and cultural, intellectual, and social experience of racial minorities and/or other ethnic groups in the United States.

4. **European Traditions Requirement.** One course that focuses on European cultures or cultures in the European tradition.

No more than two courses taken from the same department may be applied to the General Education requirement. Students should consult with the Office of Undergraduate Studies in the College of Engineering for additional information about General Education requirements.

### Grade-Point Average Requirement

Students must maintain at least a 2.0 grade-point average in all courses taken in the overall major (including both lower- and upper-division classes), in all upper-division major courses, and in all work completed at the university. In addition, students who fail to earn a 2.0 grade-point average in either the preparation for the major or the major may be denied the privilege of continuing in the program. Individual departments may have higher grade-point average requirements.

Courses taken at any of the UC campuses are included in the computation of the grade-point

average. (For information about courses completed through UC Extension, please refer to page 40 in the Undergraduate Education section of this catalog.)

Courses appropriate for satisfying major requirements must be used in the computation of the grade-point average even if they are in excess of the minimum requirements of the major program. Courses graded Incomplete, except those taken on a passed/not passed basis, will be included as F grades in final computations. Certain courses designated as remedial are offered for work-load credit only and do not figure in calculation of the grade-point average.

### Unit Requirement

In order to be eligible for graduation, students must complete at least 180 total units. Some majors in the College of Engineering require more than 180 units (see descriptions of individual majors.) Students must earn a specified number of these units while in residence at UCSB. See the chapter titled “Undergraduate Education at UCSB” for details. The unit differences between the total number of units specified for the baccalaureate degree and the number of units specified for the preparation for the major, the major, and general education are designated as free elective units. Students may choose from any course offering open to them to meet this requirement.

### College Board Advanced Placement Credit

Students may satisfy some of the requirements of the College of Engineering through the College Board Advanced Placement Tests. Credit for these tests is assigned as follows:

#### Computer Science-AB

With a score of 3, 4, or 5 on Examination AB, equivalent credit will be granted for Computer Science 5NM.

#### English

With a score of 3, equivalent credit will be granted for the Subject A requirement (Writing 1 or 1E). With a score of 4, equivalent credit will be granted for the Subject A requirement and Writing 2 or 2E. With a score of 5, equivalent credit will be granted for Writing 2 or 2E and Writing 50 or 50E.

#### History

With a score of 3, 4, or 5 in American history, 8 units of credit toward graduation will be awarded, and the student will be given credit for one course in general education Area D. If the score of 3, 4, or 5 is in European history, 8 units of credit toward graduation will be granted, and the student will be given credit for one course in general education Area E-2. Advanced placement credit in American history will satisfy the American history and institutions requirement.

#### Mathematics

With a score of 3, 4, or 5 on Examination AB, equivalent credit will be granted for Mathematics 3A. A score of 5 may be substituted by petition for Mathematics 3A and 3B at the student's request; however, students with scores of 4 or 5 may take Mathematics 3B for full credit. With a score of 3, 4, or 5 on Examination BC, equivalent credit will be granted for Mathemat-

ics 3A-B; students should enroll in Mathematics 3C.

For additional information about credit given for College Board Advanced Placement Examinations, see the chart on page 113.

### Minimal Progress Requirements

A student in the College of Engineering will be placed on academic probation if the total number of units passed at UCSB is fewer than that prescribed by the prevailing academic Senate regulation regarding Minimum Cumulative Progress (see the “Academic Policies and Procedures” section for more information). At least three-fourths of the minimum number of academic units passed must include courses prescribed for the major.

The following courses may be counted toward the unit minimums: courses repeated to raise C-, D, or F grades; courses passed by examination; courses graded IP (In Progress); courses passed during summer session at UCSB or at another accredited college or university and transferred to UCSB.

Students must obtain the approval of the dean of engineering to deviate from these requirements. Approval normally will be granted only in the case of medical disability, severe personal problems, or accident.

Students enrolled in dual-degree programs must submit their proposed programs of study to the Associate Dean for Undergraduate Studies in the College of Engineering for approval. The individual programs must contain comparable standards of minimal academic progress.

## Five-Year B.S. Engineering/M.S. Materials Degree Program

A combined B.S. Engineering/M.S. Materials program provides an opportunity for outstanding undergraduates in chemical, electrical, or mechanical engineering to earn both of these degrees in five years. This program enables students to develop all of the requisite knowledge in their core engineering disciplines and to complement this with a solid background in materials. This combination provides highly desirable training from an industrial employment perspective and capitalizes on the strengths of our internationally renowned materials department. For additional information, see the “Materials” section.

## Five-Year Joint B.S./M.A. Program with Economics

A program which combines a B.S. in any engineering major (including computer science) with a master of arts in economics with an emphasis in business economics provides an opportunity for outstanding engineering undergraduates to earn both degrees in five years. Information about this program is available in the College of Engineering Office of Undergraduate Studies or from the Department of Economics. Interested students should inform the Undergraduate Studies Office of their inter-

est in the program at the end of the sophomore year in order to plan their upper-division classes differently from other engineering undergraduates. After completing undergraduate degree requirements in an engineering program, students in this joint program must fulfill master’s degree requirements for the degree in economics, as described in the chapter, “Graduate Education at UCSB.”

## Biomolecular Science and Engineering, Interdepartmental Graduate Program in

For a complete description of this interdisciplinary program, see page 138 in the College of Letters and Science section of this catalog.

## Media Arts and Technology, Interdepartmental Graduate Program in

For a complete description of this interdisciplinary program, see page 332 in the “College of Letters and Science” section of this catalog.

## Graduate Program Certificates

For more information about this program, see page 46 in the Graduate Education section of this catalog.

## College of Engineering Honors Program

The Honors Program in the College of Engineering is designed to enrich the educational opportunities of its best students. Students in the Honors Program will be encouraged to participate in early experiences in scholarship through special seminars and individualized work in regular courses and, in later years, as members of research teams. Student in the honors Program will be provided opportunities to become peer mentors and tutors within the College.

Participation in the Honors Program offers preferential enrollment in classes for continuing students as well as graduate student library privileges. Housing is available to eligible first-year students in Scholars’ Halls located in several university-owned residence halls.

The College of Engineering invites approximately the top 10% of incoming freshmen into the Honors Program based on a combination of high school GPA and SAT or ACT scores. (Please note: eligibility criteria are subject to change at any time.) Transfer students with a UC transferable GPA of 3.6 or greater are invited to join the College Honors Program. Students who do not enter the College of Engineering with honors at the freshman level may petition to enter the program after attaining a cumulative GPA of 3.5 or greater during two consecutive quarters at UCSB.

Graduating with Honors Program Designation and to be listed as such in the Commence-

ment Book, students must complete 6.0 total Honors units during their junior and senior years; comprised of coursework from departmental 196, 197, 199 or graduate level courses with grades of B or higher, complete a total of 10 hours of community service and maintain a 3.5 or higher cumulative GPA at the end of each Spring quarter.

Continued participation in the College Honors Program is dependent on maintaining a cumulative GPA of 3.5 or greater and active participation in both the academic and community service components of the Program.

## Dean’s Honors

The College of Engineering gives public recognition to its outstanding undergraduate students by awarding Dean’s Honors at the end of each regular academic term to students who have earned a 3.5 grade-point average for the quarter and have completed a program of 12 or more letter-graded units. (Grades of Incomplete or Not Passed automatically disqualify students for eligibility for Dean’s Honors.) The Dean’s Honors List is posted quarterly, and the award is noted quarterly on the student’s permanent transcript.

Graduating students of the College of Engineering who have achieved distinguished scholarship while at the university may qualify for Honors, High Honors, or Highest Honors at graduation.

### Tau Beta Pi

Tau Beta Pi is the nation’s oldest and largest engineering honor society. Its purpose is to honor academic achievement in engineering. Election to membership is by invitation only. To be eligible for consideration, students must be in the top one-eighth of their junior class or the top one-fifth of the senior class. Graduate students and faculty also belong to this honor society. In addition to regular meetings on campus, the organization participates in regional and national activities and sponsors local events, such as tutoring and leadership training, to serve the campus and community.

## Change of Major and Change of College

Current UCSB students in a non-engineering major, as well as students wishing to change from one engineering major to another, are welcome to apply after the satisfactory completion of a pre-defined set of coursework (see below).

Students who have completed more than 105 units will not be considered for a change of major/change of college in engineering or computer science unless they can demonstrate that they will be able to complete all the degree requirements for the proposed program without exceeding 215 total units.

**Chemical Engineering.** Before petitioning for a change of major to chemical engineering, the following courses or their equivalents must be completed: Mathematics 3A-B; Chemistry 1A-AL, 1B-BL; Engineering 3; Physics 1. Only a limited number of petitions will be approved, and selection for entry into the major will be based on UC grade point averages and applicable courses completed.

**Computer Engineering.** Students may petition to enter the Computer Engineering pre-major at any time Option 1 below has been met, or they may petition to enter the full major when the requirements in Option 2 have been met.

**Option 1:**

1. An overall UCSB grade point average of at least 3.0; AND
2. Satisfactory completion at UCSB of at least four core classes required as preparation for the Computer Engineering major with a grade point average of at least 3.0 in all core classes completed. The core classes are Mathematics 3A, 3B, 3C, 5A; Computer Science 10, 20, 40, 60; Electrical and Computer Engineering 2A, 2B, 2C, 15A, 15B. Once approved for the Computer Engineering pre-major, the student must meet the requirements for advancing to the full major.

**Option 2:**

1. An overall UCSB grade point average of at least 3.0; AND
2. Satisfactory completion at UCSB of at least six of the core classes with a grade point average of at least 3.0. If the student has not attained the minimum 3.0 grade point average with the first six core classes completed, all core classes subsequently completed will be included in the grade point average computation; OR
3. Satisfactory completion of all thirteen core classes with a University of California grade point average of at least 2.75.

**Computer Science.** Students planning to enter the pre-computer science program must complete at least 16 units of pre-major coursework at UCSB, including 8 units in computer science, with at least a 3.0 grade point average for all pre-major courses completed with the University of California. Students who have completed the entire computer science pre-major with at least a 2.75 University of California grade point average will be admitted to full major standing upon petition whether or not they have been officially declared pre-majors. Petitions for changing to the pre-computer science or computer science majors may be filed any time upon meeting the above requirements.

**Electrical Engineering.** Students may petition to enter the Electrical Engineering major at any time *both* of the following requirements are met:

1. An overall UCSB grade point average of at least 3.0.
2. Satisfactory completion at UCSB, with a grade point average of 3.0 or better, of at least five classes, including at least two mathematics classes, from the following: Mathematics 5A-B-C, ECE 2A-B-C, ECE 15A-B. The calculation of the minimum GPA will be based on all classes completed from this list at the time of petitioning.

**Mechanical Engineering.** Before petitioning for a change of major to mechanical engineering, six (6) of the following core courses or their equivalents must be completed: Math 3A-B-C; Math 5A-B-C; Physics 1-2; ME 14-15 (at least one of the 6 courses must include ME 14 or ME 15). Acceptance into the major will be based on UC grade point averages and applicable courses completed.

## Student Organizations

Student chapters of a number of engineering professional organizations are active on the UCSB campus. Students interested in any of these organizations may contact the Office of Undergraduate Studies of the College of Engineering for more information.

- American Institute of Chemical Engineers
- American Society of Mechanical Engineers
- Association for Computing Machinery
- Engineering Student Council
- Engineers without Borders
- Institute of Electrical and Electronics Engineers
- Los Ingenieros (Mexican-American Engineering Society/Society of Hispanic Professional Engineers)
- National Society of Black Engineers
- Society for Advancement of Chicano and Native Americans in Science
- Society of Women Engineers
- Student Entrepreneurship Association

## Engineering Research Centers

### *Center for Advanced Nitride Electronics*

Director: Umesh Mishra  
Engineering Science Building, Room 2215C  
Telephone: (805) 893-3586

### *Center for Bio-Image Informatics*

Director: B.S. Manjunath  
Harold Frank Hall, Room 5107  
Telephone: (805) 893-7112

### *Center for the Chemical Design of Materials*

Director: Nicola Spaldin  
Materials Research Laboratory, Room 3014  
Telephone: (805) 893-7920

### *Center for Control, Dynamical Systems and Computation*

Director: Mustafa Khammash  
Harold Frank Hall, Room 5119A  
Telephone: (805) 893-7066

### *Center for Multifunctional Materials and Structures*

Director: Anthony Evans  
Engineering II, Room 2361  
Telephone: (805) 893-7839

### *Center for Polymers and Organic Solids*

Director: Guillermo Bazan  
Broida Hall, Room 4417  
Telephone: (805) 893-2001

### *Center for Risk Studies and Safety*

Director: Theofanis G. Theofanous  
Engineering Research Center (ERC)  
6740 Cortona Drive, Goleta, CA 93117  
Telephone: (805) 893-4936

### *High Performance Composites Center*

Director: Frank Zok,  
Engineering II, Room 1355  
Telephone: (805) 893-8232

### *Institute for Energy Efficiency*

Director: John Bowers  
College of Engineering  
Telephone: (805) 893-4191

### *Institute for Multiscale Materials Studies-LANL*

Director: George Homsy  
Engineering Science Building, Room 3211  
Telephone: (805) 893-2704

### *Interdisciplinary Center for Wide Band-Gap Semiconductors*

Director: James Speck  
Engineering Science Building, Room 3231  
Telephone: (805) 893-8462

### *Mitsubishi Chemical Center for Advanced Materials*

Director: Glenn H. Fredrickson  
Materials Research Laboratory, Room 3100  
Telephone: (805) 893-7913

### *Semiconductor Research Corporation Nonclassical CMOS Research Center*

Director: Mark Rodwell  
Engineering Science Building, Room 2205F  
Telephone: (805) 893-3244

### *Solid State Lighting and Energy Center*

Co-Director: Shuji Nakamura  
Co-Director: Steven DenBaars  
Engineering Science Building, Room 3231  
Telephone: (805) 893-5039

### *UCSB Nanofabrication Research Center*

Director: Mark Rodwell  
Engineering Science Building, Room 2205  
Telephone: (805) 893-7989

## National Research Centers

### *International Center for Materials Research*

Director: Nicola Spaldin  
Materials Research Laboratory, Room 3117C  
Telephone: (805) 893-5850

### *Materials Research Laboratory*

Director: Craig Hawker  
Materials Research Laboratory, Room 3004  
Telephone: (805) 893-7233

### *National Nanotechnology Infrastructure Network*

Director: Mark Rodwell  
Engineering Science Building, Room 2205  
Telephone: (805) 893-7989

### *Optoelectronics Technology Center*

Director: Larry A. Coldren  
Engineering II, Room 1339  
Telephone: (805) 893-7104

## Affiliated Centers

### *California Nanosystems Institute*

Acting Director: David Awschalom

Elings Hall  
Telephone: (805) 893-7510

### *Institute for Collaborative Biotechnologies*

Director: Daniel Morse  
Associate Director: Frank Doyle  
Phelps Hall, Room 3309  
Telephone: (805) 893-4856

### *Kavli Institute for Theoretical Physics*

Director: David J. Gross  
Kohn Hall  
Telephone: (805) 893-4111

# Chemical Engineering

Department of Chemical Engineering,  
Engineering II, Room 3357;  
Telephone (805) 893-3412  
Web site: [www.chemengr.ucsb.edu](http://www.chemengr.ucsb.edu)

Chair: *Michael Doherty*  
Vice-Chairs: *Dale Seborg and Susannah Scott*

## Faculty

**Bradley Chmelka**, Ph.D., UC Berkeley, Professor (self-assembled materials, heterogeneous catalysis, surfactants and polymers, porous and composite solids, , magnetic resonance)

**Patrick S. Daugherty**, Ph.D., University of Texas at Austin, Assistant Professor (protein engineering and design, combinational molecular biology, gene targeting, viral vector engineering)

**Michael F. Doherty**, Ph.D., Cambridge University, Professor (process design and synthesis, separations, crystal engineering)

**Francis J. Doyle III**, Ph.D., California Institute of Technology, Mellichamp Professor of Process Control (process control, systems biology, nonlinear dynamics)

**Glenn Fredrickson**, Ph.D., Stanford University, Professor (polymer theory, block copolymers, phase transitions, statistical mechanics, glass transitions, composite media)

**Michael J. Gordon**, Ph.D., California Institute of Technology, Assistant Professor (surface physics, scanning probe microscopy, nanoscale materials, plasmonics, laser spectroscopy)

**Jacob Israelachvili**, Ph.D., University of Cambridge, Professor (surface and interfacial phenomena, adhesion, colloidal systems, surface forces, bio-adhesion, friction) \*1

**Edward J. Kramer**, Ph.D., Carnegie Mellon University, Professor (microscopic fundamentals of fracture polymers, diffusion in polymers, and polymer surfaces, interfaces and thin films) \*1

**L. Gary Leal**, Ph.D., Stanford University, Schlinger Distinguished Professor in Chemical Engineering (fluid mechanics, physics of complex fluids, rheology)

**Glenn E. Lucas**, Ph.D., Massachusetts Institute of Technology, Professor (structural materials, mechanical properties) \*2

**Eric McFarland**, Ph.D., Massachusetts Institute of Technology, M.D., Harvard, Professor (energy production, catalysis, reaction engineering, charge and energy transfer)

**Samir Mitragotri**, Ph.D., Massachusetts Institute of Technology, Associate Professor (drug delivery and diagnostics, bio-membrane transport, membrane biophysics, biomedical ultrasound)

**Baron G. Peters**, Ph.D., UC Berkeley, Assistant Professor (molecular simulation, chemical kinetics, catalytic reaction mechanisms, nucleation, electron transfer)

**Susannah Scott**, Ph.D., Iowa State University, Professor (heterogeneous catalysis, surface organometallic chemistry; analysis of electronic structure and stoichiometric reactivity to determine catalytic function) \*3

**Dale E. Seborg**, Ph.D., Princeton University, Professor (process dynamics and control, monitoring and fault detection, system identification)

**M. Scott Shell**, Ph.D. Princeton, Assistant Professor (molecular simulation, statistical mechanics, complex materials, protein biophysics)

**Todd M. Squires**, Ph.D., Harvard, Assistant Professor (fluid mechanics, microfluidics, microrheology, complex fluids)

**Theofanis G. Theofanous**, Ph.D., University of Minnesota, Professor, Center for Risk Studies and Safety Director (transport phenomena in multiphase systems, risk analysis) \*2

**Matthew V. Tirrell**, Ph.D., University of Massachusetts, Auhl Professor (bioengineering, polymer science and engineering) \*1

**Joseph Zasadzinski**, Ph.D., University of Minnesota, Professor (surface and interfacial phenomena, high resolution microscopy, biomaterials)

\*1 Joint appointment with the Department of Materials.

\*2 Joint appointment with the Department of Mechanical Engineering.

\*3 Joint appointment with the Department of Chemistry and Biochemistry.

## Emeriti Faculty

**Sanjoy Banerjee**, Ph.D., University of Waterloo, Professor (transport processes, multiphase systems, process safety) \*2

**Owen T. Hanna**, Ph.D., Purdue University, Professor Emeritus (theoretical methods)

**Duncan A. Mellichamp**, Ph.D., Purdue University, Professor Emeritus (process dynamics and control, digital computer control)

**Robert G. Rinker**, Ph.D., California Institute of Technology, Professor Emeritus (chemical kinetics, reaction engineering, catalysis)

**Orville C. Sandall**, Ph.D., UC Berkeley, Professor (transport of mass, energy, and momentum; separation processes)

## Affiliated Faculty

**Song-I Han**, Ph.D. (Chemistry)

**George M. Homsy**, Ph.D. (Mechanical Engineering)

**Frederick F. Lange**, Ph. D. (Materials)

**G. Robert Odette**, Ph.D. (Materials, Mechanical Engineering)

**Philip Alan Pincus**, Ph.D. (Materials)

We live in a technological society which provides many benefits including a very high standard of living. However, our society must address critical problems that have strong technological aspects. These problems include: meeting our energy requirements, safeguarding the environment, ensuring national security, and delivering health care at an affordable cost. Because of their broad technical background, chemical engineers are uniquely qualified to make major contributions to the resolution of these and other important problems. Chemical engineers develop processes and products that transform raw materials into useful products.

## Mission Statement

The program in Chemical Engineering has a dual mission:

- **Education.** Our program seeks to produce chemical engineers who will contribute to the process industries worldwide. Our program provides students with a strong fundamental technical education designed to meet the needs of a changing and rapidly developing technological environment.
- **Research.** Our program seeks to develop innovative science and technology that addresses the needs of industry, the scientific community, and society.

## Educational Objectives for the Undergraduate Program

- We expect our graduates to become innovative, competent, contributing engineers in the process industries.
- We expect our graduates to demonstrate their flexibility and adaptability in the workplace, so that they remain effective engineers, take on new responsibilities, and assume leadership roles.
- We expect at least an average of 15% of our graduates to continue their education by obtaining advanced degrees.

## Degree Programs

The Department of Chemical Engineering offers the B.S., M.S., and Ph.D. degrees in chemical engineering. The B.S. degree is accredited by the Engineering Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD, 21202-4012 – telephone: (410) 347-7700.

At the undergraduate level, emphasis is placed on a thorough background in the fundamental principles of science and engineering, strongly reinforced by laboratory courses in which students become familiar with the application of theory. At the graduate level, students take advanced courses and are required to demonstrate competence in conducting basic and applied research.

The B.S. degree provides excellent preparation for both challenging industrial jobs and graduate degree programs.

Interdisciplinary B.S./M.S. degree programs are also available which result in M.S. degrees in other fields. Students who complete a major in chemical engineering may be eligible to pursue a California teaching credential. Interested students should consult the credential advisor in the Graduate School of Education as soon as possible.

Under the direction of the Associate Dean

for Undergraduate Studies, academic advising services are jointly provided by advisors in the College of Engineering, as well as advisors in the department. Each undergraduate also is assigned a faculty advisor, to assist in selection of elective courses, plan academic programs, and provide advice on professional career objectives. Graduate students are assigned a thesis advisor in the area of their research interest. Undergraduates in other majors who plan to change to a major in the Department of Chemical Engineering should consult the department academic advisor for the requirements.

Several publications are available from the department office describing the undergraduate and graduate programs.

### Education Abroad Program (EAP)

Students are encouraged to broaden their academic experience by studying abroad for a year, or part of a year, under the auspices of the University of California Education Abroad Program. See the section under "Additional Academic Programs" or the EAP Web site: [www.eap.ucsb.edu](http://www.eap.ucsb.edu)

### Laboratory Facilities

**1. Computational facilities.** The College of Engineering maintains computing facilities open to all students within the college. These facilities include state-of-the-art workstations. Individual research groups also maintain significant PC and workstation facilities.

### 2. Process dynamics and control laboratories.

Key concepts in the process control courses are introduced using four experiments: two stirred-tank heating systems, an interacting four tank liquid storage system, and an inverted pendulum/cart system. The experimental equipment is controlled by industrial computer control systems.

### 3. Mass transfer and separation processes

**laboratory.** This facility contains well-instrumented equipment for studying mass transfer and separation processes. Some specialized research apparatuses that have been constructed for this laboratory include: a laminar-liquid jet absorber used for gas/liquid chemical kinetics measurements; a wetted-sphere gas absorber used for diffusion coefficient measurements and gas/liquid chemical kinetics measurements; a modified Zipperclave™ reactor used for gas solubility measurements at pressures up to 200 bar; a stirred-cell absorber used for experimentally testing mass transfer models; a supported-liquid membrane apparatus used for testing diffusion/reaction models of facilitated transport; a diaphragm cell apparatus for liquid phase diffusion coefficient measurements. Data acquisition software and hardware are used where appropriate. Current research projects focus on acid gas treating using alkanolamines and advanced oxidation kinetics studies for refractory organics in water.

**4. Multiphase systems laboratory.** Interfacial instabilities, breakup and mixing/dispersal of liquids (both Newtonian and visco-elastic) in high speed gas flows are studied in a Pulse, Supersonic Wind-Tunnel, and a Shock-Tube/Catch-Chamber Facility, by high speed visualization instrumentation, including Laser-Induced Fluorescence, at exposure times down

to 10 nanoseconds. The wind-tunnel provides Mach 3 flows for up to 100 milliseconds at pressure levels that can range from 0.1 MPa down to 10 Pa. The shock tube provides flow speeds of up to Mach 1.7 at dynamic pressures of up to 2 MPa, for 4 milliseconds. In addition to high speed digital video cameras (Phantom 7, up to 150,000 frames per second), the laboratory features a unique distributed visualization system assembled from a large scale array of still, high resolution cameras and a corresponding LED-based lighting system. Auxiliary equipment include a high speed infrared camera, an ultra-high-speed gas gun (liquid jets of km/s), viscometry instruments, a Direct Numerical Simulation code (MuSiC), and a 40-node computer cluster.

**5. Materials research facilities.** The department shares with the Department of Materials extensive laboratory facilities for materials research. These include a microscopy and microanalytical facility with transmission electron microscopy, scanning electron microscopy, atomic force microscopies, as well as dynamic secondary ion mass spectroscopy and x-ray photoelectron spectroscopy. Laboratories for metallography, x-ray diffraction, mechanical testing, materials processing and polymer characterization are also available. The latter includes state-of-the-art facilities for molecular, rheological, and rheoptical characterization of polymer melts, solutions, and gels. The rheological characterization equipment includes two Arcs Rheometrics Mechanical Spectrometers (one for fluids and the other for polymer melts), a constant stress rheometer, and various capillary viscometers. The rheoptical measurements are carried out on a Phase Modulated Flow Birefringence device. Static and dynamic light scattering is performed on a Brookhaven Laser Light Scattering Goniometer. In addition, there is a wide range of facilities available for polymer synthesis and characterization which is shared with other laboratories. These include: Differential Scanning Calorimetry (DSC); Gel Permeation Chromatography (GC); Infrared Spectroscopy (IR and FTIR); and optical microscopy at elevated temperatures.

**6. Catalysis and surface chemistry laboratories.** These laboratories contain apparatus for the study of catalysts over a large range of pressures and conditions. Small scale packed bed reactor units as well as mini- and micro-reactor assemblies are available for the study of heterogeneous catalyst activity at high and moderate pressures. Characterization systems include GC, GC-MS, Fourier transform infrared reflection-absorption spectroscopy, quadrupole mass spectrometry, and optical spectroscopies. Several ultra high vacuum systems are used for detailed surface science studies with capabilities for atomic and molecular beam scattering, thermal desorption spectroscopy, low-energy electron diffraction, Auger electron spectroscopy, and X-ray photoelectron spectroscopies.

**7. Interfacial sciences laboratories.** These two laboratories in chemical engineering contain state-of-the-art equipment necessary for detailed measurements of the forces and structures at fluid-fluid and fluid-solid interfaces. The instruments include four versions of the surface forces apparatus designed to

measure the interactions between surfaces such as biomembranes, polymers, and crystalline solids across liquids such as water or oils. The newest variations of the instruments can be used to measure dynamic forces important to lubrication and friction at the molecular scale, and do in situ x-ray imaging. These labs also include high vacuum freeze-fracture devices used to prepare liquid samples for the lab's transmission electron microscope as well as a cryogenic sample holder for direct imaging of low temperature specimens in the TEM. This lab is one of the few in any chemical engineering department that contains confocal optical, cryo-electron, scanning tunneling and atomic force microscopes which can provide atomic resolution images of colloids and interfaces. The lab also includes an optical microscope with Nomarski optics, confocal microscope, a high speed ultracentrifuge, two Langmuir-Blodgett troughs for creating ordered monolayer assemblies, Brewster angle and fluorescence microscopes and highspeed cameras. The lab also has custom built surface rheometers for measuring the interfacial viscosity of lipid and protein monolayers.

### 8. Magnetic resonance characterization

**facilities.** State-of-the-art facilities in nuclear magnetic resonance (NMR) and electron spin resonance (ESR) spectroscopy are available to support a wide range of materials and engineering investigations at a molecular level. UCSB College of Engineering instrumentation includes a variety of high resolution NMR spectrometers operating at fields of 800 MHz (19 Tesla), two at 500 MHz (11.7 T), a 300 MHz (7.0 T), and a 200 MHz (4.7 T) for solution- and solid-state investigations. Extensive support equipment exists for the performance of non-routine experiments, such as ultrafast magic-angle spinning (MAS), double rotation, multiple-quantum MAS, pulsed-field gradient, laser-enhanced NMR, and multi-dimensional NMR techniques.

**9. Complex fluids laboratory.** This laboratory combines a series of unique experimental systems for investigation of viscous and viscoelastic flow phenomena involving polymer liquids, suspensions, and other complex fluids. These include birefringence, dichroism, and light scattering systems for polymeric liquids; a pair of miniaturized computer-controlled four-roll mills for studies of drop breakup, coalescence, and particle dynamics; LDV and PIV systems applied to suspensions and multiphase liquids, miniaturized shear cells with inverted microscopes for colloidal systems, and an opposing micropipette system for investigation of the interactions between growing bubbles for foam formation studies, and for studies of vesicle interactions.

**10. Imaging science laboratory.** This laboratory features facilities for studying basic problems in materials and biological systems using a variety of imaging methods. Capabilities include scanning tunneling electron microscopy (STM), and atomic force microscopy (AFM). Image processing workstations and software systems are interfaced to each device.

**11. Light scattering laboratory.** This laboratory is equipped with light scattering equipment

for characterization of complex fluids such as emulsions, colloidal suspensions, surfactant solutions, and polymer solutions. Included are commercial and custom-designed goniometers for measurements of the static structure factors at equilibrium and under a variety of shear flows. Dynamic light scattering is performed with a fast Brookhaven BI-9000 correlator. Both static and dynamic light scattering capabilities are integrated with controlled stress and controlled strain-rate rheometers for simultaneous light scattering and rheological measurements.

**12. Biomaterials and Bioengineering Laboratory.** This laboratory includes facilities for synthesis and testing of novel biomaterials for applications in drug delivery, biosensors, and tissue engineering. Equipment is available for synthesis of polymeric micro and nanoparticles for drug delivery, synthesis of self-assembled biomaterials, and engineering of biomaterial surfaces. The laboratory also includes facilities to measure cell-biomaterial interactions and transport of molecules as well as particles in biological tissues. Various analytical tools for measuring transport including scintillation counter, HPLC, spectrophotometers, and fluorescence microscopy are available. Facilities for mammalian cell culture and *in vivo* transport measurements are available. Equipment for functional characterization of biological molecules, cells, and tissues is also available.

## Undergraduate Program

Courses required for the pre-major or major, inside or outside of the Department of Chemical Engineering, cannot be taken for the passed/not passed grading option. They must be taken for letter grades.

### Bachelor of Science—Chemical Engineering

**Note:** Schedules should be planned to meet both General Education and major requirements. Detailed descriptions of these requirements are presented in the College of Engineering Announcement and General Education booklet.

A minimum of 194 units is required for graduation.

### Preparation for the major

Engineering 3, Chemical Engineering 1A, 10; Chemistry 1A-B-C or 2A-B-C, 1AL-BL-CL or 2AC-BC-CC, 6AL-BL, 109A-B-C; Mathematics 3A-B-C, 5A-B-C, and Physics 1, 2, 3, 4, and 3L, 4L.

**NOTE:** Courses required for the major, inside or outside of the Department of Chemical Engineering, cannot be taken for the pass/not pass grading option. They must be taken for letter grades.

### Upper-division major

Seventy-eight upper-division units are required of which sixty-six are specified: Chemical Engineering 110A-B, 119, 120A-B-C, 128, 132A-B-C, 140A-B, 152A, 172, 180A-B, 184A-B; Chemistry 113B-C; Materials 100B or 101. Twelve units of technical electives selected from a wide variety of upper-division science and engineering courses are also required. The list of approved technical electives is included on curriculum

sheets. Prior approval of technical electives must be obtained from the student's faculty advisor and the technical elective worksheet must be submitted to the department by fall quarter of the senior year.

Transfer students who have completed most of the lower-division courses listed above and are entering the junior year of the chemical engineering program may take Chemical Engineering 10 concurrently with Chemical Engineering 120A in the fall quarter.

## Five-Year Joint B.S. Chemical Engineering/ M.S. Materials Degree Program

Please refer to the College of Engineering section, for additional information on Five-Year B.S./M.S. programs.

## Five-Year Joint B.S. Chemical Engineering/ M.A. Program with Economics

Please refer to the College of Engineering section, for additional information on Five-Year B.S./M.S. programs.

## Graduate Program

In addition to departmental requirements, program applicants and candidates for graduate degrees must fulfill University requirements described in the chapter "Graduate Education at UCSB."

Upon admission, students will receive a copy of the graduate student handbook which contains the department's policies and procedures.

### Master of Science—Chemical Engineering

#### Admission

Graduate Record Examination (GRE) scores are required of all applicants to the graduate program. Applicants whose native language is not English must pass the Test of English as a Foreign Language (TOEFL), or the International English Language Testing System (IELTS) prior to admission to UCSB. Requests for exceptions to this requirement will be considered for those students who have completed an undergraduate or graduate education at an institution whose primary language of instruction is English. It is expected that most applicants for the M.S. degree in chemical engineering will have obtained undergraduate degrees in chemical engineering. However, students with degrees in other branches of engineering or in science may be accepted with the provision that they take such undergraduate courses as prescribed by the department as prerequisites for graduate work.

#### Degree Requirements

Two plans are available for the M.S. degree in chemical engineering. Most students will follow Plan 1, although students with special backgrounds or requirements will be permitted, at the option of the department, to follow Plan 2. Knowledge of a foreign language is not required.

**Plan 1.** Thirty units of coursework, of which at least 20 units must be taken in graduate courses numbered 200-299 in chemical engineering or related fields subject to departmental approval. Units in courses numbered 596, 598 or 599 do not count toward advanced degrees. The remaining units may be chosen from upper-division or graduate-level courses in chemical engineering or other branches of engineering or science, as approved by the department. In addition to meeting the course requirements, each student is expected to pursue a research project, theoretical and/or experimental, and to describe the results of the research in a thesis. The student must present and defend the thesis in an oral examination.

**Plan 2.** Forty-two units of coursework, of which at least 24 units must be taken in graduate courses numbered 200-299 in chemical engineering or related fields subject to departmental approval. Units numbered 596, 598 or 599 do not count toward advanced degrees. The remainder may be chosen on the same basis as outlined in Plan 1. Only students who have had adequate research experience prior to beginning graduate work, or who plan to continue in doctoral work at UCSB, will be permitted to follow Plan 2. Plan 2 candidates must pass an oral examination based on subjects studied in the graduate courses.

### Doctor of Philosophy—Chemical Engineering

#### Admission

Doctor of philosophy applicants must meet master of science admission requirements. (See "Master of Science, Chemical Engineering—Admission.")

#### Degree Requirements

The student will be expected to plan and secure approval of a program of courses in chemical engineering and related fields which will provide a depth of understanding in the principal areas of chemical engineering. Students are required to take a minimum of 36 units of course work before graduation. This includes 27 units required to fulfill the core course requirement.

Advancement to Candidacy for the Ph.D. degree includes a written report and comprehensive oral examination based primarily on a student's research progress through the Winter or Spring Quarters of the student's second year of graduate study. Eligibility to take the Candidacy Exam is based on a portfolio submitted by the student that includes performance in graduate chemical engineering course work and research progress reports.

Each student is expected to pursue a research project, theoretical and/or experimental, and to describe the results of the research in a dissertation. The student must present and defend the dissertation in an oral examination. The period of time between advancement to candidacy and completion of the final oral examination is expected to be approximately three years.

### Optional Graduate Degree Emphasis in Computational Science and Engineering

The Departments of Chemical Engineering; Computer Science; Earth Science; Ecology,

Evolution and Marine Biology; Electrical and Computer Engineering; Mathematics; and Mechanical Engineering offer an interdisciplinary master's and Ph.D. degree emphasis in computational science and engineering (CSE). CSE is a rapidly growing multidisciplinary area with connections to the sciences, engineering, mathematics, and computer science. Computer models and simulations have become an important part of the research repertoire, supplementing (and in some cases replacing) experimentation. Going from application area to computational results requires domain expertise, mathematical modeling, numerical analysis, algorithm development, software implementation, program execution, analysis, validation, and visualization of results. CSE addresses these issues.

Although CSE includes elements from computer science, applied mathematics, engineering and science, it focuses on the integration of knowledge and methodologies from all of these disciplines and, as such, is a subject distinct from any of them. All students pursuing an emphasis in CSE must complete the following:

- Numerical Methods: Electrical and Computer Engineering 210A-B-C-D (students must take at least three)
- Parallel Computing: Computer Science 240A-B (students must take at least one).
- Applied Mathematics: Students must take either the Math 214A-B or Math 215A-B sequence (run concurrently with Math 119A-B and Math 124A-B respectively), or the Chemical Engineering 230A-B sequence.
- Credit will not be given for more than one of these sequences. Advanced courses may be substituted, with approval, as follows: Math 243 instead of Math 214, and Math 246 instead of Math 215.

The specific requirements for the M.S. in Electrical and Computer Engineering (thesis option only) with the CSE emphasis are as follows:

- Completion of the above requirements for an M.S. in electrical and computer engineering
- A master's thesis in CSE

The thesis must be written under the supervision of a CSE ladder faculty member. The thesis committee must include a minimum of three permanent ladder faculty members, at least two from Electrical and Computer Engineering and one from CSE (may be CSE faculty member from another department).

Students pursuing a Ph.D. with an emphasis in CSE must:

- Complete the above requirements for a Ph.D. in electrical and computer engineering
- Write and defend a dissertation in CSE

The student's dissertation must be written under the supervision of an Electrical and Computer Engineering CSE ladder faculty member. The doctoral examination committee must include at least one CSE ladder faculty member and at least one ladder faculty member from another department.

### **Interdepartmental Graduate Program in Biomolecular Science and Engineering**

For a complete description of this interdisciplinary program, see page 137 in the College of Letters and Sciences section of this catalog or the Web site at: [www.bmse.ucsb.edu](http://www.bmse.ucsb.edu).

# Chemical Engineering Courses

## LOWER DIVISION

### 1A. Engineering and the Scientific Method

(1) STAFF

Engineering and its relationship to basic science, with specific examples from engineering practice. Analysis and synthesis of engineering education. Career opportunities for chemical engineering graduates. Seminar/discussion format with guest lecturers and current experiences/issues from students' other freshman engineering/science classes.

### 10. Introduction to Chemical Engineering

(3) DOYLE, GORDON

*Prerequisites:* Chemistry 1A-B-C; Mathematics 3A-B-C; and, Engineering 3. Chemical Engineering majors only.

Elementary principles of chemical engineering. The major topics discussed include material and energy balances, stoichiometry, and thermodynamics.

### 55. Chem-E-Car Activity

(1) STAFF

*Prerequisite:* Chem 1C and 1CL.

Students apply chemistry and engineering knowledge to design a model-scale, chemically powered car with chemically actuated brakes. The cars represent UCSB at American Institute of Chemical Engineering meetings. Grading is based on participation, design creativity, and car performance.

### 99. Introduction to Research

(1-3) STAFF

*Prerequisites:* consent of instructor and undergraduate advisor.

May be repeated for credit to a maximum of 6 units. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199DC/199RA courses combined.

Directed study, normally experimental, to be arranged with individual faculty members. Course offers exceptional students an opportunity to participate in a research group.

## UPPER DIVISION

### 102. Biomaterials and Biosurfaces

(3) ISRAELACHVILI

*Recommended Preparation:* Basic physical chemistry, chemistry, physics, thermodynamics and biology.

Not open for credit to students who have completed Chemical Engineering 121.

Fundamentals of natural and artificial biomaterials and biosurfaces with emphasis on molecular level structure and function and the interactions of biomaterials and surfaces with the body. Design issues of grafts and biopolymers. Basic biological and biochemical systems reviewed for nonbiologists.

### 110A. Chemical Engineering Thermodynamics

(3) STAFF

*Prerequisite:* Chemical Engineering 10; Mathematics 5A; Engineering majors only.

Use of the laws of thermodynamics to analyze processes encountered in engineering practice, including cycles and flows. Equations-of-state for describing properties of fluids and mixtures. Applications, including engines, turbines, refrigeration and power plant cycles, phase equilibria, and chemical-reaction equilibria.

### 110B. Chemical Engineering Thermodynamics

(3) STAFF

*Prerequisite:* Chemical Engineering 110A; Mathematics 5A; Engineering majors only.

Extension of Chemical Engineering 110A to cover mixtures and multiphase equilibrium. Liquid-vapor separations calculations are emphasized. Introduction to equations of state for mixtures.

### 119. Current Events in Chemical Engineering

(1) STAFF

*Prerequisites:* Chemical Engineering 110A-B.

Assigned readings in technical journals on current events of interest to chemical engineers. Student groups present oral reports on reading assignments pertaining to new technologies, discoveries, industry challenges, society/government issues, professional and ethical responsibilities.

### 120A. Transport Processes

(4) SQUIRES, ZASADZINSKI, MITAGOTRI, TIRRELL

*Prerequisites:* Mathematics 5A-B-C; and Physics 4.

Introductory course in conceptual understanding and mathematical analysis of problems in fluid dynamics of relevance to Chemical Engineering. Emphasis is placed on performing microscopic and macroscopic mathematical analysis to understand fluid motion in response to forces.

### 120B. Transport Processes

(3) STAFF

*Prerequisite:* Chemical Engineering 120A; Mathematics 5A-B-C and Physics 4.

Introductory course in the mathematical analysis of conductive, convective and radioactive heat transfer with practical applications to design of heat exchange equipment and use.

### 120C. Transport Processes

(3) STAFF

*Prerequisite:* Chemical Engineering 120B, Mathematics 5A-B-C and Physics 4.

Introductory course in the fundamentals of mass transfer with applications to the design of mass transfer equipment.

### 121. Colloids and Biosurfaces

(3) ISRAELACHVILI

*Recommended Preparation:* Basic physical chemistry, chemistry, physics, thermodynamics and biology.

Not open for credit to students who have completed Chemical Engineering 102.

Basic forces and interactions between atoms, molecules, small particles and extended surfaces. Special features and interactions associated with (soft) biological molecules, biomaterials and surfaces: lipids, proteins, fibrous molecules (DNA), biological membranes, hydrophobic and hydrophilic interactions, bio-specific and non-equilibrium interactions.

### 124. Advanced Topics in Transport Phenomena/Safety

(3) BANERJEE, THEOFANOUS

*Prerequisites:* Chemical Engineering 120A-B-C or Mechanical Engineering 151A-B; and Mechanical Engineering 152A.

Same course as ME 124.

Hazard identification and assessments, runaway reactions, emergency relief. Plant accidents and safety issues. Dispersion and consequences of releases.

### 125. Principles of Bioengineering

(3) MITRAGOTRI

Applications of engineering to biological and medical systems. Introduction to drug delivery, tissue engineering, and modern biomedical devices. Design and applications of these systems are discussed.

### 128. Separation Processes

(3) SCOTT

*Prerequisites:* Chemical Engineering 10 and 110A-B; open to College of Engineering majors only.

Basic principles and design techniques of equilibrium-stage separation processes. Emphasis is placed on binary distillation, liquid-liquid extraction, and multicomponent distillation.

### 132A. Analytical Methods in Chemical Engineering

(4) DAUGHERTY, FREDRICKSON, SQUIRES

*Prerequisites:* Mathematics 5A-B.

Develop analytical tools to solve elementary partial differential equations and boundary value problems. Separation of variables, method of characteristics, Sturm-Liouville theory, generalized Fourier analysis, and computer math tools.

### 132B. Computational Methods in Chemical Engineering

(3) FREDRICKSON

*Prerequisite:* Mathematics 5A-B-C.

Numerical methods for solution of linear and nonlinear algebraic equations, optimization, interpolation, numerical integration and differentiation, initial-value problems in ordinary and

partial differential equations, and boundary-value problems. Emphasis on computational tools for chemical engineering applications.

### 132C. Statistical Methods in Chemical Engineering

(3) SEBORG

Prerequisites: *Mathematics 5A-B-C.*

Probability concepts and distributions, random variables, error analysis, point estimation and confidence intervals, hypothesis testing, development of empirical chemical engineering models using regression techniques, design of experiments, process monitoring based on statistical quality control techniques.

### 136. Introduction to Multiphase Flows

(3) THEOFANOUS

Prerequisites: *Chemical Engineering 120A-B-C, or Mechanical Engineering 151C and 152A.*

Same course as ME 136.

Development from basic concepts and techniques of fluid mechanics and heat transfer, to local behavior in multiphase flows. Key multiphase phenomena, related physics. Extension of local conservation principles to usable formulations in multiphase flows. Modelling approaches. Practical examples.

### 138. Risk Assessment and Management

(3) THEOFANOUS

Prerequisites: *Chemical Engineering 120A-B-C, or Mechanical Engineering 151B and 152A.*

Same course as ME 138.

Conceptual foundations of risk and its utility for decision making. Determinism, statistical inference, and uncertainty. Formulation of safety goals and approaches to risk management. Generalized methodology and tools for assessing risks in the industrial, ecological, and public health context.

### 140A. Chemical Reaction Engineering

(3) MCFARLAND, SCOTT

Prerequisites: *Chemical Engineering 110A and 120A-B.*

Fundamentals of chemical reaction engineering with emphasis on kinetics of homogenous and heterogeneous reacting systems. Reaction rates and reaction design are linked to chemical conversion and selectivity. Batch and continuous reactor designs with and without catalysts are examined.

### 140B. Chemical Reaction Engineering

(3) CHMELKA, MCFARLAND

Prerequisites: *Chemical Engineering 110A, 120A-B and 140A.*

Thermodynamics, kinetics, mass and energy transport considerations associated with complex homogeneous and heterogeneous reacting systems. Catalytic and catalytic reaction rates and mechanisms. Adsorption and reaction at solid surfaces, including effects of diffusion in porous materials. Chemical reactors using heterogeneous catalysts.

### 141. The Science and Engineering of Energy Conversion

(3) STAFF

Prerequisite: *Chemical Engineering 110A and 140A.*

Equivalent upper-division coursework in thermodynamics and kinetics from outside of department will be considered.

Framework for understanding the energy supply issues facing society with a focus on the science, engineering, and economic principles of the major alternatives. Emphasis will be on the physical and chemical fundamentals of energy conversion technologies.

### 152A. Process Dynamics and Control

(4) SEBORG, DOYLE

Prerequisites: *Chemical Engineering 120A-B-C and 140A.*

Development of theoretical and empirical models for chemical and physical processes, dynamic behavior of processes, transfer function and block diagram representation, process instrumentation, control system design and analysis, stability analysis, computer simulation of controlled processes.

### 152B. Advanced Process Control

(3) SEBORG

Prerequisite: *Chemical Engineering 152A.*

The theory, design, and experimental application of advanced process control strategies including

feedforward control, cascade control, enhanced single-loop strategies, and model predictive control. Analysis of multi-loop control systems. Introduction to on-line optimization.

### 154. Engineering Approaches to Systems Biology

(3) DOYLE

Prerequisites: *Chemical Engineering 170 and Mathematics 5A-B-C.*

Applications of engineering tools and methods to solve problems in systems biology. Emphasis is placed on integrative approaches that address multi-scale and multi-rate phenomena in biological regulation. Modeling, optimization, and sensitivity analysis tools are introduced.

### 160. Introduction to Polymer Science

(3) KRAMER

Prerequisite: *Chemistry 109A-B.*

Same course as Materials 160.

Introductory course covering synthesis, characterization, structure, and mechanical properties of polymers. The course is taught from a materials perspective and includes polymer thermodynamics, chain architecture, measurement and control of molecular weight as well as crystallization and glass transitions.

### 170. Molecular and Cellular Biology for Engineers

(3) DAUGHERTY

Prerequisite: *Chemistry 109C. Not open for credit to students who have completed Ch E 172.*

Introduction to molecular and cellular biology from an engineering perspective. Topics include protein structure and function, transcription, translation, post-translational processing, cellular organization, molecular transport and trafficking, and cellular models.

### 171. Introduction to Biochemical Engineering

(3) DAUGHERTY

Prerequisite: *Chemical Engineering 170.*

Introduction to biochemical engineering covering cell growth kinetics, bioreactor design, enzyme processes, biotechnologies for modification of cellular information, and molecular and cellular engineering.

### 172. Molecular and Cellular Biology for Engineers

(3) DAUGHERTY

Prerequisites: *Chemical Engineering 140A and Chemistry 109C.*

Molecular and cellular biology will be introduced using engineering fundamentals. Topics include protein structure and function, transcription, translation, post-translational processing, cellular organization, molecular transport and trafficking, metabolic and protein networks, modification of cellular information, and molecular and cellular engineering.

### 180A-B. Chemical Engineering Laboratory

(3) STAFF

Prerequisite: *Chemical Engineering 110A; and Chemical Engineering 120A-B.*

Experiments in thermodynamics, fluid mechanics, heat transfer, mass transfer, and chemical processing. Analysis of results, and preparation of reports.

### 184A. Design of Chemical Processes

(3) DOHERTY

Prerequisites: *Chemical Engineering 110A-B; 120A-B-C; 140A; and 152A.*

Application of chemical engineering principles to plant design. Conceptual design of chemical processes. Flowsheeting methods. Engineering cost principles and economic aspects.

### 184B. Design of Chemical Processes

(3) DOHERTY

Prerequisites: *Chemical Engineering 110A-B; 120A-B-C; 140A; 152A; and Chemical Engineering 184A.*

The solution to comprehensive plant design problems. Use of computer process simulators. Optimization of plant design, investment and operations.

### 194. Group Studies for Advanced Students

(1-4) STAFF

Prerequisites: *consent of instructor. Limited to majors in the College of Engineering.*

Check with department for quarters offered.

Group studies intended for small number of advanced students who share an interest in a topic not included in the regular departmental curriculum.

### 196. Undergraduate Research

(2-4) STAFF

Prerequisite: *Upper-division standing, completion of 2 upper-division courses in Chemical Engineering; consent of the instructor.*

Must have a minimum 3.0 grade-point average for the preceding three quarters. May be repeated for up to 12 units. Not more than 3 units may be applied to departmental electives.

Research opportunities for undergraduate students. Students will be expected to give regular oral presentations, actively participate in a weekly seminar, and prepare at least one written report on their research.

### 198. Independent Studies in Chemical Engineering

(1-5) STAFF

Prerequisites: *consent of instructor; upper-division standing; completion of two upper-division courses in chemical engineering.*

Must have a minimum 3.0 grade-point-average for the preceding three quarters. May be repeated up to twelve units. Students are limited to five units per quarter and 30 units total in all 98/99/198/199/199DC/199RA courses combined.

Directed individual studies.

## GRADUATE COURSES

### 202. Biomaterials and Biosurfaces

(3) ISRAELACHVILI

Prerequisites: *consent of instructor.*

Same course as BMSE 202.

Recommended preparation: *prior biochemistry, physical chemistry, and organic chemistry.*

Fundamentals of natural and artificial biomaterials and biosurfaces with emphasis on molecular level structure and function and the interactions of biomaterials and surfaces with the body. Design issues of grafts and biopolymers. Basic biological and biochemical systems reviewed for nonbiologists.

### 210A. Fundamentals and Applications of Classical Thermodynamics and Statistical Mechanics

(4) DOHERTY

Fundamental concepts in classical thermodynamics and statistical mechanics for engineering students. Establishes the framework within which problems can be solved using methodologies that start with molecular level understanding.

### 210B. Advanced Topics in Equilibrium Statistical Mechanics

(3) STAFF

Recommended Preparation: *Recommended preparation: a course in physical chemistry.*

Same course as Materials 214.

Application of the principles of statistical mechanics and thermodynamics to treat classical fluid systems at equilibrium. Topics include liquid state theory, computer simulation methods, critical phenomena and scaling principles, interfacial statistical mechanics, and electrolyte theory.

### 210C. Topics in Non-equilibrium Statistical Mechanics

(3) STAFF

Introduction to the non-equilibrium statistical mechanics of classical fluid systems. Topics include: time correlation functions, linear response theory, kinetic theory of gases, Brownian motion, polymer dynamics, generalized hydrodynamics, non-equilibrium thermodynamics, and kinetics of phase transformations.

### 210D. Principles of Modern Molecular Simulation Methods

(3) STAFF

Provides a broad overview of modern methods

for computing the properties of multibody molecular systems. The course will cover: ab initio techniques, classical potential energy functions, Monte Carlo and molecular dynamics methods, free energy calculations, phase equilibria, and self-assembly/organization.

### 211A. Matrix Analysis and Computation

(4) STAFF

Prerequisite: consent of instructor.

Same course as Computer Science 211A, ECE 210A, Geology 251A, ME 210A and Mathematics 206A. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.

Graduate level-matrix theory with introduction to matrix computations. SVD's, pseudoinverses, variational characterization of eigenvalues, perturbation theory, direct and iterative methods for matrix computations.

### 211B. Numerical Simulation

(4) STAFF

Prerequisite: consent of instructor.

Same course as Computer Science 211B, ECE 210B, Geology 251B, ME 210B and Mathematics 206B. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.

Linear multistep methods and Runge-Kutta methods for ordinary differential equations: stability, order and convergence. Stiffness. Differential algebraic equations. Numerical solution of boundary value problems.

### 211C. Numerical Solution of Partial Differential Equations—Finite Difference Methods

(4) STAFF

Prerequisite: consent of instructor.

Same course as Computer Science 211C, ECE 210C, Geology 251C, ME 210C and Mathematics 206C. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.

Finite difference methods for hyperbolic, parabolic and elliptic PDE's, with application to problems in science and engineering. Convergence, consistency, order and stability of finite difference methods. Dissipation and dispersion. Finite volume methods. Software design and adaptivity.

### 211D. Numerical Solution of Partial Differential Equations—Finite Element Methods

(4) STAFF

Prerequisite: consent of instructor.

Same course as Computer Science 211D, ECE 210D, Geology 251D, ME 210D, and Mathematics 206D. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.

Weighted residual and finite element methods for the solution of hyperbolic, parabolic and elliptical partial differential equations, with application to problems in science and engineering. Error estimates. Standard and discontinuous Galerkin methods.

### 212. Risk Assessment and Management

(3) THEOFANOUS

Prerequisites: consent of instructor.

Same course as ME 212.

Conceptual foundations of risk and its utility for decision making. Determinism, statistical inference, and uncertainty. Formulation of safety goals and approaches to risk management. Generalized methodology and tools for assessing risks in the industrial, ecological, and public health context.

### 216A. Introduction to Magnetic Resonance Spectroscopy Techniques

(3) CHMELKA

Prerequisite: consent of instructor.

An introduction to magnetic resonance theory and experimental techniques, with emphasis on quantum-mechanical descriptions of basic NMR methods for solid-state applications.

### 216B. Advanced Methods of Magnetic Resonance with Applications to Materials Science

(3) CHMELKA

Prerequisite: consent of instructor.

This course is intended to provide an understanding of advanced methods of magnetic resonance spectroscopy and imaging, emphasizing new applications to current issues in materials research.

### 218. Introduction to Multiphase Flows

(3) STAFF

Prerequisite: consent of instructor.

Same course as ME 218.

Development from basic concepts and techniques of fluid mechanics and heat transfer, to local behavior in multiphase flows. Key multiphase phenomena, related physics. Extension of local conservation principles to usable formulations in multiphase flows. Modelling approaches. Practical examples. Computer simulations.

### 220A. Advanced Transport Processes—Laminar Flow and Convective Transport Processes

(4) LEAL

Prerequisite: consent of instructor.

Basic principles of fluid mechanics and convective transport processes. Governing equations and boundary conditions. Non-dimensionalization and scaling. Self-similar solutions and similarity transformations. Unidirectional flows. The thin gap approximation, lubrication theory and thin film dynamics. Low Reynolds number flows.

### 220B. Advanced Transport Processes—Laminar Flow and Convective Transport Processes

(3) LEAL

Prerequisite: consent of instructor.

Continuation of ChE 220A. Viscous flows. Application of scaling and asymptotic methods to transport problems and fluid motions; Weak convection effects; Boundary layer theories for fluid mechanics and transport processes. Introduction to Linear stability theory for interfacial and buoyancy-driven flows.

### 220C. Advanced Transport Processes—Mass Transfer

(3) ZASADZINSKI

Basic principles of diffusional processes, multicomponent systems, diffusion with chemical reaction, penetration and surface renewal theories, turbulent transport.

### 221. Turbulent Flow

(3) STAFF

Prerequisites: Chemical Engineering 220A-B or Mechanical Engineering 220A-B.

Same course as ME 223.

Nature and origin of turbulence, boundary layer mechanics law of the wall, wakes, and jets, transport of properties, statistical description of turbulence, measurement problems, stratification effects. Application of principles to practical problems is stressed.

### 222A. Colloids and Interfaces I

(3) ISRAELACHVILI

Prerequisite: consent of instructor.

Same course as Materials 222A and BMSE 222A.

Introduction to the various intermolecular interactions in solutions and in colloidal systems: Van der Waals, electrostatic, hydrophobic, solvation, H-bonding. Introduction to colloidal systems: particles, micelles, polymers, etc. Surfaces: wetting, contact angles, surface tension, etc.

### 222B. Colloids and Interfaces II

(3) ZASADZINSKI

Prerequisite: consent of instructor.

Same course as Materials 222B.

Recommended preparation: Materials 222A or Chemical Engineering 222A.

Continuation of 222A. Interparticle interaction, coagulation, flocculation, DLVO theory, steric interactions, polymer-coated surfaces, polymers in solution, viscosity in thin liquid films. Surfactant self-assembly: micelles, micro-emulsions, lamellar phases, etc. Surfactants in surfaces: Langmuir-Blodgett films, adsorption, adhesion.

### 226. Level Set Methods

(4) GIBOU

Prerequisite: Computer Science 211C, or Chemical Engineering 211C, or ECE 210C, or ME 210C.

Same course as CMPS 216, ECE 226 and ME 216.

Mathematical description of the level set method and design of the numerical methods used in its implementations (ENO-WENO, Godunov, Lax-Friedrich, etc.). Introduction to the Ghost Fluid Method. Applications in CFD, Materials Sciences, Computer Vision and Computer Graphics.

### 230A. Advanced Theoretical Methods in Engineering

(4) CHMELKA, FREDRICKSON, LEAL, PETERS

Prerequisite: consent of instructor.

Same course as ME 244A.

Methods of solution of partial differential equations and boundary value problems. Linear vector and function spaces, generalized Fourier analysis, Sturm-Liouville theory, calculus of variations, and conformal mapping techniques.

### 230B. Advanced Theoretical Methods in Engineering

(3) FREDRICKSON, SQUIRES

Prerequisites: Chemical Engineering 230A and consent of instructor.

Same course as ME 244B.

Advanced mathematical methods for engineers and scientists. Complex analysis, integral equations and Green's functions. Asymptotic analysis of integrals and sums. Boundary layer methods and WKB theory.

### 230C. Nonlinear Analysis of Dynamical Systems

(3) DOHERTY

Prerequisites: Chemical Engineering 230A and consent of instructor.

Bifurcation and stability theory of solutions to nonlinear evolution equations; introduction to chaotic dynamics. Emphasis on asymptotic and numerical methods for the analysis of steady-state and time-dependent nonlinear boundary-value problems.

### 238A. Rheology of Complex Fluids

(3) STAFF

Same course as Materials 238A.

An introduction to molecular and microscale theories for the viscoelastic behavior of complex fluids: suspensions, colloidal dispersions, liquid crystals, dilute polymer solutions.

### 238B. Rheology of Complex Fluids

(3) STAFF

Same course as Materials 238B.

Continuation of ChE 238A: Emphasis of the second term is on concentrated systems and polymeric liquids, reptation theory and extensions of reptation theories to complex architectures in the linear viscoelastic regime. Nonlinear Rheology for polymers.

### 240A. Advanced Chemical Reaction Engineering

(3) MCFARLAND

Prerequisite: consent of instructor.

Following review of the theory of reaction kinetics for catalyzed and noncatalyzed systems, detailed consideration is given to design and performance of catalysts and chemical reactors. Mathematical studies of stability and optimization are emphasized in relationship to mass, energy, and momentum transport.

### 241. Advanced Science and Engineering of Energy Conversion

(3) MCFARLAND

The course provides a framework for understanding the energy supply issues facing society with a focus on the science, engineering, and economic principles of the major alternatives. Emphasis will be on the physical and chemical fundamentals of energy conversion technologies.

### 246. Advanced Catalysis

(3) MCFARLAND, SCOTT

Prerequisite: consent of instructor.

Theories of reaction rates. Heterogeneous and homogenous catalysis, including physical structure and characterization of catalysts. Catalyst poisoning.

### 255. Methods in Systems Biology

(3) DOYLE

Prerequisites: prior coursework in cellular biology and mathematics; consent of instructor.

Same course as BMSE 255.

Fundamentals of dynamic network organization

in biology (genes, proteins, metabolites). Emphasis on mathematical approaches to model and analyze complex biophysical network systems. Detailed case studies demonstrating successes of systems biology. Basic biological systems reviewed for non-biologists.

### 290. Seminar

(.5) STAFF

*May be repeated for credit.*

Seminar featuring guest speakers and graduate students on topics of current research interest.

### 291. Research Group Studies

(1-2) STAFF

*Prerequisite: consent of instructor.*

Students or instructors present recently published papers and/or results relevant to their own research.

### 295. Group Studies: Controls, Dynamical Systems, and Computation

(1) STAFF

### 594. Special Topics

(1-4) STAFF

Special seminar on research subjects of current interest.

### 596. Directed Reading and Research

(1-12) STAFF

Experimental or theoretical research undertaken under the direction of a faculty member for graduate students who have not yet advanced to candidacy.

### 598. Master's Thesis Research and Preparation

(1-12) STAFF

*Not applicable to course requirement for master of science degree.*

Only for research underlying the thesis and writing the thesis.

### 599. Dissertation Research and Preparation

(1-12) STAFF

Only for research underlying the dissertation and writing the dissertation.

**Steven E. Butner**, Ph.D., Stanford University, Professor (computer architecture, VLSI design of CMOS and gallium-arsenide ICs with emphasis on distributed organizations and fault-tolerant structures)

**Kwang-Ting (Tim) Cheng**, Ph.D., UC Berkeley, Professor (design automation, VLSI testing, design synthesis, design verification, algorithms)

**Frederic T. Chong**, Ph.D., Massachusetts Institute of Technology, Professor (computer architecture, novel computing technologies, quantum computing, embedded systems, and architectural support for system security and reliability)

**Chandra Krintz**, Ph.D., University of California, San Diego, Associate Professor (dynamic and adaptive compilation systems, high-performance internet (mobile) computing, runtime and compiler optimizations for Java/CIL, efficient mobile program transfer formats)

**Malgorzata Marek-Sadowska**, Ph.D., Technical University of Warsaw, Poland, Professor (design automation, computer-aided design, integrated circuit layout, logic synthesis)

**P. Michael Melliar-Smith**, Ph.D., University of Cambridge, Professor (fault tolerance, formal specification and verification, distributed systems, communication networks and protocols, asynchronous systems)

**Louise E. Moser**, Ph.D., University of Wisconsin, Professor (distributed systems, computer networks, software engineering, fault-tolerance, formal specification and verification, performance evaluation)

**Behrooz Parhami**, Ph.D., UC Los Angeles, Professor (parallel architectures and algorithms, computer arithmetic, computer design, dependable and fault-tolerant computing)

**Volkan Rodoplu**, Ph.D., Stanford University, Assistant Professor (wireless networks, energy-efficient and device-adaptive communications)

**Tim Sherwood**, Ph.D., UC San Diego, Associate Professor (computer architecture, dynamic optimization, network and security processors, embedded systems, program analysis and characterization, and hardware support of software systems)

**Luke Theogarajan**, Ph.D., Massachusetts Institute of Technology, Assistant Professor (low-power analog VLSI, biomimetic nanosystems, neural prostheses, biosensors, block co-polymer synthesis, self-assembly, and microfabrication)

**Li-C. Wang**, Ph.D., University of Texas at Austin, Associate Professor (design verification, testing, computer-aided design of microprocessors)

**Richard Wolski**, Ph.D., UC Davis/Livermore, Professor (high-performance distributed computing, computational grids, computational economies for resource allocation and scheduling)

**Patrick Yue**, Ph.D., Stanford University, Associate Professor (high-speed CMOS IC design, cell-based RF CAD methodology and integrated biomedical sensors)

**Ben Zhao**, Ph.D., University of California, Berkeley, Assistant Professor (computer/overlay/mobile networking, large-scale distributed systems, operating systems, network simulation and modeling)

**Heather Zheng**, Ph.D., University of Maryland, College Park, Assistant Professor (wireless/mobile/ad hoc networking, cognitive radio and dynamic spectrum networks, multimedia communications,

security, game theory, algorithms, network simulation and modeling)

The Computer Engineering major's objective is to educate broadly based engineers with an understanding of digital electronics, computer architecture, system software and integrated circuit design. These topics bridge traditional electrical engineering and computer science curricula. The Computer Engineering degree program is conducted jointly with faculty from the Department of Computer Science and the Department of Electrical and Computer Engineering. Computer engineers emerging from this program will be able to design and build integrated digital hardware and software systems in a wide range of applications areas. Computer engineers will seldom work alone and thus teamwork and project management skills are also emphasized. The undergraduate major in Computer Engineering prepares students for a wide range of positions in business, government and private industrial research, development and manufacturing organizations.

Under the direction of the Associate Dean for Undergraduate Studies, academic advising services are jointly provided by advisors in the College of Engineering, as well as advisors in the department. Faculty advisors are also available to help with academic program planning. Students who hope to change to this major should consult the department advisor.

The computer engineering program is not accredited by a Commission of ABET.

## Mission Statement

To prepare our students to reach their full potential in computer engineering research and industrial practice through a curriculum emphasizing the mathematical tools, scientific basics, fundamental knowledge, engineering principles, and practical experience in the field.

## Educational Objectives

The Computer Engineering Program seeks to produce graduates who:

- 1) Make positive contributions to society by applying their broad knowledge of computer engineering theories, techniques, and tools.
- 2) Create processes and products, involving both hardware and software components, that solve societal and organizational problems effectively, reliably, and economically.
- 3) Are committed to the advancement of science, technical innovation, lifelong learning, professionalism, and mentoring of future generations of engineers.
- 4) Understand the ethical, social, business, technical, and human contexts of the world in which their engineering contributions will be utilized.

## Program Outcomes

Upon completion of this program, students will have:

- 1) Acquired strong basic knowledge and skills in those fundamental areas of mathematics, science, and engineering necessary to facilitate specialized professional training at an advanced level. Developed a recognition of the need for and the ability to engage in lifelong learning.
- 2) Experienced in-depth training in state-of-

Director: **Frederic T. Chong**  
Vice Director: **Patrick Yue**

## Faculty

**Kevin Almeroth**, Ph.D., Georgia Institute of Technology, Professor (computer networks and protocols, large-scale multimedia systems, performance evaluation and distributed systems)

**Kaustav Banerjee**, Ph.D., UC Berkeley, Associate Professor (high performance VLSI and mixed signal system-on-chip designs and their design automation methods; single electron transistors; 3D and optoelectronic integration)

**Forrest D. Brewer**, Ph.D., University of Illinois at Urbana-Champaign, Professor (VLSI and computer system design automation, theory of design and design representations, symbolic techniques in high level synthesis)

**Tevfik Bultan**, Ph.D., University of Maryland, College Park, Associate Professor (specification and automated analysis of concurrent systems, computer-aided verification, model checking)

the-art specialty areas in computer engineering.

- 3) Benefited from hands-on, practical laboratory experiences where appropriate throughout the program. The laboratory experiences will be closely integrated with coursework and will make use of up-to-date instrumentation and computing facilities. Students will have completed both hardware-oriented and software-oriented assignments.
- 4) Experienced design-oriented challenges that exercise and integrate skills and knowledge acquired during their course of study. These challenges may include design of components or subsystems with performance specifications. Graduates should be able to demonstrate an ability to design and test a system, analyze experimental results, and draw logical conclusions from them.
- 5) Learned to function well in multidisciplinary teams and collaborative environments. To this end, students must develop communication skills, both written and oral, through teamwork and classroom participation. Teamwork and individual originality will be evidenced through written reports, webpage preparation, and public presentations.
- 6) Completed a well-rounded and balanced education through required studies in selected areas of fine arts, humanities, and social sciences. This outcome provides for the ability to understand the impact of engineering solutions in a global and societal context. A required course in engineering ethics will have prepared students for making professional contributions while maintaining institutional and individual integrity.

## Admission to the Major

### Requirements for Advancing to the Computer Engineering Major from the Computer Engineering Pre-Major

Students intending to major in computer engineering should declare the pre-major when applying for admission to the university. It is strongly recommended that incoming freshmen complete a computer programming class prior to enrollment at UCSB. We recommend a Java course with emphasis in programming or a C++ programming course.

Students may petition to advance from the computer engineering pre-major to the computer engineering major when they have met either of the following requirements:

**Option A:** Satisfactory completion at UCSB of at least six core classes required as preparation for the computer engineering major with a grade-point-average of at least 3.0. The core classes are: Mathematics 3A, 3B, 3C, 5A; Computer Science 10, 20, 40, 60; Electrical and Computer Engineering 2A, 2B, 2C, 15A, 15B. If the student has not attained the minimum 3.0 grade-point-average with the first six core classes completed, all core classes subsequently completed will be included in the grade-point-average computation.

**Option B:** Satisfactory completion of all thirteen core classes with a University of California grade-point-average of at least 2.75.

### Requirements for Changing to Computer Engineering from Other Majors

Students may petition to enter the Computer Engineering pre-major at any time Option 1 below has been met, or they may petition to enter the full major when the requirements in Option 2 have been met.

#### Option 1:

1. An overall UCSB grade-point-average of at least 3.0; and,
2. Satisfactory completion at UCSB of at least four core classes required as preparation for the Computer Engineering major with a grade-point-average of at least 3.0 in all core classes completed. The core classes are: Mathematics 3A, 3B, 3C, 5A; Computer Science 10, 20, 40, 60; Electrical and Computer Engineering 2A, 2B, 2C, 15A, 15B. Once approved for the Computer Engineering pre-major, the student must meet the requirements above for advancing to the full major.

#### Option 2:

1. An overall UCSB grade-point-average of at least 3.0; and,
2. Satisfactory completion at UCSB of at least six of the core classes with a grade-point-average of at least 3.0. If the student has not attained the minimum 3.0 grade-point-average with the first six core classes completed, all core classes subsequently completed will be included in the grade-point-average computation; or,
3. Satisfactory completion of all thirteen core classes with a University of California grade-point-average of at least 2.75.

**Please Note:** Pre-major status does not guarantee admission to major status. To be admitted to the major, the student must meet the requirements described in Option A or B or 2 above. No exceptions will be made to the GPA rule.

Students who have completed more than 105 units will not be considered for a change of major/change of college unless they can demonstrate that they will be able to complete all the degree requirements for the proposed program without exceeding 215 total units.

## Undergraduate Program

**Note:** Schedules should be planned to meet both General Education and major requirements. Detailed descriptions of these requirements are presented in the College of Engineering Announcement and General Education booklet.

### Bachelor of Science—Computer Engineering

The curriculum contains a core required of all computer engineers, a choice of at least 32 units of senior year elective courses including completion of two out of eight elective sequences and a senior year capstone design project.

Because the Computer Engineering degree program is conducted jointly by the Department of Computer Science and the Department of Electrical and Computer Engineering, several of the upper-division courses have equivalent versions offered by ECE or CMPSC. These courses are considered interchangeable, but only one such course of a given equivalent ECE/CMPSC pair may be taken for credit.

Courses required for the major, whether inside or outside of the Departments of Electrical and Computer Engineering or Computer Science, must be taken for letter grades. They cannot be taken for the passed/not passed grading option.

### Preparation for the major

All undergraduate Computer Engineering majors are required to meet a set of minimum unit and grade-point requirements and a set of General Education requirements which are common to all undergraduate majors in the College of Engineering. In addition, required preparation for the major consists of the following lower-division courses (or their equivalents if taken elsewhere): Chemistry 1A-B, 1AL-BL; Computer Science 10, 20, 40, 60; ECE 2A-B-C, 15A-B; Mathematics 3A-B-C, 5A; Physics 1, 2, 3, 4, 3L, 4L.

The program academic advisor can suggest a recommended study plan for Computer Engineering freshmen and sophomores. Each student is assigned a departmental faculty advisor who must be consulted in planning the junior and senior year programs.

### Upper-division major

The upper-division requirements consist of a set of required courses and a minimum of 32 units (8 classes) of additional departmental elective courses comprised of at least two sequences chosen from a set of eight specialty sequences. Each sequence must consist of two or more courses taken from the same course/sequence group. The department electives must also include a capstone design project (CMPSC 189A-B/ECE 189A-B). Upper-division courses required for the major are: Computer Science 130A, 170; ECE 152A-B, 154, either ECE 139 or PSTAT 120A; Engineering 101.

The required departmental electives are taken primarily in the senior year; they permit students to develop depth in specialty areas of their choice. A student's elective course program and senior project must be approved by a departmental faculty advisor. A variety of elective programs will be considered acceptable. Sample programs include those with emphasis in: computer-aided design (CAD); computer systems design; computer networks; distributed systems; programming languages; real-time computing and control; multimedia; and very large-scale integrated (VLSI) circuit design.

*The defined sequences from which upper-division departmental electives may be chosen are:*

- Computer-Aided Design (CAD): ECE 156A-B
- Computer Systems Design: ECE/CMPSC 153A, ECE 153B
- Computer Networks: ECE 155A/CMPSC 176A, ECE 155B/CMPSC 176B
- Distributed Systems: ECE 151/CMPSC 171 and one or both of the Computer Networks courses
- Programming Languages: CMPSC 160, 162
- Real-Time Computing & Control: ECE 147A-B, 157
- Multimedia: ECE 178, ECE/CMPSC 181B, ECE 160/CMPSC 182
- VLSI: ECE 124A, 124D

### Satisfactory Progress and Prerequisites

A majority of Computer Science and Electrical

and Computer Engineering courses have prerequisites which must be completed successfully. Successful completion of prerequisite classes requires a grade of C or better in Mathematics 3A-B-C and a grade of C- or better in ECE classes. Students will not be permitted to take any ECE or CMPSC course if they received a grade of F in one or more of its prerequisites. Students who fail to maintain a grade-point average of at least 2.0 in the major may be denied the privilege of continuing in the major.

### **Five-Year Bachelor of Science Master of Science Program**

A combined B.S./M.S. program in Computer Engineering provides an opportunity for outstanding undergraduates to earn both degrees in five years. The M.S. degree will be earned in either the Department of Computer Science or the Department of Electrical and Computer Engineering, while the B.S. degree is earned in Computer Engineering. Additional information about this program is available from the respective undergraduate offices of each department. Interested students should contact the ECE undergraduate office in their junior year because they need to plan their junior year classes differently from other undergraduates. Transfer students should notify the office of their interest in the program at the earliest possible opportunity. In addition to fulfilling undergraduate degree requirements, B.S./M.S. degree candidates must meet Graduate Division degree requirements, including university requirements for academic residence and units of coursework as described in the chapter "Graduate Education at UCSB."

## Computer Engineering Courses

See listings for Computer Science starting on page 78 and Electrical and Computer Engineering Departments starting on page 86.

# Computer Science

Department of Computer Science,  
Harold Frank Hall, Room 2104;  
Telephone (805) 893-4321

Chair: **Amr El Abbadi**  
Vice Chair: **Tevfik Bultan**

### Faculty

**Divyakant Agrawal**, Ph.D., State University of New York at Stony Brook, Professor (distributed systems and databases)

**Kevin Almeroth**, Ph.D., Georgia Institute of Technology, Professor (computer networks and protocols, large-scale multimedia systems, performance evaluation and distributed systems)

**Elizabeth Belding**, Ph.D., University of California, Santa Barbara, Associate Professor (mobile wireless networking, ad hoc mobile

networks and protocols, and multimedia systems and performance evaluation)

**Tevfik Bultan**, Ph.D., University of Maryland, College Park, Associate Professor (model checking, concurrency, web services, static analysis, software engineering)

**Peter R. Cappello**, Ph.D., Princeton University, Professor (Java/Internet-based parallel computing, multiprocessor scheduling, market-based resource allocation, self-directed learning)

**Frederic T. Chong**, Ph.D., Massachusetts Institute of Technology, Professor (computer architecture, novel computing technologies, quantum computing, embedded systems, and architectural support for system security and reliability)

**Phillip Conrad**, Ph.D., University of Delaware, Lecturer PSoE (computer science education, computer networks and communication, multimedia computing, transport protocols, web technologies)\*<sup>1</sup>

**C. Michael Costanzo**, Ph.D., University of California, Santa Barbara, Lecturer

**Ömer Egecioglu**, Ph.D., University of California, San Diego, Professor (bijective and enumerative combinatorics, parallel algorithms, approximation algorithms, combinatorial algorithms)

**Amr El Abbadi**, Ph.D., Cornell University, Professor (information systems, databases, fault-tolerant distributed systems)

**Diana Franklin**, Ph.D., University of California, Davis, Lecturer SOE (computer architecture, embedded systems, architectural support for reliability, undergraduate teaching methods for diverse populations)

**Frederic Gibou**, Ph.D., University of California, Los Angeles, Associate Professor (computational mathematics, modeling and simulations - materials science, multiphase flows; level-set methods, ghost-fluid methods, and interface problems; and image segmentation with applications to radiotherapy treatment planning and civil engineering)\*<sup>2</sup>

**John R. Gilbert**, Ph.D., Stanford University, Professor (combinatorial scientific computing, tools and software for computational science and engineering, numerical linear algebra, smart matter and systemic MEMS, distributed sensing and control)

**Teofilo Gonzalez**, Ph.D., University of Minnesota, Professor (multimessage multicasting, VLSI placement and routing algorithms, scheduling theory; design and analysis of algorithms)

**Tobias Höllerer**, Ph.D., Columbia University, Associate Professor (human computer interaction, computer graphics, virtual and augmented reality, wearable and ubiquitous computing)

**Oscar H. Ibarra**, Ph.D., University of California, Berkeley, Professor (design and analysis of algorithms, theory of computation, computational complexity, parallel computing)

**Richard A. Kemmerer**, Ph.D., University of California, Los Angeles, Professor (specification and verification of systems, computer system security and reliability, programming and specification language design, software engineering, secure mobile computing)

**Chandra Krintz**, Ph.D., University of California, San Diego, Associate Professor (dynamic

and adaptive compilation systems, high-performance internet (mobile) computing, runtime and compiler optimizations for Java/CIL, efficient mobile program transfer formats)

**Christopher Kruegel**, Ph.D., Vienna University of Technology, Assistant Professor (computer and network security, malware detection, websecurity, program analysis, operating systems)

**Linda R. Petzold**, Ph.D., University of Illinois at Urbana-Champaign, Professor (computational science and engineering, multiscale numerical simulation, systems biology)\*<sup>2</sup>

**Tim Sherwood**, Ph.D., University of California, San Diego, Associate Professor (computer architecture, dynamic optimization, network and security processors, embedded systems, program analysis and characterization, hardware support of software systems)

**Ambuj Singh**, Ph.D., University of Texas at Austin, Professor (bioinformatics, databases, parallel and distributed systems)\*<sup>3</sup>

**Terence R. Smith**, Ph.D., Johns Hopkins University, Professor (spatial databases, techniques in artificial machine intelligence)\*<sup>4</sup>

**Jianwen Su**, Ph.D., University of Southern California, Professor (database systems and applications, web services)

**Subhash Suri**, Ph.D., Johns Hopkins University, Professor (algorithms, internet computing, computational geometry)

**Matthew Turk**, Ph.D., Massachusetts Institute of Technology, Professor (computer vision, human computer interaction, perceptual user interfaces, imaging systems)

**Wim van Dam**, Ph.D., University of Oxford and University of Amsterdam, Assistant Professor (quantum computation, quantum algorithms, quantum communication, quantum information theory)\*<sup>5</sup>

**Giovanni Vigna**, Ph.D., Politecnico di Milano, Associate Professor (computer and network security, network models and protocols, mobile code languages and systems, mobile agent security)

**Yuan-Fang Wang**, Ph.D., University of Texas at Austin, Professor (computer vision, computer graphics, artificial intelligence)

**Richard Wolski**, Ph.D., University of California, Davis/Livermore, Professor (distributed systems, computational grid computing, on-line performance forecasting)

**Xifeng Yan**, Ph.D., University of Illinois at Urbana Champaign, Assistant Professor (data mining, data management, machine learning, bioinformatics)

**Tao Yang**, Ph.D., Rutgers University, Professor (parallel and distributed systems, high performance scientific computing, cluster-based network services, Internet search)

**Ben Zhao**, Ph.D., University of California, Berkeley, Assistant Professor (large-scale distributed systems, security and privacy, overlay and peer-to-peer networks, mobile and wireless networks)

**Heather Zheng**, Ph.D., University of Maryland, College Park, Assistant Professor (wireless/mobile/ad hoc networking, cognitive radio and dynamic spectrum networks, multimedia communications, security, game theory, algorithms, network simulation and modeling)

## Emeriti Faculty

**Alan G. Konheim**, Ph.D., Cornell University, Professor (computer communications, computer systems, modeling and analysis, cryptography)

**Marvin Marcus**, Ph.D., University of California, Berkeley, Professor Emeritus (linear and multilinear algebra, scientific computation, numerical algorithms)

**Roger C. Wood**, Ph.D., University of California, Los Angeles, Professor Emeritus (computer system modeling, design and analysis, computer architecture)\*6

\*1 Joint appointment with the College of Creative Studies.

\*2 Joint appointment with the Department of Mechanical Engineering.

\*3 Joint appointment with the Department of Biomolecular Science and Engineering (BMSE).

\*4 Joint appointment with the Department of Geography.

\*5 Joint appointment with the Department of Physics.

\*6 Joint appointment with the Department of Electrical and Computer Engineering

## Affiliated Faculty

**B.S. Manjunath**, Ph.D., (Electrical and Computer Engineering)

**P. Michael Melliar-Smith**, Ph.D. (Electrical and Computer Engineering)

**Kenneth Rose**, Ph.D. (Electrical and Computer Engineering)

**Martin Raubal**, Ph.D. (Geography)

The Department of Computer Science offers programs leading to the degrees of bachelor of arts and bachelor of science in computer science, and the M.S. and Ph.D. in computer science. The B.A. is a College of Letters and Science major; the B.S. is a College of Engineering major. The B.S. degree program in computer science is accredited by the Computing Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012-telephone: (410) 347-7700.

One of the most important aspects of the Computer Science program at UCSB is the wealth of “hands-on” opportunities for students. UCSB has excellent computer facilities. Campus Instructional Computing makes accounts available to all students. Computer Science majors and premajors use the workstations in the Computer Science Instructional Lab and Engineering Computing Infrastructure computing facilities. Students doing special projects can gain remote access to machines at the NSF Supercomputing Centers.

Additional computing facilities are available for graduate students in the Graduate Student Laboratory. Students working with faculty have access to the specialized research facilities within the Department of Computer Science.

The undergraduate major in computer science has a dual purpose: to prepare students for advanced studies and research and to provide training for a variety of careers in business, industry, and government.

Under the direction of the Associate Dean for Undergraduate Studies, academic advising services are jointly provided by advisors in the College of Engineering, as well as advisors in the department. A faculty advisor is also available to help with academic program planning. A department publication, *Computer Science Un-*

*dergraduate Brochure*, describes degree offerings and degree requirements.

## Computer Engineering Major

This major is offered jointly by the Department of Computer Science and the Department of Electrical and Computer Engineering. For information about this major, refer to the section on Computer Engineering.

## Mission Statement

The Computer Science department seeks to prepare undergraduate and graduate students for productive careers in industry, academia, and government, by providing an outstanding environment for teaching and research in the core and emerging areas of the discipline. The department places high priority on establishing and maintaining innovative research programs that enhance educational opportunity.

## Program Goals for Undergraduate Programs

The goal of the computer science undergraduate program is to prepare future generations of computer professionals for long-term careers in research, technical development, and applications. Baccalaureate graduates, ready for immediate employment, are trainable for most computer science positions in government and a wide range of industries. Outstanding graduates interested in highly technical careers, research, and/or academia, should be prepared to further their education in graduate school.

The primary computer science departmental emphasis is on computer program design, analysis and implementation, with both a theoretical foundation and a practical component.

## Program Outcomes for Undergraduate Programs

The program enables students to achieve, by the time of graduation:

- An ability to apply knowledge of computing and mathematics appropriate to computer science.
- An ability to analyze a problem, and identify and define the computing requirements appropriate to its solution.
- An ability to design, implement, and evaluate a computer-based system, process, component, or program to meet desired needs.
- An ability to function effectively on teams to accomplish a common goal.
- An understanding of professional, ethical, and social responsibilities.
- An ability to communicate effectively.
- An ability to analyze the impact of computing on individuals, organizations, and society, including ethical, legal, security, and global policy issue.
- Recognition of the need for and an ability to engage in continuing professional development.
- An ability to use current techniques, skills, and tools necessary for computing practice.
- An ability to apply mathematical foundations, algorithmic principles, and computer science theory in the modeling and design of computer-based systems in a way that demonstrates comprehension of the trade-offs involved in design choices.
- An ability to apply design and development

principles in the construction of software systems of varying complexity.

## Admission to the Major

Students intending to major in computer science should declare a computer science pre-major when applying for admission to the university.

Computer Science majors and pre-majors have priority when registering in all Computer Science courses. Students who declare the computer science pre-major or major are responsible for satisfying major requirements in effect at the time of their declaration. When students have completed the required pre-major courses, they must petition to change from pre-major to major status. Students cannot be accepted into the computer science major unless they have successfully completed the computer science preparation for the major courses.

Courses required for the pre-major or major, lower- or upper-division, inside or outside of the Department of Computer Science, must be taken for letter grades.

## Undergraduate Program

### Bachelor of Science—Computer Science

**Note:** Schedules should be planned to meet both General Education and major requirements. Detailed descriptions of these requirements are presented in the *College of Engineering Announcement and General Education booklet*.

Admission to the full BS major is contingent upon the prior completion of the courses listed in the preparation for the major with at least a 2.75 cumulative grade point average.

### Preparation for the major—B.S.

Required: Mathematics 3A-B-C and 5A-B; Computer Science 16, 24, 32, 40, 48, 56 and 64; and Probability and Statistics 120A.

Students with no previous programming background should take CMPSC 8 before taking CMPSC 16. CMPSC 8 is not included in the list of preparation for the major courses but may be counted as a free elective.

Students applying for major status in the BS program who have completed more than 105 units will **not** be considered for a change of major/change of college unless they can demonstrate that they will be able to complete all of the degree requirements for the proposed program without exceeding 215 units.

Students may petition to enter the computer science pre-major at any time **Option A** below has been met, or they may petition to enter the full major when **Option B** has been met.

**Option A:** Satisfactory completion at UCSB of at least four 4-unit courses required for the computer science preparation for the major, including at least two computer science courses, with a University of California grade point average of at least 3.0 in all the preparation for the major courses taken.

**Option B:** Satisfactory completion of all the preparation for the major requirements with a University of California grade point average of at least 2.75.

**Please note:** Pre-major status does not guarantee admission to major status. To be admitted

to the major, the student must complete the pre-major courses with a minimum grade point average of 2.75. All courses required for the preparation for the major must be taken for a letter grade. No exceptions will be made to the minimum 2.75 GPA rule.

### **Upper-division major**

The following courses are required: Computer Science 111 or 140, 130A-B, 138, 154, 160, 162, 170; Electrical and Computer Engineering 152A; and Probability and Statistics 120B. In addition, at least 20 units of major field electives are required. Prior approval of these electives must be obtained from the faculty advisor. In addition, the following courses are required: Engineering 101, Physics 1, 2, 3, 3L and at least 8 units of science electives. Lists of approved major field electives and science electives are available in the computer science office and on the web at: [www.cs.ucsb.edu/undergraduate](http://www.cs.ucsb.edu/undergraduate)

### **Bachelor of Arts— Computer Science**

The College of Letters and Science offers a bachelor of arts degree in computer science, with emphases in computational biology, computational economics, and computational geography. For information about this major, refer to the College of Letters and Science section on page 174.

### **Five-Year Bachelor of Science/ Master of Science Program**

A combined B.S./M.S. program in computer science provides an opportunity for outstanding undergraduates to earn both degrees in five years. Additional information about this program is available from the computer science graduate program assistant or online at [www.cs.ucsb.edu/undergraduate](http://www.cs.ucsb.edu/undergraduate). Interested students may apply after completing at least 3 but no more than 8 upper division computer science courses. In addition to fulfilling undergraduate degree requirements, B.S./M.S. degree candidates must meet Graduate Division degree requirements, including university requirements for academic residence and units of coursework, as described in the chapter “Graduate Education at UCSB.”

## **Graduate Program**

### **Admission Requirements**

All students must satisfy the University’s requirements as described in the chapter “Graduate Education at UCSB.” Applicants to the Department of Computer Science must have a bachelor’s degree in some discipline of science, engineering, or mathematics.

Applicants must have a grade-point average of at least 3.0 in their last two years of undergraduate study. Satisfactory performance in the verbal, quantitative, analytical sections of the Graduate Record Examination is required of all applicants. Applicants whose native language is not English are required to take the Test of English as a Foreign Language (TOEFL) or the International English Language Testing System (IELTS). Students who have completed an undergraduate or graduate education at an institution whose primary language of instruction is English may request an exception to this

requirement. Applicants who have received a bachelor’s or master’s degree from a U.S. college or university are exempt from this requirement.

All application materials for graduate study must be received by January 15.

**Please note:** The Computer Science Department admits students to the graduate program only in fall quarter.

### **Master Of Science Program— Computer Science**

#### **Objective**

The purpose of the Master of Science program is to provide advanced training in computer science to prepare students for positions in industry and government, or for further graduate study.

There are three plans for the Master of Science program: thesis, comprehensive examination, or project.

#### **Requirements Common to All Plans**

There are three major areas — Theory, Systems, and Applications. All graduate courses in the department are classified into at most two major areas. The following requirements are common to all plans.

- 42 units of upper-division (excluding 193) or graduate courses (200+, 595, 596, 598) that are approved by a Computer Science Faculty Advisor and the departmental graduate advisor must be completed.
- A major area must be chosen. Four Computer Science graduate courses (200 level) should be taken from the major area and one Computer Science graduate course (200 level) must be taken from each of the other two areas. The same course cannot be used to satisfy more than one requirement.
- The grade in each major area course must be at least a B.
- At least two units and at most six units of 595 research seminar units may be used towards the unit requirements.
- The study plan must be approved by the faculty advisor and the departmental graduate advisor.

#### **Additional Requirements for Plan I: Thesis**

The student must submit an acceptable thesis, approved by a thesis committee composed of three UC ladder faculty members. Two members, including the chair, must be computer science faculty members. Up to 12 units of 596 and 598 may be used toward unit requirements. A public defense of the thesis is required.

#### **Additional Requirements for Plan II: Comprehensive Examination**

Besides the six courses required for all plans, twelve additional units of coursework must be completed with 100 (excluding 193) and 200 level courses. Of these, eight units must be in the 200 level.

The comprehensive examination will be offered twice a year, in the eighth week of the fall and spring quarters. Each student will list four graduate courses; and a question from each of these courses will be asked on the examination. The student must receive a passing grade on three questions.

### **Additional Requirement for the Project Option**

The project plan requires more coursework than the thesis plan but less research, establishing a useful intermediate position between the other two plans. Beyond the major area and breadth courses common to all plans, the project plan’s course requirements include two additional 200-level graduate courses. In addition to these course requirements, the student must complete:

- Six units of 596: Directed Research.
- A project under the supervision of a Computer Science permanent faculty member. The project must be approved by a Project Committee consisting of two permanent faculty members of the Computer Science Department. Approval is based on the project’s deliverables:
  - A report
  - A 30-minute public presentation describing the project

### **Study Plan**

Upon entry into the graduate program, each student is assigned a faculty advisor who guides the student through his/her graduate career. In consultation with his/her faculty advisor, each student prepares a **Study Plan**, which details the courses that will be taken in order to fulfill the course requirements. The study plan must be approved by the faculty advisor and departmental graduate advisor. The study plan may be changed at any time with the approval of one’s faculty advisor and the graduate advisor. If a student withdraws from a course that affects the study plan, a new study plan must be prepared prior to withdrawal.

### **Doctor of Philosophy— Computer Science**

#### **Admission**

Students may apply directly to the Ph.D. program without a master’s degree. However, a solid background in computer science or one or more fields of science and engineering is expected. Applicants to the Ph.D. program must have a grade-point average of at least 3.5 in their last two years of study. Students entering this program should be committed to completing a Ph.D. The department discourages students petitioning to switch to the master’s program; such petitions are approved only under exceptional circumstances.

#### **Objective**

The purpose of the Doctor of Philosophy program in computer science is to prepare students for research and teaching positions in universities and colleges, and for research and leadership positions in industry and government. The primary aim of the program is to train students in the methods of scientific inquiry and independent research. This is accomplished through advanced coursework and active participation with the faculty in their research programs. Doctor of Philosophy students are expected to have a broad knowledge of all fields of computer science and have a deep understanding of at least one of its areas. In addition to this requirement, a Doctor of Philosophy student must be up to date in all the developments in his/her major area of specialization.

The most important component of the Doctor of Philosophy program is learning to perform independent and significant research in one's area of specialization.

Requirements for the Doctor of Philosophy degree typically are completed in four to five years, depending on whether or not a student enters the program with an M.S. in computer science.

### Course Requirements

To ensure sufficient breadth at the graduate level, Ph.D. students must complete at least ten graduate courses (four or more by the end of their first year) with a GPA of at least 3.5, and a grade in each course of at least 3.0. Of the ten courses, students must take at least two courses in Foundations of Computer Science and two courses in Systems. The set of courses that students plan to take must be endorsed by their academic advisor and the graduate advisor.

### Exam Requirements

To earn a Ph.D., students must successfully complete the above course requirements plus three examinations: the major area examination (qualifying examination); the thesis proposal; and the dissertation defense.

After selecting an area of research, a student forms a doctoral committee to supervise dissertation research. The doctoral committee must be chaired by a ladder faculty member from the department and should include a minimum of three UC ladder faculty, two (including the chair) must be in computer science, although faculty from other UCSB departments may also be members. In special circumstances, non-UCSB faculty may be members. After the doctoral committee approves a student's proposed major area, the major area examination tests the student's knowledge of this area and supporting areas. As a part of this examination, a student submits a set of relevant papers from the major area and prepares a brief presentation. Passing this oral examination allows the student to advance to candidacy for the doctoral degree.

After passing the major area examination, a student prepares a dissertation proposal that describes the dissertation topic, summarizes relevant background literature, and presents a comprehensive research plan for the doctoral dissertation. The thesis proposal oral examination determines the feasibility of the research plan and the appropriateness of the research topic. This examination is administered by the student's doctoral committee.

The final examination is the defense of the candidate's dissertation in a public seminar. The candidate's doctoral committee evaluates the presentation and dissertation to determine if the student has successfully defended the dissertation.

See the Computer Science Web site for the expected Ph.D. timeline.

### Optional Graduate Degree Emphasis in Computational Science and Engineering

The Departments of Chemical Engineering; Computer Science; Earth Science; Ecology, Evolution and Marine Biology; Electrical and Computer Engineering; Mathematics; and Mechanical Engineering offer an interdisciplinary

master's and Ph.D. degree emphasis in computational science and engineering (CSE).

CSE is a rapidly growing multidisciplinary area with connections to the sciences, engineering, mathematics, and computer science. Computer models and simulations have become an important part of the research repertoire, supplementing (and in some cases replacing) experimentation. Going from application area to computational results requires domain expertise, mathematical modeling, numerical analysis, algorithm development, software implementation, program execution, analysis, validation, and visualization of results. CSE addresses these issues.

Although CSE includes elements from computer science, applied mathematics, engineering and science, it focuses on the integration of knowledge and methodologies from all of these disciplines and, as such, is a subject distinct from any of them.

All students pursuing an emphasis in CSE must complete the following:

- Numerical Methods: Computer Science 211A-B-C-D (students must take at least three).
- Parallel Computing: Computer Science 240A-B (students must take at least one).
- Applied Mathematics: Students must take one of the Math 214A-B, Math 215A-B sequences (run concurrently with Math 119A-B and Math 124A-B, respectively), or Chemical Engineering 230A-B.
- Credit will not be given for more than one of these sequences. Advanced courses may be substituted, with approval, as follows: Math 243 instead of Math 214, and Math 246 instead of Math 215.

CSE master's and Ph.D. graduates are expected to have a solid grounding in CSE core subjects discussed above. A CSE thesis or dissertation should involve the solution of a real-world problem, using and/or developing tools to advance the CSE discipline. Some examples of such problems include, but are not limited to: data mining, computational biology, parallel computing tools for scientific computation, computational fluid dynamics, computational engineering and materials, and problem solving environments.

The specific requirements for the M.S. in Computer Science (thesis option only) with the CSE emphasis are as follows:

- 42 units in upper division or graduate courses (excluding the 193) including:
- 20 graduate course units from 3 areas: Theory, Systems, Applications (the Computer Science courses in the CSE core are considered to be part of the Applications track for the M.S. degree in Computer Science). These units must include:
- 4 Computer Science graduate courses from the CSE core.
- At least one course in the theory or systems area.
- 8 units of applied mathematics from Math 214A-B, 215A-B, or 243/246 to complete the CSE core.
- 2 units of Computer Science 595 (seminar).
- 12 units of thesis preparation (596, 598).
- A master's thesis in CSE.

The thesis must be written under the supervision of a Computer Science CSE ladder faculty

member. The thesis committee must include a minimum of three permanent ladder faculty members, at least two from Computer Science and one from CSE (may be CSE faculty member from another department).

Students pursuing a Ph.D. with an emphasis in CSE must:

- Satisfy the course requirements for the general Doctor of Philosophy degree in Computer Science
- Complete the CSE core course sequence
- Pass a major area examination in CSE, pass the proposal oral examination, and write and defend a dissertation in CSE.

The student's doctoral examination committee (including the chair) must include at least two computer science CSE ladder faculty members and at least one ladder faculty member from another department.

### Optional Ph.D. Emphasis in Cognitive Science

Doctoral students from Computer Science, Education, Geography, Linguistics, and Psychology may petition to add an emphasis in Cognitive Science to the Ph.D. in their home department. The program includes faculty and students in the Schools of Letters & Sciences, Education, and Engineering. The subject matter of the Cognitive Science Program reflects the intersecting interests of more than thirty scholars within these departments. The Program provides an organizational structure that facilitates sharing of research interests and collaboration among faculty, and translates these activities into training opportunities for graduate students. Students who meet the requirements of the Cognitive Science Emphasis will graduate with a Ph.D. from their home department along with wording on their transcript stating they have earned an Emphasis in Cognitive Science.

The core requirements are: 1) Participation in the Cognitive Science Seminar (INT 200A, 200B, and 200C) for at least three quarters. (Students are encouraged to participate in this seminar throughout their graduate careers); 2) Completion of at least three cognitive science courses with one each in three different departments. (Generally, these are courses with cognitive science content that are taught by participating faculty. A list of courses is provided each quarter). Further courses can be proposed at any time and will be subject to approval by the Cognitive Science Steering Committee. We also anticipate that Cognitive Science courses taken at other universities will be acceptable electives, subject to approval by the Cognitive Science Steering Committee; 3) Completion of either a) a research project, completed before the dissertation, resulting in a written paper suitable for publication, or b) an extra-mural grant proposal for a study in cognitive science suitable for submission to an identified public or private granting agency. Either product must be prepared under the supervision of a participating faculty member; 4) Presentation of a research paper in a suitable academic forum, such as a Cognitive Science Program Colloquium, departmental colloquium, invited colloquium at another institution, or a professional meeting; 5) A Ph.D. dissertation centrally focused on a question emerging from cognitive

science with at least two committee members representing faculty participating in the Cognitive Science Interdisciplinary Emphasis. If one of the committee members is from outside the student's home department, the student will be required to have four faculty members on his/her dissertation committee (including three from the home department).

Note that in addition to the emphasis requirements, students must satisfy all requirements in their home departments. Work completed in satisfaction of departmental Ph.D. requirements may also be used to satisfy emphasis requirements.

On completion, the student will submit his/her records of courses, seminars, and completed products to the Cognitive Science Steering Committee, which will certify to the Graduate Division that the requirements for the emphasis have been met, and send a letter to that effect to the student. The Graduate Division will verify completion of the emphasis and convey this information to the Registrar for inclusion of the emphasis on the final transcript. Students will graduate from their home department with an Emphasis in Cognitive Science. For more information, visit the program website at [www.cogsci.ucsb.edu](http://www.cogsci.ucsb.edu).

### Optional Ph.D. Emphasis in Technology and Society

Students pursuing a Ph.D. in this department may petition to add an Emphasis in Technology and Society. The Emphasis brings together doctoral students in engineering, social sciences, and the humanities to engage in multidisciplinary coursework and research into the cultural and societal changes resulting from the use of new information technologies. The Emphasis features a structured set of courses that may be taught individually and collaboratively by faculty across disciplines: Anthropology, Communication, Computer Science, English, History, Media Arts and Technology, Political Science, and Sociology.

To be eligible for admission to the Emphasis, students must be enrolled in good standing in the department. Petitions for adding the Emphasis can be made at any time in a student's graduate career, but typically will be made after at least one successful year of study in the home department. Work completed prior to admission that meets Emphasis requirements (as determined by the Ph.D. Emphasis Faculty Executive Steering Committee) may be counted towards its completion.

Requirements for completing the optional Emphasis in Technology and Society include:

#### 1. Gateway Technology and Society Colloquium

Students must complete a 1-unit colloquium that brings together students and faculty from multiple disciplines to explore various approaches to studying technology and society. In addition to helping students understand similarities and differences in conceptualization and knowledge production across disciplines, the seminar promotes interaction among students from different departments.

#### 2. Graduate Coursework

Students must complete four 4-unit courses with a grade of B or better, two each from Area 1 (Culture and History) and Area 2 (Society and Behavior). Area 1 courses explore the humanistic study of cultures, histories and meanings as they intersect with technology. Area 2 investigates the social scientific study of technology in relationship to human behavior, organizations, and social structures.

One course from the student's home department can be applied toward meeting this requirement. Students can petition to substitute a non-listed course, subject to approval by the Technology and Society Faculty Executive Committee.

#### 3. Dissertation

A student's dissertation must have relevance to at least one of the two Emphasis areas. In addition, the student's dissertation committee must include a member from another department participating in the Emphasis. Exceptions are subject to approval by the Technology and Society Faculty Executive Committee.

For additional information and a current list of courses, please contact the graduate advisor or visit [www.technology-society.ucsb.edu](http://www.technology-society.ucsb.edu)

## Computer Science Courses

### LOWER DIVISION

#### 1. Seminar on the Field of Computer Science

(1) FRANKLIN

Overviews the potential of, and opportunities available from, the field of computer science. Topics include an overview of how computers work and the interesting ways in which computers can be applied to solve important and high-impact technological, social, and cutting-edge research problems.

#### 5AA-ZZ. Introduction to Computer Programming

(4) FRANKLIN

Not open for credit to students who have completed Computer Science 10 or Engineering 3. May not be repeated with a different suffix.

Introduction to programming and the organization of computers. Basic programming concepts, algorithms, data and control structures, debugging, program design, documentation, structured programming.

#### 10. Computer Programming

(4) SU

Prerequisite: Mathematics 3A.

Students with no prior programming background are encouraged to take Computer Science 5JA before 10.

Introduction to programming and computers. Basic programming concepts: algorithms, data and control structures, debugging, program design, documentation, structured programming, object oriented programming.

#### 11AA-ZZ. Programming Language Laboratory

(1) FRANKIN

Different sections may be repeated. Sections not always offered.

Recommended preparation: knowledge of at least one programming language.

A self-paced course to allow a student who already possesses a working knowledge of at least one programming language an opportunity to learn other languages of interest.

#### 12. Programming Methods in C

(4) FRANKLIN

Prerequisites: Computer Science 5 or 10 or Engineering 3.

Not open for credit to computer science majors or pre-majors. Not open for credit to students who have completed Computer Science 11C, 22, or 60.

Introduction to the UNIX system, C programming language, and data structures. Topics include: introduction to the UNIX system, C shell and shell scripts; UNIX file system and utilities; stacks, queues, lists, and trees.

#### 20. Programming Methods

(4) AGRAWAL

Prerequisite: Computer Science 10 and Mathematics 3B.

Programming techniques as follows: specification, representation, and manipulation of basic data structures such as stacks, queues, lists, trees, sets, arrays, etc. Searching and sorting techniques; predicate logic and program correctness; induction and recursion; running time analysis. Students write several medium-sized object-oriented programs.

#### 30. Introduction to Computer Systems

(4) ZHENG

Prerequisite: Engineering 3 or Computer Science 5AA-ZZ or 10; and, Mathematics 3C.

Not open for credit to students who have completed ECE 15 or 15B.

Basic computer organization, assembly language programming. Gates, combinational circuits, flip-flops and the design and analysis of sequential circuits.

#### 40. Foundations of Computer Science

(4) SU

Prerequisites: Computer Science 10 or 12; and Mathematics 3C.

Propositional predicate logic, set theory, functions and relations, counting, mathematical induction and recursion (generating functions).

#### 50. Programming Project

(4) CAPPELLO

Prerequisites: Computer Science 10 and 20.

Program design (modularization, designing for changeability, robustness, and testability), basic software engineering practices, principles of user interface design. Students design, implement, and test one or two extensive object-oriented programs.

#### 60. Introduction to C, C++, and UNIX

(4) HOLLERER

Prerequisite: Computer Science 20.

Reduced credit of 2 units will be given to students who have completed Computer Science 12.

Syntax and semantics of C and C++. Introduction to basic UNIX utilities and tools. Students complete several small projects that exercise their understanding of the material presented in class.

#### 95AA-ZZ. Undergraduate Seminar in Computer Science

(1-4) STAFF

Prerequisites: Open to pre-computer science and pre-computer engineering majors only; consent of instructor.

Seminars on introductory topics in computer science. These seminars provide an overview of the history, technology, applications, and impact in various areas of computer science, including: A. Foundations, B. Software Systems, C. Programming languages and software engineering, D. Information management, E. Architecture, F. Networking, G. Security, H. Scientific computing, I. Intelligent and interactive systems, J. History, N. General.

### UPPER DIVISION

#### 111. Introduction to Computational Science

(4) PETZOLD

Prerequisites: Mathematics 5B; and, Computer Science 12 or 60.

Not open for credit to students who have completed Computer Science 110A.

Introduction to computational science, emphasizing basic numerical algorithms and the informed use of mathematical software. Matrix computation, systems of linear and nonlinear equations, interpolation

and zero finding, differential equations, numerical integration. Students learn and use the Matlab language.

### 123. Overview of Computer Systems: Hardware and Software

(4) EL ABBADI

*Prerequisites: Computer Science 20 and 60.*

*Not open for credit to students who have completed Computer Science 30 or Computer Science 170.*

Basic computer architecture: CPU, memory, I/O. Basic operating systems concepts: processes, synchronization, memory management, virtual memory, file systems.

### 130A. Data Structures and Algorithms I

(4) GONZALEZ

*Prerequisites: Computer Science 20, 40 and 60; PSTAT 120 or ECE 139; open to computer science, computer engineering, and electrical engineering majors only.*

The study of data structures and their applications. Correctness proofs and techniques for the design of correct programs. Internal and external searching. Hashing and height balanced trees. Analysis of sorting algorithms. Memory management. Graph traversal techniques and their applications.

### 130B. Data Structures and Algorithms II

(4) GONZALEZ

*Prerequisite: Computer Science 130A.*

Design and analysis of computer algorithms. Correctness proofs and solution of recurrence relations. Design techniques; divide and conquer, greedy strategies, dynamic programming, branch and bound, backtracking, and local search. Applications of techniques to problems from several disciplines. NP-completeness.

### 138. Automata and Formal Languages

(4) EGECIOGLU

*Prerequisite: Computer Science 40; open to computer science and computer engineering majors only.*

*Not open for credit to students who have completed Computer Science 136.*

Formal languages; finite automata and regular expressions; properties of regular languages; pushdown automata and context-free grammars; properties of context-free languages; introduction to computability and unsolvability. Introduction to Turing machines and computational complexity.

### 140. Parallel Scientific Computing

(4) GILBERT

*Prerequisites: Mathematics 5B and Computer Science 20; and, Computer Science 12 or 60.*

*Not open for credit to students who have completed Computer Science 110B.*

Fundamentals of high performance computing and parallel algorithm design for numerical computation. Topics include parallel architecture and clusters, parallel programming with message-passing libraries and threads, program parallelization methodologies, parallel performance evaluation and optimization, parallel numerical algorithms and applications with different performance trade-offs.

### 153A. Hardware/Software Interface

(4) KRINTZ

*Prerequisite: Computer Science 130A with a minimum grade of C-.*

*Same course as ECE 153A.*

The study of the structures employed at the interface of hardware and software in modern computing systems. Instruction set architecture (ISA) design trade-offs, operating system and hardware support for input/output devices (memory-mapping, interrupts, device drivers). Operating system and real-time system scheduling of tasks. Low level software and program support infrastructures (virtualization, compilation, optimization, emulation/simulation, debugging).

### 154. Computer Architecture

(4) SHERWOOD, CHONG

*Prerequisite: ECE 152A.*

*Not open for credit to students who have received credit for ECE 154.*

Introduction to the architecture of computer systems. Topics include: central processing units, memory systems, channels and controllers, peripheral

devices, interrupt systems, software versus hardware trade-offs.

### 160. Translation of Programming Languages

(4) SHERWOOD, BULTAN

*Prerequisites: Computer Science 30 or 123; Computer Science 130A; and Computer Science 136 or 138; open to computer science and computer engineering majors only.*

Study of the structure of compilers. Topics include: lexical analysis; syntax analysis including LL and LR parsers; type checking; run-time environments; intermediate code generation; and compiler-construction tools.

### 162. Programming Languages

(4) KRINTZ

*Prerequisite: Computer Science 130A; open to computer science and computer engineering majors only.*

Concepts of programming languages: scopes, parameter passing, storage management; control flow, exception handling; encapsulation and modularization mechanism; reusability through genericity and inheritance; type systems; procedural, object-oriented, functional, and logic programming languages.

### 165A. Artificial Intelligence

(4) TURK

*Prerequisite: Computer Science 130A*

Introduction to the field of artificial intelligence which attempts to understand and build intelligent systems. Topics include AI programming languages, search, knowledge representation and reasoning, planning, perception, and intelligent agents.

### 165B. Machine Learning

(4) SMITH

*Prerequisite: Computer Science 130A.*

Covers the most important techniques of machine learning (ML) and includes discussions of: well-posed learning problems; artificial neural networks; concept learning and general to specific ordering; decision tree learning; genetic algorithms; Bayesian learning; analytical learning; and others.

### 167. Introduction to Bioinformatics

(4) SINGH

*Prerequisite: Computer Science 130B.*

*Not open to students who have completed Computer Science 190*

Review of the fundamentals of molecular biology and genetics; pairwise sequence alignment: dynamic programming, database searching; multiple sequence alignment; microarray data analysis; protein structure alignment; phylogeny construction: distance and character based methods; other current topics.

### 170. Operating Systems

(4) AGRAWAL

*Prerequisite: Computer Science 130A; and, Computer Science 154 or ECE 154 (may be taken concurrently); open to computer science, computer engineering or electrical engineering majors only.*

Basic concepts of operating systems. The notion of a process; interprocess communication and synchronization; input-output, file systems, memory management.

### 171. Distributed Systems

(4) EL ABBADI

*Prerequisite: Computer Science 170.*

*Not open for credit to students who have completed ECE 151.*

Distributed systems architecture, distributed programming, network of computers, message passing, remote procedure calls, group communication, naming and membership problems, asynchrony, logical time, consistency, fault-tolerance, and recovery.

### 172. Software Engineering

(4) BULTAN

*Prerequisites: Computer Science 130A; open to computer science majors only.*

*Not open for credit to students who have completed Computer Science 189A.*

*Recommended preparation: Computer Science 130B.*

Software engineering is concerned with long-term, large-scale programming projects. Software

management, cost estimates, problem specification and analysis, system design techniques, system testing and performance evaluation, and system maintenance. Students will design, manage, and implement a medium-sized project.

### 174A. Fundamentals of Database Systems

(4) SU

*Prerequisite: Computer Science 130A.*

Database system architectures, relational data model, relational algebra, relational calculus, SQL, QBE, query processing, integrity constraints (key constraints, referential integrity), database design, ER and object-oriented data model, functional dependencies, lossless join and dependency preserving decompositions, Boyce-Codd and Third Normal Forms.

### 174B. Design and Implementation Techniques of Database Systems

(4) SU

*Prerequisite: Computer Science 130B.*

Queries and processing, optimizer, cost models, execution plans, rewriting rules, access methods, spatial indexing, transactions, ACID properties, concurrency control, serializability, two-phase locking, timestamping, logging, checkpointing, transaction abort and commit, crash recovery; distributed databases.

### 176A. Introduction to Computer Communication Networks

(4) ALMEROTH, BELDING

*Prerequisites: PSTAT 120A or ECE 139; open to computer science, computer engineering, and electrical engineering majors only.*

*Not open for credit to students who have completed Computer Science 176 or ECE 155 or ECE 155A.*

*Recommended preparation: PSTAT 120B.*

Basic concepts in networking, the OSI model, error detection codes, flow control, routing, medium access control, and high-speed networking.

### 176B. Network Computing

(4) ZHAO, VIGNA

*Prerequisite: Computer Science 176A.*

*Not open for credit to students who have completed ECE 155B or 194W.*

Focus on networking technologies used in the Internet. The OSI model is used as a guide for exploring and understanding how the Internet works. Topics include snooping packets in the network, socket programming, and implementing application-layer protocols.

### 176C. Advanced Topics in Internet Computing

(4) BELDING, ZHENG

*Prerequisite: Computer Science 176B.*

General overview of wireless and mobile networking, multimedia, security multicast, quality of service, IPv6, and web caching. During the second half of the course, one or more of the above topics are studied in greater detail.

### 177. Computer Security

(4) KEMMERER

*Prerequisite: Computer Science 170 (may be taken concurrently).*

Introduction to the basics of computer security and privacy. Analysis of technical difficulties of producing secure computer information systems that provide guaranteed controlled sharing. Examination and critique of current systems, methods, certification.

### 178. Introduction to Cryptography

(4) EGECIOGLU

*Prerequisites: Computer Science 10 and PSTAT 120A or 121A or equivalent courses.*

An introduction to the basic concepts and techniques of cryptography and cryptanalysis. Topics include: The Shannon Theory, classical systems, the Enigma machine, the data encryption standard, public key systems, digital signatures, file security.

### 180. Computer Graphics

(4) WANG

*Prerequisite: Computer Science 130B or consent of instructor.*

Overview of OpenGL graphics standard, OpenGL state machine, other 3D graphics libraries, 3D graphics pipeline, 3D transformations and clipping, color

model, shading model, shadow algorithms, texturing, curves and curved surfaces, graphics hardware, interaction devices and techniques.

### 181B. Introduction to Computer Vision

(4) WANG, TURK

Prerequisite: Upper-division standing.

Same course as ECE 181B.

Overview of computer vision problems and techniques for analyzing the content images and video. Topics include image formation, edge detection, image segmentation, pattern recognition, texture analysis, optical flow, stereo vision, shape representation and recovery techniques, issues in object recognition, and case studies of practical vision systems.

### 182. Multimedia Computing

(4) ALMEROTH

Prerequisites: Computer Science 176B.

Not open for credit to students who have completed ECE 160.

Introduction to multimedia and applications. Topics include streaming media, conferencing, webcasting, digital libraries, multimedia system architectures, standards (including JPEG and MPEG), and multimedia storage and retrieval. A key emphasis is on using the Internet for delivery of multimedia data.

### 185. Human-Computer Interaction

(4) HOLLERER

Prerequisite: open to computer science, computer engineering, and electrical engineering majors.

Recommended preparation: proficiency in the Java C++ programming language, some experience with user interface programming

The study of human-computer interaction enables system architects to design useful, efficient, and enjoyable computer interfaces. This course teaches the theory, design guidelines, programming practices, and evaluation procedures behind effective human interaction with computers.

### 186. Theory of Computation

(4) IBARRA

Prerequisite: Computer Science 138; open to computer science majors only.

Not open for credit to students who have completed Mathematics 150A.

Turing machines; computability and unsolvability; computational complexity; intractability and NP-completeness.

### 189A. Senior Computer Systems Project

(4) BULTAN

Prerequisite: senior standing in Computer Engineering, Electrical Engineering, or Computer Science; consent of instructor.

Not open for credit to students who have completed Computer Science 172.

Student groups design a significant computer-based project. Groups work independently with interaction among groups via interface specifications and informal meetings.

### 189B. Senior Computer Systems Project

(4) GONZALEZ

Prerequisite: CMPSC 172 or CMPSC 189A; Senior standing in computer engineering, computer science, or electrical engineering; consent of instructor.

Not open for credit to students who have completed ECE 189A or ECE 189B.

Student groups design a significant computer-based project. Multiple groups may cooperate toward one large project. Each group works independently; interaction among groups is via interface specifications and informal meetings. Project for course may be different from that in first course.

### 190AA-ZZ. Special Topics in Computer Science

(4) STAFF

Prerequisite: consent of instructor.

May be repeated with consent of the department chair.

Courses provide for the study of topics of current interest in computer science.

- Foundations
- Software Systems
- Programming languages and software engineering

- Information management
- Architecture
- Networking
- Security
- Scientific computing
- Intelligent and interactive systems
- General

### 192. Projects in Computer Science

(4) STAFF

Prerequisite: consent of instructor.

Students must have a minimum 3.0 GPA. May be repeated with consent of the department chair but only 4 units may be applied to the major.

Projects in computer science for advanced undergraduate students.

### 193. Internship in Industry

(1-4) STAFF

Prerequisites: consent of instructor and department chair.

Not more than 4 units per quarter; may not be used as a field elective and may not be applied to science electives. May be repeated with faculty/chair approval to a maximum of 4 units.

Special projects for selected students. Offered in conjunction with selected industrial and research firms under direct faculty supervision. Prior departmental approval required. Written proposal and final report required.

### 196. Undergraduate Research

(2-4) STAFF

Prerequisites: upper-division standing, consent of the instructor.

Must have a minimum 3.0 grade-point average for the preceding three quarters. May be repeated for up to 12 units. No more than 4 units may be applied to departmental electives.

Research opportunities for undergraduate students. Students will be expected to give regular oral presentations, actively participate in a weekly seminar, and prepare at least one written report on their research.

### 199. Independent Studies in Computer Science

(1-4) STAFF

Prerequisites: upper-division standing; must have completed at least two upper-division courses in computer science.

Must have a minimum 3.0 grade-point average for the preceding three quarters. May be repeated with consent of chair. Students are limited to 5 units per quarter and 30 units total in all 198/199 courses combined.

Independent study in computer science for advanced students.

## GRADUATE COURSES

### 209. Logic and Applications in Computer Science

(4) SU

Propositional logic, first order logic, completeness, compactness, incompleteness, undecidability; selected topics from finite model theory, theorem proving, logic programming, program verification, databases, computational complexity.

### 211A. Matrix Analysis and Computation

(4) STAFF

Prerequisite: consent of instructor.

Same course as ECE 210A, ME 210A, Mathematics 206A, Chemical Engineering 211A, and Geology 251A. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.

Graduate level-matrix theory with introduction to matrix computations. SVD's, pseudo-inverses, variational characterization of eigenvalues, perturbation theory, direct and iterative methods for matrix computations.

### 211B. Numerical Simulation

(4) PETZOLD

Prerequisite: consent of instructor.

Same course as ECE 210B, ME 210B, Mathematics 206B, Chemical Engineering 211B, and Geology 251B. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous

proofs, and some programming language.

Linear multistep methods and Runge-Kutta methods for ordinary differential equations: stability, order, and convergence. Stiffness. Differential algebraic equations. Numerical solution of boundary value problems.

### 211C. Numerical Solution of Partial Differential Equations—Finite Difference Methods

(4) STAFF

Prerequisite: consent of instructor.

Same course as ECE 210C, ME 210C, Mathematics 206C, Chemical Engineering 211C, and Geology 251C. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.

Finite difference methods for hyperbolic, parabolic and elliptic PDEs, with application to problems in science and engineering. Convergence, consistency, order and stability of finite difference methods. Dissipation and dispersion. Finite volume methods. Software design and adaptivity.

### 211D. Numerical Solution of Partial Differential Equations—Finite Element Methods

(4) STAFF

Prerequisite: consent of instructor.

Same course as ECE 210D, ME 210D, Mathematics 206D, Chemical Engineering 211D, and Geology 251D. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.

Weighted residual and finite element methods for the solution of hyperbolic, parabolic, and elliptical partial differential equations, with application to problems in science and engineering. Error estimates. Standard and discontinuous Galerkin methods.

### 216. Level Set Methods

(4) GIBOU

Prerequisite: Computer Science 211C, or Chemical Engineering 211C, or ECE 210C, or ME 210C.

Same course as Chemical Engineering 226, ECE 226, and ME 216.

Mathematical description of the level set method and design of the numerical methods used in its implementations (ENO-WENO, Godunov, Lax-Friedrich, etc.). Introduction to the Ghost Fluid Method. Applications in CFD, Materials Sciences, Computer Vision and Computer Graphics.

### 220. Theory of Computation and Complexity

(4) IBARRA

Prerequisite: Computer Science 186.

Topics include: models of computation; time and space complexity classes (e.g., P, NP, Co-NP, and PSPACE), efficient reducibilities, complete problems; lower bounds; the polynomial hierarchy.

### 225. Information Theory

(4) VAN DAM

Prerequisites: ECE 140 or PSTAT 120A-B.

Same course as ECE 205A.

Entropy, mutual information, and Shannon's coding theorems; lossless source coding, Huffman, Shannon-Fano-Elias, and arithmetic codes; Channel capacity; rate-distortion theory, and lossy source coding; source-channel coding; algorithmic complexity and information; applications of information theory in various fields.

### 230. Approximations, NP-Completeness and Algorithms

(4) GONZALEZ

Prerequisites: Computer Science 130A-B.

Epsilon approximations, PTAS and FPTAS. Techniques for the design of approximation algorithms. P, NP, NP-complete problems, polynomial transformations, Turing reductions, strong NP-completeness, NP-hardness and inapproximability results. Topics in algorithms include: amortized analysis, advanced graph algorithms and data structures.

### 231. Topics in Combinatorial Algorithms

(4) SURI

Prerequisite: Computer Science 130B.

Advanced topics in algorithm design, including

network flows, matchings in graphs, linear and integer programming.

### 234. Randomized Algorithms

(4) EGECIOGLU

*Prerequisite:* Computer Science 186..

Randomized algorithms and applications: Las Vegas and Monte Carlo type algorithms, randomized algorithms for graph problems, matchings, data structures, problems from computational geometry, number theory and primality testing, distributed algorithms, hashing and fingerprinting, random generation, Markov chains and rapid mixing.

### 235. Computational Geometry

(4) SURI

*Prerequisites:* Computer Science 130A-B.

Algorithms and lower bound techniques in computational geometry; decision tree models of computation; geometric searching; point location and range search; convex hull and maxima of a point set; proximity algorithms; geometric intersections.

### 240A. Applied Parallel Computing

(4) GILBERT

*Prerequisites:* Computer Science 154 and 160.

Interdisciplinary introduction to applied parallel computing on modern supercomputers. Topics include applications-oriented architectural issues, MPI, parallel MATLAB, and parallel numerical algorithms. A course project emphasizes understanding the realities and myths of what is possible on the world's fastest machines.

### 240B. Parallel Computing and Program Parallelization

(4) YANG

*Prerequisites:* Computer Science 130A and 160.

Parallel programming; representation of parallelism, program dependence analysis, loop transformation; program and data partitioning, locality optimization; task scheduling and load balancing; parallelizing compilers and run-time support.

### 254. Advanced Computer Architecture

(4) SHERWOOD

*Prerequisite:* Computer Science 154 or ECE 154.

Advanced instruction set architectures, pipelining, dynamic scheduling, branch prediction, superscalar issue, out-of-order execution, memory-hierarchy design, advanced cache architectures, and prefetching. Several real designs are dissected and simulators are developed for performing quantitative evaluations of design decisions.

### 260. Advanced Topics in Translation

(4) STAFF

*Prerequisites:* Computer Science 160 and 162.

Theoretical aspects of translation. Topics include: data flow analysis; control flow analysis; interprocedural analysis; optimization; type systems.

### 263. Modern Programming Languages and Their Implementation

(4) KRINTZ

*Prerequisites:* Computer Science 154, 160, and 162.

*Recommended preparation:* Computer Science 260.

Topics central to modern programming languages and their implementation: garbage collection; memory system performance; characteristics and optimization of object-oriented languages; type systems and type inference; run-time compilation.

### 265. Advanced Topics in Machine Intelligence

(4) STAFF

*Prerequisite:* Computer Science 165A.

*May be repeated for credit.*

Topics covered include advanced programming techniques for representing and reasoning about complex objects and various applications of such techniques, including expert systems, natural language processors, image understanding systems, and machine learning.

### 266. Formal Specification and Verification

(4) KEMMERER

*Prerequisites:* Computer Science 130A-B; Computer Science 186.

Introduction to existing specification and verification systems, and the underlying theory and

techniques of verifying the correctness of algorithms with respect to specifications. This subject can be considered as the combination of specification and verification techniques, programming language semantics, and formal logic.

### 267. Automated Verification

(4) BULTAN

*Prerequisites:* Computer Science 130A-B and 138.

Covers automated verification algorithms and tools. Topics include: temporal logics, fixpoint characterizations of temporal properties, model checking, symbolic verification, explicit-state verification, verification using automated theorem provers, automated abstraction.

### 270. Operating Systems

(4) WOLSKI

*Prerequisite:* Computer Science 170.

Develop an understanding of operating systems and operating systems research at both a conceptual level and from an engineering perspective. Fundamental design principles, culled primarily from the research literature, motivate an analysis of previous and current systems. This analysis is further validated through empirical investigation.

### 271. Advanced Topics in Distributed Systems

(4) EL ABBADI

*Prerequisite:* Computer Science 170.

Course covers the fundamental problems in distributed systems and the various tools used to solve them. Of primary interest is the issue of fault-tolerance. Topics include event ordering, clocks, global states, agreement, fault tolerance, and peer-to-peer systems.

### 272. Software Engineering

(4) BULTAN

*Prerequisite:* Computer Science 172.

Principles of software engineering disciplines emphasizing requirements analysis, specification design, coding, testing and correctness proofs, maintenance, and management. Students will use a number of software engineering tools.

### 273. Data and Knowledge Bases

(4) SU

*Prerequisite:* Computer Science 186.

The focus is on the study of relational and post-relational data models and their query languages of different styles (algebraic, calculus, and deductive): complexity, expressive power, optimization, and database design.

### 274. Advanced Topics in Database Systems

(4) AGRAWAL, EL ABBADI

*Prerequisite:* Computer Science 170.

Topics include: data models, semantics; data integrity; database design; serializability theory, concurrency control, recovery, distributed databases.

### 276. Advanced Topics in Networking

(4) BELDING, ZHAO

*Prerequisite:* Computer Science 176A or 176B.

Focuses on advanced topics in networking.

Topics may include, but are not limited to: Internet analysis, routing techniques, multimedia, approaches for network performance enhancements, and communication over new technologies.

### 279. Advanced Topics in Security

(4) VIGNA

*Prerequisite:* Computer Science 177.

Security analysis of networked systems. Analysis of techniques for network scanning, spoofing, hijacking, and denial-of-service attacks. Vulnerability analysis of applications and web-based systems. Intrusion detection and prevention techniques.

### 280. Computer Graphics

(4) HOLLERER

*Prerequisite:* Computer Science 180.

Special topics in computer graphics including: curves and curved surfaces, visual perception of colors and color models; shading models; shadow generation; texture mapping; solid textures; stereographics; helmet-mounted display; graphics hardware/architecture; solid modeling; physically-based modeling; fractals and graphics; volume rendering; scientific visualization.

### 281B. Advanced Topics in Computer Vision

(4) WANG, TURK

*Same course as ECE 281B.*

Advanced topics in computer vision: image sequence analysis, spatio-temporal filtering, camera calibration and hand-eye coordination, robot navigation, shape representation, physically-based modeling, regularization theory, multi-sensory fusion, biological models, expert vision systems, and other topics selected from recent research papers.

### 284. Mobile Computing

(4) BELDING

*Prerequisite:* Computer Science 176A or 176B.

*Recommended preparation:* Computer Science 276.

Focuses on mobile computing. Topics may include, but are not limited to: mobile network characteristics, types of mobile networks, challenges and solutions in mobile computing, and power conservation techniques.

### 290AA-ZZ. Special Topics in Computer Science

(4) STAFF

*Prerequisite:* consent of instructor.

These courses provide for the study of topics of current interest in computer science. Special topics are coded as follows:

- A. Foundations
- B. Software Systems
- C. Programming languages and software engineering
- D. Information management
- E. Architecture
- F. Networking
- G. Security
- H. Scientific computing
- I. Intelligent and interactive systems
- N. General

### 501. Techniques of Computer Science Teaching

(1) STAFF

*This course is required for new teaching assistants and may be taken only once. No unit credit allowed toward advanced degree.*

An initial 1-2 day workshop on teaching techniques followed by a weekly seminar. Course emphasizes teaching skills, practical experience, and communication skills.

### 502. Teaching of Computer Science

(1-4) STAFF

*Prerequisite:* Computer Science 501 (may be taken concurrently).

*No unit credit allowed toward advanced degree.* Procedures and techniques for teaching computer science gained through actual teaching of lecture courses, leading discussion sections, and/or teaching laboratories. Meetings will be held as needed to discuss problems, methods and procedures.

### 592. Group Studies: Controls, Dynamical Systems, and Computation

(1) STAFF

*Same course as Chemical Engineering 295, ECE 295, and ME 295.*

A series of weekly lectures given by university staff and outside experts in the fields of control systems, dynamical systems, and computation.

### 593. Computer Science Graduate Tutorial

(1-12) STAFF

*Prerequisite:* consent of instructor or department chair.

Individual studies exploring topics in computer science with a faculty advisor.

### 594. Seminar in Computer Science

(1-5) STAFF

*Prerequisite:* consent of instructor and department.

A seminar course offered on an irregular basis. Provides an in-depth discussion of advanced topics of general interest and broadens the scope of knowledge in computer science.

### 595AA-ZZ. Group Studies in Computer Science

(1-2) STAFF

*Prerequisite:* consent of instructor.

*May be repeated for credit provided letter*

designations are different.

Special seminars focusing on topics of interest to faculty and graduate students. These seminars provide critical review of research in various areas of computer science:

- A. Foundations
- B. Software Systems
- C. Programming Languages and Software Engineering
- D. Information Management
- E. Architecture
- F. Networking
- G. Security
- H. Scientific Computing
- I. Intelligent and Interactive Systems
- J. General
- K. Computer Systems Modeling and Analysis
- N. General

### 596. Directed Research

#### (2-12) STAFF

Research, either experimental or theoretical, may be undertaken by properly qualified graduate students under the direction of a faculty member.

### 597. Individual Studies for M.S. Comprehensive Examinations and Ph.D. Examinations

#### (1-12) STAFF

No unit credit allowed toward advanced degree. Enrollment limited to 24 units per examination. Maximum of 12 units per quarter. Instructor is normally student's major professor or chair of doctoral committee. *S/U grading.*

Individual studies for M.S. comprehensive examination and Ph.D. examinations.

### 598. Master's Thesis Research and Preparation

#### (1-12) STAFF

*Prerequisite:* consent of graduate advisor.

For research underlying the thesis and writing of the thesis.

### 599. Ph.D. Dissertation Research and Preparation

#### (1-12) STAFF

*Prerequisite:* consent of chair of student's doctoral committee.

Research and preparation of dissertation.

# Electrical and Computer Engineering

Department of Electrical and Computer Engineering, Building 380, Room 101; Telephone (805) 893-2269 or (805) 893-3821 Web site: [www.ece.ucsb.edu](http://www.ece.ucsb.edu)

*Chair:* Jerry Gibson

*Vice Chair:* Joao Hespanha

## Faculty

**Kaustav Banerjee**, Ph.D., UC Berkeley, Professor (high performance VLSI and mixed signal system-on-chip designs and their design automation methods; single electron transistors; 3D and optoelectronic integration)

**Daniel J. Blumenthal**, Ph.D., University of Colorado at Boulder, Professor (fiber-optic networks, wavelength and subcarrier division multiplexing, photonic packet switching, signal processing in semiconductor optical devices, wavelength conversion, microwave photonics)

**John E. Bowers**, Ph.D., Stanford University, Professor (high-speed photonic and electronic devices and integrated circuits, fiber optic

communication, semiconductors, laser physics and mode-locking phenomena, compound semiconductor materials and processing)

**Forrest D. Brewer**, Ph.D., University of Illinois at Urbana-Champaign, Professor (VLSI and computer system design automation, theory of design and design representations, symbolic techniques in high level synthesis)

**Elliott Brown**, Ph.D., California Institute of Technology, Professor (RF system modeling and design; solid state and biomedical ultrasonics; thermal management of solid state power devices)

**Steven E. Butner**, Ph.D., Stanford University, Professor (computer architecture, VLSI design of CMOS and gallium-arsenide ICs with emphasis on distributed organizations and fault-tolerant structures)

**Shivkumar Chandrasekaran**, Ph.D., Yale University, Associate Professor (numerical analysis, numerical linear algebra, scientific computation)

**Kwang-Ting (Tim) Cheng**, Ph.D., UC Berkeley, Professor (design automation, VLSI testing, design synthesis, design verification, algorithms)

**Larry A. Coldren**, Ph.D., Stanford University, Kavli Professor in Optoelectronics and Sensors, Director of Optoelectronics Technology Center (semiconductor integrated optoelectronics, vertical-cavity lasers, widely-tunable lasers, optical fiber communication, growth and planar processing techniques) \*1

**Nadir Dagli**, Ph.D., Massachusetts Institute of Technology, Professor (design, fabrication, and modeling of photonic integrated circuits, ultrafast electrooptic modulators, solid state microwave and millimeter wave devices; experimental study of ballistic transport in quantum confined structures)

**Steven P. DenBaars**, Ph.D., University of Southern California, Professor (metalorganic vapor phase epitaxy, optoelectronic materials, compound semiconductors, indium phosphide and gallium nitride, photonic devices) \*1

**Jerry Gibson**, Ph.D., Southern Methodist University, Professor (digital signal processing, data, speech, image and video compression, and communications via multi-use networks, data embedding, adaptive filtering)

**Arthur C. Gossard**, Ph.D., UC Berkeley, Professor (epitaxial crystal growth, artificially structured materials, semiconductor structures for optical and electronic devices, quantum confinement structures) \*1

**Joao Hespanha**, Ph.D., Yale University, Professor (hybrid and switched systems, supervisory control, control of computer networks, probabilistic games, the use of vision in feedback control)

**Evelyn Hu**, Ph.D., Columbia University, Professor, (high-resolution fabrication techniques for semiconductor device structures, process-related materials damage, contact/interface studies, superconductivity) \*1

**Ronald Iltis**, Ph.D., UC San Diego, Professor (digital spread spectrum communications, spectral estimation and adaptive filtering)

**Herbert Kroemer**, Dr. rer. nat., University of Göttingen, Donald W. Whittier Professor in Electrical Engineering, 2000 Physics Nobel Laureate (general solid-state and device physics, heterostructures, molecular beam epitaxy,

compound semiconductor materials and devices, superconductivity) \*1

**Hua Lee**, Ph.D., UC Santa Barbara, Professor (image system optimization, high-performance image formation algorithms, synthetic-aperture radar and sonar systems, acoustic microscopy, microwave nondestructive evaluation, dynamic vision systems)

**Michael Liebling**, Ph.D., École Polytechnique Fédérale de Lausanne, Assistant Professor (image processing, optical microscopy, In Vivo biological imaging)

**Upamanyu Madhow**, Ph.D., University of Illinois, Professor (spread-spectrum and multiple-access communications, space-time coding, and internet protocols)

**B.S. Manjunath**, Ph.D., University of Southern California, Professor (image processing, computer vision, pattern recognition, neural networks, learning algorithms, content based search in multimedia databases)

**Malgorzata Marek-Sadowska**, Ph.D., Technical University of Warsaw, Poland, Professor (design automation, computer-aided design, integrated circuit layout, logic synthesis)

**P. Michael Melliar-Smith**, Ph.D., University of Cambridge, Professor (fault tolerance, formal specification and verification, distributed systems, communication networks and protocols, asynchronous systems)

**Umesh Mishra**, Ph.D., Cornell University, Professor (high-speed transistors, semiconductor device physics, quantum electronics, wide band gap materials and devices, design and fabrication of millimeter-wave devices, *in situ* processing and integration techniques)

**Louise E. Moser**, Ph.D., University of Wisconsin, Professor (distributed systems, computer networks, software engineering, fault-tolerance, formal specification and verification, performance evaluation)

**Behrooz Parhami**, Ph.D., UC Los Angeles, Professor (parallel architectures and algorithms, computer arithmetic, computer design, dependable and fault-tolerant computing)

**Pierre M. Petroff**, Ph.D., UC Berkeley, Professor (self assembling nanostructures in semiconductors and ferromagnetic materials, spectroscopy of nanostructures, nanostructure devices, semiconductor device reliability) \*1

**Lawrence Rabiner**, Ph.D., Massachusetts Institute of Technology, Professor (digital signal processing: intelligent human-machine interaction, digital signal processing, speech processing and recognition; telecommunications)

**Volkmar Rodoplu**, Ph.D., Stanford University, Assistant Professor (wireless networks, energy-efficient and device-adaptive communications)

**Mark J.W. Rodwell**, Ph.D., Stanford University, Professor, Director of Compound Semiconductor Research Laboratories, Director of National Nanofabrication Users Network (heterojunction bipolar transistors, high frequency integrated circuit design, electronics beyond 100 GHz)

**Kenneth Rose**, Ph.D., California Institute of Technology, Professor, Co-Director of Center for Information Processing Research (information theory, source and channel coding, image coding, communications, pattern recognition)

**John J. Shynk**, Ph.D., Stanford University, Professor (adaptive filtering, array processing, wireless communications, blind equalization, neural networks)

**Roy Smith**, Ph.D., California Institute of Technology, Professor (robust control with an emphasis on the modeling, identification, and control of uncertain systems, applications and experimental work including process control, flexible structures, automotive systems, semiconductor manufacturing, levitated magnetic bearings and dynamic aeromaneuvering of interplanetary spacecraft)

**Andrew Teel**, Ph.D., UC Berkeley, Professor (control design and analysis for nonlinear dynamical systems, input-output methods, actuator nonlinearities, applications to aerospace problems)

**Luke Theogarajan**, Ph.D., Massachusetts Institute of Technology, Assistant Professor (low-power analog VLSI, biomimetic nanosystems, neural prostheses, biosensors, block co-polymer synthesis, self-assembly, and microfabrication)

**Li C. Wang**, Ph.D., University of Texas, Austin, Associate Professor (design verification, testing, computer-aided design of microprocessors)

**Pochi Yeh**, Ph.D., California Institute of Technology, Professor (phase conjugation, nonlinear optics, dynamic holography, optical computing, optical interconnection, neural networks, and image processing)

**Robert York**, Ph.D., Cornell University, Professor (high-power/high-frequency devices and circuits, quasi-optics, antennas, electromagnetic theory, nonlinear circuits and dynamics, microwave photonics)

**Patrick Yue**, Ph.D., Stanford University, Associate Professor (high-speed CMOS IC design, cell-based RF CAD methodology and integrated biomedical sensors)

### Emeriti Faculty

**Jorge R. Fontana**, Ph.D., Stanford University, Professor Emeritus (quantum electronics, particularly lasers, interaction with charged particles)

**Allen Gersho**, Ph.D., Cornell University, Professor, Director of Center for Information Processing Research (speech, audio, image, and video compression, quantization and signal compression techniques, and speech processing)

**Glenn R. Heidbreder**, D. Eng., Yale University, Professor Emeritus (communication theory, signal processing in radar and digital communication systems; digital image processing)

**Petar V. Kokotovic**, Ph.D., USSR Academy of Sciences, Professor, Director of Center for Control Engineering and Computation, Director of Center for Robust Nonlinear Control of Aeroengines (sensitivity analysis, singular perturbations, large-scale systems, non-linear systems, adaptive control, automotive and jet engine control)

**Stephen I. Long**, Ph.D., Cornell University, Professor (semiconductor devices and integrated circuits for high speed digital and RF analog applications)

**George L. Matthaei**, Ph.D., Stanford University, Professor Emeritus (circuit design techniques for passive and active microwave,

millimeter-wave and optical integrated circuits, circuit problems of high-speed digital integrated circuits)

**James L. Merz**, Ph.D., Harvard University, Professor Emeritus (optical properties of semiconductors, including guided-wave and integrated optical devices, semiconductor lasers, optoelectronic devices, native defects in semiconductors, low-dimensional quantum structures) \*1

**Sanjit K. Mitra**, Ph.D., UC Berkeley, Professor (digital signal and image processing, computer-aided design and optimization)

**Venkatesh Narayanamurti**, Ph.D., Cornell University, Professor Emeritus (transport, semiconductor heterostructures, nanostructures, scanning tunneling microscopy and ballistic electron emission microscopy, phonon physics)

**Philip F. Ordung**, D. Eng., Yale University, Professor Emeritus (general device physics, solar cells, charge-coupled devices)

**Ian B. Rhodes**, Ph.D., Stanford University, Professor (mathematical system theory and its applications with emphasis on stochastic control, communication, and optimization problems, especially those involving decentralized information structures or parallel computational structures)

**John G. Skalnik**, D. Eng., Yale University, Professor Emeritus (solar cells, general device technology, effects of non-ideal structures)

**Glen Wade**, Ph.D., Stanford University, Professor Emeritus (optical, microwave, and acoustical systems theory and experiments, with emphasis on acoustic imaging; computer processing; enhancement of images; computer image reconstruction)

**Roger C. Wood**, Ph.D., UC Los Angeles, Professor Emeritus (computer system modeling, design, and analysis, computer architecture, and instructional use of computers) \*2

\*1 Joint appointment with the Department of Materials.

\*2 Joint appointment with the Department of Computer Science.

### Affiliated Faculty

**David Awschalom**, Ph.D. (Physics)

**Elizabeth Belding**, Ph.D. (Computer Science)

**Francesco Bullo**, Ph.D. (Mechanical Engineering)

**Francis Doyle**, Ph.D., (Chemical Engineering)

**Oscar Ibarra**, Ph.D., (Computer Science)

**Mustafa Khammash**, Ph.D. (Mechanical Engineering)

**Chandra Krintz**, Ph.D. (Computer Science)

**Eric McFarland**, Ph.D., (Chemical Engineering)

**Shuji Nakamura**, Ph.D. (Materials)

**Bradley E. Paden**, Ph.D. (Mechanical Engineering)

**Tim Sherwood**, Ph.D. (Computer Science)

**E**lectrical and Computer Engineering is a broad field encompassing many diverse areas such as computers and digital systems, control, communications, computer engineering, electronics, signal processing, electromagnetics, electro-optics, physics and fabrication of electronic and photonic devices. As in most areas of engineering, knowledge of mathematics and the

natural sciences is combined with engineering fundamentals and applied to the theory, design, analysis, and implementation of devices and systems for the benefit of society.

The Department of Electrical and Computer Engineering offers programs leading to the degrees of bachelor of science in electrical engineering or bachelor of science in computer engineering. (Please see the "Computer Engineering" section for further information.)

The undergraduate curriculum in electrical engineering is designed to provide students with a solid background in mathematics, physical sciences, and traditional electrical engineering topics as presented above. A wide range of program options, including computer engineering; microwaves; communications, control, and signal processing; and semiconductor devices and applications, is offered. The department's Electrical Engineering undergraduate program is accredited by the Engineering Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012 – telephone: (410) 347-7700. It is one of the degrees recognized in all fifty states as leading to eligibility for registration as a professional engineer.

Graduate studies leading to the M.S. and Ph.D. degrees in Electrical and Computer Engineering are offered in three major areas of specialization: computer engineering; communications, control, and signal processing; and electronics and photonics.

The undergraduate major in Electrical Engineering prepares students for a wide range of positions in business, government, and private industrial research, development, and manufacturing organizations. The graduate programs offer educational opportunities at an advanced level, leading at the M.S. level to increased career opportunities in the foregoing positions, and at the Ph.D. level to careers in research and teaching and positions of professional leadership.

Students who complete a major in electrical engineering may be eligible to pursue a California teaching credential. Interested students should consult the credential advisor in the Graduate School of Education.

Under the direction of the Associate Dean for Undergraduate Studies, academic advising services are jointly provided by advisors in the College of Engineering, as well as advisors in the department. Students who plan to change to a major in the department should consult the ECE student office. Departmental faculty advisors are assigned to students to assist them in choosing senior elective courses.

Counseling is provided to graduate students through the ECE graduate advisor. Individual faculty members are also available for help in academic planning.

### Mission Statement

The Department of Electrical and Computer Engineering seeks to provide a comprehensive, rigorous and accredited educational program for the graduates of California's high schools and for postgraduate students, both domestic and international. The department has a dual mission:

- *Education.* We will develop and produce excellent electrical and computer engineers who will support the high-tech economy of Cali-

fornia and the nation. This mission requires that we offer a balanced and timely education that includes not only strength in the fundamental principles but also experience with the practical skills that are needed to contribute to the complex technological infrastructure of our society. This approach will enable each of our graduates to continue learning throughout an extended career.

- *Research:* We will develop relevant and innovative science and technology through our research that addresses the needs of industry, government and the scientific community. This technology can be transferred through our graduates, through industrial affiliations, and through publications and presentations.

We provide a faculty that is committed to education and research, is accessible to students, and is highly qualified in their areas of expertise.

### Educational Objectives

The educational objectives of the Electrical Engineering Program identify what we hope that our graduates will accomplish within a few years after graduation.

1. We expect our graduates to make positive contributions to society in fields including, but not limited to, engineering.
2. We expect our graduates to have acquired the ability to be flexible and adaptable, showing that their educational background has given them the foundation needed to remain effective, take on new responsibilities and assume leadership roles.
3. We expect some of our graduates to pursue their formal education further, including graduate study for master's and doctoral degrees.

### Program Outcomes

The EE program expects our students upon graduation to have:

1. Acquired strong basic knowledge and skills in those fundamental areas of mathematics, science, and electrical engineering that are required to support specialized professional training at the advanced level and to provide necessary breadth to the student's overall program of studies. This provides the basis for lifelong learning.
2. Experienced in-depth training in state-of-the-art specialty areas in electrical engineering. This is implemented through our senior electives. Students are required to take two sequences of at least two courses each at the senior level.
3. Benefited from imaginative and highly supportive laboratory experiences where appropriate throughout the program. The laboratory experience will be closely integrated with coursework and will make use of up-to-date instrumentation and computing facilities. Students should experience both hardware-oriented and simulation-oriented exercises.
4. Experienced design-oriented challenges that exercise and integrate skills and knowledge acquired in several courses. These may include design of components or subsystems with performance specifications. Graduates should be able to demonstrate an ability to design and conduct experiments as well as analyze the results.
5. Learned to function well in teams. Also,

students must develop communication skills, written and oral, both through team and classroom experiences. Skills including written reports, webpage preparation, and public presentations are required.

6. Completed a well-rounded and balanced education through required studies in selected areas of fine arts, humanities, and social sciences. This provides for the ability to understand the impact of engineering solutions in a global and societal context. A course in engineering ethics is also required of all undergraduates.

### Laboratory Facilities

In addition to formal classroom lectures and studies, the department places strong emphasis on the inclusion of laboratory and computational experience in a student's program of study. To support this experience, the department and the campus maintain an extensive complement of relevant laboratory and computational facilities. Instructional laboratory facilities are available to support undergraduate courses in circuits, electronics, digital systems, communications, control, signal and image processing, microwaves, and solid-state device fabrication. Students may access microcomputers and workstations in the Microcomputer Laboratory or the College of Engineering ECI and CAD Laboratories.

The Department also maintains modern well-equipped facilities for research in communications, control, signal processing, image processing, scientific computation, VLSI design and testing, computer architecture, fault-tolerant computing, microwaves, optoelectronics, and solid state microelectronics. All research laboratories include or have access to modern computer facilities. Workstations in the various research laboratories have access via a local area network to a wide range of computing resources. The solid state research facilities include laboratories for crystal growth by molecular beam epitaxy and metal-organic CVD, micro-fabrication and processing, analog and digital integrated circuit design, and compound-semiconductor optoelectronic device and materials research.

### Undergraduate Program

**Note:** Schedules should be planned to meet both General Education and major requirements. Detailed descriptions of these requirements are presented in the College of Engineering Announcement and General Education booklet.

### Bachelor of Science—Electrical Engineering

#### Preparation for the major

All undergraduate majors in the department are required to meet a set of minimum unit and grade-point requirements and a set of General Education requirements which are common to all undergraduate majors in the College of Engineering. In addition, required preparation for the major consists of the following lower-division courses (or their equivalents if taken elsewhere): Engineering 3; Electrical and Computer Engineering 2A-B-C and 15A; Chemistry 1A-B or 2A-B, 1AL-BL or 2AC-BC; Mathematics 3A-B-C and 5A-B-C; Physics 1,

2, 3, 4, 5, 3L, 4L, 5L; and Computer Science 12. Qualified students may substitute Physics 21-25 for Physics 1-5 after obtaining permission from the Physics Department.

The department academic advisor can suggest a recommended study plan for electrical engineering freshmen and sophomores. Each student is assigned a departmental faculty advisor who must be consulted in planning the junior and senior year programs.

### Upper-division major

The upper-division requirements consist of a set of required courses and a minimum of 32 units (8 classes) of additional departmental elective courses selected from a wide variety of specialized courses. All departmental elective programs must contain at least two sequences, each consisting of two or more related courses. Required upper-division courses for the major are: Electrical and Computer Engineering 130A-B, 132, 134, 137A-B, 139, 152A; and Engineering 101.

The required 32 units (8 courses) of departmental electives are taken primarily in the senior year, and they permit students to develop depth in specialty areas of their choice. A student's elective course program must be approved by a departmental faculty advisor. The advisor will check the program to ensure satisfaction of the departmental requirements. A wide variety of elective programs will be considered acceptable.

Three matters should be noted: (1) students who fail to attain a grade-point average of at least 2.0 in the major may be denied the privilege of continuing in the major, (2) a large majority of electrical and computer engineering courses have prerequisites which must be completed successfully. Successful completion of prerequisite courses means receiving a grade of C- or better in prerequisite courses except for Mathematics 3A-B-C and Mathematics 5A and 5B which require a grade of C or better to apply these courses as prerequisites, (3) courses required for the pre-major or major, inside or outside of the Department of Electrical Engineering, cannot be taken for the passed/not passed grading option. They must be taken for letter grades.

### Requirements for Changing to Electrical Engineering from Other Majors

Undergraduate students enrolled in other majors may petition to enter the Electrical Engineering major.

The department undergraduate advisor can provide guidelines on the required academic background.

### Bachelor of Science—Computer Engineering

This major is offered jointly by the Department of Computer Science and the Department of Electrical and Computer Engineering. For information about this major, refer to the section on Computer Engineering.

### Five-Year Bachelor of Science/ Master of Science Program

A combined B.S./M.S. program in Electrical Engineering provides an opportunity for outstanding undergraduates to earn both degrees in five years. Additional information about this program is available from the depart-

ment undergraduate office. Interested students should contact the undergraduate office early in the junior year, because they need to plan their junior year classes differently from other undergraduates. Transfer students should notify the office of their interest in the program at the earliest opportunity. In addition to fulfilling undergraduate degree requirements, B.S./M.S. degree candidates must meet the ECE Master's degree requirements as well as the Graduate Division degree requirements, including university requirements for academic residence and units of coursework as described in the chapter, "Graduate Education at UCSB."

## Graduate Program

In addition to departmental requirements, program applicants and candidates for graduate degrees must fulfill University requirements described in the chapter "Graduate Education at UCSB."

### Admission

The department offers graduate programs at the M.S. and Ph.D. levels in electrical and computer engineering. The graduate programs are open to those who have a bachelor's degree in electrical engineering, computer engineering, computer science, other areas of engineering, or in mathematics, physics, or other related fields of science. Applicants with degrees in fields other than electrical and computer engineering or computer science may be required to complete undergraduate prerequisite courses. Fundamental subject areas required include mathematics through differential equations and advanced calculus, a full year of college-level physics, and introductory computer programming.

All applicants for admission to graduate status are required to present evidence of a high level of technical skill, scholarship, and aptitude for electrical and computer engineering. This evidence normally is provided through a combination of undergraduate transcripts, scores on the verbal, quantitative, and analytical sections (required) and advanced portion (optional) of the Graduate Record Examination, letters of recommendation, and accounts of professional goals and experience. Applicants whose native language is not English are required to take the Test of English as a Foreign Language (TOEFL) or the International English Language Testing System (IELTS). Exceptions to this requirement will be considered for those students who have completed an undergraduate or graduate education at an institution whose primary language of instruction is English. The minimum TOEFL score for consideration is 550 when taking the paper-based test and 80 when taking the internet-based test. The minimum IELTS score for consideration is 7.0.

The department emphasizes graduate education at the highest level and intends that most of its graduate students will be enrolled in the Ph.D. program. Admission to the Ph.D. program is open to applicants who hold a master's degree or its equivalent in either electrical and computer engineering or computer science or related fields and who demonstrate unusual ability and promise for professional success. It is also open to applicants of exceptional promise directly on completion of a baccalaureate degree program. Applicants with only a baccalaureate

degree who intend to seek the Ph.D. degree should apply for simultaneous admission to the M.S. and Ph.D. programs. It should be noted, however, that continuation in the Ph.D. program is dependent upon proof of competency to pursue research at the Ph.D. level and upon obtaining a research supervisor.

## Master of Science—Electrical and Computer Engineering

### Degree Requirements

Graduate studies toward the M.S. degree are administered under either Plan 1, which requires coursework and a thesis, or Plan 2, which requires coursework and a comprehensive examination. Under either plan, students are required to complete at least 42 units of credit approved by the faculty advisor and the departmental graduate advisor. Under either plan, M.S. degree students must select a program of courses forming a coherent pattern directed toward an educational objective, including both depth in a particular area of specialization and breadth through other course offerings. M.S. students must plan their program of study around one of the three graduate emphases: computer engineering; communications, control, and signal processing; and electronics and photonics.

**Plan 1 (thesis option).** Students in this plan are required to (1) complete 42 units approved by the department, including no fewer than 20 units of graduate coursework numbered 200–299, 594, or 596 (of which no more than 8 units can be in 596, 493 or 293 coursework) and no more than 12 units of upper-division elective coursework at the undergraduate level, and (2) submit an acceptable thesis based on research carried out by taking up to 8 units of 598. Further details are available from the ECE Graduate Office or graduate advisor.

**Plan 2 (examination option).** Students in this plan are required to (1) complete 42 units approved by the department, including no fewer than 24 units of graduate coursework numbered 200–299, 594, or 596 (of which no more than 8 units can be in 596, 493 or 293 coursework) and no more than 16 units of upper-division elective coursework at the undergraduate level, and (2) pass a comprehensive examination. Further details are available from the ECE Graduate Office or graduate advisor.

## Doctor of Philosophy—Electrical and Computer Engineering

### Degree Requirements

Immediately upon admission to studies toward the Ph.D. degree, students are required to develop a formal study plan which includes an appropriate level of coursework and special studies to provide depth of knowledge in a specialty area. The study plan must be approved by the faculty advisor and the department graduate advisor and may be modified during the course of the student's program. There is no rigid requirement concerning the total number of units of graduate work that must be taken, but doctoral students are expected to take all available courses in their area of interest that the faculty deem relevant to their programs. In addition, they are expected to take other courses for breadth. There is no foreign language requirement in the program.

All students in the Ph.D. program are required to pass the departmental screening examination. When the examination is passed, the student selects a Ph.D. committee. This committee administers an oral qualifying examination at such time as it deems the student to be adequately prepared and the university residence requirements have been satisfied. After the oral examination has been passed, the student is eligible for advancement to candidacy for the Ph.D. degree.

Students must prepare a dissertation based on original research in a subject area approved by the Ph.D. committee. The dissertation must be defended in an open oral dissertation defense examination.

## Optional Graduate Degree Emphasis in Computational Science and Engineering

The Departments of Chemical Engineering; Computer Science; Earth Science; Ecology, Evolution and Marine Biology; Electrical and Computer Engineering; Mathematics; and Mechanical Engineering offer an interdisciplinary master's and Ph.D. degree emphasis in computational science and engineering (CSE).

CSE is a rapidly growing multidisciplinary area with connections to the sciences, engineering, mathematics, and computer science. Computer models and simulations have become an important part of the research repertoire, supplementing (and in some cases replacing) experimentation. Going from application area to computational results requires domain expertise, mathematical modeling, numerical analysis, algorithm development, software implementation, program execution, analysis, validation, and visualization of results. CSE addresses these issues.

Although CSE includes elements from computer science, applied mathematics, engineering and science, it focuses on the integration of knowledge and methodologies from all of these disciplines and, as such, is a subject distinct from any of them. All students pursuing an emphasis in CSE must complete the following:

- Numerical Methods: Electrical and Computer Engineering 210A-B-C-D (students must take at least three)
- Parallel Computing: Computer Science 240A-B (students must take at least one).
- Applied Mathematics: Students must take either the Math 214A-B or Math 215A-B sequence (run concurrently with Math 119A-B and Math 124A-B respectively), or the Chemical Engineering 230A-B sequence.
- Credit will not be given for more than one of these sequences. Advanced courses may be substituted, with approval, as follows: Math 243 instead of Math 214, and Math 246 instead of Math 215.

The specific requirements for the M.S. in Electrical and Computer Engineering (thesis option only) with the CSE emphasis are as follows:

- Completion of the above requirements for an M.S. in electrical and computer engineering
- A master's thesis in CSE

The thesis must be written under the supervision of a CSE ladder faculty member. The thesis committee must include a minimum of three permanent ladder faculty members, at least two

from Electrical and Computer Engineering and one from CSE (may be CSE faculty member from another department).

Students pursuing a Ph.D. with an emphasis in CSE must:

- Complete the above requirements for a Ph.D. in electrical and computer engineering
- Write and defend a dissertation in CSE

The student's dissertation must be written under the supervision of an Electrical and Computer Engineering CSE ladder faculty member. The doctoral examination committee must include at least one CSE ladder faculty member and at least one ladder faculty member from another department.

## Electrical and Computer Engineering Courses

Many of the ECE courses are restricted to ECE majors only. Please check the quarterly Schedule of Classes. Instructor and quarter offered are subject to change.

### LOWER DIVISION

#### 1. Ten Puzzling Problems in Computer Engineering

(1) PARHAMI

Prerequisite: open to pre-computer engineering only. Seminar, 1 hour.

Gaining familiarity with, and motivation to study, the field of computer engineering, through puzzle-like problems that represent a range of challenges facing computer engineers in their daily problem-solving efforts and at the frontiers of research.

#### 2A. Circuits, Devices, and Systems

(5) YORK

Prerequisites: Mathematics 3A-B-C with a minimum grade of C; and, Mathematics 5A with a minimum grade of C (may be taken concurrently); Physics 3 or 23 (may be taken concurrently); open to electrical engineering, computer engineering, and pre-computer engineering majors only. Lecture, 3 hours; laboratory, 4 hours.

Introduction to basic circuit analysis. KCL, KVL, nodal analysis, superposition, independent and dependent sources; diodes and I-V characteristics; basic op-amp circuits; first-order transient analysis; AC analysis and phasors. Introduction to the use of test instruments.

#### 2B. Circuits, Devices, and Systems

(5) YORK

Prerequisites: ECE 2A with a grade of C- or better; open to electrical engineering, computer engineering, and pre-computer engineering majors only. Lecture, 3 hours; laboratory, 4 hours.

Second order circuits. Laplace transform and solution of steady state and transient circuit problems in the s-domain; Bode plots; Fourier series and transforms; filters. Transistor as a switch; load lines; simple logic gates; latches and flip-flops.

#### 2C. Circuits, Devices, and Systems

(5) YORK

Prerequisites: ECE 2B with a grade of C- or better (may be taken concurrently); open to electrical engineering, computer engineering, and pre-computer engineering majors only. Lecture, 3 hours; laboratory, 4 hours.

Two-port network parameters; small-signal models of nonlinear devices; transistor amplifier circuits; frequency response of amplifiers; non-ideal op-amps; modulation, bandwidth, signals; Fourier analysis.

#### 4. Design Project for Freshmen

(4) STAFF

Prerequisites: Mathematics 3A-B-C and Physics 1 with minimum grades of C; Engineering 3 with a minimum grade of C-. Lecture, 3 hours; laboratory, 3 hours.

This first course on design gives an intuitive introduction to engineering design. Learn how to take an idea of a system and convert it to a working model. Use hardware and software for building a system.

#### 15A. Fundamentals of Logic Design

(3) MAREK-SADOWSKA

Prerequisites: ECE 2A with a minimum grade of C-; open to electrical engineering, computer engineering, and pre-computer engineering majors only.

Not open for credit to students who have completed ECE 15. Lecture, 3 hours; discussion, 1 hour.

Boolean algebra, logic of propositions, minterm and maxterm expansions, Karnaugh maps, Quine-McCluskey methods, multi-level circuits, combinational circuit design and simulation, multiplexers, decoders, programmable logic devices.

#### 15B. Computer Organization

(3) STAFF

Prerequisites: ECE 15A with a minimum grade of C-; open to electrical engineering, computer engineering, and pre-computer engineering majors only.

Not open for credit to students who have completed Computer Science 30 or ECE 15. Lecture, 3 hours; discussion, 1 hour.

Basic memory and processor organization, instruction set architecture, assembly language programming, number systems, arithmetic, data transfer and control flow instructions, procedures, memory management, program execution.

#### 94AA-ZZ. Group Studies in Electrical and Computer Engineering

(1-4) STAFF

Prerequisite: consent of instructor.

Group studies intended for small number of advanced students who share an interest in a topic not included in the regular departmental curriculum.

### UPPER DIVISION

#### 121A-B. The Practice of Science

(3-4) HU, AWSCHALOM

Prerequisites: consent of instructor (for 121A): ECE 121A or Physics 121A; consent of instructor (for 121B).

Same course as Physics 121A-B. Lecture, 3 hours (for 121A); Lecture, 4 hours (for 121B).

Provides experience in pursuing careers within science and engineering through discussions with researchers, lectures on ethics, funding, intellectual property, and commercial innovation. Students prepare a focused research proposal that is pursued in the second quarter of the course.

#### 124A. VLSI Principles

(4) BANERJEE

Prerequisites: ECE 132 (may be taken concurrently) and ECE 152A with a minimum grade of C- in both. Lecture, 3 hours; laboratory, 3 hours.

Introduction to CMOS digital VLSI design: CMOS devices and manufacturing technology; transistor level design of static and dynamic logic gates and components and interconnections; circuit characterization: delay, noise margins, and power dissipation; combinational and sequential circuits; arithmetic operations and memories.

#### 124B. Integrated Circuit Design and Fabrication

(4) BOWERS

Prerequisite: ECE 132 with a minimum grade of C-. Lecture, 4 hours; laboratory, 3 hours.

Theory, fabrication, and characterization of solid state devices including P-N junctions, capacitors, bipolar and MOS devices. Devices are fabricated using modern VLSI processing techniques including lithography, oxidation, diffusion, and evaporation. Physics and performance of processing steps are discussed and analyzed.

#### 124C. Integrated Circuit Design and Fabrication

(4) BOWERS

Prerequisites: ECE 124B and ECE 137A with a minimum grade of C- in all. Lecture, 4 hours; laboratory, 3 hours.

Design, simulation, fabrication, and characterization of NMOS integrated circuits. Circuit design and layout is performed using commercial

layout software. Circuits are fabricated using modern VLSI processing techniques. Circuit and discrete device electrical performance are analyzed.

#### 124D. VLSI Architecture and Design

(4) BREWER

Prerequisite: ECE 124A with a minimum grade of C-. Lecture, 3 hours; laboratory, 2 hours.

Practical issues in VLSI circuit design, pad/pin limitations, clocking and interfacing standards, electrical packaging for high-speed and high-performance design. On-chip noise and crosstalk, clock and power distribution, architectural and circuit design constraints, interconnection limits and transmission line effects.

#### 125. High Speed Digital Integrated Circuit Design

(4) BANERJEE

Prerequisite: ECE 124A or 137A with a minimum grade of C- in either. Lecture, 4 hours.

Advanced digital VLSI design: CMOS scaling, nanoscale issues including variability, thermal management, interconnects, reliability; non-clocked, clocked and self-timed logic gates; clocked storage elements; high-speed components, PLLs and DLLs; clock and power distribution; memory systems; signaling and I/O design; low-power design.

#### 130A. Signal Analysis and Processing

(4) MADHAW

Prerequisites: Mathematics 5A and ECE 2B with a minimum grade of C- in both; open to EE and computer engineering majors only. Lecture, 3 hours; discussion, 2 hours.

Analysis of continuous time linear systems in the time and frequency domains. Superposition and convolution. Bilateral and unilateral Laplace transforms. Fourier series and Fourier transforms. Filtering, modulation, and feedback.

#### 130B. Signal Analysis and Processing

(4) CHANDRASEKARAN

Prerequisite: ECE 130A with a grade of C- or better; open to EE and computer engineering majors only. Lecture, 3 hours; discussion, 2 hours.

Analysis of discrete time linear systems in the time and frequency domains. Z transforms, Discrete Fourier transforms. Sampling and aliasing.

#### 130C. Signal Analysis and Processing

(4) CHANDRASEKARAN

Prerequisites: ECE 130A-B with a minimum grade of C- in both. Lecture, 3 hours; discussion, 2 hours.

Basic techniques for the analysis of linear models in electrical engineering: Gaussian elimination, vector spaces and linear equations, orthogonality, determinants, eigenvalues and eigenvectors, systems of linear differential equations, positive definite matrices, singular value decomposition.

#### 132. Introduction to Solid State Electronic Devices

(4) MISHRA

Prerequisites: Physics 4 or 24 with a minimum grade of C-; Mathematics 5A with a minimum grade of C; and ECE 2A-B (may be taken concurrently) with a minimum grade of C- in both; open to EE and computer engineering majors only. Lecture, 3 hours; discussion, 2 hours.

Electrons and holes in semiconductors; doping (P and N); state occupation statistics, transport properties of electrons and holes; P-N junction diodes; I-V, C-V, and switching properties of P-N junctions; introduction of bipolar transistors, MOSFET's and JFET's.

#### 134. Introduction to Fields and Waves

(4) DAGLI, YORK

Prerequisites: Physics 3 or 23 with a minimum grade of C-; and Mathematics 5A-B with a minimum grade of C; and Mathematics 5C with a minimum grade of C-; open to EE and computer engineering majors only. Lecture, 3 hours; discussion, 2 hours.

Introduction to applied electromagnetics and wave phenomena in high frequency electron circuits and systems. Wave on transmission-lines, elements of electrostatics and magnetostatics and applications, plane waves, examples and applications to RF, microwave, and optical systems.

#### 135. Optical Fiber Communication

(4) DAGLI

Prerequisites: ECE 132 and 134 with a minimum grade

of C- in both. Lecture, 3 hours; discussion, 1 hour.

Optical fiber as a transmission medium, dispersion and nonlinear effects in fiber transmission, fiber and semiconductor optical amplifiers and lasers, optical modulators, photo detectors, optical receivers, wavelength division multiplexing components, optical filters, basic transmission system analysis and design.

### 137A. Circuits and Electronics I

(4) RODWELL

Prerequisites: ECE 2A-B-C, 130A, and 132 with a minimum grade of C- in all; open to EE majors only. Lecture, 3 hours; laboratory, 3 hours.

Analysis and design of single stage and multistage transistor circuits including biasing, gain, impedances and maximum signal levels.

### 137B. Circuits and Electronics II

(4) RODWELL

Prerequisites: ECE 2C and 137A with a minimum grade of C- in both; open to EE majors only. Lecture, 3 hours; laboratory, 3 hours.

Analysis and design of single stage and multistage transistor circuits at low and high frequencies. Transient response. Analysis and design of feedback circuits. Stability criteria.

### 139. Probability and Statistics

(4) ILTIS

Prerequisite: Open to Electrical Engineering, Computer Engineering and pre-Computer Engineering majors only. Lecture, 3 hours; discussion, 2 hours.

Fundamentals of probability, conditional probability, Bayes rule, random variables, functions of random variables, expectation and high-order moments, Markov chains, hypothesis testing.

### 140. Random Processes for Engineering

(4) ILTIS

Prerequisites: ECE 130A-B and 139 each with a minimum grade of C-; open to EE majors only. Lecture, 3 hours; discussion, 2 hours.

Random processes, characteristic functions, central limit theorem, spectral analysis, linear systems with random inputs, representation of bandlimited processes, Poisson process, simple queueing systems.

### 141A. Introduction to MicroElectro Mechanical Systems (MEMS)

(3) PENNATUR

Prerequisites: ME 104 and 163; or, ECE 130A and 137A; with a minimum grade of C- in both.

Same course as ME 141A. Lecture, 3 hours.

Analysis of MEMS actuators and displacement sensors with emphasis on the analysis of capacitor-based sensing and actuation. Analysis and design of operational-amplifier models and circuits for capacitor sensors including feedback concepts. Vibration analysis of MEMS structures including wave equations for "string" and bar structures. MEMS scaling concepts.

### 141B. Semiconductor Processing and Device Characterization with Laboratory

(4) PENNATUR

Prerequisites: ME 141A or ECE 141A; and, Chemistry 1B-BL.

Same course as ME 141B. Lecture, 2 hours; laboratory, 6 hours.

Lectures and laboratory on semiconductor processing for MEMS. Description and analysis for key semiconductors and equipment used for MEMS. Design and fabrication of MEMS capacitor-actuator and accelerometers; includes a description of MEMS characterization tools.

### 141C. Introduction to Microfluidics and BioMEMS

(3) MEINHART

Prerequisite: ME 141A or ECE 141A; open to ME and EE majors only.

Same course as ME 141C. Lecture, 3 hours.

Introduces physical phenomena associated with microscale/nanoscale fluid mechanics, microfluids, and bioMEMS. Analytical methods and numerical simulation tools are used for analysis of microfluids.

### 144. Electromagnetic Fields and Waves

(4) YORK

Prerequisite: ECE 134 with a minimum grade of C-. Lecture, 3 hours; laboratory, 3 hours.

Waves on transmission lines, Maxwell's equations, skin effect, propagation and reflection of

electromagnetic waves, microwave integrated circuit principles, metal and dielectric waveguides, resonant cavities, antennas. Microwave and optical device examples and experience with modern microwave and CAD software.

### 145A. Communication Electronics

(5) LONG

Prerequisites: ECE 137A-B with a minimum grade of C- in both. Lecture, 3 hours; laboratory, 6 hours.

Analog communication circuits 1 MHz to 1GHz with emphasis on receivers. S-parameter design techniques, nonideal components, distortion, amplifier design and characterization, system level analysis.

### 145B. Communication Electronics

(5) LONG

Prerequisite: ECE 145A with a minimum grade of C-; EE majors only. Lecture, 3 hours; laboratory, 6 hours.

Analog communication circuits 1 MHz to 1GHz with emphasis on receivers. Design and evaluation of RF components: mixers, oscillators, PLL, IF amplifier, FM demodulator, frequency synthesis.

### 145C. High Speed Bipolar Mixed Signal and Communication IC Design

(4) RODWELL

Prerequisites: ECE 137A-B with a minimum grade of C- in both. Lecture, 4 hours.

Transistor and passive component models. Broadband amplifiers. Fast digital IC design. Circuit noise, digital communication receiver sensitivity. Latched comparator design. Nyquist and oversampled analog-digital and digital-analog converters. Direct digital frequency synthesis. Fiber optic and microwave digital transceivers.

### 146A. Analog Communication Theory and Techniques

(5) ILTIS

Prerequisites: ECE 130A-B and 140 with a minimum grade of C- in all; open to EE majors only. Lecture, 3 hours; laboratory, 6 hours.

Modulation theory, AM, FM, PM, and analog pulse modulation and demodulation techniques. System noise and performance calculations.

### 146B. Digital Communication Theory and Techniques

(5) SHYNK

Prerequisites: ECE 130A-B, 140 and 146A with minimum grades of C-; open to EE majors only. Lecture, 3 hours; laboratory, 6 hours.

Elements of source coding: quantization, pulse code modulation, delta modulation. Introduction to digital modulation over baseband and passband channels: linear modulation, Nyquist criterion for intersymbol interference avoidance, orthogonal modulation. Optimal reception of signals in Additive White Gaussian Noise: detection theory basics, signal space concepts, geometry of maximum likelihood receivers. Performance analysis of optimal receivers: error probability as a function of Eb/N0, union bound, nearest neighbors approximation. Link design: power-bandwidth tradeoffs, link budget analysis.

### 147A. Feedback Control Systems - Theory and Design

(5) TEEL, SMITH

Prerequisites: ECE 130A-B-C with a minimum grade of C- in each; open to EE and computer engineering majors only. Lecture, 3 hours; laboratory, 6 hours.

Feedback systems design, specifications in time and frequency domains. Analysis and synthesis of closed loop systems. Computer aided analysis and design.

### 147B. Digital Control Systems - Theory and Design

(5) SMITH, TEEL

Prerequisite: ECE 147A with a minimum grade of C-; open to EE and computer engineering majors only. Lecture, 3 hours; laboratory, 6 hours.

Analysis of sampled data feedback systems; state space description of linear systems; observability, controllability, pole assignment, state feedback, observers. Design of digital control systems. (W)

### 147C. Control System Design Project

(5) HESPANHA

Prerequisite: ECE 147A or ME 155B or ME 173 with a minimum grade of C-. Lecture, 3 hours; laboratory, 6 hours.

Students are required to design, implement, and document a significant control systems project. The project is implemented in hardware or in high-fidelity numerical simulators. Lectures and laboratories cover special topics related to the practical implementation of control systems.

### 148. Applications of Signal Analysis and Processing

(4) LEE

Prerequisites: ECE 130A-B with a minimum grade of C- in both. Lecture, 3 hours; discussion, 2 hours.

A sequence of engineering applications of signal analysis and processing techniques; in communications, image processing, analog and digital filter design, signal detection and parameter estimation, holography and tomography, Fourier optics, and microwave and acoustic sensing.

### 149. Active and Passive Network Synthesis

(4) ILTIS

Prerequisite: Upper-division standing; open to EE majors only.

Designed for juniors to take right after ECE 130AB.

Combines the areas of electronics and network theory in the subject of passive and active network design. Topics include passive synthesis, optimization techniques, approximations to ideal filters, distributed networks, sensitivity and the modern design techniques, and applications of active filters.

### 151. Distributed Systems

(4) MELLIAR-SMITH

Prerequisite: Computer Science 170 with a minimum grade of C-.

Not open for credit to students who have completed Computer Science 171. Lecture, 3 hours; discussion, 1 hour.

Distributed systems architecture, distributed programming techniques, message passing, remote procedure calls, group communication and membership, naming, asynchrony, causality, consistency, fault-tolerance and recovery, resource management, scheduling, monitoring, testing and debugging.

### 152A. Digital Design Principles

(5) RODOPLU

Prerequisites: ECE 15 or 15A or Computer Science 30 with a minimum grade of C- in each course; open to electrical engineering, computer engineering, and computer science majors only. Lecture, 3 hours; laboratory, 6 hours.

Design of synchronous digital systems: timing diagrams, propagation delay, latches and flip-flops, shift registers and counters, Mealy/Moore finite state machines, Verilog, 2-phase clocking, timing analysis, CMOS implementation, S-RAM, RAM-based designs, ASM charts, state minimization.

### 152B. Digital Design Methodologies

(5) CHENG

Prerequisites: ECE 152A with a minimum grade of C-; open to EE, computer engineering, and computer science majors only. Lecture, 3 hours; discussion, 6 hours.

Design methodologies of digital systems, the register and processor levels. Design of functional subsystems, including arithmetic processors, hardwired and microprogrammed control units, memory systems, and bussing systems. System organization including communication, input/output systems, and multiple CPU systems.

### 153A. Hardware/Software Interface

(4) STAFF

Prerequisite: Computer Science 130A with a minimum grade of C-.

Same course as Computer Science 153A.

The study of the structures employed at the interface of hardware and software in modern computing systems. Instruction set architecture (ISA) design trade-offs, operating system and hardware support for input/output devices (memory-mapping, interrupts, device drivers). Operating system and real-time system scheduling of tasks. Low level software and program support infrastructures (virtualization, compilation, optimization, emulation/simulation, debugging).

**153B. Sensor and Peripheral Interface Design****(4) BUTNER**

*Prerequisites:* ECE 152B and 153A with a minimum grade of C- in both. Lecture, 3 hours; laboratory, 3 hours.

Hardware description languages; field-programmable logic and ASIC design techniques. Mixed-signal techniques: A/D and D/A converter interfaces; video and audio signal acquisition, processing and generation, communication and network interfaces.

**154. Introduction to Computer Architecture****(4) PARHAMI**

*Prerequisite:* ECE 152A with a minimum grade of C-; open to EE, computer engineering, and computer science majors only.

Not open for credit to students who have completed Computer Science 154. Lecture, 3 hours; discussion, 1 hour.

The computer design space. Methods of performance evaluation. Machine instructions and assembly language. Variations in instruction set architecture. Design of arithmetic/logic units. Data path and control unit synthesis. Pipelining and multiple instruction issue. Hierarchical memory systems. Input/output and interfacing. High-performance systems, including multiprocessors and multicomputers.

**155A. Introduction to Computer Networks****(4) MOSER**

*Prerequisite:* ECE 154 with a minimum grade of C-; and, Computer Science 12 or 60 with a minimum grade of C-.

Not open for credit to students who have completed Computer Science 176 or 176A, or ECE 155. Lecture, 3 hours; discussion, 1 hour.

Topics in this course include network architectures, protocols, wired and wireless networks, transmission media, multiplexing, switching, framing, error detection and correction, flow control, routing, congestion control, TCP/IP, DNS, email, World Wide Web, network security, socket programming in C/C++.

**155B. Network Computing****(4) MOSER**

*Prerequisites:* ECE 155A with a minimum grade of C-; and, Computer Science 5JA or 10 or 11JA with a minimum grade of C-.

Not open for credit to students who have completed Computer Science 176B or ECE 194W. Lecture, 3 hours; discussion, 1 hour.

Topics in this course include client/server computing, threads, Java applets, Java sockets, Java RMI, Java servlets, Java Server Pages, Java Database Connectivity, Enterprise Java Beans, Hypertext Markup Language, extensible Markup Language, Web Services, programming networked applications in Java.

**156A. Digital Design with VHDL and Synthesis****(4) WANG**

*Prerequisite:* ECE 152A with a minimum grade of C-. Lecture, 3 hours; laboratory, 3 hours.

Introduction to VHDL basic elements. VHDL simulation concepts. VHDL concurrent statements with examples and applications. VHDL subprograms, packages, libraries and design units. Writing VHDL for synthesis. Writing VHDL for finite state machines. Design case study.

**156B. Computer-Aided Design of VLSI Circuits****(4) WANG**

*Prerequisite:* ECE 156A with a minimum grade of C-. Lecture, 3 hours; laboratory, 3 hours.

Introduction to computer-aided simulation and synthesis tools for VLSI. VLSI system design flow, role of CAD tools, layout synthesis, circuit simulation, logic simulation, logic synthesis, behavior synthesis and test synthesis.

**158. Digital Signal Processing****(4) GIBSON**

*Prerequisites:* ECE 130A-B with a minimum grade of C- in both; open to EE majors only.

Lecture, 3 hours; laboratory, 3 hours. Discrete signals and systems, convolution, z-transforms, discrete Fourier transforms, digital filters.

**160. Multimedia Systems****(4) MELLIAR-SMITH**

*Prerequisites:* upper-division standing; open to EE, computer engineering, computer science, and creative studies majors only. Lecture, 3 hours; laboratory, 3 hours.

Introduction to multimedia and applications, including WWW, image/video databases and video streaming. Covers media content analysis, media data organization and indexing (image/video databases), and media data distribution and interaction (video-on-demand and interactive TV).

**162A. The Quantum Description of Electronic Materials****(4) BOWERS**

*Prerequisites:* ECE 130A-B and 134 with a minimum grade of C- in all; open to EE and materials majors only.

Same course as Materials 162A. Lecture, 4 hours. Electrons as particles and waves, Schrodinger's equation and illustrative solutions. Tunneling. Atomic structure, the exclusion principle and the periodic table. Bonds. Free electrons in metals, periodic potentials and energy bands.

**162B. Fundamentals of the Solid State****(4) COLDREN**

*Prerequisite:* ECE 162A with a minimum grade of C-; open to EE and materials majors only.

Same course as Materials 162B. Lecture, 3 hours; discussion, 1 hour.

Crystal lattices and the structure of solids, with emphasis on semiconductors. Lattice vibrations, electronic states and energy bands. Electrical and thermal conduction. Dielectric and optical properties. Semiconductor devices: diffusion, p-n junctions and diode behavior.

**162C. Optoelectronic Materials and Devices****(4) COLDREN**

*Prerequisites:* ECE 162A-B with a minimum grade of C-; open to electrical engineering and materials majors only. Lecture, 3 hours; discussion, 1 hour.

Optical transitions in solids. Direct and indirect gap semiconductors. Luminescence. Excitons and photons. Fundamentals of optoelectronic devices: semiconductor lasers, Led's photoconductors, solar cells, photo diodes, modulators. Photoemission. Integrated circuits.

**178. Introduction to Digital Image and Video Processing****(4) MANJUNATH**

*Prerequisites:* open to EE, computer engineering, and computer science majors with upper-division standing. Lecture, 3 hours; discussion, 1 hour.

Basic concepts in image and video processing. Topics include image formation and sampling, image transforms, image enhancement, and image and video compression including JPEG and MPEG coding standards.

**181A. Introduction to Robotics: Robot Mechanics****(4) PADEN**

Same course as ME 170A. Recommended preparation: ME 16. Lecture, 3 hours; laboratory, 3 hours.

Overview of robot kinematics and dynamics. Structure and operation of industrial robots. Robot performance: work space, velocity, precision, payload. Comparative discussion of robot mechanical designs. Actuators. Robot coordinate systems. Kinematics of position. Dynamics of manipulators. (S; may not be offered every year)

**181B. Introduction to Computer Vision****(4) MANJUNATH**

*Prerequisite:* Upper-division standing.

Same course as Computer Science 181B. Overview of computer vision problems and techniques for analyzing the content of images and video. Topics include image formation, edge detection, image segmentation, pattern recognition, texture analysis, optical flow, stereo vision, shape representation and recovery techniques, issues in object recognition, and case studies of practical vision systems.

**181C. Introduction to Robotics: Robot Control****(4) PADEN**

*Prerequisite:* ECE 2A-B-C with a minimum grade of C-; or ME 104.

Same course as ME 170C. Lecture, 2 hours; laboratory, 4 hours.

Overview of robot control technology from open-loop manipulators and sensing systems, to single-joint servovalves and servomotors, to integrated adaptive force and position control using feedback from machine vision and touch sensing systems. Design emphasis on accurate tracking accomplished with minimal algorithm complexity. (F; may not be offered every year)

**183. Nonlinear Phenomena****(4) TEEL**

*Prerequisites:* Physics 105A or ME 163 or upper-division standing in EE.

Same course as Physics 106 and ME 169. Not open for credit to students who have completed ECE 163C. Lecture, 3 hours; discussion, 1 hour.

An introduction to nonlinear phenomena. Flows and bifurcations in one and two dimensions, chaos, fractals, strange attractors. Applications to physics, engineering, chemistry, and biology.

**188A. Senior Electrical Engineering Project****(4) STAFF**

*Prerequisites:* completion of at least 4 upper-division EE courses with a GPA of 3.0 or higher; open to EE and computer engineering, majors only; consent of instructor.

Student groups design a significant project based on the knowledge and skills acquired in earlier coursework and integrate their technical knowledge through a practical design experience. The project is evaluated through written reports, oral presentations, and demonstrations of performance.

**188B. Senior Electrical Engineering Project****(4) STAFF**

*Prerequisites:* ECE 188A with a minimum grade of C-; electrical engineering and computer engineering majors only.

Student groups design a significant project based on the knowledge and skills acquired in earlier coursework and integrate their technical knowledge through a practical design experience. The project is evaluated through written reports, oral presentations, and demonstrations of performance.

**189A-B. Senior Computer Systems Project****(4-4) BUTNER**

*Prerequisite:* consent of instructor; senior standing in computer engineering, computer science, or EE.

Not open for credit to students who have completed Computer Science 189.

Student groups design a significant computer-based project. Groups work independently with interaction among groups via interface specifications and informal meetings.

**192. Projects in Electrical and Computer Engineering****(4) STAFF**

*Prerequisite:* consent of instructor. Discussion, 2 hours; laboratory, 6 hours.

Projects in electrical and computer engineering for advanced undergraduate students.

**193. Internship in Industry****(1-8) STAFF**

*Prerequisite:* consent of department.

Must have a 3.0 grade-point-average. May not be used as departmental electives. May be repeated to a maximum of 12 units. Field, 1-8 hours.

Special projects for selected students. Offered in conjunction with engineering practice in selected industrial and research firms, under direct faculty supervision.

**194AA-ZZ. Special Topics in Electrical and Computer Engineering****(1-5) STAFF**

*Prerequisite:* consent of instructor. Variable hours.

Group studies intended for small number of advanced students who share an interest in a topic

not included in the regular departmental curriculum. Topics covered include (check with department for quarters offered):

- A. Circuits
- AA. Micro-Electro-Mechanical Systems
- B. Systems Theory
- BB. Computer Engineering
- C. Communication Systems
- D. Control Systems
- E. Signal Processing
- F. Solid State
- G. Fields and Waves
- H. Quantum Electronics
- I. Microwave Electronics
- J. Switching Theory
- K. Digital Systems Design
- L. Computer Architecture
- M. Computer Graphics
- N. Pattern Recognition
- O. Microprocessors and Microprocessor-based Systems
- P. Simulation
- Q. Imaging Systems and Image Processing
- R. General
- S. Speech
- T. Robot Control
- U. Optoelectronics
- V. Scientific Computation
- W. Computer Network
- X. Distributed Computation
- Y. Numerical Differential Equations
- Z. Nanotechnology

### 196. Undergraduate Research

(2-4) STAFF

Prerequisites: upper-division standing; consent of instructor.

Must have a minimum 3.0 grade-point average for the preceding three quarters. May be repeated for up to 12 units. Not more than 4 units may be applied to departmental electives.

Research opportunities for undergraduate students. Students will be expected to give regular oral presentations, actively participate in a weekly seminar, and prepare at least one written report on their research.

### 199. Independent Studies in Electrical and Computer Engineering

(1-5) STAFF

Prerequisites: upper division standing; completion of two upper-division courses in electrical and computer engineering; consent of instructor.

Must have a minimum 3.0 grade-point average for the preceding three quarters. Students are limited to five units per quarter and 30 units total in all 98/99/198/199/199DC/199RA courses combined.

Directed individual study, normally experimental.

## GRADUATE COURSES

### 201A. Electromagnetic Theory I

(4) DAGLI

Prerequisite: ECE 144. Lecture, 4 hours.

Basic concepts in electromagnetic theory, energy power, plane waves, guided waves, dielectric metallic waveguides, radiation, uniqueness, image theory, reciprocity, duality, equivalence principle, induction theorem.

### 205A. Information Theory

(4) ROSE

Prerequisites: ECE 140 or equivalent, or PSTAT 120A-B.

Same course as Computer Science 225. Lecture, 4 hours.

Entropy, mutual information, and Shannon's coding theorems; lossless source coding, Huffman, Shannon-Fano-Elias, and arithmetic codes; channel capacity; rate-distortion theory, and lossy source coding; source-channel coding; algorithmic complexity and information; applications of information theory in various fields.

### 207. Research Projects or Independent Studies

(1-6) STAFF

Prerequisite: consent of instructor. Variable hours.

Graduate research projects or independent studies to be arranged between students and staff

members. See M.S. degree requirements, plans 1 and 2, regarding number of units which may be used for M.S. degree.

### 210A. Matrix Analysis and Computation

(4) CHANDRASEKARAN

Prerequisite: consent of instructor.

Same course as Computer Science 211A, Mathematics 206A, ME 210A, Chemical Engineering 211A, and Geology 251A. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language. Lecture, 4 hours.

Graduate level-matrix theory with introduction to matrix computations. SVD's, pseudoinverses, variational characterization of eigen values, perturbation theory, direct and iterative methods for matrix computations.

### 210B. Numerical Simulation

(4) PETZOLD

Prerequisite: consent of instructor.

Same course as Computer Science 211B, Mathematics 206B, ME 210B, Chemical Engineering 211B and Geology 251B. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language. Lecture, 4 hours.

Linear multistep methods and Runge-Kutta methods for ordinary differential equations: stability, order and convergence. Stiffness. Differential algebraic equations. Numerical solution of boundary value problems.

### 210C. Numerical Solution of Partial Differential Equations—Finite Difference Methods

(4) STAFF

Prerequisite: consent of instructor.

Same course as Computer Science 211C, Mathematics 206C, ME 210C, Chemical Engineering 211C and Geology 251C. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language. Lecture, 4 hours.

Finite difference methods for hyperbolic, parabolic and elliptic PDEs, with application to problems in science and engineering. Convergence, consistency, order and stability of finite difference methods. Dissipation and dispersion. Finite volume methods. Software design and adaptivity.

### 210D. Numerical Solution of Partial Differential Equations—Finite Element Methods

(4) STAFF

Prerequisite: consent of instructor.

Same course as Computer Science 211D, Mathematics 206D, ME 210D, Chemical Engineering 211D and Geology 251D. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language. Lecture, 4 hours.

Weighted residual and finite element methods for the solution of hyperbolic, parabolic and elliptical partial differential equations, with application to problems in science and engineering. Error estimates. Standard and discontinuous Galerkin methods.

### 211A. Engineering Quantum Mechanics I

(4) STAFF

Prerequisites: ECE 162A-B. Students must have some knowledge of linear algebra.

Same course as Materials 211A. Lecture, 4 hours.

Wave-particle duality; bound states; uncertainty relations; expectation values and operators; variational principle; eigenfunction expansions; perturbation theory I. Treatment matches needs and background of ECE and Materials students emphasizing solid state or quantum electronics.

### 211B. Engineering Quantum Mechanics II

(4) STAFF

Prerequisite: ECE 211A or Materials 211A, or ECE 215A or Materials 206A.

Same course as Materials 211B. Lecture, 4 hours.

Continuation of ECE 211A; symmetry and degeneracy; electrons in crystals, angular momentum; perturbation theory II; transition probabilities; quantized fields and radiative transitions; magnetic

fields; electron spin; indistinguishable particles.

### 215A. Fundamentals of Electronic Solids I

(4) BROWN

Prerequisite: ECE 162A or 162B.

Same course as Materials 206A. Lecture, 4 hours.

Introduction into the physics of semiconductors for beginning engineering graduate students. Crystal structure. Reciprocal lattice and crystal diffraction. Electrons in periodic structures. Energy and bands. Semiconductor electrons and probes, Fermi statistics.

### 215B. Fundamentals of Electronic Solids II

(4) BROWN

Prerequisite: ECE 162A or 162B.

Same course as Materials 206B. Lecture, 4 hours.

Phonons, electron scattering, electronic transport, selected optical properties, heterostructures, effective mass, quantum wells, two-dimensional electron gas, quantum wires, deep levels, crystal binding.

### 216B. Defects in Semiconductors

(4) PETROFF

Prerequisites: ECE 162A-B.

Same course as Materials 216. Lecture, 3 hours.

Structural and electronic properties of elemental defects in semiconductors. Point defects and impurity complexes. Deep levels. Dislocations and grain boundary electronic properties. Measurement techniques for radiative and nonradiative defect centers.

### 217. Molecular Beam Epitaxy and Band Gap Engineering

(3) GOSSARD

Prerequisites: ECE 162A-B and 213.

Same course as Materials 217. Lecture, 3 hours.

Fundamentals and recent research developments in the growth and properties of thin crystalline films of electronic and optical materials by the process of molecular beam epitaxy. Artificially structured materials with quantized electron confinement and artificially engineered electronic band structure properties.

### 218A. Communication Electronics

(4) LONG

Prerequisites: ECE 137A-B or equivalent.

Analog communication circuits 1 MHz to 1 GHz with emphasis on receivers. S-parameter design techniques, nonideal components, distortion, amplifier design and characterization, system level analysis.

### 218B. Communication Electronics

(4) LONG

Prerequisite: ECE 218A.

Analog communication circuits 1 MHz to 1 GHz with emphasis on receivers. Design and evaluation of RF components: mixers, oscillators, PLL, IF amplifier, FM demodulator, frequency synthesis.

### 218C. High Speed Bipolar Mixed Signal and Communication IC Design

(4) RODWELL

Prerequisites: ECE 137A-B or equivalent; graduate standing.

Transistor and passive component models. Broadband amplifier design. Fast digital IC design at the transistor level. Circuit noise, signal/noise ratios, digital communication receiver sensitivity. Latched comparator design. Nyquist and oversampled analog-digital and digital-analog converters. Direct digital frequency synthesis. Fiber optic and microwave digital transceivers.

### 219. CMOS & RF INTEGRATED CIRCUIT DESIGN

(4) YUE

Prerequisite: ECE 137A and 137B.

Recommended Preparation: ECE 145A/218A and ECE 145B/218B.

Covers the design and analysis of radio-frequency integrated systems at the transistor level using state-of-the-art CMOS technology. Focuses on system-level trade-offs in transceiver design, practical RF circuit techniques, and physical understanding for device parasitics.

### 220A. Semiconductor Device Processing

(4) STAFF

Prerequisite: ECE 132 or equivalent.

Same course as Materials 215A. Lecture, 3 hours; discussion, 1 hour.

Intensive theoretical and laboratory instruction in solid-state device and integrated circuit fabrication. Topics include 1) semiconductor material properties and characterization; 2) phase diagrams; 3) diffusion; 4) thermal oxidation; 5) vacuum processes; 6) thin-film deposition; 7) scanning electron microscopy. Both gallium arsenide and silicon technologies are presented.

#### **220B-C. Semiconductor Device Processing (4-4) HU**

*Prerequisite:* ECE 220A.

Same course as Materials 215B-C. Lecture, 3 hours; discussion 1 hour.

Continued theoretical and laboratory instruction in the fundamentals, the design, the fabrication, and the characterization of junction and field-effect devices. Topics will include bipolar characterization, design, fabrication, and testing. The laboratory effort initiated in ECE 220A will be continued in these two quarters.

#### **221A. Semiconductor Device Physics I (4) MISHRA**

*Prerequisites:* ECE 132 and 162A-B. Lecture, 4 hours.

Band diagrams of P-N junctions and heterojunctions; current flow by drift and diffusion; bipolar transistors; recombination and generation. Schottky barriers; heterostructures.

#### **221B. Semiconductor Device Physics II (4) MISHRA**

*Prerequisites:* ECE 215A and 221A. Lecture, 4 hours.

More advanced continuation of ECE 221A: field effect transistors, quantum wells and superlattices; tunneling; avalanche breakdown; physical limitations of bipolar and field effect transistors; two-dimensional current flow problems.

#### **224A. VLSI Project Design (4) BREWER**

*Prerequisite:* ECE 124A or equivalent and ECE 124D/256C

Design, planning and layout of a CMOS/Mixed-Signal VLSI Integrated Circuit for fabrication, characterization and test. Layout rules, topological, and physical issues in the design of integrated systems. Student teams plan, design and test a VLSI project.

#### **224B. VLSI Project Testing (4) BUTNER**

*Prerequisite:* ECE 224A. Lecture, 2 hours; laboratory, 2 hours.

Test equipment and testing techniques. Methods for diagnosing design problems. Students perform laboratory testing of their fabricated designs from ECE 224A.

#### **225. High Speed Digital Integrated Circuit Design (4) BANERJEE**

*Prerequisite:* ECE 124A or 137A. Lecture, 4 hours.

Advanced digital VLSI design: CMOS scaling, nanoscale issues including variability, thermal management, interconnects, reliability; non-clocked, clocked and self-timed logic gates; clocked storage elements; high-speed components, PLLs and DLLs; clock and power distribution; memory systems; signaling and I/O design; low-power design.

#### **226. Level Set Methods (4) GIBOU**

*Prerequisite:* Computer Science 211C or Chemical Engineering 211C or ECE 210C or ME 210C.

Same course as Chemical Engineering 226, Computer Science 216, and ME 216.

Mathematical description of the level set method and design of the numerical methods used in its implementations (ENO-WENO, Godunov, Lax-Friedrich, etc.). Introduction to the Ghost Fluid Method. Applications in CFD. Materials Sciences, Computer Vision and Computer Graphics.

#### **227A. Semiconductor Lasers I (4) COLDREN**

*Prerequisites:* ECE 162A-B-C or 144. Lecture, 4 hours.

Review of semiconductor physics, growth technology, and materials properties; double-heterostructure and quantum-well laser structures; carrier and photon rate equations; light vs. current characteristics; scattering and transmission matrices; compound cavity, distributed Bragg reflector, and distributed feedback lasers.

#### **227B. Semiconductor Lasers II (4) COLDREN**

*Prerequisites:* ECE 227A and 215A. Lecture, 4 hours.

Gain and spontaneous emission vs. injection current in semiconductors; nonradiative recombination; strained-layer quantum wells. Dynamic characteristics of lasers including differential and large signal analysis of the rate equations; relative intensity noise and linewidth; carrier transport and feedback effects.

#### **227C. Photonic Integrated Circuits (4) COLDREN**

*Prerequisites:* ECE 227A-B. Lecture, 4 hours.

Perturbation and coupled-mode analysis; DFB lasers revisited; directional couplers; modal excitation. Dielectric waveguide analysis techniques; waveguide radiation losses. Photonic integrated circuit examples, including tunable lasers with in-line gratings and contra- and co-directional couplers; ring lasers; numerical analysis techniques.

#### **228A. Fiber Optic Communications (4) BOWERS**

*Prerequisites:* ECE 162A-B-C, 135, 144. Lecture, 4 hours.

Optical fiber structures and guided modes. Effect of dispersion, attenuation and fiber nonlinearities. Basic transmission design including loss and rise time budgets. Optical transmission system essentials and requirements. Introduction to WDM and TDM components and technologies.

#### **228B. Fiber Optic Components and Systems (4) BOWERS**

*Prerequisite:* ECE 228A. Lecture, 4 hours.

Photodetector design and receiver characteristics. Optical transmitters, optical amplifiers, optical isolators, optical switches, wavelength converters, regenerators, optical multiplexers, and demultiplexers. Advanced transmission link design and performance including bit error rate and signal to noise ratio and fiber transmission impairments.

#### **228C. Optical Networks (4) BOWERS**

*Prerequisite:* ECE 228B. Lecture, 4 hours.

Introduction to optical network architectures including long-haul, wide-area, metro and access networks. First generation networks including SONET and Gigabit Ethernet. Second generation networks including optical circuit switched network concepts, control plane, protection switching, routing wavelength assignment, and network management and control.

#### **229. Hybrid Systems (4) HESPANHA**

*Prerequisite:* graduate standing in mechanical engineering, chemical engineering, electrical & computer engineering, or computer science.

*Recommended preparation:* ECE 147A or similar course.

Introduction to systems that combine continuous dynamics with discrete logic. Topics include a modeling framework that combines elements from automata theory and differential equations, simulation tools, analysis and design techniques for hybrid systems and applications of hybrid control systems.

#### **230A-B. Linear Systems I, II (4-4) HESPANHA, BAMIEH**

*Prerequisites:* ME 210A (for 230A): ECE 140; and, ECE 230A or ME 243A; and ME 210A (for 230B).

Same course as ME 243A-B. Lecture, 4 hours.

Internal and external descriptions. Solution of state equations. Controllability and observability realizations. Pole assignment, observers; modern compensator design. Disturbance localizations and decoupling. Least-squares control. Least-squares estimation; Kalman filters; smoothing. The separation theorem; LQG compensator design. Computational considerations. Selected additional topics.

#### **232. Introductory Robust Control with Applications (4) SMITH, KHAMMASH**

*Prerequisites:* ECE 230A or ME 255A; and ECE 230B or ME 243B (may be taken concurrently).

Same course as ME 256.

Robust Control theory; uncertainty modeling;

stability of systems in the presence of norm-bounded perturbations; induced norm performance problems; structured singular value analysis; H-infinity control theory; model reduction; computer simulation based design project involving practical problems.

#### **234. Modeling, Identification, and Validation for Control (4) SMITH**

*Prerequisite:* ECE 230A. Lecture, 3 hours.

Parametric and non-parametric models, open and closed-loop identification, bias and variance effects, model order selection, probing signal design, subspace identification, closed-loop probing, autotuning, model validation, iterative identification and design.

#### **235. Stochastic Processes in Engineering (4) ILTIS**

*Prerequisites:* ECE 140; graduate standing. Lecture, 4 hours.

A first-year graduate course in stochastic processes, including: review of basic probability; Gaussian, Poisson, and Wiener processes; wide-sense stationary processes; covariance function and power spectral density; linear systems driven by random inputs; basic Wiener and Kalman filter theory.

#### **236. Nonlinear Control Systems (4) TEEL**

Same course as ME 236.

*Recommended preparation:* ECE 230A. Lecture, 4 hours.

Analysis and design of nonlinear control systems. Focus on Lyapunov stability theory, with sufficient time devoted to contrasts between linear and nonlinear systems, input-output stability and the describing function method.

#### **237. Nonlinear Control Design (4) TEEL**

*Prerequisite:* ECE 236 or ME 236.

Same course as ME 237. Lecture, 4 hours.

Stabilizability by linearization and by geometric methods. State feedback design and input/output linearization. Observability and output feedback design. Singular perturbations and composite control. Backstepping design of robust controllers for systems with uncertain nonlinearities. Adaptive nonlinear control.

#### **238. Advanced Control Design Laboratory (4) SMITH**

*Prerequisites:* ECE 230A; and, ECE 232A or ECE 237 or ME 237 or ECE 249 or ME 270A or Chemical Engineering 252. Lecture, 2 hours; laboratory, 6 hours.

A laboratory course requiring students to design and implement advanced control systems on a physical experiment. Experiments from any engineering or scientific discipline are chosen by the student.

#### **240A. Optimal Estimation and Filtering (4) SHYNK**

*Prerequisites:* ECE 140 and 210A. Lecture, 4 hours.

Optimal estimation concepts and theory (minimum variance, least-squares, and maximum likelihood estimation), optimal recursive algorithms for discrete- and continuous-time filtering of noisy signals and data. Wiener and Kalman filters, stability of recursive optimal filtering algorithms, modeling errors in recursive filters.

#### **241. Multimedia Compression (4) GIBSON**

*Prerequisites:* ECE 140 or 235; and ECE 158.

Not open for credit to students who have completed MAT 221. Lecture, 4 hours.

Covers the principle standards of speech, audio, still image and video compression with emphasis on system performance, key underlying algorithms and technologies, current applications and the projected future evolution of the standards.

#### **242. Digital Signal Compression (4) ROSE**

*Prerequisites:* ECE 140 or 235; and ECE 146B. Lecture, 3 hours.

Principles and techniques of signal compression systems. Basic quantization theory, linear prediction, predictive coding, transform and subband coding, entropy coding, and vector quantization. Techniques and algorithms for efficient trade-offs between fidelity, bit-rate, and complexity. Applications to speech, audio, image and video compression.

**243A. Digital Communication Theory****(4) SHYNK***Prerequisite:* ECE 146B. Lecture, 4 hours.

Review of probability and random waveforms, optimum receiver principles, efficient signaling, bounds on error probability, convolutional coding, channel capacity, emphasis on geometric approach to signal description.

**243B. Advanced Digital Communication Theory****(4) SHYNK***Prerequisite:* ECE 243A. Lecture, 4 hours.

Bandlimited channels and optimum receiver for ISI channels; linear, decision-feedback, blind, and adaptive equalization; multichannel and multicarrier systems; spread-spectrum signals; direct sequence and frequency hopped; fading multipath channels and diversity techniques; multiuser communications.

**245. Adaptive Filter Theory****(4) SHYNK***Prerequisites:* ECE 140, 158, and 210A (may be taken concurrently). Lecture, 4 hours.

Theory and analysis of adaptive filters. Optimal filtering, linear prediction, method of least squares. Steepest-descent and Newton search methods, gradient estimation, LMS adaptive algorithm, recursive least squares. Gradient and least-squares lattice algorithms for joint-process estimation. Convergence analysis, stability conditions, time constants, misadjustment. (offered in alternate years.)

**247. System Identification****(4) STAFF***Prerequisite:* ECE 230A. Lecture, 4 hours.

On-line identification of continuous- and discrete-time systems. Linear parameterizations. Continuous gradient and least squares algorithms. Stability, persistent excitation and parameter convergence. Robust algorithms for imperfect models. Averaging. Discrete-time equation-error identifiers. Output-error methods.

**248. Kalman and Adaptive Filtering****(4) STAFF***Prerequisites:* ECE 210A, 230A and 235 (may be taken concurrently). Lecture, 4 hours.

Least-squares estimation for processes with state-space models. Wiener filters and spectral factorization. Kalman filters, smoothing and square-root algorithms. Steady-state filters. Extended Kalman filters for nonlinear models. Fixed-order and order-recursive adaptive filters.

**249. Adaptive Control Systems****(4) KOKOTOVIC***Prerequisites:* ECE 236 and 247. Lecture, 4 hours.

Models of plants with unknown parameters. Boundedness properties of parameter update laws. Adaptive linear control. Stability and robustness to modeling errors and disturbances. Backstepping state-feedback design of direct adaptive nonlinear control. Output-feedback design. Nonlinear swapping. Indirect adaptive nonlinear control.

**250. Wireless Communication and Networking****(4) RODOPLU***Prerequisites:* ECE 155A and 146A. Lecture, 4 hours.

Overview of wireless networks, characteristics of wireless medium, physical layer operation (spread spectrum, UWB, OFDM, adaptive modulation, MIMO channel), cellular planning, mobility management, energy-efficient networking, GSM, CDMA, wireless LANs, ad hoc networks, wireless geolocation systems.

**252B. Computer Arithmetic****(4) PARHAMI***Prerequisites:* ECE 152A-B. Lecture, 4 hours.

Standard and unconventional number representations. Design of fast two-operand and multi-operand adders. High-speed multiplication and division algorithms. Floating-point numbers, algorithms, and errors. Hardware algorithms for function evaluation. Pipelined, digit-serial, and fault-tolerant arithmetic processors.

**253. Embedded System Design****(4) KASTNER**

Lecture, 4 hours.

Design and application of embedded computing systems. System synthesis techniques including

partitioning, scheduling, control and data flow analysis and behavioral transformations. Reconfigurable systems. Design environments and models of computation for embedded applications. Compilation for embedded microprocessors.

**254A. Advanced Computer Architecture: Supercomputers****(4) MELLIAR-SMITH***Prerequisite:* ECE 154. Lecture, 4 hours.

Design and application aspects of high-performance uniprocessors and shared memory multiprocessors. Memory design issues: cache memories, address translation, interleaving. Processor design issues: instruction sets, pipelining, vector processing. Software issues: explicit/implicit vectorization, vector-processing languages, optimizing compilers. Case studies of designs and applications.

**254B. Advanced Computer Architecture: Parallel Processing****(4) PARHAMI***Prerequisite:* ECE 254A. Lecture, 4 hours.

The nature of concurrent computations. Idealized models of parallel systems. Practical realization of concurrency. Interconnection networks. Building-block parallel algorithms. Algorithm design, optimality, and efficiency. Mapping and scheduling of computations. Example multiprocessors and multicomputers.

**254C. Advanced Computer Architecture: Distributed Systems****(4) MELLIAR-SMITH***Prerequisite:* ECE 254A.

Multicomputers and distributed architectures. Message-based asynchronous computations. Distributed algorithms and their performance. Hardware issues: nodes, links, and communication mechanisms. Control issues: synchronization, global state determination, distributed consensus, and fault tolerance. Software issues: operating systems and languages.

**255A. VLSI Testing Techniques****(4) CHENG***Prerequisites:* ECE 152A, knowledge of C language, data structures and algorithms. Lecture, 4 hours.

Concepts, algorithms and design techniques for VLSI testing. Fault modeling, fault simulation, automatic test generation, design for testability, built-in self test, testability analysis, delay testing and synthesis for testability.

**255B. VLSI Design Validation****(4) WANG***Prerequisites:* ECE 255A, knowledge of C language, data structures and algorithms; consent of instructor. Lecture, 4 hours.

Theories and concepts in verification. Verification tools and methodologies. Functional verification, equivalence checking, symbolic simulation, error modeling, verification coverage, silicon debug, on-chip validation, test and verification.

**256A. Introduction to Design Automation****(4) MAREK-SADOWSKA***Prerequisites:* ECE 124A or ECE 224A; knowledge of C language; Algorithms and Data Structures, equivalent to Computer Science 130A-B. Lecture, 3 hours; laboratory, 2 hours.

Overview of physical level design automation. Partitioning, placement, routing and structured design of VLSI and PC-board structures. Techniques will include graph theoretic algorithms, integer linear programming, force-directed and simulated annealing heuristics.

**256B. Logic Design Automation****(4) BREWER***Prerequisite:* ECE 256A. Lecture, 3 hours; laboratory, 2 hours.

CAD algorithms for VLSI logic and module level design. Special attention paid to timing, area, and power trade-offs. Cell design systems and associated lab with state of the art VLSI design tools. (W)

**256C. Advanced VLSI Architecture and Design****(4) STAFF***Prerequisite:* ECE 124A or equivalent or ECE 256A or 256B

Large scale VLSI design with attention to performance constraints in real-world designs. Topics

include: circuit modeling, communication parasitics, architecture optimization, and packaging. Large scale project will be fabricated using silicon compilation tools.

**256D. Algorithmic Logic Synthesis****(4) MAREK-SADOWSKA***Prerequisite:* ECE 256A. Lecture, 4 hours.

Companion course for ECE 256B. Algorithmic extension of logic synthesis and techniques. Topics covered include: two and multilevel minimization, technology mapping, logic partitioning, and testable logic.

**257A. Fault Tolerant Computing****(4) PARHAMI***Prerequisites:* ECE 152A-B. Lecture, 3 hours.

Basic concepts of dependable computing. Reliability of nonredundant and redundant systems. Dealing with circuit-level defects. Logic-level fault testing and tolerance. Error detection and correction. Diagnosis and reconfiguration for system-level malfunctions. Degradation management. Failure modeling and risk assessment.

**258A. Advanced Digital Signal Processing****(4) STAFF***Prerequisite:* ECE 158. Lecture, 4 hours.

Digital filter design, discrete random signals, effects of finite word length arithmetic, fast Fourier transform and applications, power spectrum estimation.

**258B. Multirate Digital Signal Processing****(4) STAFF***Prerequisites:* ECE 158 and ECE 258A. Lecture, 4 hours.

Multirate digital filter theory, polyphase decomposition, decimator and interpolator design, efficient implementations, orthogonal transforms, wavelet transform, analysis and synthesis filter banks, quadrature mirror filter banks, transmultiplexer, subband decomposition, applications.

**258C. VLSI Digital Signal Processing Systems****(4) STAFF***Prerequisites:* ECE 158 and ECE 258A. Lecture, 4 hours.

Characteristics and representations of signal processing programs, iteration bound, pipelining and parallel processing, retiming and unfolding transformations, fast convolution algorithms, algorithmic strength reductions in filters and transforms. (offered every even-numbered year)

**259A. Digital Speech Processing****(4) RABINER***Prerequisite:* ECE 158 and ECE 242. Lecture, 4 hours.

Speech sounds, acoustic phonetics, speech production and perception. Digital filter modeling of the vocal tract as a lossless tube. Short-time characteristics of speech in the time and frequency domains. Waveform and linear predictive coding of speech. Speech synthesis and recognition.

**259B. Fundamentals of Speech Recognition****(4) RABINER***Prerequisite:* ECE 158 and ECE 242. Lecture, 4 hours.

Course covers the fundamental design principles of automatic speech recognition systems, including speech detection, time alignment and normalization (including dynamic time warping methods), distortion measures, the Hidden Markov Model (HMM), grammar networks and the use of Finite State Network representations. (Offered alternate years.)

**260A. Principles of Quantum Electronics****(4) YEH***Prerequisite:* ECE 144A or 162C. Lecture, 4 hours.

Energy levels in atoms, ions, and molecules. Interaction between radiation and quantized systems. Stimulated emission devices. Optical resonators. Lasers. (offered alternate years)

**267. Confined Electrons and Photons in Semiconductor Structures****(3) PETROFF***Prerequisite:* Materials 162A-B or ECE 162A-B.

Same course as Materials 267. Lecture, 3 hours.

The properties of 1D, 2D and 3D confined electrons in semiconductor are reviewed. Properties of photons in microcavities and photonic crystals are introduced. Applications of photonic crystals to light

extraction and modifications of the emitter properties are developed.

### 271A. Principles of Optimization

(4) CHANDRABEKARAN

Prerequisite: ECE 210A (may be taken concurrently).  
Lecture, 4 hours.

Linear programming: simplex and revised simplex method, duality theory, primal-dual algorithms, Karmarkar's algorithm. Network flow problems: max-flow/min-cut theorem, Ford-Fulkerson algorithm, shortest path algorithms. Complexity and NP-completeness theory: the classes of P and NP, reductions between NP-complete problems, pseudopolynomial and approximation algorithms.

### 271B. Numerical Optimization Methods

(4) STAFF

Prerequisite: ECE 210A. Lecture, 4 hours.

Unconstrained nonlinear problems: basic properties of solutions and algorithms, global convergence, convergence rate, and complexity considerations. Constrained nonlinear problems: basic properties of solutions and algorithms. Primal, penalty and barrier, cutting plane, and dual methods. Computer implementations.

### 271C. Optimal Control of Dynamic Systems

(4) BAMIEH

Prerequisite: ECE 230A or ME 243A or equivalent

Calculus of variations and Gateaux and Frechet derivatives. Optimization in dynamic systems and Pontryagin's principle. Invariant Imbedding and deterministic and stochastic Dynamic Programming. Numerical solutions of optimal control problems. Min-max problems and differential games. Extensive treatment of Linear Quadratic Problems.

### 277B. Pattern Recognition

(4) ROSE

Prerequisites: ECE 130C and 140. Lecture, 4 hours.

Principles and design of pattern recognition systems. Statistical classifiers: discriminant functions; Bayes, minimum-risk, k-nearest neighbors, perceptrons. Clustering and estimation; criteria; k-means, fuzzy, hierarchical, graph-theoretic, simulated and deterministic annealing; maximum likelihood and Bayesian methods; nonparametric methods. Overview of applications.

### 278A. Digital Image Processing

(4) MANJUNATH

Prerequisite: ECE 158 or ECE 178. Lecture, 3 hours; laboratory, 3 hours.

Two-dimensional signals and systems. Two-dimensional Fourier and z-transforms. Discrete Fourier transform, two-dimensional digital filters. Image processing basics, image enhancement and restoration. Special image processing software available for laboratory experimentation.

### 278C. Imaging Systems

(4) LEE

Prerequisites: ECE 158 and 178. Lecture, 4 hours.

Generalized holography, backward techniques, resolution limit, X-ray tomography, diffraction tomography, NMR imaging, synthetic-aperture radar, active sonar imaging, acoustic microscopy, imaging algorithms, motion estimation and tracking.

### 279. Computer System Performance Evaluation

(4) STAFF

Prerequisite: ECE 140, ECE 154, and Computer Science 170.

Overview of the evaluation of computer system performance. Measurement, simulation, and analytic techniques for performance analysis. System work load characterization. Examples of performance evaluation for system selection, tuning, and design. Evaluation of program performance.

### 281B. Advanced Topics in Computer Vision

(4) MANJUNATH

Prerequisite: ECE 181B. Lecture, 3 hours.

Same course as Computer Science 281B.

Advanced topics in computer vision: image sequence analysis, spatiotemporal filtering, camera calibration and hand-eye coordination, robot navigation, shape representation, physically-based

modeling, multi-sensory fusion, biological models, expert vision systems, and other topics selected from recent research papers.

### 282. Error Correcting Codes

(4) ROSE

Prerequisite: ECE 130C or 140. Lecture, 3 hours.

Principles and techniques for combating channel errors in data transmission or storage. Introduction to Galois fields. Linear block codes (particularly Hamming, BCH, Reed-Solomon). Convolution codes. Encoding and decoding algorithms (including spectral methods, maximum likelihood and Viterbi decoding.)

### 290. Ethics in Academic and Industrial Research

(2) SMITH

Prerequisite: consent of instructor. Lecture, 2 hours.

Case study/analysis format addressing ethical issues in research conduct: moral reasoning, authorship, scholarship, copyright, misconduct, fraud, falsification, mentor/protege relationships, confidentiality, patents, consulting, conflicts of interest, funding and control of research, reviewing and editing, sexual relationships in the workplace.

### 293. Internship in Industry

(1-6) STAFF

Prerequisite: consent of department.

May be repeated to a maximum of 6 units.  
Variable hours.

Special projects for selected students. Offered in conjunction with engineering practice in selected industrial and research firms, under direct faculty supervision.

### 295. Group Studies: Controls, Dynamical Systems, and Computation

(1) STAFF

Same course as Chemical Engineering 295, Computer Science 592, and ME 295. Seminar, 1 hour.

A series of weekly lectures given by university staff and outside experts in the fields of control systems, dynamical systems, and computation.

### 493. Internship in Industry

(1-12) STAFF

Prerequisite: Graduate student standing; open to EE and computer engineering majors only.

Special projects for selected students. Offered in conjunction with engineering practice in selected industrial and research firms, under direct faculty supervision.

### 502. Teaching of Electrical and Computer Engineering

(1-4) STAFF

Open to electrical and computer engineering teaching assistants only. No unit credit allowed toward advanced degree. Variable hours.

Procedures and techniques for teaching electrical engineering or computer engineering gained through actual teaching of lecture courses, leading discussion sections, and/or teaching engineering laboratories. Meetings will be held as needed to discuss problems, methods, and procedures.

### 594AA-ZZ. Special Topics in Electrical and Computer Engineering

(1-5) STAFF

Prerequisites: consent of instructor and graduate status.

May be repeated for credit if there is no duplication of course content. Seminar, 1-5 hours.

Instruction in these courses may be carried out by lecture, or by laboratory, or by a combination of these. These courses provide a study of topics of current interest in various areas of electrical and computer engineering. Special topics are coded as follows (check with department for quarters offered):

- A. Circuits
- AA. Micro-Electro-Mechanical Systems
- B. Systems Theory
- BB. Computer Engineering
- C. Communication Systems
- D. Control Systems
- E. Signal Processing
- F. Solid State
- G. Fields and Waves
- H. Quantum Electronics
- I. Microwave Electronics
- J. Switching Theory

- K. Digital Systems Design
- L. Computer Architecture
- M. Computer Graphics
- N. Pattern Recognition
- O. Microprocessors and Microprocessor-based Systems
- P. Simulation
- Q. Imaging Systems and Image Processing
- R. General
- S. Speech
- T. Robot Control
- U. Optoelectronics
- V. Scientific Computation
- W. Computer Network
- X. Distributed Computation
- Y. Numerical Differential Equations
- Z. Nanotechnology

### 595AA-ZZ. Group Studies in Electrical and Computer Engineering

(1) STAFF

Prerequisite: consent of instructor.

No unit credit allowed toward degree. May be repeated for enrollment credit if there is no duplication of course content. Seminar, 1 hour.

Instruction in research group meetings carried out by lecture, by laboratory, or by a combination of the two. Courses provide a critical review of research in various areas of electrical and computer engineering.

### 596. Directed Research

(2-12) STAFF

Research, either experimental or theoretical, may be undertaken by properly qualified graduate students under the direction of a faculty member.

### 597. Individual Studies for M.S. Comprehensive Examinations and Ph.D. Examinations

(1-12) STAFF

No unit credit allowed toward advanced degree. Enrollment limited to 24 units per exam.

Individual studies for M.S. comprehensive examinations and Ph.D. examinations. Maximum of 12 units per quarter. S/U grading. Instructor is normally student's major professor or chair of doctoral committee.

### 598. Master's Thesis Research and Preparation

(1-12) STAFF

Prerequisite: consent of graduate advisor.

For research underlying the thesis and writing of the thesis.

### 599. Ph.D. Dissertation Research and Preparation

(1-12) STAFF

Prerequisite: consent of chair of student's doctoral committee.

Research and preparation of dissertation.

## Faculty

\* Kevin C. Almeroth, Ph.D., Georgia Institute of Technology, Professor

Glenn E. Beltz, Ph.D., Harvard, Professor

\* **John E. Bowers**, Ph.D., Stanford University, Professor

\* **Steven P. DenBaars**, Ph.D., University of Southern California, Professor

**Edward N. Dodson**, Ph.D., Stanford University, Lecturer

\* **Gary S. Hansen**, Ph.D., University of Michigan, Associate Professor

\* **Keith T. Kedward**, Ph.D., University of Wales, Professor

\* **David Seibold**, Ph.D., Michigan State University, Professor

\* *Technology Management Program faculty*

The Engineering Sciences program at UCSB serves as a focal point for the cross-disciplinary educational environment that prevails in each of our five degree-granting undergraduate programs (chemical engineering, computer engineering, computer science, electrical engineering, and mechanical engineering). The courses offered in this “department” are designed to cultivate well-educated, innovative engineers and scientists with excellent management and entrepreneurial skills and attitudes oriented to new technologies.

One of the missions of the Engineering Sciences program is to provide coursework commonly needed across other educational programs in the College of Engineering. For example, courses in computer programming, computation, ethics, engineering writing, engineering economics, science communication to the public, and even an aeronautics-inspired art course are offered.

## Engineering Sciences Courses

### LOWER DIVISION

#### 3. Introduction to Matlab and C Programming

(3) STAFF

*Prerequisites:* Open to chemical engineering, electrical engineering, and mechanical engineering majors only.

General philosophy of programming for engineering majors, with introductions to Matlab, the C programming language, and the Linux operating system.

#### 10H. Engineering Honors Seminar

(1) BELTZ, TIRRELL, MISHRA, HANSEN

*Prerequisites:* enrollment in College of Engineering Honors Program; lower-division standing.

An interdisciplinary examination of selected topics, texts, theories, and/or methods in engineering. Particular course focus is determined by the instructor(s) each time the course is offered.

#### 99. Introduction to Research

(1-3) STAFF

*Prerequisite:* Consent of instructor.

May be repeated for credit to a maximum of 6 units. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. Directed study to be arranged with individual faculty members. Course offers exceptional students an opportunity to participate in a research group.

### UPPER DIVISION

#### 100. Engineering Economic Analysis

(3) DODSON

*Prerequisite:* Upper-division standing in Engineering. Integration of economics into the evaluation

of engineering projects; economic considerations in engineering project management and decision-making.

#### 101. Ethics in Engineering

(3) STAFF

*Prerequisite:* senior standing in engineering.

The nature of moral value, normative judgment, and moral reasoning. Theories of moral value. The engineer's role in society. Ethics in professional practice. Safety, risk, responsibility. Morality and career choice. Code of ethics. Case studies will facilitate the comprehension of the concepts introduced. (W,S)

#### 102AA-ZZ. Special Topics in Engineering, Business, and Society

(1) STAFF

*Prerequisites:* Upper-division standing.

May be repeated for credit if there is no duplication of course content.

A series of weekly lectures given by university staff and outside experts in all fields of new technology management.

#### 103. Advanced Engineering Writing

(4) STAFF

*Prerequisites:* Writing 50 or 50E; upper-division standing.

Practice in the forms of communication—contractual reports, proposals, conference papers, oral presentations, business plans—that engineers and entrepreneurial engineers will encounter in professional careers. Focus is on research methods, developing a clear and persuasive writing style, and electronic document preparation.

#### 160. Science for the Public

(1-4) STAFF

*Prerequisite:* consent of instructor.

Same course as Physics 160K. Open to graduate students in science and engineering disciplines and to undergraduate science and engineering majors. May be repeated for credit to a maximum of 12 units, but only 4 units may be applied to the major.

Provides experience in communicating science and technology to nonspecialists. The major components of the course are field work in mentoring, a biweekly seminar, presentations to precollege students and to adult nonscientists, and end-of-term research papers.

#### 177. Art and Science of Aerospace Culture

(4) STAFF

*Prerequisites:* upper-division standing; consent of instructor.

Same course as Art Studio 177.

Interdisciplinary course/seminar/practice for artists, academics, engineers, and designers interested in exploring the technological aesthetic, cultural, and political aspects of the space side of the aerospace complex. Design history, space complex aesthetics, cinema intersections, imaging/telecommunications, human spaceflight history, reduced/alternating gravity experimentation, space systems design/utilization.

#### 182. Introduction to Health Care and Biomedical Technology

(3) KOHL

*Prerequisite:* upper-division standing.

Same course as MCDB 182.

Course offered in conjunction with Sansum-Santa Barbara Clinic and Cottage Hospitals and involves a series of lecture/discussions dealing with various aspects of health delivery and modern biotechnology. Students spend time working with a physician or medical research scholar.

#### 185A. The Art of the CEO: Business Skills for Future Leaders

(4) HANSEN

*Prerequisite:* Writing 2 or 2E; and,

Writing 50 or 50E or 109AA-ZZ; senior standing.

An introductory business course in strategic thinking, negotiations, marketing, finance and modeling skills that prepare engineering, science and non-technical students for successful entry into business. Class uses case studies, lectures, and computer simulation.

#### 185B. New Venture Creation: Entrepreneurship

(4) HANSEN

*Prerequisite:* Writing 2 or 2E; and, Writing 50 or 50E

or 109AA-ZZ; senior standing.

Overview of the new venture creation process. Analysis of new business opportunities, development of new business value propositions, team building, venture financing, new venture planning, managing and protecting intellectual property, business formation, and other topics relevant to the entrepreneurial process.

#### 185C. Business Planning for New Technology Ventures

(4) HANSEN

*Prerequisite:* Engineering 185A; and, Engineering 185B or 185D; senior standing.

Analysis and creation of a business plan for a new business venture including demand forecasting, financial modeling, selling of the new business idea, and other issues for current business conditions.

#### 185D. New Product Development

(4) BOWERS

*Prerequisite:* senior standing.

New product development requires technical and non-technical business persons to work across disciplines. Instruction is provided in a wide range of topics concerning customer driven product innovation. Students learn new product development processes, tools, techniques and organizational structures.

#### 185F. Business Skills: Asia: New Opportunities for Technology Businesses

(4) STAFF

*Prerequisite:* Upper-division standing.

Use analytical frameworks for assessing technology business environments and sustainability within Asia. Establish historical context; governmental structures, policy and influence; capability investments and yield by local and foreign companies; operating models in leveraging Asian economies' resources and related experiences.

#### 191AA-ZZ. Professional Seminar in New Technology Management

(2) STAFF

*Prerequisite:* Upper-division standing.

May be repeated for credit if there is no duplication of course content.

Courses provide for the study of topics of current interest in the areas of entrepreneurship, business, engineering management, ethics, social, political, and other issues related to the successful practice of engineering.

#### 192A. Entrepreneurial Opportunities in Healthcare and Life Sciences

(2) STAFF

*Prerequisite:* senior standing.

Not open for credit to students who have completed Engineering 191F.

Expert guest lecturers address current products and services. Students address the identification of market opportunities with an appreciation of the needs and requirements of the healthcare industry.

#### 192B. Designing Solutions for Healthcare and Life Sciences Opportunities

(2) STAFF

*Prerequisite:* senior standing.

Students identify specific solutions for business opportunities in the healthcare industry considering technological and market feasibility. Interaction with healthcare professionals and industry executives.

#### 192C. Critical Issues in Early Stage Healthcare and Life Science Companies

(2) STAFF

*Prerequisite:* senior standing.

Course includes visiting speakers and field visits to facilitate learning about the critical issues in early stage, life science related companies.

#### 193A. Entrepreneurial Opportunities in IT and Telecom

(2) STAFF

*Prerequisite:* Upper-division standing.

This course is intended for students with an interest in the identification of new products and services in the IT and Telecom environment. The course involves interaction with industry professionals and executives.

#### 193B. Designing Solutions for IT and Telecom

(2) STAFF

*Prerequisite: Upper-division standing.*

Students design specific solutions for business opportunities in the IT and Telecom industry considering technological and market feasibility.

### 193C. Critical Issues in Early Stage IT and Telecom Companies

(2) STAFF

*Prerequisite: Upper-division standing.*

Course includes visiting speakers and field visits to facilitate learning about the critical issues in early stage Telecom related companies.

### 199. Independent Studies in Engineering (1-5) STAFF

*Prerequisite: Upper-division standing; consent of instructor.*

Students must have a minimum 3.0 GPA for the preceding three quarters. May be repeated for credit to a maximum of 10 units.

Directed individual study.

## GRADUATE COURSES

### 202AA-ZZ. Special Topics in Engineering, Business and Society

(1) STAFF

*Prerequisite: graduate standing.*

May be repeated for credit if there is no duplication of course content.

A series of weekly lectures given by university staff and outside experts in all fields of new technology management.

### 285A. The Art of the CEO: Business Skills for Future Leaders

(4) HANSEN

An introductory business course in strategic thinking, negotiations, marketing, finance and modeling skills that prepare engineering, science and non-technical students for successful entry into business. Uses case studies, lectures, and computer simulation.

### 285B. New Venture Creation: Entrepreneurship

(4) HANSEN

Overview of the new venture creation process. Analysis of new business opportunities, development of new business value propositions, team building, venture financing, new venture planning, managing and protecting intellectual property, business formation, and other topics relevant to the entrepreneurial process.

### 285C. Business Planning for New Technology Ventures

(4) HANSEN

*Prerequisites: Engineering 285A; and, Engineering 285B or 285D.*

Analysis and creation of a business plan for a new business venture including demand forecasting, financial modeling, selling of the new business idea and other issues for current business conditions.

### 285D. New Product Development

(4) BOWERS

New product development requires technical and non-technical business persons to work across disciplines. Instruction is provided in a wide range of topics concerning customer driven product innovation. Students learn new product development processes, tools, techniques and organizational structures.

### 285E. Managing for Innovation

(4) SEIBOLD

*Prerequisite: graduate standing.*

Examination of communication and key management functions: envisioning and strategic planning; creating high performance teams; establishing appraisal/reward systems; innovation and organizational change. Emphasis on leading innovative technical people; leadership that fosters entrepreneurship and intrapreneurship; new forms of organizing.

### 285F. Business Skills: Asia: New Opportunities for Technology Businesses

(4) STAFF

*Prerequisite: graduate standing.*

Students use analytical frameworks for assessing technology business environments and sustainability within Asia. Establish historical context; governmental

structures, policy and influence; capability investments and yield by local and foreign companies; operating models in leveraging Asian economies' resources and related experiences.

### 291AA-ZZ. Professional Seminar in New Technology Management

(2) STAFF

May be repeated for credit if there is no duplication of course content.

Courses provide for the study of topics of current interest in the areas of entrepreneurship, business, engineering management, ethics, social, political, and other issue related to the successful practice of engineering.

### 292A. Entrepreneurial Opportunities in Health Care and Life Sciences

(2) STAFF

Expert guest lecturers address current products and services. Students address the identification of market opportunities with an appreciation of the needs and requirement of the healthcare industry.

### 292B. Designing Solutions for Healthcare and Life Sciences Opportunities

(2) STAFF

Students identify specific solutions for business opportunities in the healthcare industry considering technological and market feasibility. Interaction with healthcare professionals and industry executives.

### 292C. Critical Issues in Early Stage Healthcare and Life Science Companies

(2) STAFF

Course includes visiting speakers and field visits to facilitate learning about the critical issues in early stage, life-science related companies.

### 293A. Entrepreneurial Opportunities in IT and Telecom

(2) STAFF

*Prerequisite: graduate standing.*

Intended for students with an interest in the identification of new products and services in the IT and Telecom environment. The course involves interaction with industry professionals and executives.

### 293B. Designing Solutions for IT and Telecom

(2) STAFF

*Prerequisite: graduate standing.*

Students design specific solutions for business opportunities in the IT and Telecom industry considering technological and market feasibility.

### 293C. Critical Issues in Early Stage IT and Telecom Companies

(2) STAFF

*Prerequisite: graduate standing.*

Course includes visiting speakers and field visits to facilitate learning about the critical issues in early stage Telecom related companies.

thermal barrier coatings, piezospectroscopy, mechanics of microelectronics) \*2

**Larry A. Coldren**, Ph.D., Stanford University, Kavli Professor in Optoelectronics and Sensors, Director of Optoelectronics Technology Center (semiconductor integrated optics, optoelectronics, molecular beam epitaxy, microfabrication) \*1

**Steven P. DenBaars**, Ph.D., University of Southern California, Professor (metalorganic chemical vapor deposition (MOCVD) of semiconductors, IR to blue lasers and LEDs, high power electronic materials and devices) \*1

**Anthony Evans**, Ph.D., Imperial College, London, Professor, Director of Center for Multifunctional Materials and Structures (thermostructural materials, ultralight structures, multifunctional materials and devices, actuating structures) \*2

**Arthur C. Gossard**, Ph.D., UC Berkeley, Professor (epitaxial growth, artificially synthesized semiconductor microstructures, semiconductor devices) \*1

**Craig Hawker**, Ph.D., University of Cambridge, Professor, Director of Materials Research Laboratory (synthetic polymer chemistry, nanotechnology, materials science) \*5

**Alan J. Heeger**, Ph.D., UC Berkeley, Professor, Director of Institute for Polymers and Organic Solids, 2000 Chemistry Nobel Laureate (condensed-matter physics, conducting polymers) \*4

**Evelyn Hu**, Ph.D., Columbia University, Professor, Director of Institute for Quantum Engineering, Science, and Technology, Scientific Co-Director of California NanoSystems Institute (high-resolution fabrication techniques for semiconductor device structures, process-related materials damage, contact/interface studies, superconductivity) \*1

**Jacob N. Israelachvili**, Ph.D., University of Cambridge, Professor (adhesion, friction surface forces, colloids, biosurface interactions) \*3

**Edward J. Kramer**, Ph.D., Carnegie Mellon University, Professor (fracture and diffusion in polymers; polymer surfaces, interfaces, and thin films) \*3

**Herbert Kroemer**, Dr. Rer. Nat., University of Göttingen, Donald W. Whittier Professor of Electrical Engineering, 2000 Physics Nobel Laureate (device physics, molecular beam epitaxy, heterojunctions, compound semiconductors) \*1

## Faculty

**Guillermo C. Bazan**, Ph.D., Massachusetts Institute of Technology, Professor (polymer synthesis, photophysics) \*5

**Michael Chabinyk**, Ph.D., Stanford University, Professor (organic semiconductors, thin film electronics, energy conversion using photovoltaics, characterization of thin films of polymers, x-ray scattering from polymers)

**David R. Clarke**, Ph.D., University of Cambridge, Professor (electrical ceramics,

Professor (crystal mechanics, bonding, defects, mechanical properties) \*2

**Shuji Nakamura**, Ph.D., University of Tokushima, Cree Professor of Solid State Lighting and Displays (gallium nitride, blue lasers, white LEDs, solid state illumination, bulk GaN substrates)

**G. Robert Odette**, Ph.D., Massachusetts Institute of Technology, Professor (fundamental deformation and fracture, materials in extreme environments, structural reliability, and high-performance composites) \*2

**Chris Palmstrom**, Ph.D., University of Leeds, Professor (atomic level control of interfacial phenomena, in-situ STM, surface and thin film analysis, metallization of semiconductors, dissimilar materials epitaxial growth, molecular beam and chemical beam epitaxial growth of metallic compounds) \*1

**Pierre M. Petroff**, Ph.D., UC Berkeley, Professor (semiconductor interfaces, defects physics, epitaxy of self assembled quantum structures, quantum dots and nanomagnets, spectroscopy of semiconductor nanostructures) \*1

**Philip A. Pincus**, Ph.D., UC Berkeley, Professor (theoretical aspects of self-assembled biomolecular structures, membranes, polymers, and colloids) \*4

**Cyrus R. Safinya**, Ph.D., Massachusetts Institute of Technology, Professor (biophysics, supramolecular assemblies of biological molecules, non-viral gene delivery systems)

**Omar A. Saleh**, Ph.D., Princeton University, Assistant Professor (single-molecule biophysics, motor proteins, DNA-protein interactions)

**Ram Seshadri**, Ph.D., Indian Institute of Science, Associate Professor (inorganic materials, preparation and magnetism of bulk solids and nanoparticles, patterned materials)

**Hyongsuk (Tom) Soh**, Ph.D., Stanford, Assistant Professor (directed evolution of biological molecules, supramolecular assemblies, integrated biosensors) \*2

**Nicola A. Spaldin**, Ph.D., UC Berkeley, Professor (computational electronic and magnetic materials)

**James S. Speck**, Sc.D., Massachusetts Institute of Technology, Professor (nitride semiconductors, III-V semiconductors, ferroelectric and high-K films, microstructural evolution, extended defects, transmission electron microscopy, x-ray diffraction)

**Susanne Stemmer**, Ph.D., University of Stuttgart, Associate Professor (functional oxide thin films, structure-property relationships, scanning transmission electron microscopy and spectroscopy)

**Galen Stucky**, Ph.D., Iowa State University, Professor (biomaterials, composites, materials synthesis, electro-optical materials catalysis) \*5

**Matthew V. Tirrell**, Ph.D., University of Massachusetts, Auhl Professor (bioengineering, polymer science and engineering) \*3

**Chris Van de Walle**, Ph.D., Stanford University, Professor (novel electronic materials, wide-band-gap semiconductors, oxides)

**Claude Weisbuch**, Ph.D., Université Paris VII, Ecole Polytechnique-Palaiseau, Professor (semiconductor physics: fundamental and applied optical studies of quantized electronic

structures and photonic-controlled structures; electron spin resonance in semiconductors, optical semiconductor microcavities, photonic bandgap materials)

**Fred Wudl**, Ph.D., UC Los Angeles, Professor (optical and electro-optical properties of conjugated polymers, organic chemistry of fullerenes, and design and preparation of self-mending polymers)

**Francis W. Zok**, Ph.D., McMaster University, Professor (mechanical and thermal properties of materials and structures)

### Emeriti Faculty

**Anthony K. Cheetham**, Ph.D., Oxford University, Professor, (catalysis, optical materials, X-ray, neutron diffraction) \*5

**James L. Merz**, Ph.D., Harvard University, Professor Emeritus \*1

\*1 Joint appointment with the Department of Electrical and Computer Engineering.

\*2 Joint appointment with the Department of Mechanical Engineering.

\*3 Joint appointment with the Department of Chemical Engineering.

\*4 Joint appointment with the Department of Physics.

\*5 Joint appointment with the Department of Chemistry and Biochemistry.

### Affiliated Faculty

**Glenn H. Fredrickson**, Ph.D. (Chemical Engineering)

**James S. Langer**, Ph.D. (Physics)

**L. Gary Leal**, Ph.D. (Chemical Engineering)

**Glenn E. Lucas**, Ph.D. (Chemical Engineering, Mechanical Engineering)

**John McTague**, Ph.D.

**Joseph A. N. Zasadzinski**, Ph.D. (Chemical Engineering)

The Department of Materials was conceptualized and built under two basic guidelines: to educate graduate students in advanced materials and to introduce them to novel ways of doing research in a collaborative, multidisciplinary environment. Advancing materials technology today—either by creating new materials or improving the properties of existing ones—requires a synthesis of expertise from the classic materials fields of metallurgy, ceramics, and polymer science, and such fundamental disciplines as applied mechanics, chemistry, biology, and solid-state physics. Since no individual has the necessary breadth and depth of knowledge in all these areas, solving advanced materials problems demands the integrated efforts of scientists and engineers with different backgrounds and skills in a research team. The department has effectively transferred the research team concept, which is the operating mode of the high technology industry, into an academic environment.

The department has major research groups working on a wide range of advanced inorganic and organic materials, including advanced structural alloys, ceramics and polymers; high performance composites; thermal barrier coatings and engineered surfaces; organic, inorganic and hybrid semiconductor and photonic material systems; catalysts and porous materials, magnetic, ferroelectric and multiferroic materials; biomaterials and biosurfaces, including biomedically relevant systems; colloids, gels

and other complex fluids; lasers, LEDs and optoelectronic devices; packaging systems; microscale engineered systems, including MEMS. The groups are typically multidisciplinary involving faculty, postdoctoral researchers and graduate students working on the synthesis and processing, structural characterization, property evaluation, microstructure-property relationships and mathematical models relating micro-mechanisms to macroscopic behavior. The department has close collaborations with, and a number of faculty have joint appointments in, the Departments of Mechanical Engineering (mechanics and design), Chemical Engineering (fluids and environmental effects), Electrical and Computer Engineering (electronic devices), Physics, Chemistry and Biochemistry, and the BMSE Program.

### Five-Year Bachelor of Science Engineering/Master of Science Materials Program

A program combining a bachelor of science in chemical, electrical, or mechanical engineering with a master of science degree in materials provides an opportunity for outstanding undergraduates to earn both degrees in five years. Additional information about this program is available from the College of Engineering. Interested students should inform the Office of Undergraduate Studies in the College of Engineering of their intention to pursue this program in the beginning of the spring quarter of their sophomore year. Transfer students interested in the combined degree program should contact the undergraduate advising office at the earliest opportunity. In addition to fulfilling undergraduate degree requirements, B.S./M.S. degree candidates must meet Graduate Division degree requirements, including university requirements for residence and units of coursework as described in the chapter "Graduate Education at UCSB."

### Graduate Program

In addition to departmental requirements, program applicants and candidates for graduate degrees must fulfill University requirements described in the chapter "Graduate Education at UCSB."

#### Admission

Undergraduate preparation for the materials M.S./Ph.D. includes a degree in engineering, physical sciences, or mathematics. However, the breadth of the materials field requires that flexibility be built into the undergraduate educational requirements. Upper-division courses in several of the following topics are expected:

1. mathematics—24 units in advanced calculus, ordinary differential equations, special functions and complex variable theory,
2. engineering thermodynamics—9 units,
3. solid state physics—9 units,
4. physical chemistry—12 units,
5. materials science—12 units in mechanical properties, electronic properties, structure, processing,
6. electronics—12 units,
7. mechanics—9 units in advanced strength of materials, elasticity, and structures.

Incoming students are not expected to meet all

upper-division requirements, but must satisfy the requirements in mathematics and at least two other areas representing about one full year of undergraduate study. The areas that should be covered will depend on the student's chosen graduate field of study within materials. Some deficiencies can be satisfied during the first year of graduate study by taking upper-division undergraduate courses in the new area of specialization.

Students with a B.S. degree (having a 3.2 minimum grade-point average) are eligible to be admitted to M.S./Ph.D. status and those with an M.S. degree (having a 3.5 minimum grade-point average) are eligible to be admitted to Ph.D. status. The department gives priority for admission to students who are interested in academics and high quality research. Admission is available for all quarters, with no departmental deadlines beyond those of the Graduate Division. Satisfactory performance in the Graduate Record Examination is required. Applicants whose native language is not English must receive a score of at least 100 on the internet based Test of English as a Foreign Language (TOEFL), 600 on the paper based test, or complete the International English Language Testing System (IELTS) prior to admission to UCSB. Requests for exceptions to this requirement will be considered for those students who have completed an undergraduate or graduate education at an institution whose primary language of instruction is English.

### Master of Science—Materials

Students wishing to terminate their studies with an M.S. must do so under Plan 1. Students in the B.S./M.S. program follow Plan 2. The M.S. degree program introduces students to the knowledge needed to proceed to candidacy as well as to the nature of research and the discipline of independent work. Students wishing to continue on for the Ph.D. must achieve a 3.5 grade-point average in their coursework and pass the preliminary examination discussed below in the "Doctor of Philosophy" section.

**Plan 1.** Students in this plan are required to complete 42 units including 27 units of formal coursework, of which a minimum of 21 units must be approved 200 level courses (200-289) and the other 6 units may be approved advanced undergraduate courses not already used for credit toward a previous degree; 3 units of seminars (Materials 290); and 12 units of thesis research (Materials 598).

**Plan 2.** Students in this plan are required to complete 42 units of coursework including a minimum of 27 units from approved 200 level courses (200-289), at most 6 units of approved advanced undergraduate courses not already used for credit toward a previous degree, no fewer than 3 and no more than 6 units of independent studies or research (Materials 596), and 3 units of seminars (Materials 290).

### Doctor of Philosophy—Materials

The Department of Materials offers a program leading to a Ph.D. degree with specializations in the following major areas: electronic materials (semiconductors, superconductors, quantum structures and optoelectronic materials); inorganic materials (ferroelectrics, photonic and magnetic materials, and zeolite

molecular sieves); macro/biomolecular materials (self-assembling polymers, biopolymers, biomembranes, and conducting polymers); and structural materials (metals, ceramics, composites, and coatings, including mechanics of materials). The curriculum in each area has the flexibility needed to provide multidisciplinary educational opportunities in the field of advanced materials. Incoming students are expected to design a tentative program of study suitable to their interests and research field with the assistance of their advisor and submit it for approval to the Graduate Affairs Committee within the first two quarters of residence. Each study program consists of a specified course sequence with emphasis on lectures, laboratory experience, and seminars.

### Degree Requirements

In developing an appropriate, interdisciplinary course of study, doctoral students are expected to take all the available courses in their major area of interest as well as courses designed to broaden their knowledge of other materials. It is expected that individual students will develop their study plans in conjunction with their faculty advisors, and that the courses will be selected from the main sequence of courses (offered every year) from the four principal areas of emphasis in the department plus general courses as well as more specialized courses offered on a less frequent basis. The study plan must be approved by the faculty advisor and the department Graduate Affairs Committee. It may be modified during the course of the student's program.

Students admitted with a bachelor's degree are required to complete a minimum of 72 units of academic work distributed as follows: 42 units of 200-level courses, 15 units of seminars and/or independent studies, and 15 units of thesis research. All Ph.D. students are required to complete a series of core courses (MATRL 200A-B-C). In preparation for more advanced and specialized courses within their area of specialization, students are strongly encouraged to complete these courses during their first year of study.

Students are required to serve as teaching assistants for at least one quarter while in residence at UCSB, in either materials courses offered to undergraduate students or those departments providing courses consistent with the student's undergraduate background.

Students entering with an M.S. degree may petition to receive subject credit for certain unit requirements for the Ph.D. (up to 15 units of 200-level courses) deemed to have been fulfilled by Master's studies elsewhere. There is no foreign language requirement in either the M.S. or Ph.D. program. Doctoral students, however, are encouraged to become proficient in one or more foreign languages relevant to the technical literature in their fields. Students have the opportunity to take upper-division undergraduate courses, for which they have the necessary prerequisite qualifications, as preparation for the graduate program. Up to 8 units of such courses can be taken for credit toward the 200-level course requirements.

A preliminary examination is required for continuation in the Ph.D. program. The examination is administered one year after

the student's entrance into the program. The examination committee consists of three faculty members from the student's major field, including the student's advisor. At least two of the members must be ladder faculty with a non-zero percent appointment in Materials.

Students must pass an oral qualifying examination covering a dissertation proposal based on original research. The examination is administered two years after the student's entrance into the program. Prerequisites for the examination include successful completion of the preliminary examination, completion of the core courses (200A-B-C) with a minimum of B in each one of them, and a minimum 3.5 GPA in the graduate program. The examination committee consists of at least four faculty: at least three ladder faculty having more than a zero percent appointment in the Materials Department and at least one with no more than a zero percent appointment in the Materials Department. One member of the committee, other than the advisor, serves as the committee chair. Upon passing this examination, students advance to candidacy for the Ph.D. The examination committee typically becomes the dissertation committee. Subsequent to advancement to candidacy, students are required to report their progress to their dissertation committee at least once a year.

Students conduct original research under the supervision of their research advisor(s) and prepare a dissertation. Students submit their final draft to the dissertation committee and to the department chair. The committee ascertains the suitability of the draft. Candidates are then responsible for amendments to the dissertation based on the committee recommendations. When the dissertation is approved by the committee, the candidate presents a formal defense of the dissertation in a public seminar. Students are expected to complete a Ph.D. within five years after entry at the B.S. level and three years after M.S. level entry.

## Materials Courses

### LOWER DIVISION

#### 10. Materials in Society, the Stuff of Dreams

(4) GOSSARD

*Not open to engineering, pre-computer science, or computer science majors. Lecture, 3 hours; discussion 1 hour.*

A survey of new technological substances and materials, the scientific methods used in their development, and their relation to society and the economy. Emphasis on uses of new materials in the human body, electronics, optics, sports, transportation, and infrastructure.

### UPPER DIVISION

#### 100A. Structure and Properties I

(3) STAFF

*Prerequisites: Chemistry 1A-B; Physics 4; and, Mathematics 5A-B-C. Lecture, 3 hours.*

An introduction to materials in modern technology. The internal structure of materials and its underlying principles: bonding, spatial organization of atoms and molecules, structural defects. Electrical, magnetic and optical properties of materials, and their relationship with structure.

#### 100B. Structure and Properties II

(3) STAFF

*Prerequisite: Materials 100A.*

*Not open for credit to students who have*

completed *Materials 101*. Lecture, 3 hours.

Mechanical properties of engineering materials and their relationship to bonding and structure. Elastic, flow, and fracture behavior; time dependent deformation and failure. Stiffening, strengthening, and toughening mechanisms. Piezoelectricity, magnetostriction and thermo-mechanical interactions in materials.

### 100C. Fundamentals of Structural Evolution

(3) STAFF

*Prerequisites: Materials 100A or ECE 132; and, Materials 100B or Chemical Engineering 185 or ME 180. Lecture, 3 hours.*

An introduction to the thermodynamic and kinetic principles governing structural evolution in materials. Phase equilibria, diffusion and structural transformations. Metastable structures in materials. Self-assembling systems. Structural control through processing and/or imposed fields. Environmental effects on structure and properties.

### 101. Introduction to the Structure and Properties of Materials

(3) STAFF

*Prerequisite: upper-division standing.*

*Not open for credit to students who have completed Materials 100B.*

Introduction to the structure of engineering materials and its relationship with their mechanical properties. Structure of solids and defects. Concepts of microstructure and origins. Elastic, plastic flow and fracture properties. Mechanisms of deformation and failure. Stiffening, strengthening, and toughening mechanisms.

### 135. Biophysics and Biomolecular Materials

(3) STAFF

*Prerequisites: Physics 5 or 6C or 25.*

*Same course as Physics 135.*

Structure and function of cellular molecules (lipids, nucleic acids, proteins, and carbohydrates). Genetic engineering techniques of molecular biology. Biomolecular materials and biomedical applications (e.g., bio-sensors, drug delivery systems, gene carrier systems).

### 160. Introduction to Polymer Science

(3) KRAMER

*Prerequisite: Chemistry 109A-B.*

*Same course as Chemical Engineering 160.*

Introductory course covering synthesis, characterization, structure, and mechanical properties of polymers. The course is taught from a materials perspective and includes polymer thermodynamics, chain architecture, measurement and control of molecular weight as well as crystallization and glass transitions.

### 162A. The Quantum Description of Electronic Materials

(4) HU

*Prerequisites: ECE 130A-B and 134 with a minimum grade of C- in all; open to EE and materials majors only.*

*Same course as ECE 162A.*

Electrons as particles and waves, Schrodinger's equation and illustrative solutions. Tunneling. Atomic structure, the Exclusion Principle and the periodic table. Bonds. Free electrons in metals. Periodic potentials and energy bands. (F)

### 162B. Fundamentals of the Solid State

(4) COLDREN

*Prerequisites: ECE 162A with a minimum grade of C-; open to EE and materials majors only.*

*Same course as ECE 162B.*

Crystal lattices and the structure of solids, with emphasis on semiconductors. Lattice vibrations, electronic states and energy bands. Electrical and thermal conduction. Dielectric and optical properties. Semiconductor devices: Diffusion, P-N junctions and diode behavior.

### 185. Materials in Engineering

(3) LEVI, ODETT

*Prerequisite: Materials 100B or 101.*

*Same course as ME 185. Lecture, 3 hours.*

Introduces the student to the main families of

materials and the principles behind their development, selection, and behavior. Discusses the generic properties of metals, ceramics, polymers, and composites more relevant to structural applications. The relationship of properties to structure and processing is emphasized in every case.

### 186. Manufacturing and Materials

(3) LEVI

*Prerequisites: ME 15 and 151C; and, Materials 100B or 101.*

*Same course as ME 186. Lecture, 3 hours.*

Introduction to the fundamentals of common manufacturing processes and their interplay with the structure and properties of materials as they are transformed into products. Emphasis on process understanding and the key physical concepts and basic mathematical relationships involved in each of the processes discussed.

## GRADUATE COURSES

### 200A. Thermodynamic Foundation of Materials

(4) KRAMER

*Lecture, 4 hours.*

The microscopic statistical mechanical foundations of the macroscopic thermodynamics of materials, with applications to ideal and non-ideal gases, electrons and photons in solids, multicomponent solutions, phase equilibria in single and multicomponent systems, and capillarity.

### 200B. Electronic and Atomic Structure of Materials

(4) VAN DE WALLE

*Lecture, 4 hours.*

The free electron model; electron levels in periodic potentials. Classification of solids. Role electronic structure in atomic bonding and atomic packing, cohesion. Surfaces, interfaces, and junction effects. Semiconductors. Transition-metal compounds. Amorphous solids. Liquid crystals. Colloids and soft materials.

### 200C. Structure Evolution

(4) LEVI

*Lecture, 4 hours.*

Structure evolution. Study of phenomena underlying the evolution of structure across the relevant length and time scales in materials. Structural defects. Driving forces, mechanism and kinetics of structural change. Diffusional transport. Fundamentals of phase transformation. Crystallization. Evolution of microstructural features and patterns.

### 201. Thermodynamics and Phase Equilibria

(3) STAFF

*Prerequisite: consent of instructor.*

*Same course as ME 262. Lecture, 3 hours.*

Advanced thermodynamics with emphasis on phase equilibria, properties of solutions, and multicomponent systems.

### 203. Transition Metal Oxides

(3) CHEETHAM

*Same course as Chemistry 267. Lecture, 3 hours.*

Introduction to transition metal oxides. Ligand field theory. Structural basis of magnetism.

### 204. Introduction to Magnetism and Magnetic Materials

(3) SPALDIN

Review of elementary magnetism magnetostatics. Discussion of atomic origins of magnetism. Properties of ferro-, ferri-, para-, dia-, and antiferro-magnetics, and the theories that describe them. Magnetic phenomena, and magnetic materials in technological applications.

### 205. Wide-Band Gap Materials and Devices

(3) NAKAMURA

*Lecture, 3 hours.*

Optical and electrical properties of GaN, ZnSe, SiC, and diamond-based semiconductor materials. Theory and practical application of wide-band gap materials in devices. Materials growth techniques of MOCVD, CVD, and MBE are discussed. Applications of these materials in blue lasers, LEDs (UV, blue, green, and white) are emphasized.

### 206A. Fundamentals of Electronic Solids I

(4) KROEMER, PETROFF

*Prerequisite: ECE 162A-B.*

*Same course as ECE 215A.*

Introduction into the physics of semiconductors for beginning engineering graduate students. Crystal structure. Reciprocal lattice and crystal diffraction. Electrons in periodic structures. Energy and bands. Semiconductor electrons and probes, Fermi statistics.

### 206B. Fundamentals of Electronic Solids II

(4) GOSSARD

*Prerequisite: ECE 162A-B.*

*Same course as ECE 215B.*

Phonons, electron scattering, electronic transport, selected optical properties, heterostructures, effective mass, quantum wells, two-dimensional electron gas, quantum wires, deep levels, and crystal binding.

### 207. Mechanics of Materials

(3) STAFF

*Same course as Mechanical Engineering 219.*

*Lecture, 3 hours.*

Matrices and tensors, stress deformation and flow, compatibility conditions, constitutive equations, field equations and boundary conditions in fluids and solids, applications in solid and fluid mechanics.

### 208. Crystallography and Structure Determination

(3) STAFF

*Prerequisite: consent of instructor.*

*Not open for credit to students who have completed Materials 209B. Lecture, 3 hours.*

Topics in structure determination: structure factors, integrated intensities, data collection, the phase problem, Patterson synthesis, direct methods, structure refinement, Debye-Waller factors, thermal diffuse scattering and extinction. Rietveld analysis of powder diffraction data. Synchrotron x-rays, neutron diffraction, electron diffraction, non-crystalline materials.

### 209A. Crystallography and Diffraction Fundamentals

(3) SPECK

Diffraction theory: Fourier transformation, Schrodinger equation, Maxwell equations, kinematical theory, Fresnel diffraction, Fraunhofer diffraction, scattering of x-rays, electrons and neutrons by isolated atoms and assemblies of atoms, pair correlation and radial distribution functions. Basic symmetry operations, point groups, space groups.

### 209B. X-Ray Diffraction II: Advanced Methods

(3) SPECK

*Prerequisite: consent of instructor. Lecture, 3 hours.*

Focuses on modern diffraction techniques from crystalline materials. High resolution x-ray diffraction. Analysis of epitaxial layers. X-ray scattering theory. Simulation of x-ray rocking curves. Analysis of thin films and multiple layers. Triple-axis x-ray diffractometry. Topography. Synchrotron techniques.

### 209BL. X-Ray Diffraction I: Principles and Practice

(3) SESHADRI

*Laboratory, 3 hours.*

Exposes students to practical aspects of powder and single crystal x-ray diffraction, including the determination and refinement of crystal structures.

### 209C. Electron Microscopy II: Crystalline Materials

(3) STAFF

*Prerequisite: consent of instructor. Lecture, 3 hours.*

Electron microscopy to study defect structures, elastic and inelastic scattering, kinematic theory of image contrast, bright and dark field imaging, two-beam conditions, contrast from imperfections, dynamical theory of diffraction and image contrast. Howie Whellan equations, dispersion surface.

### 209CL. Electron Microscopy I: Principles and Practice

(4) STEMMER

*Recommended preparation: students should show a need for TEM in their research. Part of the course involves analysis of student's own samples. Student*

encouraged to enroll in MATRL 209C before or after MATRL 209CL. Lecture, 2.5 hours; laboratory, 3 hours.

Laboratory course with lecture component. Topics include: TEM alignment, basic functions, electron diffraction and reciprocal space, basic imaging, bright field and dark field, diffraction contrast, quantitative analysis of defects, HRTEM imaging and simulation. Course also involves TEM sample preparation.

#### **211A. Engineering Quantum Mechanics I** (4) STAFF

*Prerequisites:* ECE 162A-B. Students must have some knowledge of linear algebra.

Same course as ECE 211A. Lecture, 4 hours.

Wave-particle duality; bound states; uncertainty relations; expectation values and operators; variational principle; eigenfunction expansions; perturbation theory I. Treatment matches needs and background of ECE and materials students emphasizing solid state or quantum electronics.

#### **211B. Engineering Quantum Mechanics II** (4) STAFF

*Prerequisites:* ECE 211A or Materials 211A, or ECE 215A or Materials 206A.

Same course as ECE 211B. Lecture, 4 hours.

Continuation of Materials 211A; symmetry and degeneracy; electrons in crystals, angular momentum; perturbation theory II; transition probabilities; quantized fields and radiative transitions; magnetic fields; electron spin; indistinguishable particles.

#### **214. Advanced Topics in Equilibrium Statistical Mechanics**

(3) STAFF

Same course as Chemical Engineering 210B. Not open for credit to students who have completed Chemical Engineering 214.

*Recommended preparation:* a course in physical chemistry. Lecture, 3 hours.

Application of the principles of statistical mechanics and thermodynamics to treat classical fluid systems at equilibrium. Topics include liquid state theory, computer simulation methods, critical phenomena and scaling principles, interfacial statistical mechanics, and electrolyte theory.

#### **215A. Semiconductor Device Processing**

(4) STAFF

*Prerequisites:* ECE 132 or equivalent.

Same course as ECE 220A. Lecture, 3 hours; discussion, 1 hour.

Intensive theoretical and laboratory instruction in solid-state device and integrated circuit fabrication. Topics include 1) semiconductor material properties and characterization; 2) phase diagrams; 3) diffusion; 4) thermal oxidation; 5) vacuum processes; 6) thin-film deposition; 7) scanning electron microscopy. Both gallium arsenide and silicon technologies are presented.

#### **215B-C. Semiconductor Device Processing**

(4-4) GOSSARD, HU

*Prerequisite:* Materials 215A.

Same course as ECE 220B-C. Lecture, 3 hours; discussion, 1 hour.

Continued theoretical and laboratory instruction in the fundamentals, the design, the fabrication, and the characterization of junction and field-effect devices. Topics will include bipolar characterization, design, fabrication, and testing. The laboratory effort initiated in Materials 215A will be continued in these two quarters.

#### **216. Defects in Semiconductors**

(3) STAFF

*Prerequisites:* ECE 162A-B.

Same course as ECE 216B. Lecture, 3 hours

Structural and electronic properties of elementary defects in semiconductors. Point defects and impurity complexes. Deep levels. Dislocations and grain boundary electronic properties. Measurement techniques for radiative and nonradiative defect centers.

#### **217. Molecular Beam Epitaxy and Band Gap Engineering**

(3) GOSSARD

*Prerequisites:* ECE 162A-B, and 213.

Same course as ECE 217. Lecture, 3 hours.

Fundamentals and recent research developments in the growth and properties of thin crystalline films

of electronic and optical materials by the process of molecular beam epitaxy. Artificially structured materials with quantized electron confinement and artificially engineered electronic band structure properties. (normally offered alternate years)

#### **218. Introduction to Inorganic Materials**

(3) CHEETHAM

*Prerequisite:* Chemistry 274.

Same course as Chemistry 277.

Structures of inorganic materials: close-packing, linking of simple polyhedra. Factors that control structure: ionic radii, covalency, ligand field effects, metal-metal bonding, electron/atom ratios. Structure-property relationships in e.g. spinels, garnets, perovskites, rutiles, fluorites, zeolites,  $\beta$ -aluminas, graphites, common inorganic glasses.

#### **219. Phase Transformations**

(3) STAFF

*Prerequisite:* consent of instructor. Lecture, 3 hours.

Introduction to the unifying concepts underlying phase transformations in metals, ceramics, polymers, and electronic materials. Includes the thermodynamics, kinetics, crystallography and microstructural characteristics of displacive and diffusional transformations. Role of elastics, compositional, configurational, electrical, magnetic and gradient energy contributions.

#### **220. Mechanical Behavior of Materials**

(3) ZOK, ODETTE

*Prerequisites:* Materials 207; consent of instructor.

Concepts of stress and strain. Deformation of metals, polymers, and ceramics. Elasticity, viscoelasticity, plastic flow, and creep. Linear elastic fracture mechanics. Mechanisms of ductile and brittle fracture.

#### **221. Introduction to Structural Materials**

(3) ZOK

Not open for credit to students who have completed Materials 220. Lecture, 3 hours.

Introduction to structure-property relations in engineering materials, including polymers, metals, and ceramics. Elastic, plastic, and creep deformation. Fracture processes. Strengthening and toughening mechanisms.

#### **222A. Colloids and Interfaces I**

(3) ISRAELACHVILI

*Prerequisite:* consent of instructor.

Same course as Chemical Engineering 222A and BMSE 222A. Lecture, 3 hours.

Introduction to the various intermolecular interactions in solutions and colloidal systems: Van der Waals, electrostatic, hydrophobic, solvation, H-bonding. Introduction to colloidal systems: particles, micelles, polymers, etc. Surfaces: wetting, contact angles, surface tension, etc.

#### **222B. Colloids and Interface II**

(3) STAFF

*Prerequisite:* consent of instructor. Lecture, 3 hours.

Continuation of 222A. Interparticle interactions, coagulation, flocculation, DLVO theory, steric interactions, polymer-coated surfaces, polymers in solution, viscosity in thin liquid films. Surfactant self-assembly: micelles, micro-emulsions, lamellar phases, etc. Surfactant on surfaces: Langmuir-Blodgett films, adsorption, adhesion.

#### **224. Optical and Luminescent Materials**

(3) CLARKE

Lecture, 2 hours.

Description of the principles underlying the optical and luminescent behavior of materials illustrated with applications drawn from phosphors, optical fibers, optical memories, and electro-optical components and immuno-assay techniques. Fundamental concepts of absorption and emission, and their relation to electronic structure and crystal properties.

#### **225. Introduction to Electronic Materials**

(3) SPALDIN

*Prerequisite:* Materials 100A and 100C or equivalent.

Not open for credit to students who have completed Materials 162B or ECE 162B. Lecture, 3 hours.

Basic quantum mechanics: wave functions and expectation values, free electrons, quantum wells, scattering and tunneling. Basic solid state physics:

energy bands in solids, electronic and optical properties of metals and semiconductors. Devices: p-n junctions, transistors, light emitting diodes and lasers.

#### **226. Electrical and Functional Crystals and Ceramics**

(3) CLARKE

Lecture, 3 hours.

Description of the principles underlying the behavior of functional crystals and ceramics, ranging from dielectrics, piezoelectrics, ferroelectrics to linear and nonlinear materials. Fundamental concepts, tensorial and mathematical description of functional behavior, point defects, and applications.

#### **227. Metal-Organic Chemical Vapor Deposition**

(3) DENBAARS

Lecture, 3 hours.

Electronic and optical properties of thin films grown by vapor phase transport techniques. Growth mechanisms, kinetics and thermodynamics of vapor phase epitaxy. Special emphasis on the process of metalorganic vapor phase epitaxy for optoelectronic materials and devices. (normally offered alternate years)

#### **228. Computational Materials**

(3) CLARKE

Lecture, 3 hours.

Basic computational techniques and their application to simulating the behavior of materials. Techniques include: finite difference methods, Monte Carlo, molecular dynamics, cellular automata, and simulated annealing. (normally offered alternate years)

#### **230. Elasticity and Plasticity**

(3) MCMEEKING

*Prerequisite:* Materials 207 or ME 219

Same course as ME 230.

Review field equations of elasticity and plasticity. Energy principles and uniqueness theorems. Elementary problems in one and two dimensions, stress functions, and complex variable methods. Plastic stress-strain laws; flow potentials. Torsion and bending of plastic flow, slip line theory.

#### **234. Fracture Mechanics**

(3) STAFF

*Prerequisites:* Materials 207.

Same course as ME 275. Lecture, 3 hours.

Analytic solutions of a stationary crack under static loading. Elastic and elastoplastic analysis. The J integral. Energy balance and crack growth. Criteria for crack initiation and growth. Dynamic crack propagation. Fatigue. The micromechanics of fracture.

#### **238A. Rheology of Polymeric Liquids**

(3) STAFF

Same course as Chemical Engineering 238A.

An introduction to molecular and microscale theories for the viscoelastic behavior of complex fluids: suspensions, colloidal dispersions, liquid crystals, dilute polymer solutions.

#### **238B. Rheology of Polymeric Liquids**

(3) STAFF

Same course as Chemical Engineering 238B.

Continuation of Materials 238A: Emphasis of the second term is on concentrated systems and polymeric liquids, reptation theory and extensions of reptation theories to complex architectures in the linear viscoelastic regime. Nonlinear Rheology for polymers.

#### **240. Finite Element Structural Analysis**

(3) STAFF

*Prerequisites:* Materials 207 or equivalent.

Same course as ME 271. Lecture, 3 hours.

Definitions and basic element operations. Displacement approach in linear elasticity. Element formulation: direct methods and variational methods. Global analysis procedures: assemblage and solution. Plane stress and plane strain. Solids of revolution and general solids. Isoparametric representation and numerical integration. Computer implementation.

#### **251A. Processing of Inorganic Materials**

(3) LANGE

*Prerequisite:* consent of instructor.

Same course as Chemical Engineering 219A. Not open for credit to students who have completed Nuclear Engineering 219A. Lecture, 3 hours.

Fundamental concepts are presented for the synthesis of inorganic materials (zeolites, mesoporous materials, and epitaxial films) via chemical routes, and the processing of powders to form engineering shapes. The latter stresses fundamentals for manipulating the forces between particles that control rheological properties, particle packing and the plastic/elastic transition.

### 251B. Densification and Microstructural Control

(3) LANGE  
Prerequisite: consent of instructor.

Same course as Chemical Engineering 219B. Lecture, 3 hours.

Mass transport and kinetic sintering theories. Thermodynamics of pore phase disappearance. Grain growth during densification. Effects of a liquid phase (liquid phase sintering). Effects of inert phases on densification. Effects of applied pressure. Control of grain growth after densification.

### 253. Liquid Crystal Materials

(4) SAFINYA  
Prerequisite: consent of instructor. Lecture, 3 hours; laboratory, 2 hours.

Thermotropic and lyotropic liquid crystals (LC's). Classification and phase transitions. LC's in display technology. Laboratory experimentation using X-ray diffraction and polarized optical microscopy to characterize LC phases.

### 261. Composite Materials

(3) ZOK  
Prerequisite: consent of instructor.

Same course as ME 265. Lecture, 3 hours. Stress/strain relations in composites. Residual stresses. Fracture resistance of organic and inorganic matrix composites. Statistical aspects of fiber failure. Composite laminates and delamination cracks. Cumulative damage concepts. Interface properties. Design criteria. (normally offered alternate years)

### 262. Structural Ceramics

(3) STAFF  
Prerequisite: consent of instructor.

Same course as Chemical Engineering 262. Lecture, 3 hours.

Ceramic processing methods. Flaws in ceramics. Fracture resistance and microstructure. Probabilistic design concepts. Non-destructive evaluation approaches. Reinforced ceramics. High temperature properties. Impact damage.

### 263. Thin Films and Multilayers

(3) EVANS  
Lecture, 3 hours.

The development of stresses in thin films and its relaxation. Edge effects and discontinuities. Cracks in films and at interfaces. Delamination of residually stressed films. Buckling and buckle propagation of compressed films. Cyclic behavior and ratcheting effects.

### 265. Nanophase and Nanoparticle Materials

(3) SESHADRI  
Prerequisite: Materials 218 or equivalent. Lecture, 2.5 hours.

Course introduces graduate student to nanophase and nanoparticle inorganic materials and their applications. Emphasis on how the properties of materials change when their size is diminished. The manner in which nanomaterials (particularly nanoparticle materials) bridge the world of molecules with the world of solids is shown. Preparation, characterization and applications of nanomaterials is an integral part of the course.

### 267. Confined Electrons and Photons in Semiconductor Structures

(3) PETROFF  
Prerequisites: Materials 162A-B or ECE 162A-B.

Same course as ECE 267. Lecture, 3 hours. The properties of 1D, 2D and 3D confined electrons in semiconductors are reviewed. Properties of photons in microcavities and photonic crystals are introduced. Applications of photonic crystals to light extraction and modifications of the emitter properties are developed.

### 271A. Synthesis and Properties of Macromolecules

(3) STAFF  
Prerequisite: consent of instructor.

Not open for credit to students who have completed Materials 273B. Lecture, 3 hours.

Basics of preparation of polymers and macromolecular assemblies, and characterization of large molecules and assemblies. Discussion of chemical structure, bonding, and reactivity.

### 271B. Structure and Characterization of Complex Fluids

(3) SAFINYA  
Not open for credit to students who have completed Materials 280. Lecture, 3 hours.

Structure, phase behavior, and phase transitions in complex fluids. Characterization techniques including x-ray and neutron scattering, and light and microscopy methods. Systems include colloidal and surfactant dispersions (e.g., polyballs, microemulsions, and micelles), polymeric solutions and biomolecular materials (e.g., lyotropic liquid crystals).

### 271C. Properties of Macromolecules

(3) KRAMER  
Not open for credit to students who have completed Materials 210. Lecture, 3 hours.

Fundamentals of the properties of macromolecular solutions, melts, and solids. Viscosity, diffusion and light scattering from dilute solutions. Elements of macromolecular solid state structure. Thermal properties and processes. Mechanical and transport properties. Introduction to electrical and optical properties of macromolecules.

### 273. Experiments in Macromolecular Materials

(3) STAFF  
Not open for credit to students who have completed Materials 273C. Lecture, 3 hours; laboratory, 4 hours.

Experiments using X-ray and light scattering, optical and electron microscopy. Crystalline, quasi-crystalline, and amorphous materials. Solid, solution, and colloidal samples.

### 274. Solid State Inorganic Materials

(3) STAFF  
Prerequisites: Chemistry 173A-B or equivalent. Same course as Chemistry 274. Lecture, 3 hours.

An introductory course describing the synthesis, physical characterization, structure, electronic properties and uses of solid state materials.

### 276A. Biomolecular Materials I: Structure and Function

(3) SAFINYA  
Prerequisite: consent of instructor. Lecture, 3 hours.

Survey of classes of biomolecules (lipids, carbohydrates, proteins, nucleic acids). Structure and function of molecular machines (enzymes for biosynthesis, motors, pumps).

### 276B. Biomolecular Materials II: Applications

(3) SAFINYA  
Prerequisite: Physics 135 or Materials 276A. Lecture, 3 hours.

Interactions and self assembly in biomolecular materials. Chemical and drug delivery systems. Tissue engineering. Protein synthesis using recombinant nucleic acid methods: advanced materials development. Nonviral gene therapy. (normally offered alternate years)

### 277. Synthesis of Biomolecular Materials

(3) STAFF  
Prerequisite: consent of instructor. Lecture, 3 hours. Methods of preparation of biopolymers and biomolecular assemblies. Uses of biological techniques to engineer biomaterials. Uses of chemical techniques to prepare biological molecules as well as artificial biomimetic materials. Comparison of biological, chemical, and mixed synthesis for different applications. (normally offered alternate years)

### 278. Interactions in Biomolecular Complexes

(3) SAFINYA  
Prerequisite: consent of instructor. Lecture, 3 hours.

Focuses on the interactions, structures, and functional properties of complexes comprised of

supramolecular assemblies of biological molecules. Systems addressed include lipid membranes, lipid-DNA complexes, and assemblies of proteins of the cell cytoskeleton.

### 280. Defects in Semiconductors

(3) BAZAN  
Introduction to the science and engineering of organic semiconductors. A connection is made between the two main classes of related materials: small molecules and conjugated polymers. Electronic structure is presented together with techniques for energy level measurements and the theory of charge carrier transport. Optical properties, including emission, energy transfer and electron transfer, are discussed within the context of optically amplified biosensors. Applications in field effect transistors, light emitting diodes and solar cells are reviewed. (F)

### 284. Synthetic Chemistry of Macromolecules

(3) STAFF  
Prerequisite: consent of instructor. Same course as Chemistry 285. Lecture, 3 hours.

Molecular architecture and classification of macromolecules. Different methods for the preparation of polymers: free radical polymerization, ionic polymerization, condensation polymerization and coordination polymerization. Bulk, solution, and emulsion polymerization. Principles of copolymerization, blockcopolymerization, grafting, network formation, chemical reactions on polymers.

### 286AA-ZZ. Special Topics in Inorganic Materials

(3) STAFF  
Prerequisite: consent of instructor. Lecture, 3 hours. This course will be offered on an irregular basis and will concern in-depth discussions of advanced topics in inorganic materials.

### 287AA-ZZ. Special Topics in Macromolecular Materials

(3) STAFF  
Prerequisite: consent of instructor. Lecture, 3 hours. This course will be offered on an irregular basis and will concern in-depth discussions of advanced topics in macromolecular materials.

### 288AA-ZZ. Special Topics in Electronic Materials

(3) STAFF  
Prerequisite: consent of instructor. Lecture, 3 hours. This course will be offered on an irregular basis and will concern in-depth discussions of advanced topics in electronic materials.

### 289AA-ZZ. Special Topics in Structural Materials

(3) STAFF  
Prerequisite: consent of instructor. Lecture, 3 hours. This course will be offered on an irregular basis and will concern in-depth discussions of advanced topics in structural materials.

### 290. Research Group Studies

(1-3) STAFF  
Prerequisite: consent of instructor. Seminar, 1-3 hours. In this course students or instructors present recently published papers and/or results relevant to their own research.

### 501. Teaching Assistant Practicum

(1-4) STAFF  
Prerequisite: consent of graduate advisor. This course is required for new teaching assistants. No unit credit allowed toward advanced degree. Preparation, 1 hour; other, 2 hours.

Practical experience in the various activities associated with teaching including: lecturing, supervision of laboratories and discussion sections, preparation, and grading of homework and exams.

### 596. Directed Reading and Research

(2-4) STAFF  
Tutorial, 1-3 hours. Individual tutorial. Instructor usually student's major professor. A written proposal for each tutorial must be approved by the department chair.

**598. Master's Thesis Research and Preparation****(1-12) STAFF***Prerequisite: consent of graduate advisor.**S/U grading only. Preparation, variable hours; tutorial, 1-3 hours.*

For research underlying the thesis and writing of the thesis.

**599. Ph.D. Dissertation Research and Preparation****(1-12) STAFF***Prerequisite: consent of chair of student's doctoral committee.**S/U grading only. Preparation, variable hours; tutorial, 1-3 hours.*

Research and preparation of the dissertation.

# Mechanical Engineering

## Faculty

**Karl J. Astrom**, Ph.D., Royal Institute of Technology, Sweden, Professor (control engineering and education)**Bassam Bamieh**, Ph.D., Rice University, Professor (control systems design with applications to fluid flow problems)**Glenn E. Beltz**, Ph.D., Harvard, Professor (solid mechanics, materials, aeronautics, engineering education)**Ted D. Bennett**, Ph.D., UC Berkeley, Associate Professor (thermal science, laser processing)**David Bothman**, B.S., UC San Diego, Lecturer**Francesco Bullo**, Ph.D., California Institute of Technology, Professor (motion planning and coordination, control systems, distributed and adaptive algorithms)**David R. Clarke**, Ph.D., University of Cambridge, Professor (electrical ceramics, thermal barrier coatings, piezospectroscopy, mechanics of microelectronics) \*3**Anthony G. Evans**, Ph.D., Imperial College, London, Professor, Director of Center for Multifunctional Materials and Structures (thermostructural materials, ultralight structures, multifunctional materials and devices, actuating structures) \*3**Frederic Gibou**, Ph.D., University of California, Los Angeles, Associate Professor (computational science and engineering) \*2**Gary S. Hansen**, Ph.D., University of Michigan, Associate Professor (technology management program)**George Homsy**, Ph.D., University of Illinois, Professor (hydrodynamic stability, thermal convection, thin film hydrodynamics, flow in microgeometries and in porous media, polymer fluid mechanics)**Keith T. Kedward**, Ph.D., University of Wales, Professor (design of composite systems)**Mustafa Khammash**, Ph.D., Rice University, Professor (robust analysis and synthesis of control systems and controls in biological systems)**Rouslan Ktrechnikov**, Ph.D., Moscow Institute of Physics & Technology, Assistant Professor (fluid mechanics, complex fluid interfaces, analytical mechanics, dynamical systems, stability theory, applied mathematics)**Stephen Laguette**, M.S., University of California, Los Angeles, Lecturer (biomedical engineering design)**Carlos Levi**, Ph.D., University of Illinois at Urbana-Champaign, Professor (conceptual design, synthesis and evolution in service of structural and inorganic materials, especially for high temperature applications) \*3**Glenn E. Lucas**, Ph.D., Massachusetts Institute of Technology, Professor (mechanical properties of structural materials, environmental effects, structural reliability) \*1**Eric F. Matthys**, Ph.D., California Institute of Technology, Professor (heat transfer, fluid mechanics, rheology)**Stephen R. McLean**, Ph.D., University of Washington, Professor (fluid mechanics, physical oceanography, sediment transport)**Robert M. McMeeking**, Ph.D., Brown University, Professor (mechanics of materials, fracture mechanics, plasticity, computational mechanics) \*3**Eckart Meiburg**, Ph.D., University of Karlsruhe, Professor (computational fluid dynamics, fluid mechanics)**Carl D. Meinhart**, Ph.D., University of Illinois at Urbana-Champaign, Professor (wall turbulence, microfluidics, flows in complex geometries)**Igor Mezic**, Ph.D., California Institute of Technology, Professor (applied mechanics, non-linear dynamics, fluid mechanics, applied mathematics)**Frederick Milstein**, Ph.D., UC Los Angeles, Professor (mechanical properties of materials) \*3**Jeffrey M. Moehlis**, Ph.D., University of California, Berkeley, Associate Professor (nonlinear dynamics, fluid mechanics, biological dynamics, applied mathematics)**G. Robert Odette**, Ph.D., Massachusetts Institute of Technology, Professor (deformation and fracture, high performance materials for use in severe environments) \*3**Bradley E. Paden**, Ph.D., UC Berkeley, Professor (control theory, kinematics, robotics)**Sumita Pennathur**, Ph.D., Stanford University, Assistant Professor (application of microfabrication techniques and micro/nanoscale flow phenomena)**Linda R. Petzold**, Ph.D., University of Illinois at Urbana-Champaign, Professor, Director of Computational Science and Engineering Graduate Emphasis (computational science and engineering; systems biology) \*2**Hongsok Tom Soh**, Ph.D., Stanford University, Associate Professor (microelectromechanical systems, integrated biosensors, multi-functional biomaterials)**Theofanis G. Theofanous**, Ph.D., University of Minnesota, Professor, Director of Center for Risk Studies and Safety (nuclear and chemical plant

safety, multiphase flow, thermal hydraulics) \*1

**Kimberly L. Turner**, Ph.D., Cornell University, Professor (microelectromechanical systems, dynamics, solid mechanics, measurement and characterization of microsystems motion and device parameters)**Megan Valentine**, Ph.D., Harvard University, Assistant Professor (single-molecule biophysics, cell mechanics, motor proteins, biomaterials)**Henry T. Yang**, Ph.D., Cornell University, Professor (aerospace structures, structural dynamics and stability, transonic flutter and aeroelasticity, intelligent manufacturing systems)**Walter W. Yuen**, Ph.D., UC Berkeley, Professor (thermal science, radiation heat transfer, heat transfer with phase change, combustion)

## Emeriti Faculty

**John C. Bruch, Jr.**, Ph.D., Stanford University, Professor Emeritus (applied mathematics, numerical solutions and analysis)**Roy S. Hickman**, Ph.D., UC Berkeley, Professor Emeritus (fluid mechanics, physical gas dynamics, computer-aided design)**Frederick A. Leckie**, Ph.D., Stanford University, Professor Emeritus (mechanics of materials, engineering design)**Wilbert J. Lick**, Ph.D., Rensselaer Polytechnic Institute, Professor (oceanography and limnology, applied mathematics)**Noel C. MacDonald**, Ph.D., UC Berkeley, Kavli Professor in MEMS Technology (microelectromechanical systems, applied physics, materials, mechanics, nanofabrication) \*3**Ekkehard P. Marschall**, Dr. Ing., Technische Hochschule Hannover, Professor Emeritus (thermodynamics, heat and mass transfer, desalination, energy conversion, experimental techniques)**Thomas P. Mitchell**, Ph.D., California Institute of Technology, Professor Emeritus (theoretical and applied mechanics)**Marshall Tulin**, M.S., Massachusetts Institute of Technology, Professor Emeritus, Ocean Engineering Laboratory Director (hydrodynamics, aerodynamics, turbulence, cavitation phenomena, drag reduction in turbulent flows)**James P. Vanyo**, Ph.D., UC Los Angeles, Professor Emeritus (rotating nonrigid bodies, fluid dynamics)

\*1 Joint appointment with the Department of Chemical Engineering.

\*2 Joint appointment with the Department of Computer Science.

\*3 Joint appointment with the Department of Materials.

## Affiliated Faculty

**Hector Cenicerros** (Mathematics)**Patricia Holden** (Bren School of Environmental Science and Management)**Arturo Keller** (Bren School of Environmental Science and Management)**Gary Leal** (Chemical Engineering)**Sally MacIntyre** (Ecology, Evolution & Marine Biology)**T**he undergraduate program in mechanical engineering is accredited by the Engineering Ac-

creditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD, 21202-4012 – telephone: (410) 347-7700. We offer a balanced curriculum of theory and application, involving: preparation in basic science, math, computing and writing; a comprehensive set of engineering science and laboratory courses; and a series of engineering design courses starting in the freshman year and concluding with a three course sequence in the senior year. Our students gain hands-on expertise with state-of-the-art tools of computational design, analysis, and manufacturing that are increasingly used in industry, government, and academic institutions. In addition, the Department has a 15-unit elective program that allows students to gain depth in specific areas of interest, while maintaining appropriate breadth in the basic stem areas of the discipline. All students participate in a widely recognized design project program which includes projects sponsored by industry, UCSB researchers, as well as intercollegiate design competitions. The project program has been expanded to emphasize entrepreneurial product-oriented projects.

### Mission Statement

We offer an education that prepares our students to become leaders of the engineering profession and one which empowers them to engage in a lifetime of learning and achievement.

### Educational Objectives for the Undergraduate Program

It is the objective of the Mechanical Engineering Program to produce graduates who:

- Successfully practice in either the traditional or the emerging technologies comprising mechanical engineering;
- Are successful in a range of engineering graduate programs including those in mechanical, environmental and materials engineering;
- Have a solid background in the fundamentals of engineering allowing them to pass the Fundamentals of Engineering examination;
- Are active in professional societies.

In order to achieve these objectives, the Department of Mechanical Engineering is engaged in a very ambitious effort to lead the discipline in new directions that will be critical to the success of 21st century technologies. While maintaining strong ties to stem areas of the discipline, we are developing completely new cross-cutting fields of science and engineering related to topics such as: microscale engineering and microelectrical-micromechanical systems; dynamics and controls and related areas of sensors, actuators and instrumentation; advanced composite materials and smart structures; computation, simulation and information science; advanced energy and transportation systems; and environmental monitoring, modeling and remediation.

Qualified students who wish to pursue advanced engineering education may enroll in the M.S. or Ph.D. programs. The department offers programs leading to the degrees of master of science and doctor of philosophy, with a specialization in any of the following major areas: dynamical systems and controls; computational science and engineering; solid mechanics and structures, thermo-fluid sciences and materials; micro/nanoscale science (includ-

ing MEMS). The curricula for all of the major areas emphasize education in broad principles and fundamentals. At the same time, programs of study and research are flexible and tailored to accommodate the individual needs and interests of the students. Interdisciplinary approaches are stressed, and students are encouraged to cross over traditional boundaries into other departments.

The M.S. program is intended to extend and broaden the undergraduate background and equip practicing engineers with state-of-the-art knowledge in their field. The degree may be terminal or obtained on the way to the Ph.D. The Ph.D. program is designed to prepare students for careers in research and/or teaching in their area of specialization.

Mechanical engineering graduates at all levels are highly sought after by the automotive, aircraft, marine, defense, electronics, and materials manufacturing industries. Under the direction of the Associate Dean for Undergraduate Studies, academic advising services are jointly provided by advisors in the College of Engineering, as well as advisors in the department. In addition, departmental advisors are assigned to all students in the freshman year. A faculty advisor assists the students in the selection of departmental elective courses and provides counseling to students on a variety of issues related to their academic experience. Individual faculty are also available for help in program planning and professional development. A faculty supervisor and the graduate advisor, in conjunction with a graduate studies committee, direct the program of studies for M.S. and Ph.D. candidates. Undergraduate students enrolled in other majors at UCSB who plan to change to a major in the Department of Mechanical Engineering should obtain counseling from the departmental academic advisor.

### Laboratory Facilities

Well-equipped teaching and research laboratories can be used to conduct experimental and computational research in many areas.

### Teaching Laboratories

The laboratories listed below are a combination of facilities available permanently and those that are set up as necessary for the work of specific classes.

**1. Basic Circuits.** This laboratory focuses on basic electrical and electronic circuit design. Experiments give the students practical experience with Kirchhoff's Laws, phasor analysis, operational amplifiers, and transistor circuits in the context of how these might be used in mechanical systems.

**2. Sensors and Actuators.** This laboratory introduces students to the basics of interfacing mechanical and electrical systems and mechatronics, including computer control of sensors and actuators. Experiments use transducers and measurements devices, actuators, A/D and D/A conversion, signal conditioning, and filtering.

**3. General Mechanical Engineering Laboratory.** This intermediate laboratory builds skills centered on the practice, design, and reporting of experimental work. The use of a broad range of sensors for thermosensing, fluid mechanics, solid mechanics, materials science and environ-

mental engineering is explored in the design and implementation of laboratory measurements. Reporting of experiments is practiced in formal technical writing.

**4. Controls and Dynamics Laboratory.** This laboratory emphasizes physical modeling from first principles in the context of experiments. Students learn to implement, commission, and test control systems for real dynamic problems using an integrated approach that includes dynamic analysis and simulation as well as design and implementation of the control strategy.

**5. Computer Aided Design Laboratory.** The laboratory makes modern computers and engineering software available to students. The lab contains 20 Pentium workstations and 12 UNIX workstations. All computers are networked to the lab's printers, plotters, and other peripherals. Engineering packages available include ProEngineer, ANSYS, Mechanica, MatLab, Mathematica, Abaqus/CAE and Solidworks engineering packages along with several other design and analysis packages. Several analysis and educational packages are also provided. The lab is used in conjunction with the department's CAD/CAM curriculum, and computers are available to the students for other class work.

**6. Computer Aided Manufacturing Laboratory.** This laboratory gives students practical experience with modern manufacturing techniques. The major equipment in the lab consists of computer controlled milling machines and a CNC lathe. Students learn to program and operate the tools, and to automatically translate CAD drawings on the PC into finished parts on the machines. Drawing files can be transferred directly from computers in the CAD laboratory to the machine in the shop. Equipment is available for the design and construction of simple controlled tools by the students.

**7. Machine Shop.** The student machine shop has eight milling machines, six lathes, welding, and sheet metal equipment for student use. The shop is supervised, and instruction on the use of the tools is available. Students are encouraged to use the shop for their own design projects.

### Research Laboratories

**8. Microscale Thermal Processing Laboratory (Bennett).** Research conducted in the Microscale Thermal Processing Lab involves the thermal management of small-scale systems in both fabrication and device operation. The lab research is conducted at the apex where technology and science meet. The goal of the lab is to advance both fundamental understanding and processing technology in thermal science. Some current topics of research include: non-classical behavior of vaporization kinetics in pulsed laser deposition of thin film; developing laser based techniques for fabricating surface nanotexture for tribological enhancement of disk-drive storage media; and studying thermal asperities, which are disturbances in the computer-head readback signal arising from thermal fluctuations in the magnetoresistive element.

**9. Materials Reliability and Performance Laboratory (Odette).** The theme of the research supported by the MRPL is to assess and improve the ability of materials to sustain long-term, high-performance operation in hostile

environments, often associated with advanced aerospace and energy systems. Complemented by other on- and off-campus facilities and an extensive network of national and international collaborating institutions, the MRPL provides the capability to expose materials to conditions involving various combinations of high stress and temperature, chemically reactive gases and fluids and high-energy radiation fields. The durability of the materials under these challenging conditions, as well as routes to achieving better performance, are assessed by combining microstructural characterization down to the atomic scale, with specialized tools that relate the substructure to materials failure processes. Characterization tools accessible through the MRPL include radiation scattering (neutrons, electrons and x-rays) electron microscopy; positron annihilation and tomographic atom probe techniques. The MRPL also provides unique capabilities for *in situ* observation of deformation and fracture of damaged materials, including tomographic image reconstruction methods. The MRPL has pioneered automated testing as well as advanced methods for extracting mechanical property information from small to microscale volumes of material, including biopsies from operating structures.

**10. Computational Fluid Dynamics Laboratory (Meiburg).** Research in the CFD Laboratory focuses on large-scale simulations of complex flow-fields and related nonlinear dynamical systems, as well as on computationally intensive hydrodynamic stability problems. A 20-processor SGI Origin computer represents the main computational resource. In addition, a range of UNIX and LINUX workstations are available for pre- and post-processing purposes.

**11. Microfluidics Laboratory (Meinhart).** In the Microfluidics Laboratory research is conducted in two primary areas: development of BioMEMS and the investigation of fluid mechanics at the microscale. In the BioMEMS area, the research group is teaming with groups in ECE and ThauMDx (a local biotechnology company) to develop a fully integrated laser-based immunoassay and molecular diagnostic sensor. In the microfluidics lab, fluid flow in devices with length scales of order one to one hundred microns is studied. Interests include developing micron resolution particle image velocimetry (micro-PIV), micro-mixing devices and protocols, particle manipulation using dielectrophoresis (DEP) and optical tweezers, and analysis of boundary conditions at the microscale.

**12. Thermal-Fluid Sciences and Rheology Laboratory (Matthys).** The work conducted in this laboratory focuses on fluid mechanics, heat transfer, and materials issues. Excellent experimental facilities are available. Non-Newtonian fluids such as polymer and surfactant solutions are investigated. Studies range from fundamental rheological investigations of molecular assembly dynamics to the practical development of new energy conservation technologies based on friction-reducing additives. Other areas of work include fluid mechanics and materials issues in biology applications; and transport phenomena in materials processing involving melting and solidification.

**13. Mechanical Testing Laboratory (Odette).** The MTL is a state-of-the-art facility for characterization of the properties of advanced materials and structures, including composites, ceramics and alloys for aerospace and energy applications, biomaterials, smart materials systems, electronic packaging and microscale structures. An array of computer controlled mechanical testing devices and associated instrumentation and data acquisition systems forms the core of the facility. The focus of the MTL is on studies of deformation, fracture and fatigue, with the capability to simulate complex loading conditions in controlled environments over a wide range of temperatures, from cryogenic to 2000C. Unique capabilities for *in situ* observations of deformation and fracture have also been developed, as well as some specialized facilities for materials processing and fabrication and studies of high loading rate fracture. Research in the MTL is supported by a large number of other experimental and computational laboratories housed in other College departments and centers. The MTL is used by a large number of researchers from a number of UCSB departments.

**14. Structural Materials Processing Laboratory (Levi).** This multi-user laboratory features an array of state-of-the-art equipment for producing alloys, ceramics, intermetallics and composites in bulk, coating or thin film forms, and for studying the influence of process variables on materials structure and performance. Specialized facilities include a dedicated unit for the synthesis of thermal barrier coatings by electron beam physical vapor deposition, a multi-source e-beam evaporator for deposition of alloys and multi-layer coatings and thin films; equipment for manufacturing advanced, porous-matrix continuous-fiber ceramic composites; squeeze casting; tape casting of ceramics and rapid solidification processing. In addition, the laboratory has facilities for alloy preparation under controlled environments, for powder processing and densification under high temperature/high pressure, furnaces for heat treatments and cyclic oxidation testing, and equipment for characterization of microstructure and properties.

**15. Ocean Engineering Laboratory (McLean).** The focus of research in the OEL is hydrodynamics and sediment transport. The laboratory is located near the campus in the Engineering Research Centers building. It features a large wind/wave tank, 55 m long, 4.5 m wide and 2.5 m deep. Wind speeds up to 13 m/s can be achieved with a height of approximately 1.5 m above the water surface. In addition to wind waves, two- or three-dimensional waves can also be generated mechanically with a plunging type wavemaker. Sediment transport experiments are conducted in a large tilting, recirculating flume, 22 m long, 0.9 m wide and 0.9 m deep. This facility is equipped with acoustic Doppler and backscatter equipment to monitor fluid velocity, sediment concentration and bed elevation.

**16. Microsystems Characterization Laboratory (Turner).** The Microsystems Characterization Laboratory consists of cutting edge tools necessary for the fields of MEMS and Nanosystems. The primary function is to accurately measure the quasi-static and dynamic motion of MEMS

and nano-systems. It consists of a laser Doppler vibrometer (LDV) based measurement system, capable of measuring the motion of MEMS devices from 0-1.5 MHz, with a displacement resolution of <10nm. Devices can be tested either using electrical probes or in packages. The suite is controlled by LabView. Additionally, there is a wafer probe station and an Olympus Provis optical microscope for research use. Windows NT workstations are available for doing MEMS modeling and fabrication as well.

**17. Center for Risk Studies and Safety (Theofanous).** Research in this lab focuses on turbulence and transport phenomena in multiphase systems, with particular reference to processes that are significant to environmental concerns, such as chemical and nuclear plant safety and waste management technologies. These experiments typically involve intense multiphase interactions under highly transient and rarely experienced settings. The primary experiments include: two hydrodynamic shock tubes for steam explosion research, apparatus for mixing hot particle clouds with coolants, an experiment to study natural convection at high Raleigh numbers, apparatus to study the critical heat flux in large-scale inverted geometry systems, and an experiment for the study of low gravity boiling and the effect of surfactants on critical heat flux. Instrumentation in the lab includes an infrared high-speed camera, a flash x-ray for quantitative radiography, high speed video and film cameras and high temperature melt-handling facilities. This work also involves large-scale numerical simulations, which are integrated toward achieving a significant practical contribution. Multi-scale numerical modeling is undertaken from the lattice Boltzman methods, to direct numerical simulations, to large-scale multifield models.

**18. Fluid Mechanics and Stability Laboratory (Homsy).** Research in this laboratory is devoted to the combined computational, analytical, and experimental study of fluid mechanics and thermal convection, with particular emphasis on hydrodynamic instabilities. Our computational resources include several high-end PC, Apple and DECAlpha workstations, with a full complement of software for scientific computing. Experimental facilities include laser-based flow visualization for LIF, PIV, and other velocimetry, digital imaging and analysis, and a wide variety of general laboratory equipment for study of fluid flows under various circumstances.

**19. MEMS/NEMS Processing Laboratory (MacDonald, Turner, Soh).** The MicroElectro-Mechanical Systems/NanoElectroMechanical Systems Processing Laboratory (MEMS/NEMS processing laboratory) is a semiconductor-processing laboratory for making MEMS/NEMS sensors, actuators, micro-instruments and 'biochips'. The emphasis is single crystal, silicon processing on 8" diameter silicon wafers, and materials integration of compound semiconductors, ceramics, metals and polymers on silicon. The laboratory processing equipment includes an Applied Materials Centura Platform with three independent reactive-ion-etch (RIE) chambers with a common 8" wafer-handler. One chamber is dedicated to RIE etching of silicon; the second chamber is a RIE silicon

dioxide etcher; and the third RIE etcher is for high-aspect-ratio etching of nm-scale features in silicon. The wafers are loaded and sequenced by computer-controlled wafer handlers. Additional 8" silicon processing tools include Optical Lithography (130 nm, MFS) and a three tube oxidation furnace: one standard oxidation tube (~1 Micrometer SiO<sub>2</sub> thickness) and one tube for growing thick, ~15 micrometers thick silicon dioxide layers and the third tube for CVD processing. Support processes include optical lithography processing, wafer bonding and wet processing of 8" silicon wafers. A suite of characterization tools include time-resolved field emission electron microscopy, a computer-controlled laser vibrometer and optical microscope on a robotic arm for measuring real time MEMS/NEMS velocity and nm-scale displacements, an Atomic Force Microscope, and capacitance and conductance/voltage instruments. Additional tools to store and process Bio samples will be added for Bio-related MEMS/NEMS research. The new MEMS/NEMS laboratory complements and extends the tools and processes available at the UCSB NSF/NUNN laboratory that is located in the same building.

**20. Computational Materials Facilities (Beltz, Gibou, McMeeking, Milstein).** A network of workstations within the Department and College as well as high-speed access to major national computing facilities supports the rapidly growing area of computational materials. Computational Materials research in Mechanical Engineering employs a variety of advanced simulation techniques such as finite element methods, molecular dynamics, Monte Carlo and large scale differential equation solvers. The College-wide Computational Science and Engineering Program also supports these activities.

**21. Computational Science and Engineering Laboratory (Gibou, Petzold).** Research in this lab focuses on the development and application of innovative computational methods and software for simulation and analysis of a wide range of engineering and scientific problems. Current research addresses efficient methods for discrete stochastic and multiscale simulation, sensitivity analysis, model reduction, single and multiphase flows, viscoelastic flows and complex fluids, image processing and effective use of high performance computer architectures. The research features multidisciplinary collaboration in areas including fluids, materials, biology, computer science, psychology, and medicine.

## Undergraduate Program

### Bachelor of Science— Mechanical Engineering

**Note:** Schedules should be planned to meet both General Education and major requirements. Detailed descriptions of these requirements are presented in the College of Engineering Announcement and General Education booklet.

#### Preparation for the major

All undergraduate majors in the department are required to meet a set of minimum unit and grade-point requirements and a set of General Education requirements which are common to all undergraduate majors in the College of Engineering. In addition, required preparation for

the major consists of the following lower-division courses (or their equivalents if taken elsewhere): Engineering 3; Mechanical Engineering 6, 10, 14, 15, 16, 17; Chemistry 1A-B or 2A-B, 1AL-BL or 2AC-BC; Mathematics 3A-B-C, 5A-B-C; Physics 1, 2, 3, 4, and 3L, 4L.

Students who are not Mechanical Engineering majors may be permitted to take lower division mechanical engineering courses, subject to meeting prerequisites and grade-point average requirements, availability of space, and consent of the instructor.

#### Upper-division major

The following 66 units are required: Materials 101; Mechanical Engineering 104, 105, 140A, 151A-B-C, 152A-B, 153, 154, 155A, 156A-B, 163, 189A-B-C, and 15 units of departmental electives. All requirements total 185 units.

The mechanical engineering elective courses allow students to acquire more in-depth knowledge in one of several areas of specialization, such as those related to: the environment; design and manufacturing; thermal and fluid sciences; structures, mechanics, and materials; and dynamics and controls. A student's specific elective course selection is subject to the approval of the department advisor.

Courses required for the pre-major or major, inside or outside of the Department of Mechanical Engineering, cannot be taken for the passed/not passed grading option. They must be taken for letter grades.

#### Research Opportunities

Upper-division undergraduates have opportunities to work in a research environment with faculty members who are conducting current research in the various fields of mechanical engineering. Students interested in pursuing undergraduate research projects should contact individual faculty members in the department.

## Graduate Program

In addition to departmental requirements, program applicants and candidates for graduate degrees must fulfill University requirements described in the chapter "Graduate Education at UCSB."

Specific details about departmental degree requirements are found in the departmental graduate guide which students receive upon admission. Departmental requirements stated in the guide are in addition to the minimum requirements stated in the chapter "Graduate Education at UCSB" in this catalog.

### Master of Science—Mechanical Engineering

#### Admission

In addition to Graduate Division requirements for admission to graduate status, the department requires a bachelor's degree or its equivalent from an accredited institution. Applicants with undergraduate preparation that is deemed inadequate may be required to take additional courses.

#### Degree Requirements

Students must choose a major field from among five stem areas presently offered by the department:

- Computational science and engineering

- Dynamic systems, controls, and robotics
- Microscale/nanoscale science (including MEMS)
- Solid mechanics, structures and materials
- Thermofluid sciences

Significant flexibility exists in the requirements for each of these stem areas, and students are encouraged to gain expertise in modern cross cutting fields such as: manufacturing; reliability engineering; microscale systems; design; aerostructures; composite technology; energy and transportation; environmental and ocean engineering; environmental sensing; integrated sensors, actuators and control systems; computational simulation and others.

Two plans of study are offered, each requiring successful completion of 42 quarter-units of credit with an average GPA of 3.0. Plan 1 is a combination of coursework and research, culminating in the preparation of a thesis; Plan 2 involves coursework and the completion of a written project.

**Plan 1 (thesis).** The department requires 42 units with thesis: 18 units of approved coursework for letter grade in the major field, 9 units of approved elective courses for letter grade in science and engineering, 3 units of graduate seminar, 12 units of ME 598, and completion of a thesis. No more than 9 units may be at the 100 level.

**Plan 2 (research project).** The department requires 42 units without thesis: 18 units of approved coursework for letter grade in the major field, 18 units of approved elective courses for letter grade in science and engineering, 3 units of graduate seminar, and 3 units of coursework dedicated to the completion of a project dealing with a topic in the major field. No more than 12 units may be at the 100 level.

### Doctor of Philosophy—Mechanical Engineering

#### Admission

Applicants to the Ph.D. program must meet Graduate Division requirements for admission.

#### Degree Requirements

During the first year of study students are required to develop a formal study plan which must be approved by the student's faculty advisor and the department graduate advisor. In this plan, students select a major area of study from among the five fields offered by the department (see Master's Requirements for a listing of these areas). Significant flexibility exists in the requirements for each of these stem areas, and students are encouraged to gain expertise in modern cross cutting fields such as: manufacturing; reliability engineering; microscale systems; design; aerostructures; composite technology; energy and transportation; environmental sensing; systems biology; bioengineering; integrated sensors, actuators and control systems; computational simulation and others. All students in the Ph.D. program are required to pass a departmental oral screening exam. Students must take this examination within 15 months of being admitted to the Ph.D. program or within 9 months of entering with a Master's degree. In the oral screening examination, students will be tested in two of the five major areas.

After passing the oral screening exam, students select a Ph.D. dissertation committee with the approval of their advisor. As part of the Ph.D. qualifying examination, each student must present a dissertation proposal to the Ph.D. committee for approval. Upon successful completion of this examination, students advance to candidacy.

Candidates must complete a dissertation and pass a thesis defense consisting of presenting a seminar talk and answering questions posed by the dissertation committee.

In addition to these requirements, Ph.D. students must complete a minimum of 39 quarter units of coursework: 18 units in key courses in the major field; 9 units in approved Mechanical Engineering courses; 9 units for letter grade in approved science and engineering, 3 units of graduate seminar. Students who enter the program with a Master's degree from a comparable department or program at another institution may receive subject credit, as approved by the graduate advisor. The department requires that students maintain a minimum grade-point-average of 3.5.

### Optional Graduate Degree Emphasis in Computational Science and Engineering

The Departments of Chemical Engineering; Computer Science; Earth Science; Ecology, Evolution and Marine Biology; Electrical and Computer Engineering; Mathematics; and Mechanical Engineering offer an interdisciplinary master's and Ph.D. degree emphasis in computational science and engineering (CSE).

CSE is a rapidly growing multidisciplinary area with connections to the sciences, engineering, mathematics, and computer science. Computer models and simulations have become an important part of the research repertoire, supplementing (and in some cases replacing) experimentation. Going from application area to computational results requires domain expertise, mathematical modeling, numerical analysis, algorithm development, software implementation, program execution, analysis, validation, and visualization of results. CSE addresses these issues.

Although CSE includes elements from computer science, applied mathematics, engineering and science, it focuses on the integration of knowledge and methodologies from all of these disciplines and, as such, is a subject distinct from any of them. All students pursuing an emphasis in CSE must complete the following:

- Numerical Methods: Mechanical Engineering 210A-B-C-D (students must take at least three).
- Parallel Computing: Computer Science 240A-B (students must take at least one).
- Applied Mathematics: Students must take either the Math 214A-B or Math 215A-B sequence (run concurrently with Math119A-B and Math124A-B respectively), or the Mechanical Engineering 244A-B sequence.
- Credit will not be given for more than one of these sequences. Advanced courses may be substituted, with approval, as follows: Math 243 instead of Math 214, and Math 246 instead of Math 215.

The specific requirements for the M.S. in Mechanical Engineering (thesis option only) with

the CSE emphasis are as follows:

- The completion of the above requirements for an M.S. in mechanical engineering.
- A masters' thesis in CSE.

The thesis must be written under the supervision of a CSE ladder faculty member. The thesis committee must include a minimum of three permanent ladder faculty members, at least two from Mechanical Engineering and one from CSE (may be CSE faculty member from another department).

Students pursuing a Ph.D. with an emphasis in CSE must:

- Complete the above requirements for a Ph.D. in mechanical engineering.
- Write and defend a dissertation in CSE.
- The student's dissertation must be written under the supervision of a Mechanical Engineering CSE ladder faculty member. The doctoral examination committee must include at least one CSE ladder faculty member and at least one ladder faculty member from another department.

## Mechanical Engineering Courses

### LOWER DIVISION

#### 6. Basic Electrical and Electronic Circuits

(4) KHAMMASH, SOH

Prerequisite: Physics 3-3L; Mathematics 3C; open to ME majors only.

Not open for credit to students who have completed ECE 2A or 2B, or ECE 6A or 6B.

Introduction to basic electrical circuits and electronics. Includes Kirchhoff's laws, phasor analysis, circuit elements, operational amplifiers, and transistor circuits.

#### 10. Engineering Graphics: Sketching, CAD, and Conceptual Design

(4) LAGUETTE

Prerequisite: ME majors only.

Introduction to engineering graphics, CAD, and freehand sketching. Develop CAD proficiency using advanced 3-D software. Graphical presentation of design: views, sections, dimensioning, and tolerancing.

#### 11. Introductory Concepts in Mechanical Engineering

(1) BOTHMAN, FIELDS, EVANS, BRUCH, BELTZ

Prerequisite: lower-division standing.

The theme question of this course is "What do mechanical engineers do?" Survey of mechanical and environmental engineering applications. Lectures by mechanical engineering faculty and practicing engineers.

#### 12. Manufacturing Processes

(1) STAFF

Prerequisite: ME majors only.

Processes used to convert raw material into finished objects. Overview of manufacturing processes including: casting, forging, machining, presswork, plastic and composite processing. Videos, demonstrations, and tours illustrate modern industrial practice. Selection of appropriate processes.

#### 12S. Introduction to Machine Shop

(1) BOTHMAN

Prerequisite: ME majors only.

Basic machine shop skills course. Students learn to work safely in a machine shop. Students are introduced to the use of hand tools, the lathe, the milling machine, drill press, saws, and precision measuring tools. Students apply these skills by completing a project.

#### 14. Statics

(4) BELTZ, MILSTEIN, TURNER

Prerequisite: Physics 1 and Mathematics 3B; open to

ME majors only.

Introduction to applied mechanics. Forces, moments, couples, and resultants; vector algebra; construction of free body diagrams; equilibrium in 2- and 3- dimensions; analysis of frames, machines, trusses and beams; distributed forces; friction.

### 15. Strength of Materials

(4) BELTZ, MILSTEIN, KEDWARD, LAGUETTE

Prerequisites: ME 14; open to mechanical engineering majors only.

Hooke's law and properties of structural materials. Methods of sections and virtual work and energy methods. Design applications to engineering structures, problems of tension, torsion, flexure and combined loading. Design beyond the elastic limit.

### 16. Engineering Mechanics: Dynamics

(4) TURNER, MCLEAN, BAMIEH

Prerequisites: Physics 2; ME 14; and, Mathematics 5C; (may be taken concurrently); open to ME majors only.

Not open for credit to students who have completed ME 163A.

Vectorial kinematics of particles in space, orthogonal coordination systems. Relative and constrained motions of particles. Dynamics of particles and systems of particles, equations of motion, energy and momentum methods. Collisions. Planar kinematics and kinetics of rigid bodies. Energy and momentum methods for analyzing rigid body systems. Moving frames and relative motion.

### 17. Mathematics of Engineering

(3) MOEHLIS, MCLEAN, HOMSY, GIBOU

Prerequisite: Engineering 3; Mathematics 5B (may be taken concurrently); open to ME majors only.

Introduction to basic numerical and analytical methods, with implementation using MATLAB. Topics include root finding, linear algebraic equations, introduction to matrix algebra, determinants, inverses and eigenvalues, curve fitting and interpolation, and numerical differentiation and integration. (S, M)

### 95. Introduction to Mechanical Engineering

(1-4) STAFF

Prerequisite: consent of instructor.

May be repeated for credit to a maximum of 6 units.

Participation in projects in the laboratory or machine shop. Projects may be student- or faculty-originated depending upon student interest and consent of faculty member.

### 97. Mechanical Engineering Design Projects

(1-4) STAFF

Prerequisite: consent of instructor.

May be repeated for maximum of 12 units, variable hours.

Course offers students opportunity to work on established departmental design projects. P/ NP grading, does not satisfy technical elective requirement.

### 99. Introduction to Research

(1-3) STAFF

Prerequisite: consent of instructor.

May be repeated for maximum of 6 units, variable hours.

Directed study to be arranged with individual faculty members. Course offers exceptional students an opportunity to participate in a research group.

### UPPER DIVISION

#### 100. Professional Seminar

(1) STAFF

Prerequisite: undergraduate standing.

May be repeated for up to 3 units. May not be used as a departmental elective.

A series of weekly lectures given by university staff and outside experts in all fields of mechanical and environmental engineering.

### 104. Sensors, Actuators and Computer Interfacing

(3) BAMIEH, PADEN

Prerequisites: ME 6; open to ME majors only.

Interfacing of mechanical and electrical systems and mechatronics. Basic introduction to sensors, actuators and computer interfacing and control.

Transducers and measurement devices, actuators, A/D and D/A conversion, signal conditioning and filtering. Practical skills developed in weekly lab exercises.

### 105. Mechanical Engineering Laboratory

(4) BENNETT, MATTHYS

Prerequisite: ME 151B, 152B, 163; and, Materials 101 or 100B.

Introduction to fundamental engineering laboratory measurement techniques and report writing skills. Experiments from thermosciences, fluid mechanics, mechanics, materials science and environmental engineering. Introduction to modern data acquisition and analysis techniques. (S)

### 106A. Advanced Mechanical Engineering Laboratory

(3) KHAMMASH, BAMIEH

Prerequisite: ME 155A.

An advanced lab course with experiments in dynamical systems and feedback control design. Students design, troubleshoot, and perform detailed, multi-session experiments.

### 106B. Mechanics, Materials and Structures Laboratory

(3) ZOK, EVANS

Prerequisites: ME 15; ME 154; ME 156A; and Materials 100B or 101.

Experiments on mechanical behavior of materials and structures. Assessment of analytical and finite element methods for mechanical design, with applications to optimization of lightweight structures.

### 106C. Advanced Thermo/Fluids Laboratory

(3) BENNETT, MCLEAN

Prerequisite: ME 105 and 151A-B, ME 151C (may be concurrent) and ME 152A-B

Perform thermo/fluid experiments that emphasize elements of thermodynamics, heat transfer, and fluid mechanics. This laboratory course stresses critical thinking skills required to construct and perform experiments independently, and to investigate physical phenomena experimentally.

### 110. Aerodynamics and Aeronautical Engineering

(3) BELTZ, MEINHART

Prerequisites: ME 14 and 152A.

Concepts from aerodynamics, including lift and drag analysis for airfoils as well as aircraft sizing/scaling issues. Structural mechanics concepts are applied to practical aircraft design. Intended for students considering a career in aeronautical engineering.

### 112. Energy Conversion

(3) MARSHALL, MATTHYS

Prerequisite: ME 151C and 152; or, Chemical Engineering 110B and 120A.

Overview of energy usage and production from prehistory to present times (technical, environmental, and societal issues). Technical analysis of the modern means of energy production (fossil, nuclear, hydro, wind, solar, geothermal, biomass, etc.): operating principles, hardware, engineering issues, environmental impact, etc.

### 114. Water Supply and Pollution Control

(3) MCLEAN

Prerequisite: ME 152A or Chemical Engineering 120A.

Water supply and quality requirements for domestic, industrial, agricultural, and recreational uses. Properties of natural surface and groundwaters. Pollutants in surface and groundwaters. Transport and fates of waterborne pollutants. Water and sewage treatment processes. Waste water reclamation. Water quality management in ground and surface water environments.

### 119. Introduction to Coastal Engineering

(3) MCLEAN

Prerequisite: ME 152A.

Quantitative description of waves and tides: refraction, shoaling. Nearshore circulation. Sediment characteristics and transport; equilibrium beach profile; shoreline protection.

### 124. Advanced Topics in Transport Phenomena/Safety

(3) BANERJEE

Prerequisites: Chemical Engineering 120A-B-C, or ME 151A-B and ME 152A.

Same course as Chemical Engineering 124.

Hazard identification and assessments, runaway reactions, emergency relief. Plant accidents and safety issues. Dispersion and consequences of releases.

### 125AA-ZZ. Special Topics in Mechanical Engineering

(3) STAFF

Prerequisite: Consent of instructor.

May be repeated for credit to a maximum of 12 units provided letter designations are different. Students are advised to consult their faculty advisor before making their course selection.

Individual courses each concentrating on one area in the following subjects: applied mechanics, cad/cam, controls, design, environmental engineering, fluid mechanics, materials science, mechanics of solids and structures, ocean and coastal engineering, robotics, theoretical mechanics, thermal sciences, and recent developments in mechanical engineering.

### 128. Design of Biomedical Devices

(3) LAGUETTE

Prerequisite: Mechanical Engineering 10, 14, 15, 16, and 153; open to ME majors only.

Introductory course addresses the challenges of biomedical device design, prototyping and testing, material considerations, regulatory requirements, design control, human factors and ethics.

### 134. Advanced Thermal Science

(3) MATTHYS, YUEN, HOMS Y

Prerequisite: ME 151C.

This class will address advanced topics in fluid mechanics, heat transfer, and thermodynamics. Topics of interest may include combustion, phase change, experimental techniques, materials processing, manufacturing, engines, HVAC, non-Newtonian fluids, etc.

### 136. Introduction to Multiphase Flows

(3) THEOFANOUS

Prerequisites: Chemical Engineering 120A-B-C; or, ME 151C and 152A.

Same course as Chemical Engineering 136.

Development from basic concepts and techniques of fluid mechanics and heat transfer, to local behavior in multiphase flows. Key multiphase phenomena, related physics. Extension of local conservation principles to usable formulations in multiphase flows. Modelling approaches. Practical examples.

### 138. Risk Assessment and Management

(3) THEOFANOUS

Prerequisites: ME 151B and 152A, or Chemical Engineering 120A-B-C.

Same course as Chemical Engineering 138.

Conceptual foundations of risk and its utility for decision making. Determinism, statistical inference, and uncertainty. Formulation of safety goals and approaches to risk management. Generalized methodology and tools for assessing risks in the industrial, ecological, and public health context.

### 140A. Numerical Analysis in Engineering

(3) HOMS Y, MOEHLIS, GIBOU, MEIBURG

Prerequisites: ME 17 or Chemical Engineering 132A; open to ME and Chemical Engineering majors only.

Numerical analysis and analytical solutions of problems described by linear and nonlinear differential equations with an emphasis on MATLAB. First and second order differential equations; systems of differential equations; linear algebraic equations, matrices and eigenvalues; boundary value problems; finite differences. (F)

### 140B. Theoretical Analysis in Mechanical Engineering

(3) BRUCH, MOEHLIS, GIBOU, MEIBURG

Prerequisites: ME 140A; open to ME and Chemical Engineering majors only.

Analysis of engineering problems formulated in terms of partial differential equations. Solutions of these mathematical models by means of analytical and numerical methods. Physical interpretation of the results.

### 141A. Introduction to MicroElectroMechanical Systems (MEMS)

(3) TURNER, PENNATHUR

Prerequisites: ME 104 and 163; or, ECE 130A and 137A; with a minimum grade of C- in both.

Same course as ECE 141A.

Analysis of MEMS actuators and displacement sensors with emphasis on the analysis of capacitor-based sensing and actuation. Analysis and design of operational-amplifier models and circuits for capacitor sensors including feedback concepts. Vibration analysis of MEMS structures including wave equations for 'string' and bar structures. MEMS scaling concepts.

### 141B. MEMS: Semiconductor Processing and Device Characterization with Laboratory

(4) TURNER, PENNATHUR

Prerequisites: ME 141A or ECE 141A; and, Chemistry 1B-BL.

Same course as ECE 141B.

Lectures and laboratory on semiconductor processing for MEMS. Description and analysis of key semiconductor and equipment used for MEMS. Design and fabrication of MEMS capacitor-actuator and accelerometers, includes a description of MEMS characterization tools.

### 141C. Introduction to Microfluidics and BioMEMS

(3) MEINHART

Prerequisite: ME 141A or ECE 141A; open to ME and EE majors only.

Same course as ECE 141C.

Introduces physical phenomena associated with microscale/nanoscale fluid mechanics, microfluids, and bioMEMS. Analytical methods and numerical simulation tools are used for analysis of microfluids.

### 151A. Thermosciences 1

(4) STAFF

Prerequisite: Physics 2; ME 14; and, Mathematics 5C.

Basic concepts in thermodynamics, system analysis, energy, thermodynamic laws, and cycles. (F)

### 151B. Thermosciences 2

(4) STAFF

Prerequisite: ME 151A and 152A.

Introduction to heat transfer processes, steady and unsteady state conduction, multidimensional analysis. Introduction to convective heat transfer. (W)

### 151C. Thermosciences 3

(3) HOMS Y, BENNETT

Prerequisites: ME 151B and 152B; open to ME majors only.

Convective heat transfer, external and internal flow, forced and free convection, phase change, heat exchangers. Introduction to radiative heat transfer.

### 152A. Fluid Mechanics

(4) HOMS Y, MATTHYS, MEINHART

Prerequisite: Mathematics 5C and ME 16.

Introduction to the fundamental concepts in fluid mechanics and basic fluid properties. Basic equations of fluid flow. Dimensional analysis and similitude. Hydrodynamics. (F)

### 152B. Fluid Mechanics

(3) MEINHART, PENNATHUR

Prerequisite: ME 152A; open to ME majors only.

Incompressible viscous flow. Boundary-layer theory. Introductory considerations for one-dimensional compressible flow.

### 153. Introduction to Mechanical Engineering Design

(3) BELTZ, TURNER, KEDWARD, LAGUETTE

Prerequisites: ME 10 and 16; open to ME majors only.

Design methods. Creative thinking. Introduction to manufacturing processes, design for manufacturing. Project planning and teamwork. Applications of engineering software. Application of engineering principles to practical problem solving. Codes and standards. Engineering ethics.

### 154. Design and Analysis of Structures

(3) MCMEEKING, KEDWARD, SHUGAR

Prerequisites: ME 15 and 16; open to ME majors only.

Introductory course in structural analysis and design. The theories of matrix structural analysis and finite element analysis for the solution of analytical and design problems in structures are emphasized. Lecture material includes structural theory compatibility method, slope deflection method, displacement method and virtual work. Topics include applications to bars, beams, trusses, frames, and solids.

**155A. Control System Design****(3) BAMIEH, ASTROM, BULLO***Prerequisite: ME 17; ME 140A (may be taken concurrently); and ME 163.*

The discipline of control and its application. Dynamics and feedback. The mathematical models: transfer functions and state space descriptions. Simple control design (PID). Assessment of a control problem, specification, fundamental limitations, codesign of system and control.

**155B. Control System Design****(3) PADEN***Prerequisite: ME 155A.*

Dynamic system modeling using state-space methods, controllability and observability, state-space methods for control design including pole placement, and linear quadratic regulator methods. Observers and observer-based feedback controllers. Sampled-data and digital control. Laboratory exercises using MATLAB for simulation and control design.

**156A. Mechanical Engineering Design - I****(3) TURNER, LUCAS, EVANS***Prerequisite: ME 151C (may be concurrent), 152B, 153 and 154; and MATRL 101 or 100B; open to ME majors only*

The rational selection of engineering materials, and the utilization of Ashby- charts, stress, strain, strength, and fatigue failure consideration as applied to the design of machine elements. Lectures also support the development of system design concepts using assigned projects and involves the preparation of engineering reports and drawings.

**156B. Mechanical Engineering Design II****(3) KEDWARD***Prerequisites: ME 156A; open to ME majors only.*

Machine elements including gears, bearings, and shafts. Joint design and analysis: bolts, rivets, adhesive bonding and welding. Machine dynamics and fatigue. Design for reliability and safety. Codes and standards. Topics covered are applied in practical design projects.

**158. Computer Aided Design and Manufacturing****(3) BOTHMAN***Prerequisites: ME 10 and 156A; open to ME majors only.*

Engineering applications using advanced 3-D CAD software for plastic part designs and tooling. Topics include an overview of the design for injection molded plastic parts, material selections and electronic tooling design via CAD and CNC system software. Emphasis is put into final design projects that are designed to be functional, manufacturable, and esthetically pleasing.

**162. Introduction to Elasticity****(3) MCMEEKING, BELTZ***Prerequisites: ME 15 and 140A.*

Equations of equilibrium, compatibility, and boundary conditions. Solutions of two-dimensional problems in rectangular and polar coordinates. Eigen-solutions for the Wedge and Williams' solution for cracks. Stress intensity factors. Extension, torsion, and bending. Energy theorems. Introduction to wave propagation in elastic solids.

**163. Engineering Mechanics: Vibrations****(3) MCMEEKING***Prerequisites: ME 16; open to ME majors only.**Not open for credit to students who have completed ME 163B.*

Topics relating to vibration in mechanical systems; exact and approximate methods of analysis, matrix methods, generalized coordinates and Lagrange's equations, applications to systems. Basic feedback systems and controlled dynamic behavior.

**166. Advanced Strength of Materials****(3) TURNER***Prerequisite: ME 15.*

Analysis of statically determinate and indeterminate systems using integration, area moment, and energy methods. Beams on elastic foundations, curved beams, stress concentrations, fatigue, and theories of failure for ductile and brittle materials. Photoelasticity and other experimental techniques are covered, as well as methods of interpreting in-service failures.

**167. Structural Analysis****(3) YANG***Prerequisites: ME 15 or 165; and ME 140A.*

Presents introductory matrix methods for analysis of structures. Topics include review of matrix algebra and linear equations, basic structural theorems including the principle of superposition and energy theorems, truss bar, beam and plane frame elements, and programming techniques to realize these concepts.

**169. Nonlinear Phenomena****(4) MEZIC, KHAMMASH***Prerequisites: Physics 105A or ME 163; or upper-division standing in ECE.**Same course as ECE 183 and Physics 106. Not open for credit to students who have completed ME 163C.*

An introduction to nonlinear phenomena. Flows and bifurcation in one and two dimensions, chaos, fractals, strange attractors. Applications to physics, engineering, chemistry, and biology.

**170A. Introduction to Robotics: Robot Mechanics****(4) PADEN, BULLO***Same course as ECE 181A.**Recommended preparation: ME 16.*

Overview of robot kinematics and dynamics.

Structure and operation of industrial robots. Robot performance: workspace, velocity, precision, payload. Comparative discussion of robot mechanical designs. Actuators. Robot coordinate systems. Kinematics of position. Dynamics of manipulators.

**170C. Introduction to Robotics: Robot Control****(4) PADEN***Prerequisites: ECE 2A-B-C with a minimum grade of C-; or ME 104.**Same course as ECE 181C.*

Overview of robot control technology from open-loop manipulators and sensing systems, to single-joint servovalves and servomotors, to integrated adaptive force and position control using feedback from machine vision and touch sensing systems. Design emphasis on accurate tracking accomplished with minimal algorithm complexity.

**173. Control Systems Synthesis****(3) BAMIEH***Prerequisite: ME 155A.**Not open for credit to students who have completed ECE 147A.*

Pole-placement, observer design, observer-based compensation, frequency and time-domain techniques, internal model principle, linear quadratic regulators, modeling uncertainty in signals and systems, robust stability and performance, synthesis for robustness.

**185. Materials in Engineering****(3) LEVI, ODETTE***Prerequisite: Materials 100B or 101.**Same course as Materials 185.*

Introduces the student to the main families of materials and the principles behind their development, selection, and behavior. Discusses the generic properties of metals, ceramics, polymers, and composites more relevant to structural applications. The relationship of properties to structure and processing is emphasized in every case.

**186. Manufacturing and Materials****(3) LEVI, ODETTE***Prerequisites: ME 15 and 151C; and, Materials 100B or 101.**Same course as Materials 186.*

Introduction to the fundamentals of common manufacturing processes and their interplay with the structure and properties of materials as they are transformed into products. Emphasis on process understanding and the key physical concepts and basic mathematical relationships involved in each of the processes discussed.

**189A-B-C. Capstone Mechanical Engineering Design Project****(2-2-2) LAGUETTE***Prerequisites: ME 153; and ME 156A (may be taken concurrently).*

*A three-quarter sequence with grades issued for each quarter. Students may not concurrently enroll in ME 197 and ME 189A-B-C with the same design project.*

Students work in teams under the direction of a faculty advisor to tackle an engineering design project. Engineering communication, such as reports and oral presentations are covered. Course emphasizes practical, hands-on experience, and integrates analytical and design skills acquired in the companion ME 156 courses.

**193. Internship in Industry****(1) STAFF***Prerequisite: consent of instructor and prior departmental approval needed.**Cannot be used as a departmental elective. May be repeated to a maximum of 2 units.*

Students obtain credit for a mechanical engineering related internship and/or industrial experience under faculty supervision. A 6-10 page written report is required for credit.

**197. Independent Projects in Mechanical Engineering Design****(1-4) STAFF***Prerequisites: ME 16; consent of instructor.**May be repeated for a maximum of 12 units, variable hours. No more than 4 units may be used as departmental electives.*

Special projects in design engineering. Course offers motivated students opportunity to synthesize academic skills by designing and building new machines.

**199. Independent Studies in Mechanical Engineering****(1-5) STAFF***Prerequisites: consent of instructor; upper-division standing; completion of two upper-division courses in Mechanical Engineering.*

*Students must have a minimum of 3.0 grade-point average for the preceding three quarters and are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199DC/199RA courses combined. No more than 4 units may be used as departmental electives. May be repeated to 12 units.*

*Directed individual study.***GRADUATE COURSES****200. Professional Seminar****(1) MCMEEKING, MILSTEIN, ODETTE***Prerequisite: graduate standing.*

A series of weekly lectures given by university staff and outside experts in all fields of mechanical and environmental engineering.

**200P. Master of Science Project****(3) STAFF***Prerequisite: graduate standing.*

A ten-week research project on an advanced topic in Mechanical Engineering.

**201. Advanced Dynamics****(3) MEZIC**

Newton's laws and symmetries, Newton, Laplace and principle of determinism, qualitative analysis of Newton's equations of motion, Hamiltonian mechanics, one degree of freedom (DOF) systems, two DOF systems, motion in central fields, application to molecular dynamics, control of classical dynamical systems, Lagrangian mechanics, chaos and ergodic theory, rigid body motion.

**202. Advanced Dynamics****(3) MEZIC***Prerequisite: ME 201; graduate standing.*

Differentiable manifolds in dynamical systems theory, differential forms, Hamiltonian phase flow, Lie algebras of vector fields, canonical formalism, integrable systems, introduction to perturbation theory, averaging, chaos in Hamiltonian systems, theory of invariant measures in dynamical systems, ergodic partition, dissipative dynamical systems, limit cycles, Lyapunov exponents, strange attractors.

**203. Special Topics in Dynamical Systems****(3) MEZIC***Prerequisite: ME 201.*

Geometric mechanics, volume-preserving dynamical systems, molecular dynamics; Infinite dimensional dynamics and finite dimensional approximations including incompressible Euler equations and point vortex theory, transport and

fluid mixing, control of measure-preserving systems, equilibrium and non-equilibrium statistical mechanics methods for vortex gases.

### 207. Faculty Research Seminar

(1) BULLO

A series of bi-weekly presentations given by ladder faculty members to familiarize graduate students with current department research projects. This course is required to be taken by all graduate students within the first year of arrival.

### 210A. Matrix Analysis and Computation

(4) STAFF

*Prerequisite:* consent of instructor.

*Same course as Computer Science 211A, ECE 210A, Mathematics 206A, Chemical Engineering 211A, and Geology 251A. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.*

Graduate level-matrix theory with introduction to matrix computations. SVD's, pseudoinverses, variational characterization of eigenvalues, perturbation theory, direct and iterative methods for matrix computations.

### 210B. Numerical Simulation

(4) PETZOLD

*Prerequisite:* consent of instructor.

*Same course as Computer Science 211B, ECE 210B, Mathematics 206B, and Chemical Engineering 211B and Geology 251B. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.*

Linear multistep methods and Runge-Kutta methods for ordinary differential equations: stability, order and convergence. Stiffness. Differential algebraic equations. Numerical solution of boundary value problems.

### 210C. Numerical Solution of Partial Differential Equations—Finite Difference Methods

(4) STAFF

*Prerequisite:* consent of instructor.

*Same course as Computer Science 211C, ECE 210C, Mathematics 206C, Chemical Engineering 211C, and Geology 251C. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.*

Finite difference methods for hyperbolic, parabolic and elliptic PDEs, with application to problems in science and engineering. Convergence, consistency, order and stability of finite difference methods. Dissipation and dispersion. Finite volume methods. Software design and adaptivity.

### 210D. Numerical Solution of Partial Differential Equations—Finite Element Methods

(4) STAFF

*Prerequisite:* consent of instructor.

*Same course as Computer Science 211D, ECE 210D, Mathematics 206D, Chemical Engineering 211D, and Geology 251D. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language.*

Weighted residual and finite element methods for the solution of hyperbolic, parabolic and elliptical partial differential equations, with application to problems in science and engineering. Error estimates. Standard and discontinuous Galerkin methods.

### 212. Risk Assessment and Management

(3) THEOFANOUS

*Prerequisites:* consent of instructor.

*Same course as Chemical Engineering 212*

Conceptual foundations of risk and its utility for decision making. Determinism, statistical inference, and uncertainty. Formulation of safety goals and approaches to risk management. Generalized methodology and tools for assessing risks in the industrial, ecological, and public health context.

### 215A. Applied Dynamical Systems I

(3) MOEHLIS

*Prerequisite:* graduate standing.

Phase-plane methods, non-linear oscillators,

stability of fixed points and periodic orbits, invariant manifolds, structural stability, normal form theory, local bifurcations for vector fields and maps, applications from engineering, physics, chemistry, and biology.

### 215B. Applied Dynamical Systems II

(3) MOEHLIS

*Prerequisites:* ME 215A; graduate standing.

Local codimension two bifurcations, global bifurcations, chaos for vector fields and maps, Smale horseshoe, symbolic dynamics, strange attractors, universality, bifurcation with symmetry, perturbation theory and averaging, Melnikov's methods, canards, applications from engineering, physics, chemistry, and biology.

### 216. Level Set Methods

(4) GIBOU

*Prerequisite:* Computer Science 211C, or Chemical Engineering 211C, or ECE 210C, or ME 210C.

*Same course as Chemical Engineering 226, ECE 226, and Computer Science 216.*

Mathematical description of the level set method and design of the numerical methods used in its implementations (ENO-WENO, Godunov, Lax-Friedrich, etc.). Introduction to the Ghost Fluid Method. Applications in CFD, Materials Sciences, Computer Vision and Computer Graphics.

### 218. Introduction to Multiphase Flows

(3) THEOFANOUS

*Prerequisite:* consent of instructor.

*Same course as Chemical Engineering 218.*

Development from basic concepts and techniques of fluid mechanics and heat transfer, to local behavior in multiphase flows. Key multiphase phenomena, related physics. Extension of local conservation principles to usable formulations in multiphase flows. Modelling approaches. Practical examples. Computer simulations.

### 219. Mechanics of Materials

(3) MCMEEKING

*Same course as Materials 207.*

Matrices and tensors, stress deformation and flow, compatibility conditions, constitutive equations, field equations and boundary conditions in fluids and solids, applications in solid and fluid mechanics.

### 220A-B. Fundamentals of Fluid Mechanics

(3-3) BENNETT, HOMS, MEINHART

*Prerequisites:* ME 151A-B and 152A-B.

Introductory course in fluid mechanics. Basic equations of motion (continuity, momentum, energy, vorticity), coordinate transformations, "potential" flow, thin airfoil theory, conformal mapping, vortex dynamics, boundary layers, stability theory, laminar/turbulent transition, turbulence. Inviscid/viscid, irrotational/rotational, incompressible/compressible flow examples.

### 221. Advanced Viscous Flow

(3) HOMS

*Prerequisite:* ME 220A.

Review the Navier-Stokes equations in velocity, pressure, and vorticity variables. Analyze details of important low and moderate Reynolds number flow applications and then high Reynolds number flows with boundary layer phenomena. Compare exact, approximate, numerical, and experimental solution methods.

### 223. Turbulent Flow

(3) STAFF

*Prerequisites:* ME 220A-B or Chemical Engineering 220A-B.

*Same course as Chemical Engineering 221.*

Nature and origin of turbulence, boundary layer mechanics law of the wall, wakes, and jets, transport of properties, statistical description of turbulence, measurement problems, stratification effects. Application of principles to practical problems is stressed.

### 225AA-ZZ. Special Topics in Mechanical Engineering

(3) STAFF

*Prerequisite:* consent of instructor.

Specialized courses dealing with advanced topics and recent developments in one or more of the following areas: dynamic systems, control and robotics, fluid mechanics, materials science and

engineering, ocean engineering, solid mechanics and structures, thermal sciences.

### 230. Elasticity and Plasticity

(3) MCMEEKING

*Prerequisite:* ME 219 or MATRL 207

*Same course as Materials 230.*

Review field equations of elasticity and plasticity.

Energy principles and uniqueness theorems.

Elementary problems in one and two dimensions, stress functions, and complex variable methods. Plastic stress-strain laws; flow potentials. Torsion and bending of plastic flow, slip line theory.

### 233A. Design of Composite Structures

(3) KEDWARD

*Prerequisite:* ME 230 or 275A.

Emphasis is placed on the differences of design with composites vis-à-vis the design of conventional metallic structures. The content is directed at the class of polymer-matrix composites.

### 234A. Structural Dynamics

(3) BRUCH

Formulation of the equations of motion for free and forced response of single and multi-degree of freedom systems and for distributed-parameter systems. Modal analysis. Approximate solution techniques. Numerical algorithms. Damping.

### 236. Nonlinear Control Systems

(4) KOKOTOVIC, TEEL

*Same course as ECE 236.*

*Recommended preparation:* ECE 230A.

Analysis and design of nonlinear control systems. Focus on Lyapunov stability theory, with sufficient time devoted to contrasts between linear and nonlinear systems, input-output stability and the describing function method.

### 237. Nonlinear Control Design

(4) KOKOTOVIC

*Prerequisite:* ECE 236 or ME 236.

*Same course as ECE 237.*

Stabilizability by linearization and by geometric methods. State feedback design and input/output linearization. Observability and output feedback control. Singular perturbations and composite control. Backstepping design of robust controllers for systems with uncertain nonlinearities. Adaptive nonlinear control.

### 239. Conduction Heat Transfer

(3) STAFF

*Prerequisite:* undergraduate course in heat transfer.

Development of mathematical representation of conduction heat transfer and techniques available for analytical, analog, and numerical solutions.

### 240. Convective Heat Transfer

(3) STAFF

*Prerequisite:* undergraduate course in heat transfer.

Solutions to the momentum, continuity, and energy equations will be considered for both natural and forced convection. Applications to industrial problems, convective transfer in high-speed flows, heat transfer in rarefied flows, and the effects of chemical reactions on convective rates will be included.

### 241. Radiative Energy Transfer

(3) STAFF

*Prerequisite:* undergraduate course in heat transfer.

The physical nature of radiation and of its interaction with matter, conservation principles in radiative transfer and their relation to molecular and convective processes, and thermodynamic equilibrium with consideration of nondimensional parameters is considered. Applications to astrophysics, combustion, and plasma technology are discussed.

### 243A-B. Linear Systems I, II

(4-4) KOKOTOVIC, BAMIEH

*Prerequisites:* ME 210A (for 243A); ECE 140; and, ECE 230A or ME 243A; and ME 210A.

*Same courses as ECE 230A-B.*

Internal and external descriptions. Solution of state equations. Controllability and observability realizations. Pole assignment, observers; modern compensator design. Disturbance localization and decoupling. Least-squares control. Least-squares estimation; Kalman filters; smoothing. The separation theorem; LQG compensator design. Computational considerations. Selected additional topics.

**244A. Advanced Theoretical Methods in Engineering****(4) FREDRICKSON, CHMELKA, LEAL***Prerequisite: consent of instructor.*Same course as *Chemical Engineering 230A*.

Methods of solution of partial differential equations and boundary value problems. Linear vector and function spaces, generalized Fourier analysis, Sturm-Liouville theory, calculus of variations, and conformal mapping techniques.

**244B. Advanced Theoretical Methods in Engineering****(3) FREDRICKSON***Prerequisites: ME 244A and consent of instructor.*Same course as *Chemical Engineering 230B*.

Advanced mathematical methods for engineers and scientists. Complex analysis, integral equations and Green's functions. Asymptotic analysis of integrals and sums. Boundary layer methods and WKB theory.

**250. Advanced Thermodynamics****(3) MILSTEIN***Prerequisites: ME 151A-B.*

An extended treatment of the fundamentals of classical thermodynamics, including availability and reversibility, the chemical potential, properties of matter, thermochemistry, chemical equilibrium of real gases and gas mixtures.

**251. Statistical Thermodynamics****(3) MILSTEIN***Prerequisites: ME 151A-B.*

An extended treatment of the fundamentals of statistical thermodynamics, equilibrium distributions, properties of gases, liquids, and solids.

**252A. Computational Fluid Dynamics****(3) MEIBURG***Prerequisites: ME 210C or Computer Science 211C or ECE 210C or Mathematics 206C or Chemical Engineering 211C.*

Numerical simulation of fluid flows. Basic discretization techniques for parabolic, elliptical, and hyperbolic conservation laws. Stability and accuracy. Diffusion equation, linear convection equation.

**252B. Computational Fluid Dynamics****(3) MEIBURG***Prerequisites: ME 210C or Computer Science 211C or ECE 210C or Mathematics 206C or Chemical Engineering 211C.*

Discussion of appropriate boundary conditions. Nonlinear convection dominated problems, curvilinear coordinates, basics of grid generation. Inviscid flow, boundary layer flow, incompressible Navier-Stokes flows.

**252C. Computational Fluid Dynamics****(3) MEIBURG***Prerequisites: ME 210C or Computer Science 211C or ECE 210C or Mathematics 206C or Chemical Engineering 211C.*

Compressible inviscid flows. Compressible viscous flows. Boundary element methods. Lagrangian and vortex methods.

**254. Optimal Control of Dynamic Systems****(3) BAMIEH***Prerequisite: ME 243A or ECE 230A or equivalent.*

Introduction to the classical calculus of variations. Optimization problems for dynamic systems with terminal and path constraints. Necessary and sufficient conditions. Neighboring extremal paths and the second variation. Singular solutions. Numerical solutions of optimal control problems. Applications to engineering systems.

**256. Introductory Robust Control with Applications****(4) SMITH, KHAMMASH***Prerequisites: ECE 230A or ME 255A; and ECE 230B or ME 243B (may be taken concurrently).*Same course as *ECE 232*.

Robust Control theory; uncertainty modeling; stability of systems in the presence of norm-bounded perturbations; induced norm performance problems; structured singular value analysis; H-infinity control theory; model reduction; computer simulation based design project involving practical problems.

**260A. Materials Structures and Bonding****(3) MILSTEIN***Prerequisite: consent of instructor.*

Crystal structures (Miller indices, Bravais lattices, symmetry operations). Modeling of atomic bonding, determination and applications of interatomic potentials, atomic basis for elastic moduli. Crystal anisotropy. Lattice statics and molecular dynamics computations.

**262. Thermodynamics and Phase Equilibria****(3) ODETTE, CLARKE, ZOK***Prerequisite: consent of instructor.*Same course as *Materials 201*.

Advanced thermodynamics with emphasis on phase equilibria, properties of solutions, and multicomponent systems.

**264. Mechanical Behavior of Materials****(3) STAFF***Prerequisite: consent of instructor.*Same course as *Materials 220*.

Concepts of stress and strain. Deformation of metals, polymers, and ceramics. Elasticity, viscoelasticity, plastic flow, and creep. Linear elastic fracture mechanics. Mechanisms of ductile and brittle fracture.

**265. Composite Materials****(3) ODETTE, CLARKE, ZOK***Prerequisite: consent of instructor.*Same course as *Materials 261*.

Stress and strain relations in composites. Residual stresses. The fracture resistance of organic and inorganic matrix composites. Statistical aspects of fiber failure. Composite laminates and delamination cracks. Cumulative damage concepts. Interface properties. Design criteria.

**271. Finite Element Structural Analysis****(3) MCMEEKING***Prerequisite: ME 219.*Same course as *Materials 240*.

Definitions and basic element operations. Displacement approach in linear elasticity. Element formulation: direct methods and variational methods. Global analysis procedures: assemblage and solution. Plane stress and plane strain. Solids of revolution and general solids. Isoparametric representation and numerical integration. Computer implementation.

**275. Fracture Mechanics****(3) ODETTE, MCMEEKING***Prerequisite: ME 219.*Same course as *Materials 234*.

Analytic solutions of a stationary crack under static loading. Elastic and elastoplastic analysis. The J integral. Energy balance and crack growth. Criteria for crack initiation and growth. Dynamic crack propagation. Fatigue. The micromechanics of fracture.

**285. Geophysical Fluid Dynamics****(3) MCLEAN***Prerequisite: ME 152A.*

The ocean-atmosphere system. Air-sea interaction. Governing equations for rotating system: conservation of mass, momentum and energy. Ocean surface waves: generation, spectral characteristics. Internal waves. Geostrophic motion. Rotating boundary layers: Ekman dynamics. Tides. Kelvin waves.

**291A. Physics of Transducers****(3) SOH***Prerequisite: graduate standing.**Recommended preparation: ECE 220A (may be taken concurrently).*

The use of concepts in electromagnetic theory and solid state physics to describe capacitive, piezoresistive, piezoelectric and tunneling transduction mechanisms and analyze their applications in microsystems technology.

**292. Design of Transducers****(3) TURNER, PENNATHUR***Prerequisites: ME 291A and ECE 220A; graduate standing.*

Design issues associated with microscale transduction. Electrodynamics, linear and nonlinear mechanical behavior, sensing methods, MEMS-specific fabrication design rules, and layout are all covered.

Modeling techniques for electromechanical systems are also discussed.

**295. Group Studies: Controls, Dynamical Systems, and Computation****(1) STAFF**Same course as *ECE 295, Computer Science 592, and Chemical Engineering 295*.

A series of weekly lectures given by university staff and outside experts in the fields of control systems, dynamical systems, and computation.

**501. Teaching Assistant Practicum****(1-4) STAFF**

Normally required of students serving as teaching assistants. No unit credit allowed towards advanced degree.

Practical experience in the various activities associated with teaching, including lecturing, supervision of laboratories and discussion sections, preparation and grading of homework and exams.

**503. Research Assistant Practicum****(1-4) STAFF**

Will not count as unit credit towards M.S. or Ph.D. degree in mechanical engineering.

Practical experience in the various activities associated with research, including experimental work, theoretical work and analyses, and assisting department faculty and other professional researchers in their duties.

**596. Directed Research****(1-12) STAFF***Prerequisite: consent of instructor.*

Not applicable to course requirement for M.S. and Ph.D. degree. SIU grading.

Experimental or theoretical research undertaken under the direction of a faculty member for graduate students who have not yet advanced to candidacy.

**597. Individual Study for Ph.D. Qualifying Examination****(1-12) STAFF***Prerequisite: graduate standing.*

No unit credit allowed toward advanced degree. Maximum of 12 units per quarter; enrollment limited to 24 units per examination. Instructor is normally student's major advisor. SIU grading.

Individual studies for Ph.D. qualifying examination.

**598. Master's Thesis Research and Preparation****(1-12) STAFF***Prerequisite: consent of thesis advisor.*

No unit credit allowed toward advanced degree.

For research underlying the thesis and writing of the thesis.

**599. Ph.D. Dissertation Research and Preparation****(1-12) STAFF***Prerequisite: consent of dissertation advisor.*

No unit credit allowed toward advanced degree.

For research and preparation of the dissertation.

*Executive Dean: David Marshall*  
*Dean, Division of Humanities and Fine Arts: David Marshall*  
*Dean, Division of Mathematical, Life, and Physical Sciences: Martin Moskovits*  
*Dean, Division of Social Sciences: Melvin Oliver*  
*Acting Dean, Undergraduate Education: Mary Nisbet*

The College of Letters and Science is an innovative and diverse academic unit that offers some 80 majors and 38 minors to more than 17,000 undergraduates. Building on the great strength of its traditional disciplines, the college's departments and programs provide exciting opportunities for faculty and students at the cutting edge of interdisciplinary inquiry.

As the largest center of teaching, learning, and research on the UCSB campus, the college offers an environment of stimulating intellectual exchanges among senior faculty, graduate students, and undergraduates. The curriculum encourages exploration and intellectual breadth through the completion of the General Education Program, and provides depth through the acquisition of the analytical skills and methods of a specific academic discipline. An honors program provides enrichment opportunities for highly motivated students.

The college's Division of Undergraduate Education, headed by the dean of undergraduate studies, offers academic advising and direction and is the home of the college's honors program. Faculty members from diverse disciplines serve as assistant deans and are available for consultation on a variety of academic matters. Peer and college advisors assist students in individual consultations and in small group meetings and workshops. Academic departments and programs form the core of the College of Letters and Science and are grouped into three divisions: Division of Humanities and Fine Arts; Division of Mathematical, Life, and Physical Sciences; and Division of Social Sciences. These divisions foster intimate communities of scholars within the larger campus setting.

## Division of Humanities and Fine Arts

The programs in the Division of Humanities and Fine Arts range from traditional areas that have been at the heart of a liberal arts education for thousands of years (represented by departments such as Classics, History, and Philosophy) to programs that are redefining the university in the 21st century (such as Media Arts and Technology). They include a broad spectrum of languages and literatures and all of the performing and visual arts. The division's departments and interdisciplinary programs focus on the intellectual, historical, and artistic traditions of cultures throughout the world and the modes of expressions and representation that have given them voice and form.

On the undergraduate level, the Division of Humanities and Fine Arts prepares students for a wide variety of careers while providing them with the knowledge and the skills of critical thinking, communication, and expression that will allow them to participate in society as informed and engaged citizens. Graduate students receive rigorous professional training that prepares them for careers in academia, the arts, public and cultural institutions, and related fields. Internationally recognized scholars and artists teach undergraduate and graduate students and advance their fields with innovative research, publications, and creative activity that both preserve our traditions and map new fields of study. A wide variety of collaborative research projects, departmental centers, and interdepartmental programs and consortia promote interdisciplinary teaching and scholarship that bring together students and faculty across the Division of Humanities and Fine Arts, the College of Letters and Science, and the university.

A wide variety of degrees at the undergraduate and graduate level are available in the departments and programs in the humanities and fine arts. These include art, art history, classics, comparative literature, dance, theatre, music, Asian studies, Chinese, Japanese, French, Italian, Russian, Spanish, Portuguese, German, Slavic languages and literatures, Latin American and Iberian Studies, linguistics, English, history, philosophy, religious studies, renaissance studies, medieval studies, film and media studies, and visual and spatial studies. The division's Interdisciplinary Humanities Center seeks to broaden the traditional definition of the humanities by sponsoring activities in the

performing and visual arts and by encouraging dialogues between the humanities and the social sciences. Departments work closely with UCSB Arts and Lectures, sponsoring residencies and/or classes with well-known performers and artists, and the University Art Museum, which has a collection of over 7,000 works of art and an architecture and design collection that is one of the largest repositories of architectural records in the United States. The University Library has over two million volumes.

## Division of Mathematical, Life, and Physical Sciences

The Division of Mathematical, Life, and Physical Sciences (MLPS) is committed to the transmission of accumulated formal knowledge and structure in mathematics and the natural sciences. It promotes the quantitative and scientific literacy so essential to intelligent participation in an increasingly technological society. The division offers courses and degrees in mathematics and statistics, in the life sciences of biology and psychology, and in the physical sciences of chemistry, geography (which also includes a social-scientific focus in areas of "human geography"), geology, and physics. In addition, the division is home to a unique, interdisciplinary, problem-oriented program (and popular major) in environmental studies. Allied departments in the division with particular strengths and interest in areas of ecology and the environment include Ecology, Evolution, and Marine Biology; Geography; and Earth Science. The division's undergraduate majors offer excellent preparation for graduate and professional schools, including medical schools, where our graduates have exceptionally high acceptance rates.

Because interdisciplinary study is strongly promoted at UCSB, MLPS is able to offer a unique experience to its students that comes from the removal of barriers between fields of science and other disciplines such as engineering, social sciences, and education. This "science without silos" mentality is a unique strength for UCSB and continues to be a major attraction for many students. As a result, our graduate programs and research are strong throughout the division, and a number of special interdisciplinary programs, including those in biomolecular science and engineering, environmental studies, and marine science, have been formally

established. Unusual opportunities for strong interdisciplinary ties, and for interactions with distinguished visiting scientists from around the world, are fostered by a remarkable group of centers and institutes on campus. These include the Kavli Institute for Theoretical Physics, the Marine Science Institute, the National Center for Geographic Information and Analysis (one of the few world centers for exploration and utilization of remote sensing techniques), the National Center for Ecological Analysis and Synthesis, the Vernon and Mary Cheadle Center for Biodiversity and Ecological Restoration, the Center for the Study of the Biochemistry and Molecular Biology of Aging, the Institute for Quantum and Complex Dynamics, the Institute for Computational Earth Systems Science, the Institute for Crustal Studies, the Center for Polymers and Organic Solids, the Sage Center for the Study of the Mind, and the affiliated Brain Imaging Center, the Neuroscience Research Institute, the California NanoSystems Institute, and the Materials Research Laboratory.

## Division of Social Sciences

The Division of Social Sciences offers students a rich, interdisciplinary understanding of society, culture, economy, politics, ethnicity, and gender. Students in the division participate actively in seeking solutions to pressing national and global problems. They have an opportunity to study vital issues such as globalization; the link between science, technology, and human affairs; modes of conflict and communication within and between societies; and how the economy is affected by governmental decisions.

In addition to the traditional social science disciplines—anthropology, communication, economics, political science, and sociology—the division hosts a number of interdisciplinary programs, including Asian American Studies, Black Studies, Chicana and Chicano Studies, Global and International Studies, Law and Society, and Feminist Studies. The division is also home to the Exercise and Sport Studies Program and the Department of Military Science.

The division encourages cross-disciplinary explorations that link the social sciences to the humanities and fine arts, the physical and natural sciences, and engineering. For example, students and faculty have engaged in archaeological research and study combining anthropology, geology, biology, and history. Students in many departments are involved in projects involving digital media technology. Both faculty and students work intensely to understand problems relating to environmental policy.

Research and academic courses in the division reflect the full range of modern social science methodologies and approaches. These extend from highly mathematical approaches and intensive analysis of quantitative data, to the use of narrative techniques and detailed observation of everyday life. Both graduate and undergraduate students collaborate with faculty on research and teaching teams to create and convey new knowledge in areas such as social and environmental policy, race and ethnic studies, global and international issues, and social policy.

These innovative efforts have resulted in the development of new social science publications and research centers, including the Center for Advanced Studies of Individual Differences; the Center for Black Studies; the Center for Chicano Studies; the Center for Evolutionary Psychology; the Center for Film, Television and New Media; the Center for Global Studies; the Center for Information, Technology, and Society; the Center for Middle East Studies; the Center for Nanotechnology in Society; the Center on Police Practices and Community; the Center for the Study of Sexual Minorities in the Military; the Center for Spatially Integrated Social Science; the East Asia Center; the Health Data Research Facility; the Meso American Research Center; the Orfalea Center for Global and International Studies; and the Social Science Survey Center/Benton Survey Research Laboratory.

The skills and knowledge that the Social Sciences Division's undergraduates receive will prepare them for a variety of careers and enable them to become engaged community members and active citizens upon graduation. Many students choose to pursue graduate programs at leading universities across the country.

The division offers several diverse graduate programs where students receive extensive educational, research, and professional training that prepares them for a variety of careers, including academia. Departments offering Ph.D. degrees are Anthropology, Economics, Chicana and Chicano Studies, Communication, Political Science, and Sociology. In addition, students may pursue one of several interdisciplinary Ph.D. emphases offered in the social sciences, which include those in Global and International Studies, Technology and Society, and Women's Studies.

## Degree Requirements

The College of Letters and Science offers four bachelor's degrees: the bachelor of arts, the bachelor of science, the bachelor of fine arts, and the bachelor of music. See the chart under "Academic Units," page 17 for a full list of available degrees and majors.

The bachelor's degree requirements for students in the College of Letters and Science are as follows:

### General University Requirements

- University of California Entry Level Writing Requirement
- American History and Institutions
- Academic Residence
- Grade-Point Average
- General university requirements are described in the chapter of this catalog called "Undergraduate Education at UCSB."

### General Education Requirements (appropriate to degree chosen)

#### Major Requirements

(appropriate to degree chosen)

Major requirements are described under each department and program.

#### Unit Requirements

In order to be eligible for graduation, students must complete at least the following: 180 total units (184 if General Education Area B is met

by completing foreign language level 3 at UCSB or its equivalent at another college or university). At least 60 of these units must be upper division.

Students must earn a specified number of these units while in residence at UCSB. See the chapter titled "Undergraduate Education at UCSB" for details. There is no limit on the number of courses that may be taken passed/not passed during a single quarter. However, at the time of graduation, students must have earned at least 120, or two-thirds, of their units at UCSB on a letter-grade basis.

Certain courses designated by the college as remedial are offered for work-load credit only, and do not figure in the calculation of the total number of units needed for a degree. In addition, professional courses, numbered 300-499, are not acceptable for credit toward the bachelor's degree.

### 200-Unit Enrollment Limit

The college expects students to graduate with no more than 200 units. College policy requires students to secure specific approval to continue enrollment beyond 200 units. The College of Letters and Science will not accept students from the College of Creative Studies or the College of Engineering after they have completed 180 units. College credit earned before high school graduation does not count toward the 200-unit maximum. This includes credit for Advanced Placement and International Baccalaureate examinations, and also college or university credit earned while still in high school. In addition, students who are admitted as freshmen and remain continuously enrolled will be allowed 12 regular quarters at UCSB, and students admitted as juniors will be allowed 6 regular quarters, even if they earn more than 200 units during that period. Students are also free to attend summer session. Summer session does not count as a regular quarter in this calculation, but units earned in summer session apply toward the 200-unit maximum. Note: If students discontinue enrollment at UCSB and earn a large number of units at one or more other academic institutions while they are away, the number of quarters allowed at UCSB will be reduced in proportion to the number of terms completed elsewhere. Students who think they may exceed both the quarter limitations noted and 200 units may submit a Proposed Schedule for Graduation for consideration by the Dean of Undergraduate Education, but they should understand that approval is granted only in very limited circumstances. More detail about unit limits is given at [www.advising.ltsc.ucsb.edu/maxunits](http://www.advising.ltsc.ucsb.edu/maxunits).

### Upper-Division Courses

Sixty upper-division units are required. UCSB courses are considered upper-division if they are numbered 100-199.

Transfer students from community colleges should take particular note of the upper-division unit requirement because community colleges do not offer upper-division courses.

### Exercise and Sport Studies Credit Limit

No more than 6 units of one-half-unit exercise and sport studies (formerly physical activities)

courses, or equivalent transfer courses, will be accepted toward the 180 (or 184) total units required for graduation.

## The General Education Program

The General Education Program is the common intellectual experience of all UCSB students, whatever their majors. Through the General Education Program, students receive orientation to a broad range of intellectual disciplines: the kinds of questions that are addressed, the methods for solving problems, and the strategies for communicating findings and conclusions.

The General Education Program is multidisciplinary. It requires study in science and mathematics, human history and thought, social science, arts, and literatures. It also requires at least one course in both European traditions and world cultures, and at least one course that focuses on the history and cultural, intellectual, and social experience of designated U.S. ethnic groups.

The General Education Program also provides opportunities to acquire university-level skills in writing, critical thinking, quantitative analysis, and foreign languages, in courses specifically devoted to these topics and also in courses in which practice and instruction in these topics are embedded in the study of other subjects.

## General Education Requirements

Students in the College of Letters and Science must complete the General Education requirements appropriate to their degree (B.A., B.S., B.F.A., or B.M.) in order to qualify for graduation.

Requirements may be satisfied with courses completed on the UCSB campus. Except for the writing requirement, they may also be satisfied with equivalent courses completed at another accredited institution, or by means of College Entrance Examination Board Advanced Placement credit. A list of courses that satisfy the various area requirements in the General Education Program appears on the next page.

Students entering UC Santa Barbara as transfers from California community colleges may have their General Education requirements considered satisfied by virtue of completion of the Intersegmental General Education Transfer Curriculum (IGETC). This is a program of at least 34 semester-units of articulated coursework spread across six liberal arts subject areas. If fully completed prior to matriculation at UCSB and certified by the community college, IGETC will be accepted in satisfaction of the General Education Program. Normally, unless transfer students have fully completed the IGETC program at the time of transfer, they must satisfy all requirements within the General Education Program. However, students admitted fall 2000 or later who have partially satisfied IGETC are entitled to substitute IGETC for General Education Program requirements if they meet the following criteria: (1) they have fully completed IGETC areas 1 and 2 prior to transfer; (2) they lack no more than two courses in IGETC areas 3 through 6 at the time of ma-

trication; (3) the community college certifies that a hardship prevented full satisfaction of IGETC and provides partial certification; (4) they complete the missing course(s) within one academic year of matriculation. Because of the time limit for completion of IGETC omissions, eligible students should consult the College of Letters and Science without delay to determine how they may fulfill these requirements.

## General Provisions Governing All Degree Candidates

1. Courses in the student's major can also be used to fulfill General Education requirements.
2. Courses taken to satisfy the General Education requirements may also be applied simultaneously to the American History and Institutions requirement.
3. A course listed in more than one general subject area (A through G) can be applied to only one of these areas. (Example: Art History 6A cannot be applied to both E and F.)

## Bachelor of Arts Degree

### Special Subject Area Requirements

In the process of fulfilling the General Education General Subject Areas C through G, students must also complete the following special subject area requirements. Courses applicable to these requirements are listed following the description of General Subject Area Requirements A-G, below:

1. **Writing Requirement.** At least six designated General Education courses that meet the following criteria: (1) the courses require one to three papers totaling at least 1,800 words, exclusive of elements like footnotes, equations, tables of contents, or references; (2) the required papers are independent of or in addition to written examinations; and (3) the paper(s) are a significant consideration in the assessment of student performance in the course. Students may, by petition, request that up to two other UCSB courses be considered as applicable toward this requirement. Special instructions for such petitions are available from the college office. Once a student has matriculated at UCSB, the writing requirement may be met only with designated UCSB courses. A list of courses that meet the writing requirement may be found on page 115.
2. **European Traditions Requirement (only for B.A. degree).** At least one course that focuses on European cultures or cultures in the European tradition. Courses applicable to this requirement are listed below.
3. **World Cultures Requirement.** At least one course that focuses on a world culture outside of the European tradition. Courses applicable to this requirement are listed below.
4. **Quantitative Relationships Requirement.** At least one course from Area C emphasizing quantitative relationships. Courses applicable to this requirement are listed below.
5. **Ethnicity Requirement.** At least one course which concentrates on the intellectual, social and cultural experience, and the history of one of the following: Native Americans, African

Americans, Chicanos/Latinos, Asian Americans, or a course that provides a comparative and integrative context for understanding the experiences of oppressed and excluded racial minorities in the United States.

### General Subject Area Requirements

*Note:* Additional courses may have been approved to fulfill various General Education Area Requirements after the cut-off date for publication in this catalog. Please refer to the *Letters and Science Academic Requirements (LASAR)* brochure (available in the UCSB Bookstore) for up-to-date information.

## AREA A

### English Reading and Composition

*Objective:* To help students develop a facility in English composition.

Two courses are required. Writing 2, 2E, or 2LK, and one of the following: Writing 50, 50E, 50LK, 109AA-ZZ, or English 10, 10EM, 10LC.

Students must complete Writing 2, 2E, or 2LK by the end of their sixth quarter at UCSB. Further registration will be blocked for students who do not comply. The following courses cannot be dropped after the fifth day of instruction: Writing 2, 2LK, 50, 50LK. In addition, students cannot receive credit for these courses (or their equivalents taken at another institution) until they have fulfilled the Entry Level Writing Requirement.

## AREA B

### Foreign Language

*Objective:* To help students gain a familiarity with a foreign language.

The foreign language requirement may be satisfied in one of the following four ways:

1. By completing foreign language level 3 (third quarter) at UCSB or its equivalent at another college or university. Students fulfilling Area B with this method will require 184 overall units to fulfill degree requirements.
2. By achieving a score of 3 or higher on the College Board Advanced Placement Examination in a foreign language, or by earning a score of 5 or higher on a higher level International Baccalaureate Exam in a foreign language, or by earning one of the following minimum scores on the Foreign Language SAT II: Chinese with Listening—570; French/French with Listening—590; German/German with Listening—570; Modern Hebrew—500; Italian—570; Japanese with Listening—570; Korean with Listening—550; Latin—580; Spanish/Spanish with Listening—570.
3. By completing the third year of one language in high school with a grade-point average for third-year language of at least C.
4. By passing a UCSB foreign language placement examination at the appropriate level.

## AREA C

### Science, Mathematics, and Technology

*Objective:* To provide an understanding of the methods and applications of science and mathematics, and the fundamental laws that govern the biological and physical worlds.

Three courses are required. The disciplinary subsections listed below are for students' infor-

# College Board Advanced Placement Credit/General Education Program

| <b>Advanced Placement Exam with score of 3, 4, or 5</b>           | <b>Units awarded</b> | <b>General Education course credit</b> | <b>UCSB course equivalent</b><br><i>(You may not enroll in these courses for credit at UCSB.)</i> |

\* A maximum of 8 units EACH in art studio, English, mathematics, and physics is allowed.

# Also satisfies the quantitative relationship requirement in Area C.

+ Maximum credit for computer science exams is 4 units.

† Consult the mathematics department about optional higher placement in calculus.

• If you received a score of 5 on Mathematics-Calculus AB, see [www.math.ucsb.edu/ugrad/placement.php](http://www.math.ucsb.edu/ugrad/placement.php)

mation only; courses may be selected from any one subsection or combination of subsections.

### The Biological Sciences

EEMB 3, 21, 22, 23, 40, 136  
Geology 7, 30, 30H, 111  
MCDB 1A, 20, 21, 22, 23, 24, 27

### The Physical Sciences:

Astronomy 1, 2  
Chemistry 1A+1AL, 2A+2AC  
Geography 3A-B, 8  
Geology 1, 2, 4, 4S, 4W, 6, 10, 20, 123, 130  
Materials 10  
Natural Science 1A, 1B  
Physics 1, 6A+AL, 6B+BL, 6C+CL, 10, 21

### Other Scientific Disciplines:

Anthropology 5  
Communication 87  
Comparative Literature 27  
Computer Science 5JA  
EEMB 30  
Environmental Studies 2, 115  
French 40X  
Geography 12  
Linguistics 106, 182, 185  
Mathematics 3A-B, 34A-B  
MCDB 26  
Philosophy 183  
PSTAT 5A, 5E, 5LS  
Psychology 5  
Speech and Hearing Sciences 121

## AREA D

### Social Science

*Objective:* To provide an understanding of what determines or influences the behavior and beliefs of individuals and groups.

Three courses are required:

Anthropology 2, 3, 3SS, 109, 110, 122, 130A-B, 131, 134, 135, 136, 137, 141, 142, 156  
Asian American Studies 1, 2, 3, 6, 8, 100AA-BB-FF, 107, 119, 131, 136, 137  
Black Studies 1, 4, 6, 15, 20, 100, 102, 103, 121, 122, 124, 125, 160, 169AR-BR-CR, 171  
Chicana/o Studies 1A-B-C, 114, 137, 140, 144, 151, 168A-B, 172, 173, 174, 175, 176, 178A, 189B  
Communication 1  
Comparative Literature 119  
East Asian Cultural Studies 189A  
Economics 1, 2, 109  
Environmental Studies 1, 130A-B, 132  
Feminist Studies 20, 20H, 30, 30H, 60, 60H, 117C, 159B-C  
Geography 2, 5, 20, 108, 108E, 150  
Global Studies 1, 2  
History 7, 11A, 17A-B-C, 17AH-BH-CH, 82, 105A, 117A, 117C, 131F, 138B, 159B-C, 161A-B, 167CA-CB-CP, 168A-B, 169AR-BR-CR, 172A-B, 175A-B, 189A  
Italian 161AX  
Japanese 25  
Korean 82  
Law and Society 1  
Linguistics 20A-B, 70, 130, 132, 170, 180  
Military Science 27  
Music 175E-F-G  
Political Science 1, 12, 115, 121, 136, 150A, 151, 155, 171, 174  
Psychology 1, 102, 103, 105, 107, 108

Religious Studies 7, 14, 15, 40, 115A, 131H, 136, 141A-B, 147, 151A-B, 152  
Slavic 152A-B-C  
Sociology 1, 131, 134, 144, 152A, 153  
Spanish 178  
Theater 65

## AREA E

### Culture and Thought

*Objective:* To provide a perspective on world cultures through the study of human history and thought. Three courses are required:

Anthropology 138TS, 176TS  
Art History 6A-B-C, 45MC, 109G, 130E, 136I, 144D, 145MC  
Asian American Studies 138, 161  
Black Studies 3, 5, 7, 49A-B, 50, 60A-B, 130A-B  
Chinese 148, 158  
Classics 50, 80A-B, 101, 106, 108, 115, 150, 160, 162S, 171  
Comparative Literature 27, 30A-B-C, 35, 113, 119, 122A, 171, 183, 186RR  
East Asian Cultural Studies 3, 4A-B, 5, 21, 80, 164B  
Environmental Studies 3, 107C-E, 108A  
French 40X, 50AX-BX-CX, 70AX, 154F-G, 155D  
German 43A-C, 116A, 164I  
Global Studies 1  
History 2A-B-C, 2AH-BH-CH, 4A-B-C, 4AH-BH-CH, 8, 33D, 46, 49A-B, 80, 84, 87, 106A-B-C, 107A-B-C-E, 113B, 114B-C-D, 133A-B-C-D, 143, 144, 182A-B, 185A-B, 187A-B-C, 188T, 189E  
Italian 20X, 138AA-ZZ, 144AX  
Japanese 63, 164  
Korean 182A-B  
Latin American and Iberian Studies 101  
Linguistics 30, 50  
Mathematics 13  
Middle East Studies 45  
Philosophy 1, 3, 4, 20A-B-C, 100A-B-C-D-E, 112  
Physics 43  
Political Science 187, 188, 189  
Portuguese 125A-B  
Religious Studies 1, 3, 4, 5, 6, 12, 19, 20, 21, 43, 61A-B, 70, 80A-B-C, 116A, 123, 126, 130, 136, 138B, 150, 162C-E, 164A-B, 180B, 183  
Slavic 33  
Spanish 153, 177

## AREA F

### Arts

*Objective:* To develop an appreciation of the arts through historical study, analysis of master works, and aesthetically creative activity.

Two courses are required:

Art History 1, 5A, 6A-B-C-D-DS-DW-E-F-G-H-K, 101A-B-C-D, 103A-B-C, 105B-C-E-F-G-H-J-L-M-N, 107A-B, 109A-B-C-D-E-F-G-H, 111A-B-C-E-F, 113A-D-F, 115B-C-D, 117A-B-C-D-F, 119A-B-C-D-E-F-G, 121A-B-C-D-E-F, 123A-C, 125A, 127A-B, 130A-B-C-D, 132A-B-C-D-E-I, 134A-B-C-D-E-F-G-H, 136A-B-E-H-I-J-M-O, 138B-C-D, 140A-B-E, 141D, 143B-C, 144A-C-D-M-O, 184B-C  
Art Studio 1A-B, 7A, 125  
Asian American Studies 4, 118, 120, 127, 140, 146

Black Studies 14, 142, 161, 162, 170, 171, 172  
Chicana/o Studies 119, 125B, 138, 148, 188C  
Chinese 40, 141, 170  
Classics 102, 165, 170  
Dance 35, 36, 45, 145A-B-M-W, 146  
Film Studies 46, 120, 121, 124, 125B, 126, 127, 127M, 134, 136, 144, 163, 169, 175, 178Z  
French 156A-B-C-D  
German 55A-B, 183  
Italian 124X, 178B, 179X, 180Z  
Japanese 149, 159  
Music 11, 15, 17, 114, 115, 116, 118A, 119A  
Philosophy 136  
Slavic 130A-C-E  
Spanish 126  
Theater 3, 5, 7, 8, 9, 90, 166, 180A-B-C, 181S, 182A-M-MC-N-RM, 184CA, 185TH, 188S

## AREA G

### Literature

*Objective:* To develop an appreciation of literature through historical study, analysis of master works, and aesthetically creative activity.

Two courses are required:

Asian American Studies 5  
Black Studies 33, 38A-B, 127, 130A-B  
Chicana/o Studies 152, 180, 181, 184A  
Chinese 110A, 112A, 115A, 132, 139, 142, 148  
Classics 36, 37, 38, 39, 40, 102, 109, 110, 120, 130, 175  
Comparative Literature 30A-B-C, 31, 32, 33, 34, 100, 107, 113, 115, 117A-B, 122A-B, 128, 128A-B, 138, 153, 154, 161, 171, 179, 186EE, 191  
English 15, 21, 25, 35, 50, 101, 102, 103A-B, 104A-B, 105A-B, 113AA-ZZ, 114AA-ZZ, 115, 116A-B, 119, 119X, 120, 121, 122AA-ZZ, 124, 126B-C, 128AA-ZZ, 131AA-ZZ, 133AA-ZZ, 134AA-ZZ, 137A-B, 138C, 140, 150, 152A, 156, 157, 162, 165AA-ZZ, 172, 179, 180, 181, 184, 185, 187AA-ZZ, 189, 190AA-ZZ, 191, 192, 193  
Environmental Studies 122NE, 160  
Feminist Studies 40, 40H  
French 101C, 153A-B-C-D-E-F, 154A-D-E-F-G, 155D  
German 43B, 116A, 138, 143, 151C, 164E-F-G-I, 166, 179B-C, 182, 187  
Global Studies 101  
Italian 101, 102, 111, 114X, 126AA-ZZ, 138AX, 142X, 144AX, 163X, 179X

## Bachelor of Science Degree

Candidates for the bachelor of science degree must complete the following general subject area requirements: Area A; Area B; Area C; two courses from Area D; two courses from Area E; one course from Area F; one course from Area G.

Students are also responsible for completing all of the special subject area requirements with the exception of the European traditions requirement, as outlined in the B.A. requirement section.

## Bachelor of Fine Arts; Bachelor of Music Degree

Candidates for the degree of bachelor of fine arts or bachelor of music must complete the following general subject area requirements: Area A; Area B; two courses from Area C; two courses from Area D; two courses from Area E; one course from Area G.

Students are also responsible for completing all of the special subject area requirements with the exception of the European traditions requirement, as outlined in the B.A. requirement section.

## Honors

The College of Letters and Science is committed to academic excellence and offers students with records of superior scholarship a number of special opportunities.

## College of Letters and Science Honors Program

The College Honors Program encourages students to intensify their educational experience and to participate in a small community atmosphere within the larger university setting throughout their four years of undergraduate study. College Honors Program participants benefit from increased contact with both faculty and peers in small classes and special programs.

Participants in the honors program enjoy graduate library privileges, preferential class enrollment, participation in the peer mentorship program, and special advising services. Housing is available to eligible first-year students in Scholars floors located in several university-owned residence halls.

Honors program students may enroll in special honors sections of large introductory courses that provide preparation for the major or fulfill general education area requirements. With faculty approval, upper-division College Honors Program students may design their own honors contracts in upper-division courses, and have special research opportunities available to them. Special upper-division honors courses

that enhance the honors program curriculum may also be available. These opportunities give students the chance to find mentors among some of UCSB's most dedicated faculty. In addition, students may participate in the departmental senior honors programs described later in this section.

Undergraduate research opportunities combine two of UCSB's greatest resources, the distinction of its research faculty and the excellence of its undergraduate programs. Honors students may engage in independent and team research under the supervision of a faculty researcher. Special access to advising and research funding is available to honors program participants. Contact the Office of Undergraduate Research and Creative Activities for additional information.

Entering freshmen students are invited into the College Honors Program based on high school grade-point average and SAT I (or ACT score) and SAT II scores. In the typical entering freshman class, 10 percent of the students are in the College Honors Program. Transfer students with a 3.6 grade-point average when they enter UCSB are eligible and are encouraged to apply. The College Honors Program is also open to any UCSB students with an overall grade-point average of 3.5 on a minimum of 12 graded baccalaureate units. *Please note: Eligibility criteria are subject to change at any time.*

Students may continue as program members as long as they maintain the required grade-point average and complete at least 6 units of honors coursework each year. A minimum grade of B is required for the honors designation to be assigned to a course. An annual review is conducted during the summer.

To complete the program and receive the Academic Excellence Award, a student must earn 36 units of honors-designated courses with at least a B grade, earn a minimum overall grade-point average of 3.5, and complete volunteer service. At least 20 of the 36 honors-designated units must be upper division. Completion of 20 units of upper-division honors-designated courses qualifies junior transfer students (who are eligible for the honors program at the time of admission) for the Academic Excellence Award. The total number of honors-designated units is reduced to 28 (including 12 upper-division) for students who participate in the University of California's year-long Education Abroad Program.

A Certificate of Academic Excellence will be awarded by the dean of undergraduate studies to all graduating seniors who complete the College Honors Program.

### **Departmental Senior Honors Programs**

Most departments in the college sponsor honors programs that provide opportunities for research and independent study in the major field. Students are normally selected for the departmental honors program at the end of their junior year. They devote much of their senior year to the design and completion of an original research project or senior thesis. Members of departmental honors programs who complete their project or thesis with distinction are eligible for nomination by their departments for the award of Distinction in the Major. Departmental

honors program participants are granted special UCSB Davidson Library privileges normally available only to graduate students. In addition, they are eligible to apply for grants for undergraduate research and creative projects, including the UCSB Office of Research, and the College of Letters and Science.

### **Dean's Honors**

The award of Dean's Honors is granted at the end of each quarter to those students who earn a grade-point average of 3.75 or higher for the quarter, on a program of 12 or more letter-graded units, with no NP grades. Students with approved permanent deficit petitions may qualify for Dean's Honors if they earn the necessary grade-point average on 12 letter-graded units during a period of two or more consecutive quarters. The receipt of Dean's Honors is recorded permanently on the transcript. Grades of I normally disqualify students from eligibility for Dean's Honors for that term.

### **Honors at Graduation**

Students with outstanding academic achievement are honored at the time of graduation. College Honors are awarded to those Letters and Science undergraduates who have completed 135 or more letter-graded units in the University of California with a grade-point average of at least 3.85. General honors at graduation are awarded to the top 20 percent of students who complete at least 76 letter-graded units in the University of California, as follows: The top 2.5 percent receive Highest Honors, the next 6 percent receive High Honors, and the next 11.5 percent receive Honors. Members of departmental honors programs who complete their project or thesis with distinction are eligible for nomination by their departments for the award of Distinction in the Major.

### **Phi Beta Kappa**

Phi Beta Kappa, established in 1776, is the nation's oldest and most respected scholastic honorary society, its purpose being to honor high achievement in the liberal arts and sciences. According to the society's handbook, the objectives of humane learning encouraged by Phi Beta Kappa include intellectual honesty and tolerance, range of intellectual interests, and understanding—not merely knowledge. The UCSB chapter, California Lambda, was established in 1967 and has maintained a high standard of admission. Election is by invitation only, and is offered to no more than one percent of graduating seniors each year. Election in the junior year is extremely rare.

To be eligible for consideration, a student must have a grade-point average of at least 3.75 for juniors and 3.4 for seniors, have completed four quarters of a single foreign language, and have taken plane geometry and algebra through quadratics. Each senior candidate must have completed 60 units of work at UCSB (junior candidates must have completed 120 units), excluding professional, vocational, technical, recreational, and remedial courses, and all courses taken on the P/NP basis. A record which shows more than 15 P/NP units is normally disqualified, although exceptions are made for candidates in the College of Creative Studies and occasionally for others of extraordinary achieve-

ment. Election to Phi Beta Kappa takes place in the spring quarter, and normally requires that the candidate have demonstrated evidence of genuine intellectual curiosity and achievement beyond the minimum outlined above. Most departments at UCSB have members of Phi Beta Kappa on their faculty. Students are urged to contact faculty members, departmental undergraduate advisors, or the UCSB Phi Beta Kappa website for further information ([www.oiss.ucsb.edu/pbk](http://www.oiss.ucsb.edu/pbk)).

## **Academic Programs and Options**

### **Options for Accelerated and Independent Study**

Qualified students may accelerate their progress through portions of the undergraduate curriculum by presenting excellent scores on the College Board Advanced Placement and International Baccalaureate Examinations, by performing well in various departmental placement examinations in fields such as foreign languages, fine arts, and mathematics, and by earning credit for university courses by examination. These options are described in the "Undergraduate Education at UCSB" chapter of this catalog.

Qualified students may enroll in advanced, upper-division courses, provided they have fulfilled the course prerequisites or have obtained the instructor's permission. Upper-division students with excellent academic records may enroll in independent reading or studies courses 198, 199, and 199AA-ZZ. Exceptionally qualified seniors are sometimes encouraged to enroll in graduate courses.

### **Advanced Placement Credit**

Students who complete special advanced placement courses in high school and who earn scores of 3, 4, or 5 on the College Board Advanced Placement and International Baccalaureate Examination taken before high school graduation will receive 2, 4, or 8 units of credit toward graduation at UCSB for each such test completed with the required scores, provided scores are reported to the Office of Admissions. The specific unit values assigned to each test, course equivalents, and the applicability of this credit to the General Education requirements, are presented in the chart on page 113.

*Note: Advanced Placement credit earned prior to entering the university will not be counted toward maximum unit limitations either for selection of a major or for graduation.*

### **International Baccalaureate Credit**

Students completing the International Baccalaureate (IB) diploma with a score of 30 or above will receive 30 quarter units total toward their UC undergraduate degree. The university grants 8 quarter units for certified IB Higher Level examinations on which a student scores 5, 6, or 7. The university does not grant credit for standard level exams. The application of this credit to the General Education requirements and course equivalents for these exams are listed on page 115.

*Note: International Baccalaureate Examination credit earned prior to entering the university will*

not be counted toward maximum unit limitation either for selection of a major or for graduation.

### Undergraduate Research and Creative Activities

In keeping with the university's commitment to promote the scholarly work of undergraduates, the College of Letters and Science at UC Santa Barbara offers a variety of programs to support research and creative activities under faculty supervision. Undergraduates from all majors may apply for awards that are supported by various funding sources. A competition for these awards is held in October. Students involved in research and creative projects have an opportunity to present their work at the annual Colloquium on Undergraduate Research in the spring.

During the academic year, students may earn course credit by actively working on projects under the Faculty Research Assistance Program (FRAP). Participating faculty and descriptions of their projects may be found in the FRAP Directory.

Other scholarly experiences may be found in Opportunity Alert, an online listing updated on a continual basis. For more information about undergraduate research opportunities, visit the college's Undergraduate Research and Creative Activities (URCA) website: [www.ltsc.ucsb.edu/urca](http://www.ltsc.ucsb.edu/urca).

### Scholarship Opportunities

The Undergraduate Research and Creative Activities (URCA) Office coordinates the campus application process for a number of prestigious national and international scholarships funding undergraduate or graduate studies. Such scholarships include but are not limited to the Rhodes, Marshall, Mitchell, Goldwater, Truman, and Udall Scholarships. Details on the scholarships coordinated by this office may be found on the URCA website: [www.ltsc.ucsb.edu/urca](http://www.ltsc.ucsb.edu/urca). Students interested in applying for these scholarships should contact the URCA Office at least six months prior to the application due date. A listing of scholarships not requiring campus endorsement may be found in *Scholarship Alert*, an online publication also located on the URCA website.

### UCSB Washington Center Program

The UCSB Washington Center Program (UCDC) provides a unique opportunity in experiential learning. The program combines courses, internships and a wide variety of cultural experiences and offers students a chance to observe public policy processes first hand. Admission to the Washington Center Program is open to upper-division undergraduates from all majors. Students maintain full-time enrollment at UCSB while undertaking their internship in Washington, D.C. and may participate during any quarter of the academic year or in the summer. For more information visit the Program's website: [www.ucdc.ucsb.edu](http://www.ucdc.ucsb.edu), or contact the campus office by e-mail at [ucdc@ltsc.ucsb.edu](mailto:ucdc@ltsc.ucsb.edu).

### University of California Center in Sacramento Program

The University of California Center in Sacramento (UCCS) Program is a residential program that combines an internship with research and coursework. In addition, students have the

opportunity to observe public policy processes firsthand in our state's capital. Admission to the UCCS Program is open to upper-division undergraduates from all majors. Students maintain full-time enrollment at UCSB while working in a structured internship with an agency or organization of their choice in Sacramento. The program is offered during academic terms and summer. For more information visit the program's website: [uccs.universityofcalifornia.edu](http://uccs.universityofcalifornia.edu). Application materials may be obtained from staff in the Undergraduate Research and Creative Activities (URCA) Office, 2105 North Hall or from the URCA website: [www.ltsc.ucsb.edu/urca](http://www.ltsc.ucsb.edu/urca).

### Accelerated Study Access Program

The Accelerated Study Access Program (ASAP) in the College of Letters and Science allows highly qualified students from junior and senior high schools in the Santa Barbara area to enroll simultaneously in their home schools and at UCSB. ASAP participants are admitted to the University of California in freshman standing, and they have access to nearly the entire range of academic resources of the campus. They may enroll in any UCSB course for which they are qualified, and they will receive full university credit for each course satisfactorily completed. When they have graduated from high school, ASAP members may continue their education at UCSB, or they may be eligible for admission to another campus of the University of California or to any other institution of higher education for which they are qualified. Brochures describing the program, eligibility requirements, and application procedures are available from the college office, 1117 Cheadle Hall.

### The Letters and Science Program

Freshman and sophomore students who have not yet selected a major will be part of the Letters and Science Program. While they are in this program, they are encouraged to take courses in a variety of departments to help them to develop their interests and to learn about the range of academic opportunities available at UCSB. The College of Letters and Science, and many individual academic departments, offer special advising services to undeclared students to help them make sound academic decisions. To ensure their timely progress toward the degree, students are expected to declare a major by the time they have reached junior standing (completion of 84 quarter-units). Those who do not meet this expectation will have their future registration blocked.

### Individual Major

Highly motivated students with excellent academic records who find that no single major accommodates their specific interest in a given subject may propose an individual major, provided that the college offers sufficient courses to support the proposed study. Proposals for individual majors are prepared with the guidance of a faculty member, and they are examined for cogency and academic merit by the dean of undergraduate studies and the Executive Committee of the College of Letters and Science, which has final approval authority.

Minimum qualifications for proposing an individual major include a grade-point average

of at least 3.0 and residence in the college for at least three quarters. Final proposals for individual majors must be submitted no later than the end of the junior year. However, students are urged to discuss their ideas with a college advisor well before then, to allow sufficient time for preparation, review, and approval of the proposal. Normally, this process takes at least three months. Information sheets describing the individual major option are available in the college office.

### Double Majors

Students with interest and talent in two separate major fields may propose completion of a double major. In their proposal, they must estimate the number of units they will need to complete in satisfying degree requirements and the term in which they will become eligible to graduate. In general, double majors are approved for students who demonstrate that they can meet all degree requirements without exceeding 200 units of credit from all institutions attended. Students who receive approval for a double major will be allowed to continue their studies at UCSB only through the final quarter listed on their proposal. No more than 8 units may be applied simultaneously to the upper-division requirements of the two majors.

### Academic Minors

Students may pursue an academic minor in addition to their major under a formal minors program offered by an individual department or program, or a multidisciplinary group of departments and/or programs. Completing a minor offers students a cohesive supplement to their major, reflecting well-rounded interests and course of study. In addition, a minor program often helps students to structure their choice of elective units as they fulfill the college's unit requirements. To ensure appropriate advising and planning, students who are considering a minor should consult the sponsoring department as soon as possible. They must request that the department confirm completion of the minor no later than the second week of the quarter in which they announce candidacy to graduate.

Upon completion of the degree, the minor will be listed on the diploma and posted on the official transcript, provided the following conditions also are met:

- The sponsoring department reports the student's completion of the minor prior to the posting of the degree.
- The student has completed at least 18 upper-division quarter units pertinent to the minor. Most minors require more than 18 upper-division units. (Waivers cannot reduce the requirement below 18 units.)
- Courses for the minor are all completed for a letter grade. (At its discretion, the sponsoring department may accept up to 5 units graded P.)
- The UC grade-point average in all applicable upper-division courses is 2.0 or higher.
- No more than 5 upper-division units overlap between this minor and the upper-division portion of each of the student's major(s) or other minor(s). If overlap is greater with the student's major(s), the completion of the minor will not be formally recognized; if overlap with other minor(s) is greater, only the first

minor reported will be recognized.

- The student has completed at least 12 of the upper-division units for the minor while in residence at UCSB. (EAP courses do not apply to residence.) Courses applied to the major residence requirement may not also be applied to the minor residence requirement.

No reference will be made to the minor on any progress checks or degree clearance forms.

### Freshman Seminars

The freshman seminar program was created to help freshmen make the transition to campus life. Taught by active research faculty, these seminars help students explore different fields and disciplines in a small group discussion setting. Topics have included Behind Lab Doors: Research in Marine Biology; Nutrition: You Are What You Eat; So You Want to be a Leader?. Seminars are offered quarterly. They can be found in the *Schedule of Classes*, listed as Interdisciplinary 94AA-ZZ. Visit [www.freshsem.ucsb.edu](http://www.freshsem.ucsb.edu) for complete details and a listing of current topics.

## Academic Policies and Procedures

### Change of Major

Upon completion of prerequisites for admission to the major, students may petition to change their major. The petition should be filed not later than the end of the junior year, and requires the approval of the chair of the prospective department and the dean of undergraduate studies. Students who contemplate a change of major relatively late in their academic careers should note that the change may not be approved if it becomes clear that they will need to complete more than 200 units in order to fulfill all degree requirements. The College of Letters and Science will not accept students from the College of Engineering or the College of Creative Studies after they have completed 180 units.

### Community College Credit Limit

The university accepts a maximum of 105 quarter-units or 70 semester-units of credit for college courses completed at a two-year community college. Only subject credit for specific lower-division requirement is assigned subsequently.

### Concurrent Enrollment

Students who wish to enroll simultaneously in undergraduate courses at UCSB and at another college-level institution must obtain prior written approval from the dean of undergraduate studies. Normally, such enrollment is approved only for courses that are not available in the curriculum at UCSB.

### Minimum Academic Progress

The recommended study load for a full-time undergraduate student in the College of Letters and Science is 12 to 16 units per quarter. An average load of 15 units must be maintained if the student expects to complete degree requirements in four years.

Furthermore, undergraduate students in the College of Letters and Science are required to make at least minimum progress toward the de-

gree at a rate determined by the faculty. Student progress will be monitored every other regular term. Students who, at the point of review, fall short of the minimum cumulative progress measure will be placed on Minimum Cumulative Progress Probation. Students who have not returned to Minimum Cumulative Progress standards two regular terms later will be subject to disqualification, at the discretion of the dean of the college. Students may monitor their progress in relation to the expectations of the faculty by using the campus' GOLD system.

A term by term chart that outlines the required minimum academic progress and offers more detailed information about other important aspects of the Minimum Cumulative Regulation should be viewed at the college's academic advising website ([www.advising.ltsc.ucsb.edu](http://www.advising.ltsc.ucsb.edu)). Students may also consult the college advising office (Cheadle 1117) for assistance.

All study lists of fewer than 12 units must be approved by the dean of undergraduate studies. Students who, for health reasons, or regular outside employment, or personal and/or family responsibilities, are unable to maintain the 12-unit quarterly minimum may request an exception by submitting the appropriate petition to the college office.

## Preparing for Careers and for Graduate and Professional Schools

While enrolled in the College of Letters and Science, students have access to career-planning advice, and they can prepare for admission to a variety of graduate and professional programs offered by the University of California and other colleges and universities. To assist them in the process, the college provides pre-professional advising in a number of fields. Students are invited to discuss their plans with the college pre-professional advisor and to use the resources of the college office and of Career Services, Building 599.

### Career Planning

Career Services, Building 599, is of particular assistance to students who are searching for a rewarding career. The center offers individual counseling, workshops, career literature and a computer access to job listings, corporate profiles, and graduate school information. The Campus Interview program provides opportunities for students to meet with employers here at UCSB, especially during fall and winter quarters of each year. Internship opportunities (local, national and international) are available through the Applied Learning Program. For immediate access to employer listings, internship opportunities and workshop schedules as well as links to other resources, visit the website at [career.ucsb.edu](http://career.ucsb.edu).

### Graduate Programs

Departments at UCSB have specially appointed faculty members who are prepared to discuss their own graduate programs, specializations available, and admission requirements, including courses and majors required. They are often able to provide general information about other

graduate schools in their areas of specialization.

All college advisors have a general knowledge of graduate school matters and can assist students in reviewing the options available to them. Two publications are very helpful to students searching for appropriate graduate programs: *Graduate School Admissions Manual*, a four-volume set published by the Educational Testing Service which identifies all graduate schools in the U.S. offering programs in each specific field of study, and *Peterson's Guides*, which are helpful in deciding which school is most suitable. Both the manual and *Peterson's Guides* are available in the Career Resources Room in Counseling and Career Services, Building 599. The Graduate Division, located in Cheadle Hall 3117, can provide information and assistance to students who are interested in applying to graduate school at UCSB, including financial aid information.

## Professional School Preparation

UC Santa Barbara has an excellent reputation for preparing its students for various professional school programs. Each year, many UCSB graduates continue their education in medical, law, business, and a variety of other professional schools. Most of these graduate professional programs do not require completion of a specific undergraduate major. Instead, students may complete the major of their choice while fulfilling any specific course prerequisites required for admission to the programs of interest to them. Advisors for each of these professional programs are available either in the Office of Student Academic Affairs in the College of Letters and Science or in departmental offices. Counseling and Career Services also maintains a wealth of information relevant to these career fields.

### Medicine

Students who are preparing for careers in medicine have traditionally found UCSB an excellent institution in which to complete their requirements. Advising for premedical students is available in the Health Professions Resource Room, 2105 North Hall, and in the College office, Cheadle 1117. There students can find information about required courses, recommended schedules, preparing for the Medical College Admissions Test, preparing for interviews, and health profession programs; peer advisors are available to assist students seeking information regarding health professions. Student groups, including the Health Professions Association, help to develop programs supporting the career aspirations of premedical students, and each year the campus sponsors a Health Professions Conference, where UCSB alumni discuss their medical careers and where representatives of medical schools provide information.

Many premedical students take advantage of the campus's wide range of opportunities to involve themselves in faculty-sponsored undergraduate research projects in the biomedical field, and many participate in the extensive internship programs available at local hospitals and medical clinics. The Department of Ecology, Evolution, and Marine Biology and the Department of Molecular, Cellular, and

Developmental Biology sponsor both lower- and upper-division courses which are relevant to gaining experience in the medical field. The health professions advisor is available to help students develop academic programs to meet medical school requirements. The advisor also coordinates a series of workshops to help students prepare for the rigorous application process.

Although many students select majors within the biological sciences, medical schools do not require applicants to complete a specific major. Schools, in fact, encourage applicants to develop a broad academic program with coursework in a variety of fields in the sciences, social sciences, and humanities. Each school, however, does require certain prerequisite courses, which frequently includes the following:

- General Chemistry. Chemistry 1A-B-C and labs.
- Organic Chemistry. Chemistry 6A-B and 109A-B-C.
- Introductory Biology. MCDB 1A-AL-B, EEMB 2-3-3L, and either MCDB 1BL or EEMB 2L.
- General Physics. Physics 6A-B-C and labs or 1-2-3-3L-4-4L.
- Mathematics. Mathematics 34A-B or Mathematics 3A-B and either Mathematics 3C or PSTAT 5A or another statistics course.
- English. Writing 2 or 2LK, one course from 50 or 50LK or 109AA-ZZ (109HP suggested), and one English literature course.

In addition, some schools require one year of upper-division coursework in the biological sciences. Students take courses in fields such as cell biology (MCDB 103), neurobiology (MCDB 114, 115), pharmacology (MCDB 126A-B-C), genetics (MCDB 101A, 101B, EEMB 129), developmental biology (MCDB 112), biochemistry (MCDB 108A, 108B, 108C, 110, Chemistry 142A, 142B, 142C), and physiology (MCDB 111, EEMB 154) to fulfill this requirement.

Medical schools prefer applicants with broad academic experience. Science majors, therefore, should take as many non-science courses as possible.

The overall grade-point average, particularly the grades earned in the prerequisites described above, will be a primary factor in determining the student's prospects for admission. Generally, at least a 3.3 grade-point average in the sciences and in all college work will be needed, although in recent years the average for accepted students nationally has been greater than 3.5. Scores on the Medical College Admission Test (MCAT) are also an important factor. Because competition is intense, interested students are encouraged to consult with the health professions advisor early in their academic careers, in order to plan their program carefully. Students also work with their advisor in preparing their applications and considering alternative careers, should they be unsuccessful in gaining admission. For further information, visit [www.ltsc.ucsb.edu/health](http://www.ltsc.ucsb.edu/health).

### Other Doctoral-Level Health Professions

UCSB offers the advising and coursework necessary to complete the requirements for a variety of professional fields in health sciences. Although medicine is by far the most popular health field, many students pursue careers in

other fields which require a doctoral degree. These professions include dentistry, podiatric medicine, optometry, physical therapy, veterinary medicine, and pharmacy. Although many of these professional school programs do not absolutely require a bachelor's degree, a large proportion of successful applicants will have completed this degree. Each of these fields (and the individual schools within the field) has specific course requirements which must be met before matriculating. Most require the same spectrum of courses which are outlined above for medical schools. The health professions advisor in the College of Letters and Science maintains a Health Professions Library within the Health Professions Resource Room, 2110 North Hall, which has additional information on other doctoral-level professions. For further information, visit [www.ltsc.ucsb.edu/health](http://www.ltsc.ucsb.edu/health).

### Allied Health Professions

Many students at UCSB are working to prepare to be allied health professionals such as physical therapists, occupational therapists, nurses, or physician assistants. Many of these programs require that specific courses be completed before matriculation. Most of these courses are offered at UCSB. If the specific course is not part of the general UCSB curriculum, this campus has a general agreement with the Santa Barbara Community College allowing students to complete appropriate courses at SBCC while attending UCSB. In addition to course requirements, most of these fields also require that students obtain significant work or volunteer experience before entering professional school. The Santa Barbara community offers students many opportunities to gain that experience, often while gaining academic credit. For further information, visit [www.ltsc.ucsb.edu/health](http://www.ltsc.ucsb.edu/health).

### Counseling and Human Services

Students planning careers in one of the helping professions such as counseling psychology, health psychology, marriage and family counseling, educational psychology, social work, and industrial psychology may complete their undergraduate education at UCSB. No specific undergraduate major is required for most programs, but substantial coursework in the behavioral and social sciences is strongly recommended, and a course in statistics is often required. Some programs require applicants to take the Graduate Record Examination (GRE). Graduate professional programs in the counseling and human services area normally require one to two years of study.

Previous experience (volunteer or paid) in a human services setting is a requirement for most professional degree programs. Applicants to such programs are often asked to provide letters of recommendation from their supervisors. Additional information can be obtained from the Departments of Sociology and Psychology, from UCSB's Counseling Services, from the Graduate School of Education, and from the pre-professional advisor in the College of Letters and Science.

### Law

Undergraduates at UC Santa Barbara who are interested in preparing for a career in law will find numerous opportunities to build the strong

record of academic achievement and personal accomplishment which is so important in the very competitive world of law-school admissions.

Each year, more than 450 UC Santa Barbara students apply to the nation's law schools. The rate at which applicants are admitted to law schools consistently exceeds national averages. Many students attend law schools in California, and a smaller number choose to attend eastern law schools. UC Santa Barbara graduates with superior academic records and scores on the Law School Admissions Test (LSAT) can expect to be admitted to the nation's very best law schools.

The combination of a strong and diverse liberal arts curriculum and an established network of advising and internship opportunities creates an intellectually engaging and supportive environment in which dedicated prelaw students pursue ambitious professional goals.

Students preparing for law school may select the major which holds the greatest degree of interest for them. Law schools seek to admit students with a broad academic background, demonstrated skills in analytical thinking and communication, and an academic record and score on the Law School Admissions Test which would predict success in law school. Competition for admission to the nation's most prestigious law schools is very keen.

The prelaw advisor in the College of Letters and Science assists students with major selection, program planning, selection of law schools, and applying for admission. The UCSB Association of Prewlaw Students provides information and mutual support; it organizes law school tours for members and hosts the visits of law school representatives and local attorneys. In addition, the association publishes one of just a handful of undergraduate law reviews produced in the United States.

### Management

Careers in management and business usually require postbaccalaureate training in professional or graduate schools, where admissions officers seek out students with a solid grounding in a wide variety of fields, particularly the social and behavioral sciences. Many UCSB students pursuing graduate education in management choose majors in economics or business economics. Graduate schools, however, do not require specific major programs, and students in majors across the curriculum build the foundation they will need for advanced training in specialties like international business, personnel management, hospital administration, arts management, banking and finance, marketing, operations research, accounting, labor and industrial relations, transportation and public utilities, and insurance.

Many schools have specific course prerequisites. These often include courses in accounting, micro- and macroeconomics, statistics, and calculus. Students are advised to review the admission requirements of the programs of interest to them so that they can plan their undergraduate programs accordingly.

Most graduate schools of business require applicants to submit scores earned on the Graduate Management Admissions Test (GMAT). The UCSB Campus Learning Assistance Services

(CLAS) offers preparation sessions for this examination. In addition, graduate schools of business generally seek applicants who have supplemented their academic pursuits with activities that have enabled them to develop and exercise their leadership potential and organizational skills. Many such activities are available at UCSB, including participation in student organizations and government and in one of the various internship programs sponsored by an academic department or by the UCSB Applied Learning Program. Full-time work experience is becoming increasingly important for admission to many schools of business; some of the most prestigious programs have initiated a process of deferred admission to ensure that students have the necessary work experience before they undertake graduate study. Interested students are invited to consult the college pre-professional advisor and the advisors in the Department of Economics. *The Official Guide to M.B.A. Programs, Admissions, and Careers*, available in many university and commercial bookstores, contains descriptions of more than 400 M.B.A. programs.

### Teaching and Related Fields

The two first-level teaching credentials available in California are the Multiple Subject (elementary) and the Single Subject (secondary) credentials. Both require the prior completion of a bachelor's degree plus one academic year of graduate professional teacher education coursework and student teaching. The Gevirtz Graduate School of Education at UCSB offers these and several additional credential and graduate education programs.

Certain specific prerequisite courses are required for admission to these credential programs. Pre-credential students are encouraged to discuss their plans as soon as possible with the credential advisor in the Gevirtz Graduate School of Education, Teacher Education Program, Phelps Hall, Room 2517.

# Anthropology

Department of Anthropology  
Division of Social Sciences  
Humanities and Social Sciences 2001

Telephone: (805) 893-2257

Website: [www.anth.ucsb.edu](http://www.anth.ucsb.edu)

Department Chair: *Katharina Schreiber*

## Faculty

**Shankar Aswani**, Ph.D., University of Hawaii, Associate Professor (maritime anthropology, behavioral ecology, indigenous ecological knowledge, common property resources, exchange, social stratification, ethnohistory; Solomon Islands, Melanesia, Tonga, Hawaii)

**Steven J. C. Gaulin**, Ph.D., Harvard University, Professor (evolutionary psychology, cognitive adaptations, sexual selection, evolution of sex differences, North America)

**Michael D. Gurven**, Ph.D., University of New Mexico, Associate Professor (cooperation and food sharing, foraging, hunter-gather ecology, altruism and reciprocity, the dynamics of social networks, evolution of human life history

patterns, South American Indians Bolivia, Paraguay)

**Mary E. Hancock**, Ph.D., University of Pennsylvania, Professor (ideology and cultural practice, South Asia, social theory, nationalism, cultural studies, feminist theory, public memory)

**Michael Jochim**, Ph.D., University of Michigan, Professor (archaeology, hunters-gatherers, European prehistory, archaeological method and theory)

**Juan Vicente Palerm**, Ph.D., Universidad Iberoamericana, Professor (peasant studies, development)

**Katharina Schreiber**, Ph.D., Binghamton University, Professor (archaeology of Andean South America and the southwestern United States, origin and development of complex societies, empire expansion, settlement patterns)

**Stuart T. Smith**, Ph.D., UC Los Angeles, Professor (archaeology of Egypt and Nubia [the Sudan], ethnicity, culture contact and imperialism, ideology and legitimization, funerary practice, ceramics and residue analysis)

**Susan Stonich**, Ph.D., University of Kentucky, Professor (political ecology, ecological anthropology, Appalachia, Latin America, Asia)

**John Tooby**, Ph.D., Harvard University, Professor (evolutionary psychology, hominid-behavioral evolution, behavioral ecology, evolutionary genetics)

**Amber VanDerwarker**, Ph.D., University of North Carolina-Chapel Hill, Assistant Professor (archaeology, paleoethnobotany, zooarchaeology, Mesoamerica, southeastern United States)

**Casey Walsh**, Ph.D., New School for Social Research, Assistant Professor (political economy, Mexico-U.S. borderlands, water, commodities, history)

**Gregory D. Wilson**, Ph.D., University of North Carolina-Chapel Hill, Assistant Professor (archaeology, origins of social inequality, warfare, Eastern North America, particularly the Mississippi valley and interior southeastern United States)

### Emeriti Faculty

**Francesca Bray**, Ph.D., Cambridge University, Professor Emerita (history and culture of medicine, technology and science, development, gender; East and Southeast Asia)

**David W. Brokensha**, D. Phil., Oxford University, Professor Emeritus (modernization, ecology, plural societies, Africa)

**Donald E. Brown**, Ph.D., Cornell University, Professor Emeritus (sociocultural anthropology, political anthropology, anthropology of history, Southeast Asia)

**Manuel L. Carlos**, Ph.D., UC Santa Barbara, Professor Emeritus (political anthropology, Latin America)

**Napoleon Chagnon**, Ph.D., University of Michigan, Professor Emeritus (social behavior, evolutionary theory, social structure, South American Indians)

**Charles J. Erasmus**, Ph.D., UC Berkeley, Professor Emeritus (development, explanation, collective good, Latin America)

**Brian M. Fagan**, Ph.D., Cambridge University, Professor Emeritus (Old World archaeology, general prehistory, multimedia teaching)

**Michael A. Glassow**, Ph.D., UC Los Angeles, Professor Emeritus (archaeology, cultural ecology, western North America)

**Thomas G. Harding**, Ph.D., University of Michigan, Professor Emeritus (economic anthropology, the Pacific)

**Elvin Hatch**, Ph.D., UC Los Angeles, Professor Emeritus (history of anthropology, social history of rural America and New Zealand)

**Mattison Mines**, Ph.D., Cornell University, Professor Emeritus (social anthropology, South Asia, South Asian Muslims)

**Alexander F. Robertson**, Ph.D., University of Edinburgh, Sc.D., University of Cambridge, Professor Emeritus (social change and development, economic and political processes; Africa, Europe)

**Donald Symons**, Ph.D., UC Berkeley, Professor Emeritus (physical anthropology, primate social behavior, the evolution of human behavior)

**Barbara Voorhies**, Ph.D., Yale University, Professor Emerita (archaeology, cultural ecology, Mesoamerica)

### Affiliated Faculty

**David A. Cleveland**, Ph.D. (Environmental Studies)

**Leda Cosmides**, Ph.D. (Psychology)

**Sabine Frühstück**, Ph.D. (East Asian Languages and Cultural Studies)

**Barbara Herr Harthorn**, Ph.D. (Feminist Studies)

**Laury Oaks**, Ph.D. (Feminist Studies)

**Thomas Scheff**, Ph.D. (Sociology)

**Mayfair Yang**, Ph.D., (Religious Studies and East Asian Languages and Cultural Studies)

**A**nthropology is the study of humans in the broadest sense: biological, sociocultural, and historical. Most undergraduates in anthropology at UCSB select this major because of the opportunity it affords them to acquire a sound liberal education, even if they do not intend to become anthropologists. However, the professionally oriented student will also find the curriculum fully suitable.

The aim of the anthropology major is three-fold: (1) to prepare for graduate school those students who wish to work professionally in anthropology; (2) to prepare students for careers in secondary education or in social work; and (3) to provide a background in behavioral studies for students who desire a broad education in either the biological or the social sciences.

Students interested in cultural anthropology focus on ethnology and archaeology. Students interested in the study of human evolution and biological adaptation to the environment take physical anthropology. The course of study includes the sciences of biology and zoology.

Students may declare the major after completing two anthropology courses. An overall 2.0 grade-point average is required. All major courses must be completed on a letter-graded basis.

After completing specific prerequisites, students with a B.A. in anthropology are eligible to pursue a California Teaching Credential. The department recommends that students discuss this with the Gevirtz Graduate School of Education.

The Department of Anthropology's staff undergraduate advisor assists students regarding major requirements as well as other curriculum matters. The department also has a faculty advisor available for academic and career counseling.

Students pursuing advanced degrees in anthropology should consult with the departmental graduate program assistant. A full discussion of the graduate program appears in the graduate program description, below.

### Senior Honors Program

The senior honors program is designed to facilitate independent research on topics chosen by the student and pursued in particular depth. Qualified majors will be invited to participate in the honors program. Minimum qualifications are junior standing (completion of at least 105 units), completion of at least 20 upper-division units in anthropology and a grade-point average of at least 3.4.

Students may enter the program any quarter. Each candidate for honors enrolls in Anthropology 195A-B, taken in consecutive quarters, under the instruction of a thesis advisor chosen by the student. In Anthropology 195A, the student will concentrate on reading and gathering material for the thesis; in 195B, the student will write the thesis. The senior honors thesis will be retained permanently in the department office for faculty and students to read.

Anthropology students who complete the honors program, maintain grades of B or better in Anthropology 195A-B, and graduate with a minimum 3.4 grade-point average in the major will be awarded Distinction in the Major on university records and on the diploma.

### College of Letters and Science Honors Program

Students enrolled in the College of Letters and Science Honors Program will be eligible to enroll in special honors discussion sections in most lower-division anthropology courses. See the departmental staff undergraduate advisor for more information.

## Undergraduate Program

### Bachelor of Arts— Anthropology— Cultural Emphasis

**Preparation for the major.** Anthropology 2, 3 or 3SS, and 5.

**Upper-division major.** Forty upper-division anthropology units are required. Students select 28 units from course offerings in areas I through V as indicated below. The twelve remaining upper-division units may be completed by taking any upper-division anthropology courses. By petition, up to 8 units may come from other disciplines. See department for a list of acceptable courses. Upper-division courses are 4 units. The yearly schedule of course offerings varies.

#### I. Method and Theory (one course required)

##### A. Ethnology

- 102. Anthropology of Media
- 104. Workshop: Reading, Writing, and Thinking
- 106. History of Anthropological Theory

- 109. Human Universals
- 123MG. Anthropological Data Analysis
- 143. Introduction to Contemporary Social Theory
- 154. Special Topics in Social Anthropology
- 185. Human Environmental Rights
- 190. Cultural Anthropology Internship (No more than 4 units of Anthropology 178, 183, and 190 combined may be applied to the major.)

##### B. Archaeology

- \*100. Basic Archaeological Concepts
  - \*112Z. Theoretical Approaches in Contemporary Archaeology
  - 132TS. Ceramic Analysis in Archaeology
  - 165. History of Archaeology
  - 174. Spatial Analysis in Archaeology
  - \*178. Internship in Archaeological Record-Keeping and Collections (No more than 4 units of Anthropology 190, 178, and 183 combined may be applied to the major.)
  - \*181. Methods and Techniques of Field Archaeology
  - \*182. Quantitative Data Analysis in Archaeology
  - 182M. Introduction to Lithic Analysis Management
  - \*183. Internship in Archaeological Resource Management (No more than 4 units of Anthropology 178, 183, and 190 combined may be applied to the major.)
  - 184. Settlement Pattern Analysis in Archaeology
  - 186. Lab Course in Paleoethnobotany
  - 191A. Prehistoric and Early Historic Artifacts: Technology of their Manufacture and Use
  - 191B. Analysis of Archaeological Materials
  - 194. Field Training in Archaeology
  - 194P. Practicum in Field and Laboratory Analysis
- \* These courses are strongly recommended for majors with an archaeology concentration.

#### II. Ethnology and Archaeology (two courses required)

##### A. Ethnology

- 107. Psychological Anthropology
- 108. Educating the Native
- 114. Social Organization
- 115. Law and Warfare in Non-Western Societies
- 116. Myth, Ritual, and Symbol
- 116B. Anthropological Approaches to Religion
- 117. Borders and Borderlands
- 120. The Family
- 121MS. Historical World Systems
- 125. Anthropology of Gender
- 127. Hunters and Gatherers
- 148A. Comparative Ethnicity
- 148MH. Aesthetic Anthropology
- 168. Ethnology in Rural California: Transformations in Agriculture, Farm Labor, and Rural Communities

##### B. Archaeology

- 119. Household Archaeology
- 128. The Archaeology of Gender
- 143F. Ethics in Archaeology
- 187. The Clash of Cultures
- 188. The Seacoast in Prehistory
- 196. Archaeology of Religion

#### III. Development, Ecology, and Social Change (one course required)

##### A. Ethnology

- 102A-B. Women, Culture, and Development

- 103. Human Population and the Environment
- 104H. People, Poverty, and Environment in Central America
- 110. Technology and Culture
- 111. Anthropology of Food
- 118. Modernity and the State
- 122. Anthropology of World Systems
- 130A. Coupled Human and Natural Systems: Risk, Vulnerability, Resilience, and Disasters
- 130B. Global Tourism and Environmental Conservation
- 130C. Global Food Systems and Human Food Security
- 141. Agriculture and Society in Mexico: Past and Present
- 145. Anthropological Demography and Life History
- 146. Development Anthropology
- 148. Ecological Anthropology
- 149. World Agriculture, Food, and Population
- 158. Cultural and Biological Diversity of Food Plants
- 160. Cultural Ecology
- 166BT. Biotechnology, Food, and Agriculture
- 166FP. Small-Scale Food Production
- 172. Colonialism and Culture
- 173. Nationalisms and the Nation State
- 185. Human Environmental Rights

##### B. Archaeology

- 162. Prehistoric Food Production
- 164. The Origins of Complex Societies
- 166. Climate Change in Prehistory
- 167. People of the Ice Age

#### IV. Ethnography and Culture History (two courses required)

##### A. Ethnology

- 131. North American Indians
- 131CA. California Indians
- 134. Modern Cultures of Latin America
- 135. Modern Mexican Culture
- 136. Peoples and Cultures of the Pacific
- 139. Indigenous People
- 139MG. Indigenous Peoples of the Amazon
- 140. Popular Culture in South East Asia
- 142. Peoples and Cultures of India
- 142B. Contemporary Issues in South Asia
- 156. Understanding Africa

##### B. Archaeology

- 118TS. Archaeology of Ancient Near East
- 133. Cultural Development in Mesoamerica
- 137. The Ancient Maya
- 138TS. Archaeology of Egypt
- 150A. The Archaeology of the Andean Pre-ceramic
- 150B. Archaeology of Andean Civilizations
- 150C. The Inca Empire
- 155. Prehistory of California and the Great Basin
- 163. Archaeology of North America
- 175. Southwestern Archaeology
- 176TS. Ancient Egyptian Religion
- 189. Problems in European Prehistory

#### V. Physical Anthropology (one course required)

- 105. Human Variation
- 112. Bioarchaeology
- 121. Human Evolution
- 121T. Genetics, Natural Selection, and Human Evolution
- 129MG. Behavioral Ecology of Hunter Gatherers

151T. Evolutionary Psychology  
 153. Primate Behavior  
 153S. The Evolution of Human Sexuality  
 153T. Primate Behavior  
 169. Evolution of Cooperation  
 180A-B. Osteology

### **Bachelor of Arts— Anthropology— Physical Emphasis**

**Preparation for the major.** Anthropology 2, 3 or 3SS, 5, 7, and ESS 47. Recommended: MCDB 1A-AL, MCDB 1B, EEMB 2, either MCDB 1BL or EEMB 2L, and EEMB 3-3L.

**Upper-division major.** Forty units of upper-division anthropology courses. Students must complete Anthropology 105 and 12 additional units in physical anthropology courses from 112, 121, 121T, 129MG, 151T, 153, 153S, 153T, 169, 180A-B; and 24 units of upper-division courses. By petition up to twelve of these units may be completed in subjects related to physical anthropology.

### **Minor—Anthropology**

Up to 5 upper-division anthropology units may be taken on a P/NP basis. All other courses to be applied to the minor must be completed on a letter-grade basis, including both courses offered in the Department of Anthropology and those offered by other departments and applied to the minor.

**Preparation for the minor.** Anthropology 2, 3 or 3SS, and 5.

**Upper-division minor.** Eighteen units of upper-division anthropology coursework. Students are strongly encouraged to discuss course selection with the undergraduate faculty advisor. For anthropology independent courses such as 178, 183, 190, 198, 199 and 199RA, only a maximum of four units may be applied to the minor.

*Note: Substitutions and waivers are subject to approval by the chair of the department. Please see page 118 for special conditions governing minors in the College of Letters and Science.*

## **Graduate Program**

Three specializations are offered in the combined M.A./Ph.D. program in anthropology: archaeology, sociocultural anthropology, and integrative anthropological science. Further specialization is possible within each of these fields. The department offers a terminal M.A. program in anthropology with a specialization in archaeology for students whose career objectives require only a master's degree. A complete statement of degree requirements and policies is available on the department website at [www.anth.ucsb.edu](http://www.anth.ucsb.edu).

In addition to fulfilling the departmental admission requirements, applicants must also meet the university requirements for admission described in the chapter "Graduate Education at UCSB." Applicants must hold a bachelor's degree in anthropology or a related field. Except for the terminal M.A. degree program (archaeology specialization only), the department normally admits only those applicants whose ultimate degree objective is the Ph.D. The ultimate degree objective as well as the desired specialization must be indicated on the

application.

Applicants will be admitted for the fall quarter only; the application deadline is December 1.

Applicants to the Ph.D. in anthropology must hold an M.A. in anthropology or its equivalent. Students who have received the UCSB M.A. (leading to the Ph.D.) must have approval of the faculty in their specialization to continue to the Ph.D. Students who have successfully completed the terminal UCSB M.A. program (archaeology specialization only) must apply to the Ph.D. program and compete for admission with all other applicants for that year.

**Interdepartmental Graduate Program in Marine Science.** The Department of Anthropology participates in the program for students with biology backgrounds and interests in marine coastal and environmental policy.

### **Master of Arts—Anthropology Degree Requirements**

All M.A. students are required to complete a course of study as defined in a contract determined by the student in consultation with a three-member master's committee. The contract is specially tailored to each student's needs. It should be finalized and approved by the winter quarter, but no later than the end of spring quarter of the first year. Satisfactory progress toward the degree is required. Students complete three courses per quarter and all general requirements according to the published deadlines. Students who are appointed as teaching assistants will normally be enrolled in a teaching practicum course and two academic courses.

The M.A. degree leading to the Ph.D. is awarded upon satisfactory completion of a minimum of 36 units of coursework and the fulfillment of the following requirements: students in archaeology and biosocial anthropology take a comprehensive exam in the spring quarter of the second year; students in sociocultural anthropology take a first-year assessment examination just before the beginning of their second fall quarter, and at the end of the second year must submit an M.A. dossier that includes a draft research proposal. The terminal M.A., archaeology specialization, is awarded upon satisfactory completion of a minimum of 32 units of coursework, a comprehensive examination and a thesis.

### **Master of Arts—Anthropology, Archaeology Specialization**

Subspecializations offered for the M.A. leading to the Ph.D. include North American, South American, and European archaeology. The terminal M.A. program has a subspecialization of North American archaeology only. Students opting for the North American archaeology subspecialization in either M.A. program may further specialize in human osteology and faunal analysis through a link with the department's bioarchaeology subspecialization.

A series of core courses must be taken during the first two years. The comprehensive examination, offered in the spring quarter of the second year, covers general anthropology and method and theory in archaeology.

Students in the terminal M.A. program form a thesis committee toward the end of the winter quarter of first year of study, and, in

consultation with the committee, formulate a thesis topic during the second year of study. The thesis, based on original research in North American archaeology, must be completed and approved no later than the end of the third year after entering the program.

### **Master of Arts— Anthropology, Biosocial Anthropology Specialization**

During the first year, students take a series of core courses and relevant additional courses in anthropology and other departments, as determined in consultation with biosocial faculty and an assigned faculty advisor. By early winter quarter of the first year, each student selects a master's committee of three faculty who will assist with determining a specific course of study for his or her contract. The contract shall be submitted by the end of spring quarter of the first year. During the second year, the student begins work on an article-length research paper on a topic chosen in consultation with the M.A. committee. The paper is submitted and approved in the fall quarter of the third year.

The comprehensive examination taken spring quarter of the second year covers the general field of anthropology, biological anthropology, and the student's chosen areas of specialization.

### **Master of Arts— Anthropology, Sociocultural Anthropology Specialization**

By the end of winter quarter of the first year, each student selects a master's committee of three faculty who will assist the student with determining a specific course of study for his or her contract. Students are expected to make up deficiencies in preparation during the first year.

There are four compulsory core courses for the M.A. The first-year assessment examination covers the contents of three first-year core courses on anthropological theory; second-year students take two core courses in research design and methods that prepare them for writing the draft research proposal for their M.A. dossier.

### **Doctor of Philosophy— Anthropology**

#### **Degree Requirements**

Students who have received their M.A. degree from another institution must demonstrate that they also meet the UCSB M.A. requirements, and may be asked to complete courses and/or pass the appropriate comprehensive or assessment examination before admission to the Ph.D. program.

The department offers the specializations of archaeology, biosocial anthropology, and sociocultural anthropology toward the Ph.D. in anthropology. Further specialization within these fields is possible.

Students complete a course of study as determined in consultation with their committees. To advance to candidacy for the doctorate, students must: (1) satisfy all requirements in their fields; (2) form a dissertation committee; (3) gain approval of their dissertation proposal; and (4) pass an oral qualifying examination. (5) Students in the archaeology and biosocial specializations must complete a research paper in

fall quarter of their second year. Students in the sociocultural specialization must complete two literature review papers in their third year. One literature review paper addresses the theoretical issues of the student's research specialization. The second reviews literature on the region, culture and history of the people to be studied. Upon completion of all relevant requirements students may petition for advancement to candidacy.

Students who have received their M.A. from another institution generally submit the dissertation proposal during their second year at UCSB. Students in the UCSB combined M.A./Ph.D. program submit their dissertation proposals by the end of their third year of study. Dissertation proposals are normally submitted to a funding agency such as the National Science Foundation.

Three quarters of dissertation research are required of all students for the degree. The dissertation must be approved by all members of the dissertation committee.

### **Optional Ph.D. Emphasis in Global Studies**

Students pursuing a Ph.D. in certain departments may petition to add an emphasis in global studies. The departments for which the emphasis is available include anthropology, English, history, political science, religious studies, and sociology. To be eligible for admission to the Ph.D. emphasis, students must be admitted to the Ph.D. program in one of the departments choosing to offer this emphasis with their existing Ph.D. program and petition successfully to add the optional emphasis.

The student's dissertation committee must have one member from a participating department other than the student's own department. The student may also elect a global emphasis for his or her department field/area/specialization exam, if such an emphasis is offered within the department. The chair of the Coordinating Committee will determine when the student has successfully completed all of the requirements for the emphasis.

By "global" we refer to transnational economic, political, environmental, social, and cultural interactions and flows that operate at a global (i.e., trans-continental) scale. "Global studies" views the world as comprised of increasingly interdependent processes, rather than as shaped exclusively or even primarily by the interplay of discrete nation-states.

Petitions for adding the emphasis can be made at any time in a student's graduate career, but typically will be made after at least one successful year of study in the home department. Work completed prior to admission in the emphasis that meets emphasis requirements (as determined by the Ph.D. Emphasis Coordinating Committee) may be counted towards completion.

To satisfy the Ph.D. emphasis in global studies, students are required to take four one-quarter graduate-level courses. One course is Global 201, the introductory gateway seminar, offered by the Global and International Studies Program. Three additional courses must be chosen from among qualifying global theory and global issues courses offered by participat-

ing departments. These courses will be selected from an approved list of global theory and global issues graduate courses prepared by the Ph.D. Emphasis Coordinating Committee each spring, for the following academic year. At least one of these three courses must be a global theory course, and at least one must be a global issues course. Courses will typically be taken for a letter grade.

At least one of these three courses will be taken from the student's home department, and at least two must be taken from the six other participating departments or the Global and International Studies Program. No more than one of the three seminars (excluding Global 201) can be taken from a single instructor.

For additional information, please contact the graduate advisor in one of the participating departments or global studies.

### **Optional Ph.D. Emphasis in Human Development (IHD)**

The interdisciplinary program in human development (IHD) involves faculty from the Ph.D. programs in communications, counseling/clinical/school psychology, education, linguistics, psychology, and sociology. The program focuses on developmental theory and research across the lifespan, and may be particularly relevant to the dissertation research of some students. The program features a structured set of courses which are taught individually and collaboratively by faculty from a variety of disciplines.

Students who petition to add the emphasis in human development must fulfill the following requirements in addition to the requirements for the Ph.D. in anthropology: (1) six quarters of proseminar Interdisciplinary 592; (2) four courses in addition to the proseminar, two of which must be outside the student's home department; (3) a minimum of one member of the student's doctoral committee must be a ladder faculty member officially affiliated with the interdisciplinary program in human development.

### **Optional Ph.D. Emphasis in Quantitative Methods in the Social Sciences (QMSS)**

Students pursuing a Ph.D. in this department may petition to add an interdisciplinary emphasis in quantitative methods in the social sciences (QMSS). This new interdisciplinary emphasis involves faculty from the Ph.D. programs in communication, economics, education, geography, political science, psychology, sociology, and statistics and applied probability. The areas of specialization of the participating faculty include advanced regression modeling techniques, multivariate statistics, bootstrap estimation methods, demography, econometrics, psychometrics, social network theory, mathematical psychology, spatial statistics, survey research, and educational and psychological assessment. The QMSS emphasis helps students to attain the competencies needed to conduct quantitative social science research through core design and analysis classes, courses in advanced and specialized methodologies, and participation in interdisciplinary colloquia and research projects.

Each admitted student will develop, with his or her advisor, an individual contract listing the QMSS requirements to be completed. The

contract must include the following:

- Two quarters of calculus, one quarter in linear algebra, and a one-year statistics sequence (these requirements can be waived if equivalent courses have already been completed).
- Attendance for at least three quarters at the ongoing QMSS seminar series, including presentation of at least one paper.
- Completion of at least three quantitative methods courses (excluding those listed above) or at least two of which are outside the student's home department.
- A Ph.D. dissertation that is centrally focused on an issue that is appropriate to the QMSS emphasis. The dissertation may make a contribution to methodological theory or may involve an advanced or innovative application.
- A dissertation committee that includes at least one QMSS faculty member from outside the student's home department.

Consult the department for additional information.

### **Optional Ph.D. Emphasis in Technology and Society**

Students pursuing a Ph.D. in this department may petition to add an emphasis in technology and society. The emphasis brings together doctoral students in engineering, social sciences, and the humanities to engage in multidisciplinary coursework and research into the cultural and societal changes resulting from the use of new information technologies. The emphasis features a structured set of courses that may be taught individually and collaboratively by faculty across disciplines: Anthropology, Communication, Computer Science, English, History, Media Arts and Technology, Political Science, and Sociology.

To be eligible for admission to the emphasis, students must be enrolled in good standing in the department. Petitions for adding the emphasis can be made at any time in a student's graduate career, but typically will be made after at least one successful year of study in the home department. Work completed prior to admission that meets emphasis requirements (as determined by the Ph.D. Emphasis Faculty Executive Steering Committee) may be counted towards its completion.

Requirements for completing the optional emphasis in technology and society include:

1. **Gateway Technology and Society Colloquium.** Students must complete a 1-unit colloquium that brings together students and faculty from multiple disciplines to explore various approaches to studying technology and society. In addition to helping students understand similarities and differences in conceptualization and knowledge production across disciplines, the seminar promotes interaction among students from different departments.
2. **Graduate Coursework.** Students must complete four 4-unit courses with a grade of B or better, two each from Area 1 (Culture and History) and Area 2 (Society and Behavior). Area 1 courses explore the humanistic study of cultures, histories and meanings as they intersect with technology. Area 2 investigates the social scientific study of technology in relationship to human behavior, organizations, and social structures.

One course from the student's home department can be applied toward meeting this requirement. Students can petition to substitute a non-listed course, subject to approval by the Technology and Society Faculty Executive Committee.

3. **Dissertation.** A student's dissertation must have relevance to at least one of the two Emphasis areas. In addition, the student's dissertation committee must include a member from another department participating in the emphasis. Exceptions are subject to approval by the Technology and Society Faculty Executive Committee.

For additional information and a current list of courses, please contact the graduate advisor or visit [www.technology-society.ucsb.edu](http://www.technology-society.ucsb.edu)

### Optional Ph.D. Emphasis in Women's Studies

The Department of Feminist Studies, with almost fifty core and affiliated faculty members in over nineteen disciplines, serves as a model of interdisciplinary work and scholarly collaboration at UCSB. Women's Studies doctoral emphasis students are required to successfully complete four seminars that will enhance their understanding of feminist pedagogy, feminist theory, and topics relevant to the study of women, gender and/or sexuality. Women's Studies as an inter-departmental set of conversations and intellectual questions supports a multifaceted undergraduate curriculum at UCSB. Doctoral emphasis students are encouraged to apply to teach Feminist Studies courses as teaching assistants and associates as part of their Feminist Studies training.

Applicants must first be admitted to, or currently enrolled in, a UCSB Ph.D. program participating in the Women's Studies graduate emphasis. Anthropology; Comparative Literature; Counseling, Clinical, and School Psychology; English; French and Italian; Germanic, Slavic and Semitic Studies; History; History of Art and Architecture; Linguistics; Political Science; Religious Studies; Sociology; Spanish and Portuguese; or Theater and Dance. Candidates complete four graduate courses and select a member of the Feminist Studies faculty or affiliated faculty to serve on their dissertation committees. Applications to the Women's Studies Doctoral Emphasis may be submitted at any stage of Ph.D. work, and applications will be considered throughout the year.

### Doctoral Emphasis Coursework

Students pursuing the emphasis in Women's Studies will successfully complete four graduate courses that have been approved by the Doctoral Emphasis advisor.

1. **Feminist Theories.** A one quarter graduate seminar in interdisciplinary feminist theory offered by any department, including Feminist Studies 250 AA-ZZ.
2. **Issues in Feminist Epistemology and Pedagogy** (Feminist Studies 270). A one quarter seminar that considers Feminist Studies as a distinct field. It offers an interdisciplinary exploration of feminist theories of knowledge production and teaching practices. Readings cover past and present critical debates and provide theoretical approaches through which to analyze interdisciplinary epistemological and pedagogical issues.

3. **Graduate Seminar in Feminist Studies** (Feminist Studies 200-290 or 594 AA-ZZ). A one quarter seminar offered by a Feminist Studies faculty member on topics of central concern to the field.  
Or,  
**Research Practicum** (Feminist Studies 280). A cross-disciplinary seminar in which fundamental questions in contemporary feminist research practice are considered in light of students' own graduate projects.
4. **Topical Seminar.** A one quarter graduate seminar that addresses topics relevant to the study of women, gender, and/or sexuality. This seminar must be taken outside the student's home department; it may be fulfilled either by another graduate seminar in Feminist Studies or a seminar in another department.

## Anthropology Courses

### LOWER DIVISION

Note: Freshman seminars are offered on an irregular basis.

#### 2. Introductory Cultural Anthropology (4) STAFF

The nature of culture: survey of the range of cultural phenomena, including material culture, social organization, religion, and other topics.

#### 3. Introduction to Archaeology (5) SMITH

An introduction to archaeology and the prehistory of humankind from the earliest times up to the advent of literate civilization and cities, also processes of cultural change. Partly self-paced learning.

#### 3SS. Introduction to Archeology (4) STAFF

Introduction to archeology and the prehistory of humankind from the earliest times up to the advent of civilization and cities, also processes of cultural change.

#### 5. Introductory Physical Anthropology (4) GAULIN

Human evolution: evolutionary theory, basic genetical concepts, primate evolution and behavior, fossil man, evolution of human behavior and mind.

#### 7. Introductory Biosocial Anthropology (4) TOOPY

An introduction to our evolved, universal human nature, the evolution of the human mind, and how they shape behavior, social life, and culture. Topics include friendship, mate choice, incest avoidance, cooperation, revenge, status, jealousy, emotions, group formation, and intergroup aggression.

#### 99. Independent Studies (1-4) STAFF

Prerequisite: consent of instructor.

Must have an overall grade point average of 3.0. May be taken for a maximum of four units of Anthropology 99 per quarter, and can be repeated for a maximum of eight units. Students are limited to five units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined.

Introduction to research in Anthropology. Independent research under the guidance of a faculty member in the department. Course offers exceptional students the opportunity to undertake independent research or work in a research group.

### UPPER DIVISION

#### 100. Basic Archaeological Concepts (4) JOCHIM

Prerequisite: Anthropology 3 or 3SS.

A survey of important archaeological methods of excavation, analysis, and interpretation. Focus will be on the problems and promise of various approaches to

the explanation of past human behavior.

#### 101. African Archaeology (4) STAFF

Prerequisite: Anthropology 3 or 3SS.

An analysis of the archaeology of Africa from 10,000 years ago to AD 1500, with special reference to the emergence of food production, indigenous states, and the development of long-distance trade. Major emphasis on the self-paced learning.

#### 102. Anthropology of Media (4) STAFF

Anthropological approaches to the study of modern media with emphasis on non-Western societies. Topics: media reception; media as text; political economy of media; national and transnational media; gender and sexuality; consumer culture. Focus on television, film, and new information technology.

#### 102A. Introduction to Women, Culture and Development (4) HANCOCK

Prerequisite: upper-division standing.

Same course as Sociology 156A and Global Studies 180A.

Critical examination of relations among women, culture, and development. Topics include colonialism, violence, globalization and the state, health and reproduction, biotechnology, representation and resistance movements.

#### 104. Workshop: Reading, Writing, and Thinking (4) STAFF

Prerequisite: sophomore or junior standing; consent of instructor.

This workshop for sophomores and juniors intending to major in Anthropology develops an understanding of anthropological texts, and the skills necessary to undertake such projects as the undergraduate honors dissertation.

#### 104H. People, Poverty, and Environment in Central America (4) STONICH

Prerequisite: Anthropology 2 or Environmental Studies 1 or 3.

Same course as Environmental Studies 104.

Analysis of the interrelated social, demographic, economic, political, and environmental crises occurring in Central America from an anthropological perspective. Emphasis on the evolution of contemporary problems, current conditions, and future prospects for the region.

#### 105. Human Variation (4) WALKER

Prerequisite: Anthropology 5.

An examination of traditional race concepts contrasted with an approach to human variation through the analysis of biologically adaptive traits.

#### 106. History of Anthropological Theory (4) STAFF

Prerequisite: Anthropology 2.

An account of the intellectual traditions of anthropology, the main figures who shaped these traditions, and the issues that both divided and united anthropologists at different periods of time.

#### 106A. From Ape to Cyborg: New Debates on Human Nature (4) WEINBERGER-THOMAS

Prerequisite: a prior course in Religious Studies or Anthropology.

Same course as Religious Studies 100A.

Drawing from recent publications from the fields of ethnology, primatology, palaeoanthropology, neurobiology, cognitive science, evolutionary psychology, Neo-Darwinian studies, and robotics, artificial intelligence, genetic engineering and artificial life, this seminar examines the fundamental question of what makes us human.

#### 106B. Ritual and Violence (4) WEINBERGER-THOMAS

Prerequisite: a prior course in Religious Studies or Anthropology.

Same course as Religious Studies 100B.

Focuses on the link between ritual and violence in archaic and/or traditional societies. Attention is also given to the persistence of this link in the contemporary context.

**107. Psychological Anthropology****(4) TOOBY**

Field from Freud and Mead to present; how human nature (universal psychological mechanisms) and culture interact to form individual psychologies, identities, genders, social attitudes, worldviews, and traditions; how cognitive development shapes belief systems, reasoning and symbolism; emotions, preferences, thinking, and pathologies in a cross-cultural perspective.

**108. Educating the Native****(4) PALERM, SALDIVAR**

We look at different educational projects, such as Indian boarding Schools, English-only laws, the "indirect rule" of the British colonies. We address the not-always-clear line between education as a form of social control or as a form of liberation.

**109. Human Universals****(4) GAULIN, TOOBY**

A critical overview of those characteristics of human psyche, behavior, society, and culture that are allegedly found among all peoples: the constants of human nature.

**110. Technology and Culture****(4) STAFF**

*Prerequisite: Anthropology 2.*

Theories of technological evolution and innovation. Meanings of technology. The social and cultural impact of technology on our everyday lives, including automobile culture, industrial farming, the telephone, and technologies of the body.

**111. The Anthropology of Food****(4) STAFF**

*Prerequisite: upper-division standing.*

Critical survey of different anthropological approaches of food production and consumption: biological implications of diet; relations between agricultural forms and political systems; the meanings of feasting; cooking, class and gender; food and national identity.

**112. Bioarchaeology****(4) WALKER**

*Prerequisite: Anthropology 180A.*

A survey of research in the field of bioarchaeology including studies of paleodemography, paleopathology and their relevance to testing about the biological and cultural adaptations of earlier human populations and interpreting behavior from the human skeleton.

**112Z. Theoretical Approaches in Contemporary Archaeology****(4) STAFF**

*Prerequisite: Anthropology 3 or 3SS or 100.*

Students will be introduced to the major theoretical approaches in contemporary archaeology, including neo-evolutionist, Marxist, symbolic/structuralist, critical, and neo-Darwinian thinking. The goal of the course is to show how theory serves as a guide to research.

**113. Indigenous People and the Nation State in the Americas****(4) PALERM**

*Prerequisite: ANTH 2 or CH ST 1A, 1B, or 1C.*

The changing relationship between indigenous people and the state. Compare the differences and similarities between indigenous peoples' mobilizations in the cases of Canada, USA, Ecuador, Chile, Guatemala, Bolivia and Mexico.

**114. Social Organization****(4) STAFF**

Emphasis on various theories of social structure and social organization in cross-cultural perspective; kinship, social stratification, and ethnicity.

**115. Law and Warfare in Nonwestern Societies****(4) STAFF**

The nature of law and warfare in nonwestern societies. Analysis of the strategy and tactics of conflict resolution in relation to ecological, economic, and political aspects of life in nonwestern societies.

**116. Myth, Ritual, and Symbol****(4) HANCOCK**

*Prerequisite: Anthropology 2.*

Uses ethnographic case studies, films and performance videos to explore myth, ritual, and

symbolism cross-culturally. Compares and contrasts the symbolic dimensions of gender and ethnic identity, world view, social and political organization in different societies.

**116B. Anthropological Approaches to Religion****(4) HANCOCK**

*Prerequisites: Anthropology 2; upper-division standing; consent of instructor.*

Exploration of anthropology's distinctive approaches to religion using theoretical works, historical and ethnographic case studies, film, and performance video. Topics include sociopolitical dimensions of religion; ritual structure, and experience; cognitive, aesthetic, and semiotic approaches to religion.

**117. Borders and Borderlands****(4) WALSH**

*Prerequisite: Anthropology 2.*

The theoretical concept of "borderlands" examined through a discussion of the societies, economics and cultures that form on geopolitical borders. The Mexico-U.S. border will be discussed in detail.

**118. Modernity and the State****(4) STAFF**

Modernity produced an expansion of the modern state. This course explores state and counter-state processes in non-Western societies. Topics: ancient states; nationalism; non-Western traditions of civil society (popular religion, kinship, voluntary association); gender and the state; transnational media and migration.

**118TS. Archaeology of the Ancient Near East****(4) SMITH**

*Prerequisite: Anthropology 3 or 3SS or INEST 45.*

This course combines archaeology and history to trace the development of the cultures of the ancient Near East from the origins of civilization through the rise of empires, ending with the conquest of Alexander the Great in c. 300 BCE.

**119. Household Archeology****(4) WILSON**

*Prerequisite: Anthropology 3 or Anthropology 3SS.*

*Designed for majors.*

Household Archeology plays a central role in the analysis of a wide range of anthropological issues, such as wealth, status, economic risk, gender, political networks, and ethnicity. Focuses on how to integrate household data into abstract general theories of social process.

**120. The Family****(4) STAFF**

*Prerequisite: Anthropology 2.*

Exploration of the relationship between family processes and changing economic structure in tribal, peasant, and industrial societies. How the production of people depends on the reproduction of economic relationships, and how economic production is influenced by human reproduction.

**121. Human Evolution****(4) WALKER**

*Prerequisite: Anthropology 5.*

The nature and results of the evolutionary processes responsible for the formation and differentiation of human populations.

**121MS. Historical World Systems****(4) STAFF**

*Prerequisite: upper-division standing.*

Eurasian systems of trade pre-1825: the major trade systems, modes of production, cultures of banking, credit and trust, early expressions of identity, ethnicity and knowledge of others, trade's impact in the pre-industrial world: distribution of wealth, knowledge, and power.

**121T. Genetics, Natural Selection, and Human Evolution****(4) TOOBY**

*Prerequisite: upper-division standing.*

An introduction to the nature and role of genes in evolution, in natural selection, in sexual reproduction, in cellular regulation, in human development, in structuring universal human adaptive design, and in creating individual and intergroup similarities and differences.

**122. Anthropology of World Systems****(4) STAFF**

Focuses on the penetration and impact of global capitalist economy (national and multinational) upon local level third world societies, communities, and groups. A world system perspective is taken and anthropological case studies are presented from Asia, Africa, and Latin America.

**123MG. Anthropological Data Analysis****(4) GURVEN**

*Prerequisites: Anthropology 5 or 7; upper-division standing.*

Hands-on course explores the scientific process as used in bio- and bio-cultural anthropological research. Emphasizes hypothesis testing, data collection and data analysis. Students examine and analyze new anthropological data from ongoing socio-ecological research.

**125. Anthropology of Gender****(4) STAFF**

*Prerequisite: not open to freshmen.*

The cross-cultural study of gender from a feminist perspective. Topics may include gender and nature, gender and the division of labor, gender and kinship, gender and subjectivity, gender and sexuality, gender and the state, gender and knowledge/discourse.

**127. Hunters and Gatherers****(4) JOCHIM**

*Prerequisite: Anthropology 2.*

What do Pygmies, Aborigines, and Eskimos have in common? What is the relationship between nature and culture in these simple societies? These questions and other will be examined through case studies and cross-cultural comparisons.

**128. The Archeology of Gender****(4) VANDERWARKER**

*Prerequisite: Anth 3.*

*Designed for majors.*

The development of gender as a research focus in archeology over the past several decades. Examine case studies that consider the identification and understanding of past gender relations, specifically how gender relations are materialized in the archaeological record. (W, S)

**129MG. Behavioral Ecology of Hunter Gatherers****(4) GURVEN**

*Prerequisite: Anthropology 5 or 7.*

A thorough introduction using a behavioral ecology approach to the diversity of behaviors found among foragers in Africa, South America, Southeast Asia, and Australia. Topics include: diet and subsistence, mating, demography, social behavior, mobility and settlement patterns, gender, indigenous rights, and conservation.

**130A. Third World Environments: Problems and Prospects****(4) STONICH**

*Prerequisite: Anthropology 2 or Environmental Studies 1 or 3.*

*Same course as Environmental Studies 130A.*

Examination of the human dimensions of globalization/global environmental change from the Third World. Emphasis on the sociocultural context of environmental destruction, environmental justice and interdisciplinary approaches.

**130B. Third World Environments: Conservation and Sustainable Development****(4) STONICH**

*Prerequisite: Environmental Studies 1 or 3 or Anthropology 2.*

*Recommended Preparation: Environmental Studies 130A or Anthropology 130A. Same course as Environmental Studies 130B.*

Focus on conservation and sustainable development. Includes examination of contending views of sustainable development. Special emphasis on tourism, agricultural, fisheries, and aquacultural development in the Third World.

**130C. Third World Environments: Response and Resistance****(4) STONICH**

*Prerequisites: Environmental Studies 1 or 3 or Anthropology 2.*

*Same course as Environmental Studies 130C.*

Concerned with response and resistance to economic globalization, impoverishment, and environmental degradation: household economic strategies; migration, urbanization; social conflict; environmental movements of the poor; the information revolution; and alternative development strategies.

### 131. North American Indians

(4) GLASSOW

The origins, development, and attainments of New World aboriginal cultures north of Mexico. Some emphasis is given to California groups such as the Chumash.

### 131CA. California Indians

(4) GLASSOW

Investigation of the diversity of California Indian societies at the beginning of European colonization, including social organization, economy, material culture, and ideology. Also considered are origins and historic changes. Emphasis is placed on central and southern California.

### 132TS. Ceramic Analysis in Archaeology

(4) SMITH

*Prerequisite: Anthropology 3 or 35S.*

An overview of how ceramics are used in archaeology. Topics include pottery manufacture, classification, stylistic and functional analysis, scientific analysis, chronology, production and exchange, ceramic consumption and socio-political organization.

### 133. Cultural Development in Mesoamerica

(4) VANDERWARKER

The rise and fall of various ancient civilizations such as those of the Maya, Aztecs, Toltecs, Teotihuacanos, and Olmec as well as their cultural antecedents. This course uses self-paced audiovisual modules as well as traditional lecture format. (Offered periodically)

### 134. Modern Cultures of Latin America

(4) STAFF

Continuities and changes in the contemporary cultures of peasant and urban societies in Mexico, Central, and South America. Examination of cultural institutions and values, social stratification, village and urban life, elites, urbanization.

### 135. Modern Mexican Culture

(4) STAFF

The impact of dependency, industrialization, urbanization, technology, and modern communications on Mexican society in the twentieth century. Examination of recent sociocultural contemporary urban and rural communities, class structure, value orientations, ethnic minorities, and national integration.

### 136. Peoples and Cultures of the Pacific

(4) ASWANI

The aboriginal and modern cultures of Polynesia, Melanesia, and Micronesia.

### 137. The Ancient Maya

(4) STAFF

The splendiferous Maya civilization as it waxed and waned during ancient times.

### 138TS. Archaeology of Egypt

(4) SMITH

*Prerequisite: upper-division standing.*

Selected topics on the archaeology of ancient Egypt, placing the monuments of this great civilization in the context of its rise and development. Emphasis on ancient Egyptian material culture as a source for understanding Egyptian political, social, and economic dynamics.

### 139. Indigenous Peoples

(4) ASWANI

Survey of indigenous societies, including: resistance response and adaptations to colonial incursions; colonial and postcolonial politics; ethnic and cultural assimilation; indigenous ethnic resistance; indigenous political movements. Other topics explored include ethnocide and ecocide; indigenous property rights; effects of globalization.

### 139MG. Indigenous Peoples of the Amazon

(4) GURVEN

This advanced undergraduate course examines the cultural landscape of lowland South America

and its native inhabitants of the past and of today. Representations of the Amazonian "green hell" and focus on relevant topics such as ecological adaptations, indigenous rights, and conservation are discussed.

### 140. Popular Culture in South East Asia

(4) HANCOCK

Course on contemporary social and cultural issues in South Asia. Readings on popular religion, communalism, mass media, commercial culture, and the middle class.

### 141. Agriculture and Society in Mexico: Past and Present

(4) PALERM

The evolution of rural Mexico: from origins of Mesoamerican agriculture to the rise of high civilization; from the establishment of the colonial system to the demise of colonial agricultural institutions; from the revolution of 1910 to the enactment of land reform and development programs. Emphasis will be made on the role of peasantry in the making of the modern state.

### 142. Peoples and Cultures of India

(4) STAFF

Rise of Indian civilization from prehistoric times to the present; regional divisions of India; family, kin, caste groups, and village life; social organization above village level; effects of urbanization, British rule, and independence.

### 142B. Contemporary Issues in South Asia

(4) HANCOCK

Uses film, novels, ethnographies and popular journalism to explore a variety of issues in post-independence South Asia. Topics such as environmental, feminist, and human rights movements; communalism; mass media; and South Asian diaspora, youth culture, and development may be covered.

### 143. Introduction to Contemporary Social Theory

(4) STAFF

*Prerequisite: upper-division standing.*

Introduction to the main themes and concerns that preoccupy contemporary social theorists. The underlying purpose is to stress the importance of social theory in providing insights and posing questions critical for informed and innovative research in the social sciences.

### 143F. Ethics in Archaeology

(4) STAFF

*Prerequisite: Anthropology 3 or 35S.*

An analysis of ethics in contemporary archaeology. Topics include reburial and repatriation, interpretation of the archaeological record in the context of historically oppressed groups, ethnic minorities, and non-western societies. The course also includes the ethics of collecting and managing cultural property.

### 144. The Archeology of Warfare

(4) WILSON

*Designed for majors*

Tacks between cross-cultural ethnographic research and archaeological case studies of violence to provide a historically contextualized and data-rich exploration of violence in the ancient world.

### 145. Anthropological Demography and Life History

(4) GURVEN

*Prerequisite: Anthropology 5 or 7 or upper-division standing; or Environmental Studies 2 or 3.*

Introduces students to anthropological applications of demography and life history theory. Focuses on ecological approaches to population dynamics, birth and death processes, and policy implications in light of population "problems" among traditional and modern societies.

### 146. Development Anthropology

(4) STAFF

*Prerequisite: upper-division standing.*

An introduction to the planning of economic development in the "Third World" and its social consequences from the perspective of anthropology.

### 148. Ecological Anthropology

(4) ASWANI

*Prerequisites: Anthropology 2; upper-division standing.*

Focuses on the complex and dynamic interactions between human beings and their physical environment. Examines ecological thinking in anthropology and the various theoretical approaches within the discipline that have developed from the coalescence of natural and social sciences.

### 148A. Comparative Ethnicity

(4) STAFF

*Prerequisite: Anthropology 2 or 5.*

A cross-cultural examination of the part that ethnicity and race play in human affairs.

### 148MH. Aesthetic Anthropology

(4) HANCOCK

*Prerequisite: Anthropology 2 or 116.*

Contrasts different forms of artistic production and criticism in a range of societies. Considers how art and aesthetics are defined in cultural context; investigates political, economic and socio-cultural dimensions of aesthetic practice, including visual arts, music performance, body art.

### 149. World Agriculture, Food, and Population

(4) CLEVELAND

*Prerequisite: upper-division standing.*

*Same course as Environmental Studies 149 and Geography 161.*

Evolution, current status, and alternative futures of agriculture, food, and population worldwide. Achieving environmentally, socially and economically sustainable food systems; soil, water, crops, energy and labor; diversity, stability and ecosystems management; farmer and scientist knowledge and collaboration; common property management.

### 150B. Archaeology of Andean Civilizations

(4) SCHREIBER

*Prerequisites: Anthropology 3; not open to freshmen.*

A survey of the prehistory of Andean South America beginning with the complex cultures of the Initial Period and ending with an overview of the Inca Empire. Major cultures include Chavin, Nasca, Moche, Wari and Tiwanaku.

### 150C. The Inca Empire

(4) SCHREIBER

*Prerequisite: Anthropology 3 or 35S.*

An in-depth study of the fabled Inca Empire of South America, including archaeological and historic sources. Topics include Inca origins, political organization, economy, and social structure.

### 151T. Evolutionary Psychology

(4) TOOBY, GAULIN

*Prerequisite: Anthropology 2 or 3 or 35S or 5 or Psychology 1.*

A critical survey of the emerging field of evolutionary psychology, covering specific cognitive adaptations involved in mate choice, incest avoidance, cooperation, love, revenge, jealousy and individual and intergroup aggression, and also analyzing how such evolved species-typical mechanisms generate human culture.

### 153S. The Evolution of Human Sexuality

(4) STAFF

*Recommended preparation: Anthropology 5 or 7.*

Exploration of the psychological mechanisms—adaptations—that underpin human sexual feeling, thought, and action. Emphasis on male-female differences, "engineering" analyses, and the comparative method as sources of information about adaptive design. Includes the study of sexual arousal, attractiveness, jealousy, and competition.

### 153T. Primate Behavior

(4) GAULIN

*Prerequisites: Anthropology 5 or 7; upper-division standing.*

An introduction to primatology and the principles of behavioral ecology, using langur, vervet, macaque, baboon, gorilla, and chimpanzee field studies to illustrate theories of foraging, parenting, kinship, sexual selection, incest avoidance, aggression, and dominance. Concludes with applications to human evolution.

### 154. Special Topics in Social Anthropology

(4) STAFF

*Designed for students who intend to do graduate work in social or behavioral sciences. May be repeated*

for credit to a maximum of 8 units.

A critical review of selected theoretical and methodological contributions of social anthropology to the description, analysis, and comparison of human societies. (Normally taught every other year.)

### 155. Prehistory of California and the Great Basin

(4) GLASSOW

*Prerequisite:* upper-division standing.

A survey of the prehistory of California and the Great Basin, which includes principally the states of Nevada and Utah. Consideration is also given to how archaeologists construct regional cultural developments and attempt to explain prehistoric cultural change.

### 156. Understanding Africa

(4) STAFF

*Prerequisite:* upper-division standing.

A general introduction to the peoples of Africa: their histories, economies, political systems, and cultures. How should we, as outsiders, understand the diversity of this great continent, its human problems, and its significance in the modern world?

### 158. Cultural and Biological Diversity of Food Plants

(4) CLEVELAND

*Prerequisite:* upper-division standing.

*Same course as Environmental Studies 158 and Geography 169.*

*Recommended preparation:* Anthropology 149 or Environmental Studies 149 or Geography 161.

The evolution of food plants from domestication to genetic engineering. Patterns of diversity around the world in small-scale, traditionally-based and industrial communities. Class participation in project on local olive diversity includes field work.

### 160. Cultural Ecology

(4) JOCHIM

*Prerequisite:* Anthropology 2.

Ranging from moose hunters to rice farmers, cultures seem tremendously diverse, yet cultural forms do show clear patterns. The relationship of these patterns to the natural and social environment will be examined.

### 162. Prehistoric Food Production

(4) VANDERWARKER

*Prerequisite:* Anthropology 3 or 3SS.

A history of the process of plant and animal domestication in the Americas, the Near East, Asia, and Africa. Course focuses on the specific biological changes in the major domesticates as well as associated social changes in human life.

### 163. Archeology of North America

(4) WILSON

A survey of North American archeology exclusive of Mesoamerica. Changes in prehistoric lifeways from simple hunting and gathering to complex agriculturally based chiefdoms will be explored through the study of the development of regional traditions over long periods of time.

### 164. The Origins of Complex Societies

(4) SCHREIBER

*Prerequisite:* Anthropology 3 or 3SS.

Why and how complex societies developed from simple, egalitarian societies in some areas of the world. Course surveys major theories and evidence surrounding the origins of states and urban societies in New and Old World.

### 165. History of Archaeology

(4) STAFF

*Prerequisite:* Anthropology 3 or 3SS.

A survey of the history of archaeology from Medieval times to 1960, with special reference to the changing intellectual contexts of the field. Emphasis on emerging major theoretical approaches and the impact of important discoveries.

### 166. Climate Change in Prehistory

(4) STAFF

*Prerequisite:* Anthropology 3.

Survey of the impact of short- and long-term climate change on human prehistory from the late Ice Age to the Medieval Warm Period (c.A.D. 1000). Course surveys the relationships between climate and changing human societies.

### 166BT. Biotechnology, Food, and Agriculture

(4) CLEVELAND

*Prerequisite:* upper-division standing.

*Recommended preparation:* Anthropology 149 or Environmental Studies 149 or Geography 161.

*Same course as Environmental Studies 166BT and Geography 171BT.*

Social, cultural, ethical, biological, and environmental issues surrounding biotechnology (BT) and the food system. Includes theory and method of BT; scientific, social, and political control of BT; effect of BT on genetic diversity, small-scale farmers, the environment, food supply, and consumer health.

### 166FP. Small-Scale Food Production

(5) CLEVELAND

*Prerequisites:* Anthropology 149 or Environmental Studies 149 or Geography 161.

*Same course as Environmental Studies 166FP and Geography 171FP.*

Biological, ecological, social, and economic principles of small food production and their practical applications. Includes each student cultivating a garden plot; lab exercises, field trips to local farms and gardens.

### 167. People of the Ice Age

(4) JOCHIM

*Prerequisite:* Anthropology 3 or 3SS.

Human adaptations and population dispersals during the Ice Age (Pleistocene epoch). Course focuses on the nature of Stone Age cultures and the evidence for early human occupation of the Americas and the Old World between three million and 10,000 years ago.

### 168. Ethnology in Rural California: Transformations in Agriculture, Farm Labor, and Rural Communities

(4) PALERM

*Prerequisite:* Anthropology 2; upper-division standing.

Provides a systematic review of research completed by anthropologists and other social scientists on the development of agriculture and its effects over rural society. Special emphasis is given to the settlement of immigrant farmworkers and the formation of new human communities.

### 169. Evolution of Cooperation

(4) GURVEN

*Prerequisite:* Anthropology 5 or 7.

Interdisciplinary focus on the emergence and maintenance of cooperation in human populations. Are we unique in our abilities to reap gains from cooperative endeavors? Why are some people generous, other stingy? How do propensities, personalities, ecology, and cultural institutions affect success in cooperation?

### 172. Colonialism and Culture

(4) HANCOCK

*Prerequisite:* upper-division standing.

Historical and sociocultural processes of colonialism and postcolonialism in selected societies. Topics include: relations between colonialism and capitalism; rise of nationalism; race and sexuality; cultural dimensions of and resistance to colonialism; modernization and development regimes; postcolonial critique.

### 173. Nationalisms and the Nation-State

(4) STAFF

*Prerequisite:* upper-division standing.

Critical introduction to theories about nationalism and state formation from an anthropological perspective. Topics include nationalism and gender, nationalism and racism, and nationalism and law. These are related to contemporary contradictions of the nation-state posed by transnational processes.

### 175. Southwestern Archaeology

(4) SCHREIBER

*Prerequisite:* Anthropology 3 or 3SS.

Understanding the sequence of cultural developments in the southwest United States. Reconstructing prehistoric economy and society through study of material remains, such as the cliff dwellings of Mesa Verde, Chaco Canyon's great pueblos, and the ball-courts, platform mounds, and irrigation systems of desert Hohokam.

### 176TS. Ancient Egyptian Religion

(4) SMITH

*Prerequisite:* upper-division standing.

Examination of ancient Egyptian religion from massive temples and pyramids to modest offerings and simple burials. The interaction of sacred and secular is considered through examination of the individual, society, and the state in shaping religious beliefs.

### 178. Internship in Archaeological Record-Keeping and Collections

(1-4) GLASSOW

*Prerequisite:* consent of instructor.

*May be repeated for credit to a maximum of 4 units.*

Interns serve as assistants in the department's Central Coast Information Center or Repository for Archaeological Collection or both.

### 180A. Osteology

(4) WALKER

*Prerequisite:* consent of instructor.

Class is designed to teach students in archaeology and physical anthropology the basic skills necessary to identify and analyze the remains of animals recovered from archaeological excavations. Emphasis is placed on laboratory work with actual archaeological collections and testing hypotheses about prehistoric human behavior.

### 180B. Osteology

(4) WALKER

*Prerequisites:* Anthropology 180A and consent of instructor.

Continuation of Anthropology 180A with the development of a research project.

### 181. Methods and Techniques of Field Archaeology

(6) GLASSOW

*Prerequisite:* Anthropology 3 or 3SS.

Introduction to archaeological research designs and field techniques of data collection, including survey, excavation, and site data recording. Course entails two lectures during the week and fieldwork all day Saturday.

### 183. Internship in Archaeological Resource Management

(1-4) GLASSOW

*Prerequisite:* consent of instructor.

*May be repeated for credit to a maximum of 4 units. Recommended preparation:* Anthropology 181 or 191, depending on the nature of the internship.

Interns serve as assistants or trainees in the archaeological programs of a governmental agency, a museum, or a private firm in the local area. In collaboration with the instructor and an extramural archaeologist, the student conceives a set of activities for the internship.

### 184. Settlement Pattern Analysis in Archaeology

(4) SCHREIBER

*Prerequisites:* Anthropology 3; not open to freshmen.

*Recommended preparation:* upper-division courses in archaeology.

How the arrangement of archaeological sites across the landscape indicates aspects of human culture, including subsistence strategies and socio-political complexity. Methods of obtaining and interpreting settlement data.

### 185. Human Environmental Rights

(4) STAFF

*Prerequisite:* Anthropology 2 or Environmental Studies 1 or 3.

*Same course as Environmental Studies 185.*

Introduction to human environmental rights. Examines the expansion of human rights to include human environmental rights, abuses of human environmental rights, associated social conflicts, and emergent social movements including environmental justice and transnational advocacy networks.

### 186. Lab Course in Paleoethnobotany

(4) VANDERWARKER

*Prerequisite:* Anth 3

Study of archaeological plant remains, including field/lab methodology, the reconstruction of ancient environment and the subsistence, spatial and temporal analysis, quantitative methods, and taxonomy. Divided

between lecture, discussion, and labwork, involving microscopic identification of paleoethnobotanical remains. (W, S)

### 187. The Clash of Cultures

(4) STAFF

Prerequisites: Anthropology 2; and, Anthropology 3 or 35S.

A historical and anthropological survey of contact between western civilization and nonwestern societies from medieval times up to the early twentieth century. Peoples covered include Khoi, Aztecs, Tahitians, Fuegians, Maori, and Northwest Indians.

### 188. The Seacoast in Prehistory

(4) STAFF

Prerequisite: Anthropology 3 or 35S.

An examination of maritime adaptations in world prehistory, emphasizing the integration of marine resources into economies of varying degrees of complexity. Course will cover New and Old World culture areas and the Santa Barbara region.

### 189. Problems in European Prehistory

(4) JOCHIM

Prerequisite: Anthropology 3 or 35S.

Seminar in selected problems in the archaeology of Europe.

### 190. Cultural Anthropology Internship

(1-4) STAFF

Prerequisite: consent of instructor.

May be repeated for credit to a maximum of 8 units but only 4 units may be applied to the major.

Students serve as interns in various settings such as museums, governmental agencies, and health organizations to gain exposure to different cultures. In collaboration with the instructor and an extramural anthropologist, the student conceives a set of activities for the internship.

### 191A. Prehistoric and Early Historic Artifacts: Technology of Their Manufacture and Use

(4) GLASSOW

Prerequisite: Anthropology 3.

Anthropology 191B may be taken concurrently.

Not open for credit to students who have completed Anthropology 191.

Consideration of how prehistoric and early historic peoples manufactured and used all major classes of artifacts found in North American archaeological sites, and how archaeologists manage artifact collections and reconstruct technology through artifact analysis.

### 191B. Analysis of Archaeological Materials

(2) GLASSOW

Prerequisite: Anthropology 3 or 35S.

Not open for credit to students who have completed Anthropology 163N.

An advanced applied course on the analysis and interpretation of prehistoric artifacts from archaeological sites in California. Research design, data recording, simple statistical analysis and interpretation are covered as the site analysis progresses through the quarter.

### 194. Field Training in Archaeology

(1-8) STAFF

Prerequisites: Anthropology 3 or 35S; and, Anthropology 100 and 133.

May be repeated for credit to a maximum of 16 units, but only 8 units may be applied toward the major.

Introduction to design of research projects and techniques of data collection in archaeology. The number of units taken in one course will depend on the amount of training and experience received.

### 194P. Practicum in Field and Laboratory Analysis

(1-4) STAFF

Prerequisites: Anthropology 100; consent of instructor.

May be repeated for credit to a maximum of 8 units, but only 6 units may be applied toward the major.

An applied course emphasizing acquisition of practical skills in archaeological field work and laboratory analysis. Projects will vary depending on the type of archaeological research in progress, but may include artifact processing, cataloging, field excavation, and preparation of research results.

### 195A-B. Senior Honors Program

(4-4) STAFF

Prerequisites: admission to senior honors program; consent of instructor.

This is a two-quarter, in-progress course with letter grade assigned for both quarters upon completion of Anthropology 195B.

Independent research under the supervision of an anthropology faculty member which will result in senior thesis.

A: Will concentrate on reading and gathering of materials for thesis.

B: Writing of thesis will be completed.

### 196. Archaeology of Religion

(4) STAFF

Prerequisite: Anthropology 3.

An analysis and survey of the ways in which archaeologists have approached religious beliefs and other intangibles in ancient societies. Emphasis on multidisciplinary perspectives, ethnographic analogy, and the impact of science on the study of ancient religion.

### 197. Special Courses

(4) STAFF

Prerequisite: upper-division standing.

May be repeated to a maximum of 12 units provided content is different.

Intensive studies or projects focused on special problems related to anthropology which are not covered by other courses.

### 198. Independent Readings in Anthropology

(1-5) STAFF

Prerequisites: upper-division standing; completion of two upper-division courses in anthropology.

Must have a minimum 3.0 grade-point average for preceding 3 quarters. Students limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. May be repeated to a maximum of 12 units in anthropology.

Intended for students who know their own reading needs. Normally requires regular meetings with the instructor.

### 199 Independent Studies in Anthropology

(1-5) STAFF

Prerequisites: upper-division standing; completion of two upper-division courses in anthropology.

Must have a minimum 3.0 grade-point average for preceding 3 quarters. Students limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. May be repeated to a maximum of 12 units in anthropology.

Students must execute a limited research project on their own initiative.

### 199RA. Undergraduate Research Assistance Training in Anthropology

(1-5) STAFF

Prerequisites: upper-division standing; completion of two upper-division courses in anthropology.

Must have a minimum 3.0 grade-point average for preceding 3 quarters. Students limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. May be repeated to a maximum of 12 units in anthropology.

Student gains research experience through assisting faculty member in research project.

## GRADUATE COURSES

### 201A. Classical Archaeological Theory

(4) JOCHIM

Prerequisite: graduate standing in anthropology.

Not open for credit to students who have completed Anthropology 201.

A survey and critique of archaeological theory from the nineteenth century through the 1970's, with emphasis on shifting paradigms and the implications for research.

### 201B. Contemporary Archaeological Theory

(4) SCHREIBER

Prerequisite: graduate standing in anthropology.

Not open for credit to students who have completed Anthropology 201.

A survey and critique of archaeological theory from

the 1980's to the present, emphasizing the diversity of new approaches and their implications for research.

### 204. World Agriculture, Food and Population

(4) CLEVELAND

Prerequisite: graduate standing.

The evolution, current status, and alternative futures of human population and agriculture worldwide. Emphasized environmental, social, and economic susceptibility; carrying capacities; diversity and stability; population growth, fertility, mortality and migration; common pool resources; farmer and scientist knowledge and collaboration.

### 206. Current Problems in Archaeology

(4) STAFF

May be repeated for credit.

Critical examination of a selected aspect of contemporary archaeological research and theory. Topics will vary from year to year.

### 207. Problems in Hunter-Gatherer Archaeology

(4) JOCHIM

Prerequisite: consent of instructor.

A problem-oriented seminar focusing on major issues in the archaeology of hunter-gatherers.

### 210. Basic Issues in Physical Anthropology

(4) WALKER

Prerequisite: consent of instructor.

A review of basic issues in physical anthropology for graduate students in archaeology.

### 217. Biotechnology, Food, and Agriculture

(4) CLEVELAND

Prerequisite: Environmental Studies 149 or Anthropology 149 or Anthropology 204.

Social, cultural, ethical, biological, and environmental issues surrounding biotechnology (BT) and the food system. Includes theory and method of BT; scientific, social, and political control of BT; effect of BT on genetic diversity, small-scale farmers, the environment, food supply, consumer health.

### 218. Problems in Andean Archaeology

(4) SCHREIBER

A problem-oriented approach to major issues in Andean archeology. Focus is on the Middle Horizon of the Andean prehistory, especially the Wari and Tiwanaku cultures. Conducted on a seminar basis.

### 222. Ethnicity and Race in the Americas

(4) SALDIVAR

Identifies different racial projects, of how "ethnicity" and "race" are understood in specific contexts. Special attention is put on the ideas of mestizaje, indigenismo and development, and the role that played in the racial projects of Latin America.

### 223. Feminist Theory and Ethnographic Practice

(4) HANCOCK

Recent debates in feminist theory as they have engaged and reconceived ethnographic fieldwork and writing: feminist interventions in poststructuralist and postcolonial theory; feminist critiques of ethnographic writing; current debates on gender and sexuality.

### 225. Peasants and Industrialization: "Traditional" Rural Societies

(4) PALERM

The interaction between peasant and industrial socioeconomic formations is examined through three intellectual traditions: late nineteenth century Marxian writers, twentieth century development anthropologists, and proponents of the theory of the articulation of modes of production.

### 226. Power and Meaning in Religious Experience

(4) HANCOCK

Prerequisite: graduate standing.

Explores religion in cross-cultural and historical contexts using theoretical sources and ethnographic and historiographical case studies. Topics include structure and agency in ritual; relations among religion, gender, ethnicity and nationalism; new religious movements; religion and mass media.

### 230. History of Cultural Anthropology

(4) STAFF

A history of cultural anthropology as revealed in the writings on major theoretical problems beginning

in the 1850s, the disputes, the solutions, and a final appraisal of where we stand today.

### 232. Graduate Proseminar

(1-4) STAFF

Exposes all first and second year students to examples of current research in the different subfields of anthropology, to provide opportunities to meet with eminent scholars from other institutions, and to provide a forum for collegial interactions among faculty members and graduate students.

### 234. Advanced Theory and Method in Evolutionary Psychology

(4) TOOBY

*Prerequisite: consent of instructor.*

Interdepartmental research practicum in evolutionary psychology, biology, and anthropology for students and faculty planning or working on evolutionary research projects. Focus on experimental design, cross-cultural methods, organism design theory, new adaptationist hypotheses, and the criteria for testing them.

### 235A. Foundations of Modern Social Theory

(4) STAFF

Seminar introduces major post-enlightenment debates on social life and modernity. Selections from Marx, Durkheim, Weber, Freud as well as major responses, revisions and critiques in critical and subaltern theory, cultural studies, structuralism and poststructuralism. Close readings of primary texts emphasized.

### 235B. Issues in Contemporary Anthropology

(4) STAFF

Survey of major theoretical trends since the 1960's. Topics include: political economy and Marxism; evolution, history, and anthropology; symbolic anthropology; development studies; gender studies; colonialism and nationalism; structuralism/post-structuralism; modernity and post-modernity; ecological anthropology. Topics may vary with each professor.

### 239A. Research Design and Writing in Archaeology

(4) STAFF

*Prerequisite: graduate standing in archaeology.*

How to design a fieldwork project and write a dissertation research proposal; the search for funding agencies; how to deal with funding institutions, professional organizations, publishers and employers; issues of a career in anthropology.

### 240A. Research Methods in Cultural Anthropology

(4) STONICH

Designed to give students a solid grounding in basic research methods in cultural anthropology. Focus on the role of fieldwork, preparation for field research (ethics, health, and gender), systematic data collection, qualitative data base management and analysis.

### 240B. Research Design and Writing in Sociocultural Anthropology

(4) STAFF

*Prerequisites: graduate standing in sociocultural anthropology.*

How to design a fieldwork project and write a dissertation research proposal; the search for funding agencies; how to deal with funding institutions, professional organizations, publishers and employers; issues of a career in anthropology.

### 240C. Research Seminar in Cultural Anthropology

(4) STAFF

*Prerequisite: graduate standing.*

Required research and writing seminar during which second-year graduate students write individual MA papers.

### 241. Contemporary Topics in Biological Anthropology

(1) TOOBY, GURVEN, GAULIN

*Prerequisite: Graduate standing in Anthropology or a related field.*

Read and discuss professional literature in biological anthropology and related fields: evolutionary and life history theory, human biology, paleoanthropology, biomedical science and

primatology. Course keeps students abreast of key developments in the field. (F, W, S)

### 245A. Quantitative Data Analysis in Archaeology

(4) STAFF

This course is an introduction to the practical analysis of commonly-encountered archaeological data using simple quantitative and statistical procedures, such as exploratory data analysis, sampling, regression, and spatial analysis. The course is taught in a computer-assisted (multimedia) format.

### 245B. Quantitative Data Analysis in Archaeology

(4) STAFF

*Prerequisite: Anthropology 245A.*

A working knowledge of quantitative methods that aid recognition of patterns in archaeological data; an understanding of the sorts of archaeological problems that can be attacked quantitatively; and experience in research designs which yield data that can be effectively analyzed.

### 250AA-ZZ. Method and Theory in Anthropology

(4) STAFF

A discussion of general problems in anthropology. Consult with department office for faculty designation.

### 251. Methods of Prehistoric Subsistence Analysis

(4) GLASSOW

Assessment of approaches archaeologists use to reconstruct subsistence systems and identify subsistence change among prehistoric hunter-gatherers and farmers.

### 257. Human Behavioral Ecology Theory and Method

(4) GURVEN

*Prerequisite: background in evolutionary theory.*

Focuses on foraging, mate choice, parenting, life history, time use, cooperation, and culture by examining key articles, thereby providing an overview of the major theoretical issues, methods, and data in human evolutionary ecology.

### 266FP. Small-Scale Food Production

(4) CLEVELAND

*Prerequisite: Environmental Studies 149 or Anthropology 149 or Anthropology 204.*

Practical application of biological, ecological, social, and economic principles of small-scale food production. Includes each student cultivating a garden plot; field trips to local farms and gardens.

### 277. Faculty Graduate Proseminar

(2) STAFF

*Prerequisites: graduate standing in anthropology.*

Exposes incoming graduate students to the theoretical interests and current research being conducted by the department ladder and affiliated faculty. First-year students are required to enroll and participate fully in weekly meetings.

### 501. Teaching Assistant Practicum

(4) STAFF

*Prerequisite: appointment as a teaching assistant in anthropology.*

*No unit credit allowed toward degree.*

The course, designed to meet the needs of the graduate student who serves as a teaching assistant, includes analyses of texts and materials, discussion of teaching techniques, conducting discussion sections, formulation of topics and questions for papers and examinations, and grading papers and examinations under the supervision of the instructor assigned to the course.

### 594. Field Research Training

(2-12) STAFF

*Prerequisite: consent of instructor.*

Introduction to the planning and implementation of full-scale research projects. The opportunity will be given to formulate and carry out research designs and to direct crews in data collection.

### 596. Directed Reading and Research

(2-6) STAFF

*No more than half the graduate units necessary for the master's degree may be taken in 596.*

Individual tutorial.

### 597. Individual Study for Master's Comprehensive Examinations

(2-6) STAFF

*No unit credit allowed toward degree.*

Individual tutorial.

### 598. Master's Thesis and Pre-Candidacy Preparation

(2-12) STAFF

*No unit credit allowed toward degree.*

Individual tutorial for graduate students writing the research paper and/or dissertation proposal for advancement to candidacy.

### 599. Dissertation Research and Preparation

(2-12) STAFF

*No unit credit allowed toward degree.*

Individual tutorial.

*Department Chair: Colin Gardner*

## Faculty

**Phil Argent**, M.F.A., University of Nevada, Lecturer (painting and drawing)

**Laurel Beckman**, M.F.A., California Institute of the Arts, Associate Professor (2D integrated digital media, core foundation studies)

**Graham Budgett**, M.F.A., Stanford University, Lecturer (digital media, photography)

**Jane Callister**, M.F.A., University of Nevada, Las Vegas, Professor (painting and drawing, inter-media)

**Kip Fulbeck**, M.F.A., UC San Diego, Professor (performance studies, video)

**Colin Gardner**, Ph.D., UC Los Angeles, Professor (integrative studies, critical theory)

**Dick Hebdige**, M.A., Center for Contemporary Cultural Studies, University of Birmingham, U.K., Professor (interdisciplinary and experimental studies), Director of the UCSB Interdisciplinary Humanities Center

**Lisa Jevbratt**, M.F.A., California State University, San Jose, Associate Professor (net art, interactive media)

**George Legrady**, M.F.A., San Francisco Art Institute, Professor (interactive media)

**Jane Mulfinger**, M.F.A., Royal College of Art, London, Associate Professor (3D and spatial studies)

**Marcos Novak**, M.S.Arch, Ohio State University, Professor (interactive media, transarchitecture)

**Marko Peljhan**, Diploma, University of Ljubljana, AGRFT Academy, Slovenia, Associate Professor (interdisciplinary studies)

**Harry Reese**, M.F.A., Brown University, Professor (print, book arts)

**Richard Ross**, M.F.A., University of Florida, Gainesville, Professor (photography)

**Kim Yasuda**, M.F.A., University of Southern California, Professor (3D spatial studies)

### Emeriti Faculty

**Michael A. Arntz**, M.A., California State University, Long Beach, Professor Emeritus (ceramic sculpture)

**Gary H. Brown**, M.F.A., University of Wisconsin, Madison, Professor Emeritus (drawing and painting, journaling)

**William A. Rohrbach**, M.A., UC Berkeley, Professor Emeritus (painting)

### Affiliated Faculty

**Alan Liu**, Ph.D. (English)

**Lisa Parks**, Ph.D. (Film Studies)

**Constance Penley**, Ph.D. (Film Studies)

**Laurence A. Rickels**, Ph.D. (Germanic, Slavic, and Semitic Studies)

**Abigail Solomon-Godeau**, Ph.D. (History of Art and Architecture)

**Sven Spieker**, Ph.D. (Germanic, Slavic, and Semitic Studies)

The Department of Art offers programs leading to the degrees of bachelor of arts (B.A.) and the master of fine arts (M.F.A.). The department is committed to creative research that investigates the relationship between inquiry and practice and how this dynamic manifests itself in contemporary and historical approaches to cultural production in a continually changing world. Students are exposed to a broad range of aesthetic perspectives through the department's interdisciplinary curriculum and extensive range of faculty research.

Through a comprehensive core foundation program, students are first introduced to the diverse and hybrid practices of contemporary art, including study in the history, theory, and production of art. At the advanced level, students are given the opportunity to focus and individualize their aesthetic development while still maintaining an open attitude towards art and its ever-evolving contextual relationship with contemporary culture. Students are encouraged to pursue interdisciplinary course opportunities campus-wide in other departments and divisions such as film studies and the history of art and architecture.

Art majors are first introduced to contemporary thinking and practice through core survey and studio courses. Upon completion of this fundamental series, students are encouraged to enhance their research through exploration of a range of studio and special topic courses (see current faculty research areas and catalog undergraduate course listing).

The department encourages conceptual problem-solving skills as well as the practical and experimental exploration of the creative process. In so doing, the program fosters independence and innovation on the part of each student in the development of alternative projects and venues for the production and presentation of visual works. In the course of their undergraduate studies, students are expected to generate a significant body of work and should learn to document their process effectively,

utilizing current methods of both analog and digital representation. Students are also required to develop their written and verbal skills in tandem with their visual practice to ensure their successful integration into the professional environment.

Further information on the major and on student advising is available in the department through the staff and faculty undergraduate advisors and faculty program mentors.

Students with a bachelor's degree in art who are interested in pursuing a California Teaching Credential should contact the credential advisor in the Gevirtz Graduate School of Education as soon as possible. Students who plan to teach in the public schools are advised to choose a wide range of courses in art. Undergraduate art majors wishing to be teachers must pass the National Teacher Examination (N.T.E.) competency standard in art. Evidence of a passing score on CBEST is also required. (See details in the Gevirtz Graduate School of Education *Announcement*.)

### Honors Program

One of the most important and successful components of our undergraduate program, the departmental honors program, is a one-year course of study designed to bring a select group of seniors to a level of professional practice. Students apply by portfolio in the spring of their junior year, and must have at least a B overall grade-point average. Selection is by faculty consensus after a review of portfolio materials (slides, digital data, video), with the top 9-12 students chosen for their extant production, as well as potential for development as professional artists. Selected students participate in a rigorous, focused curriculum consisting of seminar, critique, and independent study classes. They receive advanced course reading, and are responsible for sharing their own research through additional readings for the group. They are expected, with the guidance of the Honors Advisor and other faculty, to assume a heightened and perhaps unfamiliar level of initiative for their own education as well as their role as artists within our culture. When possible, visiting artists are invited to speak and the Honors students are granted parallel rights and responsibilities in line with the graduate students, such as access to lab facilities as well as spring exhibition of their senior projects. Graduating students have been successfully admitted to M.F.A. programs across the country including Yale University, Art Center College of Design, the School of the Art Institute of Chicago, and California Institute of the Arts. Honors students have gone on to pursue professional careers in gallery and museum exhibition and installation, filmmaking, web design, commercial design production, fashion and photography.

## Undergraduate Program

### Bachelor of Arts—Art

**Preparation for the major.** Forty-three units in lower-division courses including Art Studio 1A and 1C (7 units); Art Studio 7A-B-C-D (20 units); Art Studio 10, 12, 14, 16, 19, 22 (3 courses, 12 units); Art Studio 18 (4 units).

**Upper-division major.** Forty units in upper-division

courses (including 28 units selected from upper-division art courses), 8 units of art history, and Art Studio 125, Art Studio 126, or Art Studio 130. Up to 8 units of College of Creative Studies courses or Art Studio 192 may be taken on a passed/not passed basis. College of Creative Studies art courses may be applied only to the 28 upper-division art electives.

## Graduate Program

The Department of Art offers a master of fine arts degree. The two-year program provides graduate students with the opportunity to explore studio production and theoretical work in a flexible structure that encourages individual development within an interdisciplinary context. The department stresses the importance of a rigorous understanding of the conditions in which art is produced. Students are exposed to methodologies of inquiry that foster innovative and problem-solving skills necessary for artistic development and creative production.

The program's internationally accomplished faculty are actively engaged in a range of disciplines and areas that include art and cultural theory, art history, film, video, sound, architecture, digital media, print media, photography, performative studies, painting, spatial arts, and related courses in the humanities, sciences, and engineering. A significant number of the permanent faculty hold joint or affiliate appointments with other departments and programs such as the Media Arts and Technology graduate program, the Department of the History of Art and Architecture, the Department of Asian American Studies, the Comparative Literature Program, and the Department of Film Studies. The department also maintains affiliate appointments with current faculty in the history of art and architecture, English, and German and Slavic studies.

Students are given the opportunity to work one-on-one with faculty who are involved in a wide range of research practices. In conjunction with an intensive curriculum which includes theory, studio critique seminars, professionalism, a range of directed media research courses, and the department's visiting artist lecture symposia, the study program provides graduate students with direct exposure to professional artists who visit individual graduate students' studios.

The department wishes to attract motivated students who will benefit from interaction with a diverse and challenging faculty. The UCSB environment offers focused research within a compelling natural setting along with exposure to opportunities in the urban centers of Los Angeles and San Francisco.

### Master of Fine Arts—Art Admission

In addition to meeting university requirements for graduate admission status (found in the chapter "Graduate Education at UCSB"), each applicant to the graduate program in art must have earned an undergraduate bachelor degree with an overall 3.0 grade-point average or better. A research emphasis in visual art is recommended; however, applicants with degrees outside the visual arts or non-traditional backgrounds may be eligible, if their application

shows promise and relevance to the current research environment. In all cases, the applicants must demonstrate outstanding accomplishment by submitting a slide portfolio of their work. Documentation of work in other forms (analog / digital data) may also be submitted through prior arrangement with the graduate staff assistant.

Applicants to this program are not required to take the Graduate Record Examination (GRE).

Applicants whose native language is not English, are required to take either the Test of English as Foreign Language (TOEFL) or the International English Language Testing System (IELTS) exam. Exemptions to this requirement will be considered for those students who have completed an undergraduate or graduate education at an institution whose primary language of instruction is English. The minimum TOEFL score for consideration is 550 when taking the paper-based test (PBT) and 80 when taking the internet-based test (IBT). The minimum IELTS score for consideration is an Overall Band Score of 7 or higher. TOEFL or IELTS scores must not be more than two years old at the time of application to UCSB.

Applications are reviewed by the faculty; admission is contingent upon approval of a majority of the tenured faculty. Applicants will be ranked, and offered admittance into the program depending on space availability. Admission is limited to fall quarter only. The application deadline is the second week of January. Applications are available at [www.graddiv.ucsb.edu](http://www.graddiv.ucsb.edu). Department brochures, describing the program and its requirements, are available from the graduate staff assistant.

### Degree Requirements

The Department of Art promotes a cross-disciplinary approach to art production, and therefore, a specialization in a particular medium or curriculum area is not required. Individual students design a specific study program within the prescribed course offerings and degree requirements.

Seventy-two units in graduate-level coursework are required of all admitted M.F.A. students as follows: 36 units of graduate studio courses (Art 244, 261, 591), 12 units of theory and criticism (Art 245, 594, and 595); 12 units of M.F.A. thesis preparation (Art 593); and 12 units of electives (any approved graduate-level coursework). Students must be registered and work on the degree full time for the two-year duration of the program.

Areas of graduate study include theory and criticism, digital and interactive media, digital video, contemporary 2D-studies (painting, photography, print), 3D-studies (spatial studies, new forms), and performance.

At the end of a student's third quarter of study, a first-year review of both studio and academic work is conducted by the faculty in order to assess the accomplishments of the student during the first year. Upon passing this first-year review, a student is approved by the faculty to advance to the second-year status.

At the beginning of the second year in the program, a student, in consultation with the faculty, nominates a chair and members of the faculty for the M.F.A. thesis committee; thesis committee nominations are reviewed and ap-

proved by the faculty. Students are expected to meet with their thesis committee chair and members before the end of the fourth quarter to determine the nature of the M.F.A. thesis project, which includes both an exhibition and thesis document.

The Master of Fine Arts degree is awarded only after successful completion of all requirements. More detailed information on the program and the M.F.A. degree requirements are available from the graduate staff assistant in the department office or the department's website: [www.arts.ucsb.edu](http://www.arts.ucsb.edu).

## Art Studio Courses

### LOWER DIVISION

*The department recommends Art Studio 1A, 1C and the 7A-7B-7C-7D series be taken at the freshman level. Art Studio courses 10, 12, 14, 16, 18, 19, 21, and 22 may be repeated for credit up to 8 units, but may not be repeated for credit towards the major.*

#### 1A. Visual Literacy

(5) STAFF

*Open to non-majors. Letter grade only for majors.*  
An introductory survey of visual culture, encompassing art and film theory and practice, digital technologies, television, advertising and print media, with a special focus on current interdisciplinary methodologies.

#### 1C. Introduction to Contemporary Art

(2) STAFF

*May not be taken concurrently with Art CS 106. Open to non-majors.*

Symposium format course presents contemporary artists' creative projects in relation to recent developments in art and cross-disciplinary practices. Lectures by UCSB's Art Department faculty and also distinguished guests invited to expand on art, theory and cultural production. (F, S)

#### 7A. The Intersections of Art and Life

(5) STAFF

*Open to non-majors. Letter grade only for majors. Not open for credit to students who have completed Art Studio 4D.*

Explores art in relation to time-based activity and integration with everyday life. Conceptual introduction to authorship, authenticity, and narrative through exercises and examples of performance, video, film, book, arts, sound, digital media, and interactive/chance derived work. (S, M)

#### 7B. Introduction to Contemporary Practice I: Image Studies

(5) STAFF

*Open to non-majors. Letter grade only for majors. Not open for credit to students who have completed Art Studio 2D.*

The study of visual perception and image-making across visual art disciplines, both material and digital. Studio assignments are combined with related critical theory, historical practice, current strategies, and new evolutions. (F, M)

#### 7C. Introduction to Contemporary Practice II: Spatial Studies

(5) STAFF

*Open to non-majors. Letter grade only for majors. Not open for credit to students who have completed Art Studio 3D.*

The study of spatial art in all forms, including material, interactive and dynamic digital. Studio assignments are combined with related critical theory, historical practice, current strategies and new evolutions. (W, M)

#### 7D. Introduction to Contemporary Practice III: Art, Science and Technologies

(5) JEVBRATT, PELJHAN

*Open to non-majors. Letter grade required for majors.*

The study of the foundations of digital and technological arts in all forms, including the history, theory and practice of optical, kinetic, interactive, interdisciplinary and systems-oriented art. Lectures and assignments introduce concepts, methods, movements and practitioners that have shaped the fields.

#### 10. Introduction to Contemporary Painting Practice

(4) STAFF

*Prerequisite: Art Studio 1A.*

*May be repeated for credit to a maximum of 8 units, but only 4 units can be applied to the major. Open to non-majors. Letter-grade required for majors.*

*Recommended preparation: Art Studio 7B or equivalent.*

Lectures, demonstrations, and projects designed to provide a strong foundation in fundamental 2D image making. Various media to include acrylic, oil, and experimental processes.

#### 12. Beginning Spatial Practices

(4) STAFF

*Prerequisite: Art Studio 1A.*

*May be repeated for credit to a maximum of 8 units, but only 4 units can be applied to the major. Open to non-majors. Letter-grade required for majors.*

*Recommended preparation: Art Studio 7B or equivalent.*

Introduction to the challenges, strategies, and techniques of 3D artmaking within the expanding fields of traditional and contemporary sculpture.

#### 14. Lower-Division Print

(4) STAFF

*Prerequisite: Art Studio 1A.*

*May be repeated for credit to a maximum of 8 units, but only 4 units can be applied to the major. Open to non-majors. Letter-grade required for majors.*

*Recommended prep: Art Studio 7B or equivalent.*

Introduction to making prints. Emphasis on technical fundamentals and conceptual aspects of graphic arts. "Print" incorporates hand produced, mechanically or photographically reproduced, and electronically replicated media.

#### 18. Lower-Division Drawing

(4) STAFF

*May be repeated for credit to a maximum of 8 units, but only 4 units can be applied to the major. Open to non-majors. Letter-grade required for majors.*

Introductory to two-dimensional representation with various drawing media, including structural and symbolic implications of human form. Emphasis on organization of vision and thought.

#### 19. Lower-Division Photography

(4) STAFF

*Prerequisite: Art Studio 1A.*

*May be repeated for credit to a maximum of 8 units, but only 4 units can be applied to the major. Letter-grade required for majors.*

*Recommended preparation: Art Studio 7A, 7B or equivalent.*

Examines photography as a means of artistic expression. Conceptually-based projects explore how we view, interpret, and manipulate visual information. Lectures cover major historical and contemporary artists. Lab work in digital, chemical, or a combination of both at instructor's discretion.

#### 22. Digital Media Arts Toolbox

(4) STAFF

*Prerequisite: Art Studio 1A.*

*May be repeated for credit to a maximum of 8 units, but only 4 units may be applied to the major.*

Focuses on digital media approaches specific to fine arts practice; exploring conceptual, technical and artistic methods of digital media arts. Techniques covered include digital graphics, video, sound and HTML.

### UPPER DIVISION

*The specific concepts, techniques, and philosophy of teaching in art courses 100 through 120 will vary according to the individual instructor. A syllabus of each instructor's courses will be available in the department office.*

**100. Intermediate Contemporary Painting Issues****(4) STAFF**

*Prerequisites:* Art studio 1A, 7B, 7C, 7A, 10, and 18; or equivalents.

*May be repeated for credit to a maximum of 16 units with instructor approval. Letter grade required for majors.*

Various projects designed to assist the understanding and development of intermediate painting practices. Supplemented with slide lectures, library research, and class critique. Additional self-directed projects, sketch books, experimentation, independent research, and self-motivation are encouraged. 101. Advanced Contemporary Painting Issues

**(4) STAFF**

*Prerequisites:* Art Studio 100; consent of instructor.

*May be repeated for credit to a maximum of 16 units. Letter grade required for majors.*

Special studies in painting utilizing particular faculty interests and/or special departmental facilities. Exact nature of course is specified in the Department of Art syllabus. Integration of non-painting media (i.e., installation pertaining to current painting issues, digital media, and photography).

**102. Digital Media Tool Box: Concepts and Skills****(4) STAFF**

*Prerequisite:* Art Studio 1A, and 22.

*May be repeated for credit to a maximum of 16 units.*

A project based course with an emphasis on technical skills within the digital media arts context. Topics may include telecommunications, wireless, database aesthetics, networks, interactivity, digital 3D, virtual reality, immersive environments, algorithmic aesthetics, visualization, media theory and others. Topic to be determined by instructor.

**105. Intermediate Spatial Practices****(4) STAFF**

*Prerequisites:* Art Studio 1A, 7A, 7B, 7C and 12; or equivalent.

*May be repeated for credit to a maximum of 16 units with instructor approval. Letter-grade required for majors.*

Develops student knowledge and proficiency of material and method, cultivating both manual and conceptual skill levels in three-dimensional practices. Course focus varies by quarter, but may include mold-making, casting, metal fabrication, foundry, and related kiln practices.

**106. Advanced Spatial Practices****(4) STAFF**

*Prerequisite:* Art Studio 105.

*May be repeated for credit to a maximum of 16 units. Letter grade required for majors.*

Advanced study of new forms and spatial practices. Individual projects may encompass formal sculptural practices as well as investigations that engage new and alternative technologies such as data-driven forms, alternative architectures, interactive media, cyber/nano/nuero/bio forms and virtual environments. Course content detailed in syllabus each quarter.

**106W. Introduction to 2D/3D Visualizations in Architecture****(4) STAFF**

*Prerequisite:* upper-division standing; open to majors only.

*Same course as Art History 136W.*

Develops skills in reading, interpreting, and visualizing in 3D objects and spaces by offering exercises in sketching, perspective, orthographic projections, isometric drawings, and manual rendering practices. Relevant for those interested in history of architecture, architecture, sculpture, and such spatial practices as installations and public art.

**110. Intermediate Print****(4) STAFF**

*Prerequisites:* Art Studio 1A, 7A, 7B, 7C, 14, 18, and 19 or equivalent.

*May be repeated for credit to a maximum of 16 units with instructor approval. Letter grade required for majors.*

Continued refinement of skills in service of ink and

digital print production. Emphasis on the intermedia aspects of image and text and the sequential use of pictorial information. Areas of specific focus to include electronic multiples, relief printing, and artists' books.

**112. Artists' Books****(4) STAFF**

*Prerequisites:* Art Studio 1A, 7B, 14, and 22; upper-division standing.

*Designed for majors. May be repeated for credit to a maximum of 16 units.*

An investigation of the book as an art form. Based on conventional media, artists' books encompass a variety of methods, techniques, and ideas. Assigned and self-directed projects using traditional and innovative practices, combining reading with pictorial and tactile experience.

**113. Advanced Integrated 2D Digital Media****(4) STAFF**

*Prerequisites:* Art Studio 22 and Art Studio 110; consent of instructor.

*Repeat Comments:* May be repeated for credit to a maximum of 16 units.

The development of independent, innovative projects that utilize digital or digital-traditional hybrid means to make images on surfaces. Projects may employ any imaging strategies in concept, production, and distribution; including installation, projection, printing, and publishing.

**117. Intermediate Drawing****(4) STAFF**

*Prerequisite:* Art Studio 1A, 7A, 7B, 7C, and 18 or equivalent.

*May be repeated for credit to a maximum of 16 units with instructor approval.*

Continuing investigation into the challenges of two-dimensional representation. Course focus to depend on instructor, but may include structural and symbolic implications of the human form, historical and contemporary strategies of visual analysis, and exploration into experimental media.

**118. Advanced Drawing****(4) STAFF**

*Prerequisite:* Art Studio 117.

*May be repeated for credit to a maximum of 16 units. Designed for majors. Letter-grade required for majors.*

Special studies in drawing utilizing particular faculty interests and/or departmental facilities.

**120. Intermediate Photography****(4) STAFF**

*Prerequisites:* Art Studio 1A, 7A-C, 7D, which may be taken concurrently, 14, 19 and 22; or equivalent.

*May be repeated for credit to a maximum of 16 units with instructor approval. Letter grade required for majors.*

Continued refinement of traditional photographic technique, and development of photography as an artmaking tool. Course to range by instructor, but may include photo narrative, journalism, fashion, artists' books, desktop publishing, web design, time-based work, and intermedia collaborations.

**121. Advanced Photography****(4) STAFF**

*Prerequisite:* Art Studio 120.

*May be repeated for credit to a maximum of 16 units. Letter-grade required for majors.*

Special studies in photography utilizing faculty interests and/or special departmental facilities. Exact nature of course content to be specified in the Department of Art Studio syllabus.

**122. Advanced Topics in Digital Media****(4) STAFF**

*Prerequisite:* Art Studio 1A, 22, 7D, which may be taken concurrently, and 102.

*May be repeated for credit to a maximum of 16 units.*

An advanced project based course in digital media arts. Students are expected to have relevant conceptual, aesthetic, and technological grounding in digital media. Topic to be determined by instructor.

**123. Papermaking****(4) STAFF**

*Prerequisite:* consent of instructor.

*May be repeated for credit to a maximum of 16 units.*

Introduction to historical and contemporary methods of handmade papermaking leading to innovative uses of handmade paper as an integral part of art forms.

**125. Art Since 1950****(4) STAFF**

*Prerequisite:* Art Studio 1A.

*May be repeated for credit to a maximum of 8 units. Letter grade required for majors.*

*Recommended preparation:* upper-division standing.

Developments in American and European art since 1950 with an emphasis on the most recent decades. Focus ranges from the post-war impact of the New York School, Pop Art, Minimalism and Conceptualism to more recent, "postmodern" trends.

**126. Introduction to Contemporary Theory****(4) STAFF**

*Prerequisite:* Art Studio 1A.

A basic beginning survey of contemporary art, film and media theory, focusing specifically on: realism, formalism, semiotics, phenomenology, psychoanalysis, feminism, Marxism, gender/queer studies, poststructuralism, post-colonial theory and broader issues of authorship, narratology, postmodernism, and multiculturalism.

**130. Visual Arts as Culture****(4) STAFF**

*Prerequisite:* Upper-division standing.

*May be repeated for credit to a maximum of 16 units, but only 8 units can be applied to the major.*

Exploration of visual arts and culture, including the evolving social and practical parameters of technologically produced images and the shifting arenas of ideology, analysis, and criticism.

**132. Video****(4) STAFF**

*Prerequisites:* Art Studio 1A and 7A.

*May be repeated for credit to a maximum of 16 units. Letter grade required for majors.*

The use of video as an artmaking tool in relation to its increasing prominence and pervasiveness in American culture. Hands on production and post-production are combined with viewing, discussion, and criticism. Integration with other artistic media is encouraged.

**134. Performance****(4) STAFF**

*Prerequisites:* Art Studio 1A and 7A.

*May be repeated for credit to a maximum of 16 units. Letter grade required for majors.*

A workshop introduction to the forms, styles, and strategies relating to the use of the body as both physical and psychological basis for making art. Method, space, narrative, audience, object, games, chance and rituals are explored.

**136. Personal Narrative****(4) FULBECK**

*Prerequisites:* upper-division standing and consent of instructor.

*Recommended preparation:* Art Studio 1A and 7A or equivalent.

Intensive writing-based workshop designed for formulating and producing artwork based on one's own personal experiences and histories. Experimentation and expansion into other artistic media are encouraged.

**137. Spoken Word****(4) STAFF**

*Prerequisite:* Upper-division standing; consent of instructor.

*Recommended Preparation:* Art Studio 7A or equivalent.

A workshop introduction to the use of voice as an artistic medium, with emphasis on improvisation, personal monologue, and slam poetry.

**177. Art and Science of Aerospace Culture****(4) STAFF**

*Prerequisites:* upper-division standing; consent of instructor.

*Same course as Engineering 177. Letter grade*

required for majors. May be repeated for credit to a maximum of 16 units.

Interdisciplinary course/seminar/practice for artists, academics, engineers, and designers interested in exploring the technological, aesthetic, cultural, and political aspects of the space side of the aerospace complex. Design history, space complex aesthetics, cinema intersections, imaging/telecommunications, human spaceflight history, reduced/alternating gravity experimentation, space systems design/utilization.

### **185AA-ZZ. Special Topics in Art Studio**

**(4) STAFF**

*Prerequisites: upper-division standing; open to art majors only.*

May be repeated for credit to a maximum of 16 units.

Special topics in art.

### **192. Internship in Art Studio**

**(1-4) STAFF**

*Prerequisites: upper-division standing; consent of department.*

Must have a 3.0 overall grade-point average. Units are calculated based on three hours of work per week equaling 1 unit. May be repeated to a maximum of 8 units; 4 units maximum may be applied toward major.

Opportunities in applied learning related to visual art through local museums, art galleries, and other art related organizations or institutions. Students work under the direction of the faculty sponsor who maintains contact with the supervisor for whom the student is interning.

### **194. Special Group Studies**

**(2-4) STAFF**

*Prerequisites: upper-division standing; and consent of instructor and department.*

May be repeated for credit.

A means of making special studies or meeting special curricular problems.

### **196. Honors Seminar**

**(4) STAFF**

*Prerequisites: upper-division standing; art majors only; acceptance into the department's honors program.*

Open to qualified with at least a 3.5 grade-point average in the major and at least a 3.0 grade-point average overall. May be repeated for credit to a maximum of 12 units in combination with Art Studio 196HA, HB, and HC.

Seminar designed to focus on criticism of current studio work. A total of 12 units in this course required to complete honors program. Completion of seminar units followed by public exhibition of work accomplished.

### **199. Independent Studies**

**(1-5) STAFF**

*Prerequisites: upper-division standing; completion of two upper-division courses in art.*

Must have a minimum 3.0 grade-point average for the preceding three quarters. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. Consent of instructor and chair of department required.

Advanced individual problems.

### **199RA. Independent Research Assistance in Art Studio**

**(1-5) STAFF**

*Prerequisites: upper-division standing; instructor and department approval required prior to registration.*

Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined.

Coursework shall consist of faculty supervised research assistance.

## **GRADUATE COURSES**

### **213. Advanced Electronic Image**

**(4) BECKMAN**

*Prerequisite: consent of instructor.*

The development of independent, innovative projects that utilize digital or digital-traditional hybrid means to make images on surfaces. Projects may employ any imaging strategies in concept, production and distribution; including installation, projection, printing and publishing.

### **244. Graduate Seminar in Critique**

**(4) STAFF**

*Prerequisites: graduate standing and consent of instructor.*

A seminar focusing on criticism of current studio work.

### **245. Graduate Theory Seminar**

**(4) STAFF**

*Prerequisites: graduate standing and consent of instructor.*

In-depth look at contemporary media and art discourse framed through a wide range of theoretical approaches: formalism, structuralism, phenomenology, psychoanalysis, Marxism, gender and queer studies, poststructuralism, postcolonial theory, deconstruction, issues of authorship, narratology, and multiculturalism. Specific content varies with instructor.

### **246. Professionalism**

**(4) STAFF**

*Prerequisite: second-year graduate student.*

Seminar will address problems of professionalism and survival for graduating M.F.A. students. Portfolios, resumes, commercial galleries, alternate spaces, sales and commission policies, studio spaces, art world politics, taxes, etc., will be discussed by faculty and guest speakers.

### **260. Graduate Seminar in Visual Arts**

**(4) STAFF**

*Prerequisites: graduate standing and consent of instructor.*

A means of making special studies and meeting special curricular problems.

### **261. All Faculty Graduate Seminar**

**(2) STAFF**

*Prerequisites: graduate standing; consent of department.*

Symposium format course presents contemporary artists' creative projects in relation to recent developments in art and cross-disciplinary practices. Lectures by faculty from UCSB's Art Department supplemented by distinguished guests invited to expand on art, theory and cultural production. (F,S)

### **501. Teaching Assistant Practicum**

**(1-4) STAFF**

*Prerequisite: graduate standing.*

Practice of teaching art.

### **591A. Directed Study in Visual Arts Education**

**(2-12) STAFF**

*Prerequisites: graduate standing and consent of instructor.*

Individual tutorial.

### **591DP. Directed Study for the M.F.A. in Drawing/Painting**

**(2-12) STAFF**

*Prerequisites: graduate standing and consent of instructor.*

Individual tutorial.

### **591IM. Directed Study in Intermedia (New Forms)**

**(2-12) STAFF**

*Prerequisites: graduate standing and consent of instructor.*

Individual tutorial.

### **591PH. Directed Study in Photography**

**(2-12) STAFF**

*Prerequisites: graduate standing and consent of instructor.*

Individual tutorial.

### **591PM. Directed Study for the M.F.A. in Printmaking**

**(2-12) STAFF**

*Prerequisites: graduate standing and consent of instructor.*

Individual tutorial.

### **591S. Directed Study for the M.F.A. in Sculpture**

**(2-12) STAFF**

*Prerequisites: graduate standing and consent of instructor.*

Individual tutorial.

### **593MS. M.F.A. Thesis Project**

**(2-12) STAFF**

*Prerequisites: graduate standing and consent of instructor.*

Individual tutorial.

### **594. Special Studies in Studio Art**

**(4) STAFF**

*Prerequisite: graduate standing.*

A means of making special studies and meeting special curricular problems.

### **595. Directed Historical Reading and Research**

**(4) STAFF**

*Prerequisite: graduate standing.*

Independent research involving extensive reading and written essay on a particular period, artist, or body of work with a historical context.

Department Chair: *Diane C. Fujino*

## Faculty

**Julie Cho**, M.F.A., UC Los Angeles, Lecturer (film, video, and media production and screenwriting)

**Diane C. Fujino**, Ph.D., UC Los Angeles, Associate Professor (Asian-American social movements, Third-world radicalism, Asian-African political connections, Japanese-American history, biography, race, class and gender studies)

**Ambi Harsha**, M.A., UC Santa Barbara, and M.Phil. and M.A., University of Madras, Lecturer (plays, playwriting, and performances)

**James K. Lee**, M.A. and Ph.D., UC Los Angeles, Associate Professor (Asian-American literature, urban studies, modern social movements, U.S. political economy)

**Erin Khuê Ninh**, Ph.D., UC Berkeley, Assistant Professor (Asian American literature, comparative literature, gender and family)

**John S.W. Park**, Ph.D., UC Berkeley, M.P.P., Harvard University, Associate Professor (immigration law and policy, race theory, political theory and public law)

**Celine Parreñas Shimizu**, Ph.D., Stanford University, MFA, UC Los Angeles, Associate Professor (film and performance theory and production, Asian American cultural studies, sexuality, feminist post-colonial theory, and social theories of power, difference and inequality)

**Xiaojian Zhao**, Ph.D., UC Berkeley, Associate Professor (history, women's history, Asian-American families, Chinese-American experience)

### Emeriti Faculty

**Sucheng Chan**, Ph.D., UC Berkeley, Professor Emerita (immigration history, contemporary community issues)

### Affiliated Faculty

**Michael Berry**, Ph.D. (East Asian Languages and Cultural Studies)

**Rudy V. Busto**, Ph.D. (Religious Studies)

**Jesus M. Casas**, Ph.D. (Education)

**Jon D. Cruz**, Ph.D. (Sociology)

**G. Reginald Daniel**, Ph.D. (Sociology)

**Lawrence K. Fulbeck**, M.F.A. (Art)

**Pei-Te Lein**, Ph.D. (Political Science)

**Shirley Lim**, Ph.D. (English and Feminist studies)

**Jin Sook Lee**, Ph.D. (Gevirtz Graduate School of Education)

**Paul Spickard**, Ph.D., UC Berkeley (History)

**John Wiemann**, Ph.D. (Communication)

**Mayfair Yang**, Ph.D. (Religious Studies and East Asian)

The Department of Asian American Studies was one of the very first autonomous academic departments in the United States completely devoted to the study of Asian Americans. The department was founded by Professor Sucheng Chan, a pioneer in our field. Over the years, the department has consistently offered students the opportunity to study and understand the experiences of Asian Americans, particularly their histories, communities, and cultures. Our students learn to evaluate the existing literature on Asian American communities, to analyze a variety of data on Asian Americans, and to conduct original research. Professors in the department offer courses informed by approaches from the traditional disciplines, including sociology, law, education, psychology, and literature, as well as from interdisciplinary scholarship in women's studies, law and society, public policy, global studies, cultural studies, and film and media studies.

Although the department offers a wide range of courses through multiple approaches, we share a common commitment to progressive scholarship of the highest caliber. We also share a commitment to engaging directly issues of inequality, both in United States history and in our own time. To that end, the lower-division courses offer a thorough introduction to Asian American history and culture, primarily to show how migration from Asia has profoundly shaped life in the United States at least since the mid-nineteenth century. The upper-division courses further explore Asian American contributions to literature, art, culture, film, and performance, in addition to Asian American struggles for political equality, opportunity, and fairness. These courses also highlight contemporary issues facing Asian American communities, issues that require leadership and meaningful intervention. As Asian American communities continue to grow and develop, we hope that our students will be better prepared to play an active

role in confronting the many challenges faced by all of us living in a multiracial, multicultural world.

Students with a bachelor's degree in Asian American Studies may pursue a wide range of career choices. As interdisciplinary majors, students will be exposed to several substantive areas of knowledge and multiple approaches to learning. These should provide a substantial basis for success in any number of careers immediately after graduation. In addition, students are encouraged to consider further graduate studies in literature, history, sociology, and other traditional disciplines. Students are also encouraged to consider professional programs, such as in film production, law, public policy, public health, education, business, and social welfare. Please consult with individual faculty members who work in these fields for any additional advice.

### Senior Honors Program

The Department of Asian American Studies Honors Program is designed for seniors who wish to receive Distinction in the Major at the time of graduation. Majors who have a cumulative GPA of at least 3.0 and major GPA of 3.5 may apply during spring quarter of their junior year for the program beginning the next fall. The Honors Program is comprised of two required courses and one optional independent study course. The required courses, Asian American Studies 175 - Theory and Method in Asian American Studies and Asian American Studies 195H - Senior Honors Project, facilitate research and the writing of an honors thesis (including library workshop, weekly seminar and grant proposal writing workshop). The optional course, Asian American Studies 199 - Independent Studies, involves working with a faculty advisor in a specified field (Humanities, Social Science, Cultural Studies or Production). Students have the option to present their research in the departmental spring quarter colloquium and/or the University-wide Undergraduate Research Colloquium.

The format for the thesis may be, 1) scholarly work, 2) expressive art, or 3) community studies fieldwork in conjunction with an internship. During the senior year, each student's work will be evaluated by the Honors Program Director and an Asian American Studies faculty advisor. Honors Program graduates will receive the award of Distinction in the Major upon graduation.

## Undergraduate Program

### Bachelor of Arts— Asian American Studies

**Preparation for the major.** Asian American Studies 1; and Asian American Studies 2, 3, 6, or 71 (RG ST 71); and, Asian American Studies 4 or 5; and Asian American Studies 8.

**Upper-division major.** Forty upper-division units from Asian American Studies and related departments are required, with 8 units from Area A, 8 units from Area B and 24 units from Area C.

**Area A.** Social Science and History Two Asian American Studies courses from: 100AA-ZZ, 107, 110, 112, 113, 114, 115, 116, 118, 119, 130, 131,

132, 134, 135, 136, 137, 138, 139, 154, 155, 156, 157, 161, 163A, 163B, 163C, 171AA-ZZ (max of 8 units), 175, 183AA, 191AA, 192A-B, 193A-B.

**Area B.** Humanities and Arts Two Asian American Studies courses from: 120, 121, 122, 124, 125, 127, 128, 129, 141, 142, 143, 144, 146, 147, 148, 149, 158, 170AA-ZZ (max of 8 units), 175.

**Area C.** Six additional Asian American Studies courses except 195H, 197, 199, 199RA. Students are encouraged to specialize in either Social Science and History or Humanities and Arts. In Area C, up to two courses (8 units) may be taken from upper-division courses outside the department. Courses from the Department of Feminist Studies, Black Studies, or Chicana/o Studies will apply without petition. Courses from other departments may be substituted by petition when course content is relevant. Please consult the department for additional information.

### Minor—Asian American Studies

All courses to be applied to the minor must be completed on a letter-grade basis. This includes both courses offered in Asian American Studies and those offered by other departments and applied to the minor.

**Preparation for the minor.** Two courses (8 units) from the following: Asian American Studies 1, 2, 3, 4, 5, 6, 8, or 71 (RG ST 71).

**Upper-division minor.** Five courses (20 units), distributed as follows, with at least one course from area A and one course from area B.

**Area A.** Social Science and History One Asian American Studies course from: 100AA-ZZ, 107, 110, 112, 113, 114, 115, 116, 118, 119, 130, 131, 132, 134, 135, 136, 137, 138, 139, 154, 155, 156, 157, 161, 163A, 163B, 163C, 171AA-ZZ, 175, 183AA, 191AA, 192A-B, 193A-B.

**Area B.** Humanities and the Arts One Asian American Studies course from: 120, 121, 122, 124, 125, 127, 128, 129, 141, 142, 143, 144, 146, 147, 148, 149, 158, 170AA-ZZ, 175.

**Area C.** Three additional upper-division Asian American courses from Area A or B above.

*Note: Substitutions and waivers are subject to approval by the chair of the department. Please see page 118 for special conditions governing minors in the College of Letters and Science.*

## Asian American Studies Courses

### LOWER DIVISION

#### 1. Introduction to Asian American History, 1850-Present

(4) ZHAO

Historical survey of Asian Americans in the United States from 1850 to the present. Topics include: Immigration patterns, settlement and employment, race and gender relations, community development, and transnational connections.

#### 2. Asian Americans and Contemporary Race Relations

(4) PARK

A comparative analysis of race relations in the United States after 1964, with special emphasis on Asian Americans. Topics include immigration trends, changing socio-economic patterns, and on-

going debates about race, law, and public policy in a multiracial context. (F)

### 3. Asian American Personality and Identity

(4) STAFF

Cultural values and behavioral norms; ethnic identity development; process of acculturation; family patterns of communication; stressors and social support systems; tokenism; symbolic racism; academic achievement; interpersonal effectiveness; and culturally-responsive mental health treatment and service delivery.

### 4. Introduction to Asian American Popular Culture

(4) SHIMIZU

A historical survey of how Asians and Asian Americans have been represented in American popular culture, with an analytical focus on the social contexts and symbolic contents of examples in journalism, literature, theatre, and television.

### 5. Introduction to Asian American Literature

(4) NINH

Selected major themes in literary texts from Asian American communities, including Japanese, Chinese, Korean, Filipino, and Southeast Asian Americans: dislocation/relocation; finding/inventing a usable past; poetics/politics in language; identities/ethnicities.

### 6. Sociology of Asian America

(4) STAFF

Survey of contemporary sociological theories and empirical studies focusing on Asian American experiences in the U.S. and globally; major themes in the sociological imagination including race, class, gender, sexuality, marriage/family, education, consumption, childhoods, aging, demography, and the rise of transmigration.

### 8. Introduction to Asian American Gender and Sexuality

(4) FUJINO

Examination of relations between Asian American women and men from sociological, psychological and historical perspectives. Topics include: social construction of gender and race, effects of racism and sexism, mediarepresentations, gay and lesbian experiences, education, reproductive labor, Anti-Asian and sexualized violence.

### 71. Introduction to Asian American Religions

(4) BUSTO

*Open to non-majors*

Introduction to patterns and themes in religious histories and experiences of Asians in North America. Includes theories of race/ethnicity; immigration; transplantation and transformation of "Asian" traditions to North America; Asian American Christianities; theology; and various ways religion functions in the contemporary representation of Asian Americans. (S)

## UPPER DIVISION

### 100AA-ZZ. Specific Asian Ethnic Groups

(4) STAFF

*May be repeated for credit to a maximum of 12 units provided letter designations are different.*

The historical and contemporary experiences of specific Asian ethnic groups:

- AA. Chinese Americans
- BB. Japanese Americans
- CC. Filipino Americans
- DD. Korean Americans
- EE. Vietnamese Americans
- FF. South Asian Americans
- HH. Southeast Asian Refugees and Immigrants in the United States

### 107. Third World Social Movements

(4) FUJINO

*Prerequisite: consent of instructor.*

*Recommended preparation: a prior course in Asian American studies.*

Comparative analysis of Third World social movements. Examines the protest activities of Asian, Black, Chicano, Indigenous, and Puerto Rican communities, primarily in the United States but also

how these movements connect to global struggles.

### 112. Intimacies in Asian America

(4) STAFF

*Recommended preparation: a prior course in Asian American Studies.*

Considers varieties of "intimacies" in Asian America; deconstructs non-Western formulations of experience and lifestyle. Theories/empirical studies of love, emotions, sexualities, gender, and interracial/interethnic experiences; institutions like the state, marriage, and culture. Sources include ethnography, film, testimony, and memoirs.

### 113. The Asian American Movement

(4) FUJINO

*Recommended preparation: a prior course in Asian American Studies.*

The history of Asian American social movements during the twentieth century. Examination of early immigrant resistance; Japanese American World War II protest; rise of Asian American Movement—student, labor, feminist, anti-war, and yellow power movements—during the 1960s-70s; contemporary social issues.

### 115. Asian American Communities and Contemporary Legal Issues

(4) PARK

*Recommended preparation: a prior course in Asian American Studies.*

Examines several contemporary developments in American law where Asian Americans have played an important role. These include: changes in immigration rules; affirmative action law; emerging criminal defenses based on cultural background; political districting; and rules about race-based violence.

### 116. Asian Americans and the Law

(4) ZHAO, PARK

*Prerequisite: a prior course in Asian American Studies, or history, or law & society.*

Laws impacted the lives of Asian Americans and Asian Americans' contributions of the legal system in the United States. Review of landmark court cases with opportunities for students to analyze legal documents.

### 118. Asian Americans in Popular Culture

(4) SHIMIZU

A historical survey of how Asians and Asian Americans have been represented in American popular culture and an analysis of alternative models of popular culture. Texts include literature, theater, television, film.

### 119. Asian Americans and Race Relations

(4) FUJINO

*Recommended preparation: a prior course in Asian American Studies.*

Examination of the development of racial ideology and racism, theories of race relations, effects of racism and discrimination against Asian Americans, and contemporary race issues.

### 120. Asian American Documentary

(4) CHO

*Open to non-majors. Designed for majors*

Analysis of modes of documentary production to negotiate issues of Asian American history, culture, class, and personal identity. Critical readings and discussion of filmic strategies, combined with introduction to documentary pre-production, culminates in the production of a documentary proposal. (W)

### 121. Asian American Autobiographies and Biographies

(4) STAFF

Asian American autobiographies and biographies, their socio-political reflections and expressions inscribing the subject in and against culture, relations between intention and form. Readings may include Pardee Lowe, Jade Snow Wong, Monica Sone, Jeanne Houston, Carlos Bulosan, and Maxine Hong Kingston.

### 122. Asian American Fiction

(4) LEE

*Recommended preparation: Asian American Studies 5.*

Examination of the ways in which Asian American writers create fiction in order to reflect on pertinent issues concerning Asian Americans, such as race, class,

gender, and sexuality. Texts include short stories and novels.

### 124. Asian American Literature in Comparative Frameworks

(4) LEE, NINH

*Recommended preparation: a prior course in Asian American Studies.*

Focuses on literature by Asian American writers alongside texts from one or more of the other ethnic American literary traditions. Generic and thematic coverage will vary. Emphasis on literary analysis in comparative racial context.

### 125. Asian American Plays

(4) HARSHA

*Recommended preparation: a prior course in Asian American Studies.*

An examination of plays by first-, second-, and third-generation Asian Americans that demonstrate divergent yet expanding vitality in Asian American theater; works by Ping Chong, David Henry Hwang, Frank Chin, Genny Lim, Wakako Yamauchi, Philip Kan Gotanda, and Velina Hasu Houston.

### 127. Asian American, Television, and Digital Media

(4) SHIMIZU

*Recommended preparation: a prior course in Asian American Studies.*

Formal, historical, and cultural issues in the study of Asian American film, television, and digital media practices in independent, Hollywood, and transnational contexts. The role of cinema and visual technology in the understanding of Asian Americans in modern and contemporary culture.

### 128. Writings by Asian American Women

(4) NINH

Asian American women's writings covering a variety of genres and cultural communities; emphasis on literary analysis of works in relation to central themes of race, family and gender.

### 129. Representations of Asia in Asian American Narratives

(4) LEE

Course traces the emergence of an American discourse about Asia by examining literary and non-literary texts. Post 1960's Asian American narratives will also be analyzed in terms of their relationship to the earlier discursive frameworks.

### 130. Colonialism and Migration in the Passage to America

(4) PARK

*Recommended preparation: a prior course in Asian American Studies.*

Examines Asian migration to the United States by looking at the influence of Western nation-states on Asian nations and peoples. It studies theories of colonialism and imperialism as well as Asian nations' contract with the West.

### 131. Asian American Women's History

(4) ZHAO

*Prerequisite: a prior course in Asian American Studies or history or women's studies.*

The lives and changing status of Asian immigrant women, past and present; Japanese and Korean "picture brides;" American-born girls of Asian ancestry; Chinese, Japanese, Korean, and Filipino war brides; adopted Asian girls; and diverse life-styles of Asian American women today.

### 132. Asian/Asian American Women in the Global Economy

(4) FUJINO

*Recommended preparation: a prior course in Asian American Studies.*

Examination of economic and political systems that affect Asian women's labor in the United States and internationally. Topics include: the intersection of race, class, gender, and sexuality; the garment industry; sex industry; and Asian and Asian American women's resistance.

### 134. Asian American Men and Contemporary Men's Issues

(4) J. CHAN

*Recommended preparation: Asian American Studies 8.*

An interdisciplinary study of Asian American male identities, masculinities, and bodies; emphasis

on literary, sociocultural, cinematic, and popular culture representations; Asian American masculinist discourses as complements to Asian American feminist discourses. Texts include literatures, films, photos, comic books, and essays.

### 135. Asian Pacific American Queer Issues

(4) STAFF  
*Recommended preparation: a prior course in Asian American studies.*

An interdisciplinary survey of the histories, experiences, and identities of Asian Pacific American gays, lesbians, and bisexuals; coming out issues, family and community pressures, and socio-political representation in Asian Pacific American communities and in the mainstream gay movement.

### 136. Asian American Families

(4) ZHAO  
*Prerequisite: a prior course in Asian American studies or history or women's studies.*

The importance of the family in the East and Southeast Asian cultural heritage; family formation in the United States; contemporary Asian American family dynamics; interracial families; changing gender roles and relationships; the family and the life cycle.

### 137. Multiethnic Asian Americans

(4) STAFF  
*Recommended preparation: a prior course in Asian American Studies.*

The history, identities, and social relations of multiethnic Asian Americans. Uses fiction, autobiography, sociological and psychological studies of people of mixed racial or ethnic parentage. Considers cognate issues such as interracial marriage.

### 138. Asian American Sexualities

(4) SHIMIZU  
*Recommended preparation: a prior course in Asian American Studies.*

Examines the critical lens of sexuality in studying Asian American culture, history, and politics. Survey of interdisciplinary texts on concepts of sexuality in Asia and America, constructions of sexual difference, denaturalizing heterosexuality and queer theory.

### 139. The "New" Second Generation Asian Americans

(4) STAFF  
*Recommended preparation: a prior course in Asian American Studies.*

Analysis of post-1965 Asian American children of immigrants and/or immigrant children. Examination of diverse childhoods such as "brain drain" children, "refugee" children, and "parachute" and "transnational" children. Emphasis on gender, class, ethnicity, intergenerational relations, education, sexuality, popular culture, and globalization.

### 140. Theory & Production of Social Experience

(4) SHIMIZU  
*Open to non-majors.*  
Theory and video production of social experience course focused on performance studies and ethnography in the context of Asian American studies. Central texts in these fields as well as production of performances and ethnographies in video are covered. (W)

### 141. Asian American Creative Writing

(4) STAFF  
*Prerequisite: Writing 2 or 2E or 2LK; and, English 10 or Writing 50 or 50E or 50LK or 109AA-ZZ.*

A creative writing workshop focusing on Asian American themes. Different genres are emphasized depending on the instructor's preference and expertise.

### 142. Introductory Asian American Performance Workshop

(4) HARSHA  
*Recommended preparation: Asian American Studies 147 or another prior course in Asian American Studies.*

An introductory performance workshop focusing on Asian American themes. Students write original pieces, learn the basic techniques of stage performance, and participate in presenting a public performance at the end of the quarter.

### 143. Television Production

(4) SHIMIZU  
*Recommended preparation: a prior course in Asian American Studies.*

Introduces students to television production and critical studies focused on the melodrama and comedy of race and the racialized experience. Completion of two short video works visualizing and dramatizing Asian American life in a professional three-camera studio.

### 146. Racialized Sexuality on Screen and Scene

(4) SHIMIZU  
*Recommended preparation: a prior course in Asian American Studies.*

Explores race and sexuality in Asian American moving image visual cultures, with particular attention to the production of the hypersexual "Asian Woman" in film and performance. Theories of visibility and perception in the contexts of racial, gendered, and queer representation and visibility.

### 147. Asian American Play Writing

(4) STAFF  
*Open to non-majors.*  
*Recommended preparation: a prior course in Asian American Studies.*

Examination of various dramatic techniques, dialogue construction, and character development used in writing for the theater. Students create an original short play or performance piece. Some pieces may be developed for a staged presentation.

### 148. Introduction to Video Production

(4) CHO  
*Prerequisite: One prior course in Asian American Studies.*  
*Recommended Preparation: Asian American 118, 120, 127, 146, 149. Recommended upper division standing of a junior or senior. Open to majors and non-majors.*

Not open for credit to students who have completed Asian American Studies 170QQ. Open to non-majors. Designed for majors

Introduction to video pre-production, production, post-production and distribution of Asian American independent video. Covers fundamentals of production planning, budget, lighting, sound recording and design, editing, and the film festival and distribution requirements for race and independent media projects. Examples of various practices by Asian American independents are explored. (S)

### 149. Screenwriting

(4) CHO  
*Not open for credit to students who have completed Asian American Studies 170RR.*

Writing intensive course focuses on the craft of screenwriting in the short film, television and feature film format. Attention to development of visual language, story, structure, plot, conflict, and other alternative modes of storytelling deployed by various Asian-American filmmakers. Students complete scripts in various formats.

### 150. Pacific Islander Americans

(4) STAFF  
*Prerequisite: consent of instructor.*  
*Recommended preparation: A prior course in Asian American studies.*

Examination of the histories, migration patterns, ethnic identities, family dynamics, community organizations, cultures, religions, health and mental health, social service needs, political concerns, and intergroup relations of people from Hawaii, Samoa, Tonga, Guam, Fiji, and other Pacific Islands.

### 154. Race and Law in Early American History

(4) PARK  
*Prerequisite: Law and Society majors must take two of the following: Law & Society 111, 112, 113.*

*Recommended Preparation: Recommended for juniors and seniors. Open to majors in Social Sciences or English, Religious Studies or History on a seats available basis.*

Early race relations in the American colonies and in the formation of the United States. The course examines the interrelationship of Native Americans, Africans, Asians, and Europeans in American public law before the Civil War (F)

### 155. Racial Segregation from the Civil War to the Civil Rights Movement

(4) JOHN S W PARK  
*Recommended Preparation: Recommended for juniors and seniors. Designed for majors of Asian American Studies and Law and Society Program.*

This course examines the legal dimensions of white supremacy in American public law after the Civil War. The course reviews commonly recurring rules and principles about segregation and racial subordination in American society before the 1960's. (F)

### 156. Race and Law in Modern America

(4) PARK  
*Prerequisite: Law and Society majors must take two of the following: Law and Society 111, 112, 113.*

*Recommended Preparation: Recommended for juniors and seniors. Designed for majors of Asian American Studies and Law and Society Program.*

This course reviews the Civil Rights Movement and American law in the post World War II era, and it concludes with an overview of contemporary debates about race and law. We examine the end of segregation, and review recurring patterns of race-based inequality. (F)

### 157. Asian Americans and Education

(4) FUJINO  
*Recommended Preparation: A prior course in Asian American studies. Not open for credit to students who have completed Asian American 171II. Open to non-majors. Designed for majors*

A historical and sociological examination of the effects of race and power on Asian American educational experiences. The role of critical pedagogy in the creation of knowledge. The development and impact of ethnic studies and the model minority image. (S)

### 158. Asian American Aesthetics

(4) SHIMIZU  
*Prerequisite: One prior Asian American Studies course and upper division standing.*

*One prior Asian American Studies course and upper division standing. Students must have a cumulative 2.0 for the proceeding 3 quarter(s). Open to non-majors. Designed for majors*

Questions, arguments and ideas regarding Asian American aesthetics. How can we apply traditional western concepts such as beauty, the sublime, and the imagination when considering Asian American cultural production? Explores the employment of realism, modernism and postmodernism across different genres. (S)

### 161. Asian American Religions

(4) BUSTO  
*Same course as Religious Studies 123.*  
*Recommended preparation: a prior course in Asian American studies.*

Historical and interdisciplinary approach to the themes and issues in the religious traditions of Asian Americans. Topics: the civil religious context, the transplantation of "Asian" traditions into the U.S., Asian American Christianity, Asian American theology.

### 163A-B-C. Asian American Community Leadership and Social Change

(4) CHO  
*Prerequisite: One prior Asian American Studies course and upper division standing.*

*Recommended Preparation: Recommended prior courses: 107, Third World Social Movements, or 113, The Asian American Movement*

*A three-quarter in-progress sequence course with grades for all quarters issued upon completion of Asian American Studies 163C. Open to non-majors. Designed for majors*

Examines models of community leadership, in the context of Asian American activism and social movements. Research on contemporary social issues and personal skill-building exercises support groundwork for internship placement with community organization.

### 170AA-ZZ. Special Topics in Asian American Studies - Arts & Humanities

(4) STAFF  
*May be repeated for credit to a maximum of 12 units (provided letter designations are different) but only 8 units may be applied to the major.*

*Recommended preparation: a prior course in Asian American Studies.*

Courses focusing on various arts and humanities topics not offered in other Asian American studies courses.

### **171AA-ZZ. Special Topics in Asian American Studies - Social Science & History**

(4) STAFF

*May be repeated for credit to a maximum of 12 units (provided letter designations are different) but only 8 units may be applied to the major.*

*Recommended preparation: a prior course in Asian American Studies.*

Focuses on various social science and history topics not offered in other Asian American studies courses.

### **175. Theory and Method in Asian American Studies**

(4) LEE

*Open to all majors.*

Exploration of the main theoretical orientations that have shaped Asian American studies: race and ethnicity, diasporas, international labor migration, etc. introduction to several methodologies, including historiography, quantitative social science, literary criticism, and ethnography.

### **183AA. Asian-Americans and the Black Radical Imagination**

(4) FUJINO

*Prerequisites: a prior course in Asian American Studies or Black Studies or upper-division standing.*

*Not open for credit to students who have completed Asian American Studies 171EE.*

*Recommended preparation: Asian American Studies 113; Black Studies 102, 103, 104; Chicano Studies 175, 176; Sociology 118M, 134, 134LA, 134R, 157; Political Science 109.*

An analysis of the political, economic, geographic, biographical, methodological, and/or racial/ethnic comparative contexts in which Asian and African grassroots politics and social movements arose and influenced one another in the United States and globally.

### **192A-B. Research Seminar in Asian American History**

(4-4) ZHAO

*Prerequisite: upper-division standing.*

*A two-quarter in-progress sequence course with grades for both quarters issued upon completion of Asian American Studies 192B.*

Exploration of Asian American history from 1850 to present. Students collect, analyze and evaluate primary sources and work closely with the instructor to write research papers on selected aspects of Asian American history.

### **193A-B. Research Seminar in Asian American Social Movements**

(4-4) FUJINO

*Prerequisites: Asian American Studies 113 or Black Studies 103 or Chicano Studies 168E or Chicano Studies 170A or 177 or Sociology 118M or 134 or 134LA or 134R; upper-division standing (for 193A): Asian American Studies 193A (for 193B).*

*A two-quarter in-progress sequence course with grades for both quarters issued upon completion of Asian American Studies 193B.*

Exploration of the study of Asian American social movements and research methodologies. Students work closely with the instructor to conduct original research and write a research paper on selected aspects of Asian American social movements.

### **195H. Senior Honors Project**

(4) STAFF

*Prerequisites: Open only to Asian American studies majors who have completed at least six upper-division courses in Asian American Studies.*

*Must have a 3.0 overall grade-point average and 3.5 grade-point average in courses in the major.*

Offers an opportunity to students who meet the prerequisites to do independent research and to write an honors thesis or produce an honors film/video or performance.

### **196. Career Development Seminar in Asian American Studies**

(1) STAFF

*May be repeated.*

*Recommended preparation: prior coursework in Asian American Studies.*

Course is for majors and other interested students who wish to explore career options under the supervision of a faculty member. (W)

### **199. Independent Studies**

(1-4) STAFF

*Prerequisites: upper-division standing; one lower-division course and two upper-division courses in Asian American Studies.*

*Must have a minimum 3.0 grade-point average for the preceding three quarters. Maximum of 4 units per quarter or a total of 12 units in Asian American studies. Students are limited to 5 units per quarter, and 30 units total in all 98/99/198/199/199AA-ZZ courses combined.*

Independent study of topics not covered in the regular curriculum under the guidance of an approved faculty member.

### **199RA. Independent Research Assistance in Asian American Studies**

(1-4) STAFF

*Prerequisites: upper-division standing; two upper-division courses in Asian American studies; consent of instructor and department.*

*Must have a minimum 3.0 grade-point average for the preceding three quarters. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses.*

Students will assist faculty in the latter's research under the personal supervision of the faculty.

## **GRADUATE COURSES**

### **200. Critical Issues in Asian American Studies**

(4) LEE

*Prerequisites: Graduate student standing and instructor consent.*

*Recommended preparation: A prior course in Asian American Studies or graduate level work in a different discipline.*

Graduate Seminar exploring critical themes and major debate in Asian American Studies. Readings cover perspectives that may include history, literature, sociology, anthropology, cultural studies, political science, gender and sexuality studies, psychology, and religious studies. (S)

### **218. Asian American in Popular Culture**

(4) SHIMIZU

Critical and historical approaches to popular culture representation of Asian Americans in the United States in films, theater, performance, print media, sports, and music.

### **227. Asian American Television and Digital Media**

(4) SHIMIZU

Asian-American film, video, and new media produced within Asian-American framework life, culture, and politics or "socioaesthetics." Moving image production, criticism, and theory is reviewed in order to formulate one's analyses of production, authorship and spectatorship of various forms. Peter Feng, E. Franklin Wong, Eve Oishi and others reading are a must.

### **238. Asian American Sexualities**

(4) SHIMIZU

*Prerequisite: graduate standing.*

*Graduate students required to write a research paper, or weekly assignments.*

*Recommended preparation: a prior course in Asian American Studies.*

Examines the critical lens of sexuality in studying Asian American culture, history, and politics. Survey of interdisciplinary texts on concepts of sexuality in Asia and America, constructions of sexual difference, denaturalizing heterosexuality and queer theory. (S)

### **240. Theory and Production of Social Experience**

(4) SHIMIZU

*Prerequisite: Graduate student standing.*

Graduate level course in the theory and video production of social experience. Focuses on performance studies and ethnography in the context of Asian American studies. Central texts in these fields as well as production of performances and ethnographies in video are covered. (W)

### **246. Race, Sex, and Cinema**

(4) SHIMIZU

*Prerequisite: a graduate-level course in theory and production.*

Twentieth-century western film and video representations of Asian/American women through ethnic, film and feminist studies. Examines why the legibility of Asian/American women on screen has consistently depended on hypersexuality, or the production of perverse and non-normative sexuality.

### **500. Laboratory for Teaching Assistants**

(4) STAFF

*Prerequisite: departmental approval; appointment as a teaching assistant in a lower-division Asian American Studies course.*

*No unit credit allowed toward advanced degree.*

Supervised teaching of Asian American studies lower-division courses.

### **594. Special Topics**

(4) SHIMIZU

*Prerequisite: a graduate level seminar in theory and production.*

Graduate-level theory and video production course focussing on performance studies and ethnography in the context of Asian American studies. Central texts in these fields as well as production of performances and ethnographies in video are covered.

### **596. Directed Reading and Research**

(1-4) STAFF

*Prerequisites: graduate standing and consent of instructor.*

Reading and research in special topics in Asian American studies.

# Biological Sciences

*For biological sciences majors see Ecology, Evolution, and Marine Biology (EEMB), and Molecular, Cellular, and Developmental Biology (MCDB).*

## **Interdepartmental Graduate Program in Biomolecular Science and Engineering**

*For details see Biomolecular Science and Engineering.*

# Biomolecular Science and Engineering

**Interdepartmental Graduate Program in Biomolecular Science and Engineering (formerly Biochemistry and Molecular Biology)**

**Division of Mathematical, Life and Physical Sciences**

**Life Sciences Building 3312**

**Telephone: (805) 893-2290**

**E-mail: bmse@lifesci.ucsb.edu**

**Website: www.bmse.ucsb.edu**

**Program Director: Philip A. Pincus**

## Faculty

**Cheryl Briggs**, Ph.D., UC Santa Barbara, Professor (theoretical ecology, disease ecology, population dynamics, systems biology)

**Alison Butler**, Ph.D., UC San Diego, Professor (metallobiochemistry)

**Rolf E. Christoffersen**, Ph.D., UC Los Angeles, Associate Professor (plant molecular biology)

**Dennis O. Clegg**, Ph.D., UC Berkeley, Professor (molecular neurobiology)

**James B. Cooper**, Ph.D., Washington University, Associate Professor (plant molecular biology)

**Peggy Cotter**, Ph.D., UC Los Angeles, Associate Professor (microbial pathogenesis, mechanisms of secretion, localization and function of bacterial virulence factors, virulence gene regulation, mechanisms of signal transduction and transcriptional control)

**Patrick S. Daugherty**, Ph.D., University of Texas at Austin, Associate Professor (protein engineering and design, combinational molecular biology, gene targeting, viral vector engineering)

**Frederick W. Dahlquist**, Ph.D., California Institute of Technology, Professor (biochemistry, protein structure-function relationships; dynamics of bacteriophage T4; chemotaxis in bacteria)

**Francis J. Doyle III**, Ph.D., California Institute of Technology, Mellichamp Professor of Process Control (biomedical control, process control, systems biology, nonlinear dynamics)

**Deborah K. Fygenon**, Ph.D., Princeton University, Associate Professor (biophysics—experimental)

**Christopher Hayes**, Ph.D., University of Connecticut, Assistant Professor (molecular mechanisms of ribosome pausing during protein synthesis and recruitment of SsrA (tmRNA) to stalled ribosomes)

**Jacob Israelachvili**, Ph.D., University of Cambridge, Professor (surface and interfacial phenomena, adhesion, colloidal systems, surface forces, bio-adhesion, friction)

**Luc Jaeger**, Ph.D., University Louis Pasteur of Strasbourg (France), Assistant Professor (biochemistry, biological chemistry, biomolecular nanotechnology)

**Kenneth Kosik**, M.D., Medical College of Pennsylvania, Harriman Professor and Co-Director of Neuroscience Research Institute (neuronal development, neurodegeneration, Alzheimer's disease OR basic mechanisms and disorders of neural plasticity, the role of microRNAs in stem cell differentiation)

**John Lew**, Ph.D., University of Calgary, Alberta, Associate Professor (biochemistry, molecular and cell biology)

**Everett Lipman**, Ph.D., UC Berkeley, Assistant Professor (single molecule optical methods, protein folding, resonance energy transfer, applications of microfluidic devices)

**David Low**, Ph.D., UC Irvine, Professor (biochemical and genetic analysis of transcription, epigenetics, antimicrobials)

**Michael J. Mahan**, Ph.D., University of Utah, Professor (microbial pathogenesis, genetics, vaccine development)

**Samir Mitragotri**, Ph.D., Massachusetts

Institute of Technology, Professor (drug delivery and diagnostics, bio-membrane transport, membrane biophysics, biomedical ultrasound)

**Daniel E. Morse**, Ph.D., Albert Einstein College of Medicine, Professor (molecular genetics, biochemistry, biomolecular nanotechnology, biomimetic materials)

**Stanley M. Parsons**, Ph.D., California Institute of Technology, Professor (neurochemistry, presynaptic pharmacology, rapid assay for drugs of abuse)

**John J. Perona**, Ph.D., Yale University, Professor (x-ray crystallography, physical biochemistry)

**Philip A. Pincus**, Ph.D., UC Berkeley, Professor (polymers, colloids, surfactants, membranes, biomaterials)

**Kevin W. Plaxco**, Ph.D., California Institute of Technology, Professor (molecular biology, biochemistry, bioengineering)

**Norbert O. Reich**, Ph.D., UC San Francisco, Professor (biological chemistry)

**Joel H. Rothman**, Ph.D., University of Oregon, Eugene, Professor (regulation of development, programmed cell death, neurodegeneration, cancer biology, systems biology)

**Cyrus R. Safinya**, Ph.D., Massachusetts Institute of Technology, Professor (biomolecular materials)

**Martin Sagermann**, Ph.D., University of Heidelberg (Germany), Assistant Professor (structural biology, protein engineering, x-ray crystallography)

**Omar A. Saleh**, Ph.D., Princeton University, Assistant Professor (experimental biophysics/biomaterials)

**Charles E. Samuel**, Ph.D., UC Berkeley, C. A. Storke II Professor (virology, molecular biology, biochemistry, biomaterials)

**Duane Sears**, Ph.D., Columbia University, Professor (biochemistry)

**Boris I. Shraiman**, Ph.D., Harvard, Professor (statistical physics, quantitative systems biology)

**Ambuj K. Singh**, Ph.D., University of Texas at Austin, Professor (bioinformatics, databases, parallel and distributed systems)

**William Smith**, Ph.D., UC Santa Cruz, Professor (chordate morphogenesis and developmental biology)

**Hyongsok Tom Soh**, Ph.D., Stanford University, Associate Professor (bioengineering, bioseparations, biomaterials)

**Galen Stucky**, Ph.D., Iowa State University, Professor (biomaterials, surfactants, composites, materials synthesis, porous materials)

**Matthew V. Tirrell**, Ph.D. University of Massachusetts, Richard A. Auhl Professor and Dean, College of Engineering (surface properties of polymers, biomaterials)

**Carol A. Vandenberg**, Ph.D., UC San Diego, Professor (molecular neurobiology)

**J. Herbert Waite**, Ph.D., Duke University, Professor (marine biomolecular materials, adhesion, sclerotization strategies, biocoacervation)

**Leslie Wilson**, Ph.D., Tufts University, Professor (biochemistry, pharmacology, microtubule dynamics)

## Emeriti Faculty

**Thomas C. Bruice**, Ph.D., University of Southern California, Research Professor

**John A. Carbon**, Ph.D., Northwestern University, Professor Emeritus (biochemistry)

**Louise Clarke**, Ph.D., UC Santa Barbara, Professor Emeritus (biochemistry, genetics)

**Ellis Englesberg**, Ph.D., UC Berkeley, Professor Emeritus

**J. Thomas C. Gerig**, Ph.D., Brown University, Professor Emeritus (bio-physical chemistry)

**Nancy L. Lee**, Ph.D., University of Pittsburgh, Professor Emeritus (microbiology)

**Robert L. Sinsheimer**, Ph.D., Massachusetts Institute of Technology, Professor Emeritus (biochemistry)

**George Taborsky**, Ph.D., Yale University, Professor Emeritus

**Edward L. Triplett**, Ph.D., Stanford University, Professor Emeritus

The interdepartmental graduate program in Biomolecular Science and Engineering (BMSE) offers studies leading to the Ph.D. degree. The program is administered by faculty with joint appointments in the following departments: Chemical Engineering, Chemistry & Biochemistry, Computer Science, Ecology, Evolution, & Marine, Biology, Materials, Mechanical & Environmental Engineering, Molecular, Cellular & Developmental Biology (MCDB), and Physics. BMSE provides unique opportunities for intensive research training at the interface between the physical and life sciences and engineering disciplines in highly interactive and collaborative laboratories. The diverse group of program faculty provides students with an exceptionally broad range of challenging opportunities for multidisciplinary research in biomolecular structure, function, and engineering. Research areas currently under active investigation on campus include kinetics and regulation of enzyme catalysis, chromosome structure and cell cycle regulation, the cytoskeleton and extracellular matrix, mechanisms regulating signal transduction and cellular differentiation, protein structure and structure-function relationships, protein-nucleic acid interactions, biomolecular materials (biominerals and adhesives), biosensors and biomolecular electronics, biomimetics, biophysics, molecular neurobiology, plant molecular biology, bacterial pathogenesis, and molecular virology and immunology. A complete listing of research interests of the participating faculty can be obtained by writing to the above address, or from the BMSE website at [www.bmse.ucsb.edu/](http://www.bmse.ucsb.edu/).

The program accommodates students with a diversity of backgrounds and career goals who are interested in multidisciplinary research training. Qualified students with undergraduate degrees in one of the life or physical sciences or engineering disciplines are accepted into the program. In addition to specific program requirements, candidates for graduate degrees must meet all university degree requirements found in the chapter "Graduate Education at UCSB." Highly individualized programs of instruction can be undertaken by a student enrolled in the program after consultation with and approval by the graduate committee and

a research mentor. Approximately 40 faculty members from the affiliated departments are available to direct approved research projects under the auspices of the BMSE program.

## Graduate Program

### Admission

In addition to fulfilling the departmental admission requirements outlined below, applicants must also meet the university requirements for admission described in the chapter "Graduate Education at UCSB." Optimal undergraduate preparation would include one year each of introductory chemistry, biology and physics, one year of calculus (differential equations recommended), one year of organic chemistry, one year of biochemistry, one course in physical chemistry (one year recommended), one course in molecular genetics or molecular biology and additional specialized electives. Applicants with strong undergraduate records who lack some of the preparation indicated above may be admitted with the condition that they complete necessary coursework early in their graduate careers. The target deadline for completed applications is December 15th.

Transcripts and Graduate Record Exam (GRE) general test scores are required of all applicants. One of the following three GRE subject tests is recommended—biology; chemistry or biochemistry, cell, and molecular biology. Applicants whose native language is not English are required to take the Test of English as a Foreign Language (TOEFL). Exceptions to this requirement will be considered for those students who have completed an undergraduate or graduate education at an institution whose primary language of instruction is English. The minimum score for consideration is 630 when taking the paper-based test or 109 when taking the internet based test, taken within two years of the application to UCSB.

### Master of Science—Biochemistry and Molecular Biology

#### Degree Requirements

M.S. students may complete their master's degree under either Plan I (thesis) or Plan II (examination). In addition to fulfilling all university requirements for a master's degree, M.S. students must complete a minimum of 12 units of core course modules, all with grades of B or better, and 3 units of BMSE 263 (Research Seminars in Biochemistry and Molecular Biology). Plan I (thesis) students must also successfully complete 18 units of directed reading and research, and must write and defend a master's thesis in consultation with a master's thesis committee.

Plan II (examination) students must complete a minimum of 12 units of core course modules, all with grades of B or better, 3 units of BMSE 263 (Research Seminars in Biochemistry and Molecular Biology), 12 additional units of graduate coursework chosen (with the approval of the graduate advisor) from the course offerings from any of the home departments of BMSE Program faculty, and 6 units of BMSE 295 (Internship in Biotechnology/Pharmacology) or BMSE 596 (Directed Reading and Research). Plan II students must also submit a

satisfactory written final report whose content is to be determined in consultation with the master's advisor and two additional BMSE faculty, and is filed with the BMSE graduate program office. This final report must demonstrate an integration of the knowledge acquired in the student's graduate coursework and research studies, and shall satisfy the requirements of a comprehensive examination.

#### Core Module Courses

- I. Biophysics and Bioengineering emphasis: 201A, 202, 203, 212, 215, 216A, 216B, 217, 244, 250, 251, 252, 253, and 255.
- II. Biochemistry and Molecular Biology emphasis: BMSE 201B, 201C, 205A, 205A, 205B, 207, 220A, 220B, 220C, 223, 229, 230, 235, and 239.

### Doctor of Philosophy—Biochemistry and Molecular Biology

#### Degree Requirements

Ph.D. students in the program are required to demonstrate competency in fundamental areas of molecular biology, biochemistry, biophysics, and bioengineering, normally by completing 15 units of core module coursework, and by demonstrating a depth of knowledge in at least two advanced topics. Program students will elect an emphasis in either biochemistry/molecular biology, or in biophysics/bioengineering. Core module courses in each of the two emphases are listed above.

Competency in the selected emphasis is normally demonstrated by completion of 10 units of modular coursework from the emphasis, with grades of B or better. Competency in the other area is normally demonstrated by completion of 5 units of coursework with grades of B or better.

In addition to the course requirements, students are required to complete three laboratory rotations during the first year of study (9 units of BMSE 592) and are encouraged to rotate through laboratories in more than a single academic department. All BMSE students are required to serve as teaching assistants for at least two quarters during their entire course of study at UCSB, and are expected to regularly enroll and attend BMSE 262 (Research Progress in Biochemistry and Molecular Biology; also known as Friday Noon Seminar or FNS). Attendance is also strongly encouraged at BMSE's weekly seminars (not a course).

BMSE students are required to complete all course requirements before advancement to candidacy, which normally occurs during the second year. Ph.D. students advance to candidacy by passing one proposition exam on their dissertation research, which involves a written research proposition followed by an oral defense of the proposition. After advancement to candidacy, program students are expected to present a formal seminar annually in the Progress in Biochemistry and Molecular Biology Seminar series (BMSE 262), and are required to meet annually with their Ph.D. dissertation committee until completion and defense of the Ph.D. dissertation. The final requirement for the Ph.D. degree is a written dissertation and its oral defense, which is usually in the form of a scheduled interdepartmental program seminar.

Students are expected to begin research for the dissertation by the end of the first academic year in the program. Research directors may be selected from any of the faculty affiliated with the BMSE program.

## Biomolecular Science and Engineering Courses

### UPPER DIVISION

#### 199. Independent Studies in Biochemistry. (1-5) STAFF

*Prerequisites:* upper-division standing; consent of instructor and department.

*Students must have a 3.0 grade-point average for the preceding three quarters. Up to 8 units may apply toward upper-division major requirements and may be taken in combination with courses numbered 168, 169, 184, 190-199, and BMSE courses numbered 195-199, unless otherwise specified by the major. Students are limited to five units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined.*

Hours and credit by arrangement with any member of the staff. Laboratory.

### GRADUATE COURSES

#### 201A. Protein Structure and Function (2) PLAXCO

*Prerequisite:* graduate standing.

Traces the physical interactions by which sequence-specific polypeptides attain a unique, functional native state. Fold design, fold prediction, and protein folding kinetics are also discussed.

#### 201B. Chemistry and Structure of Nucleic Acid (2) JAEGER

*Prerequisite:* one year of undergraduate biochemistry (e.g., MCDB 108A-B-C), one quarter of undergraduate physical chemistry (e.g., Chemistry 142A-B-C, Chemistry 113A).

Primary, secondary, and higher-order structures of DNA and RNA, thermodynamic stability and folding, protein-nucleic acid interactions, ribozymes, applications to gene regulation, RNA world evolution.

#### 201C. Biomembrane Structure and Function (2) PARSONS

*Prerequisite:* Chemistry 142A-B-C or MCDB 108A-B-C or equivalents.

Lipid diversity, lipid aggregates, dynamics and phase behavior of lipid aggregates, permeabilities of model and cellular bilayers, manipulation and quantitation of ionic and pH gradients, related special topics in physiology such as the mechanisms of anesthesia.

#### 202. Biomaterials and Biosurfaces (3) ISRAELACHVILI

*Prerequisites:* consent of instructor.

*Same course as Chemical Engineering 202.*

*Recommended preparation:* prior biochemistry, physical chemistry, and organic chemistry.

Fundamentals of natural and artificial biomaterials and biosurfaces with emphasis on molecular level structure and function and the interactions of biomaterials and surfaces with the body. Design issues of grafts and biopolymers. Basic biological and biochemical systems reviewed for nonbiologists.

#### 203. Protein Engineering and Design (3) REICH, SAGERMANN

*Prerequisites:* consent of instructor.

Rational design of protein structure, activity, and stability. Current methods and applications of protein engineering including protein evolution, unnatural amino acids, and combinatorial methods.

#### 204. Post-Translational Protein Processing (4) WAITE

*Prerequisite:* MCDB 108A or 218A or the equivalent.

Structure/function relationships in interesting macromolecules isolated from marine organisms.

Focus is on well characterized pathways from horseshoe crabs, abalone, and fish as well as others.

### 205A. Biochemical Kinetics

(1) LEW

*Prerequisite:* one year of undergraduate biochemistry (e.g., MCDB 108A-B-C) or equivalent.

A practical approach to purifying and working with proteins in the laboratory. Emphasis is on techniques (mainly qualitative) with a focus on modern methods used in the research literature. Students will have an intuitive sense of protein purification, manipulations, and analysis, and should be able to critically read the primary literature upon successful completion of the course.

### 205B. Strategies in Protein Characterization

(1) WAITE

*Prerequisite:* a grade of B- or better in MCDB 108A or 208A or the equivalent.

A presentation of traditional and state-of-the-art approaches for characterizing the primary structure of proteins and polysaccharides. Techniques include amino acid analysis, mass spectroscopy, gas-phase sequencing, capillary electrophoresis, and covalent modification chemistry.

### 207. Enzyme Mechanisms

(2) REICH

*Prerequisite:* undergraduate biochemistry course (e.g., MCDB 108).

Chemical mechanisms of enzyme catalysis. Enzyme models and non-classical enzymes. Theory, experimental design, and data analysis.

### 210. Biochemistry & Molecular Biology Techniques for Physical Scientists

(4) FYGENSON, DAHLQUIST

*Prerequisite:* Graduate standing; consent of instructor.

Students must have a cumulative 3.0 for the preceding 3 quarter(s).

An intensive laboratory course for physical science and engineering students providing background knowledge and laboratory experience in standard molecular biology and protein purification techniques, as well as techniques for characterizing purified proteins. (F)

### 215. Biophysical Thermodynamics

(2) PLAXCO

*Prerequisite:* undergraduate course in physical chemistry (e.g., Chemistry 113A-B-C).

An overview of those parts of chemical thermodynamics relevant to the study of biomolecules and biological systems. Topics include fundamental thermodynamics, experimental and theoretical tools and the thermodynamics of biopolymer structure formation.

### 216A. Spectroscopy of Biological Molecules

(2) GERIG

*Prerequisite:* graduate standing.

Introduction to the application of spectroscopic techniques to biological systems, including UV - vis, IR, CD, fluorescence, NMR, and ESR.

### 216B. Diffraction of Biological Molecules

(2) PERONA

*Prerequisite:* one year of undergraduate biochemistry (e.g., MCDB 108A-B-C), one quarter of undergraduate physical chemistry (e.g., Chemistry 142A-B-C, Chemistry 113A).

Single-crystal macromolecular crystallography methods; crystal growth, geometric and physical basis of diffraction, approaches to phasing and refinement. X-ray and neutron solution scattering.

### 217. Electrostatics of Biopolymers

(2) PINCUS

*Prerequisite:* knowledge of elementary ideas and methods of electrostatics and statistical mechanics.

Electrostatics of highly charged surfaces in contact with a polar solvent with application to biopolymers (e.g., DNA, f-actin).

### 220A. Chromosomes and Cell Cycle

(2) THROWER

*Prerequisite:* graduate standing.

Structure and organization of the nucleus, Chromatin and chromosome structure, organization, and function; DNA replication and replication origins; Eukaryotic cell cycle regulation.

### 220B. The Cytoskeleton

(2) WILSON

*Prerequisite:* graduate standing.

Structure and function of the eukaryotic cytoskeleton. Structure assembly and function of microtubules, microfilaments, and intermediate filaments.

### 220C. Membrane Dynamics and Cell-Cell Interactions

(2) CLEGG, ROTHMAN

*Prerequisite:* undergraduate biochemistry (e.g., MCDB 108A-B-C or Chemistry 142A-B-C) and genetics (e.g., MCDB 101A).

Structure and dynamics of biological membranes and membrane proteins, protein translocation and sorting in the endomembrane system of eukaryotic cells, extracellular matrix protein structure/function, cell-matrix and cell-cell interactions, cell adhesion receptors, transmembrane signaling by cell adhesion receptors.

### 222A. Colloids and Interfaces I

(3) ISRAELACHVILI

*Prerequisite:* consent of instructor.

Same course as Materials 222A and Chemical Engineering 222A.

Introduction to the various intermolecular interactions in solution and in colloidal systems: Van der Waals, electrostatic, hydrophobic, solvation, H-bonding. Introduction to colloidal systems: particles, micelles, polymers, etc. Surfaces: wetting, contact angles, surface tension, etc.

### 223. Signal Transduction

(2) MAHAN

*Prerequisite:* graduate standing.

A cell's growth is controlled by positive and negative cues from its surroundings. A discussion of the cell's signaling mechanisms that recognize these cues and initiate an intracellular set of events that generate a response.

### 229. Protein Biochemistry

(2) WAITE

*Prerequisite:* graduate standing.

Same course as MCDB 229.

Discussion of topics relevant to structure-function relationships in proteins, including chemical reactivity of amino acid side chains, post-translational modifications, and covalent and non-covalent interactions of multimeric structures. Case studies involve recent advances in structure-function relationships of mechanoproteins.

### 230. Gene Regulation

(2) LOW, SAMUEL, HAYES

*Prerequisite:* graduate standing.

Mechanisms and regulation of transcription and translation in prokaryotic and eukaryotic organisms and their viruses.

### 232. Bacterial Pathogenesis

(3) MAHAN

Not open for credit to students who have completed Biology 228.

Recommended preparation: MCDB 101A-B.

The mechanisms by which bacterial pathogens cause disease. Investigation of the bacterial gene products produced during infection to understand the metabolic, physiological, and genetic factors that contribute to the virulence of bacterial pathogens.

### 232L. Bacterial Pathogenesis Laboratory

(3) MAHAN

*Prerequisite:* BMSE 232 (may be taken concurrently).

Not open for credit to students who have completed Biology 228L.

The latest molecular, biochemical, and genetic techniques available for the identification of microbial gene products that contribute to infection. Study of the regulatory parameters that govern their expression.

### 235. Experimental Strategies in Molecular Genetics

(1) ROTHMAN

*Prerequisite:* undergraduate biochemistry (e.g., MCDB 108A-B-C) and genetics (e.g., MCDB 101A-B-C).

Discussion of experimental strategies used to purify, analyze, and manipulate nucleic acids, isolate molecular clones from complex genomes, physically

map genomes, analyze gene expression, and perform reverse genetics.

### 239. Cellular Microbiology

(4) COTTER

*Prerequisite:* graduate standing.

Same course as MCDB 239.

Exploration of the mechanisms by which microbes and their eukaryotic hosts interact at the cellular and molecular levels. Focus is on experimental strategies to investigate these interactions and primary literature is discussed.

### 244. Informational Macro- and Supra-Molecules

(2) JAEGER

*Prerequisite:* consent of instructor.

Same course as Chemistry 244.

Selected topics at the interface of chemistry and biology: informational molecular coding, molecular machines, self-assembling and self-replicating molecular systems, evolution and selection of molecules with binding of catalytic properties, biopolymer-based materials, special emphasis on cutting-edge technologies.

### 250. Bionanotechnology

(2) FYGENSON

Recommended preparation: background in biochemistry and molecular biology.

Introduction to macromolecular assemblies and force generation strategies. Topics may also include but are not limited to: conformations and behavior of protein polymers; nucleic acid superstructures and membranes; structure, motility and mechanism of linear and rotary motor proteins; and macromolecular switches.

### 251. Biopharmaceutical Process Engineering

(2) DAUGHERTY

*Prerequisites:* Mathematics 5A or equivalent; background in biochemistry.

An introduction to the design bioprocess for large-scale production of biopharmaceuticals. Emphasis is placed upon biopharmaceutical products, protein expression systems, host cell optimization, and reactor selection and design.

### 252. Principles of Bioengineering

(2) MITRAGOTRI

An overview of various aspects of bioengineering including modeling of physiological functions, biomedical devices, drug delivery, and tissue engineering.

### 253. Analytical Biotechnology

(2) SOH

*Prerequisite:* graduate standing.

Recommended preparation: ME 291A.

Develops fundamental understanding behind modern methods of biotechnology. Topics include theoretical treatment of the double layer, electrophoresis, polymerase chain reaction, modern optics, and fluorescence. In addition, case studies of contemporary emerging trends are discussed.

### 255. Methods in Systems Biology

(3) DOYLE

*Prerequisites:* prior course work in cellular biology and mathematics; consent of instructor

Same course as Chemical Engineering 255.

Fundamentals of dynamic network organization in biology (genes, metabolites). Emphasis on mathematical approaches to model and analyze complex biophysical network systems. Detailed case studies demonstrating successes of systems biology. Basic biological systems reviewed for non-biologists.

### 257. Special Topics in Biophysics

(1-4) STAFF

Same course as Physics 257. May be repeated for credit provided topics vary.

Course varies from year to year according to the currents of the times.

### 259. Selected Topics in Biological Chemistry

(1-4) STAFF

*Prerequisite:* consent of instructor.

Same course as Chemistry 259. May be repeated with a different topic to a maximum of 18 units.

Selected topics from bioorganic, biophysical, or biological chemistry. The content of this course varies.

**260. Research Progress in Biomolecular Science and Engineering****(1) MAHAN***Prerequisite: graduate standing.*

Seminars on research being conducted by the faculty of the BMSE interdisciplinary program.

**262. Research Progress in Biomolecular Science and Engineering****(1) ROTHMAN**

Research presentations by postdoctoral fellows and advanced Ph.D. students of research progress in the department.

**263. Research Seminars in Biomolecular Science and Engineering****(1) MAHAN**

Research seminars presented by invited speakers on current research topics.

**264. Literature in Signal Transduction****(1) LEW***Prerequisite: graduate standing.*

Critical reading and presentation of the literature on signal transduction mechanisms that control cell growth and differentiation.

**290AA-ZZ. Group Studies****(2) STAFF***Prerequisite: consent of instructor.*

Presentation and discussion of current research, to be selected from the following list.

- A. Biomolecular Materials Synthesis: Morse, D.E.
- B. Biomineralization: Stucky, G.D.
- BP. Bacterial Pathogenesis: Mahan, M.J.
- CE. *C. elegans* Development: Rothman, J.H.
- DN. Developmental Neurobiology: Clegg, D.O.
- HW. Marine Structural Proteins: Waite, J.H.
- PM. Molecular Plant-Microbe Interactions: Cooper, J.B.
- PR. Protein-Nucleic Acid Interactions: Perona, J.J.
- S. Molecular Virology and Interferon Action: Samuel, C.E.

**293. Computational Methods in Biochemistry-Molecular Biology****(1) CHRISTOFFERSEN***Prerequisite: graduate standing.*

Survey of computational methods in molecular biology. Topics include analysis and presentation of data, database searching, quantitative image analysis, and protein homology modeling. Emphasis is on utilizing accessible software tools that are designed for non-programmers.

**294B. Bioengineering: Career and Development Opportunities at the Interface between Biotechnology and Engineering****(2) STAFF***Prerequisite: consent of instructor.*

Based on presentations by experts from the bioengineering industry. Presenters describe their companies' technologies and developments, including biosensors, therapeutics, tissue engineering, quantum dots, and advanced instrumentation. Training and educational requirements for different career tracks are discussed.

**592. Laboratory Research Rotation in Biomolecular Science and Engineering****(3) STAFF***Prerequisite: enrollment in the BMSE Ph.D. program.*

Open to first year graduate students only.

*May be repeated up to 4 times.*

Laboratory rotation project in BMSE faculty laboratories.

**595. Biochemistry/Molecular Biology Seminar****(2) STAFF***Prerequisites: graduate standing and consent of instructor.*

A critical review of research in selected areas of biochemistry and molecular biology.

**595BG. Bacterial Genetics****(2) LOW***Prerequisite: consent of instructor.**Same course as MCDB 595BG. May be repeated for credit in combination with Biology 595AA-ZZ and EEMB 595AA-ZZ to a maximum of 8 units. Individual letter designations may be repeated for credit to a maximum of 4 units.*

A critical review of research in selected fields of biology.

**595BM. Literature in Biomolecular Materials****(2) REICH**

Review of literature related to biomolecular materials.

**595EZ. Literature in Enzymes****(2) REICH**

Covers literature in enzymes kinetics and mechanisms.

**595MP. Microbial Pathogenesis****(2) MAHAN***Prerequisite: consent of instructor.**May be repeated for credit in combination with MCDB 595AA-ZZ to a maximum of 4 units.*

A critical review of research in selected fields of biology.

**596. Directed Reading and Research****(2-12) STAFF***Prerequisites: graduate standing and consent of instructor.**Same course as Chemistry 596. May be repeated for credit up to half of the graduate units required for the M.S. degree. Instructor is usually the student's major advisor. Each faculty member has a unique number designation.*

Individual tutorial.

**598. Masters Thesis Research and Preparation****(2-12) STAFF***Prerequisite: graduate standing as an M.S. student in the BMSE program.**No unit credit allowed toward the M.S. degree.**Instructor should be student's major professor or chair of committee.*

Preparation of the thesis and writing the thesis.

**599. Ph.D. Dissertation Preparation****(2-12) STAFF***Prerequisite: graduate standing as a Ph.D. student and advancement to doctoral candidacy.**Instructor should be the chair of the student's doctoral committee.*

Writing the Ph.D. dissertation.

Department Chair: Jeffrey Stewart

## Faculty

Jude G. Akudinobi, Ph.D., University of Southern California, Lecturer (cinema-television, critical studies)

Ingrid Banks, Ph.D., UC Berkeley, Associate Professor (race, gender, culture, qualitative methods, popular culture)

Stephanie Batiste, Ph.D., George Washington University, Assistant Professor (20th-century African-American literature, culture and performance)

Douglas H. Daniels, Ph.D., UC Berkeley, Professor (American and Afro-American history)

Jane M. Duran, Ph.D., Rutgers University, Lecturer (philosophy and social theory)

Gaye Theresa Johnson, Ph.D., University of Minnesota, Assistant Professor (race and racism, 20th-century U.S. history, popular music, cultural politics)

George Lipsitz, Ph.D., University of Wisconsin, Professor (race, culture and social identities, 20th-century U.S. history, urban history and culture, social movements)

Otis F. Madison, C. Phil., UC Santa Barbara, Lecturer (Afro-American politics)

Christopher McAuley, Ph.D., University of Michigan, Associate Professor (political economy)

Claudine Michel, Ph.D., UC Santa Barbara, Professor (multicultural/comparative education, cross-cultural psychology, religion)

Cedric J. Robinson, Ph.D., Stanford University, Professor (political theory, popular culture and ideology)

Earl L. Stewart, D.M.A., University of Texas, Associate Professor (Afro-American music)

Jeffrey Stewart, Ph.D., Yale University, Professor (African-American history and philosophy, art history, American studies)

Roberto Strongman, Ph.D., UC San Diego, Assistant Professor (comparative Caribbean cultural studies, literature and religion of the Afro-Americas, gender and sexuality studies)

Clyde Woods, Ph.D., UCLA, Assistant Professor (urban and rural development, race and public policy, Southern studies, Los Angeles studies, blues and hip hop culture)

## Emeriti Faculty

Gérard G. Pigeon, Ph.D., UC Santa Barbara, Professor Emeritus (French, Francophone Caribbean and African literatures and cultures, racial representations in colonial societies)

## Affiliated Faculty

Eileen Boris, Ph.D. (Feminist studies)

Jon Cruz, Ph.D. (Sociology)

G. Reginald Daniel, Ph.D. (Sociology)

Anna Everett, Ph.D. (Film Studies)

Diane Fujino, Ph.D. (Asian-American Studies)

Nikki Jones, Ph.D. (Sociology)

Stephan Miescher, Ph.D. (History)

Mireille Miller-Young, Ph.D. (Feminist studies)

Sylvester Ogbechie, Ph.D. (History of Art and Architecture)

Melvin L. Oliver, Ph.D. (Sociology)

Victor Rios, Ph.D. (Sociology)

Darieck Scott, Ph.D. (English)

F. Winddance Twine, Ph.D. (Sociology)

Howard Winant, Ph.D. (Sociology)

The Department of Black Studies is an interdisciplinary undergraduate program that increases the awareness and understanding of the Black experience through an examination of its historical and contemporary manifestations in various African, U.S., Caribbean, and Latin American societies. Black Studies employs multiple theoretical and methodological approaches from a variety of disciplines to introduce students to history, literature, cinema, religion, the arts, and the social sciences while examining the dynamics of race, class, gender, sexuality, culture, politics, and economics.

In both research and teaching, faculty in the Department of Black Studies engage the influences and intersections of Africa and the African Diaspora on the formation and future of

the modern world. Individual and collaborative research projects include critical inquiries into race and racism, the socialization of children, popular culture and media, the representation of Blacks in national, colonial, and postcolonial globalized cultures, the conflicting iconography of Black women, gender and sexuality, African American religious expressions, the intellectual interventions of Black social critics and activists, aesthetics theory and praxis in Black literature and music, the histories and ethno-musical structures of musical forms in Africa and the Western hemisphere, Creoleness, and Black social movements in the Caribbean, Africa, and the Americas.

The department offers a major leading to the B.A. degree. The Black Studies major is the foundation of an excellent liberal arts education, laying the groundwork for careers in education, social sciences, and public policy. Students are also well prepared to do graduate work in law, ethnic studies, or allied areas in the social sciences, humanities, and the arts. The faculty is available to students who are pursuing graduate degrees in other departments on topics in Black Studies.

Students with a bachelor's degree in Black Studies who are interested in pursuing a California Teaching Credential should contact the advisor in the Graduate School of Education.

Students majoring in Black Studies are encouraged to consult with the department's undergraduate advisor.

## Undergraduate Program

### Bachelor of Arts—Black Studies

**Preparation for the major.** Required: Three lower-division courses from Black Studies 1, 3, 4, 7; one lower-division course from Black Studies 5, 6, 14, 15, 33, 36, 38A-B, 45, 49A-B, 50, 55, 58, 60A-B; one course from one of the following departments: Asian American Studies 1, 2, 3, 4, 5, 8; Chicano Studies 1A-B-C; Comparative Literature 34; Environmental Studies 1, 3; History 8, 46, 88; Sociology 1; Feminist studies 20, 30, 40, 50, 60 or 80.

**Upper-division major.** Thirty-six units of upper-division Black Studies courses are required. Four units from (a) Culture and Representation (Black Studies 126, 130A, 130B, 138, 142, 152, 153, 161, 162, 170, 171, 172); 4 units from (b) Politics and Social Policy (Black Studies 100, 102, 103, 104, 118, 122, 124, 128, 129, 131, 137E, 160, 169AR-BR-CR, 174); 4 units from (c) Gender and Sexuality (Black Studies 106, 125, 127, 133, 136); (d) Senior Seminar (Black Studies 190); (e) 20 units from upper-division electives in Black Studies. Up to 12 units of closely related fields outside the major may be applied by petition.

### Minor—Black Studies

All courses to be applied to the minor must be completed on a letter-grade basis, including both courses offered in Black Studies and those offered by other departments and applied to the minor.

**Preparation for the minor.** Black Studies 1 and 3, 4, or 7.

**Upper-division minor.** Twenty units, distributed as follows: Four units from (a) Culture

and Representation (Black Studies 126, 130A, 130B, 138, 142, 152, 153, 161, 162, 170, 171, 172); 4 units from (b) Politics and Social Policy (Black Studies 100, 102, 103, 104, 118, 122, 124, 128, 129, 131, 137E, 160, 169AR-BR-CR, 174); 4 units from (c) Gender and Sexuality (Black Studies 106, 125, 127, 133, 136); (d) one upper-division seminar (193 AA-ZZ); (e) one upper-division elective Black Studies course.

*Note: Substitutions and waivers are subject to approval by the chair of the department. Please see page 118 for special conditions governing minors in the College of Letters and Science.*

## Black Studies Courses

### LOWER DIVISION

#### 1. Introduction to Afro-American Studies

(4) BANKS, JOHNSON, LIPSITZ, WOODS

Historical and current social conditions of Black people in the United States. Topics include slavery, emancipation, reconstruction, and urban Black migration, with particular consideration given to the black church and the black family as bearers and creators of Afro-American culture.

#### 1H. Introduction to Afro-American Studies-Honors

(5) BANKS, JOHNSON, LIPSITZ, WOODS

*Prerequisite: consent of instructor.*

Lecture is concurrent with BL ST 1, including weekly honors seminar with instructor. Additional assignments and rigorous discussion of readings facilitated by the instructor. Intended for highly motivated and well-prepared students actively engaged in critical thought.

#### 3. Introduction to African Studies

(4) DANIELS

A survey of the subject matter, themes, and methods of African studies. While briefly surveying the prehistory and early states of Africa, the course focuses on the culture and society of the colonial and independence eras.

#### 4. Critical Introduction to Race and Racism

(4) BANKS, JOHNSON, MICHEL, J. STEWART

Examines historical and contemporary manifestations of racism and anti-racism, as well as theoretical approaches to understand the social, cultural, political and economic aspects of race.

#### 5. Blacks and Western Civilization

(4) ROBINSON, MCAULEY, J. STEWART

An interdisciplinary analysis of the effects of Africa on Western Civilization, specifically the politics, economics, and cultures of Europe, the Caribbean, and North America.

#### 6. The Civil Rights Movement

(4) BANKS, JOHNSON, LIPSITZ, J. STEWART, WOODS

History of the modern civil rights movement, its organization and ideology from its origins in the post-reconstruction era, to its triumphs with the end of legal racial segregation, and its recognition in the civil rights legislation in the 1960s.

#### 7. Introduction to Caribbean Studies

(4) MCAULEY, STRONGMAN

A survey of the culture and society of the Caribbean. After surveying Amerindian communities and examining the impact of the Atlantic slave trade, focus will be on slavery, emancipation, African and Creole cultures, and the issues accompanying an independent nationhood status.

#### 14. The History of Jazz

(4) DANIELS, JOHNSON, LIPSITZ, WOODS

A survey of the historical origins and development of jazz, beginning with the West African heritage and the Afro-American folk tradition, and examining the social and cultural context of this twentieth-century music.

#### 15. The Psychology of Blacks

(4) MICHEL

Examines manifestations of various psychological characteristics of people of African descent, their cultural and behavioral norms, including the way that issues of race, class, gender and sexuality affect their cognitive, social, and emotional development. Connections between Africa, the Caribbean, and Afro-America are explored.

#### 33. Major Works of African Literatures

(4) STRONGMAN, AKUDINOB

*Same course as Comparative Literature 33.*

An introduction to the diverse literary traditions of Africa through an examination of selected works. Regional focus on North, West, East, Central, and South Africa varies.

#### 36. Afro-American Oral Traditions

(4) MICHEL, DANIELS

The roots and contemporary manifestations of oral traditions of Afro-American and Caribbean cultures are examined as expressed in oral narratives and non-verbal modes of communication.

#### 38A. Introduction to Afro-American Literature (Part I)

(4) STRONGMAN, BATISTE, J. STEWART

Afro-American literature from colonial times through the Harlem renaissance.

#### 38B. Introduction to African-American Literature (Part II)

(4) BATISTE, J. STEWART, STRONGMAN

African-American literature from the 1930s to the present.

#### 38BH. Seminar on African-American Literature (Part 2)

(1) BATISTE

*Prerequisite: Concurrent enrollment in Black Studies 38B; consent of instructor.*

Seminar course for a select group of students enrolled in Black Studies 38B designed to enrich the large lecture experience for the motivated student. Course includes supplementary readings or more intensive study of the Black Studies 38B reading list, and supplemental writing.

#### 45. Black Arts Expressions

(4) LIPSITZ, E. STEWART, J. STEWART, WOODS

A comparative examination of the traditions of African American music, literature, dance, folklore, cinema, the visual arts, and musical theatre. No prior musical background is required, though some musicological concepts and nomenclature are employed.

#### 49A-B. Survey of African History

(4-4) MIESCHER

*Same course as History 49A-B. Not open for credit to students who have completed History 49.*

An Introduction to the history of Africa from the earliest times to the present. Course themes include: organization of production, state formation, Africa and the world economy, colonialism, resistance, power and identities in African societies, current struggles and conflicts. Prehistory to 1800CE.

#### 50. Blacks in the Media

(4) LIPSITZ, MADISON

The development of black stereotypes. Studying literature, comic books, comic strips, cartoons, music, theater, cinema, broadcasting, and television, students will analyze the mythical imageries which have created stereotypes.

#### 55. Race and Space

(4) LIPSITZ

A study of urban spatial relations, housing discrimination, environmental racism, school segregation, urban renewal, and city planning from the nineteenth century to the present.

#### 58. Education and Inequality

(4) LIPSITZ

The role of education in the racialization of opportunities and life chances in U.S. society with special emphasis on the origins, implementation, and legacy of the Supreme Court's decision in Brown vs. Board of Education.

**60A. Survey of Afro-American Religious Traditions****(4) STRONGMAN***Same course as Religious Studies 61A.*

A historical examination, beginning with West African heritage, of Afro-American religious leaders and organizations in the United States during slavery and until the end of the nineteenth century.

**60B. Religion in Black America (Part II)****(4) STRONGMAN***Same course as Religious Studies 61B.*

A historical survey of major black religious figures, organizations, movements, philosophies, and issues. Emphasis on contemporary religious phenomena in the black religious community of the United States during the twentieth century.

**90. Sophomore Seminar****(1-4) STAFF***Prerequisite: sophomore standing.*

A research and/or writing seminar which focuses on major themes in Black Studies.

**UPPER DIVISION****100. Africa and United States Policy****(4) MCAULEY***Prerequisite: upper-division standing.*

Post-World War II Africa and United States foreign policy. Special attention will be devoted to southern Africa and parallels between social movements in that part of the world and the United States civil rights movement.

**102. Black Radicals and the Radical Tradition****(4) DANIELS, JOHNSON, LIPSITZ, J. STEWART, WOODS***Prerequisite: upper-division standing.*

This course examines the tradition of radical thought and the relevance of this thought to the needs and interests of the black community.

**103. The Politics of Black Liberation—The Sixties****(4) DANIELS, JOHNSON, LIPSITZ, WOODS***Prerequisite: upper-division standing.*

The origins of various Black liberation organizations and their ideologies and strategies in the 1960s. Study of grass roots organizations and their struggles sheds light on the developments that occurred when this movement encountered the intransigence of entrenched American racism.

**104. Black Marxism****(4) LIPSITZ, MCAULEY, ROBINSON***Prerequisites: upper-division standing.*

A theoretical explication and critique of the diverse Marxian analyses developed in Africa and the African Diaspora from the early 20th century. The course traces and analyzes the divergences of Black Marxism from Western Marxism.

**106. Women and Politics of the Body****(4) BANKS***Prerequisite: upper-division standing.*

Examines the relationship between race and gender in the construction of bodily politics that include perceptions of beauty and femininity. In understanding how race and gender matter in conceptualizations of beauty, this course centers black women's bodies as important sites of resistance.

**118. Comparative Rebellion****(4) JOHNSON**

Examines key events in Brown/Black resistance and rebellion in the U. S. and the Borderlands. Using primary and secondary sources, the course emphasizes parallel rebellions, transnational revolutionary thought, and cross-racial alliances.

**122. The Education of Black Children****(4) MICHEL***Prerequisite: Upper-division standing.*

Explores the effects of social, political, and economic forces on the history of Black education. Examines ways of challenging the impacts of race, class, gender, and language in the educational achievement of Black children. Focuses on anti-bias/multicultural curricula in urban settings. Fieldwork required.

**124. Housing, Inheritance, and Race****(4) LIPSITZ,***Prerequisite: Upper-division standing.*

Housing discrimination systematically skews opportunities and life chances in the United States across racial lines. This course examines the origins and evolution of fair housing laws, and the role that housing plays in asset accumulation, inheritance, and wealth.

**125. Queer Black Studies****(4) STRONGMAN***Prerequisite: upper-division standing.*

An exploration of the intersection of Black Studies and Queer Studies from various theoretical, literary, historical, and multi-media perspectives. Cultural producers studied include: Audre Lorde, Marlon Riggs, Bayard Rustin, and Bruce Nugent.

**126. Comparative Black Literatures****(4) STRONGMAN***Prerequisite: upper-division standing.**Same course as Comparative Literature 126.*

Using a social constructionist approach to race, this course examines the multiple ways in which racial discourses operate in global literary cultures. It emphasizes that blackness need not be a homogeneous concept in order to continue to be a powerful agent in the postmodern world.

**127. Black Women Writers****(4) STRONGMAN, BATISTE***Prerequisite: upper-division standing.*

Examines the significance of race, class, gender, sexuality, and place as experienced and articulated in the literature of black women of the African diaspora.

**128. The Black Experience in Southern California****(4) JOHNSON, WOODS***Prerequisite: upper-division standing.*

An interdisciplinary examination of the history, culture, economic conditions, policy debates, and social movements of Blacks in Southern California from 1781 to the present. Music, literature, film, autobiography, and social theory are used to analyze the processes of regional and racial transformation.

**129. The Urban Dilemma****(4) WOODS***Prerequisite: Upper-division standing.*

Examines the evolution of African American urban communities. Focuses on theoretical and historiographical debates: social organization; conditions; daily life; culture; social movements; sustainable development; and class, gender, race relations. Analysis of current policy debates and community initiatives.

**130A. Negritude and African Literature****(4) STRONGMAN***Prerequisite: upper-division standing.**Recommended preparation: Black Studies 3 or 7.*

History of Francophone West Indian and African literature from the 1920s through the 1950s. Writers studied include Aime and Suzanne Césaire, Léon Gontran Damas, Léopold Sédar Senghor, and Jane and Paulette Nardal.

**130B. The Black Francophone Novel****(4) STRONGMAN***Prerequisite: upper-division standing.**Recommended preparation: Black Studies 3 or 7.*

A study of theoretical and literary discourses of decolonization that appeared simultaneously in Africa and the West Indies after the second World War. Writers studied include Mongo Beti, Camara Laye, Aime Césaire, Ferdinand Oyono, Miriam Warner-Viegyra, Maryse Conde, and Simone Schwartz-Bart.

**131. Race and Public Policy****(4) WOODS***Prerequisite: upper-division standing.*

Provides a theoretical overview of the role of race and ethnicity in local, national, and international public policy debates. Examines critical case studies of several policies: regional development, social welfare, environment, criminal justice, etc. Student policy projects with fieldwork component.

**133. Gender and Sexuality in Black Studies****(4) STRONGMAN, BANKS***Prerequisite: upper-division standing.*

Examines the intersection of gender, sexuality, race, and class in creating disadvantage and advantage. In examining how racism, sexism, and heterosexism shape black life chances in a 21st century context, this course focuses on systems of oppression that exist within and outside black communities.

**134. African American Language and Culture****(4) BUCHOLTZ***Prerequisite: Linguistics 20.*

The history, structure, and use of varieties of African American English. Topics include debates over the origins of African American vernacular English; the politics of African American English; representations of African American speech in popular culture; language and hip hop culture; the use of African American vernacular English by other ethnic groups.

**136. Black Feminist Thought****(4) BANKS***Prerequisite: upper-division standing.*

Examines past and contemporary scholarship in black feminist thought. By examining the intervention of black feminist thought within mainstream feminist theory and the field of black studies, this course presents a critical examination of the theoretical and practical contributions of black feminist scholars.

**138. African Religions in the Americas****(4) MICHEL, STRONGMAN***Prerequisite: upper-division standing.**Same course as Religious Studies 156.*

A study of Neo-African religions in the Americas, with special emphasis on Haitian Vodou. Beliefs, myths, philosophical perspectives, moral order, rituals and practices as well as social and political dynamics are examined in various contemporary religious communities. Women's roles and sexuality issues are also explored.

**142. Music in Afro-American Cultures: U.S.A.****(4) E. STEWART, WOODS***Prerequisite: upper-division standing.*

Introduction to the music of Afro-Americans in the U.S.A. from the antebellum era to the present, including folk, religious, popular, and classical music forms. The sociology of black music in America forms the basis for lectures and discussions.

**152. Music of the African Diaspora****(4) E. STEWART***Prerequisite: upper-division standing.*

A survey of select African derived musical traditions from the Caribbean, North and South America, and Africa.

**153. Black Popular Music in America****(4) JOHNSON, LIPSITZ, E. STEWART, WOODS***Prerequisite: upper-division standing.*

A critical survey of African American popular styles since 1950. The course is style specific, but also addresses the music's relationship to other aspects of popular culture.

**160. Analyses of Racism and Social Policy in the United States****(4) MADISON***Prerequisites: Black Studies 1 or 4; upper-division standing.*

In-depth analysis of the history, ideological, and scientific origins of racism in the United States from the nineteenth century. The effects of institutional racism on social policy, desegregation, integration, and affirmative action programs are also examined.

**161. "Third World" Cinema****(4) AKUDINOB, ROBINSON***Prerequisite: Upper-division standing.**Same course as Film Studies 161.*

Studies representative films from Africa, Asia, and Latin America from the 1950s to the present. Explores the socio-cultural and aesthetic dimensions of these cinemas (which have emerged as the "other" of Hollywood and European cinema).

**162. African Cinema****(4) AKUDINOBI***Prerequisite: upper-division standing.*

Critical perspectives on African cinema from its inception to the present. Production contexts, aesthetic/narrative strategies, ideological/representational concerns will be examined along with issues of authorship, culture, gender, identity, post-coloniality, etc.

**169AR-BR-CR. Afro-American History****(4) DANIELS, JOHNSON, J. STEWART***Prerequisite: Black Studies 1 or 5 or History 17A or 17B or 17C or upper-division standing.**Same course as History 169AR-BR-CR.*

Influence/experience of Africans/African Americans in United States history.

AR. Origins and development of slavery and racism in British Colonies.

BR. Nineteenth-century expansion of slavery, Anti-slavery, Civil War, Reconstruction and development of segregation.

CR. Twentieth-century New South, urban migration and desegregation.

**170. Afro-Americans in the American Cinema****(4) ROBINSON***Prerequisite: upper-division standing.*

An examination of the representation of Afro-Americans in the Hollywood feature film, from 1915 to the present. The course explores the relationship between screen icons and the racial attitudes held by black and white Americans.

**171. Africa in Film****(4) AKUDINOBI***Prerequisite: upper-division standing.*

The purpose of this course is to provide an understanding of African cultures, traditions, and politics as depicted by African and non-African filmmakers. Students will explore stereotypical as well as positive and romantic images of Africa. Films: semi-documentaries, documentaries, fiction.

**172. Contemporary Black Cinema****(4) ROBINSON***Prerequisite: upper-division standing.*

The course explores the new directions in Afro-American cinema with emphasis on the directors, the aesthetics and the social content of contemporary Black film. The problems of production, distribution and exhibition will be examined.

**174. From Plantations to Prisons****(4) LIPSITZ, WOODS***Prerequisite: upper-division standing.*

An introduction to the historical roots of the U.S. penal industry and current policies. Provides a structural understanding of the contemporary prison crisis and questions contemporary notions of crime, punishment, rehabilitation, restoration and justice. Focuses on the unprecedented prison population explosion in terms of race, gender and class.

**190. Senior Seminar in Black Studies****(4) J. STEWART***Prerequisite: open to upper-division Black Studies majors only.*

Designed to sharpen knowledge of major themes in Black Studies and strengthen skills in research, critical analysis, and effective writing. This course emphasizes primary research.

**191AA-ZZ. Special Topics in Black Studies****(4) STAFF***Prerequisite: upper-division standing.*

May be repeated for credit to a maximum of 16 units provided letter designations are different (only 12 units may be applied toward the major).

Designed to broaden opportunities for students by offering varying topics related to the Black experience.

A. Marcus Garvey and Garveyism in the U.S. and Africa

BB. The Political Uses of Race: McAuley

GJ. Comparative Rebellion

IB. Ethnographies of Black America

W. Afro-American Soldier

X. Racism, Sports and Politics: Madison

**192. Community Studies and Outreach Initiatives****(1-4) STAFF**

Internship and/or studies in contemporary urban problems and decision-making processes as they affect the black community. For internships, students are individually assigned, instructed and supervised in fieldwork involving practical experience in decision-making unit of community liaison agencies.

**193AA-ZZ. Seminars in Black Studies****(4) STAFF***Prerequisites: upper-division standing and consent of instructor.*

May be repeated for credit to a maximum of 12 units provided letter designations are different (only 4 units may be applied toward the major).

Seminars will focus on a specific topic chosen by the professor and will involve in-depth reading of a number of works and the writing of a paper on a subject chosen in consultation with the instructor.

AA. Racism, Law, and the Constitution: Madison

B. Afro-American History

CJ. The Black Detective in Film and Literature

D. C.L.R. James and the World System: Robinson

EE. Seminar on Black Feminism: Banks

GG. Masterpieces in Black Music Literature: E.

Stewart

J. Langston Hughes

U. Harlem Renaissance

VW. Seminar on Katrina: Community/Action

Research

X. The African American Artist: Smith

Y. The Black Worker Since the Civil War: McAuley

Z. Seminar on Edwidge Danticat; Michel

**195A-B-C. Honors Thesis Seminar in Black Studies****(4-4-4) STAFF***Prerequisites: senior standing and consent of department.*

Must have a 3.3 university grade-point average; 3.5 departmental grade-point average; A three-quarter in-progress sequence course with grades for all three quarters issued upon completion of the final quarter.

Each student, under the direction of the department chair, will identify a research topic and map out a research project with the appropriate faculty member(s). Research will begin in fall and continue more intensely during winter. Research papers will be completed in spring with a formal presentation before an audience of faculty, graduate and undergraduate students in Black studies.

**197. Research Seminar****(1-8) STAFF***Prerequisite: consent of department and/or instructor.*

It is recommended a student have a 3.0 Grade Point Average prior to enrolling in this course.

Directed field research on a topic in Black Studies.

**199. Independent Studies in Black Studies****(1-4) STAFF***Prerequisites: upper-division standing; completion of two upper-division courses in Black Studies; consent of department.*

Must have a minimum 3.0 grade-point average for the preceding three quarters. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined.

**199RA. Independent Research Assistance in Black Studies****(1-5) STAFF***Prerequisites: upper-division standing; completion of two upper-division courses in Black Studies; consent of instructor and department.*

Must have a minimum 3.0 grade-point average for the preceding three quarters. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined.

Coursework shall consist of faculty supervised research assistance.

**GRADUATE COURSES****206. Graduate Proseminar****(4) STAFF***Prerequisite: graduate standing; completion of at least 12 upper-division units related to the subject matter*

of the course.

Critical inquiry based on dissertation-related research addressing several issues in the curricular development of black studies: research writing, formal presentation, postdoctoral programs, revision, and journal publication process.

**501. Teaching Methodology in Black Studies****(1-4) STAFF***Prerequisite: appointment as T.A. in Black studies.*

For graduate students who serve as teaching assistants: analyses of texts and materials; discussion of teaching techniques; conducting discussion sections; formulation of topics and questions for papers and examinations; and grading papers and examinations under supervision of instructor.

**596. Directed Reading and Research****(2-5) STAFF***Prerequisite: graduate standing. May be repeated for credit on approval of chair.*

Individual tutorial. Plan of study must be approved by department chair.

**598. Master's Thesis Research and Preparation****(2-8) STAFF***Prerequisite: consent of instructor.*

To assist graduate students who are doing research or writing their dissertation in African area studies and/or Black studies.

## Faculty

**Donald H. Aue**, Ph.D., Cornell University, Associate Professor (organic chemistry)

**Guillermo C. Bazan**, Ph.D., Massachusetts Institute of Technology, Professor (organic, materials, organometallic chemistry)

**Michael T. Bowers**, Ph.D., University of Illinois, Professor (physical chemistry)

**Frank L. Brown**, Ph.D., Massachusetts Institute of Technology, Associate Professor (theoretical/biophysical chemistry)

**Paula Yurkanis Bruice**, Ph.D., University of Virginia, Senior Lecturer (organic chemistry)

**Thomas C. Bruice**, Ph.D., University of Southern California, Research Professor (bio-organic chemistry)

**Steven Buratto**, Ph.D., California Institute of Technology, Professor (physical chemistry)

**Alison Butler**, Ph.D., UC San Diego, Professor (bio-inorganic chemistry)

**Frederick W. Dahlquist**, Ph.D., California Institute of Technology, Professor (biochemistry)

**Mattanah S. de Vries**, Ph.D., University of Amsterdam, Professor (physical chemistry)

**Peter C. Ford**, Ph.D., Yale University, Professor (inorganic chemistry)

**Song-I Han**, Ph.D., Aachen University of Technology, Assistant Professor (physical chemistry)

**Craig Hawker**, Ph.D., University of Cambridge, Professor (polymer chemistry)

**Trevor Hayton**, Ph.D., University of British Columbia, Assistant Professor (inorganic chemistry)

**Alan Heeger**, Ph.D., UC Berkeley, Professor (materials), Nobel Laureate (2000)

**Thomas M. Hooker, Jr.**, Ph.D., Duke University, Professor (biophysical chemistry)

**Luc Jaeger**, Ph.D., University of Louis Pasteur of Strasbourg (France), Associate Professor (biomaterials)

**Bernard Kirtman**, Ph.D., Harvard University, Professor (theoretical physical chemistry)

**Kalju Kahn**, Ph.D., University of Missouri, Lecturer (biochemistry)

**Walter Kohn**, Ph.D., Harvard University, Professor, Nobel Laureate (chemical physics, 1998)

**Leroy Laverman**, Ph.D., UC Santa Barbara, Lecturer (inorganic/analytical chemistry)

**Bruce H. Lipshutz**, Ph.D., Yale University, Professor (organic chemistry)

**R. Daniel Little**, Ph.D., University of Wisconsin, Professor (organic chemistry)

**Horia I. Metiu**, Ph.D., Massachusetts Institute of Technology, Professor (theoretical physical chemistry)

**Martin Moskovits**, Ph.D., University of Toronto, Professor (physical chemistry)

**Thuc-Quyen Nguyen**, Ph.D., UC Los Angeles, Assistant Professor (physical, materials chemistry)

**Stanley M. Parsons**, Ph.D., California Institute of Technology, Professor (biological chemistry)

**John Perona**, Ph.D., Yale University, Professor (biological chemistry)

**Thomas R. R. Pettus**, Ph.D., University of Rochester, Associate Professor (organic and biological chemistry)

**Kevin W. Plaxco**, Ph.D., California Institute of Technology, Professor (biological chemistry)

**Norbert O. Reich**, Ph.D., UC San Francisco, Professor (theoretical biophysical chemistry)

**Martin Sagermann**, Ph.D., University of Heidelberg (Germany), Assistant Professor (biochemistry)

**Susannah Scott**, Ph.D., Iowa State University, Professor (inorganic chemistry, chemical engineering)

**Ram Seshadri**, Ph.D., Indian Institute of Science, Professor (inorganic chemistry, materials chemistry)

**Joan-Emma Shea**, Ph.D., Massachusetts Institute of Technology, Professor (theoretical biophysical chemistry)

**Galen Stucky**, Ph.D., Iowa State University, Professor (inorganic chemistry)

**Petra A. M. Van Koppen**, Ph.D., UC Santa Barbara, Lecturer (physical chemistry)

**J. Herbert Waite**, Ph.D., Duke University, Professor (biological, organic, and materials chemistry)

**Alec M. Wodtke**, Ph.D., UC Berkeley, Professor (physical chemistry)

**Fred Wudl**, Ph.D., UC Los Angeles, Professor (organic chemistry)

**Armen Zakarian**, Ph.D., Florida State University, Assistant Professor (organic chemistry)

### Emeriti Faculty

**Curtis B. Anderson**, Ph.D., UC Los Angeles, Associate Professor Emeritus (organic chemistry)

**Clifford A. Bunton**, Ph.D., University College (London), Professor Emeritus (organic chemistry)

**Anthony Cheetham**, Ph.D., Oxford University, Professor (inorganic chemistry/materials)

**David O. Harris**, Ph.D., UC Berkeley, Professor Emeritus (physical chemistry)

**J. Thomas C. Gerig**, Ph.D., Brown University, Professor Emeritus (bio-physical chemistry)

**William C. Kaska**, Ph.D., University of Michigan, Professor Emeritus (inorganic chemistry)

**John H. Kennedy**, Ph.D., Harvard University, Professor Emeritus (inorganic/analytical chemistry)

**Richard M. Martin**, Ph.D., University of Wisconsin, Professor Emeritus (physical chemistry)

**Roger C. Millikan**, Ph.D., UC Berkeley, Professor Emeritus (physical chemistry)

**Henry W. Offen**, Ph.D., UC Los Angeles, Professor Emeritus (physical chemistry)

**Ralph G. Pearson**, Ph.D., Northwestern University, Professor Emeritus (inorganic chemistry)

**Glyn O. Pritchard**, Ph.D., Manchester University, Professor Emeritus (physical chemistry)

**Bruce Rickborn**, Ph.D., UC Los Angeles, Professor Emeritus (organic chemistry)

**Richard J. Watts**, Ph.D., University of Colorado, Professor (inorganic chemistry)

The department offers programs leading to the B.S. degree in chemistry or biochemistry or the B.A. degree in chemistry. The B.S. degrees are intended for students interested in careers strongly dependent on chemical knowledge. Such careers are found in chemical, biochemical, and materials science research, and quality control in medicine. Graduates may enter the workforce directly or seek the highest levels of career attainment by enrolling in an appropriate graduate or professional school. The requirements of the B.S. degree in chemistry meet American Chemical Society standards for certification with appropriate choices of upper-division electives.

The B.A. degree in chemistry offers flexibility and is intended for students interested in careers having a significant chemical component such as environmental science, law, technical management, K-12 education, and business. Graduates may enter the workforce directly or seek higher levels of career attainment by enrolling in an appropriate professional program.

Entering majors will be assigned an advisor who should be consulted on departmental opportunities and program requirements. Students must submit their programs to the

advisor for approval.

Students seeking a degree from the department and who also are interested in pursuing a California Teaching Credential should consult with the credential advisor in the Graduate School of Education soon after enrolling.

### Prizes and Honors

The Willard L. McRary Prize in Chemistry is given to a graduating senior whose work in chemistry reflects the promise of outstanding scientific achievement, such as that which characterized the career of Professor McRary. The B. R. Baker Memorial Fellowship in Chemistry is awarded to graduate students who have given strong indication, by their graduate or undergraduate record, that they will make continued and substantial contributions to the progress of organic, medicinal, or biological chemistry. The Robert H. DeWolfe Teaching Fellowship is awarded to a graduate student in organic chemistry who has demonstrated excellence in undergraduate instruction. The John H. Tokuyama Memorial Scholarship is awarded annually to an organic chemistry graduate student. The Roche Bio-Science Fellowships recognizes outstanding graduate and undergraduate students in organic chemistry.

### Departmental Honors Program

Students who have achieved a grade-point average of 3.5 or above in their chemistry courses and submit a written report of their original research carried out under the guidance of a faculty member (through completion of chemistry 192) and approved by one additional member of the faculty shall be designated as having achieved a Distinction in the Major. Students contemplating this option should advise the undergraduate staff advisor of their intention at the beginning of their senior year.

## Undergraduate Program

### Bachelor of Science—Biochemistry

**Preparation for the major.** Chemistry 1A or 2A, 1B or 2B, 1C or 2C, and 1AL or 2AC, 1BL or 2BC, 1CL or 2CC; 6AL, 6BL, (or BH); 109A-B-C; Mathematics 3A-B-C and 5A; Physics 6A-AL-B-BL-C-CL; MCDB 1A-AL-B; EEMB 2, and either MCDB 1BL or EEMB 2L.

**Upper-division major.** Forty-six upper-division units, including Chemistry 110L, 112A-B-C-112L, 125L, 142A-B-C, 173A; six units of core electives from Chemistry 141, 143, 145, 146, 147, 151, 154A-B, 161, 162A, 162B, 171, 181; five additional units from the above or from Chemistry 111, 115A-B-C, 117A, 118, 120, 123, 124, 126 (if 145 not completed), 127, 128, 129, 132, 133, 134, 150, 173B, 175, 176, and from the following MCDB courses: 101B, 103, 126B-C, 134, 135.

### Bachelor of Science—Chemistry

**Preparation for the major.** Chemistry 1A or 2A, 1B or 2B, 1C or 2C, and 1AL or 2AC, 1BL or 2BC, 1CL or 2CC; 6AL, 6BL, (or BH), 6CL (or CH); 109A-B-C; Mathematics 3A-B-C, 5A-B; Physics 1-2-3-3L-4-4L. It is recommended but not required that Mathematics 5A be completed before taking Chemistry 113A-B-C.

**Upper-division major.** Forty-five upper-division units, including Chemistry 113A-B-C,

116AL-BL-CL, 142A, 150, 173A-B, are required. Chemistry 101, 193, and 196 will not apply. Courses should be chosen after consultation with the junior or senior advisor.

Note: Transfer students receiving subject credit for Chemistry 150 *must* complete a minimum of 44 upper-division units in the Department of Chemistry and Biochemistry.

### Bachelor of Arts—Chemistry

**Preparation for the major.** Chemistry 1A or 2A, 1B or 2B, 1C or 2C, and 1AL or 2AC, 1BL or 2BC, 1CL or 2CC; 6AL, 6BL, (or BH); Mathematics 3A-B-C. Physics 1, 2, 3, 4, 3L, 4L, or Physics 6A-B-C, 6AL-BL-CL are required. It is recommended but not required that Mathematics 5A be completed before taking Chemistry 113A-B-C.

**Upper-division major.** Thirty-nine upper-division units, including Chemistry 109A-B-C, 113A-B-C, 116AL-BL, 150, 173A. The final three elective units may not include the following: Chemistry 101, 193, 196, and 199.

Note: Transfer students receiving subject credit for Chemistry 109A-B-C and/or 150 *must* complete a minimum of 36 upper-division units in the Department of Chemistry and Biochemistry.

### Minor—Chemistry

All courses to be applied to the minor must be completed on a letter-grade basis. This includes both courses offered in chemistry and those offered by other departments and applied to the minor.

**Preparation for the minor.** No specific courses are required for the minor in chemistry, but students should note that most upper-division chemistry courses include Chemistry 1A-B-C as prerequisite, and many require mathematics courses through 5A as prerequisite.

**Upper-division minor.** Twenty-three upper-division units, including at least one course (4 units) in physical chemistry (Chemistry 113A or 113B or 113C) and 150; and 16 units of additional upper-division chemistry courses (Chemistry 101, 193, 196, and 199 may not apply).

Note: Substitutions and waivers are subject to approval by the chair of the department. Please see page 118 for special conditions governing minors in the College of Letters and Science.

## Graduate Program

### Admission

The M.S., M.A., or Ph.D. degrees may be obtained in any one of the special fields of analytical, biological, inorganic, organic, materials, physical, or theoretical chemistry. In addition to fulfilling the departmental admission requirements, applicants must also meet the university requirements for admission described in the chapter "Graduate Education at UCSB." Graduate Study in Chemistry, a publication containing admission and degree requirements, is available upon request from the Department of Chemistry and Biochemistry.

Applications are accepted all year long for fall, winter, and spring quarters. However, January 15 is the priority deadline for fall applications and for campuswide fellowship competition.

### Master of Science or Master of Arts—Chemistry

The M.S. in chemistry may be attained under Plan 1 (thesis based on research). At least 30 units of upper-division and graduate courses must be completed, including no fewer than 20 units in graduate courses in the major subject or in graduate courses related to that subject as approved by the departmental graduate advisor. The M.A. in chemistry may be obtained under Plan 2 (examination). At least 36 units of upper-division and graduate courses are required, including no fewer than 24 units in graduate courses in the major subject or in graduate courses related to that subject as approved by the departmental graduate advisor. The student must present a literature-based seminar to the department (both plans). The Department of Chemistry and Biochemistry emphasizes graduate work leading to the Ph.D.

### Doctor of Philosophy—Chemistry

The Ph.D. degree in chemistry will be awarded upon the successful completion of the following requirements: (1) a core curriculum; (2) two preliminary evaluations; (3) a seminar presentation unrelated to the dissertation research field; (4) the Ph.D. oral qualifying examination for advancement to candidacy; and (5) submission and successful defense of a research dissertation. The main features and time schedule of these requirements are briefly summarized below; a complete document is available in the department.

A six-course curriculum is established with and approved by the divisional academic advisor and normally completed during the first year. Several additional elective courses will be taken during the first and second year. The two preliminary evaluations include written examinations, propositions, and cumulative examinations, depending on the division. Typically, all requirements and the seminar presentation must be completed before the Ph.D. oral qualifying examination. The Ph.D. qualifying oral examination, which focuses on the student's dissertation research field, is usually scheduled for the end of the sixth quarter.

Ph.D. candidates will prepare and defend a dissertation detailing an original work of research in their field of specialization.

### Interdepartmental Graduate Program in Biomolecular Science and Engineering

For details see catalog entry under *Biomolecular Science and Engineering*.

### Interdepartmental Graduate Program in Marine Science

For details see catalog entry under *Marine Science*.

## Chemistry & Biochemistry Courses

### LOWER DIVISION

#### 1A. General Chemistry

##### (3) STAFF

Recommended preparation: concurrent enrollment in Chemistry 1AL; high-school algebra, chemistry and physics.

Not open for credit to students who have completed Chemistry 2A. Lecture, 3 hours.

Stoichiometry, chemical reactions, gas laws and kinetic theory, chemical equilibrium and acid-base chemistry. (F,W,S)

#### 1AL. General Chemistry Laboratory

##### (2) STAFF

Prerequisite: Chemistry 1A or 2A (may be taken concurrently).

Not open for credit to students who have completed Chemistry 1AC or 2AC. Lab fee required. Laboratory, 4 hours.

Qualitative and quantitative measurements to develop laboratory technique and demonstrate the basic concepts of stoichiometry, chemical bonding, gas laws, chemical equilibrium and acid-base chemistry. (F,W,S)

#### 1B. General Chemistry

##### (3) STAFF

Prerequisite: Chemistry 1A or 2A with a minimum grade of C-.

Recommended preparation: Chemistry 1AL or 2AC; concurrent enrollment in Chemistry 1BL; high-school algebra, chemistry and physics.

Not open for credit to students who have completed Chemistry 2B. Lecture, 3 hours.

Thermodynamics (1st and 2nd laws), electrochemistry, chemical kinetics, atomic and molecular structure, and chemical bonding. (W,S)

#### 1BL. General Chemistry Laboratory

##### (2) STAFF

Prerequisite: Chemistry 1A or 2A with a minimum grade of C-; and, Chemistry 1AL or 2AC with a minimum grade of C-; and, Chemistry 1B or 2B (may be taken concurrently).

Not open for credit to students who have completed Chemistry 1BC or 2BC. Laboratory, 3 hours; discussion, 1 hour.

Qualitative and quantitative measurements to develop laboratory technique and demonstrate basic concepts of thermochemistry, electrochemistry, chemical kinetics, and atomic spectroscopy. (W,S)

#### 1C. General Chemistry

##### (3) STAFF

Prerequisite: Chemistry 1B or 2B with a minimum grade of C-.

Recommended preparation: Chemistry 1BL or 2BC; concurrent enrollment in Chemistry 1CL; high-school algebra, chemistry and physics.

Not open for credit to students who have completed Chemistry 2C. Lecture, 3 hours.

Chemical bonding, liquids and solids, properties of solution, structure and dynamics of elements and their compounds. Aspects of technology and environmental problems. (F,S)

#### 1CL. General Chemistry Laboratory

##### (2) STAFF

Prerequisites: Chemistry 1B or 2B with a minimum grade of C-; and, Chemistry 1BL or 2BC with a minimum grade of C-; and, Chemistry 1C or 2C (may be taken concurrently).

Not open for credit to students who have completed Chemistry 1CC or 2CC. Laboratory, 3 hours; discussion, 1 hour.

Qualitative and quantitative measurements to develop laboratory technique and demonstrate the basic concepts of solutions, intermolecular forces, colligative properties, and synthetic organic and inorganic chemistry. (F,S)

#### 2A. General Chemistry (Honors)

##### (3) STAFF

Recommended preparation: concurrent enrollment in Chemistry 2AC; high-school chemistry or physics, one quarter of calculus (may be taken concurrently).

Not open for credit to students who have completed Chemistry 1A. Lecture, 3 hours.

The sequence of topics will be similar to that in Chemistry 1A. Calculus will be used as needed, at the level of the concurrent Mathematics 3A course. (F)

#### 2AC. General Chemistry Laboratory (Honors)

##### (2) STAFF

Prerequisite: Chemistry 2A (may be taken concurrently).

Not open for credit to students who have completed Chemistry 1AC or 1AL. Laboratory, 3 hours; discussion, 1 hour.

Qualitative and quantitative measurements to develop laboratory technique and demonstrate the basic concepts of stoichiometry, chemical bonding, gas laws, chemical equilibrium and acid-base chemistry. Students work in small groups to develop a unique perspective on the experiment. (F)

## 2B. General Chemistry (Honors)

(3) STAFF

Prerequisite: Chemistry 1A or 2A with a minimum grade of B.

Recommended preparation: Chemistry 1AL or 2AC with a grade of B or better; and concurrent enrollment in Chemistry 2BC; high-school algebra, chemistry and physics, and one quarter of calculus.

Not open for credit to students who have completed Chemistry 1B. Lecture, 3 hours.

Thermodynamics (1st and 2nd law), electrochemistry, chemical kinetics, atomic and molecular structure, and chemical bonding. (W)

## 2BC. General Chemistry Laboratory (Honors)

(2) STAFF

Prerequisite: Chemistry 1A or 2A with a minimum grade of B; and, Chemistry 1AL or 2AC with a minimum grade of B; and, Chemistry 2B (may be taken concurrently).

Not open for credit to students who have completed Chemistry 1BC or 1BL. Laboratory, 3 hours; discussion, 1 hour.

Laboratory techniques. Thermochemistry, electrochemistry, chemical kinetics, and atomic spectroscopy. Students work in small groups to develop a unique perspective on the experiment.

## 2C. General Chemistry (Honors)

(3) STAFF

Prerequisite: Chemistry 1B or 2B with a minimum grade of B.

Recommended preparation: Chemistry 1BL or 2BC with a minimum grade of B; and, concurrent enrollment in Chemistry 2CC; high-school algebra, chemistry and physics, and one quarter of calculus.

Not open for credit to students who have completed Chemistry 1C. Lecture, 3 hours.

Structure and dynamics of the elements and their compounds. Aspects of technology and environmental problems. Laboratory required. (S)

## 2CC. General Chemistry Laboratory (Honors)

(2) STAFF

Prerequisite: Chemistry 1B or 2B with a minimum grade of B; and, Chemistry 1BL or 2BC with a minimum grade of B; and, Chemistry 2C (may be taken concurrently).

Not open for credit to students who have completed Chemistry 1CC or 1CL. Laboratory, 3 hours; discussion, 1 hour.

Laboratory techniques. Solutions, colligative properties, and synthetic organic and inorganic chemistry. Students work in small groups to develop a unique perspective on the experiment. (S)

## 6AL. Laboratory Methods of Organic Chemistry

(3) STAFF

Prerequisite: Chemistry 109A (may be taken concurrently). Lecture, 2 hours; Laboratory, 4 hours.

Distillation, crystallization, extraction, determination of physical properties, spectroscopy, and instrumental methods in organic chemistry.

## 6BH. Laboratory Methods of Organic Chemistry (Independent Research)

(3) STAFF

Prerequisites: Chemistry 6A and 109A; and Chemistry 109B (may be taken concurrently); open to chemistry, biochemistry and creative studies majors only; consent of instructor. Discussion, 1 hour; Laboratory, 7 hours.

Independent research involving distillation, crystallization, extraction, determination of physical properties, organic synthesis, and use of instrumental methods in organic chemistry. (W,S)

## 6BL. Laboratory Methods of Organic Chemistry

(3) STAFF

Prerequisites: Chemistry 6A and 109A with a minimum grade of C-; and Chemistry 109B (may be taken concurrently). Discussion, 1 hour; Laboratory, 7 hours.

Distillation, crystallization, extraction, determination of physical properties, organic synthesis, instrumental methods in organic chemistry.

## 6CH. Organic Chemistry Labs

(3) STAFF

Prerequisites: Chemistry 6B and 109B; and, Chemistry 109C (may be taken concurrently); open to chemistry, biochemistry and creative studies majors only.

Not open for credit to students who have completed Chemistry 7C. Lab fee required. Discussion, 1 hour; Laboratory, 7 hours.

Independent research involving distillation, crystallization, extraction, determination of physical properties, organic synthesis, and use of instrumental methods in organic chemistry for the purposes of multistep synthesis.

## 6CL. Organic Chemistry Labs

(3) STAFF

Prerequisites: Chemistry 6C and 109B with a minimum grade of C-; and Chemistry 109C (may be taken concurrently).

Not open for credit to students who have completed Chemistry 7C. Lab fee required. Discussion, 1 hour; Laboratory, 7 hours.

Distillation, crystallization, extraction, determination of physical properties, organic synthesis, instrumental methods in organic chemistry.

## 10. Introduction to Computer Methods and Simulations in Chemistry

(2) STAFF

Introduction of different computing techniques for scientific computation in the fields of chemistry, materials, and nanotechnology using Unix and web based software. Applications include: molecular modeling, molecular dynamics, Mathematica, Monte Carlo, data analysis, quantum computing, and data mining.

## 99. Introduction to Research

(1-3) STAFF

Prerequisite: consent of instructor.

May be repeated to a maximum of 6 units. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. Tutorial, 3-9 hours.

Directed study, normally experimental, to be arranged with individual faculty members. Course offers exceptional students an opportunity to participate in a research group. Basic techniques and the operation of instruments used in research.

## UPPER DIVISION

### 102. Chemistry in the Community / The Process of Learning and Teaching Science

(4) VAN KOPPEN

Prerequisite: Chemistry 1A-AL, 1B-BL, 1C-CL

Upper Division course credit toward SMI Education minor. Open to non-majors.

Students work with fifth graders to teach hands-on physical science activities in our chemistry labs. They also work with teachers in the classroom to implement science lesson plans. They observe how students learn science and share their experiences with one another.

### 109A. Organic Chemistry

(4) AUE, BRUCE, LIPSHUTZ, LITTLE, PETTUS

Prerequisite: Chemistry 1C or 2C with a minimum grade of C-; or, Chemistry 1B or 2B with a minimum grade of B-.

Not open for credit to students who have completed Chemistry 107A or 130A.

Structure, reactivity, and synthesis of organic molecules including nomenclature, reaction mechanisms, and stereochemistry. Topics include organometallics, polymers, carbohydrates, amino acids, proteins, nucleic acids, coenzymes, and their mechanisms. (F,W,S)

### 109B. Organic Chemistry

(4) AUE, BRUCE, LIPSHUTZ, LITTLE, PETTUS

Prerequisite: Chemistry 109A with a minimum grade

of C-.

Not open for credit to students who have completed Chemistry 107B or 130B.

Structure, reactivity, and synthesis of organic molecules including nomenclature, reaction mechanisms, and stereochemistry. Topics include organometallics, polymers, carbohydrates, amino acids, proteins, nucleic acids, coenzymes, and their mechanisms. (F,W,S)

## 109C. Organic Chemistry

(4) AUE, BRUCE, LIPSHUTZ, LITTLE, PETTUS

Prerequisite: Chemistry 109B with a minimum grade of C-.

Not open for credit to students who have completed Chemistry 108 or 130C.

Structure, reactivity, and synthesis of organic molecules including nomenclature, reaction mechanisms, and stereochemistry. Topics include organometallics, polymers, carbohydrates, amino acids, proteins, nucleic acids, coenzymes, and their mechanisms. (F,W,S)

## 110L. Introductory Biochemistry Laboratory

(4) STAFF

Prerequisite: Chemistry 142A (may be taken concurrently).

Lab fee required.

Recommended preparation: Chemistry 6A-B-C; Chemistry 107A-B and 108, or Chemistry 109A-B-C; Chemistry 150 (may be taken concurrently).

Gives students hands-on experience with modern methods of separation, identification, and study of biomolecules and macromolecular structures. (F)

## 111. Chemical Kinetics

(3) STAFF

Prerequisite: consent of instructor. Lecture, 3 hours

The laws and theories governing rates of chemical reactions and reaction mechanisms. Empirical treatment of reaction rates, treatment of data, gas-phase reactions, reactions in solution, catalysis, complex reactions, chain reactions. Collision theory and potential energy surfaces.

## 112A. Biophysical Chemistry

(4) BROWN, SHEA, DAHLQUIST

Prerequisite: Chemistry 1C or 2C; and, Mathematics 3A-B-C; and, Physics 1, 2, 3, 3L, 4, and 4L, or, Physics 6A-AL-B-L-C-CL; Chemistry 142A (may be taken concurrently).

Laws of thermodynamics, chemical equilibria and ligand binding, phase equilibria, electrochemistry, nonelectrolyte solutions, applications to biochemical problems.

## 112B. Biophysical Chemistry

(4) BROWN, SHEA, DAHLQUIST

Prerequisite: Chemistry 112A; Chemistry 142B (may be taken concurrently).

Forces influencing macromolecular conformation, microscopy and diffraction methods, quantum mechanics, statistical mechanics.

## 112C. Biophysical Chemistry

(4) BROWN, SHEA, DAHLQUIST

Prerequisite: Chemistry 112B; Chemistry 142A-B, or, MCDB 108A-B; Chemistry 142C, or, MCDB 108C (may be taken concurrently).

Not open to students who have completed Chemistry 113C.

Biological spectroscopy, nuclear magnetic resonance, mass transport dynamics in solution, chemical and biochemical kinetics.

## 112L. Biophysical and Bioanalytical Laboratory

(3) STAFF

Prerequisite: Chemistry 110L, 113A or 112A, and 142A-B-C (Chem 142C may be taken concurrently).

Recommended Preparation: Chemistry 112B, Chemistry 113B and 125L.

Application of modern biophysical and bioanalytical techniques to study the structure, function, and properties of biomolecules. Fluorescence spectroscopy, mass spectroscopy, FTIR, 2D-NMR, diffraction techniques, circular dichroism.

## 113A. Physical Chemistry

(4) BOWERS, BURATTO, HARRIS, METIU

Prerequisite: Chemistry 1C or 2C; and, Mathematics

3A-B-C; and, *Physics 1, 2, 3, 3L, 4, and 4L, or, Physics 6A- AL-BL-C-CL.*

*Recommended Preparation: Chemistry 113AL (may be taken concurrently).*

Chemical thermodynamics: laws of thermodynamics, phase equilibria, chemical equilibria, equations of state.

### 113AG. Physical Chemistry

(4) BOWERS, BURATTO, METIU

*Prerequisite: graduate standing.*

*Not open for credit to students who have taken Chemistry 113A-B-C or the respective part thereof in this institution. Lectures, 3 hours; discussions, 1 hour.*

Same description as Chemistry 113A-B-C. (F)

### 113AL. Physical Chemistry Laboratory

(3) METIU, WODTKE

*Prerequisite: Chemistry 113A (may be taken concurrently).*

*Recommended preparation: Chemistry 150 or equivalent. Lecture, 2 hours; laboratory, 8 hours. Lab fee required.*

Lecture: instrumental techniques, data analysis, error analysis, instruction in Mathematica<sup>®</sup>. Laboratory: Mathematica<sup>®</sup>, a symbolic programming language, is taught in the computer laboratory. (F)

### 113B. Physical Chemistry

(4) BOWERS, BURATTO, HARRIS, METIU

*Prerequisite: Chemistry 113A or Chemical Engineering 110A-B.*

*Recommended Preparation: Chemistry 150 and 116AL-BL (may be taken concurrently).*

Quantum theory and spectroscopy: introduction to quantum mechanics; symmetry, molecular structure, and spectroscopy.

### 113C. Physical Chemistry

(4) BOWERS, BURATTO, HARRIS, METIU

*Prerequisite: Chemistry 113B.*

*Recommended Preparation: Chemistry 113AL and 113CL (may be taken concurrently).*

Kinetic theory of gases, chemical kinetics, statistical mechanics, photochemistry.

### 115A-B-C. Fundamentals of Quantum Chemistry

(3) KIRTMAN, WODTKE

*Prerequisite: Mathematics 5A, and Chemistry 113A-B-C or Chemistry 112A-B-C.*

*Offered concurrently with Chemistry 222A-B-C.*

- Introduction to quantum mechanics-postulatory approach; particle in box, on ring, harmonic oscillator; linear operator theory, matrix algebra; hydrogen atom; perturbation theory, variation theory; applications. B. Molecular orbital theory and valence bond theory; Huckel theory (secular eqn.) applications to conjugated systems. Electronic spectra, and term symbols; introduction to infrared, Raman, and microwave spectroscopy. (W)
- Molecular orbital theory and valence bond theory; Huckel theory (secular eqn.) applications to conjugated systems, electronic spectra, and term symbols; introduction to infrared, Raman, and microwave spectroscopy.
- Introduction to NMR, EPR, group theory; applications.

### 116AL. Quantitative Analytical and Physical Methods Laboratory

(3) LAVERMAN

*Prerequisites: Chemistry 150 (may be taken concurrently); and Chemistry 113B (may be taken concurrently).*

*Lab fee required. Lecture, 1 hours; Laboratory, 8 hours.*

Principles of analytical chemistry including spectroscopy, classical techniques and separation processes. Quantitative analysis of unknowns. Introduction to instrumental analysis. (W)

### 116BL. Advanced Physical Chemistry Laboratory

(3) LAVERMAN

*Prerequisites: Chemistry 150 and 116AL; Chemistry 113C (may be taken concurrently).*

*Lab fee required. Lecture, 1 hours; laboratory, 8 hours.*

Experiments in thermodynamics, spectroscopy and electrochemistry. Synthesis and study of inorganic

complexes. Instrumental techniques such as NMR, fluorescence, Raman and laser flash photolysis are explored. Methods of data and error analysis. (S)

### 116CL. Inorganic Synthesis and Physical Characterization Laboratory

(3) LAVERMAN

*Prerequisites: Chemistry 150 and 116BL; Chemistry 173A (may be taken concurrently).*

*Lab fee required. Lecture, 1 hour; laboratory, 8 hours.*

Synthesis of inorganic and organometallic complexes including techniques for air-sensitive materials. Instrumental characterization and study of synthesized compounds in a research-like setting. (F)

### 117A. Statistical Mechanics

(3) BROWN, METIU, SHEA

*Prerequisite: Chemistry 113A-B-C or Chemistry 112A-B-C.*

Fundamentals of statistical thermodynamics, partition functions for ideal gases and crystals, quantum statistics, calculations of thermodynamic properties.

### 118. Photochemistry and Radiation Chemistry

(3) BURATTO, DEVRIES

*Prerequisites: Chemistry 112A-B-C or 113A-B-C and 150. Lecture, 3 hours.*

Interaction of light and matter, reaction paths from electronically excited molecules, flash photolysis, high energy radiation.

### 120. Polymer Chemistry

(3) BAZAN

*Prerequisites: Chemistry 1C or 2C; and, Chemistry 107A-B-C or 109A-B-C.*

Mechanism and kinetics of polymerization: vinyl, condensation, and diene polymers; ionic polymerizations; block and graft polymers; copolymerization; physical chemistry of high polymers; polymer degradations; radiation chemistry of polymer systems.

### 123. Fundamentals of Environmental Chemistry

(3) DE VRIES, PERONA, WATTS

*Prerequisites: Chemistry 1A-B.*

*Recommended preparation: Chemistry 1C.*

Chemical matters of pollution sources. Principles of analytical monitoring and control of pollution sources. The chemistry of pollutants in the environment. Chemical quality standards and chemical monitoring of the environment.

### 124. Organic Spectroscopic Analysis

(3) AUE, BAZAN, LITTLE, PETTUS

*Prerequisites: Chemistry 107A-B or 109A-B; and Chemistry 6A. Lecture, 3 hours; laboratory, 1 hour.*

*Recommended preparation: Chemistry 107C or 109C.*

Structure determination of complex organic molecules. Topics covered include NMR, IR, UV, and mass spectrometry.

### 125L. Laboratory Techniques in Biochemistry

(4) STAFF

*Prerequisites: Chemistry 110L; and Chemistry 142A-B (may be taken concurrently).*

*Lab fee required.*

*Recommended preparation: Chemistry 6A-B-C; and, Chemistry 109A-B-C.*

Application of molecular biology techniques to perform mutagenesis and cloning; restriction endonucleases, PCR, plasmid purification and DNA analysis. Protein purification and analysis methods: expression of proteins in bacterial systems. (W)

### 126. Computation Chemistry and Molecular Modeling

(3) AUE, BROWN, KAHN, SHEA

*Prerequisites: Chemistry 109A-B.*

*Same course as EEMB 126MM. Lecture, 3 hours; laboratory, 3 hours.*

Introduction to computational chemistry and molecular modeling. Application of molecular mechanics, quantum mechanics, and computer graphical interfaces to problems in chemistry, biochemistry, drug design, and pharmacology.

### 127. Structure and Reactivity in Organic Chemistry

(3) AUE, LIPSHUTZ, LITTLE, PETTUS

*Prerequisites: Chemistry 107A-B-C or 109A-B-C with a C or better. Lecture, 3 hours.*

Electronic structure, resonance, acid/base chemistry, thermodynamics, kinetics, transition state theory, and isotope effects.

### 128. Organic Reaction Mechanisms

(3) AUE, LIPSHUTZ, LITTLE, PETTUS

*Prerequisites: Chemistry 107A-B-C or 109A-B-C.*

*Recommended preparation: Chemistry 127.*

*Lecture, 3 hours.*

Mechanisms of thermal, photochemical, organometallic, electrochemical asymmetric or other processes in organic chemistry.

### 129. Synthetic Organic Reactions

(3) AUE, LIPSHUTZ, LITTLE, PETTUS

*Prerequisites: Chemistry 107A-B-C or 109A-B-C.*

*Lecture, 3 hours.*

A survey of reactions of organic substances with emphasis on those with practical synthetic utility, including discussion of mechanism, scope and limitations, and stereochemical issues.

### 132. Organometallics in Organic Synthesis

(3) LIPSHUTZ

*Prerequisites: Chemistry 109A-B-C and Chemistry 129; upper-division standing. Lecture, 3 hours.*

Synthetic methods and applications to natural products total syntheses involving transition metals.

### 133. Advanced Synthetic Chemistry

(3) LIPSHUTZ, LITTLE, PETTUS

*Prerequisites: Chemistry 109A-B-C; upper-division standing; open to chemistry and biochemistry majors only. Lecture, 3 hours.*

A comprehensive discussion of modern synthetic organic methods, including the applications of addition, condensation, substitution, and rearrangement reactions.

### 134. Chemical Synthesis of Biological Molecules

(3) STAFF

*Prerequisites: Chemistry 129; upper-division standing. Lecture, 3 hours.*

The synthesis, manipulation, and modification of biological molecules including peptides, carbohydrates, nucleic acids, and other metabolites are essential to advances in biomedicine. This course surveys chemical methods for the production of these molecules and their application to biological problems. (S)

### 141. Epigenetics: Biology, Mechanisms and Therapies

(3) REICH

*Prerequisites: Chemistry 142A-B-C or MCDB 108A-B-C; upper-division standing. Lecture, 3 hours.*

Covers epigenetic processes and molecular mechanisms in bacteria, fungi, plants, mammals, imprinting, gene regulation, repeat-induced point mutation (RIP), X- chromosome inactivation, epigenetic mechanisms including DNA methylation, histone modification, chromatin remodeling, RNA silencing, and epigenetically based therapeutics and pharmacology.

### 142A. Biochemistry

(3) KAHN, PARSONS, PLAXCO

*Prerequisites: Chemistry 107A-B-C or 109A-B-C. Lecture, 3 hours.*

Macromolecules of biological importance. A survey of the physical and chemical properties of proteins, nucleic acids, and carbohydrates. Methods of preparation, chemical synthesis, degradation, and characterization of biomolecules. (F)

### 142B. Biochemistry

(3) PARSONS, PERONA, PLAXCO

*Prerequisite: Chemistry 142A. Lecture, 3 hours.*

Chemical aspects of intermediary metabolism. The chemistry and elementary dynamic properties of enzymes; study of enzyme active sites; characterization of metabolic pathways and methods of examining cellular regulation. (W)

### 142C. Biochemistry

(3) JAEGER, REICH

*Prerequisite: Chemistry 142B. Lecture, 3 hours.*

Macromolecular biosynthesis and specialized cellular processes. A survey of nucleic acid and

protein biosynthesis, characterization of lipids and membranes; function of membranes in transport, energy transduction, and cellular control; mechanisms of muscle contraction and cell motility. (S)

### 143. The RNA World

(3) JAEGER

Prerequisites: Chemistry 142A-B-C; or, MCDB 108A-B-C.

Introduction to RNA structure and thermodynamics. Biological roles of RNA in contemporary organisms. Implications for the origins of life.

### 145. Computational Biochemistry

(3) SHEA

Prerequisites: Chemistry 112A-B or 113A-B; and, Chemistry 142A or MCDB 108A.

Introduction to molecular modeling and molecular dynamics. Discussion of practical considerations of energy minimization, solvent modeling, structure-based drug design. Practical computer graphics experience.

### 146. Membrane Biochemistry

(3) PARSONS

Prerequisites: Chemistry 142A-B-C; or, MCDB 108A-B-C.

Introduction to the structures and roles of lipids and their phase behavior, liposomes, membrane proteins and kinetics, protein sorting, and signal transduction.

### 147. Astrobiology and the Origins of Life

(3) PLAXCO

Prerequisite: Chemistry 142A. Lecture, 3 hours.

Discusses the origins and evolution of the solar system and the earth, the origins and evolution of life on earth and the possibilities for life elsewhere in the cosmos all from the perspective of contemporary, terrain biochemistry.

### 150. Analytical Chemistry

(3) BURATTO, DE VRIES, NGUYEN

Prerequisites: Chemistry 1A-B-C or 2A-B-C.

Recommended preparation: Chemistry 116AL (may be taken concurrently). Lecture, 3 hours.

Principles of analytical chemistry including classical techniques, spectrophotometry, electroanalytical techniques, and separation processes. (W)

### 151. Post-translational Protein Processing

(4) WAITE

Prerequisites: MCDB 108A or Chemistry 142A with a grade of C or better.

Same course as MCDB 145. Lecture, 3 hours; discussion, 1 hour.

Structure/function relationships in interesting macromolecules isolated from marine organisms. Focus is on well-characterized pathways from horseshoe crabs, abalones, mussels, and fish as well as others.

### 153. Advanced Analytical Techniques

(3) NGUYEN, WATTS

Prerequisite: Chemistry 150. Lecture, 2 hours; laboratory, 4 hours. Lab fee required.

Principles of analytical methodology, as in spectroscopy, electronanalysis, and chromatography. Applications to environmental problems, forensic and clinical analysis, and industry. Analysis of solids and surfaces.

### 154A-B. Magnetic Resonance in Biological Systems

(3-3) STAFF

Prerequisites: Chemistry 112A-B or 113A-B; and, Chemistry 112 or 133C (may be taken concurrently). Lecture, 3 hours.

A discussion of the theory and practice of magnetic resonance methods used in studies of proteins, nucleic acids, and polysaccharides.

### 161. Enzyme Mechanisms

(3) REICH

Prerequisites: Chemistry 142A-B-C; or, MCDB 108A-B-C.

Chemistry, structure and function of enzymes; theory, experimental design, and data analysis. Enzyme models and non-classical enzymes.

### 162A. Drug Design

(3) KAHN, REICH

Prerequisites: Chemistry 142A-B-C; or, MCDB 108A-B-C. Recommended preparation: MCDB 101A-B or

Chemistry 126, 145 or 161. Lecture, 3 hours.

Sources for new drugs. Biochemistry of diseases. Target validation techniques. Mechanism of action of enzymes and receptors. Enzyme inhibition and receptor binding studies. Structure based drug design: conformational analysis, docking and binding affinity calculations. Course also teaches proposal writing skills.

### 162B. Drug Design

(3) KAHN, REICH

Prerequisites: Chemistry 142A-B-C; or, MCDB 108A-B-C.

Recommended preparation: Chemistry 127, 129 or 162A. Lecture, 3 hours.

Medicinal chemistry for lead optimization, combinatorial synthesis, quantitative structure-activity relationships, pharmacokinetics, drug metabolism and toxicity, pharmacogenomics. Drugs that interact with DNA and protein drugs. Clinical trials, intellectual property in drug design. Students develop their own drug design project.

### 163. Arrow Pushing in Organic Chemistry

(2) STAFF

Prerequisites: Chemistry 109A-B-C; upper-division standing; open to chemistry and biochemistry majors only.

Designed for majors

Recommended preparation: taken or concurrently enrolled in one of the following: Chemistry 127, 128, 129, or 133. Lecture, 2 hours.

Covers the arrow pushing formalism and addresses molecular rearrangements and other organic reactions from this perspective. (F)

### 171. Bioinorganic Chemistry

(3) BUTLER

Prerequisite: Chemistry 173A.

Selected topics in bioinorganic chemistry, and metallo-biochemistry. Discussions of metalloproteins and corresponding model compound investigations. Emphasis will be on reactions mechanisms and spectroscopy or properties of metal sites.

### 173A. Advanced Inorganic Chemistry

(3) FORD, STUCKY

Prerequisites: Chemistry 112A-B-C or 113A-B-C. Lecture, 3 hours.

Electronic structure of atoms and molecules. Models for bonding in molecules of nontransition and transition elements. Applications of symmetry to bonding, electronic and vibrational spectroscopy. Stereochemistry of transition metal complexes and introduction to organometallics. (F)

### 173B. Advanced Inorganic Chemistry

(3) FORD, STUCKY

Prerequisite: Chemistry 173A. Lecture, 3 hours.

Structures of ordered crystalline solids, X-ray crystallography. Introduction to solid state chemistry, inorganic materials and chemical catalysis. Bioinorganic chemistry. (W)

### 175. Physical-Inorganic Chemistry

(3) FORD

Prerequisites: Chemistry 173A-B. Lecture, 3 hours.

Bonding theory, thermodynamics, and structure of inorganic compounds. Applications of physical techniques to the study of inorganic (and organometallic) reactions and their mechanisms.

### 176. Photochemical and Photophysical Properties of Inorganic and Organometallic Compounds and Materials

(3) FORD

Prerequisite: Chemistry 173A. Lecture, 3 hours.

Discussion of the mechanisms of fundamental physical and chemical events which follow absorption of light by inorganic or organometallic chromophores. Consideration of homogeneous and heterogeneous systems as well as the design and operation of photo-optical and photoelectrical devices.

### 181. Protein Crystallography

(3) SAGERMANN

Prerequisite: consent of instructor.

Introduction to diffraction techniques. Protein crystal growth and morphology. Data collection and reduction strategies. Approaches for solving the phase problem. Crystallographic refinement, including molecular dynamics. Interpretation of crystal structure.

### 183. Introduction to Teaching in Chemistry

(1-5) VAN KOPPEN

Prerequisite: Upper-division standing, a chemistry grade point average of 3.5 or above and consent of instructor.

May be repeated for credit to a maximum of 5 units. May not be applied toward the major.

Students will assist instructor in teaching a lab course in which the student previously received a grade of A- or better. Activities will be determined in consultation with the instructor and include instruction of 1 or 2 lab sections per week, hold 1 office hour per week, prepare weekly quizzes and lab lectures, grade weekly lab reports and quizzes, conduct one review session for the lab final, maintain/submit student grade records, complete video tape teaching evaluation and consultation with instructional development, complete mid-quarter and end of quarter teaching evaluations, grade and proctor exams.

### 184. Chemical Literature

(2) HUBER

Prerequisites: prior enrollment in 3 chemistry courses. Lecture, 2 hours.

Lectures and exercises on the literature and other information resources of use in chemistry. (W)

### 192. Honors Research Seminar

(3) STAFF

Prerequisites: upper-division standing; consent of instructor and department.

Must have a minimum 3.5 GPA. No units may be applied to the major. An application must be completed and submitted to the undergrad advisor in the first quarter of their senior year. Students successfully completing the program are eligible to graduate with Distinction in the Major.

Independent research project carried out under the supervision of faculty member. Goal is to write an original, publishable research paper. The project can be on a topic of the student's choice, or it can be an extension of an ongoing research project under the direction of a faculty member in the department.

### 193. Internship in Chemistry

(1-3) STAFF

Prerequisites: upper-division standing; consent of instructor.

Must have a minimum 3.0 GPA. No units may be applied to the major. An application must be completed and submitted to the department research advisor prior to the internship.

Opportunity to obtain practical nonpaid chemistry-related research experience by working under faculty direction as an intern with local, state, federal, or private agencies. A formal written report is required for credit, which is evaluated by the department research advisor.

### 195. Chemical Instrumentation

(3-5) STAFF

Prerequisite: consent of instructor. Discussion, 1 hour; laboratory, 6 to 12 hours.

With guidance from a faculty member students learn advanced laboratory techniques by independent experimental work and weekly consultations with the instructor. This course may be used to satisfy the upper-division laboratory requirement.

### 196. Special Topics

(1-4) STAFF

Prerequisite: consent of instructor.

May be applied to major requirements by petition only. Tutorial, 3-12 hours.

Special topics and courses as a means of meeting special curriculum needs.

### 199. Independent Studies in Chemistry and Biochemistry

(1-5) STAFF

Prerequisites: upper-division standing in the major; completion of two upper-division courses in chemistry.

Must have a minimum 3.0 grade-point average for the preceding three quarters. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. Not applicable to the B.A. in Chemistry. No more than 12 units of Chemistry 199 may apply toward the B.S. in Chemistry. Tutorial, 1-5 hours.

Coursework shall consist of academic research supervised by a faculty member. This course is not intended for internship credit.

## GRADUATE COURSES

### 203. Combinatorial Methods in Chemistry and Chemical Engineering

(3) MCFARLAND

*Prerequisite:* prior coursework in inorganic and organic chemistry; consent of instructor.

Same course as Chemical Engineering 203 and Materials 223. Lecture, 3 hours.

Foundation and methodologies of chemical, biological, and materials research and discovery using automated, high-speed synthesis and screening. Emphasis on the chemical, biochemical, physical, and mathematical fundamentals necessary for experimental design, synthesis, high-throughput screening and analysis of combinatorial libraries.

### 217A. Statistical Mechanics

(3) BROWN, METIU, SHEA

*Prerequisite:* consent of graduate advisor.

Fundamentals of statistical thermodynamics, partition functions for ideal gases and crystals, quantum statistics, calculations of thermodynamic properties.

### 217B. Statistical Mechanics

(3) BROWN, METIU, SHEA

*Prerequisite:* consent of graduate advisor.

Fundamentals of non-equilibrium statistical mechanics, kinetic theory of gases, Boltzmann equation, correlation functions, linear response theory, fluctuation-dissipation theorem, Langevin and Fokker-Planck equations.

### 217C. Statistical Mechanics

(3) BROWN, METIU, SHEA

*Prerequisite:* consent of graduate advisor.

Not open for credit to students who have completed Chemistry 117A.

Selected topics in advanced statistical mechanics. Phase transitions and the renormalization group. Theory of rate processes.

### 218. Photochemistry and Radiation Chemistry

(3) BURATTO, DE VRIES

*Prerequisite:* consent of the chemistry graduate advisor.

Interaction of light and matter, reaction paths from electronically excited molecules, flash photolysis, high energy radiation.

### 219. Selected Topics in Physical Chemistry

(1-4) STAFF

*Prerequisite:* consent of instructor.

Course may be repeated with a different topic (18 units maximum). Lecture, 1 to 4 hours.

Selected topics: orbital symmetry rules for chemical reactions (Pearson); classical theory of light, radiation, and spectroscopy (Metiu); nonlinear optics and nonlinear spectroscopy (Metiu).

### 222A-B-C. Fundamentals of Quantum Chemistry

(3-3-3) DE VRIES, HAN, KIRTMAN, WODTKE

*Prerequisites:* consent of the graduate advisor; graduate standing.

Not open for credit to students who have completed Chemistry 115A-B-C.

A. Introduction to quantum mechanics-postulatory approach; particle in box, on ring, harmonic oscillator; linear operator theory, matrix algebra; hydrogen atom; perturbation theory, variation theory; applications. (F)

B. Molecular orbital theory and valence bond theory (secular equ.) applications to conjugated systems, electronic spectra, and term symbols; introduction to infrared Raman, and microwave spectroscopy. (W)

C. Introduction to NMR, EPR, Group Theory; applications. (S)

### 223. Current Events in Organic Chemistry

(2) STAFF

*Recommended preparation:* Chemistry 109A-B-C. Lecture, 2 hours.

Faculty and students present and critically discuss current chemical literature.

### 224. Organic Spectroscopic Analysis

(3) STAFF

*Lecture, 3 hours; discussion, 1 hour.*

Structure determination of complex organic molecules. Topics include NMR, IR, UV, and mass spectroscopy.

### 225. Instrumental Methods in Physical Chemistry

(3) BOWERS, BURATTO, DE VRIES, WODTKE

*Prerequisite:* consent of instructor.

Advanced undergraduates may enroll by petition to their college office. Lecture, 3 hours.

Fundamentals of basic measurements and advanced research instrumentation are taught. Emphasis is on both practical and conceptual understanding of the methods, suitable for experimental design. Signal electronics, vacuum techniques, molecular beams, lasers, and optics.

### 226. Computational Chemistry

(3) AUE, BROWN, SHEA

*Lecture, 3 hours; laboratory, 3 hours.*

Introduction to computational chemistry and molecular modeling. Application of molecular mechanics, quantum mechanics, and computer graphical interfaces to problems in chemistry, biochemistry, drug design and pharmacology.

### 227. Structure and Reactivity in Organic Chemistry

(3) AUE, LIPSHUTZ, LITTLE, PETTUS

*Lecture, 3 hours.*

Electronic structure, resonance, acid/base chemistry, thermodynamics, kinetics, transition state theory, and isotope effects.

### 228. Organic Reaction Mechanisms

(3) AUE, LIPSHUTZ, LITTLE, PETTUS

*Lecture, 3 hours.*

Mechanisms of thermal, photochemical, organometallic, electrochemical, asymmetric or other processes in organic chemistry.

### 229. Synthetic Organic Reactions

(3) AUE, LIPSHUTZ, LITTLE, PETTUS

*Lecture, 3 hours.*

A survey of reactions of organic substances with emphasis on those with practical synthetic utility, including discussion of mechanism, scope and limitations, and stereochemical issues.

### 230. Modern Instrumental Techniques in Organic Chemistry

(3) STAFF

*Prerequisite:* graduate standing. Lecture, 3 hours.

Practical spectroscopy including infrared and ultraviolet, but with primary emphasis on nuclear magnetic resonance, electron spin resonance, and mass spectroscopy.

### 232. Organometallics in Organic Synthesis

(3) LIPSHUTZ

*Prerequisites:* Chemistry 109A-B-C; and, Chemistry 129 or 229; graduate standing.

*Designed for majors.*

*Recommended preparation:* Chemistry 233.

Synthetic methods and applications to natural products total syntheses involving transition metals.

### 233. Advanced Synthetic Chemistry

(3) PETTUS

*Prerequisite:* consent of instructor. Lecture, 3 hours.

A comprehensive discussion of modern synthetic organic methods, including the applications of addition, condensation, substitution, and rearrangement reactions.

### 234. Chemical Synthesis of Biological Molecules

(3) STAFF

*Prerequisites:* Chemistry 229; graduate standing; consent of instructor. Lecture, 3 hours.

The synthesis, manipulation, and modification of biological molecules including peptides, carbohydrates, nucleic acids, and other metabolites are essential to advances in biomedicine. This course surveys chemical methods for the production of these molecules and their application to biological problems. (S)

### 239. Selected Topics in Organic Chemistry

(1-4) AUE, BAZAN, LIPSHUTZ, LITTLE, PETTUS

*Prerequisite:* consent of instructor.

Course may be repeated with a different topic (18 units maximum). Lecture, 3 hours.

Selected topics in organic chemistry. The contents of this course will vary.

### 240. Chemistry of Organic Semiconductors

(4) BAZAN

Synthesis, electronic structure, photophysics and applications of organic semiconductors. Emphasis will be placed on materials based on conjugated polymers. Applications of interest include solar cell devices, biosensors, and light emitting diodes.

### 241. Epigenetics: Biology, Mechanisms and Therapies

(3) REICH

*Prerequisites:* Chemistry 142A-B-C or MCDB 108A-B-C; graduate standing. Lecture, 3 hours.

Covers epigenetic processes and molecular mechanisms in bacteria, fungi, plants, mammals, imprinting, gene regulation, repeat-induced point mutation (RIP), X-chromosome inactivation, epigenetic mechanisms including DNA methylation, histone modification, chromatin remodeling, RNA silencing, and epigenetically based therapeutics and pharmacogenetics.

### 242A-B-C. Chemical Aspects of Biological Systems

(3) PARSONS, PERONA, PLAXCO, REICH, JAEGER

*Prerequisite:* consent of the chemistry graduate advisor.

A. Macromolecules of biological importance. A survey of the physical and chemical properties of proteins, nucleic acids, and carbohydrates. Methods of preparation, chemical synthesis, degradation, and characterization of biomolecules. (F)

B. Chemical aspects of intermediary metabolism. The chemistry and elementary dynamic properties of enzymes; study of enzyme active sites; characterization of metabolic pathways and methods of examining cellular regulation. (W)

C. Macromolecular biosynthesis and specialized cellular processes. A survey of nucleic acid and protein biosynthesis, characterization of lipids and membranes; function of membranes in transport, energy transduction, and cellular control; mechanisms of muscle contraction and cell motility; neurochemistry. (S)

### 243. The RNA World

(3) PERONA

*Prerequisites:* Chemistry 142A-B-C or MCDB 108A-B-C.

Introduction to RNA structure and thermodynamics. Biological roles of RNA in contemporary organisms. Implications for the origins of life.

### 244. Informational Macro- and Supra-Molecules

(2) JAEGER

*Prerequisite:* consent of instructor.

Same course as BMSE 244.

Selected topics at the interface of chemistry and biology: informational molecular coding, molecular machines, self-assembling and self-replicating molecular systems, evolution and selection of molecules with binding of catalytic properties, biopolymer-based materials, special emphasis on cutting-edge technologies.

### 245. Computational Biochemistry

(3) PERONA, REICH

*Prerequisites:* Chemistry 113A or 112 or 142A-B-C or Chemistry 113A-B-C.

Same course as Biochemistry-Molecular Biology 245.

Introduction to molecular modeling and molecular dynamics. Discussion of practical considerations of energy minimization, solvent modeling, structure-based drug design. Practical computer graphics experience.

### 246. Membrane Biochemistry

(3) PARSONS, REICH

*Prerequisites:* Chemistry 142A-B-C.

Same course as Biochemistry-Molecular Biology

246.

Introduction to the structures and roles of lipids and their behavior, liposomes, membrane proteins and kinetics, protein sorting, and signal transduction.

### 251. Post-Translational Protein Processing

(4) WAITE

*Prerequisite:* MCDB 108A or MCDB 218A or Chemistry 142A or equivalent. Lecture, 3 hours; discussion, 1

hour.

Same course as MCDB 245.

Structure/function relationships in interesting macromolecules isolated from marine organisms. Focus is on well-characterized pathways from horseshoe crabs, abalones, mussels, and fish as well as others.

### 254A-B. Magnetic Resonance in Biological Systems

(3-3) STAFF

Prerequisite: graduate standing. Lecture, 3 hours.

A discussion of the theory and practice of magnetic resonance methods used in studies of proteins, nucleic acids, and polysaccharides.

### 257. Strategy in Organic Synthesis and Methodology

(3) LIPSHUTZ, LITTLE, PETTUS

Prerequisite: advancement to candidacy. Lecture, 3 hours.

Primarily intended for graduate students in the organic division.

The design, development, presentation, and organization of new concepts for organic synthesis and methodologies is an essential skill for graduate students. Course focuses on advances in these areas and developing skills for writing and presenting research proposals. (W,S)

### 258. Mechanisms of Organic and Enzymatic Reactions

(3) STAFF

Prerequisite: consent of instructor. Lecture, 3 hours.

Formal presentation of seminars on recent literature dealing with mechanisms of organic and enzymatic reactions accompanied by open discussion of the topics considered.

### 259. Selected Topics in Biological Chemistry

(1-4) STAFF

Prerequisite: consent of instructor.

Same course as BMB 259. Course may be repeated with a different topic (18 units maximum). Lecture, 1 to 4 hours.

Selected topics from bio-organic, biophysical, or biological chemistry. The contents of this course will vary.

### 261. Enzyme Mechanisms

(3) PARSONS, REICH

Prerequisites: Chemistry 142A-B-C or MCDB 108A-B-C. Lecture, 3 hours.

Chemistry, structure, and function of enzymes; theory, experimental design, and data analysis. Enzyme models and non-classical enzymes.

### 262A. Drug Design

(3) KAHN, REICH

Lecture, 3 hours.

Sources for new drugs. Biochemistry of diseases. Target validation techniques. Mechanism of action of enzymes and receptors. Enzyme inhibition and receptor binding studies. Structure based drug design: conformational analysis, docking and binding affinity calculations. Course also teaches proposal writing skills.

### 262B. Drug Design

(3) KAHN, REICH

Lecture, 3 hours.

Medicinal chemistry for lead optimization, combinatorial synthesis, quantitative structure-activity relationships, pharmacokinetics, drug metabolism and toxicity, pharmacogenomics. Drugs that interact with DNA and protein drugs. Clinical trials, intellectual property in drug design. Students develop their own drug design project.

### 263. Arrow Pushing in Organic Chemistry

(2) STAFF

Prerequisite: graduate standing.

Recommended preparation: a previous or current course in one of the following; Chemistry 227, 228, 229 or 233.

Covers the arrow pushing formalism and addresses molecular rearrangements and other organic reactions from this perspective.

### 267. Transition Metal Oxides

(3) CHEETHAM

Same course as Materials 203. Lecture, 3 hours.

Introduction to transition metal oxides. Ligand field theory. Structural basis of magnetism.

### 268A. Advanced Inorganic Chemistry

(3) FORD, STUCKY

Prerequisite: consent of the chemistry graduate advisor.

Not open for credit to students who have completed Chemistry 173A, or 272A. Lecture, 3 hours.

Electronic structure of atoms and molecules. Models for bonding in molecules of nontransition and transition elements. Applications of symmetry to bonding, electronic and vibrational spectroscopy. Stereochemistry of transition metal complexes and introduction to organometallics.

### 268B. Advanced Inorganic Chemistry

(3) FORD, STUCKY

Prerequisite: consent of the chemistry graduate advisor.

Not open for credit to students who have completed Chemistry 173B, or 272B. Lecture, 3 hours.

Structures of ordered crystalline solids, x-ray crystallography. Introduction to solid state chemistry, inorganic materials and chemical catalysis. Bioinorganic chemistry.

### 270. Graduate Seminar in Inorganic/Analytical Chemistry

(2) STAFF

Prerequisite: graduate standing. Seminar, 2 hours.

Seminars on current research topics in Inorganic/Analytical Chemistry presented by faculty, visiting scholars, and postdoctoral and senior graduate students.

### 271. Bioinorganic Chemistry

(3) BUTLER

Prerequisites: Chemistry 173A-B. Lecture, 3 hours.

Selected topics in bioinorganic chemistry and metallochemistry with a major focus on recent developments. Topics will include discussions of metalloproteins and corresponding model compound investigations. Emphasis will be on reaction mechanisms and spectroscopic properties of metal sites.

### 272. Reaction Mechanisms in Organometallic and Inorganic Chemistry

(3) BUTLER, FORD

Prerequisites: Chemistry 173A-B. Lecture, 3 hours.

Discussion of chemical reaction mechanisms. Emphasis will be on fundamental reactions of metal compounds such as substitution, addition, elimination, and redox reactions for homogenous catalysis mechanisms and other complex systems.

### 273. Structural Inorganic Chemistry

(3) CHEETHAM, STUCKY

Prerequisites: Chemistry 173A-B and 175. Lecture, 3 hours.

The use of x-ray and neutron scattering to characterize solid state materials. Subjects include the crystal unit cell, space groups, structure determination and refinement. It is recommended that the student have an elementary introduction to vectors, matrices, and Fourier series.

### 274. Solid State Inorganic/Materials

(3) CHEETHAM, STUCKY

Prerequisites: Chemistry 173A-B.

Same course as Materials 274. Lecture, 3 hours.

An introductory course describing the synthesis, physical characterization, structure, electronic properties, and uses of solid state materials. (Normally offered in alternate years.)

### 275. Physical-Inorganic Chemistry

(3) FORD

Prerequisite: consent of the chemistry graduate advisor. Lecture, 3 hours.

Bonding theory, thermodynamics, and structure of inorganic compounds. Applications of physical techniques to the study of inorganic (and organometallic) reactions and their mechanisms.

### 276. Photochemical and Photophysical Properties of Inorganic and Organometallic Compounds and Materials

(3) FORD

Prerequisites: Chemistry 173A-B. Lecture, 3 hours.

Discussion of the mechanisms of fundamental

physical and chemical events which follow absorption of light by inorganic or organometallic chromophores. Consideration of homogeneous and heterogeneous systems as well as the design and operation of photo-optical and photoelectrical devices.

### 279. Selected Topics in Inorganic Chemistry

(1-4) STAFF

Prerequisite: consent of instructor.

Course may be repeated with a different topic (18 units maximum). Lecture, 3 hours.

This course is designed to reflect recent developments in inorganic chemistry.

### 284. Chemical Literature

(2) HUBER

Prerequisite: consent of the chemistry graduate advisor only. Lecture, 3 hours.

Lectures and exercises on the literature and other information resources of use in chemistry. (W)

### 290. Seminar in Chemistry and Biochemistry

(2) STAFF

Prerequisite: consent of instructor.

May be repeated for credit. Lecture, 1 hour.

Presentation of seminar required of all chemistry graduate students. (F,W,S)

### 293. Faculty Research Seminar

(2) STAFF

Prerequisite: consent of instructor. Seminar, 2 hours.

A series of seminars by departmental faculty describing their active research projects. (F)

### 501A. Techniques of Teaching and Laboratory Class Supervision

(2) VAN KOPPEN

Prerequisite: graduate standing.

SIU grade. Discussion, 1 hour.

An initial 2-3 day workshop is followed by weekly discussion. Topics covered: laboratory organization, supervising experiments, safety, presentations, leading discussions, writing quizzes, advising, and grading. Aimed at new teaching assistants. (F)

### 594. Special Topics

(1-4) STAFF

Variable hours.

Special seminar on research subjects of current interest.

### 595. Group Studies

(2) AUE, LIPSHUTZ, LITTLE, PETTUS

Critical review of research in selected fields. Regular meetings are held in which the student presents for discussion information from the recent chemical literature.

### 596. Directed Reading and Research

(2-12) STAFF

Same course as Biochemistry-Molecular Biology 596CH. No more than half the units necessary for the master's degree may be taken in Chemistry 596. Tutorial, 2-8 hours.

Individual tutorial. Instructor usually the student's major professor. A written proposal for each tutorial must be approved by the department chair. Each faculty member has a unique number designation.

### 597. Individual Study for Master's Comprehensive Examinations and Ph.D. Examinations

(1-3) STAFF

No unit credit allowed toward advanced degree(s). SIU grade. Variable hours.

Instructor should be the student's major professor or chair of the doctoral committee.

### 598. Master's Thesis Research and Preparation

(1-12) STAFF

No unit credit allowed toward advanced degree. SIU grade. Variable hours.

Only for research underlying the thesis, writing the thesis. Instructor should be the chair of the student's thesis committee.

### 599. Ph.D. Dissertation Research and Preparation

(1-12) STAFF

SIU Grade. Variable hours.

Only for research underlying the dissertation, writing the dissertation. Instructor should be the chair

of the student's doctoral committee.

 Website: [www.chicst.ucsb.edu](http://www.chicst.ucsb.edu)

Department Chair: *Juan Vicente Palerm*

## Faculty

**Gerardo Aldana**, Ph.D., Harvard University, Associate Professor (Maya hieroglyphic history, Mesoamerican art, experimental archaeology, science studies, culture theory)

**Ralph Armbruster-Sandoval**, Ph.D., UC Riverside, Associate Professor (globalization, labor, social movements, race and ethnic relations, Latin American studies and community/urban studies)

**Edwina Barvosa**, Ph.D., Harvard University, Associate Professor (contemporary social and political theory, intellectual history, Chicana/o studies)

**D. Ines Casillas**, Ph.D., University of Michigan, Assistant Professor (U.S. Spanish-language media, radio/sound practices, immigration policy, gender, popular culture)

**Mario T. García**, Ph.D., UC San Diego, Professor (Chicano history, race and ethnicity, southwestern history, autobiography, Latino religion)

**María Herrera-Sobek**, Ph.D., UC Los Angeles, Associate Vice Chancellor for Diversity, Equity and Academic Policy; Professor, Luis Leal Endowed Chair in Chicano Studies (literature, gender, cultural studies, oral traditions, folklore, feminist theory)

**Francisco A. Lomelí**, Ph.D., University of New Mexico, Professor (Chicano literature, literary history, cultural studies, border studies, language)

**Horacio N. Roque Ramírez**, Ph.D., UC Berkeley, Assistant Professor (queer/LGBT community history and theory, Central American migrations studies, oral history theories and methods, popular cultures, creative writing and narrative)

**Chela Sandoval**, Ph.D., UC Santa Cruz, Associate Professor (cyber and millennial studies, third space feminism, critical media theory and production, oppositional consciousness and social movement)

**Tara J. Yosso**, Ph.D., UC Los Angeles, Associate Professor (sociology of education, critical race theory, Latina/o critical race theory, visual sociology)

## Emeriti Faculty

**Professor Yolanda Broyles-Gonzalez**, Ph.D., Stanford University, Professor Emeritus (Chicano and German studies, gender and performance, oral traditions, Native American studies, cultural studies, music)

**Professor Luis Leal**, Ph.D., University of Chicago, Professor Emeritus (Mexican, Chicano, and Latin American Literature)

## Affiliated Faculty

**Rudy Busto** (Religious Studies)

**Manuel Casas** (Education)

**Leo Cabranes-Grant** (Theatre & Dance/  
Spanish & Portuguese)

**Sarah Cline** (History)

**Richard Duran** (Education)

**Carl Gutierrez-Jones** (English)

**Ellie Hernandez** (Feminist Studies)

**Gaye T. Johnson** (Black Studies)

**Claudine Michel** (Black Studies)

**Carlos Morton** (Theater & Dance)

**Juan Vicente Palerm** (Anthropology)

**G. Reginald Daniel** (Sociology)

**Victor Rios** (Sociology)

**Denise Segura** (Sociology)

**Gabriela Soto-Laveaga** (History)

**Roberto Strongman** (Black Studies)

**Ines Talamantez** (Religious Studies)

**Carolyn Pinedo Turnovsky** (Sociology)

**Zaragoza Vargas** (History)

**Cristina Venegas** (Film Studies)

**Howard Winant** (Sociology)

The Department of Chicana and Chicano Studies is an interdisciplinary undergraduate program that fosters a historical, political, social, and cultural understanding of the heterogeneous Chicano and Chicana experience. Chicana and Chicano Studies builds upon the critical inquiry of traditional disciplines, as well as upon a host of innovative approaches that have surfaced over the last few decades, most notably in gender, ethnic, sexuality, border, and global studies. Chicana and Chicano Studies thus actively advocates the crossing of disciplinary boundaries and encourages the creative interweaving of methods, providing a unique alternative to traditional forms of intellectual inquiry.

In the twenty-first century, the Chicana/Latina and Chicano/Latino peoples of the United States and particularly of California are situated at the forefront of a new multicultural, multilingual force that is rapidly changing the face of the Americas. Given its interdisciplinary nature, the Department of Chicana and Chicano Studies is uniquely positioned to comprehend the diverse knowledge, experience, and cultures resulting from these millennial transformations. The academic program integrates the study of Chicana/o populations in the United States with studies of history, consciousness, political institutions, social systems, and forms of cultural expression. Many Chicana and Chicano Studies courses address contemporary issues that arise in response to new political, eco-

nomie, and cultural realities: changing modes of identity; new understandings of gender, sexuality, and social movements; immigration and bi-national populations; and growing trends toward globalization, transnationalization, and transculturation. Courses critically engage themes and methods capable of speaking about race, culture, power, sexuality, gender, class, and social transformation.

The major in Chicana and Chicano Studies is designed to provide a broad liberal arts education for the twenty-first century. The goals of the major are as follows: (1) to encourage participatory and student-centered learning so that students become agents of knowledge and change; (2) to motivate students to examine their own political, economic, social, and cultural positions; (3) to empower students to move beyond being objects of study toward being subjects in their own social realities; (4) to enable majors to become conversant in historical and structural formations of power pertaining to processes such as racism, sexism, historicity, gender, race relations, inter-ethnic connections, and dominant social theories; (5) to prepare all students to inhabit and contribute to an increasingly diverse and transnational society which demands new modes of interaction.

The major can be used as preparation for a career in such fields as teaching and education, counseling and social services, health and human services, public service, law, and business. The major also provides excellent undergraduate preparation for students who intend to do graduate work in the field of ethnic-American studies or associated areas in the social sciences, humanities, or arts.

Undergraduate majors, incoming students, and prospective majors are invited to consult the departmental undergraduate academic advisor about all aspects of planning a program in Chicana and Chicano Studies. Detailed descriptions of course offerings are available in the department office prior to the registration period, along with several guides and information sheets for majors and prospective majors.

Students with a bachelor's degree in Chicana and Chicano Studies who are interested in pursuing a California Teaching Credential should contact the credential advisor in the Graduate School of Education as soon as possible.

## Senior Honors Program

The Department of Chicana and Chicano Studies commonly offers honors sections in lower-division survey courses and selected upper-division courses. Upper-division College Honors Program students may also design their own contract courses and independent studies courses with Chicana and Chicano Studies faculty. In addition, the Chicana and Chicano Studies Department offers a departmental honors program. Candidates for departmental honors must be in residence at UCSB for at least one year (three quarters) as Chicana and Chicano Studies majors, have a minimum overall GPA of 3.0, and a minimum 3.5 GPA in the major; special circumstances will be considered for those who fall short of the GPA requirement. During their senior year, students work closely with department faculty to prepare an honors thesis, and enroll in Chicana/o Studies 197HA-HB-HC, which is designed to facilitate research

and writing of the thesis. Honors program graduates receive the award of distinction in their major upon graduation.

## Undergraduate Program

### Bachelor of Arts—Chicana and Chicano Studies

**Preparation for the major.** Chicana/o Studies 1A-B-C; Spanish 3 or equivalent.

Upper-division major. Forty-four upper-division units emphasizing seven sub-areas, selected from the following:

- A. Global, Postcolonial, and Border Studies—One course (4 units). Chicana/o Studies 108, 109, 141, 142, 171, 173, 177, 178A, 185, 189, 189B, 189C.
- B. Literature, Culture, and Representation—Two courses (8 units). Chicana/o Studies 103, 117, 119, 124, 125B, 130, 137, 138, 138H, 139, 143, 146, 147, 148, 150, 158, 160, 162, 162A, 162B, 162C, 180, 180H, 181, 182, 183, 184A, 184B, 184AH, 185, 185A, 186A, 188C.
- C. Politics, History, and Community—Two courses (8 units). Chicana/o Studies 107, 108, 109, 112, 120, 126, 132, 133, 134, 135, 135H, 136, 140, 144, 146, 147, 148, 153, 153H, 154F, 166, 168A-B, 168E, 168EH, 168F, 168FH, 168GQ, 168I, 168LA, 168LB, 168P, 168R, 168S, 170A, 171, 172, 174, 174A, 175, 179, 179A.
- D. Critical and Cultural Theory—One course (4 units). Chicana/o Studies 110, 114, 135, 149, 149A, 150, 151, 151H, 167, 167H, 174A, 176, 179, 185.
- E. Gender and Sexuality Studies—One course (4 units). These courses are also listed in Areas A through D but may not be applied to more than one area. Chicana/o Studies 148, 149, 149A, 151, 151H, 153, 153H, 154F, 167, 167H, 184A, 184AH.
- F. Senior seminar: Chicana/o Studies 193—One course (4 units). The senior seminar, offered three times a year, must be taken in the senior year.
- G. Electives—(12 units). Three upper-division Chicana and Chicano Studies courses including 192, 195A-B-C-D, 196H, 197HA-HB-HC, 198, and WRIT 109CS. Up to 8 units of closely related fields outside the major may be applied by petition.

## Graduate Program

The Chicana/o Studies Ph.D. program engages students in the interdisciplinary study of Chicana/o lives, cultures, and political struggle. Students examine Chicana/o experiences in their most broad, comprehensive sense, through the study of politics, philosophy, history, literature, religion, art, psychology, sociology, education, oral traditions, anthropology, mass media, film, environment, health, and music as well as other intellectual, scholarly, and artistic traditions. International and Hemispheric Studies allow students to explore the interlocking connections between Latin America, the Caribbean, and U.S. Indigenous, Mestizo/a, Latina/o, and Chicana/o communities. The main goal of the M.A./Ph.D. program is to educate scholars as interdisciplinary researchers equipped to work with a broad range of contents, perspectives, approaches, and methodologies. The M.A./Ph.D.

degree in Chicana/o Studies challenges students to understand struggles toward social justice by linking theory with practice, scholarship with teaching, and the academy with the community. The program's intellectually rigorous course of study is designed to train students to meet the challenges of the 21st century.

### Admission

The department does not admit students who are only interested in pursuing a terminal M.A. The M.A. degree is earned as one of the requirements for the Ph.D. Students in the Ph.D. program must complete the requirements for the master's degree before continuing toward the doctorate.

### Degree Requirements

Students in the M.A. program are required to complete a degree requirements include total of 44 units, including the department's core courses curriculum (24 units) and a minimum of five Chicana/o Studies subfield seminars (20 units) with a cumulative GPA of at least 3.0. In addition, an M.A. qualifying paper is also required. Two years is the normative time to complete the master's degree.

### Doctor of Philosophy—Chicano Studies

#### Admission

All applicants must fulfill the general UCSB university requirements as described in the chapter titled "Graduate Education at UCSB" for admission to graduate status. To be considered for admission to the Chicana/o Studies Ph.D. program, a student must show a strong aptitude for scholarly work and demonstrate intellectual maturity. Students admitted to the graduate program would normally have completed an undergraduate major in Chicana/o Studies or a closely related discipline. Admission to the program is based on (1) academic transcripts, (2) statement of purpose, (3) letters of recommendation, (4) Graduate Record Examination scores, and (5) a writing sample.

### Degree Requirements

Candidates for the Ph.D. degree must complete at least 56 graduate units. Students must complete the core curriculum (24 units), as follows: Chicana/o Studies 200A-B-C, 210, 220, 230. Students must also complete 32 units of additional coursework, as follows:

**Chicana/o Studies Subfield Seminars (24 units):** Six graduate seminars in Chicana/o Studies focused on two chosen subfields selected from four programmatic subfields: (1) aesthetic and cultural studies, (2) social and political institutions, (3) global and transnational studies, (4) critical race, gender, and sexuality studies.

**Seminars outside Chicana/o Studies (8 units):** Two graduate seminars that complement students' chosen subfields, taken outside the Department of Chicana/o Studies.

Students who are admitted to the doctoral program in Chicana/o Studies with an M.A. degree must complete all the requirements for the Chicana/o Studies Master of Arts degree. These students may be able to transfer up to three graduate courses (12 units) from another institution toward the additional course re-

quirements.

A fluent reading knowledge of Spanish or another language relevant to a chosen area of study is also required. After satisfying course requirements, students are eligible to take their doctoral qualifying examination. Upon advancement to candidacy, students begin work on the dissertation. Expected time to Ph.D. candidacy is no more than nine quarters. Full-time students normally complete the requirements for a Ph.D. within six years of full-time work.

## Chicana & Chicano Studies Courses

### LOWER DIVISION

#### 1A-B-C. Introduction to Chicana/o Studies (4-4-4) STAFF

Introduction to the historical and contemporary development of the Chicana/o community. Course is interdisciplinary in nature. Focuses by quarter on A. history, B. gender, and C. culture.

#### 7A. Aztec History (4) ALDANA

An introduction to Aztec culture from its mythological origins to contact with Europe. Consideration of statecraft, religion, art, and science from historical and archeological perspectives.

#### 7B. Beginning Nahuatl (4) ALDANA

An introduction to the reading of sixteenth-century Nahuatl documents. Emphasis is on language acquisition, with some reference made to indigenous codices.

#### 9A. Classic Maya History (4) ALDANA

An introduction to ancient Maya culture through its history recovered from hieroglyphic texts. Emphasis is on political history, but religion, art, and science are considered as well.

#### 9B. Maya Hieroglyphic Writing (3) ALDANA

An introduction to the classic Maya hieroglyphic writing system. Treatment balances language acquisition with methods for interpreting hieroglyphic records.

#### 9BL. Maya Hieroglyphic Writing Lab (1) ALDANA

*Prerequisite: concurrent enrollment in Chicana/o Studies 9B.*

Laboratory accompanying Maya Hieroglyphic Writing course. Explores the various methods and media of hieroglyphic writing.

#### 12. Introduction to Chicana/o Spanish (4) LOMELI

*Prerequisite: Spanish 3.*

Introduces students to Chicana Spanish and helps them to improve oral and written skills, distinguish between standard speech and popular variants, and to learn the Chicana Spanish lexicon.

#### 51. U.S. Third World Feminist Politics (4) SANDOVAL

Introduces U.S. third world feminism from an interdisciplinary perspective. Explores that movement's cultural, political, and artistic rise to prominence. Identifies a coalitional consciousness that crosses differing nations, genders, races, sexualities, classes, and cultures as expressed by the international political class "women-of-color."

#### 99. Independent Studies (1-4) STAFF

*Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined.*

Independent study under the guidance of a faculty member in the department. Course offers students the opportunity to undertake independent study or work in a group.

**UPPER DIVISION****103. Chicana/o and Latina/o Media and Popular Culture****(4) CASILLAS***Prerequisite: CHST 138*

Consumption of popular culture in relation to U.S. ethnic identity with an emphasis on telenovelas, "border" films, U.S. Spanish-language music sales, etc.

**107. Politics of Language, Accent, and Translation****(4) CASILLAS***Prerequisite: SPAN 3 or equivalent*

How language politics are magnified in public policy, public culture, and the mainstream media; how accents work to racialize Latinos.

**108. Transnational Chicana and Chicano Studies****(4) CASILLAS***Prerequisite: consent of instructor*

How Chicana/o scholars position themselves within the interdisciplinary field of transnational literature as ethnic U.S. subjects; reviews patterns and scholarship of transnational migration, media, mothering, etc.

**109. Indigenous People and the Nation State in the Americas****(4) PALERM**

The changing relationship between indigenous people and the state. Compare the differences and similarities between indigenous peoples' mobilizations in the cases of Canada, USA, Ecuador, Chile, Guatemala, Bolivia and Mexico.

**110. Research Methods in Chicana/o Studies****(4) STAFF***Prerequisite: Chicana/o Studies 1A or 1B or 1C or upper-division standing.*

Using Chicano studies topics, the course will introduce students to: (1) the epistemology of scientific inquiry (its history and contemporary movements); (2) the strengths and weaknesses of quantitative and qualitative methodologies; and (3) the mechanisms of research design (transforming an idea into a research plan).

**112. Methodology of the Oppressed****(4) SANDOVAL***Prerequisite: Chicana/o Studies 1A or 1B or 1C or upper-division standing.*

"Minority discourses" employ in various modes what can be defined as "the theories and methodologies of the oppressed." What are these theories and methods, and how are they encoded in literature, theory, ideology, and popular culture?

**114. Cultural and Critical Theory****(4) SANDOVAL***Prerequisite: Chicana/o Studies 1A or 1B or 1C or upper-division standing.*

Introduction to the various modes, techniques, terminologies, and methodologies fundamental to Cultural Studies.

**117. Aztec and Maya Mythologies****(4) ALDANA***Prerequisites: Chicana/o Studies 7A-B or 9A-B.*

Explores ancient Mesoamerican mythology in both its indigenous and modern Chicana representations from archeological, historical, and Chicano perspectives. Emphasizes consideration of the various forms by which mythologies are maintained.

**119. Mesoamerican Art and Artists****(4) ALDANA**

Introduction to public and private art in Mesoamerican cultures. Considers the social and political place of artists and their products. Focus is on the Classic Maya, but course surveys Olmec, Teotihuacan, Mixtec, and Aztec art as well.

**120. Indigenous Mestizos of Ancient Mesoamerica****(4) ALDANA***Prerequisite: Chicana/o Studies 1A or 1B or 1C.*

Course begins with a comparison of the meanings of mestizaje in colonial and modern times. We then look at case studies from classic and postclassic Mesoamerica that both corroborate and extend our understanding of this cultural phenomenon.

**124. Introduction to U.S. Chicana/o and Latina/o Public Art****(4) STAFF***Prerequisite: Chicano Studies 1A or 1B or 1C.*

Explores examples of public and site-specific artwork created by Chicano/Latino artists challenging museum and gallery spaces. The history of displacement and marginalization traditionally suffered by Chicano/Latino communities had lead these artists to create public art as a form of decolonization.

**124L. Introduction to U.S. Chicana/o and Latina/o Public Art Lab****(1) STAFF**

After visiting the Chicana/Latino museum and gallery spaces, the lab supports students in producing their own public and site-specific artwork. Other students describe, arrange, and curate a gallery showing by the end of the quarter.

**125B. Contemporary Chicano and Chicana Art****(4) STAFF***Prerequisite: upper-division standing.*

*Not open for credit to students who have completed Art History 125B or 146.*

Examination and appraisal of the Chicana/o art movement within the context of contemporary American art and the contemporary art of Mexico. A survey of major Chicano and Chicana artists and developments in Chicano painting, sculpture, graphic, and conceptual art from the late 1960's to the present.

**126. Educating the Native****(4) PALERM, SALDIVAR**

We look at different educational projects, such as Indian boarding schools, English-only laws, the "indirect rule" of the British colonies. We address the not-always-clear line between education as a form of social control or as a form of liberation.

**130. Imaging (Imagining) Chicanas/os: A Critical Media Literacy Seminar****(4) YOSSO***Prerequisite: upper-division standing.*

Presents a critical historical overview of mainstream entertainment media images of Chicanas and Chicanos, with an emphasis on educational impact of such portrayals. Students examine how historical, social, psychological, political, and economic forces construct imaginary Chicanas/os through media images.

**132. A History of Chicana/o Education****(4) YOSSO***Prerequisite: upper-division standing.*

Presents a theoretical and empirical overview of Chicana/o educational issues in the U.S. Examines how historical, social, political, and economic forces impact Chicana/o educational attainment and achievement. Fieldwork component encompasses students conducting research projects in Chicana/o educational settings.

**133. Struggles for Equality in Chicana/o Education****(4) YOSSO***Prerequisite: upper-division standing.*

Investigates Chicana/o struggles for educational equality in the U.S. Presentations, discussions, written assignments analyze historical and contemporary examples of Chicana/o communities responding to and resisting subordination based on intersections of race with gender, class, language, immigrant status, and sexuality.

**134. Chicana/o Curricula K-12: Theory Into Practice****(5) YOSSO***Prerequisite: upper-division standing. Lecture, 3 hours; fieldwork, 3 hours.*

*Fieldwork component includes a one hour per week discussion section.*

Addresses academic literature in bilingual and multicultural education in the context of hands-on experience in Chicana/o educational settings. Fieldwork encompasses students working as part of a research team in Santa Barbara area schools to link academic knowledge with K-12 practice.

**135. Critical Race Theory in Chicana/o Education****(4) YOSSO***Prerequisite: upper-division standing.*

Examines Critical Race Theory (CRT) as an emerging analytical framework in the field of education. Course investigates how a CRT framework might address and challenge the impacts of race, class, gender, language, immigrant status, accent, and sexual orientation on Chicana/o, Latina/o educational attainment and achievement.

**135H. Critical Race Theory in Chicana/o Education (Honors)****(4) YOSSO***Prerequisite: Upper-division standing; and consent of instructor.*

*Not open for credit for students who have completed CH ST 135.*

Lecture is concurrent with Chicana/o Studies 135, along with a weekly honors seminar, requiring additional assignments and intensive discussion of the readings. Intended for highly motivated and well prepared students. (F, W, S)

**136. Oral History: Theories and Methods****(4) ROQUE RAMÍREZ***Prerequisite: upper-division standing.*

Survey of oral history as a theoretical and methodological practice, including the "testimonio" tradition. Through readings, discussions, and a small field studies component, the politics of memory and truth, and the challenges and pleasures of oral history work are considered.

**137. Chicana/o Oral Traditions****(4) STAFF***Prerequisite: upper-division standing.*

Introduces students to Chicana/o oral traditions. Contemporary forms of Chicano oral poetry, oral narrative, and drama are examined in addition to more ephemeral forms such as cabula, choteo, joke-telling, or dichos.

**138. Barrio Popular Culture****(4) CASILLAS***Prerequisite: Upper-division standing.*

Explores various manifestations of popular and mass culture in Chicano urban and semi-rural communities throughout the Southwest. Both secular and religious cultural phenomena are analyzed (lowriders, saints, music, etc.). Relationships to mainstream culture is examined.

**138H. Barrio Popular Culture (Honors)****(4) CASILLAS***Prerequisite: Upper-division standing; and consent of instructor*

*Not open for credit for students who have completed Ch St 138.*

Lecture is concurrent with Chicana/o Studies 138, along with a weekly honors seminar, requiring additional assignments and intensive discussion of the readings. Intended for highly motivated and well prepared students. (F, W, S)

**139. Chicana/o Native American Heritage****(4) STAFF***Prerequisite: Chicano Studies 1A or 1B or 1C or upper-division standing.*

Explores the intense recourse to the Native American heritage during the Chicano cultural renaissance of the 1960s and 1970s. The rediscovery of the native ancestral cultures will be analyzed in poetry, prose, drama, and graphic arts.

**140. Chicana/o Mexican Cultural Heritage****(4) STAFF***Prerequisite: Chicano Studies 1A or 1B or 1C or upper-division standing.*

A panoramic view of present-day Chicana/o traditions analyzed from a Mexican cultural heritage perspective in order to comprehend and appreciate the uniqueness and difference of present-day Chicana/o culture, its achievements, and contribution to the overall American culture.

**141. Central Americans in the United States****(4) ROQUE RAMÍREZ***Prerequisite: upper-division standing.*

Provides an interdisciplinary historical overview

of Central American migrations to the U.S., and a cultural and political analysis of resulting individual and group identities. Transnationalism, diasporas, politics, and community building among Central Americans, or “Central American-Americans” are explored.

#### 142. Salvadoran Diasporas

(4) ROQUE RAMÍREZ

*Prerequisite:* upper-division standing.

Reviews of Salvadoran people’s movements across time and space, conscious of the intersection of cultural, social, and economic processes at individual and collective levels. Examines this diaspora and the forging of new identities and vision from this new Cuzcatlan.

#### 143. Chicano/a Film Studies

(4) LOMELI

Study of Chicano/a cinema to view film as an art form and projection of the filmmaker. Techniques, messages, and ideology stressed as instruments which propose film truth within the context of Chicano/a experience.

#### 144. The Chicana/o Community

(4) ARMBRUSTER-SANDOVAL, SEGURA

*Prerequisite:* upper-division standing.

Same course as Sociology 144.

Origins of the Chicano in rural Mexico; context of contact; patterns of settlement in the United States; the Chicano community, social structure, and social change; acculturation and generational patterns; community leadership and change.

#### 146. Humor and the Chicana/o Artist

(4) LATORRE

*Prerequisite:* Chicano/a Studies 1A or 1B or 1C.

Though Chicana/o art is often associated with serious political and grassroots movements, the use of humor has been a recurring element in its production. Course examines the various instances of humor, irony, and parody in Chicana/o art.

#### 147. Figuration in Chicana/o Art

(4) STAFF

*Prerequisite:* Chicano Studies 1A or 1B or 1C.

Chicana/o artists often work in a realist style putting great emphasis on the human figure. Class analyzes how Chicana/o artists render the human figure and how their representations of the body reflect or inform the ideology of the Chicano movement.

#### 148. Chicana Art and Feminism

(4) STAFF

*Prerequisite:* Chicano Studies 1A or 1B or 1C or upper-division standing.

An overview of contemporary Chicana art and feminist theory from the late 1960s to the present placed within the context of the Chicano movement and other historical events.

#### 149. Body, Culture, and Power

(4) INDA

*Prerequisite:* upper-division standing.

Exploration of the construction, imaging, and experience of the body in light of modern regimes of power/knowledge. Particular attention is paid to the work of Michel Foucault on disciplinary technologies, medical practices of ab/normalization, and the emergence of bio-power.

#### 149A. Race and Science

(4) INDA

*Prerequisite:* upper-division standing.

Examines the role of science in the construction and management of racialized bodies.

#### 150. Mesoamerican Technology and Ideology

(4) ALDANA

Explores the extent to which communities and individuals can be identified in their production of material cultures. Begins and ends with examples from modern culture, then treats the production of stone tools, ceramics, and stone sculpture in classic Maya culture.

#### 151. De-Colonizing Feminism

(4) SANDOVAL

*Prerequisites:* Chicano/a Studies 1A or 1B or 1C or upper-division standing.

Surveys contemporary forms of feminist consciousness expressed by U.S. women of color. Can

U.S. women of color be considered a political class? What relations exist between women of color across race, culture, sex, and class differences?

#### 151H. De-Colonizing Feminism (Honors)

(4) SANDOVAL

*Prerequisite:* Chicano Studies 1A or 1B or 1C or upper-division standing.

Not open for credit for students who have completed Ch St 151

Lecture is concurrent with Chicana/o Studies 151 along with a weekly honors seminar, requiring additional assignments and intensive discussion of the readings. Intended for highly motivated and well prepared students. (F, W, S)

#### 152. Postcolonialism

(4) ARMBRUSTER-SANDOVAL

*Prerequisite:* Chicano/a Studies 1A or 1B or 1C or upper-division standing.

Exploration of postcolonial theories and their effectiveness as critical tools in discussing Chicano cultural production. Focus on Chicano culture as it creates a counter-discourse to dominant cultural formations. Examined through film, music, visual, performance, and literary arts.

#### 153. Queer Identities, Communities, and Theories

(4) ROQUE RAMÍREZ

*Prerequisite:* upper-division standing.

Examines queer/lgbt community life and death; political and social identities; and multiple gender and sexual expressions. Grounded in narratives of identity and experience, the course explores dimensions of visibility, space, “silence,” and politics of exclusion in queer worlds.

#### 153H. Queer Identities, Communities, and Theories (Honors)

(4) ROQUE, RAMIREZ

*Prerequisite:* Upper-division standing and consent of instructor.

Not open for credit for students who have completed Ch St 153

Lecture is concurrent with Chicana/o Studies 153 along with a weekly honors seminar, requiring additional assignments and intensive discussion of the readings. Intended for highly motivated and well prepared students. (F, W, S)

#### 154F. The Chicana/o Family

(4) SEGURA

*Prerequisites:* upper-division standing.

Same course as Sociology 154F.

Provides an overview of historical and contemporary research on Chicano families in the United States. Changing viewpoints on the character of Chicano families and their implications with respect to policy issues are examined.

#### 158. Spoken Word Art Performance Activism (SWAPA)

(4) SANDOVAL

*Prerequisites:* Chicano/a Studies 1A or 1B or 1C; a prior upper-division course in Chicano/a Studies.

May be repeated for credit to a maximum of 8 units.

Recommended preparation: a prior writing course.

Spoken word/art performance activism (SWAPA) introduces students to a method for reading, writing, thinking, and performing before an audience of peers. This method is based on the shaman-witness ritual proposed by Chicana theorist and writer, Gloria Anzaldúa.

#### 158L. Spoken Word Art Performance Activism (SWAPA) Laboratory

(4) SANDOVAL

*Prerequisites:* concurrent enrollment in Chicano/a Studies 158.

Laboratory accompanies Spoken Word Art Performance Activism (SWAPA) course. Lab focuses on creative production, articulation, and vocal expression.

#### 160. Pre-Colombian Religions, Mexican Religions, and Chicana/o Religions

(4) TALAMANTEZ

A response to present-day indigenous spirituality movement by examining pre-Colombian religions, religion in Mexico, Chicana/o religion, and the impact of Spanish colonization on these traditions. Pilgrimage,

altars, rituals, influence of Aztec philosophy, Mexican and Chicana/o spirituality are examined from a contemporary perspective.

#### 162A-B-C-D. Guerrilla Digital Video

(4-4-4-4) SANDOVAL

*Prerequisites:* Chicano/a Studies 1A or 1B or 1C; two upper-division courses in Chicano/a Studies; consent of instructor.

Low cost digital tools have created a revolution in video. Course explores creative approaches to practical techniques of independent digital video production. Students establish a production strategy by employing “guerrilla tactics” for creative and unconventional uses of digital machineries.

#### 162L. Guerrilla Digital Video Laboratory

(1) SANDOVAL

*Prerequisite:* concurrent enrollment in Chicano/a Studies 162.

Lab for producing guerrilla digital video.

#### 166. Issues in Contemporary Chicana/o and Latina/o Politics

(4) STAFF

*Prerequisite:* Chicano Studies 1A or 1B or 1C or upper-division standing.

Examines various politicized issues relevant to Chicanas/os such as immigrant rights, unauthorized Latina/o residency, Latina/o struggles for LGBT civil rights, English-only movements and nativism, Latina/o political participation, current community and grassroots organizing, and contemporary Chicana/o and Latina/o electoral politics, and urban politics.

#### 167. Chicana Feminisms

(4) BARVOSA

Different feminisms have contributed significantly to contemporary political thought. In this course, students survey the historical development and primary issues of Chicana Feminism, including its practices of political intervention, major writings, and comparisons to other influential feminisms.

#### 167H. Chicana Feminisms (Honors)

(4) BARVOSA

Not open for credit for students who have completed Ch St 167

Lecture is concurrent with Chicano/a Studies 167 along with a weekly honors seminar, requiring additional assignments and intensive discussion of the readings. Intended for highly motivated and well prepared students. (F, W, S)

#### 168A-B. History of the Chicana/o

(4-4) GARCÍA, VARGAS

*Prerequisite:* History 17A or 17B or 17C or Chicano/a Studies 1A or 1B or 1C or upper-division standing.

Same course as History 168A-B.

The history of the Chicanos, 1821 to the present; traces the sociocultural lifeline of the Mexicans who have lived north of Mexico.

#### 168E. History of the Chicana/o Movement

(4) GARCÍA

*Prerequisite:* Chicano/a Studies 1A or 1B or 1C or upper-division standing.

Same course as History 168E.

An examination of the Chicano movement in the United States from the mid-1960s to the mid-1970s. Topics will include the student movement, the farmworker movement, the Plan de Aztlán, the Raza Unida Party, Chicana feminists, the anti-war movement, and Chicana/o Studies.

#### 168EH. History of the Chicano Movement (Honors)

(4) GARCÍA

*Prerequisite:* Chicano Studies 1A or 1B or 1C or upper-division standing.

Not open for credit for students who have completed Chicano Studies 168E

Lecture is concurrent with Chicana/o Studies 168E History of the Chicana/o Movement along with a weekly honors seminar, requiring additional assignments and intensive discussion of the readings. Intended for highly motivated and well prepared students. (F, W, S)

#### 168F. Racism in American History

(4) GARCÍA, ARMBRUSTER-SANDOVAL

*Prerequisite:* History 17A or 17B or 17C or Chicano/a Studies 1A or 1B or 1C or Asian American Studies 1 or

2 or Black Studies 1 or 2 or 5 or 6 or 20.

Same course as History 168F.

Examines racism as a major ideological force in defining American society from the colonial era to the 1980s. Major focus is in the changing nature of racism as ideology as well as the relationship of racism to specific minority groups such as Afro-American, Native American, Chicanos, and Asian-American.

### 168GQ. Minority Autobiography and United States History

(4) GARCÍA

Prerequisite: Chicana/o Studies 1A or 1B or 1C or History 17A or 17B or 17C.

Same course as History 168GQ.

Seminar utilizes autobiographical or life-stories texts by U.S. minority writers to better understand the diversity of U.S. history and the racialized ethnic experience.

### 168I. Latina/o Autobiography and History

(4) GARCÍA

Prerequisite: Chicana/o Studies 1A or 1B or 1C or upper-division standing.

Same course as History 168I.

Examines a diverse number of Latina/o autobiographical texts that reflect the changing nature of the Latina/o historical experience. Topics to be covered include issue of race, class, gender, immigration, labor, politics, religion, and culture.

### 168LA. History of Chicano and Chicana Workers from the Nineteenth Century to the Early 1930's

(4) VARGAS

Prerequisite: History 168A or 168B or Chicana/o Studies 168A or 168B.

Not open to students who have taken Chicana/o Studies 194 or History 168LA.

History of Chicana/o workers from the late nineteenth century to the early Great Depression, focusing on immigration, regional labor migrations, class formation, unionization, and work lives. The history of Chicana/o workers is examined within the framework of U.S. labor history.

### 168LB. History of Chicana/o Workers from the Late 1930's to the Present Era

(4) VARGAS

Prerequisite: History 168A or 168B or 168LA or Chicana/o Studies 168A or 168B or 168LA.

Not open to students who have taken History 168LB.

History of Chicana/o workers from the late 1930's to the present era, focusing on labor struggles, union organizations, civil rights politics migration and immigration, and work. The history of Chicana/o workers is examined within the framework of U.S. labor history.

### 168P. Proseminar in Chicana/o History

(4) GARCÍA

Prerequisite: History 168A or 168B or Chicana/o Studies 168A or 168B.

Same course as History 168P. May be repeated for credit to a maximum of 8 units.

Studies in selected aspects of Chicano history with an emphasis on social and economic history.

### 168R. Latino Religious Traditions in Historical Perspective

(4) GARCÍA

Same course as History 168R and Religious Studies 124R.

Focuses on the role of religion in the Chicano/Latino historical experience. Includes pre-Colombian traditions, Spanish colonial traditions, religion of the U.S.-Mexico borderlands, immigrant religious traditions, the changing nature of Latino religions in the twentieth century.

### 168S. Latino Leadership Traditions

(4) GARCÍA

Prerequisite: Chicana/o Studies 1A or 1B or 1C or upper-division standing.

Focuses on the issue of leadership in the Chicano/Latino experience. A historical as well as a contemporary perspective is utilized. Leadership includes politics, community action, labor, academics, and cultural activities.

### 170A. Chicano Political Organizing: Proseminar in Theory & History

(4) ARMBRUSTER-SANDOVAL, BARVOSA

Prerequisite: Upper-division standing.

An in-depth examination of the theory and practice of various forms of political organizing. Case studies focus on Chicano/a political organizing in the post-war period with attention to grassroots community organization, electoral politics, and cultural production.

### 170B. Chicano Political Organizing: Conference Course & Practicum

(4) ARMBRUSTER-SANDOVAL

Prerequisite: Chicana/o Studies 170A or upper-division standing.

Develop and conduct a field research project on a local Chicana/o political organization, formulate their research into scholarly presentation for discussion at a bi-monthly conference meeting attended by students, faculty, and other guest speakers.

### 171. The Brown/Black Metropolis: Race, Class, and Resistance in the City

(4) ARMBRUSTER-SANDOVAL

Prerequisite: upper-division standing.

Traces the transition of Browns/Blacks from a rural to urban population and examines trends in family size, language usage, segregation and social inequality. Issues of urban decay and community conflict are also examined.

### 172. Law and Civil Rights

(4) STAFF

Prerequisite: Chicana/o Studies 1A or 1B or 1C or upper-division standing.

Survey of recent state and federal laws and court decisions affecting the Chicano community. Special consideration will be given to landmark cases and decisions. Analysis of opposing views on each case in a historical context.

### 173. Immigrant Labor Organizing

(4) ARMBRUSTER-SANDOVAL

Prerequisite: Chicana/o Studies 1A or 1B or 1C.

Status of growing immigrant population in the counties of Ventura, Santa Barbara, and San Luis Obispo and linkages to agricultural and services unions.

### 174. Chicana/o Politics

(4) BARVOSA

Prerequisites: consent of instructor.

Same course as Political Science 174.

Political life in the barrio, political behavior of the Chicano community, and representation of Chicanos by elected officials and interest groups.

### 174A. The Political Philosophy of Cesar Chavez

(4) BARVOSA

Prerequisite: Chicana/o Studies 1A or 1B or 1C.

Surveys the political work and philosophy of Cesar Chavez. Elements of his philosophy covered include approaches to race, class, gender, and diversity, basic liberal principles, religious faith and spirituality, and his commitment to nonviolence.

### 176. Theories of Social Change and Chicano Political Life

(4) BARVOSA, ARMBRUSTER-SANDOVAL

Prerequisite: upper-division standing.

Introduction to classical and contemporary theories of social and political change. Students apply these theoretical frameworks toward understanding specific cases of social and political transformation and continuity which have affected Chicanos/as during the twentieth century.

### 177. Globalization and Transnational Social Movements

(4) ARMBRUSTER-SANDOVAL

Prerequisite: Chicana/o Studies 1A or 1B or 1C.

Analysis of the globalization of the world economy and the social and economic consequences of this process. Examination of the transnational social movements that emerged in response to globalization. Emphasis on Mexico and Central America and role of Chicanos in these movements.

### 178A. Global Migration, Transnationalism in Chicana/o Contexts

(4) STAFF

Prerequisite: Upper-division standing.

This course considers Chicana/o and U.S. Latina/o culture(s) within the context of transnational practices and patterns including both hemispheric and global migration trajectories.

### 179. Democracy and Diversity

(4) BARVOSA

Prerequisite: consent of instructor.

Introduction to the ancient and modern model of democracy which underpin contemporary democratic life. Special attention given to recent reformulations of our democratic models and how these new approaches relate to Chicano/a political concerns and practices.

### 179. Democracy and Diversity

(4) DIGESER, BARVOSA

Prerequisite: Chicana/o Studies 1B or Political Science 1.

Same course as Political Science 114.

Introduction to the ancient and modern model of democracy which underpin contemporary democratic life. Special attention given to recent reformulations of our democratic models and how these new approaches relate to Chicano/a political concerns and practices.

### 180. Survey of Chicana/o Literature

(4) LOMELI, HERRERA-SOBEK

Same course as Spanish 135.

This course encompasses a general overview of all genres (poetry, novel, theatre, short story, and essay) of Chicano literature. A people's socio-historical experiences are examined to understand ethnicity, creativity, and world view.

### 181. The Chicana/o Novel

(4) LOMELI, HERRERA-SOBEK

Same course as Spanish 179.

Reading, analysis, and critique of the contemporary Chicano novel as it pertains to the Chicano experience.

### 182. Contemporary Chicano/a Authors

(4) LEAL

Detailed reading and critical examination of a limited number of contemporary Chicano/a authors. A more intense study of their literary works than that provided in introductory courses.

### 183. Border Narrative

(4) LEAL, LOMELI

Prerequisite: Upper-division standing.

Reading and analysis of U.S./Mexico border narratives (novels, essays, short stories, autobiographies) focusing on the problems associated with relations between countries.

### 184A. Chicana Writers

(4) STAFF

Prerequisite: Consent of instructor.

Examination of literary works by Chicana writers. Feminist theories as well as other contemporary critical theories are applied to the analysis of prose, poetry and dramatic words written by such authors as Sandra Cisneros, Ana Castillo, Helen Viramontes, and others.

### 184AH. Chicana Writers (Honors)

(4) HERRERA-SOBEK

Prerequisite: Consent of instructor.

Recommended Preparation: Fluency in Spanish.

Not open for credit for students who have completed Ch St 184A

Lecture is concurrent with Chicana/o Studies 184A Chicana Writers along with a weekly honors seminar, requiring additional assignments and intensive discussion of the readings. Intended for highly motivated and well prepared students. (F, W, S)

### 185. De-Colonizing CyberCinema

(4) SANDOVAL

Prerequisites: concurrent enrollment in Chicana Studies 185L; upper-division standing.

Cybercinema is one of the most recent and innovative technologies for representing reality. What are its aesthetic forms, and how do they work to de-colonize the imagination under postcolonial conditions? Can we identify a specific "Chicana/o" criticism or aesthetics?

### 185A. Techno Imaginaries

(4) SANDOVAL

Prerequisite: upper-division standing.

Explores the role of technology in relation to Latino populations. Topics might include the digital divide,

cyberpublics, television, film, computers, cyborgs, and medical technologies.

### 185L. De-Colonizing CyberCinema Lab

(1) SANDOVAL

*Prerequisites:* concurrent enrollment in *Chicano Studies 185*; upper-division standing.

Mandatory Laboratory for CHST 185.

### 186A. Chicano and Mexican Music

(4) STAFF

Traditional music from pre-Hispanic to contemporary; regional styles and instruments, indigenous and urban popular styles; social movement music from resistance against Spain, Independence, "La Reforma," the Mexican Revolution, "Cancion Nueva," the Chicano Movement and the contemporary Zapatistas.

### 188C. Chicana/o Theater Workshop

(4) STAFF

*Prerequisite:* *Chicana/o Studies 1A or 1B or 1C or upper-division standing.*

Reading and analysis of contemporary bilingual Chicano plays, in conjunction with acting and technical training. A dramatic piece will be rehearsed and performed.

### 189. Immigration and the U.S. Border

(4) ARMBRUSTER-SANDOVAL, INDA

*Prerequisite:* upper-division standing.

An analysis of the socioeconomic and political factors which have determined and continue to form the basis for the development of United States immigration policies and practices toward Mexico and the U.S.-Mexican border.

### 189B. The Global Underground

(4) INDA

*Prerequisite:* upper-division standing.

Explores some of the more negative aspects of globalization. Topics covered might include the trafficking of women, the exploitation of workers, and the subjugation of indigenous peoples.

### 189C. Cultures of Globalization

(4) INDA, SANDOVAL

*Prerequisite:* *Chicana/o Studies 1A or 1B or 1C or upper-division standing.*

Examination of ethnographic and other efforts to come to terms with the increasingly hybrid, mobile, and interconnected world in which we live. Topics include: deterritorialized nations, borders and diaspora, exotic destinations, mass culture, and cultural imperialism.

### 191AA-ZZ. Special Topics in Chicana/o Studies

(4) STAFF

*Course may be taken up to three times (12 units) providing the letter designations are different.*

Designed to allow courses of varying topics in areas of expertise of visiting professors to broaden opportunities for students. Examples might be: immigration, Native American, Mexican, or Latin American influences on the Chicano, legal issues, the migrants.

### 192. Group Studies for Advanced Students

(4) STAFF

*Prerequisite:* *Chicana/o Studies 1A or 1B or 1C or upper-division standing.*

*Students may apply a maximum of 8 units of Chicana/o Studies 192/195A-B-C-D/198/199 courses combined to the Chicana/o Studies major.*

Intensive study and research.

### 193. Senior Seminar

(4) STAFF

*Prerequisites:* two prior courses in *Chicana/o Studies*; consent of instructor; and senior standing.

To be offered intermittently.

Capstone course for Chicana and Chicana/o Studies majors. Goal is to produce a thoroughly documented and professionally crafted Chicana/o Studies research paper (or creative project).

### 195A-B-C-D. Community Studies and Outreach Initiatives

(1-5 each) ARMBRUSTER

*Prerequisite:* consent of instructor.

*Students may apply a maximum of 8 units of*

*Chicana/o Studies 192/195A-B-C-D/198/199 courses combined to the Chicana/o Studies major.*

Internship in contemporary urban problems and decision-making processes as they affect the Chicana/o community. Student individually assigned, instructed and supervised in fieldwork involving practical experience in decision-making unit of local governmental social service, or of community liaison agencies. (A-fall; B-winter; C-spring; D-summer)

### 197HA-HB-HC. Honors Project Seminar

(4-4-4) STAFF

*Prerequisite:* acceptance into the *Chicana and Chicana/o Studies honors program*; senior standing; consent of department; open to *Chicana/o Studies majors only*; *Chicana/o Studies 197HA (for 197HB); Chicana/o Studies 197HB (for 197HC).*

*Designed for majors.*

HA. Seminar for the development of the honors research project. Emphasis is on the design of the project and the establishment of methodologies to be utilized. Background and initial research is undertaken. (F)

HB. Independent research comprising the bulk of the data acquisition and organization for the honors project. (W)

HC. Allows students to complete the writing of the honors thesis. Time is allotted to prepare a presentation of the project before an audience of peers and faculty members.

### 199. Independent Studies

(1-5) STAFF

*Prerequisites:* upper-division standing; completion of two upper-division courses in *Chicana/o Studies*.

*Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. Students may apply a maximum of 8 units of Chicana/o Studies 192/195A-B-C-D/198/199 courses combined to the Chicana/o Studies major.*

### 199RA. Independent Research Assistance in Chicana/o Studies

(1-5) STAFF

*Prerequisites:* upper-division standing; completion of two upper-division courses in *Chicana/o Studies*; consent of instructor and department.

*Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. Chicana/o Studies 199RA may not be used for credit in the major.*

Coursework shall consist of faculty supervised research assistance.

## GRADUATE COURSES

### 200A. History and Narrativity

(4) STAFF

Examines critical theories and methods in the production of historical narratives, social myths, and ideologies of racialization and ethnicity. Special attention is given to employment strategies, tropes, and allegorical forms in the construction of historical events and narratives.

### 200B. Cultural Texts

(4) STAFF

Explores critical theories and methods in the production of cultural knowledge in the humanities. Special attention is given to interdisciplinary articulations with theories and methods in the social sciences.

### 200C. Social Processes

(4) STAFF

Explores critical theories and methods in the production of knowledge relevant to social, political, economic, and institutional structures. Special attention is given to interdisciplinary articulations with theories and methods in the humanities.

### 201. Special Topics

(4) STAFF

*Prerequisite:* consent of instructor.

May be repeated for credit.

Special seminar on research subjects of current interest.

### 210. Research Seminar

(4) STAFF

Introduces students to the practice of original research in the interdisciplinary field of Chicana and

Chicana Studies, including articulating a research problem, placing it within theoretical discussions, selecting appropriate methods, and analyzing and writing data, results, and/or findings.

### 220. Interdisciplinary Methods

(4) STAFF

A critical introduction to a broad range of approaches and methodologies used in Chicana and Chicano Studies. These methods include but are not limited to fieldwork, archival and historical research, textual analysis, action research, visual production, political economy, and statistics.

### 222. Ethnicity and Race in the Americas

(4) SALDIVAR

Identifies different racial projects, of how "ethnicity" and "race" are understood in specific contexts. Special attention is put on the ideas of mestizaje, indigenismo and development, and the role that played in the racial projects of Latin America.

### 230. Teaching Practicum

(4) STAFF

This pedagogical course is designed to help beginning instructors develop and refine their teaching methods, explore techniques, consider innovative strategies and syllabi, and conceptualize interdisciplinary course materials through discussions with appropriate members of the department's faculty.

### 240. Chicana and Chicano Studies Colloquium

(1) STAFF

A year-long, bi-monthly colloquium required for all doctoral Chicana and Chicano Studies graduate students. Designed to provide cohort-identity and faculty-student exchange, the colloquium provides students with the opportunity to present research papers, hear guest lecturers, and see faculty presentations.

### 250A. Theory of Chicana/o Novel

(4) LOMELI

Examines theoretical approaches to the Chicana/o Chicano novel. Combines questions and methods pertaining to specific texts of this genre: structuralism, formalism, Marxism, postmodernism, semiotics, cultural studies, and postcolonial studies. Centers notions of nationhood, identity, space, gender, and culture.

### 250B. Literary History in Chicana/o Literature

(4) LOMELI

Attempts to explain factors and parameters contributing to literary history in Chicana and Chicano literature from the colonial period (1540s) to the contemporary period (twenty-first century). Each major historical period is characterized and studied through a representative text.

### 250C. Theory and Text: The Mexican/Chicano Ballad

(4) HERRERA-SOBEK

Analyzes the Mexican/Chicano ballad or corrido, applying contemporary critical theories. Examines the trajectory of the ballad from its literary roots in the Spanish romance tradition to its crystallization as a ballad tradition in the U.S. Southwest.

### 250D. Feminist Theory and Chicana Writers

(4) HERRERA-SOBEK

Examines Chicana writers' narratives applying feminist theories to their analyses. Uses Marxist feminism, psychoanalytic, liberal, cultural and third world feminism, and postmodern theories to interpret novels, short stories, and theatrical work by Mexican American women writers.

### 250E. Colonial Literature of the Southwest from 1521-1821

(4) HERRERA-SOBEK

Examines literary texts from the colonial period (1521-1821) of the Southwest.

### 251A. Aztec Religion and Philosophy

(4) TALAMANTEZ

An analysis of methodological issues in the study of Aztec religious traditions and philosophies. Various approaches include readings from pre-Colombian codices or the folded books of Mexico. A critical examination of important figures, symbols, deities, and sacred narratives.

**251B. Impact of Mexican Religion on Chicana/o Religion****(4) TALAMANTEZ**

A survey of religious traditions of Mexico from the time of contact, including Mexican Catholicism, spiritualism, curanderismo, and Mexican Protestantism as they impact the development of religion in Chicano communities today.

**252A. Indigenous Texts****(4) ALDANA**

*Prerequisite: coursework on ancient Mesoamerica.*

Treats translations of primary indigenous documents. Investigates the oral performance inherent to written indigenous records. Attention focuses on the Popol Vuh and the Codex Chimalpopoca, but Classic Maya hieroglyphic texts and Aztec codices are considered as well.

**252B. Indigenous Science****(4) ALDANA**

*Prerequisite: coursework on ancient Mesoamerica.*

Examines the enterprise that may be categorized as indigenous science, beginning with an approach grounded in science studies. Proceeds to consider ensuing alternative epistemologies and how they change a characterization of "science."

**252C. Indigenous Material Culture****(4) ALDANA**

*Prerequisite: coursework on ancient Mesoamerica or archaeology.*

Treats material culture as compromised forms of non-verbal communication. Considers the theories and methodologies of Bourdieu, Latour, Gallison, and Pfaffenberger as applied (primarily) to the archeological record of ancient Mesoamerica.

**253A. Techno Imaginaries****(4) SANDOVAL**

Exploration of the history and philosophy of contemporary science and technology in relation to Chicanas/os and the digital divide, technoscience studies, cyberspace, and cybercultural studies. Explores film, computer, television, print and other media related to scientific and popular cultures.

**254. Listening to Race****(4) CASILLAS**

*Prerequisite: Graduate student standing. Preference given to Chicano Studies graduate students.*

Explores various sound theories, listening studies, and sound-specific case studies that analyze the relationship made between sound and race. Material reviewed includes radio studies, sound semiotics, music as texts, and the queering of sound.

**255A. Oral Tradition****(4) STAFF**

An interdisciplinary exploration of current theoretical perspectives on oral traditional performances. Various cultural practices are examined, such as music, dance, storytelling, historical discourse, and spiritual practices.

**255B. Perspectives in Popular Culture****(4) STAFF**

An interdisciplinary course on popular cultural expression by raza peoples. Examines these cultural forms as part of the social fabric and social movements.

**256. Contemporary Readings in Chicana-o Latina-o Indigenous Studies****(4) GARCIA M.T.**

*Prerequisites: graduate standing.*

Focuses on recent publications covering different fields in Chicana-o Latina-o Indigenous studies in the Humanities, Social and/or Natural Sciences.

**257. Performance and Gender****(4) STAFF**

An examination of selected performance theories and practices as they express gender and sexual relations.

**258. Feminine Energy in Native America****(4) STAFF**

An interdisciplinary exploration of feminine energy in Native American philosophical, scientific, and ritual perspectives.

**259. The Chicana/o Movement: New Historical Perspectives****(4) GARCIA M.T.**

Focuses on the Chicana/o Movement of the 1960s and 1970s and the developing historiographical literature on the Movement. Topics to be covered include Chicanismo, the student movement, the anti-war movement, and La Chicana.

**260A. Seminar in Chicana and Chicano History****(4) GARCIA**

First part of a two-quarter research seminar exploring various facets of Chicano history, concentrating on the twentieth century. Examination of literature and projects covering immigration, labor, women, the Mexican-American, and the Chicano movement.

**260B. Ethnicity and Community****(4) GARCIA**

Second of a two-quarter research seminar, focusing on the historical development of ethnic communities in the United States. Examines community institutions such as the family, the church, voluntary associations, and the ethnic press, with emphasis on Santa Barbara and Southern California.

**261A. Chicana/o Education****(4) YOSSO**

*Prerequisites: graduate standing and consent of instructor.*

A theoretical and empirical overview of Chicana/o educational issues in the U.S., analyzing effects of race, gender, class, language, sexuality and immigrant status on attainment and achievement. Examination of social, political, economic, and historical contexts of Chicana/o educational experiences.

**261B. Imaging (Imagining) Chicanas/os****(4) YOSSO**

*Prerequisites: graduate standing and consent of instructor.*

Using visual sociology, course examines film, television, and print media for their inclusion, exclusion, or distortion of Chicanas/os and the impacts of these images. Historical examination of how society, economy, and politics shape popular discourse.

**262A. Governmentality****(4) INDA**

*Prerequisites: graduate standing.*

Surveys the growing body of interdisciplinary literature that has developed around the theme of governmentality. Topics explored include the regulation of reproduction, crime control, colonial governance, and the management of welfare.

**262B. Chicano/Latino Social Political Theory****(4) BARVOSA**

Surveys the major texts in contemporary Chicano/Latino social and political thought, including works by Lugones, Rosaldo, Lauretis, Anzaldúa, Moraga, and Alarcón. Areas and themes of inquiry: poststructuralism, postmodernist thought, postcolonial theory, psychoanalysis and various feminisms.

**262C. Contemporary Problems in Chicana/o and Latina/o Ethics and Politics****(4) BARVOSA**

Surveys Chicano/Latino-specific problems in contemporary ethics and politics. Topics include gender and sexual equality, distributive justice, transnational citizenship and political membership, competing Chicana/o accounts of civic engagement, ethnic group and cultural rights, and ethnic subordination by the state.

**262D. Bio-Power****(4) INDA**

*Prerequisites: graduate standing.*

Explores and elaborates on Michel Foucault's concept of bio-power. Topics dealt with might include disease and public health, genocidal politics, and eugenic/genomic projects.

**263. Comparative Ethnic Theory****(4) STAFF**

Theories of ethnicity drawn primarily from the fields of Sociology, Anthropology, and Ethnic Studies. Comparative and historical approach, including an analysis of "race", racialization, class and nationalism.

**270. Globalization and Transnational Social Movements****(4) ARMBRUSTER-SANDOVAL**

An examination of globalization in the world economy and its impact on Central America, Mexico, and the Chicano/Latino community in the United States. Topics include the historical and contemporary nature of capitalism, the WTO, the IMF, the World Bank and neoliberalism.

**271. Globalization and Immigration****(4) INDA**

Tracks the migration of people and cultures across national boundaries, focusing on the itinerary of Mexican migrations to the United States, with selected examples of migrations into Europe. Attention is paid to the changing significance of the nation.

**272. Post-Border Thought****(4) SANDOVAL**

Introduces inter- and trans-disciplinary approaches to constructing knowledge. Some of the methods discussed include Marxism, deconstruction, semiotics, the feminist critique of representation, transnational feminism, critical and cultural theory, disidentification, the methodology of the oppressed, mestizaje, poststructuralism, and chusmaria.

**273. Central American Diaspora and Displacements****(4) ROQUE RAMÍREZ**

*Prerequisite: consent of instructor.*

Examines the structural and cultural forces of displacement in Central American national histories, and the ensuing diasporas within and outside the isthmus. Using various (inter)disciplinary approaches, the course focuses on the interplay between imperialism, (im)migrations, and identity formations.

**274A. Oral History: Theories, Ethics, and Methods****(4) ROQUE RAMÍREZ**

A survey of the theory and practice of oral history methodologies, including the testimonio tradition in Latin America. Considers the politics of memory and truth, evidence and experience, and the challenges and pleasures of oral history work among subordinated communities.

**274B. Oral History: Fieldwork and Practice****(4) ROQUE RAMÍREZ**

Field studies component of Chicana/o Studies 274A. Students are required to engage in a sustained, carefully planned oral history project of their choice, and develop writing and historical analysis based primarily on this labor of community documentation.

**275. Site and Intervention: Chicana/o Art****(4) LATORRE**

*Prerequisite: enrollment in Chicana/o Studies or Art History Ph.D./M.A. program or graduate student status with consent of instructor.*

Course centers on public art in Chicana/o art history. Examines various media, from murals to street performance. Contextualizes the artwork within the history of the displacement suffered by Chicana/o and Mexican people from the colonization of the Americas to the present.

**276. The Body in Chicana and Chicano Art****(4) LATORRE**

*Prerequisite: enrollment in Chicana/o Studies or Art History Ph.D./M.A. program or graduate student status with consent of instructor.*

Focuses on the representations of the body in Chicana/o art as a shifting site for the articulation of nation, culture, gender, and sexuality. Situates Chicana/o depictions of the human figure within existing postmodern and feminist discourses on the body.

**277. Photography and Digital Media in Chicana/o Art****(4) LATORRE**

*Prerequisite: enrollment in Chicana/o Studies or Art History Ph.D./M.A. program or graduate student status with consent of instructor.*

Overview of the emerging trend among Chicana/o artists of using photographic and digital technologies as creative media. Students become familiar with theoretical writings on photography (Benjamin, Barthes) and cultural studies on technology as an empowering vehicle (Stafford, Balsamo).

**278. Glyph and Sign: Mesoamerican Imagery in Contemporary Chicana/o Art**

(4) LATORRE

*Prerequisite:* enrollment in *Chicana/o Studies or Art History Ph.D./M.A. program or graduate student status with consent of instructor.*

Documents the influence of Mesoamerican art and culture in work by Chicana/o artists. Topics include the use of pre-conquest iconographic motifs and figures, the adoption of pre-Colombian stylistic conventions, and the incorporation of Aztec writing systems into the visual.

**280. Critical Race Theory in Education**

(4) YOSSO

*Prerequisites:* graduate standing; consent of instructor.

Utilizing a critical race theory framework, the course examines education with an emphasis on the intercentricity of race/racism with other forms of subordination and the power of experiential knowledge to challenge traditional theories, concepts, methods, and data.

**281. The Chicana/o and Latina/o Metropolis: Race, Class, and Resistance**

(4) ARMBRUSTER-SANDOVAL

Examines the historical and contemporary experiences of Chicanas/os and Latinas/os in urban settings such as Los Angeles. Topics include the historical development of Mexicano L.A., police-community relations, political and economic restructuring, the 1992 L.A. rebellion/riots, and intra-ethnic relations.

**282. Sex, Gender, and Feminist Theories**

(4) SANDOVAL

Examination of sex, gender, and race across fields of representation, investigating the relationship between these political categories and Chicana and U.S. third world feminist consciousness. Readings in history, literature, and post colonial queer studies include Anzaldúa, Yarbrow-Bejarano, and José Muñoz.

**283. Queer/LGBTIQ Communities, Histories, and Theories**

(4) ROQUE RAMÍREZ

*Prerequisite:* consent of instructor.

Examines queer/lgbtqi life and death in Chicana/o and Latina/o American communities by grounding the discussion in lived experiences. Explores the relationship among theory, his/herstories, and community archives, the evidence of desire, and the (dis)placement of voice and authority in "queer theory."

**284. Globalizing Sexualities in the Americas**

(4) ROQUE RAMÍREZ

*Prerequisite:* consent of instructor.

Examines multiple sexualities in contemporary political, cultural, social, and economic life in the Americas. Considers transnational notions of rights and freedom, the nation, and the body in relation to the policing and containment of gender and sexual expressions.

**299. Special Topics in Chicana and Chicano Studies**

(4) STAFF

Seminar on topics of contemporary and historic importance in Chicana and Chicano Studies. Specific topics vary according to instructor's interests and expertise.

**501. Teaching Assistant and Associate Training**

(4) STAFF

*Units earned do not apply toward completion of advanced degrees. S/U grading only. Required of all teaching assistants in Chicana and Chicano Studies.*

Supervised teaching of lower-division Chicana/o Studies courses. Required participation in occasional workshops related to teaching.

**502. Research Assistant Practicum**

(4) STAFF

*Units earned do not apply toward completion of advanced degrees. S/U grading only.*

Supervised research in Chicana and Chicano Studies literature, history, culture, and other relevant areas.

**592. Directed Reading**

(1-12) STAFF

Course content variable; may be repeated. Special readings selected under guidance of individual instructor to help students make up particular gaps in their intellectual backgrounds that are pertinent to their graduate program.

**594AA-ZZ. Special Topics**

(1-12) STAFF

Special seminar on research subjects of current interest.

**595AA-ZZ. Directed Reading and Research**

(1-12) STAFF

Critical review of research in selected fields.

**596. Directed Reading and Research**

(1-12) STAFF

An independent research or individually guided tutorial in an area not covered by existing courses.

**597. Individual Study for Master's or Ph.D. Examinations for Advancement to Candidacy**

(1-12) STAFF

Normally taken with the student's committee chair in preparation for Master's or Ph.D. examinations. Units do not count toward graduate degrees.

**598. Master's Research and Writing**

(1-12) STAFF

Open to graduate students conducting master's research.

**599. Dissertation Research and Writing**

(1-12) STAFF

*Prerequisite:* open to graduate students conducting doctoral thesis research.

Open to graduate students conducting doctoral research.

# Classics

Department of Classics  
Division of Humanities and Fine Arts  
Humanities and Social Sciences 4080  
Telephone: (805) 893-3556

Website: [www.classics.ucsb.edu](http://www.classics.ucsb.edu)

*Department Chair: Robert Morstein-Marx*

## Faculty

**Apostolos N. Athanassakis**, Ph.D., University of Pennsylvania, James and Sarah Argyropoulos Professor of Hellenic Studies (Greek poetry, classical linguistics)

**Francis M. Dunn**, Ph.D., Yale University, Professor (Greek drama, Latin poetry)

**Dorota Dutsch**, Ph.D., McGill University, Associate Professor (Roman comedy, theater and performance, Roman society)

**Brice Erickson**, Ph.D., University of Texas, Associate Professor (Greek archaeology, Crete, ceramic studies)

**Ralph Gallucci**, Ph.D., UC Los Angeles, Lecturer (early Greece, Homer, Athenian democracy)

**Frances V. Hickson-Hahn**, Ph.D., University of North Carolina, Associate Professor (Latin literature, Roman religion)

**Sara Lindheim**, Ph.D., Brown University, Associate Professor (Latin poetry, literary theory)

**Helen Morales**, Ph.D., University of Cambridge, Associate Professor (Greek literature of the Roman Empire: narrative)

**Robert Morstein-Marx**, Ph.D., UC Berkeley, Professor (Roman history, Roman oratory)

**Glenn Patten**, Ph.D., University of Heidelberg, Assistant Professor (Greek Literature)

**Robert Renehan**, Ph.D., Harvard University, Research Professor (Greek and Latin literature, textual criticism, Greek philosophy and medicine)

**Jo-Ann Shelton**, Ph.D., UC Berkeley, Research Professor (Greek and Latin literature, Roman drama, Roman society)

**Jeffrey G. Souther**, M.A., UC Santa Barbara, Lecturer

## Affiliated Faculty

**Elizabeth Digeser**, Ph.D. (History)

**John Lee**, Ph.D. (History)

**Christine Thomas**, Ph.D. (Religious Studies)

**Voula Tsouna**, Ph.D. (Philosophy)

**Fikret K. Yegül**, Ph.D. (History of Art and Architecture)

## Emeriti Faculty

**Alva W. Bennett**, Ph.D., UC Berkeley, Professor Emeritus (Latin literature, ancient comedy)

**Howard W. Clarke**, Ph.D., Harvard University, Professor Emeritus (Homer, comparative literature)

**Borimir Jordan**, Ph.D., UC Berkeley, Professor Emeritus (philology, epigraphy, history, religion)

**David C. Young**, Ph.D., University of Iowa, Professor Emeritus (Greek literature, Pindar, ancient athletes)

The field of classics encompasses all aspects of Graeco-Roman culture. The heart of classical studies is the collection of literary, historical, philosophical, and scientific writings from Homeric to Byzantine times. The reconstruction and interpretation of these writings is the primary responsibility of the teacher of classics, who is frequently a specialist in some particular field such as poetry, drama, philosophy, epigraphy, papyrology, mythology, or history. All of these studies are interrelated, and classicists pursuing them are working toward the same goal: a wider picture of Graeco-Roman culture as a means toward a clearer understanding of our own.

It cannot be emphasized enough that the field of classics is not a narrow discipline intended for specialists only. The Greek and Roman worlds were themselves the products of cross-cultural exchange and ferment; they constituted the first widespread multicultural societies in the West and as such are of special relevance to our own multicultural society today. A major in classics can serve as a superb preparation for virtually any field of professional endeavor. The fact that classics majors are able to take many courses with small enrollments taught by senior faculty makes it especially attractive to serious students. To serve the interests of as many students as possible, the department offers a major with three distinct emphases (see below).

The department provides advising to undergraduate and graduate students. Course descriptions are prepared and distributed before the start of each quarter, and a brochure is available describing the undergraduate programs.

The Department of Classics offers an intensive summer session in Greece (Athens and Paros). Three standard courses and an

undergraduate seminar on special topics offer students wonderful opportunities to study ancient Greek culture, history, and archaeology.

The Education Abroad Program also offers opportunities for study in several countries with strong traditions in teaching classics. England is one of these. Students who elect to go to France, Germany, Italy, or Spain also have an ideal opportunity to learn one of the languages that greatly enhance research in our field. The legacy of the classical past in both Greece (through Summer Sessions) and Italy (through EAP) is at the very center of our discipline. Study abroad under EAP is automatically accredited by UCSB. However, the authority to approve study abroad courses for a student's major or minor rests with the Department of Classics.

### Prizes and Awards

The Keith Aldrich Memorial Awards are given each year by the department to an undergraduate major in classics and to a graduate student in classics, in recognition of outstanding academic achievement.

The Dumas Award in Greek Mythology is given for essays on a mythological topic written in Classics 40. The Dumas Travel Scholarship supports travel to Greece by undergraduates and graduate students.

### Undergraduate Honors

The Department of Classics at UCSB allows and encourages qualified students to pursue undergraduate honors in classics. Students admitted to the honors program in classics will write an honors thesis during their senior year, supervised by a member of the faculty. Successful completion of the program will be recognized by the award of Distinction in the Major at graduation. An honors thesis for distinction in classics is a substantial piece of critical writing that advances a sustained argument and that shows the student's ability to conduct research with primary and secondary sources. A thesis is usually at least 25 pages in length (excluding appendices and bibliography). Candidates for the honors program in classics should petition the department chair at the end of their junior year; candidates must have been in residence at UCSB for one year (three quarters) as classics majors by time of graduation, must have maintained a grade-point average of 3.6 in the major, and must obtain the consent of two faculty members, one to serve as advisor and one as a second reader. In the first quarter of their senior year, honors students will work with faculty members to develop a suitable topic; in each of the remaining quarters, they will enroll in Classics 195A-B, Senior Honors Thesis in Classics, to research and write the honors thesis in consultation with the thesis advisor and the second reader. Writing an honors thesis is strongly recommended for students considering graduate work in classics.

### Undergraduate Program

The undergraduate program in classics offers a challenging and rewarding course of study in the unified field of Graeco-Roman culture. It is designed to accommodate both the aspirant to graduate studies in classics or related fields and the student primarily interested in an undergraduate liberal arts major.

Students choose an emphasis in one of three areas: (1) language and literature, (2) Greek and Roman culture, or (3) archaeology. All three are excellent liberal-arts degrees, but while option (2) is primarily designed to be an intellectually exciting and rigorous exploration of classical culture, options (1) and (3) require somewhat more study of a classical language and are, therefore, generally better suited for those intending to pursue graduate study in classics or classical archaeology respectively. Students should keep in mind that strong language preparation (2-3 years of each language) is normally required for admission to a graduate program in Classics. Since this exceeds the minimum language requirements in all of the three major emphases, those interested in taking this route will need to do more than satisfy the minimal language requirements for their major, whichever emphasis they choose.

Note: In the first quarter of their junior year, all majors must make an appointment with the undergraduate advisor to review their progress towards meeting the requirements of the major.

### Bachelor of Arts—Classics— Classical Language and Literature Emphasis

The language and literature emphasis focuses on examining the Graeco-Roman world through an exploration of ancient texts in their original languages. Like classics as a field, this emphasis is strongly interdisciplinary. Reading in Greek and/or Latin texts offer students a sampling of poetry, drama, history, philosophy, oratory, etc.

Students who wish to pursue graduate studies in classics should take the language and literature emphasis, but this emphasis also serves well students with interdisciplinary interests who seek a challenging liberal arts major and who enjoy small classes in which they receive significant personal attention. Students interested in pursuing graduate study in Classics should keep in mind that they will need to exceed the minimum language requirements for this emphasis in order to improve their chances of admission to a strong graduate program (*see above*).

**Preparation for the major.** Greek 1, 2, 3, 100, 101 or Latin 1, 2, 3, 100, 101 (or equivalent); Classics 37, 38, 40; History 2A or 4A; Writing 109HU.

Students completing courses in a second classical (Greek or Latin) language may substitute up to 12 units of such work for Classics 37, 38, and 40.

**Upper-division major.** Thirty-six upper-division units are required, distributed as follows: (a) 28 upper-division units selected from any upper-division Greek or Latin course not used in preparation for the major. Up to 12 units of the 28 may be from upper-division classics courses. (b) One course chosen from Classics 150, History 111A-B-C-P, 112A-B-C-D, 113A-B-C-P-Q. (c) Classics 185AA-ZZ (or Classics 195A-B for Honors).

### Bachelor of Arts— Classics—Greek and Roman Culture Emphasis

The Greek and Roman Culture Emphasis is intended to serve as an intellectually stimulating and rigorous liberal arts major for those who

do not plan a career teaching Classics. Since the language requirement is somewhat lower than that of other emphases, this emphasis is not recommended for those intending to pursue graduate study in Classics. However, it provides students with the opportunity to explore in depth a wide variety of central aspects of Greek and Roman culture in a highly interdisciplinary fashion. The one-course requirement in "Comparative ancient and classical cultures" also encourages students to consider common themes of ancient cultural traditions and early complex societies in the Middle East, Asia, Africa and the Americas.

**Preparation for the major.** Classics 80A-B; Writing 109HU. Students enrolled in this emphasis are also encouraged to use their General Education requirement to take related lower-division courses in Classics (36, 37, 38, 39, 40, 50), Comparative Literature (30A), Anthropology (2, 3), History of Art and Architecture (6A), History (2A, 4A), Philosophy (20A) and Religious Studies (80A).

**Upper-division major.** Forty-eight upper-division units are required, distributed as follows:

- (a) Eight courses in at least two of the following areas, of which at least four courses must be Classics courses. (Note that the upper-division courses commonly have prerequisites.) (1) Literature Traditions and Representations: Classics 102, 104, 109, 110, 120, 130, 175. (2) Politics and Society: Classics 125, 150, History 111A-B-C-P, 112A-B-C-D, 113A-B-C-P-Q. (3) Material Culture: Classics 160, 161S, 162S, 163SS, 164, 165, 170, 171, Art History 103A-B-C, 186B (4) Religious and Intellectual Life: Classics 101, 106, 108, Philosophy 151, 152, 153, 156, Religious Studies 116A-B-C, 128A, 139A-B.
- (b) One course in comparative ancient and classical culture from any of the following areas. (Note that the upper-division courses commonly have prerequisites.) (1) Cross-cultural: Anthropology 116, 160, 164, Religious Studies 136; (2) Ancient Near East: Anthropology 118TS, 138TS, 176TS, Religious Studies 115A; (3) Early Islam: History 145A, Religious Studies 189A; (4) India: Religious Studies 158A, 162A; (5) East Asia: Art History 134B, Chinese 148, Japanese 110A, 149, Religious Studies 166A-C; (6) The Americas: Anthropology 150B-C, 175, Art History 130A-B-D-E, Chicano Studies 117, 119, 150.
- (c) Classics 180A-B, (d) Classics 185AA-ZZ (or Classics 195A-B for Honors).

**Language Requirement.** Completion of Latin 3 or Greek 3. Note that up to 3 upper-division courses in Latin or Greek may be applied to the Upper-division major in category (a).

### Bachelor of Arts—Classics— Classical Archaeology Emphasis

The classical archaeology emphasis brings together classical art history, classical archaeology, anthropology, and ancient history into a coherent program of study.

This emphasis is for students with an interest in archaeology looking for a strong, liberal arts major, or for students planning to pursue graduate studies in classical archaeology.

**Preparation for the major.** Greek 1, 2, 3, 100,

101 or Latin 1, 2, 3, 100, 101 (or the equivalent); Classics 37, 38, 40; Classics 50 or Anthropology 3; Art History 6A, History 2A or 4A; Writing 109HU.

Students completing courses in a second classical language (Greek or Latin) may substitute up to 12 units of such work for Classics 37, 38, and 40.

**Upper-division major.** Thirty-six upper-division units are required, distributed as follows: (a) Anthropology 100; (b) three of the following courses: Classics 160, 161S, 162S, 163SS, 164, 165, 170, or Art History 101A-B-C, 102AA-ZZ, 103A-B-C, 104AA-ZZ, 186B; (c) two courses from Classics 101, 102, 104, 108, 109, 110, 125, 130, 175, 180A-B, plus any upper-division Greek or Latin course not used in the preparation for the major; (d) two courses from Classics 125 (if not in Area C), 150, 171; History 111A-B-C-P, 112A-B-C-D, 113A-B-C-P-Q; Art History 101A-B-C, 102, 103A-B-C, 104AA-ZZ (if not used in Area B); (e) Classics 185AA-ZZ (or Classics 195A-B for honors).

### Minor—Classics

Students majoring in other fields who have an interest in classics may still choose to pursue an intensive study of the classical languages and culture.

Up to 5 upper-division units may be taken on a P/NP basis. All other courses to be applied to the classics minor must be completed on a letter-grade basis.

**Preparation for the minor.** Latin 1, 2, 3 or Greek 1, 2, 3 (13-15 units).

**Upper-division minor.** Twenty upper-division units in Classics, Greek, or Latin.

*Note: Substitutions and waivers are subject to approval by the department chair/undergraduate advisor of the department. Please see page 118 for special conditions governing minors in the College of Letters and Science.*

## Graduate Program

In addition to the regular M.A. and Ph.D. degrees, the department offers optional emphases in ancient history and in literature and theory. The M.A. and Ph.D. in Classics with emphasis in ancient history involve significant coursework in the Department of History. The emphasis is designed for those students who wish their training to emphasize ancient history without sacrificing the classical languages. The M.A. and Ph.D. in Classics with emphasis in literature and theory are designed for students who wish to combine solid training in the classical languages with broader study in literature and theory. Students in this program will take graduate courses in literary theory, gender studies, cultural theory, or other approved areas in cognate disciplines on campus.

Candidates for graduate degrees must meet university degree requirements found in the chapter “Graduate Education at UCSB,” as well as departmental requirements.

### Admission

Applicants must meet the university requirements for admission described in the chapter “Graduate Education at UCSB,” in addition to fulfilling the departmental admission require-

ments stated below. Applicants for admission to the M.A. program in Classics should have an undergraduate major or equivalent in Greek, Latin, or classics. Other students may be admitted if they demonstrate proficiency in ancient Greek and Latin, but they will be required to make up any deficiencies in their undergraduate training while completing the regular coursework for the M.A. degree.

Because a primary function of the M.A. program in Classics is to prepare students for the Ph.D., applicants are encouraged to apply to the M.A./Ph.D. degree program. However, continuation into the Ph.D. following completion of the M.A. is at the discretion of the faculty and is dependent upon proof of the student’s ability to do research at the Ph.D. level. Upon completing their M.A. in classics at UCSB, students wishing to continue into the Ph.D. program must submit one research paper and two letters of recommendation from ladder faculty in the Department of Classics. One of the ladder faculty must be willing to supervise the applicant’s Ph.D. work.

A candidate for admission to the Ph.D. must present an M.A. in classics from UC Santa Barbara or the equivalent from another institution. Students applying for admission to the Ph.D. program who have received their M.A. elsewhere (or who are reapplying some time after completing the M.A. in classics at UCSB) follow the M.A./Ph.D. admission program procedures. Admission is dependent upon proof of the applicant’s ability to do research at the Ph.D. level.

The requirements for admission to the M.A. and/or Ph.D. in classics with an emphasis in ancient history are the same as those spelled out above. It is expected that students will enter with upper-division undergraduate classes in Greek or Roman history.

The requirements for admission to the M.A. and/or Ph.D. in classics with an emphasis in literature and theory are the same as those listed above for the regular degrees in classics. It is generally expected that students will enter with at least one upper division undergraduate class in Greek or Roman history, and one introductory course in literary, cultural, or gender theory. Students who are admitted without the requisite undergraduate preparation are expected to take equivalent courses as soon as possible after entering the M.A. program.

Graduate study is supported by various sources including the department’s Argyropoulos Fellowship in Hellenic Studies.

### Master of Arts—Classics

#### Degree Requirements

The M.A. in Classics is granted under the comprehensive examination plan. Classics 201 (Proseminar) and Classics 211, 212, 213 (History of Greek and Latin Literature) are required of all M.A. candidates. Thirty-six units are required, 24 (12 Greek, 12 Latin) of which must be in graduate courses within the department; the remaining units may come from upper-division courses in the department or from approved courses in other departments if they are relevant to the student’s program.

In addition, candidates must meet the following requirements: (1) reading knowledge of either German, French, or Italian (by examination); (2) Greek and Latin sight translation

(by examination); (3) Greek or Latin prose composition (by course credit); (4) two courses in Greek and Roman history; one for students in the literature and theory emphasis; (5) four term/research papers. Full details concerning the M.A. requirements are available upon request.

### Degree Requirements— Ancient History Emphasis

The degree requirements for the M.A. in Classics with an emphasis in ancient history differ from those listed above for the regular M.A. in classics in the following respects: (1) Greek or Latin prose composition is not required; (2) candidates must take at least four graduate courses in Greek or Latin each year that they are in the program; (3) Greek and Latin translation examinations will be based on a reading list appropriate to the emphasis; (4) four quarters of graduate courses in ancient history, selected from the following list, with the provisos that both Greek and Roman history be represented and at least two quarters be taken of graduate coursework in the History Department: Classics 233 (Greek History), Classics 233 (Roman History), History 201E (Greek Historical Literature), History 201E (Roman Historical Literature), History 211A-B or History 213A-B. Students may petition the graduate advisor for permission to apply any of the following courses to this requirement (success of the petition will depend on the relevance to ancient history of the actual content of the specific version of the course taken): Classics 231, Classics 232, Classics 234, Classics 235, and Greek and Latin graduate reading courses in historical or historically relevant authors, including a historical or historically relevant paper that is submitted for the paper requirement. Courses may not be repeated for this requirement. (5) candidates must pass an examination in Greek and Roman history. Full details concerning the requirements for the M.A. in classics with an emphasis in ancient history are available upon request from the department.

### Degree Requirements— Literature and Theory Emphasis

The degree requirements for the M.A. in Classics with an emphasis in literature and theory differ from those listed above for the regular M.A. in classics in these respects: (1) Greek or Latin prose composition is not required; (2) candidates must attend three additional meetings of the proseminar designed to introduce students to specifically classical theory-based scholarship; (3) Greek and Latin translation examinations will be based on a modified reading list; (4) required coursework will include three theory courses, and candidates will be required to write two seminar papers demonstrating an application of theory—one in a classics course and one in a course outside the Department of Classics. Full details concerning the requirements for the M.A. in classics with an emphasis in literature and theory are available from the department.

### Doctor of Philosophy—Classics Degree Requirements

Candidates for the Ph.D. must satisfy the requirements for the M.A. in Classics if they have

not already done so. A minimum of 36 further graduate units in classics is required, including Greek 240 or Latin 210 (Greek or Latin Prose Composition), whichever was not completed for the M.A. Candidates must also take at least 4 seminars in Classics. One seminar may be taken in another department after consultation with the graduate advisor and the chair of the student's committee. In addition to the four seminar papers, candidates must write a significant paper on a topic or area that will contribute to the dissertation, and present it in both written and oral form to the department.

The following examinations are required before the student will be advanced to candidacy: author/genre examination in language of dissertation, sight examinations in Greek and in Latin, and in a second foreign language (German, if student has not already passed a German examination). The oral qualifying examination is taken after all written examinations have been passed. Upon successful completion of the examination, the student will be advanced to candidacy and will proceed with the dissertation. A defense of the dissertation is required. Full details concerning the Ph.D. requirements are available upon request.

### **Degree Requirements— Ancient History Emphasis**

Candidates for the Ph.D. must satisfy the requirements for the M.A. in Classics with an emphasis in ancient history if they have not already done so. A minimum of 36 further graduate units in classics, history (Greek or Roman), or related subjects in art history, religious studies, or philosophy, is required, including the following: (1) 4 seminars, which may be used to fulfill the following required courses (2) at least 4 graduate courses in Greek or Latin, including 2 Classics seminars (231, 232, 233, 234, 235) and (3) 2 graduate courses in ancient history (Classics 233, 234, History 201E, 211 A-B, 213 A-B, whichever was not taken for the M.A.), including 1 in Roman history if the exam is in Greek history, and vice versa. In addition to the 4 seminar papers, candidates must write a significant paper on a topic or area that will contribute to the dissertation, and present it in both written and oral form to the department.

The following examinations are required before the student may advance to candidacy: sight examinations in Greek and in Latin, based on modified reading lists, examination in a second foreign language (German, if student has not already passed a German examination), and examination in Greek or Roman history. The nature of the oral qualifying examination is the same as for the regular Ph.D. in classics. Full details concerning the requirements for the Ph.D. in Classics with an emphasis in ancient history are available upon request.

### **Degree Requirements— Literature and Theory Emphasis**

Candidates for the Ph.D. must satisfy the requirements for the M.A. in Classics with an emphasis in literature and theory if they have not already done so. A minimum of 36 further graduate units in classics or related interdisciplinary courses are required, including the following: (1) 5 seminars with at least 3 in the

Classics Department (2 seminars should be predominantly concerned with theory) and (2) prose composition in Greek or Latin. In addition to the 5 seminar papers, candidates must write a significant paper on a topic or area that will contribute to the dissertation, and present it in both written and oral form to the department.

The following examinations are required before the student may advance to candidacy: author/genre examination in the language of the dissertation, sight examinations in Greek and Latin based on modified reading lists, examination in a second modern foreign language (German, if student has not already passed a German examination), and an oral qualifying examination with emphasis in literature. Full details concerning the requirements for the Ph.D. in Classics with an emphasis in literature and theory are available from the department.

## *Classics Courses*

*Yearly schedule varies. Not all courses are offered each quarter. Courses taught in English.*

### **LOWER DIVISION**

#### **36. Ancient Epic**

(4) STAFF

A study in translation of the *Iliad*, *Odyssey*, *Aeneid*, and other ancient epics, and of the place of these epics in Greek and Roman society.

#### **36H. Ancient Epic—Honors**

(4) STAFF

*Prerequisites:* concurrent enrollment in *Classics 36*; consent of instructor.

A discussion section led by the instructor, provided for students enrolled in the honors program. Students receive one unit for the honors seminar (36H) in addition to the four units for *Classics 36*.

#### **37. Greek Literature in Translation**

(4) STAFF

Reading and lecture survey of the principal Greek writers.

#### **37H. Greek Literature in Translation—Honors**

(4) STAFF

*Prerequisites:* concurrent enrollment in *Classics 37*; consent of instructor.

A discussion section led by the instructor, provided for students enrolled in the honors program. Students receive one unit for the honors seminar (37H) in addition to the four units for *Classics 37*.

#### **38. Latin Literature in Translation**

(4) STAFF

Reading and lecture survey of the principal Roman writers.

#### **38H. Latin Literature in Translation—Honors**

(4) STAFF

*Prerequisites:* concurrent enrollment in *Classics 38*; consent of instructor.

Discussion section led by the instructor, provided for students in the honors program. Students receive one unit for the honors seminar (38H) in addition to four units for *Classics 38*. (F,W,S,M)

#### **39. Women in Classical Literature**

(4) STAFF

Study of the portrayal of women in selected Greek and Latin authors from the seventh century B.C. to the second century A.D. and this portrayal's relationship to the literary, historical, and social backgrounds of the works concerned.

#### **40. Greek Mythology**

(4) STAFF

Introduction to the principal myths of ancient Greece and the ways in which these myths have been understood. Format and readings vary. (F,W,S)

#### **40H. Greek Mythology-Honors**

(1) STAFF

*Prerequisites:* concurrent enrollment in *Classics 40* and consent of instructor.

A discussion section led by the professor is available to students in the Honors Program. Students will receive one unit of credit for the honors seminar (40H) in addition to four units for *Classics 40*.

#### **50. Introduction to Classical Archaeology**

(4) ERICKSON

Examines the techniques and methods of classical archaeology as revealed through an examination of the major monuments and artifacts of the Greco-Roman world from prehistory to the Late Empire.

#### **80A. Greek Civilization**

(4) STAFF

*Not open for credit to students who have completed *Classics 100A*.*

Introduction to the various aspects of Greek civilization such as art, education, daily life, festivals, law, religion, science, and sports.

#### **80B. Roman Civilization**

(4) STAFF

*Not open for credit to students who have completed *Classics 100B*.*

Introduction to the various aspects of Roman civilization such as art, education, daily life, festivals, law, religion, science, and sports. Readings in primary sources in translation.

#### **99. Introduction to Research**

(1-3) STAFF

*Prerequisites:* consent of instructor and department chair.

*May be repeated to a maximum of 6 units.*

*Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined.*

Directed study, oriented toward research, to be arranged with individual faculty members. Course offers exceptional students an opportunity to participate in a research project or group.

### **UPPER DIVISION**

#### **101. The Greek Intellectual Experience: From Poetry to Philosophy**

(4) STAFF

A survey of the major Greek beliefs about such concepts as the nature of man — body, soul, afterlife, gods and men, man in the cosmos— from Homer to Plato. Readings (in translation) of poetic, philosophical, and medical texts.

#### **102. Greek Tragedy in Translation**

(4) STAFF

Plays by Aeschylus, Sophocles, and Euripides in English translation. Various aspects of Greek tragedy discussed: origins, historical development, costumes, staging, performance. Primary emphasis placed on the plays as literature: plot, characters, language, etc. Role of tragedy in Greek culture.

#### **104. Seminar on the Poetry of Archaic Greece**

(4) ATHANASSAKIS

*Prerequisite:* consent of instructor.

Taught in Greece as part of the summer curriculum offered by the Classics Department. Selections from Homer, Hesiod, the Homeric Hymns, and Greek lyric are read as poetry related to the Greek land as well as to religion, politics and temperament. The readings are in translation.

#### **106. Magic and Medicine in Ancient Greece**

(4) STAFF

The old and the new in classical Greek modes of thought; primitive religious and magical beliefs and scientific medical teachings. A study in the intellectual revolution of Greece. Readings in primary literary sources in translation and secondary literature.

#### **108. Pagan Religion and Cult in Ancient Rome**

(4) HAHN

A study of public and private religion in the Roman Republic, including deities, priesthoods, rituals and ceremonies, as well as the relationship of religion to politics and history. Readings emphasize ancient sources in translation.

**109. Viewing the Barbarian: Representations of Foreign Peoples in Greek Literature****(4) DUNN**

Study of representations of “barbarians” in Greek literature, with special interest in their cultural and historical contexts, and in the construction of Athenian ideology. Readings from Homer, Herodotus, tragedy and comedy, with essays by Said, Bernal, Hall and others.

**110. From Homer to Harlequin: Masculine, Feminine and the Romance****(4) LINDHEIM**

The romance, from Homer’s *Odyssey* to the contemporary romance novel, creates images of masculinity and femininity. This course considers these gender representations and questions whether they vary among ancient novels, and between the romances of antiquity and those of today.

**112. Greek and Latin Lyric Poetry****(4) STAFF**

Development, forms, and interpretation of ancient lyric poetry; such authors as Sappho, Pindar, Catullus, and Propertius in English translation.

**125. Greek and Roman Historians in Translation****(4) STAFF**

Development of history as a genre; such authors as Herodotus, Thucydides, Livy, and Tacitus in English translation.

**130. Comedy and Satire in Translation****(4) STAFF**

The comic playwrights, such as Aristophanes and Plautus, and satirists, such as Lucian and Juvenal, in English translation.

**150. The Fall of the Ancient Republic: Cicero, Caesar, and Rome****(4) MORSTEIN-MARX**

The tumultuous end of the Roman Republic, from Tiberius Gracchus (133 BC) to the Rubicon (49 BC), had profound importance for the history of the West and produced a fascinating literature of crisis in the writings of Sallust, Cicero, Catullus, and Caesar.

**160. Greek Cities and Sanctuaries****(4) ERICKSON**

*Recommended preparation: Classics 50.*

Surveys the evidence for the primary archaeological sites of the Archaic, Classical, and Hellenistic Greek world, with special emphasis on town planning and architectural responses to important Greek institutions such as colonization and democracy.

**163SS. Field Archaeology in Greece****(4) ERICKSON**

*Recommended Preparation: Classics 50*

The methods of Classical archaeology through excavation of a harbor/port town on the north coast of Crete. Students will participate in the archaeological project at Priniatikos Pyrgos, a Minoan (prehistoric) and Classical settlement. This introduction to the techniques of stratigraphic excavation takes place in the field. (M)

**164. Artifact Analysis****(4) ERICKSON**

*Recommended Preparation: Classics 50*

Introduction to the techniques of artifact analysis in Classical archaeology, with an emphasis on artifact style as a chronological and social phenomenon. Responsibilities include processing and analyzing finds from Priniatikos Pyrgos. Students assigned a research project based on excavated material.

**165. Greek Painting****(4) ERICKSON**

*Recommended preparation: Classics 50.*

Examines the art of painting and its social contexts in Greek antiquity, including monumental wall painting, vase painting, and the relationship between these and other media from prehistory to the Hellenistic period.

**170. Pompeii****(4) SHELTON**

*Not open for credit to students who have completed Classics 170B.*

A study of the history, buildings, and people of Pompeii, a city buried by the eruption of Mt. Vesuvius.

**171. Artifact and Text: The Archaeology and Literature of Early Greece****(4) GALLUCCI**

A survey of the archaeological record and literature of early Greece from the Late Bronze Age to the end of the Archaic Age, with special attention paid to the interconnection of artifact and text for our understanding of this period.

**175. Ancient Theories of Literature****(4) DUNN**

An introduction to Greek and Roman theories of literature and representation, with attention both to the major texts of Plato, Horace, Tacitus, and Longinus, and to central issues such as education, imitation, persuasion, allegory, genre, and style.

**180A. Advanced Study in Classical Civilization****(4) STAFF**

*Prerequisite: Consent of instructor.*

*For Classical Civilization and Greek and Roman Culture majors.*

Specialized study in classical civilization addressing central themes or genres in detail. Topics vary and may include subjects such as The Family in Ancient Rome, Greek Oracles and Politics, and Imperial Theology: Augustus, Politics and Religion.

**180B. Interfaces in Classical Civilization****(4) STAFF**

*Prerequisite: Consent of instructor.*

*For Classical Civilization and Greek and Roman Culture majors.*

Specialized study in classical civilization addressing influence or reception of classical culture, or meeting and competition of cultures. Topics vary and may include subjects such as Greek Tragedy and Western Theater, Greek and Roman Comedy and Reception, and Julius Caesars: Ancient and Modern.

**185AA-ZZ. Undergraduate Seminar****(4) STAFF**

*Prerequisites: upper-division standing and consent of instructor.*

*Priority given to Classics majors, Classics minors, and students in the Honors Program. May be repeated for credit to a maximum of 12 units provided letter designations are different.*

Study and research of special topics in classical literature, civilization, and culture. Topics may include: Rome: the ancient city, food in antiquity, the Roman family, religious thought and practice in Rome, culture and crisis in Athens, culture and crisis in Rome, etc. (Usually taught every other year.)

**195A. Senior Honors Thesis in Classics****(4) STAFF**

*Prerequisite: Must have been in residence as a Classics major for at least one full quarter. Must have a grade point average of 3.6 or better in the major. Approval of the department’s chair.*

Research and writing of a senior thesis paper under the close supervision of a Classics faculty member. (W)

**195B. Senior Honors Thesis in Classics****(4) STAFF**

*Prerequisite: Must have been in residence as a Classics major for at least two full quarters. Must have a grade point average of 3.6 or better in the major. Approval of the department’s chair.*

Research and writing of a senior thesis paper under the close supervision of a Classics faculty member. (S)

**198. Special Readings****(1-4) STAFF**

*Prerequisites: consent of instructor and department; upper-division standing; completion of two upper-division courses in classics.*

*Must have a minimum 3.0 grade-point average for the preceding three quarters. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. Total credit for this course is limited to 6 units.*

Individual or small group reading and study in subjects not included in the regular curriculum.

**199. Independent Studies in Greek and Latin****(1-5) STAFF**

*Prerequisites: consent of instructor and department; upper-division standing; completion of two upper-*

*division courses in classics.*

*Must have a minimum 3.0 grade-point average for the preceding three quarters. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined.*

Independent study in areas in which both Greek and Latin are necessary.

**199RA. Independent Research Assistant****(1-5) STAFF**

*Prerequisites: consent of instructor and department; upper-division standing; completion of two upper-division courses in classics.*

*Must have a minimum 3.0 grade-point average for the preceding three quarters. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined.*

To cooperate on an active basis with a professor on a research project.

**GRADUATE COURSES**

*Graduate standing is prerequisite for all graduate courses.*

**201. Proseminar****(2) STAFF**

Bibliography, methodology, and history of classical scholarship.

**211-212-213. History of Greek and Latin Literature****(2-2-2) STAFF**

Survey of development of poetry and prose; major authors. Special readings and reports.

**220. Greek Novel****(4) MORALES**

Advanced reading and study of selected chapters of an ancient Greek novel, with attention to the language and style of the work and to its literary, social and political contexts.

**231. Seminar in Literary Studies****(4) STAFF**

*Prerequisite: graduate standing.*

A graduate-level course in Greek and Roman authors, themes, or genres. Topics vary and may include Aristotle’s *De Anima*, construction of gender in Augustan poetry, texts and intertexts, and Roman tragedy.

**232. Seminar in Cultural Studies****(4) STAFF**

*Prerequisite: graduate standing.*

A graduate-level course in the culture and cultures of the ancient Mediterranean. Topics vary and may include, animals and ethics in the ancient world, religion and politics in the Roman republic, and performance on and off the stage.

**233. Seminar in Ancient History****(4) STAFF**

*Prerequisite: graduate standing.*

Advanced study in the scholarship, methods, and ancillary disciplines of Greek and Roman history. Topics may include, slavery in ancient Greece, naval strategy in classical Greece, current problems and debates in Roman history, and Augustus and foundation of the Principate.

**234. Seminar in Archaeology****(4) STAFF**

*Prerequisite: graduate standing.*

Advanced study in the material culture of the ancient Mediterranean, examining the scholarship, techniques, and methods of classical archaeology. Topics may include Greeks in southern Italy, Athens in the age of Pericles, and the rise of the Greek city-state.

**235. Seminar: Specialized Topics in Classical Studies****(4) STAFF**

*Prerequisite: graduate standing.*

A graduate-level course in the major subdisciplines of classical scholarship. Topics vary and may include, comparative Greek and Latin morphology and syntax, Greek and Latin textual criticism, Greek and Latin metrics, and Greek and Latin epigraphy.

**500. Teaching Assistant Practicum****(2) STAFF**

Weekly discussions, directed by faculty, of topics especially relevant for teaching assistants assigned to

Classics 40 (Greek Mythology). Includes analyses of texts and materials, discussion of teaching techniques, formulation of exam questions and paper topics, grading, and pedagogical ethics.

### 501. Language Teaching Practicum

(2) STAFF

Weekly discussions, directed by faculty, of topics relevant for graduate students assigned to introductory language courses. Includes design of syllabi, quizzes and exams, and especially discussion of teaching techniques and evaluation of teaching methods by observation and follow-up consultations.

### 596. Directed Reading and Research

(2-4) STAFF

*Prerequisite:* written proposal approved by department chair and graduate advisor.

Individual tutorial. (F,W,S)

### 597. Preparation for Comprehensive Exams

(1-6) STAFF

*Prerequisites:* consent of graduate advisor and chair.

No unit credit allowed toward degree.

Study for master's examinations and Ph.D. examinations.

### 599. Ph.D. Dissertation Preparation

(2-12) STAFF

Preparation of the dissertation.

## Greek Courses

### LOWER DIVISION

*Courses in the series Greek 1-3, or Greek 11-13, or Greek 14-16 must be taken in sequence. Students may not enroll in an earlier course in the sequence after taking a later one.*

#### 1. Elementary Greek

(5) STAFF

The beginning course in classical Greek and first in a three-quarter sequence introducing fundamentals of grammar, syntax, and reading skills. Concepts taught using written exercises. Interesting aspects of Ancient Greek society are introduced. (F)

#### 155. Conversational Modern Greek

(2) STAFF

*Course to be taught only during UCSB Summer Session in Greece. Contact time is 1,000 minutes. Meets every other day.*

Emphasis on conversation. Rudiments of grammar are taught through repetition of basic paradigms.

#### 2. Elementary Greek

(5) STAFF

*Prerequisite:* Greek 1 with a grade of C or better.

A continuation of Greek 1. Emphasis on mastering grammar and building vocabulary. (W)

#### 3. Intermediate Greek

(5) STAFF

*Prerequisite:* Greek 2 with a grade of C better.

A continuation of Greek 2. Emphasis building a working vocabulary and the syntax of complex sentences. Readings classical prose introduce students to ancient Greek literature and culture. (S)

#### 11. Elementary Modern Greek

(5) STAFF

Beginning course in Modern Greek, and the first in a three quarter sequence. Introduces pronunciation, script, vocabulary, and basic writing, reading, and conversational skills. Audio-visual materials aid language acquisition and enrich the understanding of Greek culture and history.

#### 12. Elementary Modern Greek

(4) STAFF

*Prerequisite:* Greek 11.

Continuation of Greek 11. Moves toward a greater command of conversation and reading comprehension with the help of selected passages of simple prose and entertaining dialogues. Audio-visual materials aid language acquisition and enrich the understanding of Greek culture and history.

#### 13. Intermediate Modern Greek

(4) STAFF

*Prerequisite:* Greek 12.

Continuation of Greek 12. Reinforces and broadens

command of conversation and reading comprehension with the help of selected short stories and poems. Audio-visual materials aid language acquisition and enrich the understanding of Greek culture and history.

#### 14. Advanced Modern Greek

(4) STAFF

*Prerequisite:* Greek 13.

Course builds on fundamentals covered during the first year of instruction. Review of grammar is accompanied by composition of brief narratives. Oral presentations are followed by conversation. Exposure to Greek culture is pursued through films and watching Greek newscasts.

#### 15. Advanced Grammar and Composition in Modern Greek

(4) STAFF

*Prerequisite:* Greek 14.

Course emphasizes more complex grammar and syntax. Readings are chosen from books equivalent to textbooks used in Greek high schools. Students are armed to write brief essays for class presentations. Conversations are kept at a demanding level. Audiovisual aids are used.

#### 16. Advanced Reading in Modern Greek

(4) STAFF

*Prerequisite:* Greek 15.

Course acquaints students with some of the best authors of modern Greece. Short stories are read in entirety and excerpts from longer works are read. Emphasis on swift accumulation of more difficult literary vocabulary. Both literature and films form the basis for classroom presentations.

### UPPER DIVISION

*Greek 102 is prerequisite to Greek 110 through 173.*

#### 100. Introduction to Greek Prose

(4) STAFF

*Prerequisite:* Greek 3 with a minimum grade of C.

Reading and analysis of Attic prose writers such as Xenophon, Plato to develop reading skills and introduce study of the style and thought of historical, rhetorical and/or philosophical writers. (F)

#### 101. Introduction to Greek Poetry

(4) STAFF

*Prerequisite:* Greek 100 with a minimum grade of C.

*Not open for credit to students who have completed Greek 106.*

Readings in the poetry of Homer to develop reading skills, introduce Homeric grammar and meter, and begin study of the style, thought and heroic world of epic poetry. (W)

#### 102. Readings in Greek Literature

(4) STAFF

*Prerequisite:* Greek 101.

Selected readings in Greek prose and/or poetry designed to develop reading proficiency, and to help students make the transition to more advanced study of classical Greek literature.

#### 110. Attic Orators

(4) STAFF

Reading and study of attic orators such as Demosthenes, and of famous orations by Demosthenes and other attic orators.

#### 113. Lucian

(4) STAFF

Reading and study of selected passages from Lucian, with attention to the language and style of his satirical dialogues, and to their social and historical context.

#### 120. Greek Novel

(4) MORALES

*Prerequisite:* Greek 102

Advanced reading and study of selected chapters of an ancient Greek novel, with attention to the language and style of the work and to its literary, social and political contexts.

#### 138. Pre-Socratic Philosophers

(4) DUNN

Readings in the first "formal" philosophers of the Western tradition. Normally includes all of the major pre-Socratics (Parmenides, Heraclitus, Pythagoras, Xenophanes, Anaxagoras, Democritus) and their

contributions to European thought. Sometimes concentrates on thinkers of the fifth-century Sophistic Movement.

#### 142. Plato

(4) STAFF

Reading of one or several Platonic dialogues from the early or middle period (*Laches*, *Protagoras*, *Phaedo*, *Gorgias*, *Symposium*), both as masterpieces of Greek literature and as philosophical dialogues. No prior formal training in philosophy is required.

#### 143. Post-Platonic Philosophers

(4) STAFF

Readings of selections from the more famous works of Aristotle (*Nicomachean Ethics*, *Politics*, *De Anima*, *Metaphysics*), emphasizing Aristotle both as thinker and as stylist; occasionally excerpts from Theophrastus, the Stoics, Plotinus. No prior formal training in philosophy required.

#### 151. Euripides

(4) DUNN

Reading, translation, and discussion of a complete tragedy of Euripides, with attention to language, meter, staging, tragic themes and conventions, and the cultural context of Athenian drama.

#### 152. Sophocles

(4) DUNN

Reading, translation, and discussion of a complete tragedy of Sophocles, with attention to language, meter, staging, tragic themes and conventions, and the cultural context of Athenian drama.

#### 153. Aeschylus

(4) DUNN

Reading, translation, and discussion of a complete tragedy of Aeschylus, with attention to language, meter, staging, tragic themes and conventions, and the cultural context of Athenian drama.

#### 154. Aristophanes

(4) DUNN

Reading, translation, and discussion of a complete comedy of Aristophanes, with attention to language, meter, staging, tragic themes and conventions, and the cultural context of Athenian drama.

#### 158. Homer

(4) ATHANASSAKIS

Reading and study of selections from the *Iliad* and/or *Odyssey*.

#### 161. Hesiod, Theognis, and Solon

(4) ATHANASSAKIS

Reading and study of archaic poets.

#### 162. Herodotus

(4) STAFF

Reading and study of the histories of Herodotus.

#### 163. Thucydides

(4) STAFF

Reading and research in the historical, literary, and philological aspects of Thucydides.

#### 165. Xenophon

(4) STAFF

Reading and study of selected works.

#### 171. Lyric Poets and Homeric Hymns

(4) ATHANASSAKIS

Reading and study of lyric poems and Homeric hymns.

#### 173. Hellenistic Poets

(4) DUNN

Introduction to poetry of the Alexandrian period, normally concentrating upon a single major poet such as Apollonius Rhodius, Callimachus, or Theocritus. Reading, translation, and discussion, with attention to language, meter, generic innovation, cultural context, and formative influence upon Latin literature.

#### 199. Independent Studies in Greek

(1-5) STAFF

*Prerequisites:* consent of instructor and department; upper-division standing; completion of two upper-division courses in Greek.

*Must have a minimum 3.0 grade-point average for the preceding three quarters. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined.*

Independent investigations in Greek language and literature.

**GRADUATE COURSES**

*Greek courses 210-273 address the same subjects as the undergraduate courses bearing the corresponding numeration. However, treatment of the subjects is at the graduate level. Graduate standing is prerequisite to all graduate courses.*

**210. Attic Orators****(4) STAFF**

Advanced reading and study of Attic orators such as Demosthenes, Lysias, Aeschines, and Isocrates, with attention to the language, style, and rhetoric of the speeches, and to their political and historical context.

**213. Lucian****(4) STAFF**

Advanced reading and study of selected passages from Lucian, with attention to the language and style of his satirical dialogues, and to their social and historical context.

**238. Pre-Socratic Philosophers****(4) DUNN**

Advanced readings in the first "formal" philosophers of the Western tradition. Normally includes all the major pre-Socratics (Parmenides, Heraclitus, Pythagoras, Xenophanes, Anaxagoras, Democritus) and their contributions to European thought. Sometimes concentrates upon thinkers of the fifth-century Sophistic Movement.

**240. Greek Prose Composition****(4) STAFF**

*Prerequisite: Graduate standing.*

Improves active knowledge of the Greek language, both grammar and vocabulary, through careful writing. Refines a feeling for the Greek employed in various genres of Greek literature. Demonstrates how a feel for style helps interpret and explicate Greek literature.

**242. Plato****(4) STAFF**

Advanced reading of one or several Platonic dialogues from the early or middle period (*Laches, Protagoras, Phaedo, Gorgias, Symposium*), both as masterpieces of Greek literature and as philosophical dialogues.

**243. Post-Platonic Philosophers****(4) STAFF**

Advanced readings of selections from the more famous works of Aristotle (*Nicomachean Ethics, Politics, De Anima, Metaphysics*), emphasizing Aristotle both as thinker and as stylist; occasionally excerpts from Theophrastus, the Stoics, Plotinus.

**251. Euripides****(4) DUNN**

Advanced reading, translation, and discussion of a complete tragedy of Euripides, with attention to language, meter, staging, tragic themes and conventions, and the cultural context of Athenian drama, with an introduction to current scholarship.

**252. Sophocles****(4) DUNN**

Advanced reading, translation, and discussion of a complete tragedy of Sophocles, with attention to language, meter, staging, tragic themes and conventions, and the cultural context of Athenian drama, with an introduction to current scholarship.

**253. Aeschylus****(4) DUNN**

Advanced reading, translation, and discussion of a complete tragedy of Aeschylus, with attention to language, meter, staging, tragic themes and conventions, and the cultural context of Athenian drama, with an introduction to current scholarship.

**254. Aristophanes****(4) DUNN**

Advanced reading, translation, and discussion of a complete comedy of Aristophanes, with attention to language, meter, staging, comic themes and conventions, and the cultural context of Athenian drama, with an introduction to current scholarship.

**258. Homer****(4) ATHANASSAKIS**

Advanced reading and study of selections from the *Iliad* and/or *Odyssey*.

**261. Hesiod, Theognis, and Solon****(4) ATHANASSAKIS**

Advanced reading and study of the archaic poets.

**262. Herodotus****(4) STAFF**

Advanced reading and study in the histories of Herodotus.

**263. Thucydides****(4) STAFF**

Advanced reading and research in the historical, literary, and philological aspects of Thucydides.

**265. Xenophon****(4) STAFF**

Advanced reading and study in selected works.

**266. Polybius****(4) MORSTEIN-MARX**

Selections from the great history, focusing either on the Hellenistic world of the later third century, the Punic Wars, or Rome's interventions across the Adriatic from 229 to 146 B.C. Translation and historical/historiographical study.

**271. Lyric Poets and Homeric Hymns****(4) ATHANASSAKIS**

Advanced reading and study of lyric poems and Homeric hymns.

**272. Pindar****(4) STAFF**

Advanced reading, interpretation, metrical study, and textual criticism. Introduction to other choral poets.

**273. Hellenistic Poets****(4) DUNN**

Advanced study in poetry of the Alexandrian period, normally concentrating upon a single major poet such as Apollonius, Callimachus, or Theocritus, with attention to language, meter, generic innovation, cultural context, and formative influence upon Latin literature. Includes introduction to current scholarship.

**596. Directed Reading and Research****(2-4) STAFF**

*Prerequisite: written proposal approved by department chair and graduate advisor.*

Individual tutorial. (F,W,S)

**598. Master's Thesis Research and Preparation****(1-4) STAFF**

*Prerequisites: graduate standing and consent of instructor and graduate advisor.*

*No unit credit allowed toward degree.*

Independent research. (F,W,S)

**599. Ph.D. Dissertation Preparation****(2-12) STAFF**

Terminal preparation of the dissertation. (F,W,S)

## Latin Courses

**LOWER DIVISION**

*Courses in the series Latin 1-3 must be taken in sequence. Students may not enroll in an earlier course in the sequence after taking a later one.*

**1. Elementary Latin****(5) STAFF**

The beginning course in classical Latin, and first in a three-quarter sequence introducing fundamentals of grammar, syntax, and reading skills. Concepts taught using written exercises. Interesting aspects of Ancient Roman society are introduced. (F)

**2. Elementary Latin****(4) STAFF**

*Prerequisite: Latin 1 with a minimum grade of C.*

A continuation of Latin 1. Emphasis on mastering grammar and building vocabulary. (W)

**3. Intermediate Latin****(4) STAFF**

*Prerequisite: Latin 2 with a minimum grade of C.*

A continuation of Latin 2. Emphasis on building a working vocabulary and the syntax of complex sentences. Readings in classical prose introduce students to ancient Roman literature and culture. (S)

**UPPER DIVISION**

*Latin 102 is prerequisite to Latin 111 through 139.*

**100. Introduction to Latin Prose****(4) STAFF**

*Prerequisite: Latin 3 with a minimum grade of C.*

*Not open for credit to students who have completed Latin 105.*

Reading and analysis of various Latin prose authors to develop reading skills and introduce study of the style and thought of historical, rhetorical and/or philosophical writers. (F)

**101. Introduction to Latin Poetry****(4) STAFF**

*Prerequisite: Latin 100 with a minimum grade of C.*

Readings in various authors (often including Catullus and Ovid) to develop reading skills, introduce an understanding of meter, and begin study of the style and thought of Latin poetry. (W)

**102. Readings in Latin Literature****(4) STAFF**

*Prerequisite: Latin 101.*

Selected readings in Latin prose and/or poetry designed to develop reading proficiency, and to help students make the transition to more advanced study of classical Latin literature.

**103. Medieval Latin Readings****(4) STAFF**

*Prerequisites: Latin 1, 2, and 3.*

*Recommended preparation: Latin 100.*

Graded and selected reading and study of medieval Latin prose and verse writers.

**111. Roman Epic****(4) SHELTON**

Reading, translation, and discussion of authors such as Vergil and Lucan.

**112. Roman Elegy****(4) LINDHEIM**

Translation and discussion of the elegiac works of Tibullus, Propertius and/or Ovid. Consideration of the genre of elegy in its literary and historical contexts, with special attention to elegiac themes and motifs.

**114. Roman Comedy****(4) DUTSCH**

Plautus and Terence. Reading of complete plays and study of the origins of Roman Comedy.

**115. The Roman Novel****(4) STAFF**

Reading and study of passages from Petronius and Apuleius with attention to the language and style of their satiric novels and to their social and historical context.

**116. Cicero: Essays, Letters, and Orations****(4) HAHN, MORSTEIN-MARX**

Reading and study of selected works of Cicero, normally one of the major speeches. Translation; discussion of philological, stylistic, and rhetorical points.

**117. Prose of the Empire****(4) SHELTON**

Reading, translation, and discussion of authors such as Seneca, Pliny, and Tacitus.

**118. Roman Epistles****(4) SHELTON**

Reading, translation, and discussion of the letters of Cicero, Seneca, and Pliny.

**120. Sallust****(4) MORSTEIN-MARX**

Study of one of the extant works of Rome's first great historian: the *Bellum Catilinae* or the *Bellum Jugurthinum*. Translation; discussion of philological, stylistic, literary, and historical points.

**122. Livy****(4) HAHN**

Reading and study of the annalistic history of Livy with attention to the author's style, literary and historical context, and recent scholarly approaches to the text.

**123. Tacitus****(4) MORSTEIN-MARX, SHELTON**

Study of portions of one of Tacitus' major histories

of the early Empire (*Annales, Historiae*), or of the shorter works (*Agricola, Dialogus, Germania*). Translation; discussion of philological, stylistic, literary, and historical points.

#### 124. Caesar

(4) MORSTEIN-MARX

Study of Caesar as historian and Latin prose stylist. Extensive reading.

#### 125. Roman Biography

(4) HAHN

Exploration of Roman biographical writing: its historical and literary context, themes, and techniques. Translation and discussion of selections from the biographies of Nepos, Suetonius, and Tacitus, as well as biographical passages from the histories of Sallust, Livy, and Tacitus.

#### 134. Lucretius

(4) SHELTON

Reading, translation, and discussion of style, meter, and philosophy of Lucretius' epic poem *De Rerum Natura*.

#### 135. Vergil

(4) LINDHEIM, SHELTON

Reading, translation, and discussion of Vergil's epic poem *Aeneid*, as well as his *Georgics* and *Eclogues*.

#### 136. Ovid

(4) LINDHEIM

Translation and discussion of Ovid's epic or elegiac poetry (*Metamorphoses, Fasti, Ars Amatoria, Tristia, Heroides*) in its literary, social and historical contexts.

#### 137. Catullus

(4) LINDHEIM

Translation, and discussion of Catullus' poetry in its literary, social and historical contexts.

#### 138. Horace

(4) DUNN, SHELTON

Reading, translation, and discussion of selected poems of Horace (*Odes, Epodes, Satires, Epistles*) in their literary, social, and historical contexts.

#### 139. Seneca: Tragedies

(4) SHELTON

Readings, translation, and discussion of several tragedies by Seneca.

#### 199. Independent Studies in Latin

(1-5) STAFF

*Prerequisites: consent of instructor and department; upper-division standing; completion of two upper-division courses in Latin.*

*Must have a minimum 3.0 grade-point average for the preceding three quarters. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined.*

Independent investigations in Latin language and literature.

### GRADUATE COURSES

*Latin courses 211-239 address the same subjects as the undergraduate courses bearing the corresponding numeration. However, treatment of the subjects is at the graduate level. Graduate standing is prerequisite to all graduate courses.*

#### 210. Latin Prose Composition

(4) STAFF

*Prerequisite: Graduate standing.*

Study of Latin grammar and syntax through English composition, combined with analysis of Latin prose style in a variety of authors, including Cato, Caesar, Cicero, Sallust, and Tacitus.

#### 211. Roman Epic

(4) SHELTON

Advanced reading, translation, and discussion of authors such as Vergil and Lucan.

#### 212. Roman Elegy

(4) LINDHEIM

Advanced study and discussion of the elegiac works of Tibullus, Propertius, and/or Ovid. Consideration of the genre of elegy in its literary and historical contexts, with special attention to elegiac themes and motifs.

#### 214. Roman Comedy

(4) DUTSCH

Advanced study of Plautus and Terence. Reading of complete plays and study of the origins of Roman comedy.

#### 215. The Roman Novel

(4) STAFF

Advanced study of Petronius and/or Apuleius, with attention to the language and style of their satiric novels and to their social and historical context.

#### 216. Cicero: Essays, Letters, and Orations

(4) HAHN, MORSTEIN-MARX

Advanced reading and study of selected works of Cicero, normally one of the major speeches. Translation; discussion of philological, stylistic and rhetorical points; introduction to current scholarship.

#### 217. Prose of the Empire

(4) STAFF

Advanced reading, translation, and discussion of authors such as Seneca, Pliny, and Tacitus.

#### 218. Roman Epistles

(4) SHELTON

Advanced reading, translation, and discussion of authors such as Cicero, Seneca, and Pliny.

#### 220. Sallust

(4) MORSTEIN-MARX

Advanced study of one of the extant works of Rome's first great historian: The *Bellum Catilinae* or the *Bellum Jugurthinum*. Translations; discussion of philological, stylistic, literary, and historical points; introduction to current scholarship.

#### 222. Livy

(4) HAHN

Advanced reading and study of the annalistic history of Livy with scholarly approaches to the text.

#### 223. Tacitus

(4) MORSTEIN-MARX, SHELTON

Advanced study of portions of one of Tacitus' major histories of the early Empire (*Annales, Historiae*), or of the shorter works (*Agricola, Dialogus, Germania*). Translation; discussion of philological, stylistic, literary, and historical points; introduction to current scholarship.

#### 224. Caesar

(4) MORSTEIN-MARX

Advanced study of Caesar as historian and as Latin prose stylist.

#### 225. Roman Biography

(4) HAHN

Advanced study of Roman biographical writing: its historical and literary context, themes and techniques. Discussion of selections from the biographies of Nepos, Suetonius, and Tacitus, as well as biographical passages from the histories of Sallust, Livy, and Tacitus.

#### 234. Lucretius

(4) SHELTON

*Prerequisite: graduate standing.*

*May be repeated for credit to a maximum of 12 units.*

Intensive study in the poetry and Epicurean philosophy of Lucretius.

#### 235. Vergil

(4) LINDHEIM, SHELTON

Advanced reading, translation, and discussion of Vergil's epic poem *Aeneid*, as well as his *Georgics* and *Eclogues*.

#### 236. Ovid

(4) LINDHEIM

Advanced study of Ovid's epic or elegiac poetry (*Metamorphoses, Fasti, Ars Amatoria, Tristia, Heroides*) in its literary, social, and historical contexts.

#### 237. Catullus

(4) LINDHEIM

Advanced study of Catullus' poetry in its literary, social, and historical contexts.

#### 238. Horace

(4) DUNN, SHELTON

Advanced study of selected poems of Horace (*Odes, Epodes, Satire Epistles*) in their literary, social, and historical contexts, with an introduction to current scholarship.

#### 239. Seneca: Tragedies

(4) SHELTON

*Prerequisite: graduate standing.*

Reading, translation, and discussion of several tragedies by Seneca.

#### 596. Directed Reading and Research

(2-4) STAFF

*Prerequisite: written proposal approved by department chair and graduate advisor.*

Individual tutorial. (F,W,S)

#### 598. Master's Thesis Research and Preparation

(1-4) STAFF

*Prerequisites: graduate standing and consent of instructor and graduate advisor.*

*No unit credit allowed toward degree.*

Independent research. (F,W,S)

#### 599. Ph.D. Dissertation Presentation

(2-12) STAFF

Terminal preparation of the dissertation. (F,W,S)

# Communication

Department of Communication  
Division of Social Sciences  
Social Sciences and Media Studies Building 4005  
Telephone: (805) 893-4479  
E-mail: [comminfo@mail.lsisit.ucsb.edu](mailto:comminfo@mail.lsisit.ucsb.edu)  
Website: [www.comm.ucsb.edu](http://www.comm.ucsb.edu)

Department Chair: Michael Stohl

## Faculty

Tamara D. Afifi, Ph.D., University of Nebraska-Lincoln, Associate Professor (interpersonal communication, family communication, divorce processes, information regulation, coping)

Walid A. Afifi, Ph.D., University of Arizona, Associate Professor (uncertainty and information management, interpersonal and relational communication, health communication)

Andrew J. Flanagan, Ph.D., University of Southern California, Professor (effects of organizational communication and information technologies, collective action in organizations)

Howard Giles, Ph.D., D.Sc., University of Bristol, Professor (intergroup communication settings of all kinds, including intercultural, intergenerational, and police-civilian interactions)

Kenneth Harwood, Ph.D., University of Southern California, Adjunct Professor (economic analysis of communication services)

Laura Jansma, Ph.D., UC Santa Barbara, Continuing Lecturer (theory, conflict management, gender, internship experience, intentional communities, peace)

Daniel G. Linz, Ph.D., University of Wisconsin, Professor (mass-media policy and law, mass-media effects)

Miriam J. Metzger, Ph.D., University of Southern California, Associate Professor (media effects, new technologies, communication law)

Charles Mullin, Ph.D., UC Santa Barbara, Continuing Lecturer (mass media and society, communication and law, statistical analysis)

Dorothy Imrich Mullin, Ph.D., UC Santa Barbara, Continuing Lecturer (communication and law, mass media and children, quantitative research methods)

Karen K. Myers, Ph.D., Arizona State University, Assistant Professor (organizational

communication, organizational socialization/assimilation, emotions, identity, leadership)

**Robin Nabi**, Ph.D., University of Pennsylvania, Associate Professor (persuasion, emotion, mass media effects, health communication)

**W. James Potter**, Ph.D., Indiana University, Ph.D., Florida State University, Professor (media processes, effects, and literacy; theory and methods)

**Linda L. Putnam**, Ph.D., University of Minnesota, Professor (organizational communication, negotiation and conflict management, discourse analysis and organizations, organizational culture, gender studies in organizations)

**Scott A. Reid**, Ph.D., University of Queensland, Associate Professor (intergroup communication, social identity, language and power, social influence)

**Ronald E. Rice**, Ph.D., Stanford University, Arthur N. Rupe Professor of the Social Effects of Mass Communication (internet and new media, organizational communication, communication campaigns, communication networks)

**David R. Seibold**, Ph.D., Michigan State University, Professor (small group and organizational communication)

**Cynthia Stohl**, Ph.D., Purdue University, Professor (group and organizational communication, globalization and international organizations, networks, collective action)

**Michael S. Stohl**, Ph.D., Northwestern University, Professor (globalization, international organizations, political communication)

**René Weber**, Ph.D./Dr.rer.nat., University of Technology Berlin/Germany; M.D./ Dr.rer.medic, University of Aachen/ Germany, Assistant Professor (media effects, audience research, cognitive neuroscience, research methods and statistics)

**John M. Wiemann**, Ph.D., Purdue University, Professor (interpersonal and nonverbal behavior, communicative competence)

### Affiliated Faculty

**Bruce Bimber**, Ph.D. (Political Science)

**Noah E. Friedkin**, Ph.D. (Sociology)

**David L. Hamilton**, Ph.D. (Psychology)

**Diane M. Mackie**, Ph.D. (Psychology)

**Brenda N. Major**, Ph.D. (Psychology)

### Emeriti Faculty

**Anthony Mulac**, Ph.D., University of Michigan, Professor Emeritus

**Edwin R. Schoell**, Ph.D., University of Denver, Professor Emeritus

The study of communication focuses on how people construct, use, and interpret messages across multiple channels and types of media to inform, persuade, manage, relate, and influence each other within and across social contexts and cultures. Students trained in the communication discipline find employment in a wide range of local, state, national, and global organizations in professions ranging from the media industry, law, education, and social services to management in profit and nonprofit organizations.

Globalization, increased interconnectedness, new communication technologies, and

changing social values are reshaping patterns of social interaction, home and work experiences, domestic and international politics, and economic activity. The department's three core areas, interpersonal and intergroup, organizational, and media communication, respond to these changes in many ways.

## Undergraduate Program

Communication is one of the fastest growing areas of study among UCSB's undergraduate students. The communication program offers an array of courses across three primary areas of interest: interpersonal/intergroup, media, and organization communication.

The major emphasizes the understanding of communicative events—their psychological, social, and philosophical implications and aspects—the development of knowledge in these areas, and the use of empirical and critical tools for assessing the impact and quality of message transmission. Mass media effects, new communication technologies, interpersonal relationships, communication policies, nonverbal, health, group, organizational, global, and intercultural communication are just a few areas in which faculty members in UCSB's Department of Communication are teaching and conducting research. Although the implications of media production and distribution are emphasized within the curriculum, the department does not provide instruction in production processes.

### Bachelor of Arts—Communication

The major in communication consists of two tiers of courses: pre-major (Communication 1, 87, 88, 89); and upper-division courses.

**Preparation for the major.** Students must complete each of the following requirements before petitioning the department to change from pre-major to major status: (1) Communication 1, 87, 88, and 89. (2) Communication 1, 87, 88, 89 must be completed with a combined grade-point average in these four courses of 3.0 or better. (3) In completing the four courses above, students must earn no grade lower than a C-.

Before these preparatory requirements are completed, students intending to become communication majors are strongly encouraged to declare pre-communication as their major. Upon successful completion of these requirements, students may petition for full major status, generally prior to the accumulation of 100 units, but not after the completion of 144 units. Admission to the pre-major does not guarantee admission to the Communication major, regardless of the number and outcome of upper division Communication units taken.

During the regular academic year, upper-division Communication courses are restricted to full majors only. During summer session, any student may take upper-division Communication courses. However, this will not effect your eligibility for the Communication major. Courses completed during summer session will not be applied to fulfillment of major requirements until such time as the student completes the required pre-major courses with a minimum GPA of 3.0 in those courses and is officially accepted into the major.

**Upper-division major.** Forty upper-division units are required for the major. There are no

specific required courses, but the following credit requirements and limitations are in effect:

(1) By petition, students may apply one elective course outside the Department of Communication from the following courses: Anthropology 110; Chicana/o Studies 138; Environmental Studies 124; and Linguistics 124, 130, 132, 170, 180, 185; Philosophy 100C; Political Science 154, 171; Psychology 102 (2) A total of 16 units combined of Communication 181A-B-C, 194, 199, and 199RA may be applied to the upper-division major, with no more than 12 units of 194, 199, and 199RA combined.

### Senior Honors Program

Qualified majors will be sent an invitation letter to participate in the department's senior honors program (Communication 180 and 181A-B-C) during winter quarter of their junior year. Students must have achieved junior standing with a minimum overall and major grade-point average of 3.5 at time of application. They must complete 12 upper-division major units, maintaining the 3.5 GPA, by the end of winter quarter of their junior year, in order to be admitted into the program. Eligibility requirements are subject to change. All interested transfer students should contact the undergraduate advisor early in their first quarter. Students admitted into the program enroll in a thesis preparation seminar in the spring of the junior year, and then work directly with a faculty mentor throughout the senior year to complete an in-depth project culminating in a senior thesis. Students successfully completing the program will graduate with Distinction in the Major.

## Graduate Program

Graduate education in the Department of Communication is provided in interpersonal/intergroup communication, media communication, and organizational communication. Additional emphases are available in language and communication, health communication, new media communication, group communication, family communication, political communication, media literacy, human-computer interaction, information technology, communication law and policy, and global and international communication. Because the M.A. degree is designed to prepare students for the Ph.D., students without a master's degree should apply to both degree programs. Students interested in attaining a master's degree only will normally not be considered for the program.

### Admission

In addition to departmental requirements for admission, applicants must also fulfill the university requirements for admission described in the chapter "Graduate Education at UCSB." Applicants will be evaluated on their educational record; statement of purpose; the verbal, quantitative, and analytical writing portions of the Graduate Record Examination; and three letters of recommendation. Most applicants who have completed a M.A. or are in the process of doing so generally are able to show some proficiency in research by means of an empirical M.A. thesis, although this is not necessary if applicants can demonstrate research experience and/or have outstanding potential for doctoral research.

Applications may be submitted online via the Graduate Division website: [www.graddiv.ucsb.edu/eapp](http://www.graddiv.ucsb.edu/eapp). Students accepted for graduate study typically receive either fellowship support or teaching/research assistantships. Competition for admission is intense. To be fully considered for admission and support, applications must be received by January 1st.

### Degree Requirements

The department offers a plan leading to the degree of Ph.D. in Communication for everyone with a B.A. / B.S. successful pursuit of which demands that the student complete a high-caliber thesis for the Master's degree, normally by the end of two years. Assuming faculty endorsement of doctoral research potential, the student then works toward completing additional coursework, undertakes written and oral qualifying examinations, and completes a dissertation, normally by the end of three additional years.

At the M.A. level, students are required to take three core introductory courses in communication, 16 units in their major research area, 8 units in a minor area, and 8 statistics or tool equivalent units. (Note: The university requires master's students following the thesis option to complete at least 20 graduate units in the major or related fields numbered either 200-299 or 596.) At the Ph.D. level, students take 12 additional units in their primary research area, 8 units of theoretical breadth, 8 units of statistics, and 12 units of cognate courses outside the department. Students entering with a master's degree from another university must consult with the graduate advisor to ensure that they have completed sufficient coursework at the master's level. At a minimum, students should have completed one methods course in communication and two statistics courses during their M.A. work at another institution.

A quarterly research colloquium is required of all graduate students in the department and directed research units are strongly encouraged throughout a student's program of study.

### Optional Ph.D. Emphasis Programs

Graduate students may choose to add an interdisciplinary focus to their work in Communication. Several programs currently exist on campus: the Interdisciplinary Cognitive Science Program, Program in Human Development (IHD), the Language, Interaction, and Social Organization program (LISO), and Quantitative Methods in the Social Sciences (QMSS). All are formally recognized by UCSB as interdisciplinary emphases that can be added to the Ph.D. in Communication. The programs offer students the opportunity to obtain cross-training in the theories and methods of other disciplines that approach the same area of study, but from different perspectives. Doctoral students in Communication can use these programs to fulfill the department's cognate requirement. M.A. students are welcome to join these programs in preparation for doctoral work, though no cognate is required at the M.A. level.

### Cognitive Science Program

The interdisciplinary program in Cognitive Science involves faculty from the Ph.D. programs in Anthropology, Communication, Computer Science, Education, Electrical and Computer

Engineering, English, Geography, Linguistics, Philosophy, and Psychology. Its goal is to give students an appreciation of the interdisciplinary study of thinking, perception, and intelligent behavior as determined jointly by the nature of the environment and by the internal architecture of the intelligent agent, whether human, animal, or machine. The program features a structured set of courses that are taught individually and collaboratively by faculty from a variety of disciplines.

### The Interdisciplinary Program in Human Development (IHD)

Focus on the scientific study of human development, and may be of interest to those pursuing work in family Communication, children and media, or any other aspect of Communication that deal with lifespan development. The program includes faculty and graduate students for Communication, Education, Linguistics, Psychology, and Sociology who are concerned with biological, sociocultural, and ethnic influences on human development. Interdisciplinary coursework in the program is concentrated in three areas: social-emotional development; language acquisition and interpersonal communication; and cognitive development and the acquisition of knowledge.

### The Language, Interaction, and Social Organization Program (LISO)

Focus on the scientific study of how language is used in human action and social organization, and may be of interest to those pursuing work in conversation analysis, interpersonal communication, and intercultural communication. The program brings together faculty and graduate students from Education, Linguistics, and Sociology whose research interests involve close, detailed description of real-time human interaction. Courses can be taken in three areas: the ethnographic study of naturally occurring interaction; interactional functional linguistics, which deals with the structure of languages and the properties of language in the use; and the study of sequentially-organized activities carried out through the medium of language.

### The Quantitative Methods in the Social Sciences (QMSS)

This emphasis helps students to attain the competencies needed to conduct quantitative social science research through core design and analysis classes, courses in advanced and specialized methodologies, and participation in interdisciplinary colloquia and research projects. Conducting quantitative social science research requires competence in certain core design and analysis methods that are common across social science disciplines. In addition, some specialized methodologies have emerged from research applications that are unique to social science fields. At most universities, social science instruction and research takes place in many separate units spread throughout the campus, which discourages the sharing of resources and ideas. The overarching purpose of the QMSS emphasis is to overcome these barriers by creating a unifying administrative structure that capitalizes on UCSB's strengths to create a unique interdisciplinary program.

### The Technology and Society

The emphasis in the Center for Information Technology and Society (CITS) is closely affiliated with the new Optional Ph.D. Emphasis in Technology and Society at UC Santa Barbara. This degree certification program functions similarly to a doctoral minor, and is currently open to students in seven disciplines. It provides doctoral students with a short curriculum of courses outside their home departments, and a Colloquium Series I which they can meet other students and faculty with similar interests.

## Communication Courses

### LOWER DIVISION

#### 1. Introduction to Communication

(4) STAFF

*Prerequisite: not open to seniors.*

Survey of basic concepts, principles, and models of communication. Introduction to the importance of communication in intrapersonal, interpersonal, small group, organizational, and mass media contexts.

#### 87. Statistical Analysis for Communication

(4) STAFF

*Not open for credit to students who have completed PSTAT 5AA-ZZ or Sociology 3 or EEMB 30 or Psychology 5 or equivalent.*

An introduction to basic statistical concepts and applications in communication. Through lecture and computer labs, students will be exposed to statistical applications for advanced coursework in the major.

#### 88. Communication Research Methods

(5) STAFF

An introduction to social scientific research designs used in the field of communication, including survey research, experimental design, content analysis, and field research.

#### 89. Theories of Communication

(5) STAFF

*Prerequisite: Communication 1.*

An introduction to major theories and theoretical influences in the field of communication, in the areas of interpersonal, small group, organizational, and mass communication.

### UPPER DIVISION

#### 101. Media Literacy

(4) STAFF

*Prerequisite: upper-division standing; open to communication and interdisciplinary studies majors only.*

*Open to all students during Summer Session.*

An introduction to media courses. Overview of the key skills, knowledge structures of the media industries, the content those industries produce, and effects of that content on individuals and society.

#### 106. Small Group Communication

(4) STAFF

*Prerequisites: upper-division standing; open to communications and interdisciplinary majors only.*

*Designed for majors.*

Theory and research in communication in groups, teams, and work units in a variety of organizational contexts. Includes sections in which students observe and analyze communication processes in small group projects and exercises.

#### 107. Interpersonal Communication

(4) STAFF

*Prerequisites: upper-division standing; open to communications and interdisciplinary majors only.*

*Open to all students during Summer Session.*

Survey of theory and research in interpersonal communication, including social and intimate relationships and conversational interaction.

**109. Language and Social Identity****(4) STAFF**

*Prerequisites: upper-division standing; open to communications and interdisciplinary majors only.*

*Open to all students during Summer Session.*

Social psychology of language and communication examined from the "social identity approach." From this perspective, which claims that our attitudes, beliefs, and behaviors flow from our self-conceptions as group members, we investigate concepts such as stereotyping, power and CMC.

**110. Language and Communication Processes****(4) STAFF**

*Prerequisites: upper-division standing; communication and interdisciplinary majors only.*

*Designed for majors.*

Theory and research on the role of language in various communication contexts. Topics include: the nature of signs and symbols; language, perception and thought; social psychological factors in verbal encoding; and language and impression formation.

**111. Nonverbal Communication in Human Interaction****(4) STAFF**

*Prerequisites: upper-division standing; communication and interdisciplinary majors only.*

*Open to all students during Summer Session.*

Review of theories and empirical research on structure and function of nonverbal messages in interaction, including body and facial gestures, paralinguistics, touch, territory, environment, and physical appearance. Students conduct and report original studies or applied research projects on nonverbal communication.

**113. Media Effects on Individuals****(4) STAFF**

*Prerequisites: upper-division standing; communication and interdisciplinary majors only.*

*Open to all students during Summer Session.*

The effects of media communication on individual cognitive processes and the social environment. Emphasis on media effects on individual attitudes, family interaction, children, perceptions of minorities, sex-role stereotyping and other outcomes.

**114. Media Effects on Society and Institutions****(4) STAFF**

*Prerequisites: upper-division standing; communication and interdisciplinary majors only.*

*Open to all students during Summer Session.*

Examines the role that mass media institutions play in society. The history and functions of various media are explored from contrasting social and political viewpoints, with empirical theory and research used where possible to support and/or challenge these viewpoints.

**115. Interactive Media Theory and Design****(4) STAFF**

*Prerequisites: upper-division standing; communication and interdisciplinary majors only.*

*Open to all students during Summer Session.*

Examines cognitive, emotional, social, behavioral processes and effects of interactive media. Students apply theories of communication, psychology, and human-computer interaction to the design of content for computer-based media (Internet, interactive games, portable wireless devices, smart toys, interactive television).

**116. The Internet, Communication, and Contemporary Society****(4) STAFF**

*Prerequisites: upper-division standing; communication and interdisciplinary majors only.*

*Open to all students during Summer Session.*

Applies theories of interpersonal, group, organizational and community communication to understanding Internet communication and its social implications. Explores Internet's historical, technical, relational, economic, legal, political, and social dimensions.

**117. Persuasion****(4) STAFF**

*Prerequisites: upper-division standing; communication*

*and interdisciplinary majors only.*

*Open to all students during Summer Session.*

Analysis and synthesis of current persuasion theory to understand how messages influence attitudes and behaviors. Topics covered include: theories for altering attitudes and behaviors, the persuasion process, and the use of persuasion in applied contexts.

**118. Communication Technology and Organization****(4) STAFF**

*Prerequisites: upper-division standing; communication and interdisciplinary majors only.*

*Open to all students during Summer Session.*

Examines the interaction between communication technologies and organization, including theories of technology and agency, diffusion of innovations, effect of communication technologies on the nature of work, impact of communication technologies on privacy, security, public policy, and virtual, global, network organizations.

**119. Intergenerational Communication****(4) STAFF**

*Prerequisites: upper-division standing; communication and interdisciplinary majors only.*

*Open to all students during Summer Session.*

Introduction to our changing communication needs as we age, the dynamics of intergenerational contact, and communicative consequences of being elderly.

**120. Interviewing Theory and Practice****(4) STAFF**

*Prerequisites: upper-division standing; communication and interdisciplinary majors only.*

*Open to all students during Summer Session.*

Analysis of the interview as unique communication context, including the application of theoretical concepts and practice in designing and conducting interviews of various types (e.g., information gathering, career, recruitment, selection, appraisal, grievance, exit, journalistic, sales, survey).

**121. Communication and Conflict****(4) STAFF**

*Prerequisite: upper-division standing; communication and interdisciplinary majors only.*

*Open to all students during Summer Session.*

Theory and research on communication and conflict dynamics in various contexts. Students use theoretical concepts to analyze conflict in different situations and in their daily lives.

**122. Micro- and Macro-Organizational Communication****(4) STAFF**

*Prerequisites: upper-division standing; communication and interdisciplinary majors only.*

*Open to all students during Summer Session.*

Application of communication theory and research to established organizations, with special emphasis on communication causes, correlates, and consequences of internal and external organizational communication processes at individual, group, organizational, and societal levels of analysis.

**123. Cultural Influences on Communication****(4) STAFF**

*Prerequisites: upper-division standing; communication and interdisciplinary majors only.*

*Open to all students during Summer Session.*

Cross-cultural influences on communication processes. May deal with face-to-face or electronically mediated communication.

**124. Family Communication****(4) STAFF**

*Prerequisites: upper-division standing; communication and interdisciplinary majors only.*

*Open to all students during Summer Session.*

Communication strategies and patterns of interaction in family relationships. Topics include closeness and affection, disclosure, sibling interaction, adolescence, parenting, marital roles and conflict.

**126. Gender and Communication****(4) STAFF**

*Prerequisites: upper-division standing; communication and interdisciplinary majors only.*

*Open to all students during Summer Session.*

Identification of sex-role stereotypes and discriminatory issues for both sexes. Awareness

of gendered-communication patterns across interpersonal, mediated, and organizational contexts and the theoretical attempts to explain them. Students create applied research projects attempting to modify sexist communication patterns.

**128. Language and Intergroup Communication****(4) STAFF**

*Prerequisite: Upper-division standing; open to communication and interdisciplinary studies majors only.*

*Open to all students during Summer Session.*

Survey of theory and research concerning language and communication between various social groups (e.g., intersocial and interethnic groups), with emphasis on understanding the role communication plays in integrating and differentiating group members.

**129. Law Enforcement, Communication, and the Community****(4) STAFF**

*Prerequisites: upper-division standing; communication and interdisciplinary majors only.*

*Open to all students during Summer Session.*

Introduction to the complex facets of modern-day law enforcement. Intends to enhance effective relations between the community and law enforcement. Lectures from policing agencies and academics are supplemented by practical experiences via field trips and an extensive ridealong.

**130. Political Communication****(4) STAFF**

*Prerequisites: upper-division standing; communication and interdisciplinary majors only.*

*Designed for majors.*

Overview of the role of communication in politics and public opinion. Exploration of research on the content of a variety of forms of political communication and the cognitive, attitudinal, and behavioral effects of this communication on the public.

**131. Organizational Communication: A Global Perspective****(4) STAFF**

*Prerequisite: Upper-division standing; open to communication and interdisciplinary studies majors only.*

*Open to all students during Summer Session.*

*Not open to students who have completed Communications 122B.*

Focuses on communication processes and issues that arise in multinational and global organizations. Explores the relationship among culture, communication, technology, and ways of organizing across national contexts and in different types of organizations (non-profit, voluntary, civic, governmental, small business and corporate systems).

**132. Electronic Media Policy and Regulation****(4) STAFF**

*Prerequisites: upper-division standing; communication and interdisciplinary majors only.*

*Open to all students during Summer Session.*

Introduction to the process by which communication policy is constructed, including analysis of the role of key participants. Survey of the fundamental regulatory structure governing broadcasting and other electronic media. Examination of current media policies.

**133. Mass Communication and Children****(4) STAFF**

*Prerequisites: upper-division standing; communication and interdisciplinary majors only.*

*Open to all students during Summer Session.*

Examines children's and adolescents' reactions to mass media and interactive media. Includes analysis of children's cognitive processing of media and study of effects in such areas as violent portrayals, prosocial messages, advertising content. Considers policy implications of research.

**134. Societal Influences on the Shape and Effects of Media****(4) STAFF**

*Prerequisites: upper-division standing; communication and interdisciplinary majors only.*

Open to all students during Summer Session.

Examines the factors that affect the shape and influence of news, politics, and entertainment media messages, including media gatekeepers, audiences, institutions/organizations, technologies, the government, and culture.

### **136. Collaborative Technologies and the Dynamics of Organization**

(4) STAFF

*Prerequisites:* upper-division standing; communication and interdisciplinary majors only.

Open to all students during Summer Session.

Focuses on the nature of collaboration within and across organizations, in view of contemporary technologies. Issues examined include nature of collaboration, support of group work, virtual groups, information sharing, knowledge management, collective action, e-commerce, and new forms of organizing.

### **137. Global Communication, International Relations and the Media**

(4) STAFF

*Prerequisites:* upper-division standing; communication and interdisciplinary majors only.

Open to all students during Summer Session.

Examines the nature, role, and influence of the global communication on international relations and the relationship between the media and policy making and advocacy.

### **138. Advertising Literacy**

(4) STAFF

*Prerequisites:* upper-division standing; communication and interdisciplinary majors only.

Open to all students during Summer Session.

Introduction to the advertising industry, its procedures and its effects on our society as well as on us as individuals.

### **139. Communication and Emotion**

(4) STAFF

*Prerequisites:* upper-division standing; communication and interdisciplinary majors only.

Open to all students during Summer Session.

Overview of emotion and its role in communication. Addresses theoretical perspectives on emotion; issues of emotional display and recognition; and different emotions' effects in interpersonal, media, and social systems contexts.

### **145. Media Entertainment**

(4) STAFF

*Prerequisites:* upper-division standing; communication and interdisciplinary majors only.

Open to all students during Summer Session.

Investigation and analysis of the enjoyment, selection, appreciation, understanding, and production of media entertainment and popular culture.

### **150. Group Communication in Multiple Contexts**

(4) STAFF

*Prerequisites:* upper-division standing; communication and interdisciplinary majors only.

Open to all students during Summer Session. May be repeated for credit to a maximum of 12 units.

Integrates social and behavioral sciences with the latest communication approaches to group behavior. Students develop an understanding of how communication networks within and outside of a particular group constitutes the essential nature of group processes.

### **151. Advanced Interpersonal Communication**

(4) STAFF

*Prerequisite:* Upper-division standing; open to communication and interdisciplinary studies majors only.

Open to all students during Summer Session.

Intensive analysis of current theory and research in interpersonal communication, with special attention to theory development and testing.

### **152. Advanced Organizational Communication**

(4) STAFF

*Prerequisites:* upper-division standing; communication and interdisciplinary majors only.

Open to all students during Summer Session. May

be repeated for credit to a maximum of 12 units.

Intensive analysis of current theory and research in selected areas of organizational communication. Topics include organizational communication diagnosis and auditing, organizational innovation and change, and communication management.

### **153. Communication and Global Advocacy Networks**

(4) STAFF

*Prerequisites:* upper-division standing; communication and interdisciplinary majors only.

Open to all students during Summer Session.

Examines the nexus of communication and global advocacy networks. Explores how non-governmental organizations communicate and organize their interactions with governmental and corporate actors and the implications for global civil society.

### **155. Health Communication**

(4) STAFF

*Prerequisites:* upper-division standing; communication and interdisciplinary majors only.

Open to all students during Summer Session.

Explores theory, research, and practice regarding the impact of various types of messages (intrapersonal, interpersonal, and/or media) on people's health knowledge, attitudes, behaviors, and outcomes.

### **160AA-ZZ. Special Topics in Communication**

(4) STAFF

*Prerequisite:* Upper-division standing; open to Communication and Interdisciplinary Studies majors only.

Open to all students during Summer session.

Investigation of current theory and research in a selected area of communication. Variable topics in media, interpersonal or organizational communication, depending on the instructor.

### **170. Communication Law**

(4) STAFF

*Prerequisites:* upper-division standing; communication and interdisciplinary majors only.

Open to all students during Summer Session.

A historical survey of the development of the concept of free speech, and a study of First Amendment controversies in the United States during the twentieth and twenty-first centuries.

### **172. Advanced Communication Theory and Research**

(4) STAFF

*Prerequisites:* upper-division standing; communication and interdisciplinary majors only.

*Designed for majors. May be repeated for credit to a maximum of 12 units.*

Integration and synthesis of theories and research between at least two core areas of communication. Variable topics, such as family relationships, health, or intercultural communication will be the focus of these integrations.

### **174. Freedom of Communication (Senior Capstone in Communication Law)**

(4) STAFF

*Prerequisite:* Seniors only; open to communication majors only.

Advanced study of the principles underlying First Amendment jurisprudence, including the philosophical and political issues entailed in the right to free expression. Students examine leading court decisions and learn to apply communication law to novel situations involving freedom of speech.

### **175AA-ZZ. Senior Capstone in Communication**

(4) STAFF

*Prerequisites:* consent of instructor; senior standing; communication and interdisciplinary studies majors only.

*Designed for majors.*

A project-based course in a specific topic area of communication designed to give students a chance to apply the skills and knowledge learned in the major and the opportunity to work intensively in groups on a real world project.

- AD. Advertising
- FM. Family Communication
- IC. intercultural Communication
- IP. Interpersonal Communication

LE. Law Enforcement

SX. Sex, Censorship, and the Judiciary

### **180. Senior Honors Seminar**

(4) STAFF

*Prerequisites:* upper-division standing; open to communication majors only.

*Designed for majors.*

Seminar offered spring quarter covering methodological, theoretical, and procedural issues involved in undertaking a senior thesis.

### **181A-B-C. Senior Honors Thesis**

(4) STAFF

*Prerequisite:* consent of instructor.

Independent work with faculty sponsor culminating in senior thesis.

### **191. Applying Communication to Internships in Organizations**

(4) STAFF

*Prerequisites:* upper-division standing; open to communication majors only; consent of instructor.

*Designed for majors.*

Integrate field work experience with communication theory and current literature. Weekly lecture to be concurrent with internship in the field of communication. Lecture topics include theories of interpersonal communication, organizational structures, management, and communication styles.

### **194. Group Studies for Advanced Students**

(1-12) STAFF

*Prerequisites:* upper-division standing; communications majors only.

*May be repeated for a maximum of 12 units.*

*Designed for majors.*

Selected topics in accordance with instructor's area of specialization.

### **199. Independent Studies in Communication**

(1-5) STAFF

*Prerequisites:* upper-division standing; communications majors only.

*Must have a minimum 3.0 grade-point average for the preceding three quarters. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. Written proposal required.*

Independent studies in communication.

### **199RA. Independent Research Assistance in Communication**

(1-5) STAFF

*Prerequisites:* upper-division standing; communications majors only.

*Must have a minimum 3.0 grade-point average for the preceding three quarters. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. Written proposal required.*

Coursework shall consist of faculty supervised research assistance.

## **GRADUATE COURSES**

### **200. Communication Theory Construction**

(4) STAFF

*Prerequisite:* graduate standing.

The nature of theory and theory building in human communication.

### **201. Communication Theory**

(4) STAFF

*Prerequisite:* graduate standing.

Provides a broad overview to the study of human communication by surveying theories of language, interpersonal communication, persuasion, small group communication, organizational communication, and mass communication.

### **204A. Research Methods in Communication**

(4) STAFF

*Prerequisite:* graduate standing.

A survey of research methods in the social sciences applicable to communication research.

### **204B. Applications in Research Methods in Communication**

(4) LINZ

*Prerequisites:* Communication 204A; graduate

*standing.*

Provides students with hands on experience with basic statistics and computer programs applicable to the analysis of communication related data.

#### **204C. Advanced Topics in Research Methods and Statistical Analysis**

(4) STAFF

*Prerequisites: Communication 204A; graduate standing.*

Provides students with experience in advanced topics in multivariate statistics and computer programs. Analyses includes multiple regression, MANOVA, log linear analyses, and other advanced techniques.

#### **206. Group Communication**

(4) SEIBOLD

*Prerequisite: graduate standing.*

Readings on research concerning group processes from social and behavioral sciences, with special attention to latest communication approaches to group interaction. Design of research projects on small group communication.

#### **207. Interpersonal Communication**

(4) STAFF

*Prerequisite: graduate standing.*

Analysis of theory and research related to interpersonal communication processes.

#### **210. Language and Communication Processes**

(4) REID

*Prerequisite: graduate standing.*

Social psychology of language and communication examined from the "social identity approach." From this perspective, which claims that our attitudes, beliefs, and behaviors flow from our self-conceptions as group members, we investigate concepts such as stereotyping, power and CMC.

#### **213. Mass Media, the Individual, and Society**

(4) STAFF

*Prerequisite: graduate standing.*

The cognitive and social psychological effects of mass media on the individual and society. Focus is on empirical research as it informs communication theory.

#### **222A. Micro and Macro Organizational Communication**

(4) SEIBOLD

*Prerequisite: graduate standing.*

Classical/administrative, human relations/resources, systems, interpretive/cultural, and critical approaches to organizational communication. Theory and research on organizational structures and environments; power, authority and influence; communication networks; leadership; decision making; assimilation and socialization; innovation and change; and strategic communication.

#### **222B. Organizational Communication: A Global Perspective**

(4) C. STOHL

*Prerequisite: graduate standing.*

An organizational communicative perspective on globalization and a global perspective on organizational communication processes. Review of theories and research that address processes of organizational convergence and divergence, contemporary organizational practices, and opportunities and consequences associated with globalization.

#### **222C. Technology and Organization**

(4) FLANAGIN

*Prerequisite: graduate standing.*

Examination of critical issues in contemporary communication theory and research implicating advanced communication and information technologies and their relation to organizational dynamics, structure, and change.

#### **224. Family Communication**

(4) STAFF

*Prerequisite: graduate standing.*

Theory and research on communication in familial relationships. Focus on development, maintenance, and disintegration of families. Special consideration is given to developmental stages of families (attachment) and families with members who are failing to function in some capacity.

#### **228. Intergroup Communication**

(4) GILES

*Prerequisite: graduate standing.*

Analysis of theory and research related to intergroup relations, with special attention to the role of language use and variation as a means of communicating about intergroup relations.

#### **229. Intergenerational Communication and Aging**

(4) GILES

*Prerequisite: graduate standing.*

Theory, research and practice in communication and aging. Focus on intergenerational discourse, age identity and psychological well being.

#### **232. Mass Media Law and Policy**

(4) LINZ

*Prerequisite: graduate standing.*

Survey of the fundamental and regulatory policies governing electronic mass media, emphasizing broadcast television. Considers both structural and content-based regulation. Analyzes the policy-making process as well as the outcome of major communication policy decisions.

#### **234. Cognition and Mass Communication**

(4) STAFF

*Prerequisites: Communication 200 and 201; graduate standing.*

Review of current research of theories in the cognitive processing of mass media. Special consideration will be given to attention and memory for television.

#### **250. Contemporary Issues in Communication Science**

(4) STAFF

*Prerequisites: Communication 200 and 201; graduate standing.*

*May be repeated for a maximum of 12 units.*

Critical examination of a selected aspect of contemporary communication theory and research. Topic varies from year to year.

#### **252. Management Communication: Theory and Practice**

(4) STAFF

*Prerequisites: consent of instructor; graduate standing.*

Traditional managerial functions examined in terms of communication theory/research. Focus on leadership, advocacy, strategic communication; recruitment selection and development of top performers; new forms of organizing, group processes, team functioning; appraisal systems; feedback/motivation/performance; organizational innovation and change.

#### **500. Teaching College Communication**

(3) STAFF

*Prerequisite: graduate standing.*

Theory of teaching communication at the college level. Topics include self-presentation, facilitating discussion, constructing examinations, grading examinations and term papers, providing feedback, and professionalism.

#### **501. Apprentice Teaching**

(3) STAFF

*Prerequisites: Communication 500; graduate standing.*

*No unit credit allowed toward advanced degree.*

Application of theory to the practices of teaching college courses in communication. Students issue assignments, conduct class discussions, prepare and deliver lectures, score tests, and assign grades under the supervision of the faculty member who is the course director.

#### **502. Practicum for Teaching Associates**

(3) STAFF

*Prerequisite: Communication 500.*

*No unit credit allowed toward advanced degree.*

Theory and practice of teaching undergraduate classes in communication. Topics include the selection of behavioral objectives, selection of texts and other materials, creation of syllabi, preparation of lectures and assignments, administration of examination, and maintenance of standards.

#### **503. Research Practicum**

(3) STAFF

*No unit credit allowed toward advanced degree.*

A practicum for research associates.

#### **505. Issues in Communication Research**

(1) STAFF

*Prerequisite: graduate standing.*

*Enrollment is mandatory each quarter that a student is in residence; units do not fulfill degree requirements.*

Presentation of research completed or in progress by students, faculty and guest speakers followed by critical discussion of the issues raised.

#### **593AA-ZZ. Directed Reading**

(2-4) STAFF

*Prerequisites: consent of instructor; graduate standing.*

*May be repeated for credit to a maximum of 12 units.*

Individual tutorial. Provides students with the same material as a regular course except it is conducted on an individual basis with a faculty member.

Written contract describing the course, readings, and assignments should be submitted to the departmental graduate adviser.

#### **594AA-ZZ. Special Topics**

(1-4) STAFF

*Prerequisites: graduate standing; consent of instructor.*

Special seminar on research subjects of current interest.

#### **595AA-ZZ. Group Studies**

(4) STAFF

*Prerequisites: graduate standing; consent of instructor.*

Critical review of research in selected fields.

#### **596AA-ZZ. Directed Research**

(2-4) STAFF

*Prerequisites: consent of instructor; graduate standing.*

*May be repeated for credit.*

Individual tutorial. Provides students with supervised research experience including any of the following: reviewing literature, formulating research questions, designing measures, collecting and analyzing data, and writing papers. Written proposal must be approved by the departmental graduate adviser.

#### **597AA-ZZ. Preparation for the Qualifying Examination**

(1-4) STAFF

*Prerequisite: consent of graduate advisor; graduate standing.*

*No unit credit allowed toward advanced degree.*

Directed group or individual preparation for the master's or doctoral qualifying examination.

#### **598AA-ZZ. Master's Thesis Research and Preparation**

(1-12) STAFF

*Prerequisite: consent of thesis advisor; graduate standing.*

The thesis is done under the direction of the chair of a student's thesis committee.

#### **599A-Z. Dissertation Preparation**

(1-12) STAFF

*Prerequisites: consent of instructor; advancement to candidacy; graduate standing.*

Course is reserved for writing the dissertation.

## Comparative Literature Advisory Board

**Michael Berry**, Ph.D. (East Asian Languages and Cultural Studies)

**Julie Carlson**, Ph.D. (English)

**Susan Derwin**, Ph.D. (Germanic, Slavic, and Semitic Studies)

**Ronald Egan**, Ph.D. (East Asian Languages and Cultural Studies)

**Bishnupriya Ghosh**, Ph.D. (English)

**Wolf D. Kittler**, Ph.D. (Germanic, Slavic, and Semitic Studies)

**Sara Lindheim**, Ph.D. (Classics)

**Eric Prieto**, Ph.D. (French and Italian)

**Dwight F. Reynolds**, Ph.D. (Religious Studies)

**Harvey L. Sharrer**, Ph.D. (Spanish and Portuguese)

**Jon Snyder**, Ph.D. (French and Italian)

**Sven Spieker**, Ph.D. (Germanic, Slavic & Semitic Studies)

**Elisabeth Weber**, Ph.D. (Germanic, Slavic, and Semitic Studies)

**Simon Williams**, Ph.D. (Dramatic Art)

### Affiliated Faculty

**Geraldo Aldana**, Ph.D. (Chicana and Chicano Studies)

**Silvia Bermúdez**, Ph.D. (Spanish and Portuguese)

**Maurizia Boscagli**, Ph.D. (English)

**Edward Branigan**, Ph.D. (Film Studies)

**Leo Cabranes-Grant**, Ph.D. (Drama/Spanish and Portuguese)

**Joao Camilo dos Santos**, Ph.D. (Spanish and Portuguese)

**Thomas Carlson**, Ph.D. (Religious Studies)

**Jorge Checa**, Ph.D. (Spanish & Portuguese)

**Elizabeth Heckendorn Cook**, Ph.D. (English)

**Enda Duffy**, Ph.D. (English)

**Francis Dunn**, Ph.D. (Classics)

**Jody Enders**, Ph.D. (French and Italian)

**Claudio Fogu**, Ph.D. (French and Italian)

**L.O. Aranye Fradenburg**, Ph.D. (English)

**Colin Gardner**, Ph.D. (Art)

**Giles Gunn**, Ph.D. (English)

**Carl Gutiérrez-Jones**, Ph.D. (English)

**Richard Hecht**, Ph.D. (Religious Studies)

**Jocelyn Holland**, Ph.D. (Germanic, Slavic and Semitic Studies)

**Dominique Jullien**, Ph.D. (French)

**Stephanie LeMenager**, Ph.D. (English)

**Suzanne Jill Levine**, Ph.D. (Spanish and Portuguese)

**Didier Maleuvre**, Ph.D. (French and Italian)

**Harold Marcuse**, Ph.D. (History)

**David Marshall**, Ph.D. (English)

**Anne Maurseth**, Ph.D. (French and Italian)

**Ellen McCracken**, Ph.D. (Spanish and Portuguese)

**Catherine Nesci**, Ph.D. (French and Italian)

**Elide Oliver**, Ph.D. (Spanish and Portuguese)

**Sara Poot-Herrera**, Ph.D. (Spanish and Portuguese)

**William Powell**, Ph.D. (Religious Studies)

**Rita Raley**, Ph.D. (English)

**Laurence Rickels**, Ph.D. (Germanic, Slavic, and Semitic Studies)

**Mark Rose**, Ph.D. (English)

**Katherine Saltzman-Li**, Ph.D. (East Asian Languages and Cultural Studies)

**Cynthia Skenazi**, Ph.D. (French and Italian)

**Candace Waid**, Ph.D. (English)

**Janet Walker**, Ph.D. (Film and Media Studies)

**William Warner**, Ph.D. (English)

**Kay Young**, Ph.D. (English)

Comparative literature, an interdepartmental undergraduate and graduate program, combines the study of national literatures with courses that address the relationship between literature and other disciplines such as anthropology, cultural studies, gender studies, philosophy, linguistics, media and technology studies, psychoanalysis, religious studies, and the fine and performing arts.

The Comparative Literature Program offers two undergraduate major tracks leading to the B.A. degree, Comparative Literature with Foreign Language Emphasis and Comparative Literature with Interdisciplinary Emphasis, and M.A./Ph.D. and Ph.D. programs at the graduate level.

A degree in comparative literature provides preparation for possible careers as teachers and scholars in literary and cultural studies as well as for careers that require expertise in foreign languages and familiarity with multi-cultural perspectives, such as international journalism, business, law, and diplomacy.

### Senior Honors Program in Comparative Literature

To earn departmental senior honors, the student will work with a professor of choice for two quarters to complete a senior thesis, while enrolled in Comparative Literature 199 (Independent Studies). No more than 4 units of 199 credits may be applied to the major requirements. Students who complete departmental honors will receive the notation of “Distinction in the Major” on both official transcripts and their diploma. Students interested in departmental honors should consult with their undergraduate advisor.

## Undergraduate Program

### Bachelor of Arts— Comparative Literature

**Preparation for the major.** Six quarters (or the equivalent) of a language other than English; three courses from the following: Comparative Literature 30A, 30B, 30C, 31, 32, 33, 34, 35, 36; and one of the following series: History 2A-B-C, 4A-B-C, Art History 6A-B-C, Religious Studies 80A-B-C, Philosophy 20A-B-C.

### Upper-division major, Foreign Language

**Emphasis:** A minimum of five upper-division courses in comparative literature, including Comparative Literature 100 (Introduction to Comparative Literature) and Comparative

Literature 195 (Junior/Senior Seminar); and six literature courses (of which a minimum of three must be taught in a language other than English). Students wishing to pursue graduate study in comparative literature should select this emphasis and are strongly advised to select literature courses in two foreign languages rather than a single foreign language and English.

*Note: By petition, up to 8 units of upper-division College of Creative Studies literature courses may be applied to the upper-division major.*

### Upper-division major, Interdisciplinary

**Emphasis:** A minimum of five upper-division courses in comparative literature, including Comparative Literature 100 (Introduction to Comparative Literature) and Comparative Literature 195 (Junior/Senior Seminar); three literature courses (of which a minimum of one course must be taught in a language other than English); and three courses in a single ancillary discipline (that must be chosen in consultation with the undergraduate advisor). *Note: By petition, up to 8 units of upper-division College of Creative Studies literature courses may be applied to the upper-division major.*

### Minor—Comparative Literature

All courses to be applied to the minor must be completed on a letter-grade basis. This includes both courses offered in comparative literature and those offered by other departments and applied to the minor.

**Preparation for the minor.** Six quarters (or the equivalent) of foreign language study; two courses from the following: Comparative Literature 30A, 30B, 30C, 31, 32, 33, 34, 35, 36.

**Upper-division minor.** Twenty upper-division units, distributed as follows: Comparative Literature 100, and 16 units selected from courses in comparative literature.

*Note: Substitutions and waivers are subject to approval by the chair of the department. Please see page 118 for special conditions governing minors in the College of Letters and Science.*

## Graduate Program

Graduate study in this program requires completion of graduate courses in comparative literature in addition to courses offered by other departments and programs. These include graduate courses in literature offered by the departments of Classics, East Asian Languages and Cultural Studies, English, French and Italian, Germanic, Slavic, and Semitic Studies, and Spanish and Portuguese, and Theater. Graduate course work can also be done in related departments such as Anthropology, Communication, Film Studies, History, History of Art and Architecture, Linguistics, Music, Philosophy, Political Science, Religious Studies, Sociology, and Feminist studies. The M.A./Ph.D. is normally a six-year program. The Ph.D. for students who enter with an M.A. should take no more than four years to complete the program. Applicants to the Comparative Literature Program should confirm that appropriate resources are available for their desired course of study.

In addition to meeting program requirements, candidates for graduate degrees must meet university degree requirements found in the chapter “Graduate Education at UCSB.”

### **Admission**

In addition to fulfilling all university requirements for admission to graduate status, described in the chapter in the general catalog "Graduate Education at UCSB," applicants to the M.A./Ph.D. program will normally have completed an undergraduate major in comparative literature or a related field. For admission to the Ph.D. program, applicants must have completed an M.A. in comparative literature or a closely related field. Application packets for both programs should consist of the following: (1) two official sets of transcripts from all postsecondary institutions; (2) three letters of recommendation; (3) official scores on the GRE general test (sent electronically by ETS) and, if the applicant is not from an English-speaking country, official TOEFL scores (sent electronically by ETS); (4) one writing sample of no more than 25 pages in length; (5) two copies of the statement of purpose; (6) competence in a foreign language; and (7) the Program's foreign language form. The writing samples should be substantial papers written in an upper-division or graduate literature course. Foreign language proficiency can be demonstrated by (a) submission of a writing sample in a foreign language, (b) submission of an academic transcript providing a record of classes taken in a foreign language, or (c) evidence that the applicant is a native speaker of a foreign language. The program's admission policy is based on intellectual potential and promise, academic records, and programmatic fit.

### **Master of Arts— Comparative Literature Degree Requirements**

The M.A. requires a minimum of 36 units of graduate-level course work in either (a) three national literatures, or, (b) two national literatures and one related discipline chosen in consultation with the graduate advisor. The 36 units of graduate-level course work must include a minimum of 8 graduate units in each of two national literatures and 4 graduate units in the student's third national literature or the related discipline. Eight additional graduate units must be taken in comparative literature. A maximum of 4 units of 596 course work can be counted toward the master's degree. By the end of the second year of study, students must pass a written qualifying field examination or successfully complete a thesis in a national literature other than the literature of their native language. The written field examination or thesis will be followed by an oral examination, which must be successfully completed to pass the field examination. Students are invited to join the Ph.D. program by the Graduate Studies Committee. The invitation is contingent upon the student's performance meeting the standards of excellence needed for Ph.D. study in Comparative Literature at UCSB in graduate course work and on the first qualifying examination, as well as upon the positive recommendations by the student's exam committee and the faculty with whom the student has worked.

### **Doctor of Philosophy— Comparative Literature Degree Requirements**

The Ph.D. degree in comparative literature requires the study of three fields consisting of either (a) three national literatures, or, (b) two national literatures and one related discipline. One of the literatures may be in English. The other(s) must be studied in the original language. Two fields are considered major and the third minor. The selection of fields must be approved by the graduate advisor.

Students entering the program with an M.A. in comparative literature or a closely related field need a minimum of 24 units of additional graduate-level course work to be distributed in consultation with the graduate advisor. These must include 4 units in each of two national literatures, 4 units in the student's third national literature or related discipline, and 4 units in comparative literature. Additional course work may be required to make up for deficiencies. Students must pass three field exams in three national literatures, or two national literatures and in a related field. The first field examination should be taken in the first quarter of their second year at UCSB.

For students entering the program with a B.A., a minimum of 60 units of graduate-level course work including work done at the M.A. level is required leading to the Ph.D. A minimum of 12 units of graduate-level course work must be completed in each of the student's three fields, plus at least 12 additional units of graduate-level course work from the offerings in the Comparative Literature Program, with the remaining 12 units to be distributed among the student's fields in consultation with the Graduate Advisor. The field exam written at the M.A. level counts as the first field exam for the Ph.D. The other two qualifying field examinations and the remaining 24 units of course work should be completed by the end of the first quarter of the fourth year of study. Students may retake each field exam only one time.

Upon completion of the three field exams, students prepare an oral exam, administered by the dissertation committee, in which they present a dissertation prospectus on the proposed dissertation topic. Students who pass this examination and demonstrate a proficiency in a second foreign language will be advanced to candidacy. The final requirement is the successful completion of a doctoral dissertation, including an oral defense.

### **Optional Ph.D. Emphasis in East Asian Literatures**

The Department of East Asian Languages and Cultural Studies offers a doctoral emphasis to students previously admitted to the Ph.D. program in comparative literature. Students pursuing the emphasis in East Asian Literatures must complete four graduate-level courses: a pro-seminar on bibliography and research methodology (Chinese 211 or Japanese 211) and three other approved seminars or reading courses in the student's field. In addition, students of Chinese literature are expected to have completed at least three years of modern Chinese and three quarters of Classical Chinese (Chinese 101A-B-C) or the equivalent. Students

of Japanese literature are expected to have completed at least four years of modern Japanese and two quarters of Classical Japanese (Japanese 181, 182, 183).

There are a total of 16 units of coursework required for the emphasis in East Asian literatures, which may also be counted to satisfy the 12 to 24 units of graduate coursework in a national literature necessary for the Ph.D. in comparative literature. The doctoral committee must include a faculty member from the East Asian Languages and Cultural Studies department, either as committee chair or as one of the three participating members. The dissertation for the emphasis must rely in some significant measure on primary sources in Chinese or Japanese. Contact the Department of East Asian Languages and Cultural Studies for additional information on faculty research interests and course offerings.

### **Optional Ph.D. Emphasis in Women's Studies**

The Department of Feminist Studies, with almost fifty core and affiliated faculty members in over nineteen disciplines, serves as a model of interdisciplinary work and scholarly collaboration at UCSB. Women's Studies doctoral emphasis students are required to successfully complete four seminars that will enhance their understanding of feminist pedagogy, feminist theory, and topics relevant to the study of women, gender and/or sexuality. Women's Studies as an inter-departmental set of conversations and intellectual questions supports a multifaceted undergraduate curriculum at UCSB. Doctoral emphasis students are encouraged to apply to teach Feminist Studies courses as teaching assistants and associates as part of their Feminist Studies training.

Applicants must first be admitted to, or currently enrolled in, a UCSB Ph.D. program participating in the Women's Studies graduate emphasis. Anthropology; Comparative Literature; Counseling, Clinical, and School Psychology; English; French and Italian; Germanic, Slavic and Semitic Studies; History; History of Art and Architecture; Linguistics; Political Science; Religious Studies; Sociology; Spanish and Portuguese; or Theater and Dance. Candidates complete four graduate courses and select a member of the Feminist Studies faculty or affiliated faculty to serve on their dissertation committees. Applications to the Women's Studies Doctoral Emphasis may be submitted at any stage of Ph.D. work, and applications will be considered throughout the year.

### **Doctoral Emphasis Coursework**

Students pursuing the emphasis in Women's Studies will successfully complete four graduate courses that have been approved by the Doctoral Emphasis advisor.

1. **Feminist Theories.** A one quarter graduate seminar in interdisciplinary feminist theory offered by any department, including Feminist Studies 250 AA-ZZ.
2. **Issues in Feminist Epistemology and Pedagogy (Feminist Studies 270).** A one quarter seminar that considers Feminist Studies as a distinct field. It offers an interdisciplinary exploration of feminist theories of knowledge production and teaching practices. Readings cover past and present critical debates

and provide theoretical approaches through which to analyze interdisciplinary epistemological and pedagogical issues.

3. **Graduate Seminar in Feminist Studies** (Feminist Studies 200-290 or 594 AA-ZZ). A one quarter seminar offered by a Feminist Studies faculty member on topics of central concern to the field.  
Or,  
**Research Practicum** (Feminist Studies 280). A cross-disciplinary seminar in which fundamental questions in contemporary feminist research practice are considered in light of students' own graduate projects.
4. **Topical Seminar.** A one quarter graduate seminar that addresses topics relevant to the study of women, gender, and/or sexuality. This seminar must be taken outside the student's home department; it may be fulfilled either by another graduate seminar in Feminist Studies or a seminar in another department.

## Comparative Literature Courses

### LOWER DIVISION

#### 27. Memory: Bridging the Humanities and Neuroscience

(3) KOSIK, JULLIEN

Lecture, 3 hours; discussion, 1 hour.

Same course as French 40X and MCDB 27.

Neurosciences now ask some of the same profound questions posed by writers, artists and philosophers for centuries, thus opening surprising perspectives on memory and morality, dreams and perception, identity and agency. This course explores this emerging concordance.

#### 30A-B-C. Major Works of European Literature

(4-4-4) STAFF

A survey of European literature.

A. Classical and medieval literature from Homer to Dante.

B. Renaissance and Neoclassical literature from Petrarch to Diderot.

C. Romantic and modern literature from Rousseau to Solzhenitsyn.

#### 31. Major Works of Asian Literatures

(4) EGAN

An introduction to the diverse literary traditions of Asia through an examination of selected works. Regional focus on East, South, and Southeast Asia varies.

#### 32. Major Works of Middle Eastern Literatures

(4) STAFF

An introduction to the diverse literary traditions of the Middle East through an examination of selected works. Regional focus on North Africa, the Middle East, and Central Asia varies.

#### 33. Major Works of African Literatures

(4) STRONGMAN, AKUDINOBI

Same course as Black Studies 33.

An introduction to the diverse literary traditions of Africa through an examination of selected works. Regional focus on North, West, East, Central, and South Africa varies.

#### 34. Literature of the Americas

(4) MCCracken, OLIVER, GUTIERREZ-JONES

An introduction to the diverse literary traditions of the Americas through an examination of selected works. Regional focus on North America, the Caribbean, and Latin America varies.

#### 35. The Making of the Modern World

(4) LÉVY

Description and analysis of decisive events contributing to the world we are inhabiting. Various

themes presented: city planning, war and industrial warfare, technology and media-technology, ideologies of modernity, and modern master theories.

#### 36. Global Humanities: The Politics and Poetics of Witnessing

(4) WEBER, CARLSON

What do literature and critical theory contribute to the reflection on human rights and the analysis of their violation? Inquiry into different ways in which the humanities can reframe the debate on human rights and act as a social force.

### UPPER DIVISION

#### 100. Introduction to Comparative Literature

(4) STAFF

Prerequisite: upper-division standing.

Addresses questions of methodology and also development and debates in the history of literary and critical theory.

#### 101. Writers' Theories

(4) LEVY, LUPI

Prerequisite: consent of instructor.

Writers have also something to say about literature: What is it? How do they write it? How are we to read it? What does it mean? What tools do they provide us to analyze it?

#### 103. Going Postal: Epistolary Narratives

(4) COOK

Prerequisite: upper-division standing.

Investigates reappearance of the letter-novel at particular historical moments, and paradoxes built into the letter-form itself. Range of works emphasizing the eighteenth- and later twentieth-century novels, likely including works by Austen, Goethe, Hoffman, James, Montesquieu, Choderlos de Laclos, Lydia Davis, Pynchon.

#### 107. Voyages to the Unknown

(4) SKENAZI

Prerequisites: Writing 2 and 50.

Same course as French 154A.

The impact of the voyages of discovery on late fifteenth- and sixteenth-century Europe. Readings on real and imaginary voyages: Columbus, Cartier, Lery, More, Rabelais, Montaigne.

#### 109. Game and Literature

(4) MAURSETH

Prerequisite: upper-division standing.

An interdisciplinary inquiry into the motive of game in 18th-20th century literature. Focus is on the moral, psychological and epistemological dimensions of game according to both form and function. Considerations of the stylistic, narrative and rhetorical components of texts.

#### 111. Dreaming in Cultural Contexts

(4) PLANE

Prerequisite: upper-division standing.

Explores dreams and dreaming in multiple historical and cultural contexts and pays particular attention to dreams and dream reports as unconscious and intrapsychic as well as social and cultural communications. A variety of historical, ethnographic, psychoanalytic, and literary texts are considered.

#### 113. Trauma, Memory, Historiography

(4) DERWIN, WEBER

Prerequisite: upper-division standing.

May be repeated for credit to a maximum of 8 units with consent of department chair.

How do individuals, communities, cultures, nations remember and/or forget, preserve and/or erase, traumatic events?

#### 115. Introduction to Folk Tales

(4) STAFF

Prerequisite: English 10 or Writing 50 or upper-division standing.

Not open for credit to students who have completed Interdisciplinary 115.

Broad survey of folk tales from all over the world. Types, motifs, research, and history.

#### 117A-B. European Romanticism(s)

(4-4) HOLLAND

Prerequisite: upper-division standing.

Roots: Romantic tendencies as they emerge against the backdrop of the eighteenth-century, the Middle

Ages, and antiquity.

Cultivation: Romantic literature and science in their manifold relation to nature.

#### 119. Psychoanalytic Theory

(4) DERWIN, WEBER, FRADENBURG

Prerequisite: upper-division standing.

May be repeated for credit to a maximum of 8 units with consent of department chair.

Topics to be addressed each quarter will be chosen from the following: origins of psychoanalysis; sadomasochism; the death-drive; psychoanalysis and the law; group-psychology; psychoanalysis and the media; literature and psychoanalysis.

#### 120. Adventures of Chivalry, Courtship and War: Arthurian Romance and the Chivalric Novel

(4) SHARRER

Prerequisite: upper-division standing.

Arthurian and chivalric fiction from the medieval period to the time of Cervantes. The evolution of the legends of King Arthur and the Knights of the Round Table and the rise of new chivalric heroes and modes of fiction.

#### 121. What is a Hero?

(4) JULLIEN

Prerequisite: upper-division standing.

Focus on the idea of heroes and heroism in the Western tradition through readings of the three major epics of Greek and Latin Antiquity (the Iliad, the Odyssey, and the Aeneid), along with selections from modern variations on these old stories.

#### 122A. Representations of the Holocaust

(4) DERWIN

Prerequisite: upper-division standing.

Same course as German 116A. Not open for credit to students who have completed German 116A.

Close reading of post-Holocaust literature. Taught in English.

#### 122B. Holocaust in France

(4) DERWIN, NESCI

Same course as French 154E.

Through analysis of testimonies, memoirs, fiction, and film, this course focuses on France under the Nazi occupation. Topics include the Vichy Regime (1940-1945), The Resistance Movement, the Church under Vichy, anti-Semitism, deportations and concentration camp imprisonment, and national memory after World War II.

#### 124. Old Comedy/New Comedy

(4) YOUNG

Prerequisite: upper-division standing.

What is comedy? Is it what prompts laughter? Is it a particular structural form? Study of theories of comedy and comic forms across cultures and times under the headings of "Old" and "New" to work through the nature of comedy.

#### 126. Comparative Black Literatures

(4) STRONGMAN

Prerequisite: upper-division standing.

Same course as Black Studies 126.

Using a social constructivist approach to race, this course examines the multiple ways in which racial discourses operate in global literary cultures. Emphasizes that blackness need not be a homogenous concept in order to continue to be a powerful agent in our postmodern world.

#### 128A. Children's Literature

(4) SNYDER

Prerequisite: upper-division standing.

Classic texts and theories of children's literature, from Perrault and Wilde to Freud and Propp. Examination of narrative and ideological strategies for constructing and representing "childhood" in modernity, with emphasis on their relationship to the family and the marketplace.

#### 128B. Representing Childhood

(4) DERWIN

Prerequisite: upper-division standing.

Course examines European and American representations of childhood in works of fiction, painting, photography, psychoanalysis, and pedagogy from the eighteenth to the twentieth centuries. Topics include religious views of the child, sexuality and childhood, discipline, play, and children in media.

**129. Theory and Text: Petrarch and Shakespeare's Sonnets****(4) CORUM***Prerequisite: upper-division standing.*

An opportunity to bring several powerful theoretical discourses to bear on the two most exceptional sonnet sequences of early modern cultures—Petrarch's at the beginning, Shakespeare's at the end.

**137. Mind Games****(4) LEVY***Prerequisite: upper-division standing.*

Exploration of works challenging our intellectual and cognitive faculties with paradoxes, manipulations of space and time, logical aberrations and the like. Authors may include Poe, Stevenson, Maupassant, Balzac, Melville, Borges, Kafka, Bioy-Casares, Nabokov, Cortazar, Barth, Calvino, Pynchon, Vonnegut, Queneau, Perec.

**146. Robots****(4) STAFF***Prerequisite: upper-division standing.*

From eighteenth-century clockwork automata to Turing's universal machine, investigation of the function and representation of machines in literature, philosophy, film and animation. Texts by Kant, Villiers de L'Isle-Adam, Kafka, Wiener, and Alan Turing, SciFi films and computer games.

**148. Creative Chaos****(4) HOLLAND***Prerequisite: upper-division standing.*

Chaos: is it primordial mayhem and confusion? Or does chaos permit the possibility of form and creativity? Course explores the order and disorder of chaos within literary, scientific, and philosophical narratives. From Hesiod and Ovid through Diderot, Wordsworth, and Pynchon.

**149. Rhetoric of Crime****(4) STAFF***Prerequisite: upper-division standing.*

Focusing on the interrelations between law and literature this course examines American and European representations of crime and punishment in the lawcourts, theater, cinema, and television from Euripides to the Court-Television network. Readings and screenings from writers, judges, and jurists. In English.

**150. Contemporary Literary Criticism****(4) STAFF***Prerequisite: upper-division standing.**May be repeated for credit.*

Studies in modern and post-modern literary theory. In any one quarter, the course will examine two or three basic orientations such as structuralism, semiotics, hermeneutics, deconstruction, or the esthetics of reception.

**153. Border Narratives****(4) GUTIERREZ-JONES***Prerequisite: upper-division standing.*

Examination of novels, short stories, and films that engage U.S./Mexico border dynamics considering the ways diverse, interactive processes are affecting border culture, and inquiring into the ways cultural products critically respond to these processes.

**154. Science Fiction in Eastern Europe****(4) MCCLAIN***Prerequisite: upper-division standing.**Same course as Slavic 164B.*

The genre of science fiction and its development in literature and film in the various cultures of Eastern Europe. Topics include utopia, dystopia, technology, the "mad" scientist, etc.

**161. Literature of Central Europe****(4) SPIEKER***Same course as German 151C and Slavic 151C.*

Investigation of the prolific literatures of central Europe, one of the culturally and linguistically most diverse regions of the European continent that has produced writers such as Italo Svevo, Franz Kafka, Robert Musil, Bruno Schulz, and others. Readings in English.

**170. Literary Translation: Theory and Practice****(4) LEVINE***Prerequisite: upper-division standing.*

Examination of translation and the canon, questioning the hierarchical division between translation and original, illustrating the concept of the original as translation and the literary text as "work-in-progress" in which translation forms part of the creative process.

**171. Post-Colonial Cultures****(4) PRIETO***Same course as French 154G.*

Study of fiction from the Caribbean, West Africa, and the Maghreb. Provides insights into the vibrancy of contemporary post-colonial societies, the ongoing legacy of colonialism, and the meaning of multiculturalism born of the conflict between and hybridization of widely differing cultural traditions. In English.

**173. Life Stories: Biography and Autobiography in a Comparative Context****(4) SALTZMAN-LI***Prerequisite: upper-division standing.*

An exploration of biography and autobiography. Examples to be chosen from Western European, American, Japanese, and Chinese literature with a view towards defining these two terms with comparative and historicized significance.

**174. Metamorphosis****(4) HOLLAND**

Narratives of metamorphosis challenge our preconceived notions of identity and form. This course investigates metamorphosis as a scientific, social, and philosophical problem, drawing from literature (Ovid, Stevenson, Kafka, Cortazar, etc.) and the visual arts, including film.

**179B. Mysticism****(4) WEBER***Prerequisite: upper-division standing.**Same course as German 179B. Not open for credit to students who have completed German 169.*

Analysis of German mystical writing, its roots in ancient Greek texts, revolutionary impact, links with other mystical traditions, and influence on secular literature. Texts include Hildegard von Bingen, Meister Eckhart, Mechthild von Magdeburg, Novalis, Rilke, etc. Taught in English.

**179C. Mediatechnology****(4) STAFF***Prerequisite: upper-division standing.**Same course as German 179C. Not open for credit to students who have completed German 180.*

Telegraph, telephone, phonograph, and film are techniques that have engendered new forms of representation, communication, and thinking. Course studies the impact of these transformations in literature and on literature. Taught in English.

**180. The European Renaissance****(4) HELGERSON***Prerequisites: Writing 2 and 50; or Writing 109AA-ZZ or English 10.**Same course as English 144.*

The generic forms and cultural issues characteristic of early modern European poetry, fiction, and drama. Such authors as Petrarch, Boccaccio, More, Rabelais, Ariosto, Montaigne, Camoes, Shakespeare, Lope de Vega, and Cervantes.

**183. The Quest for Narrative in Late Imperial China****(4) POWELL***Same course as Religious Studies 183.*

An exploration of quest themes, narrative forms and performative modes in the culture of Late Imperial China based on a reading of an English translation for the sixteenth century masterpiece, *The Journey to the West (Monkey)*.

**186AA-ZZ. Interdisciplinary Comparative Literature Studies****(4) STAFF***Prerequisite: upper-division standing.**May be repeated for credit to a maximum of 12 units provided letter designations are different.*

Interdisciplinary examination of selected topics, theories, disciplinary issues, and/or methodological

questions in the combined study of literature and other areas of the humanities and humanistic sciences. Course focus will be determined by the instructor(s).

**187. Strauss and Hofmannsthal****(4) HSU***Prerequisite: upper-division standing.**Same course as Music 187.*

A course in the collaboration between composer and poet. A study in the operas, the correspondence, and related developments in German music in the early twentieth century.

**188. Narrative Studies****(4) STAFF***Prerequisite: upper-division standing.*

Study of various forms, e.g., novel, shorty story, essay, memoir, with a specific focus each quarter. Topics to be addressed may include strategies of narration, the history of particular narrative forms, what is meant by literary style.

**191. Fantasy and the Fantastic****(4) LEVY***Same course as French 153D.*

Course explores works that manipulate our conceptions of space and time, undermining our sense of reality. Works by Balzac, Poe, Merimée, Stevenson, James, and Borges.

**195. Junior/Senior Seminar****(4) STAFF***Prerequisite: upper-division standing.*

Selected methodological issues in comparative literature. Topics vary with each instructor.

**197. Upper Division Special Topics****(4) STAFF***Prerequisite: upper-division standing.**May be repeated for credit to a maximum of 12 units.*

Content will vary with each instructor.

**199. Independent Studies in Comparative Literature****(1-5) STAFF***Prerequisites: upper-division standing; completion of two upper-division courses in comparative literature.*

*Must have a minimum 3.0 grade-point average for the preceding three quarters. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. Comparative Literature 199 may be repeated for credit to a maximum of 30 units, but only 12 units may be applied toward the major.*

Independent studies with any faculty member. To permit study of a subject desired by the student but not covered in course offerings.

**GRADUATE COURSES****200. Seminar in Comparative Literature****(4) STAFF***Prerequisite: graduate standing.*

Addresses issues of methodology and literary theory. Specific authors and topics vary from class to class.

**209. Religion and Politics in Pier Pasolini and Georges Bataille****(4) WITTMAN***Prerequisite: graduate standing.**Same course as French 209.*

Explores how recent interest in the connections between religion and politics has brought to the fore the works of director, poet, and political agitator Pier Paolo Pasolini, and philosopher and founder of the Collège de Sociologie, Georges Bataille.

**235. Symbolism, Decadence, and the Origins of Modernism in Italy and France****(4) STAFF***Prerequisite: graduate standing.*

From Mallarmé to Marinetti, this course explores the continuities between the obsessions of decadence (the dandy, the femme fatale, and the "death of God"), and the revolutionary claims of Modernism (asserting artistic autonomy, freeing the unconscious, politicizing the personal).

**236. Media History Theory****(4) WARNER***Prerequisite: graduate standing.*

Interweaves a study of the emergence of several

kinds of twentieth century media including radio, film, television, and the internet, with key texts of media theory including Benjamin, Adorno, McLuhan, Debord, Hall, and others.

### 237. Literature and the Sacred

(4) STAFF

*Prerequisite: graduate standing.*

*Same course as Religious Studies 277.*

Explores theories of the sacred, and its radical otherness, in relation to writing and poetics, in twentieth century French and Italian thought. Authors include: Caillois, Bataille, Paulhan, Eco, Ricoeur, Cacciari, Blanchot, Vattimo, Kristiva, Derrida, Lacan, Irigaray. In English.

### 249. Music and Literature

(4) PRIETO

Study of interrelations of music and literature, with emphasis on modernist interest in using principles from one art to guide creation in the other. Literary texts from Symbolists to Beckett and Burgess; theory: Aristotle to Adorno; music: from Wagner to S. Reich.

### 260. Literary Translation: Theory and Practice

(4) LEVINE

Examination of translation and the canon, questioning the hierarchical division between translation and original, illustrating the concept of the original as translation and the literary text as "work-in-progress" in which translation forms part of the creative process.

### 265. Studies in Renaissance Literature: Comparative Study of Early Modern European Literature

(4) HELGERSON

Topics and content will vary and may include: the place of the domestic in early modern European drama and painting, Petrarchism and the formation of national literatures in Spain, France, and England, and Renaissance fiction from More to Cervantes.

### 287. Strauss and Hofmannsthal

(4) HSU

*Same course as Music 287.*

A course in the collaboration between composer and poet. A study in the operas, the correspondence, and related developments in German music in the early twentieth century.

### 591. Teaching Assistant Practicum

(4) STAFF

*Units earned do not apply toward completion of advanced degrees.*

Supervised teaching of lower-division comparative literature courses at UCSB. Participation in occasional workshops related to the field of teaching will be required.

### 594. Special Topics

(4) STAFF

A special seminar on research subjects of current interest.

### 596. Directed Reading and Research

(2-18) STAFF

*Minimum of 2 units per quarter. No more than half of units required for M.A. may be taken in 596 series. Letter grade only.*

Individual tutorial. A written proposal for each tutorial must be approved by the program chair.

### 597. Individual Study for M.A. Comprehensive and Ph.D. Examinations

(1-12) STAFF

*No unit credit allowed toward advanced degree. Enrollment limited to 24 units per examination (12 units maximum in any one examination quarter). S/U grading only.*

For individual study with major professor or chair or director of student's program.

### 598. Master's Thesis Research and Preparation

(2-12) STAFF

*No unit credit allowed toward advanced degree. S/U grading only.*

For research and writing of the master's thesis.

### 599. Ph.D. Dissertation Research and Preparation

(2-12) STAFF

*S/U grading only.*

For research and writing of the doctoral dissertation. Instructor should be chair of the student's doctoral committee.

# Computer Science

## (Letters and Science)

Department of Computer Science

Harold Frank Hall, Room 2104

Telephone: (805) 893-4321

The College of Letters and Science offers a bachelor of arts degree in computer science with a choice of emphasis in computational biology, computational geography, or computational economics.

Students may satisfy some of the requirements for the computer science degree through the College Board Advanced Placement Tests. With a score of 3, 4, or 5 on Computer Science Examination AB, equivalent credit will be granted for the university course Computer Science 5NM. For additional information concerning the programs in computer science, see the entry of the Department of Computer Science in the College of Engineering, which describes departmental facilities, faculty, advising services, courses offered, career opportunities, and graduate study.

## Undergraduate Program

Students who declare the computer science pre-major or major are responsible for satisfying major requirements in effect at the time of their declaration. When students have completed the required pre-major courses, they must petition to change from pre-major to major status. Computer science majors and pre-majors have priority when registering in all Computer Science courses.

Students who are admitted to UCSB in a different major (or undeclared) and who are planning to enter the pre-computer science program must complete at least 16 units of pre-major coursework at UCSB, including 8 units in computer science, with at least a 3.0 grade-point average for all pre-major courses completed at the University of California. Students who have completed the entire computer science pre-major with at least a 2.75 University of California grade-point average will be admitted to full major standing upon petition whether or not they have been officially declared pre-majors.

Students applying for major status in the B.A. program will not be considered for a change of major/change of college unless they can demonstrate that they will be able to complete all of the degree requirements for the proposed program without exceeding 200 units.

*Please note:* Pre-major status does not guarantee admission to major status. To be admitted to the

major, the student must complete the pre-major courses with a minimum grade-point average of 2.75.

Courses required in preparation for the major and in the lower- and upper-division major, both within the Department of Computer Science and in other departments, must all be completed on a letter-grade basis.

### Bachelor of Arts—Computer Science—Emphasis in Computational Biology

**Preparation for the major.** Mathematics 3A-B-C, 5A-B; Computer Science 16, 24, 32, 40; PSTAT 120A. Students with no previous programming background should take CMPSC 8 before taking CMPSC 16. CMPSC 8 is not included in the list of preparation for the major courses but may be counted as a free elective.

Upon completion of the pre-major requirements with a satisfactory grade-point average, the pre-major student should submit a change of major petition, available in the office of the Department of Computer Science to advance to the full major; at that time, students must declare an emphasis.

**Lower-division major.** Chemistry 1A-AL-B-BL-C-CL; and MCDB 1A-AL; MCDB 1B; EEMB 2; and either MCDB 1BL or EEMB 2L; and Engineering 101. The lower-division major requirements are excluded from the pre-major grade-point average requirement and need not be completed prior to advancement to the full major.

**Upper-division major.** Computer Science 123, 130A-B, 138, 165B, 174A, 167; PSTAT 120B; and MCDB 101A-B. Students must choose 8 units of upper-division biology electives. Recommended: 8 additional units of upper-division Computer science or biology electives. A list of these electives is available from the Computer Science office, and on the web at [www.cs.ucsb.edu/undergraduate/requirements/ba/cpbio](http://www.cs.ucsb.edu/undergraduate/requirements/ba/cpbio).

### Bachelor of Arts—Computer Science—Emphasis in Computational Economics

**Preparation for the major.** Students must complete the courses listed in both Sections I and II. The courses in Section I must be completed with a minimum University of California grade-point average of 2.75 before the student will be admitted to full major status.

I. (Pre-major): Mathematics 3A-B-C, 5A-B; Computer Science 16, 24, 32, 40; PSTAT 120A. Students with no previous programming background are encouraged to take Computer Science 8 before taking Computer Science 16. Computer Science 8 will not apply to the major or pre-major.

II. One science sequence from Chemistry 1A-AL-B-BL-C-CL or Physics 1-2-3-3L or Physics 6A-AL-B-BL-C-CL; Economics 1 and 2; Economics 100A-B; one course from Philosophy 4, 6, 100A or Engineering 101. The courses listed in Section II need not be completed prior to advancement to the full major, and the grades will not be included in the pre-major grade-point average calculation, although they will apply to the overall major grade-point average.

Upon completion of the pre-major require-

ments with a satisfactory grade-point average, the pre-major student should submit a change of major petition, available in the office of the Department of Computer Science to advance to the full major; at that time, students must declare an emphasis.

**Upper-division major.** Forty-eight upper-division units are required, to be distributed as follows: Computer Science 111, 123, 130A-B, 165A or 165B, 174A and 4 units of Computer Science elective; PSTAT 120B; 16 units from Economics 101, 116A-B-C, 134A-B, 140A-B, 171, 180, 181, 184. Additional coursework in upper-division computer science and economics is recommended.

### **Bachelor of Arts—Computer Science—Emphasis in Computational Geography**

**Preparation for the major.** Mathematics 3A-B-C, 5A-B; Computer Science 16, 24, 32, 40; PSTAT 120A. Students with no previous programming background should take CMPSC 8 before taking CMPSC 16. CMPSC 8 is not included in the list of preparation for the major courses but may be counted as a free elective.

Upon completion of the pre-major requirements with a satisfactory grade-point average, the pre-major students should submit a change of major petition, available in the office of the Department of Computer Science to advance to the full major; at that time, students must declare an emphasis.

**Lower-division major.** Science sequence: Chemistry 1A-AL-B-BL-C-CL or Physics 1-2-3-3L or Physics 6A-AL-B-BL-C-CL; Geography 3A, 3B, 5, and 12. Philosophy 4 or 6 or 100A or Engineering 101. The lower-division major requirements are excluded from the pre-major grade-point average requirement and need not be completed prior to advancement to the full major.

**Upper-division major.** Computer Science 111, 123, 130A-B, 165A or B, 174A, 185, and Computer Science/Electrical Engineering 181B. Students must choose 16 units of upper-division geography electives. Recommended: 8 additional units of upper-division computer science or geography electives. A list of these electives is available from the Computer Science office, and on the web at [www.cs.ucsb.edu/undergraduate/requirements/ba/cpgeo](http://www.cs.ucsb.edu/undergraduate/requirements/ba/cpgeo).

### **Bachelor of Science—Computer Science**

The College of Engineering offers a bachelor of science degree in computer science. For information about this major, refer to the Computer Science section in the College of Engineering.

## Dance

for Dance, see Theater and Dance.

## Dramatic Art

for Dramatic Art, see Theater and Dance.

# Earth Science

(formerly Geological Sciences)

Department of Earth Science  
Division of Mathematics, Life,  
and Physical Sciences  
Webb Hall, Room 1006

**Telephone: (805) 893-3471**

**Undergraduate e-mail:**

**gs-undergraduate-assistant@geol.ucsb.edu**

**Graduate e-mail:**

**gs-graduate-assistant@geol.ucsb.edu**

**Website: [www.geol.ucsb.edu](http://www.geol.ucsb.edu)**

**Department Chair: Ralph Archuleta**

## Faculty

**Ralph J. Archuleta**, Ph.D., UC San Diego Institute for Geophysics and Planetary Physics; Professor (seismic source studies, strong motion seismology)

**Stanley M. Awramik**, Ph.D., Harvard University, Professor (biogeology, paleobiology)

**Douglas Burbank**, Ph.D., Dartmouth College, Professor (tectonic geomorphology, collisional origins, sedimentation and tectonics, surface processes).

**Cathy J. Busby**, Ph.D., Princeton University, Professor (sedimentology)

**Jordan F. Clark**, Ph.D., Columbia University, Professor (hydrogeology)

**John M. Cottle**, Ph.D., Oxford University, Assistant Professor (continental tectonics)

**Michael DeNiro**, Ph.D., California Institute of Technology, Professor (stable isotopes and geobiology)

**Phillip B. Gans**, Ph.D., Stanford University, Associate Professor (structural geology, tectonics, geochronology)

**Bradley R. Hacker**, Ph.D., UC Los Angeles, Professor (metamorphic petrology, structural geology, geochronology)

**Rachel M. Haymon**, Ph.D., UC San Diego Scripps Institution of Oceanography, Professor (marine geology and geochemistry)

**Chen Ji**, Ph.D., California Institute of Technology, Assistant Professor (seismology)

**Edward A. Keller**, Ph.D., Purdue University, Professor (surface processes, hydrology, environmental geology)

**David W. Lea**, Ph.D., Massachusetts Institute of Technology—Woods Hole Oceanographic Institute, Professor (chemical oceanography and paleo-oceanography)

**Lorraine E. Lisiecki**, Ph.D., Brown University, Assistant Professor (paleoclimate)

**Bruce P. Luyendyk**, Ph.D., UC San Diego Scripps Institution of Oceanography, Professor (tectonics, geophysics, paleomagnetism)

**James M. Mattinson**, Ph.D., UC Santa Barbara, Professor (petrology, isotope geology)

**Susannah M. Porter**, Ph.D., Harvard University, Assistant Professor (paleontology of early life)

**Frank J. Spera**, Ph.D., UC Berkeley, Professor (igneous petrology, magma transport phenomena)

**Toshiro Tanimoto**, Ph.D., UC Berkeley, Professor (seismology, earth structure)

**Bruce H. Tiffney**, Ph.D., Harvard University, Professor (evolutionary biology, paleobotany)

**David L. Valentine**, Ph.D., UC Irvine, Associate Professor (biogeochemistry, geomicrobiology, microbial ecology, geochemistry)

**Syee Weldeab**, Ph.D., University of Tübingen, Assistant Professor (paleoclimate, paleoceanography)

**Andre R. Wyss**, Ph.D., Columbia University, Professor (vertebrate paleontology)

## Emeriti Faculty

**Tanya M. Atwater**, Ph.D., Scripps Institution of Oceanography, Professor (plate tectonics, ocean floor spreading)

**James R. Boles**, Ph.D., University of Otago, Professor (sedimentary petrology)

**John C. Crowell**, Ph.D., UC Los Angeles, Professor Emeritus (tectonics, paleoclimates)

**Michael D. Fuller**, Ph.D., Cambridge University, Professor Emeritus (geomagnetism)

**Clifford A. Hopson**, Ph.D., Johns Hopkins University, Professor Emeritus (igneous and metamorphic petrology)

**James P. Kennett**, Ph.D., Victoria University of Wellington, New Zealand, Professor Emeritus (paleo-oceanography, marine geology)

**Ken C. MacDonald**, Ph.D., Massachusetts Institute of Technology, Professor (marine tectonics and magnetism)

**Robert M. Norris**, Ph.D., UC San Diego Scripps Institution of Oceanography, Professor Emeritus (geomorphology, quaternary geology)

**William A. Prothero**, Ph.D., UC San Diego, Professor Emeritus (seismology, seismic instrumentation, educational technology)

**Arthur G. Sylvester**, Ph.D., UC Los Angeles, Professor Emeritus (structural geology, petrofabrics, neotectonics)

**George R. Tilton**, Ph.D., University of Chicago, Professor Emeritus (geochronology)

**Donald W. Weaver**, Ph.D., UC Berkeley, Professor Emeritus (stratigraphy, paleontology)

**William S. Wise**, Ph.D., Johns Hopkins University, Professor Emeritus (mineralogy, geochemistry)

## Affiliated Faculty

**Robert D. Ballard**, Ph.D. (Oceanography)

**Bodo Bookhagen**, Ph.D. (Geography)

**Oliver Chadwick**, Ph.D. (Geography and Environmental Studies)

**Thomas Dunne**, Ph.D. (School of Environmental Science and Management)

**John A. Endler**, Ph.D. (Ecology, Evolution, and Marine Biology)

**Patricia A. Holden**, Ph.D. (Donald Bren School of Environmental Science and Management)

**Craig Nicholson**, Ph.D., (Marine Science Institute)

**Richard H. Sibson**, Ph.D., (Earth Science)

**Samuel S. Sweet**, Ph.D. (Ecology, Evolution, and Marine Biology)

**Douglas Wilson**, Ph.D. (Marine Science Institute)

**A**lone in the solar system, the Earth is a water-rich rocky planet that has given rise to abundant and diverse life. In the Department of Earth Science, we study the whole Earth system, focusing on interactions between the solid earth, hydrosphere, atmosphere, and biosphere, and on the historical evolution of the Earth system throughout geologic time. We explore ongoing terrestrial, marine, and interior Earth processes that are taking place today, and we examine the geologic record to illuminate the past behavior and changing properties of our planet over timescales ranging from centuries to billions of years. We use knowledge about active processes to read the rocky record of the past and seek clues to the origins of Earth's features and life. From the record of the past, we extrapolate to predict global changes that will affect people in the future. We discover the marvels of our home planet at spatial scales ranging from the atomic scale to the global scale, through observations, measurements, experiments, and models.

The Department of Earth Science at UCSB conducts many field studies in geographic areas ranging from the tallest mountain peaks of the Himalayas, the wilderness of Antarctica, to the vast undiscovered depths of the ocean floor. Our graduate and undergraduate students participate directly in the excitement of exploring unknown terra incognita. Taught by a distinguished and dedicated faculty (including several members of the National Academy of Sciences and winners of the UCSB Distinguished Teaching Award), students in Earth Science experience the wonder of discovery and come to appreciate and connect to the unfolding planetary drama of which they are part. Because Earth Science students acquire such diverse tools and skills in mapping, analyzing, visualizing, computing, and problem-solving, they are well-prepared for a broad range of careers in the private sector, government, K-12 education, academia, and the industry.

### **Mission Statement**

The faculty and facilities of the Department of Earth Science exist to support and further instruction and research in geological sciences. These endeavors involve the creation and dissemination of knowledge by involving students in conducting research both at the undergraduate and graduate levels.

### **Educational Objectives**

The goal of the graduate program is to equip young scientists for their future roles as research scientists, teachers, scholars, and productive employees by teaching them to be engaged in lifelong learning and experience, as well as professional and public service. The goal of the undergraduate program is to produce graduates with a broad education in the sciences, a firm grasp of geologic principles and ideas, and an arsenal of intellectual and communication skills. Departmental requirements and goals are organized toward acquisition of basic fundamentals, skills of observation, techniques of data collection and analysis, and training in objective reasoning, writing, and computer literacy. The main vehicle for this training is a strong emphasis on field experience through three field courses and numerous trips attached to other courses.

### **Senior Honors Program**

Senior standing students with outstanding academic records in geological sciences are encouraged to participate in the senior honors program. The honors program centers on an independent research project, which must represent a significant advanced undertaking in an area of academic or applied research. It must be approved by the department chair and by a faculty member who serves as the project supervisor. Program requirements include a 3.2 grade-point average in the major and overall, maintenance of the 3.2 grade-point average through the duration of the project, and completion of the senior research thesis course series, Geology 196HA-B-C. Distinction in the Major will be awarded at graduation to students whose projects are evaluated as acceptable. Proposal forms are available in the department office, and are due by the add deadline in the Fall quarter. Students whose projects require funding should contact the Undergraduate Research and Creative Activities (URCA) office in early October.

### **Five-Year Combined Bachelor's/Master's Program**

The Department of Earth Science offers a program allowing students to earn combined bachelor of science and master of science degrees in geological sciences or geophysics. See the description below under "Graduate Program."

## **Undergraduate Program**

### **Bachelor of Science— Geological Sciences**

Geological science is the study of the earth—of its rocks, minerals and records of ancient life, and of the physical, chemical and biological processes, past and present, at work in the earth's interior, on its surface, and within its envelope of water and air. An applied science, geoscience draws from a number of disciplines, mixing the practical with the theoretical.

**Preparation for the Major.** Students must complete the following courses: Geology 1 or 2 or 4; Geology 3; Chemistry 1A-AL, 1B-BL, 1C-CL; Mathematics 3A, 3B, 3C; Physics 1, 2, 3, 4 or Physics 6A-AL, 6B-BL, 6C-CL. Recommended: Geology 18 (fall and spring field trips), Math 5B-C, PSTAT 5A and a course in computer programming. A grade of C- or better is required in all courses in the preparation for the major.

**Upper-division major.** Fifty-six upper-division units are required, distributed as follows: Geology 104A, 114A, 114B, 115, 134, 160 (total of 2 units) and Writing 109ST. In addition, students must take Geology 103, 104B, 118, one course from Geology 102A-L, 102B-BL, 102C-CL, and 7 additional elective units from the list: Geology 102A-AL-B-BL-C-CL (if not used above), 109, 113, 117, 122, 123, 124AA-ZZ, 156, 157, 160, 164B, 173; Geography 176A-B.

**Concentration in Engineering Geology.** Students desiring this concentration must include Geology 100, 113, 117, 168, and 173 (or Geography 116) in their upper-division electives. Also recommended for the concentration:

Geography 176A, 176B, Geology 124AA-ZZ, 169 and Environmental Studies 144.

*Note: The concentration will not be specified on the transcript or diploma.*

### **Bachelor of Science— Geological Sciences— Earth Systems Emphasis**

Earth systems science emphasizes an integrated view of the earth as a dynamically linked system. Students in this major take traditional geology courses while also pursuing course work in related disciplines, such as ocean, atmospheric, and earth-surface sciences. The program provides broad preparation for both postbaccalaureate employment (especially in environmental fields) and graduate studies in geosciences.

**Preparation for the major.** Students must complete the following courses: Geology 1 or 2 or 4; Geology 3; Mathematics 3A, 3B, 3C; Chemistry 1A-AL, 1B-BL, 1C-CL; Physics 1, 2, 3, 4 or Physics 6A-AL, 6B-BL, 6C-CL. Recommended courses: Geology 18 (fall and spring field trips), statistics, and a course in computer programming. A grade of C- or better is required in all courses in the preparation for the major.

**Upper-division major.** Fifty-six upper-division units are required. The core requirements are: Geology 104A, 114A, 114B, 134, 160 (total of 2 units) and Writing 109ST. The emphasis requirements are: 2 courses from Geology 164A-B-C, Geology 130, 6-8 units of senior research experience (Geology 119, 181, 182) and 14-16 elective units from the list: Geology 102A, 102AL, 102B, 102BL, 102C, 102CL, 103, 104B, 117, 123, 124AA-ZZ, 157, 160, 161, 168, 169, 171, 198, 199; Chemistry 113A; Geography 104, 110, 115A, 115B, 116, 133, 134, 166 or other UCSB course with permission from faculty advisor.

### **Bachelor of Science— Geological Sciences— Earth and Planetary Science Emphasis**

Earth and planetary science is the study of earth as a planetary system with focus on origin and nature of terrestrial planets in the cosmos with a focus on the primary underlying physical and chemical principles involved including astrobiological theories.

**Preparation for the major.** Students must complete the following courses: Geology 1 or 2 or 4; Geology 3; Mathematics 3A, 3B, 3C; Chemistry 1A-AL, 1B-BL, 1C-CL; and Physics 1, 2, 3, 4 or Physics 6A-AL, 6B-BL, 6C-CL; Astronomy 1. A grade of C- or better is required in all courses in the preparation for the major. Recommended: Math 5A-B-C; Physics 5.

**Upper-division major.** Fifty-six upper-division units are required. The core requirements are: Geology 104A, 114A, 114B, 134, 160 (total of 2 units) and Writing 109ST. The emphasis requirements are: Geography 110, Geology 123, Geology 135, Chemistry 113A, and 18 elective units from the list: Geology 102A, 102AL, 102B, 102BL, 103, 124G, 157, 159A, 159B, 164B; Geography 133, 176A, 176B; Chemistry 113B, 113C, Physics 132, 133.

### **Bachelor of Science— Geological Sciences— Geohydrology Emphasis**

Geohydrology is the study of the movement of water through geologic material and the resulting interactions with a focus on earth surface processes.

**Preparation for the major.** Students must complete the following courses: Geology 1 or 2 or 4; Geology 3; Mathematics 3A, 3B, 3C; Chemistry 1A-AL, 1B-BL, 1C-CL; and Physics 1, 2, 3, 4 or Physics 6A-AL, 6B-BL, 6C-CL. Recommended: Geology 19. A grade of C- or better is required in all courses in the preparation for the major.

**Upper-division major.** Fifty-six upper-division units are required. The core requirements are: Geology 104A, 114A, 114B, 134, 160 (total of 2 units) and Writing 109ST. The emphasis requirements are Geology 117, 168 or 169, 173, and 21 elective units from the list: Geology 100, 103, 104B, 113, 118, 119, 122, 130, 164A, 164B, 164C, 168 or 169 (if not used above), 171; Environmental Studies 144; Environmental Studies/Geography 114A; Geography 112, 162A, 176B, 176BL.

### **Bachelor of Science— Geological Sciences— Paleobiology Emphasis**

Paleobiology is the study of fossils as evidence for the patterns and processes of evolution over geological time. Fossils embody some, but not all, of the traits of the animals they represent. The paleobiologist seeks to understand the geological context in which a fossil is found and to interpret the biology of the fossil from a sound knowledge of living organisms. Students in paleobiology take most of the traditional Geology courses in addition to their coursework in biology and related fields.

**Preparation for the major.** Recommended: Geology 18. A grade of C- or better is required in all courses in the preparation for the major. Students must complete the following courses: Geology 1 or 2 or 4; Geology 3; Mathematics 3A, 3B, 3C; Chemistry 1A-AL, 1B-BL, 1C-CL; Physics 1, 2, 3, 4 or 6A-AL, 6B-BL, 6C-CL; MCDB 1A-1AL, MCDB 1B; EEMB 2-2L, EEMB 3-3L, EEMB 30 or Psychology 5.

**Upper-division major.** Fifty-six upper-division units are required. The core requirements are: Geology 104A, 114A, 114B, 134, 160 (total of 2 units) and Writing 109ST. The emphasis requirements are: Geology 111-111L; EEMB 120; Geology 121; two courses from: Geology 141-141L, 144, 148, 149, 159C; and 11-12 elective units from the list: Geology 122, 130, 157, 159A, 159B, 161, 164A, 164B, 164C, 189, 190; Anthropology 105, 153ST, 180A, 180B; EEMB 102, 103A, 103B, 105, 106, 107, 108, 112, 114, 115, 116, 134, 140, 150, 161, 173, 174; Geography 167, 170; MCDB 112. Students are encouraged to consider a senior research project in paleobiology (Geology 199).

### **Bachelor of Arts— Geological Sciences**

The Bachelor of Arts, Geological Sciences is almost identical to that of the Bachelor of Science in Geological Sciences. The Bachelor of Arts program offers more flexibility in that it

has fewer required courses, and allow for more elective courses.

**Preparation for the major.** Students must complete the following courses: Geology 1 or 2 or 4; Geology 3; Mathematics 3A, 3B, 3C; Chemistry 1A-AL, 1B-BL, 1C-CL; and Physics 1, 2, 3, 4 or Physics 6A-AL, 6B-BL, 6C-CL. Recommended: Geology 18 (fall and spring field trips); PSTAT 5A; and a course in computer programming. A grade of C- or better is required in all courses in the preparation for the major.

**Upper-division major.** Forty-eight upper-division units are required, distributed as follows: Geology 104A, 114A, 114B, 115, 134, 160 (total of 2 units), 111, Writing 109ST and 20 units of upper-division electives in geological sciences, selected in consultation with an advisor.

### **Bachelor of Arts— Geological Sciences— Science Education Emphasis**

The geological sciences major naturally lends itself to preparation for careers in science education, because it requires a broad background in mathematics, physics, chemistry, and geology. The emphasis in science education is designed for students who plan to earn a California Teaching Credential after graduation. Students in this major should consult early with the Graduate School of Education to ensure completion of all requirements for admission to the desired credential program.

**Preparation for the major.** Students must complete the following courses: Geology 1 or 2 or 4; Geology 3; Mathematics 3A, 3B, 3C; Chemistry 1A-AL, 1B-BL, 1C-CL; Physics 1, 2, 3, 4 or Physics 6A-AL, 6B-BL, 6C-CL; MCDB 1A-1AL, MCDB 1B; EEMB2-2L, EEMB3-3L. Recommended: Geology 18 (fall and spring field trips). A grade of C- or better is required in all courses in the preparation for the major.

**Upper-division major.** Forty-eight upper-division units are required. The core requirements are: Geology 104A, 114A, 114B, 134, 160 (total of 2 units) and Writing 109ST. The emphasis requirements are: Geology 123; Geography 110 and 18 units from: Geology 100, 103, 104B, 109, 111, 113, 117, 157, 187, 160, 164A, 164B, 164C; Geography 104, 112, 116, 162A, 176A, 176B, Environmental Studies 114A, 114B, 144.

### **Bachelor of Science—Geophysics**

Geophysics focuses on a quantitative and physical interpretation of Earth processes. Students in Geophysics take more courses in math and physics and fewer courses in earth materials and geologic field methods than do students in Geological Sciences.

**Preparation for the major.** Students must take the following: Mathematics 3A-B-C and Mathematics 5A-B-C; Chemistry 1A-AL-B-BL-C-CL (or 2 series); Geology 2, 3; Physics 1-2-3-3L-4-4L-5-5L or 21-22-23-3L-24-4L-25-5L; one course from Computer Science 5AA-ZZ or 10. A grade of C- or better is required in all courses in the preparation for the major.

Every student must be certified for technical writing competence. Certification may be achieved by submitting acceptable writing in Geology 104A, by writing acceptable term papers in other geoscience courses, or by complet-

ing a technical writing course with a C or better. Writing 109ST is highly recommended.

**Upper-division major.** At least 44-47 upper-division units in geology, physics, and mathematics are required, chosen in consultation with an advisor. A minimum of 35 units Geology required as follows: Geology 104A, 135, 136, two courses from Geology 100, 103, 123, 134, 2 units of Geology 160, 114A, and 114B; 4 additional upper-division units in Geology. In addition, one sequence plus one course must be completed from the following: Mathematics 104A-B, 122A-B, 124A-B, 144A-B; Physics 100A-B, 105A-B, 110A-B; ECE 130A-B.

**Recommended electives.** Statistics, advanced mathematics, Geology 18, 102A-L, 102B-L, 102C-L, 104B, 113, 124AA-ZZ, 157, 173, and 199RA; Geography 176A-B.

### **Minor—Geological Sciences**

Up to 5 units of Geology 160 (graded P/NP only) may apply to the minor. All other courses to be applied to the minor must be completed on a letter-grade basis. This includes both courses offered in earth science and those offered by other departments and applied to the minor.

**Preparation for the minor.** No specific courses are required. Note, however, that most upper-division courses in geology have prerequisites of lower-division geology and often mathematics, chemistry, or physics. Consult departmental advisors for assistance in planning.

**Upper-division major.** Eighteen units of upper-division geology courses. No more than 5 units of Geology 160 will be accepted.

*Note: Substitutions and waivers are subject to approval by the chair of the department. Please see page 118 for special conditions governing minors in the College of Letters and Science.*

## **Graduate Program**

In addition to departmental requirements, candidates for graduate degrees must meet university degree requirements found in the chapter "Graduate Education at UCSB."

### **Admission**

In addition to departmental requirements for admission, applicants must also meet the university requirement for admission described in the chapter "Graduate Education at UCSB." The deadline for applications is January 1. Applicants are informed of acceptance or denial by mid-March. Students normally are not accepted into the graduate program during winter and spring quarters unless approved in early March of the previous year.

In addition to students with undergraduate majors in earth science, the department also encourages students with bachelor's degrees in sciences other than earth science to apply for admission.

### **Five-Year Combined Bachelor of Science/Master of Science— Geological Sciences or Geophysics**

The Department of Earth Science offers a five-year B.S./M.S. degree program in geological sciences and a five-year B.S./M.S. degree pro-

gram in geophysics. The five-year B.S./master's programs are targeted to provide the very best undergraduates with the opportunity to obtain a master's degree in combination with their work towards a bachelor's degree.

Requirements for the master's portion of the combined BS/MS programs are as follows: preparation of one research paper; oral comprehensive examinations; completion of 30 units (including at least 20 in graduate courses and no undergraduate units which will be used for completion of the bachelor's degree); completion of Geology 201A and 201B; completion of Geology 260 each quarter while in residence; completion of 1 unit of Geology 268 (Oral Presentation and Research); preparation of a satisfactory thesis. Geology 260, 268, and all 500-series courses (except 596) are excluded from these graduate course units.

Interested undergraduates are advised to consult with a faculty undergraduate advisor during the fall of their junior year to determine whether they are well matched with the program, and then apply to the graduate program, along with all other prospective graduate students, prior to January 1. Requirements for admission are submission of a graduate application and all supporting documentation and a minimum grade-point average of 3.3 in classes required for the major. Admission is determined during winter quarter of the student's junior year by the department graduate admissions committee, and admitted students are notified during that quarter.

The student then completes the research and coursework for the B.S./M.S. in the senior and following year. The coursework required for the undergraduate major is unchanged; graduate-level classes are chosen in consultation with the student's placement committee. Upon completion of the requirements for a B.S. degree, students admitted to the joint B.S./M.S. are awarded a B.S. degree. Student progress is monitored to encourage timely completion of the undergraduate degree. The student is awarded the master's degree upon completion of the requirements for the M.S. in the final year of study.

### **Master of Science—Geological Sciences or Geophysics**

#### **Degree Requirements**

M.S. candidates follow an integrated course of study recommended by a placement committee and the graduate advisor.

The student must demonstrate, by coursework and by preparation of one research paper and by oral comprehensive examination, superior competence in the field of specialization, broad knowledge in the earth sciences, and satisfactory knowledge of sciences other than earth science that are relevant to the fields of interest.

In addition to the above composition requirements, the M.S. degrees are normally earned by preparation of a satisfactory thesis; completion of Geology 201A and 201B; Geology 260 each quarter while in residence; completion of 1 unit of Geology 268, Oral Presentation of Research; and completion of 30 units (at least 20 units in graduate courses). Geology 260, 268, and all 500-series courses (except 596) are excluded

from these graduate course units.

M.S. degree candidates in geophysics must complete research in geophysics under faculty supervision. Master of science degree candidates may also be required to present a defense of the thesis in open forum.

### **Doctor of Philosophy—Geological Sciences**

The Ph.D. in geological sciences encompasses study in any of the branches of geology and geophysics. To earn the Ph.D., a student must prepare a satisfactory doctoral dissertation; complete Geology 201A and 201B; enroll in Geology 260 each quarter while in residence; complete 1 unit of Geology 268, Oral Presentation of Research; and complete 30 units of geology (at least 20 units in graduate courses) while in residence at UCSB. Geology 260, 268, and all 500-series courses (except 596) are excluded from these graduate course units.

In addition, students must successfully complete the following:

- 1. Comprehensive exam.** The student must demonstrate, by coursework and by preparation of one research paper and by oral comprehensive examination, superior competence in the field of specialization, broad knowledge in the geological sciences, and satisfactory knowledge of sciences other than geology that are relevant to the fields of interest.
- 2. Advancement to candidacy.** After completion of (1) above, but before being formally admitted to doctoral candidacy, the student must pass a oral qualifying examination administered by the dissertation committee.
- 3. Dissertation defense.** A dissertation must be prepared in a professional style and approved by the committee. The candidate is required to present its principal conclusions in an open forum.

### **Optional Graduate Degree Emphasis in Computational Science and Engineering**

The Departments of Chemical Engineering, Computer Science, Ecology, Evolution and Marine Biology, Electrical and Computer Engineering, Earth Science, Mathematics, and Mechanical and Environmental Engineering offer an interdisciplinary master's and Ph.D. degree emphasis in computational science and engineering (CSE).

CSE is a rapidly growing multidisciplinary area with connections to the sciences, engineering, Mathematics, and computer science. Computer models and simulations have become an important part of the research repertoire, supplementing (and in some cases replacing) experimentation. Going from application area to computational results requires domain expertise, Mathematics modeling, numerical analysis, algorithm development, software implementation, program execution, analysis, validation, and visualization of results. CSE addresses these issues.

Although CSE includes elements from computer science, applied Mathematics, engineering, and science, it focuses on the integration of knowledge and methodologies from all of these disciplines and, as such, is a subject distinct

from any of them.

All students pursuing an emphasis in CSE must complete the following:

- Numerical Methods: Geological Sciences 251A-B-C-D (students must take at least three).
- Applied Mathematics: Students must take a two-course sequence from Mathematics 214A-B or Mathematics 215A-B.

The specific requirements for the M.S. in Geological Sciences or geophysics with the CSE emphasis are as follows:

- Completion of the requirements for an M.S. degree.
- A master's thesis in CSE.

The thesis must be written under the supervision of a CSE ladder faculty member. The thesis committee must include a minimum of three permanent ladder faculty members, at least two from geological sciences and one from CSE (may be CSE faculty member from another department).

Students pursuing a Ph.D. with an emphasis in CSE must:

- Complete the requirements for a Ph.D. in geological sciences.
- Write and defend a dissertation in CSE.

The student's dissertation must be written under the supervision of an earth sciences ladder faculty member. The doctoral examination committee must include at least one CSE ladder faculty member and at least one ladder faculty member from another department.

## **Earth Science Courses** (formerly Geological Sciences)

### **LOWER DIVISION**

#### **1. Geology and Environment**

##### **(4) KELLER**

*Lecture, 3 hours; laboratory, 1 hour.*

Introduction to geology and environment including: human population and sustainability; physical geologic processes; use, pollution and management of water, mineral, and soil resources; process and mitigation of natural hazards; global climate change; waste management; environmental health; and environmental planning.

#### **2. Principles of Physical Geology**

##### **(4) STAFF**

*Course materials fee required. Lecture, 3 hours; laboratory, 2 hours.*

Introduction to the science of the Earth; properties and processes of its surface and interior, including plate tectonics, volcanism, earthquakes, glaciation, mountain building, formation of rocks, minerals, and the structural basis of landforms.

#### **2H. Principles of Physical Geology**

##### **(Honors)**

##### **(1) STAFF**

*Prerequisites: concurrent enrollment in Geology 2; honors standing. Discussion, 1 hour.*

A supplement to Geology 2 focusing on properties and processes of the Earth's surface and interior, including plate tectonics, volcanism, earthquakes, glaciation, mountain building, formation of rocks, minerals, and the structural basis of landforms.

#### **3. Principles of Historical Geology**

##### **(4) AWRAMIK**

*Prerequisite: Geology 2 or 4 or 7 or 20. Lecture, 3 hours; laboratory, 3 hours.*

Antiquity and history of the Earth from an Earth system history approach. Focus is on processes and changes over time of the Earth's lithosphere, biosphere, atmosphere, and hydrosphere.

**3H. Principles of Historical Geology (Honors)****(1) AWRAMIK***Prerequisites: concurrent enrollment in Geology 3; honors standing. Discussion, 1 hour.**A supplement to Geology 3 focusing on Earth system history. (S)***3LX. Principles of Historical Geology (Laboratory)****(1) AWRAMIK***Prerequisite: consent of instructor. Laboratory, 3 hours.**Elementary problems in paleontology and stratigraphy. (S)***4. Introduction to Oceanography****(4) STAFF***Not open for credit to students who have taken Geology 4S or 4W. Course materials fee required. Lecture, 3 hours; laboratory, 1 hour.**An introduction to oceanography covering the major physical, chemical, and geological features of the oceans, their role in earth history, and potential use as a natural resource. (F,W,S)***4H. Introduction to Oceanography (Honors)****(1) STAFF***Prerequisites: concurrent enrollment in Geology 4.**Course materials fee required. Discussion, 1 hour.**A supplement to Geological Sciences 4 focusing on major physical, chemical, and geological features of the oceans, their role in earth history, and potential use as a natural resource. (F,W,S)***4S. Introduction to Oceanography****(4) LEA***Not open to students who have completed Geology 4. Course materials fee required. Lecture, 3 hours; laboratory, 2 hours.**Similar to Geological Sciences 4, but designed for students with an interest in science desiring a small, more intensive class format. Topics include a survey of ocean basins, plate tectonics, seawater, the atmosphere, ocean climate and circulation, oceanic productivity and biota.***4W. Introduction to Oceanography****(4) STAFF***Not open to students who have completed Geology 4 or 4S. Lecture, 3 hours; laboratory 2 hours.**Focussing on ocean basins and their formation, atmosphere and ocean circulation and its effect on climate, global warming, waves and beaches, world fisheries, science and society. Online materials are used extensively.***6. Mountains, Boots, and Backpacks: Field Study of the High Sierra****(4) HACKER, BURBANK***Prerequisite: Not open to freshmen. Minimum 3.0 GPA requirement.**Need ability to hike 1-2 hours/day. Fee charged Open to non-majors**Ten-day, off-campus, field-based investigation of faults, volcanoes, glaciers, rivers, and related geologic processes in the Sierra Nevada and nearby mountains. Emphasis on observations; analysis of geologic and environmental field data. Class takes place in September prior to Fall quarter.***7. Dinosaurs****(4) WYSS, PORTER***Lecture, 3 hours; discussion, 1 hour.**The origin and diversification of dinosaurs including birds. Survey of evolutionary relationships within the group, and between the major groups of vertebrates. Broad introduction including anatomy, geography, climate, and vertebrate contemporaries.***7H. Dinosaurs (Honors)****(1) WYSS, PORTER***Prerequisites: concurrent enrollment in Geology 7; honors standing. Discussion, 1 hour.**A supplement to Geology 7 focusing on the origin and diversification of dinosaurs including birds. Survey of evolutionary relationships within the group, and between the major groups of vertebrates. Broad introduction including anatomy, geography, climate, and vertebrate contemporaries.***10. Antarctica****(4) LUYENDYK***Course materials fee required.**Recommended preparation: Geology 2 or 4.**Lecture, 3 hours; discussion, 1 hour.**The interrelations of the physical and biological environments on the continent of Antarctica; Antarctica as an earth system. Included are studies of the tectonic history, global warming, ozone depletion, mineral resources, and the history of scientific exploration of the continent.***18. Field Studies in Geological Science****(1) STAFF***May be repeated for credit to a maximum of 4 units. P/NP grading only. Course materials fee required.**Four to five day field trip, fall and/or spring quarters. Field studies under guidance of two or three staff members introducing the geology of California.***19. Geology of Yosemite Valley****(1) KELLER***Prerequisite: freshmen standing.**Course materials fee required.**Introduction to the geology, surface processes, glacial history, and environmental geology of Yosemite valley. The four-day field trip includes one day in the lower Yosemite valley, and one day in the upper valley.***20. Geological Catastrophes****(4) ARCHULETA, BUSBY***Course materials fee required. Lecture, 3 hours; discussion 1 hour.**Course deals with geological catastrophes, e.g., earthquakes, volcanic eruptions, tsunamis, and landslides. Students will learn the basic physical causes of these naturally occurring events and discuss the consequences.***30. The History of Life****(4) AWRAMIK, TIFFNEY***Course materials fee required. Lecture, 3 hours; discussion, 1 hour.**Examination of the geological and biological processes affecting the evolution of life on Earth from 3.8 billion years ago to the present. Strong emphasis on the nature of the "scientific methods" as a way of understanding natural history. (F)***30H. The History of Life (Honors)****(1) AWRAMIK, TIFFNEY***Prerequisites: concurrent enrollment in Geology 30; honors standing.**Course materials fee required. Lecture, 3 hours; discussion 1 hour.**A supplement of Geology 30 focusing on the examination of the geological and biological processes affecting the evolution of life on Earth from 3.8 billion years ago to the present. Strong emphasis on the nature of the "scientific methods" as a way of understanding natural history. (F)***98. Readings in Geological Sciences****(1-3) STAFF***Prerequisite: consent of instructor.**May be repeated for credit. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. Variable hours.**Critical reviews and discussions of selected geological subjects. (F,W,S)***99. Independent Studies****(1-4) STAFF***Prerequisite: consent of instructor.**May be repeated for credit. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. Variable hours.**Independent research conducted under guidance of Earth Science faculty. Topic and scope varies, to be specified by student and supervisory faculty member prior to registration.***UPPER DIVISION****100. Introduction to Geophysics****(4) JL TANIMOTO***Recommended preparation: Geology 2 or 3; and, Mathematics 3C; and, Physics 1, 2, and 3 (may be taken concurrently), or, Physics 6A-B-C (may be taken**concurrently). Lecture, 3 hours; discussion, 1 hour.**Survey of major topics in geophysics at an elementary level; the figure of the earth, its gravitational and magnetic fields, seismology and the deep structure of the earth, heat flow, methods of geophysical exploration. The geophysical basis of plate tectonics and sea floor spreading. (S)***102A. Petrology of Igneous Rocks****(4) SPERA***Prerequisite: Mathematics 3A; Geology 114A-B and 115. Concurrent enrollment with Geology 102AL required.**Introduction to the occurrence, associations, tectonics, and petrogenesis of plutonic and volcanic rocks. Introduction to the physical chemistry of magma systems; magmatic crystallization and differentiation; pluton emplacement, volcanic eruption mechanisms.***102AL. Igneous Petrology Laboratory****(1) SPERA***Prerequisite: Geology 114A-B and Geology 115. Concurrent enrollment with Geology 102A required.**An introduction to the classification and identification of igneous rocks, studied with the petrographic microscope and in hand specimen.***102B. Sedimentary Petrology****(4) STAFF***Prerequisites: Geology 14 or 114 or 114A-B.**Course materials fee required.**Recommended preparation: Geology 124T. Lab, 3 hours; field, 1 hour.**The texture, mineralogy, classification, and primal structure of sedimentary rocks and their significance in relation to regional setting, environment of deposition, and postdepositional history. Field study emphasizes interpretation of sedimentary sequences.***102B. Sedimentology Petrology****(4) STAFF***Prerequisite: Geology 114 or 114A-B and 115.**Concurrent enrollment with Geology 102BL required.**Recommended Preparation: Geology 124T. Course materials fee required.**The texture, mineralogy, classification, and primal structure of sedimentary rocks and their significance in relation to regional setting, environment of deposition, and post-depositional history. Field study emphasizes interpretation of sedimentary sequences.***102C. Metamorphic Petrology****(4) HACKER***Prerequisite: Geology 114 or 114A-B and 115 with a grade of C or better. Concurrent enrollment in 102CL required.**Course materials fee required.**Study of metamorphic rocks to understand tectonic processes. Metamorphic minerals, metamorphic textures, physical processes responsible for metamorphism, phase equilibria, thermodynamics, diffusion, thermobarometry, kinetics, geochronology, and high-temperature rock deformation.***102CL. Metamorphic Petrology Laboratory****(1) HACKER***Prerequisite: Geology 114 or 114A-B and 115 with a grade of C or better. Concurrent enrollment in 102C required.**Course materials fee required.**The study of metamorphic rocks with the petrographic microscope and in the field.***103. Fundamentals of Structural Geology****(4) GANS***Prerequisite: Mathematics 3A-B-C; Physics 6A or 1; Geology 104A or 122. A grade of C- or better is required on all prerequisite courses.**Deformation of rocks--faulting, folding and flow.**Theory and observations at scales ranging from mountain belts to microscopic. (W)***104A. Field Studies in Geological Methods****(4) STAFF***Prerequisites: Geology 2; consent of department.**Course materials fee required.**Recommended preparation: Geology 3. Lecture, 1 hour, discussion, 1 hour; laboratory 1 hour; field, 8 hours.**Introduction to the methods of geological observations and interpretations, with an emphasis*

laboratory, 3 hours.

Various numerical methods for analysis of data are developed. Methods are statistical inference, error propagation, least squares, time series as applied to geological and geophysical examples.

### 135. Principles of Geophysics

(4) TANIMOTO

Prerequisites: Mathematics 3A-B-C; and, Mathematics 5A or 5C; and, Physics 1 and 2, or Physics 6A-B-C. Lecture, 3 hours; discussion, 1 hour.

Basic principles in geophysics from elasticity theory, fluid dynamics, gravity, magnetism and heat flow. Their applications to various processes in the earth.

### 136. Geophysics (Seismology)

(5) ARCHULETA, TANIMOTO

Prerequisite: Mathematics 3A-B-C; and, Physics 6A-B-C, or Physics 1 and 2.

Recommended Preparation: Mathematics 5A (may be taken concurrently).

Wave propagation in an elastic medium; reflection and refraction, attenuation physics of the earthquake source, magnitude, seismic moment and focal mechanisms.

### 141. Plant Paleobiology

(4) TIFFNEY

Prerequisite: upper-division standing.

Same course as EEMB 137. Letter grade required for majors. Not open for credit to students who have completed Botany 110.

Recommended preparation: Geology 111 or EEMB 136. Lecture, 3 hours.

Examination of the history of land plants; the systematics, morphology, and phylogeny of major groups. Major evolution and biogeographic patterns.

### 141L. Plant Paleobiology Laboratory

(1) TIFFNEY

Prerequisite: Geology 141 or EEMB 137 (may be taken concurrently).

Same course as EEMB 137L. Letter grade required for majors. Not open for credit to students who have completed Botany 110L. Laboratory, 3 hours.

Anatomy, morphology, and systematics of fossil plants from the specimens.

### 144. Invertebrate Paleobiology

(4) PORTER

Prerequisite: Geology 3 or 30 or 111. Lecture, 3 hours; discussion, 1 hour.

Important topics in paleobiology are discussed in the context of the evolutionary history of invertebrate animal life. These include macroevolutionary theory, diversification and extinction events, ecological and geobiological interactions through time, and the incompleteness of the fossil record.

### 148. Vertebrate Paleontology

(4) WYSS

Prerequisite: Geology 2 or 3 or 7 or 30, or MCDB 1A-1AL or EEMB 2.

Same course as EEMB 109. Lecture, 3 hours; discussion, 1 hour.

Introduction to the history of vertebrate life, with emphasis on the phylogenetic relationships of the major vertebrate groups.

### 149. The History of Mammals

(4) WYSS

Prerequisite: Geology 3 or 7 or 11 or 30, or MCDB 1A-AL or EEMB 2. Lecture, 3 hours; discussion, 1 hour.

Introduction to the diversity of fossil and living mammals from phylogenetic, stratigraphic, and paleobiogeographic perspectives.

### 150. Petroleum Geology

(2) STAFF

Prerequisite: Geology 2; and, Geology 14 or 114 or 114A-B.

Recommended Preparation: Geology 124T and 102B. Field/Lab, 1 hour. Course material fee required.

Study of petroleum systems including origin, generation, migration, and trapping of hydrocarbons. Guest speakers from industry. Lab includes use of basin analysis software from oil company. Field trip to active petroleum basin in California. Required written report.

### 155. Petrotectonics

(4) HACKER

Prerequisites: Geology 14 or 114 or 114A-B; and,

Geology 15, 102C, and 102CL; concurrent enrollment in Geology 155L.

May be repeated for credit to a maximum of 8 units. Course materials fee required.

Recommended preparation: Geology 124T. Lecture, 3 hours.

Analysis of orogenic belts using petrography, thermochronology, and thermobarometry. Subject material changes each year.

### 155L. Petrotectonics Lab

(1-2) HACKER

Prerequisites: Geology 14 or 114 or 114A-B; and, Geology 15, 102C, and 102CL; concurrent enrollment in Geology 155; concurrent enrollment in Geology 155.

May be repeated for credit to a maximum of 4 units. Course materials fee required. Laboratory, 3-6 hours.

Analysis of orogenic belts using petrography, structural petrology, thermochronology, and thermobarometry.

### 156. Tectonic Controls on Sedimentation

(4) BUSBY

Prerequisite: consent of instructor. Seminar, 3 hours; field, 3 hours.

Integrates sedimentology, volcanology, structural geology, petrology, and geophysics in the study of basins. Overview of divergent, convergent, and strike slip margins, with textbook readings. Journal readings and field trip to case study area, which changes yearly. Field work completed on weekends and over spring break.

### 157. Plate Tectonics

(4) STAFF

Prerequisites: Geology 2; upper-division standing.

Course materials fee required.

Recommended preparation: one year of university-level mathematics and physics. Lecture, 3 hours; laboratory, 3 hours.

Introduction to sea floor spreading, plate tectonics, and continental drift. Geometry and evolution of present day plates. Measurement and calculation of plate motions. Geophysical and geological implications of resulting relative motions at plate boundaries.

### 157X. Advanced Plate Tectonics Seminar

(4) STAFF

Prerequisite: Geology 157 (may be taken concurrently). Seminar, 3 hours.

Discuss current research in plate tectonics. Supplements material covered in Geology 157.

### 158. Advanced Structural Geology

(5) GANS

Prerequisite: Geology 103.

Course materials fee required. Lecture, 2 hours; laboratory, 3 hours; field 3 hours.

Analysis of geologic structures—theory and practice. Rock deformation as a function of crustal environment. Fault mechanics and earthquakes; mineral deformation mechanisms; microstructures, and tectonite fabrics. Finite strain measurement and interpretation of kinematic indicators. Regional structural styles.

### 159A. Origin of the Earth

(4) SPERA

Prerequisites: Geology 123; and, Physics 1 or 6A (may be taken concurrently). Lecture, 3 hours; discussion, 1 hour.

Origin of the Earth from the perspective of planetary genesis and the history of the solar nebula. Geochemistry and cosmochemistry of ancient solar system materials; accretion and earliest history of the earth-moon system.

### 159B. Hadean and Archean Earth History

(4) SPERA

Prerequisites: Geology 123 and 159A. Lecture, 3 hours; discussion, 1 hour.

Description and quantitative analysis of the most important physical and chemical processes on the Earth during its first two billion years. Origin of atmosphere, hydrosphere, pre-biotic chemistry, evolution of magma ocean.

### 159C. The Early Evolution of Life and its Environmental Context

(4) PORTER

Prerequisites: Geology 3 or 30 or 111.

Course materials fee required. Lecture, 3 hours; discussion, 1 hour.

The first 3.5 billion years of life and the environmental context in which it evolved. Highly multidisciplinary, drawing on evidence from geology, geochemistry, paleontology, and comparative biology.

### 160. Seminar in Geology

(1) STAFF

May be repeated for credit to a maximum of 12 units. P/NP grading only.

Recommended preparation: upper-division standing. Seminar, 2 hours.

Attendance at departmental "Journal Club" (Geological Sciences 260, "Seminar in Geology") and brief written evaluations of the three papers which, in the student's judgment, were the best of the quarter.

### 161. Marine Stratigraphy

(3) STAFF

Prerequisite: not open to freshmen. Seminar, 2 hours; short field trips.

Extensive reading and class discussion of concepts and methods of marine stratigraphy. Included are lithostratigraphy, biostratigraphy, chemostratigraphy, magnetostratigraphy, and chronology. Stratigraphic nomenclature. Problems and advances in correlation and dating of sediments including the Pacific, California, and Europe. Term paper.

### 162. Marine Micropaleontology and Paleobiology

(4) STAFF

Prerequisite: upper-division standing. Lecture, 2 hours; laboratory, 2 hours.

A survey of the major marine microfossil groups of the Cenozoic and Mesozoic; with particular reference to classification, preservation, evolution, stratigraphic utility, paleobiology, biogeography, paleoceanographic relations and sediment accumulation.

### 164A. Earth System Geology

(4) HAYMON

Recommended preparation: Geology 2 or 4.

Course materials fee required. Lecture, 3 hours; laboratory, 2 hours.

The geologic features of the world's ocean basins and continents emphasizing advances in marine geology and taught from the viewpoint of plate tectonics as the unifying theory of the Earth's geodynamic processes. (F)

### 164B. Earth System Ocean-Atmosphere

(4) LEA, VALENTINE

Prerequisite: Chemistry 1C.

Recommended preparation: Geology 4 or equivalent. Lecture, 3 hours; discussion 1 hour.

An introduction to the chemistry of the oceans and atmosphere. Topics include composition of seawater, biogeochemical cycling, sediment chemistry, chemical tracers of circulation, ocean-atmosphere exchange, atmospheric photochemistry and pollution, and the impact of earth system chemical changes on climate.

### 164C. Earth System History

(4) STAFF

Prerequisite: upper-division standing. Lecture, 3 hours; discussion 1 hour.

Examination of: the evolution of the Earth's environmental system from Cretaceous to present day; interactions between plate tectonics and orogeny (lithosphere) and changes in ocean circulation (hydrosphere), climate (atmosphere), ice sheets (cryosphere), and life (biosphere). Global change theories.

### 168. Aqueous Transport of Pollutants

(4) CLARK

Prerequisites: Mathematics 3B and Chemistry 1A-B-C. Same course as Environmental Studies 168.

Recommended preparation: Geology 113 or 173-173L or Geography 116-116L or 144 or Environmental Studies 144. Lecture, 3 hours; discussion, 1 hour.

Focus on the behavior of dissolved species in rivers. Examination of the basic advection-diffusion model. Particular emphasis on field data.

### 169. Tracer Hydrology

(4) CLARK

Prerequisites: Mathematics 3B and Chemistry 1A-B-C; and, Geology 173-173L or Geology 113.

Same course as Environmental Studies 169.

*Recommended preparation: Geology 113 or 173-173L or Geography 116-116L or 144 or Environmental Studies 144. Lecture, 3 hours; discussion, 1 hour.*

Introduction to principles of chemical and isotope tracer hydrology. Emphasis on methods of groundwater dating, the use of tracers as management tools, and contaminant plume monitoring.

### **171. Submarine Hydrothermal Systems (3) HAYMON**

*Prerequisite: Not open to freshmen.*

*Recommended preparation: Geology 2 or 4 or 164A. Recommended for students pursuing degrees with a 3.0 GPA. Lecture, 1 hour; discussion, 2 hours.*

Covers observational, experimental, and theoretical studies of seafloor hydrothermal processes; emphasizes systems at oceanic spreading centers; includes global hydrothermal effects on the compositions of seawater and ocean crust; focuses on recent developments and unsolved problems.

### **172. Earth's Climate: Past and Present (4) LEA, LISIECKI**

*Prerequisite: Geology 164B or equivalent.*

Description and quantitative analysis of climate processes and paleoclimate proxies. Processes include radiation and the Earth's energy budget, the influence of orbital cycles, ocean circulation, monsoons, ENSO, and ice sheets. Paleoclimate reconstructions from tectonic-scale to the last millennium, with emphasis on glacial cycles and Plio-Pleistocene climate evolution.

### **173. Groundwater Hydrology (5) LOAICIGA**

*Same course as Geography 116.*

*Recommended preparation: Geography 3B. Lecture, 3 hours; laboratory, 3 hours.*

Analysis of groundwater flow in aquifers, aquifer properties, study of wells and groundwater contamination, surface water-groundwater interactions. The laboratory: basic groundwater experiments, Darcy's Law, flow nets, solute dispersion, field measurements of bedrock groundwater characteristics, computer analysis of pumping-test data. (W)

### **176. Geological Application of GIS (4) STAFF**

*Recommended Preparation: Geology 103 and Geology 134. Designed for majors*

An intensive introduction to Geographic Information Systems (GIS) with an emphasis on geological applications, including geologic mapping, topographic analysis, modeling surface processes and river networks, importation and interpolation of field data, and spatial analysis and correlation of multiple geologic datasets.

### **181. Field Studies in Marine Geophysics (2-12) STAFF**

*Prerequisite: Consent of instructor.*

*May be repeated for credit to a maximum of 12 units. Course materials fee required.*

Field studies in marine geophysical work with the opportunity of going to sea. Lectures cover seismic, sonar, magnetic high resolution techniques for geologic study.

### **182. Field Studies in Marine Geochemistry (2-12) HAYMON**

*Prerequisite: consent of instructor.*

*Course materials fee required. Lecture, 3 hours; laboratory, up to 3 hours; field, up to 6 weeks.*

Marine geochemistry with the opportunity of going to sea or into the field on land. Lectures cover techniques of seafloor mapping using bottom photography, marine geochemical sampling, and methods of data reduction and sample analysis. Labs include analysis of data/samples collected.

### **183. Advanced Field Mapping and Geologic Investigations (4) GANS**

*Prerequisite: Geological Sciences 118 or equivalent. Course materials fee required. Discussion, 3 hours.*

Research oriented mapping projects to solve outstanding problem(s) in a geologically significant area. Two weeks in the field, followed by compilation and complimentary laboratory studies. Weekly meetings to discuss results.

### **185. Physical Volcanology (4) GANS, BUSBY**

*Prerequisites: Geology 14 or 114 or 114A-B; and, Geology 102A and 104A.*

*Recommended preparation: Geology 103. Lecture, 2 hours; laboratory, 3 hours; field, 3 hours.*

Overview of volcanic processes, including physical properties of melts, eruptive mechanisms, classification of volcanic deposits, and volcanic-tectonic environments. Lecture emphasizes theoretical aspects of volcanic processes, lab examines major classes of volcanic rocks, field trips emphasize mapping in volcanic terrains.

### **186. Cordilleran Tectonics (4) GANS**

*Prerequisites: Geology 2, 103, and 104A. Lecture, 1 hour; seminar, 2 hours.*

Directed readings, weekly seminar, and field trip focused on the Phanerozoic tectonic evolution of the North American Cordillera. Emphasis on understanding fundamental orogenic processes (continental extension, shortening, transcurrent motions, magmatism, metamorphism) from a cordilleran perspective.

### **187. Introduction to Teaching in Geological Sciences (1-5) STAFF**

*Prerequisites: upper-division standing and consent of instructor.*

*May be repeated for credit to a maximum of 8 units but only 4 units may be applied toward the major.*

Students will assist instructor in teaching course in which the student previously received a grade of A- or better. Activities will be determined in consultation with the instructor and may include assisting in laboratories, tutorials, discussion sections and field trips.

### **188. Field Studies in Neotectonics (1-3) STAFF**

*Prerequisite: consent of instructor.*

*May be repeated for a maximum of 3 units. Tutorial, 1 hour; field, 2 hours.*

Geodetic measurement of recent crustal movements around active faults and volcanoes. Includes techniques and analyses of precision levelling, triangulation, trilateration, and tiltmetry. Field work arranged as opportune. Term paper required if taken for three units.

### **190. Advanced Studies in Paleobiology (1-4) AWRAMIK, TIFFNEY, WYSS**

*Prerequisite: consent of instructor.*

*Course materials fee required. May be repeated for a maximum of 12 units. Laboratory, 3-12 hours.*

Designed to meet the interests and needs of individual students. Selected readings and laboratory work in systematic paleontology; field studies of recent or fossil biotas; animal-substrate relations, biostatistics, etc. (F,W,S)

### **192. Internship in Geological Sciences (1-4) STAFF**

*Prerequisite: Proposal form must be submitted by the end of the 2nd week of the quarter. Applicant must have a minimum overall GPA of 2.70. Student that does not meet this requirement may submit a GPA waiver.*

*May be repeated for credit to a maximum of 12 units, but only 4 units may be applied toward the major. Designed for majors*

Individualized practical approaches to problems in geological sciences by working under faculty supervision as interns with local, state or federal agencies or private organizations. To receive credit student must turn in an experiential journal, end of quarter evaluation, and complete the internship hours. Units are determined by the number of hours worked per quarter. (F, W, S)

### **194. Group Studies for Advanced Students (1-5) STAFF**

*Prerequisites: upper-division standing; consent of the instructor.*

*May be repeated for credit but no more than 5 units will apply to the major. Variable hours.*

Intensive research or study by a small group of advanced students who share an interest in a topic not included in the regular departmental curriculum.

### **195H. Honors Field Studies (1-8) STAFF**

*Prerequisites: geology and geophysics majors only; honors standing; consent of instructor.*

*May be repeated for credit to a maximum of 8 units. Variable hours.*

Fieldwork in selected areas under the direction of a faculty member. Final report required.

### **196HA-HB-HC. Senior Honors Thesis (4-4-4) STAFF**

*Prerequisites: geology and geophysics majors only; honors standing; consent of instructor.*

*A three-quarter in-progress sequence course with grades for all quarters issued upon completion of Geological Sciences 196HC. Students must have a minimum overall GPA of 3.20. Laboratory, 2 hours; field, 2 hours.*

Three quarter individual research project under the direction of a faculty member. Oral defense as required by the sponsoring faculty advisor. (F,W,S)

### **198. Readings in the Geological Sciences (1-4) STAFF**

*Prerequisites: upper-division standing; completion of two upper-division courses in geology; consent of instructor and department.*

*Students must have a minimum 3.0 grade-point average for the preceding three quarters and are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined.*

*May be taken more than once at the option of the student; not more than 4 units may be included in the minimum requirements for the major. Tutorial, variable hours.*

Critical reviews and discussions of selected geological subjects. (F,W,S)

### **199. Independent Studies in Geology (1-5) STAFF**

*Prerequisite: Upper-division standing in the major; consent of department and instructor.*

*Students must have a 3.0 grade-point-average for the preceding three quarters. Students are limited to 5 units per quarter, 15 units per year, and 30 units total in all 98/99/198/199/199AA-ZZ courses combined.*

Course consists of academic research supervised by a faculty member. This course is not intended for internship honors, or Senior Thesis credit.

### **199RA. Independent Research Assistance in Geological Sciences (1-5) STAFF**

*Prerequisites: upper-division standing; completion of two upper-division geology courses; consent of instructor.*

*Students must have a 3.0 grade-point average for the preceding three quarters and are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined.*

Coursework shall consist of faculty supervised research assistance. (F,W,S)

## **GRADUATE COURSES**

### **200. Introduction to Geophysics (5) ARCHULETA, LUYENDYK, MACDONALD, TANIMOTO**

*Prerequisites: graduate standing; consent of department. Lecture, 3 hours; discussion, 1 hour.*

Survey of major topics in geophysics at an elementary level; the figure of the earth, its gravitational and magnetic fields, seismology and deep structure of the earth, heat flow, methods of geophysical exploration. The geophysical basis of plate tectonics and sea floor spreading. Term paper. (S)

### **201A. Graduate Research and Field Seminar (4) STAFF**

*Required of all entering graduate students. Course materials fee required. Seminar, 3 hours.*

Faculty research projects are presented in a series of evening seminars. Student projects are initiated. Three weekend field trips sample field research in southern California. (F)

**201B. Graduate Research Seminar****(4) LUVENDYK, HAYMON***Prerequisites: Geology 201A; graduate standing in the department of Geological Sciences.**Required course for all first year graduate students.*

How research is conducted in geological sciences; identifying significant problems; designing the experiment; how to obtain funding and how to write and evaluate a research proposal, including a budget.

**209. Tectonic Controls of Sedimentation****(5) BUSBY***Prerequisites: Geology 2 and 102A-B-C and 122.**Course materials fee required. Seminar, 3 hours; laboratory, 8 hours.*

Integrates sedimentology, volcanology, structural geology, petrology, and geophysics in the study of basins. Overview of divergent, convergent, and strike slip margins, with textbook readings. Journal readings and field trip to case study area, which changes yearly. Field work completed on weekends or over spring break.

**212. Marine Geochemistry and Minerals****(2-4) HAYMON***Prerequisite: consent of instructor.**Appropriate for graduate students, upper-division Geology majors. Seminar, 3 hours; Discussion, 1 hour.*

Recent discoveries/current topics in marine geochemistry; emphasis on seafloor hydrothermal systems and mineral formation in marine environments; includes discussion of instruments/methods used to observe seafloor processes, and to analyze minerals.

**213. Geochemistry II****(1-4) MATTINSON***Prerequisites: Chemistry 1C, Mathematics 3C, and Geology 2 or equivalent. Seminar, 1 hour.*

An introduction to the geochemistry of the earth and solar system; especially applications of radiogenic isotopes to problems of magma genesis and age determination. Presentation of a seminar or term paper selected in consultation with instructor is required.

**214. Marine Geophysics and Tectonics****(4) STAFF***Prerequisite: consent of instructor. Lecture, 3 hours; discussion, 1 hour.*

Current discoveries and unsolved problems in marine geophysics. Instruments and methods of study. Appropriate for majors in geology and geophysics.

**216. Advanced Topics in Stable Isotopy****(4) STAFF***Prerequisites: Geology 124SI or 224SI or a similar course in stable isotopy. Seminar, 3 hours.*

Directed reading and weekly seminar in the misuses of stable isotopy, especially in its application to biology, archaeology, geology, paleontology, and paleoecology. The larger issue of misuses of numeric data is also addressed.

**217. Tectonic Geomorphology****(4) BURBANK***Prerequisite: Geology 103 or 117 or equivalent.**Course materials fee required. Lecture, 3 hours; field, 1 hour.*

Interaction among geomorphic processes that shape the Earth's surface and tectonic processes that deform the upper crust. Use of new tools for geochronology, geodesy, structural geology, and landform analysis. Field trips and projects in Southern California.

**218. Ethics in Scientific Research****(4) STAFF***Prerequisite: graduate standing. Seminar, 3 hours.*

Directed reading and weekly seminar in ethical guidelines for conducting scientific research. Problems encountered during the practice of research: data acquisition and handling; publication and communication of results; error, negligence, and misconduct; procedures for dealing with misconduct; responsibilities to society.

**222. Advanced Topics in Stratigraphy****(4) BUSBY***Prerequisite: consent of instructor.**Course materials fee charged. Lecture, 3 hours; field trips.*

Current topics in stratigraphy with emphasis on paleogeographic/tectonic reconstructions. Field research in Cordilleran United States or Mexico, supplemented by laboratory studies and classroom discussion of published literature. Content of course changes from year to year.

**224SI. Stable Isotope Biogeochemistry****(2) STAFF***Prerequisites: Chemistry 1C and Mathematics 3C.*

Principles of mass spectrometry. Expression of isotope ratios and fractionations. Principles and applications of isotopes relating to waters, minerals, and both biogenic organic and inorganic matter.

**225. Advanced Igneous Petrology****(5) SPERA***Prerequisite: Geology 240A or equivalent. Lecture, 3 hours; discussion, 1 hour.*

The study of magma dynamics and igneous rocks including petrogeny with an emphasis on petrography, physical chemistry, and dynamics.

**235. Plate Tectonics Seminar****(2-4) ATWATER***Course materials fee required. Lecture, 3 hours; seminar, 1 hour.*

Read recent related articles. Students present and discuss selected topics in separate seminar. Complete term paper and/or problem sets for 3 or 4 units.

**236. Geophysics Seismology****(5) ARCHULETA, JI, TANIMOTO***Prerequisites: one year of college level calculus and physics.**Recommended preparation: Mathematics 5A (may be taken concurrently). Lecture, 3 hours; laboratory, 3 hours.*

Wave propagation in an elastic medium; reflection and refraction, attenuation. Physics of the earthquake source, magnitude, seismic moment and focal mechanisms.

**238. Advanced Geophysics****(4) TANIMOTO, JI***Prerequisite: Consent of instructor.*

Application of geophysical principles to processes in the Earth. Use of gravity, elasticity theory, fluid dynamics, geomagnetism, and theory of heat transfer. Term paper required.

**239A. Origin of the Earth****(4) STAFF***Prerequisite: Consent of instructor.**Not open for credit to students who have completed Geology 239.*

Origin of the Earth from the perspective of planetary genesis and the history of the Solar Nebula. Geochemistry and cosmochemistry of ancient solar system materials; accretion and earliest history of the Earth-Moon system.

**239B. Hadean and Archean Earth History****(4) SPERA***Prerequisite: consent of department. Lecture, 3 hours; discussion, 1 hour.*

Description and quantitative analysis of the most important physical and chemical processes on the earth during its first two billion years. Origin of atmosphere, hydrosphere, pre-biotic chemistry, evolution of magma ocean.

**240A. Mineralogical Thermodynamics****(4) SPERA***Prerequisite: elementary thermodynamics or physical chemistry. Lecture, 3 hours.*

Derivation of thermodynamic equations of state for minerals and fluids. Thermodynamics of ideal and nonideal crystalline solutions. Development and application of thermodynamic data bases. Characterization of physical conditions for metamorphic and igneous rocks.

**241. Plant Paleobiology****(4) TIFFNEY**

Examination of the history of land plants; the systematics, morphology, and phylogeny of major groups. Major evolutionary and biogeographic patterns. Extra readings and paper.

**243. The History of Mammals****(5) WYSS***Prerequisite: Geology 3 or 7 or 11 or 30 or**MCDB 5A-AL. Lecture, 3 hours; discussion, 1 hour.*

Introduction to the diversity of fossil and living mammals from phylogenetic, stratigraphic, and paleobiogeographic perspectives. Required research paper.

**244. Invertebrate Paleobiology****(4) PORTER***Lecture, 3 hours; laboratory, 1 hour.*

Important topics in paleobiology are discussed in the context of the evolutionary history of invertebrate animal life. These include macroevolutionary theory, diversification and extinction events, ecological and geobiological interactions through time, and the incompleteness of the fossil record.

**247. Seminar in Quaternary Geology****(4) KELLER***Prerequisite: Geology 117.**May be repeated for credit. Seminar, 3 hours.*

Selected topics in quaternary geology. Subject matter will change from year to year.

**248. Vertebrate Paleontology****(4) WYSS***Lecture, 3 hours; discussion, 1 hour.*

Introduction to the history of vertebrate life, with emphasis on the phylogenetic relationships of the major vertebrate groups. Paper required.

**249. Seminar in Structure and Tectonics****(4) STAFF***Prerequisite: Geology 201. Seminar, 3 hours.**Topical structural geology and tectonics.***250. Petroleum Geology****(2) STAFF***Prerequisites: Geology 14 or 114 or 114A-B; and Geology 102B.**Course materials fee required. Lecture, 2 hours; discussion, 1 hour; field, 1 hour.*

Study of petroleum systems including origin, generation, migration, and trapping hydrocarbons. Guest speakers from industry. Field trip to active petroleum basin in California. Required written report.

**251A. Matrix Analysis and Computation****(4) STAFF***Prerequisites: consent of instructor.**Same course as Computer Science 211A, ME 210A, ECE 210A, and Chemical Engineering 211A. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language. Lecture, 4 hours.*

Graduate level-matrix theory with introduction to matrix computations. SVD's, pseudoinverses, variational characterization of eigenvalues, perturbation theory, direct and iterative methods for matrix computations.

**251B. Numerical Simulation****(4) STAFF***Prerequisites: consent of instructor.**Same course as Computer Science 211B, ME 210B, ECE 210B, Chemical Engineering 211B, and Math 206B. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language. Lecture, 4 hours.*

Linear multistep methods and Runge-Kutta methods for ordinary differential equations: stability, order and convergence. Stiffness. Differential algebraic equations. Numerical solution of boundary value problems.

**251C. Numerical Solution of Partial Differential Equations--Finite Difference Methods****(4) STAFF***Prerequisites: consent of instructor.**Same course as Computer Science 211C, ME 210C, ECE 210C, Chemical Engineering 211C, and Math 206C. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language. Lecture, 4 hours.*

Finite difference methods for hyperbolic, parabolic and elliptic PDE's, with application to problems in science and engineering. Convergence, consistency, order and stability of finite difference methods. Dissipation and dispersion. Finite volume methods.

Software design and adaptivity.

### 251D. Numerical Solution of Partial Differential Equations - Finite Element Methods

(4) STAFF

Prerequisites: consent of instructor.

Same course as Computer Science 211D, ME 210D, ECE 210D, Chemical Engineering 211D, and Math 206D. Students should be proficient in basic numerical methods, linear algebra, mathematically rigorous proofs, and some programming language. Lecture, 4 hours.

Weighted residual and finite element methods for the solution of hyperbolic, parabolic and elliptic partial differential equations, with application to problems in science and engineering. Error estimates. Standard and discontinuous Galerkin methods.

### 256. Geophysical Inverse Theory

(4) TANIMOTO

Prerequisites: Geology 136 and consent of instructor. Lecture, 3 hours.

Introduction to basic concepts of inverse theory such as resolution, error and its trade-off. Application to earth structure study, earthquake source, geodetic data and magnetic field. Reading on key papers. Term paper.

### 258. Advanced Structural Geology

(5) GANS

Prerequisites: Geology 103 and 104B. Lecture, 2 hours; laboratory, 3 hours.

Analysis of geologic structures—theory and practice. Rock deformation as a function of crustal environment. Fault mechanics and earthquakes; mineral deformation mechanisms, microstructures, and tectonite fabrics. Finite strain measurement and interpretation of kinematic indicators. Regional structural styles.

### 259. Paleomagnetism and Tectonics

(4) LUYENDYK

Seminar, 3 hours.

Lectures on paleomagnetism followed by seminar. Readings and discussion on topics concerning the tectonics of the Pacific rim, and especially the western United States Cordillera, as approached by the paleomagnetism method.

### 259C. The Early Evolution of Life and its Environmental Context

(4) PORTER

Lecture, 3 hours; discussion, 1 hour.

The first 3.5 billion years of life and the environmental context in which it evolved. Highly multidisciplinary, drawing on evidence from geology, geochemistry, paleontology, and comparative biology.

### 260. Seminar in Geology

(1) STAFF

Required of all first year graduate students. May be repeated for credit. P/NP grading only. Seminar, 1 hour.

Presentation and discussion of current research, and reviews of the literature on selected geologic concepts. Students will present material reflecting their interests in geology for critical appraisal, of both content and manner of presentation, by selected members of the seminar. Emphasis will be placed on assisting students in developing professional speaking style.

### 261. Marine Stratigraphy

(3) STAFF

Open to graduates and qualified senior undergraduates. Seminar, 2 hours; short field trips.

Extensive reading and class discussion of concepts and methods of marine stratigraphy. Included are lithostratigraphy, biostratigraphy, chemostratigraphy, magnetostratigraphy, chronostratigraphy, and chronology. Stratigraphic nomenclature. Problems and advances in correlation and dating of sediments including the Pacific, California, and Europe. Term paper.

### 262. Marine Micropaleontology and Paleobiology

(4) STAFF

Lecture, 2 hours; laboratory, 2 hours.

A survey of the major marine microfossil groups of the cenozoic and mesozoic; with particular reference to classification, preservation, evolution, stratigraphic

utility, paleobiology, biogeography, paleoceanographic relations, and sediment accumulation.

### 264. Petrotectonics

(4) HACKER

Prerequisite: Geology 102C.

Course materials fee charged. Lecture, 3 hours.

Analysis of orogenic belts using petrography, thermochronology, and thermobarometry. Subject material changes each year.

### 264A. Earth System Geology

(4) HAYMON

The geologic features of the world's ocean basins and continents emphasizing advances in marine geology and taught from the viewpoint of plate tectonics as the unifying theory of the earth's geodynamic processes.

### 264L. Petrotectonics Laboratory

(1-2) HACKER

Prerequisites: Geology 102C.

Recommended preparation: Geology 124T.

Laboratory, 3-6 hours.

Analysis of orogenic belts using petrography, structural petrology, thermochronology, and thermobarometry.

### 266. Chemical Oceanography

(4) LEA

Prerequisites: Chemistry 1C; graduate standing. Lecture, 3 hours; discussion, 1 hour.

An introduction to the chemistry of the oceans. Topics include composition and chemical equilibria of seawater, biogeochemical cycling, sediment chemistry, atmospheric exchange, circulation and rates of mixing based on chemical tracers, and the impact of ocean chemistry on climate change.

### 268. Seminar in Geology-Presentation

(1) STAFF

Prerequisite: graduate standing.

Presentation of research topics to meeting of Geology 260.

### 269. Tracer Hydrology

(4) CLARK

Introduction to principles of chemical and isotope tracer hydrology. Emphasis on methods of groundwater dating, the use of tracers as management tools, and contaminate plume monitoring. Research paper required.

### 270. Seminar in Geologic Problems

(1-3) STAFF

Prerequisite: graduate standing.

Course materials fee required. Discussion, 1-3 hours.

Review and discussion of a current problem in geology. Content is variable and depends on student interest. (On demand.)

### 271. Submarine Hydrothermal Systems

(4) HAYMON

Prerequisite: graduate standing. Seminar, 3 hours.

Covers observational, experimental, and theoretical studies of seafloor hydrothermal processes; emphasizes systems at oceanic spreading centers; includes global hydrothermal effects on the compositions of seawater and ocean crust; focuses on recent developments and unsolved problems.

### 276. Geological Oceanography

(4) STAFF

Prerequisite: graduate standing. Lecture, 3 hours.

Geology of the oceans. Development of the oceans through geologic time. Tectonism, crustal structure and composition, sediments, and the fossil record. Paleoceanographic change in relation to earth system history including impact of the oceans on climate change.

### 280. Seminar in Field Geology

(1-4) STAFF

Credit is one half of 1 unit per day in the field, with a maximum of 1 unit for any trip. May be repeated for a maximum of 8 units each academic year. SIU grading. Field, variable hours.

Field trips of one day or more, organized as opportune. Appropriate report required for each trip. (On demand.)

### 281. Field Studies in Marine Geophysics (2-12) HAYMON, LUYENDYK

Prerequisite: consent of instructor.

Course materials fee required. Lecture, 3 hours; laboratory, up to 40 hours.

Field studies in marine geophysics using seismic, sonar, magnetic techniques in high resolution studies of deep-sea geologic features. Normally involves going to sea.

### 282. Field Studies in Marine Geochemistry (2-12) HAYMON

Prerequisite: consent of instructor.

Course materials fee required. Lecture, 3 hours; laboratory, up to 3 hours; field and preparation, up to 6 weeks.

Studies in marine geochemistry with the opportunity of going to sea or into the field on land. Lectures cover techniques of seafloor mapping using bottom photography, marine geochemical sampling, and methods of data reduction and sample analysis. Labs include analysis of data/samples collected.

### 283. Advanced Field Mapping and Geologic Investigations

(4) GANS

Prerequisite: Geological Sciences 118.

Course materials fee required. Discussion, 3 hours.

Research-oriented mapping projects to solve outstanding problem(s) in a geologically significant area. Two weeks in the field, followed by compilation and complimentary laboratory studies. Weekly meetings to discuss results. Paper required.

### 285. Physical Volcanology

(4) GANS, BUSBY

Prerequisites: Geology 14 or 114 or 114A-B; and Geology 102A and 104A.

Course materials fee required.

Recommended preparation: Geology 103.

Laboratory, 3 hours; field, 3 hours.

Overview of volcanic processes, including physical properties of melts, eruptive mechanisms, classification of volcanic deposits, and volcanic-tectonic environments. Lecture emphasizes theoretical aspects of volcanic processes, lab examines major classification of rocks. Graduate students must complete an independent research project.

### 286. Cordilleran Tectonics

(4) GANS

Directed readings, weekly seminar, and field trip focused on the Phanerozoic evolution of the North American Cordillera. Emphasis on understanding fundamental orogenic processes (continental extension, shortening, transcurrent motions, magmatism, metamorphism) from a cordilleran perspective.

### 501. Practicum in Instruction

(1-4) STAFF

Prerequisite: concurrent teaching assistant appointment.

No unit credit allowed toward degree. Tutorial, 1-6 hours.

Practical experience in teaching in geological sciences. Student will have responsibility for one or more laboratory and/or discussion sections. Evaluations will be made by both staff and class.

### 502. Teaching Assistant Training

(2) STAFF

Maximum of three quarters. No unit credit allowed toward degree. Tutorial, 1-2 hours. (2 day workshop.)

Orientation and workshop in professional conduct and responsibilities. Course will involve observation of student in teaching situation (faculty visits or videotaping) and follow-up conferences, evaluations, and follow-up. (F)

### 503. Practicum in Research

(1-6) STAFF

Prerequisite: concurrent research assistant appointment.

No unit credit allowed toward degree. Tutorial, 1-6 hours.

Practical experience in research in the geological sciences, under supervision of faculty member.

### 596. Directed Reading and Research (2-12) STAFF

Prerequisites: consent of instructor and graduate

advisor.

No more than half the units necessary for the master's degree may be taken in *Geology 596. Tutorial, 3-40 hours.*

Individual tutorial. Written proposal for each tutorial must be approved by the instructor and the department chair. (F,W,S)

### 597. Individual Study for Master's and Ph.D. Examinations

(1-12) STAFF

*Prerequisites: consent of instructor and graduate advisor.*

No unit credit allowed toward advanced degree. *Laboratory, 3-36 hours.*

Instructor should be student's major professor or chair of the committee. (F,W,S)

### 598. Master's Thesis Research and Preparation

(1-12) STAFF

*Prerequisites: consent of instructor and graduate advisor.*

No unit credit allowed toward degree. *Tutorial, 1-12 hours.*

Master's thesis research and preparation. Instructor normally should be chair of the student's thesis committee. Only for research underlying the thesis, writing the thesis. (F,W,S)

### 599. Ph.D. Dissertation Preparation

(1-12) STAFF

*Prerequisites: consent of instructor and graduate advisor. Variable hours.*

Instructor normally should be chair of the student's doctoral committee. Only for research underlying the dissertation, writing the dissertation. Limited to terminal preparation. (F,W,S)

**Ann-Elise Lewallen**, Ph.D., University of Michigan, Assistant Professor (Japan anthropology, minority issues)

**Xiaorong Li**, Ph.D., McGill University, Assistant Professor (Chinese literature, Gender and Ming-Qing literature)

**John Nathan**, Ph.D., Harvard University, Professor (modern Japanese fiction and film)

**Katherine Saltzman-Li**, Ph.D., Stanford University, Associate Professor (Japanese literature and drama)

**Hyung Il Pai**, Ph.D., Harvard University, Associate Professor (Korean history, East Asian archaeology)

**William Powell**, Ph.D., UC Berkeley, Associate Professor (Chinese religions)

**Chikako Shinagawa**, M.A., University of Wisconsin, Madison, Lecturer (Japanese language)

**Hiroko Sugawara**, M.A., University of Oregon, Lecturer (Japanese language)

**Kuo-ch'ing Tu**, Ph.D., Stanford University, Professor (Chinese poetry and poetics, world literatures in Chinese)

**Mayfair Yang**, Ph.D., UC Berkeley, Professor (China, sociocultural anthropology, interpretive and social theory, political economy)

**Hsiao-jung Yu**, Ph.D., UC Berkeley, Associate Professor (Chinese linguistics, pre-modern fiction)

### Emeriti Faculty

**Robert L. Backus**, Ph.D., UC Berkeley, Professor Emeritus (Japanese literature)

**Chauncey S. Goodrich**, Ph.D., UC Berkeley, Professor Emeritus (early Chinese)

**Allan Grapard**, Ph.D., National Institute for Oriental Languages and Civilizations, Paris, Professor (Japanese religions)

**Haruko Iwasaki**, Ph.D., Harvard University, Associate Professor Emeritus (Japanese literature—Edo)

**Kenneth H. Pai**, M.F.A., Iowa State University, Professor Emeritus (modern Chinese fiction)

### Affiliated Faculty

**Laurie Freeman**, Ph.D. (Political Science)

**Tsuyoshi Hasegawa**, Ph.D. (History)

**Yunte Huang**, Ph.D. (English)

**Suk-Young Kim**, Ph.D. (Dramatic Art)

**Luke Roberts**, Ph.D. (History)

**Paul Spickard**, Ph.D. (History)

**Peter Sturman**, Ph.D. (Art History)

**Miriam Wattles**, Ph.D. (History of Art and Architecture)

The Department of East Asian Languages and Cultural Studies offers majors in Asian Studies, Chinese, and Japanese, together with coursework in four areas: East Asian cultural studies (involving more than one East Asian country), Chinese, Japanese, Korean, and Tibetan.

Asian Studies, an interdepartmental program administered by the Department of East Asian Languages and Cultural Studies, offers an undergraduate major leading to the B.A. degree and a graduate program leading both to the M.A. and Ph.D. The undergraduate and the graduate programs enable the student to

study an Asian area (China, Japan, Korea, Tibet) through two or more academic disciplines and, at the same time, to acquire at least two years of training in a language relevant to the area of study. The disciplines that contribute most to Asian studies at UCSB are anthropology, art history, literature, history, and religious studies. The languages which may be taken at UCSB in conjunction with Asian studies courses are Chinese (Mandarin and Classical), Japanese (modern and classical), Korean and Tibetan. Any Asian language offered at UCSB, can serve to fulfill the language prerequisite if the student can demonstrate competence by exam equivalent to two years of study.

It is important to consult early with an advisor to ensure a proper balance between breadth and concentration in the study plan. In addition, students are encouraged to meet with the advisor at least once each year to discuss their work and any issues that have arisen, or seem likely to arise, in the course of their studies.

Interdisciplinary study of an Asian culture, together with language training, provides a good basis for graduate work at the M.A. or Ph.D. level. In addition, the Asian studies major provides specialized knowledge for students who anticipate a career in business, law, journalism, government service, or museum work. It should be noted, however, that additional training in a professional school is necessary for entrance into many of these fields.

Students with a bachelor's degree in Asian studies who are interested in pursuing a California Teaching Credential should contact the credential advisor in the Graduate School of Education as soon as possible.

The Chinese and Japanese majors provide an opportunity for extensive language training and interdisciplinary coursework, fields of literature, history, and religion. The major in Chinese begins with work in modern Mandarin, the standard speech of the Beijing area, and moves on subsequently to Classical Chinese, which was the dominant literary medium until the twentieth century. The major in Japanese permits a concentrated study of the standard language of the Tokyo area and encourages an acquaintance with, Classical Japanese and Classical Chinese. Beyond language training, both of these majors focus on the humanistic fields set within a broad social and historical context.

The Chinese and Japanese majors are more geographically and culturally specific than is the Asian studies major, and they require considerably more advanced language training in Chinese or Japanese. Students should examine the different majors to determine which best suits their objectives.

The Chinese and Japanese majors are intended to provide preparation for graduate academic work in East Asian studies, or for careers in a wide variety of professions. Many recent majors have gone on to combine their undergraduate training with a professional degree in law or international management.

## Undergraduate Program

### Bachelor of Arts—Asian Studies

**Preparation for the major.** Students must have at least two years (0-30 units) of an Asian language (Chinese, Japanese, Korean, Tibetan)

# East Asian Languages and Cultural Studies

Department of East Asian Languages and Cultural Studies

Division of Humanities and Fine Arts  
Humanities and Social Sciences 2214

Department Chair: *William Powell*

## Faculty

**Michael Berry**, Ph.D., Columbia University, Associate Professor (modern Chinese literature and film, popular Chinese culture)

**Ronald Egan**, Ph.D., Harvard University, Professor (Chinese literature, aesthetics)

**Michael Emmerick**, Ph.D., Columbia University, Assistant Professor (Japanese literature, translation studies)

**Sabine Frühstück**, Ph.D. University of Vienna, Professor (modern Japanese cultural studies)

**Daoxiong Guan**, M.A., Washington University; M.S., Nanjing University, Lecturer (Chinese language)

**Chen-chuan Hsu**, M.A., UC Santa Barbara, Lecturer (Chinese language)

**Sun-Ae Lee**, M.A., Ohio State University, Lecturer (Korean language)

pertaining to the area of their interest or demonstrate an equivalent level of competence. In addition, they must take 8 units of East Asian Cultural Studies 4A-B and 4 units from one of the following: Chinese 40, Comparative Literature 31, EACS 5, 21, 80; Japanese 25, 63; Korean 82; History 80, 82, 87; or Religious Studies 3, 4, 21, 22.

**Upper-division major.** The major consists of 40 units of upper-division courses selected from three or more disciplines and generally concentrating on East Asia (China, Japan, Korea) or South Asia (India). It is advisable that one of the disciplines be history; in any case, all majors are required to take 4 units of Asian history chosen from the lower- or upper-division list. Courses for the major may be selected from the following list. Courses outside the list may be substituted in consultation with the advisor to accommodate individual interests consonant with the overall purpose of the program.

**Course List for Upper-Division Majors:**

**Anthropology**

- 138A. Elements of Traditional Chinese Culture
- 142. Peoples and Cultures of India

**Art History**

- 134A. Buddhist Art
- 134B. Early Chinese Art
- 134C. Chinese Painting
- 134D. Art and Modernism in China
- 134E. The Art of Chinese Landscape
- 134F. The Art of Japan
- 134G. Japanese Painting
- 134H. Ukiyo-e: Pictures of the Floating World
- 135AA-ZZ. Special Topics in Asian Art
- 186R. Seminar in Asian Art
- 186RS. Seminar in Chinese Art
- 186RW. Seminar in Japanese Art

**Chinese**

- 101A-B-C. Introduction to Classical Chinese
- 102A-B-C. Advanced Chinese Conversation
- 104. The Buddhist Influence on Chinese Language and Culture
- 105. Workshop in Chinese Translation
- 106A. Seminar in Chinese Literary Translation
- 115A. Imagism, Haiku, and Chinese Poetry
- 121. Seminar on Taiwan Literature
- 122A-B-C. Advanced Modern Chinese
- 124A-B. Readings in Modern Chinese Literature
- 125. Business Chinese
- 126A-B. Advanced Readings in Taiwan Literature
- 132A. Special Topics in Classical Chinese Poetry
- 132B. Special Topics in Modern Chinese Poetry
- 133. Advanced Readings in Classical Prose
- 136. Advanced Readings in Vernacular Literature
- 144. Women Writers of late Imperial China
- 146. Poetic Culture in late Imperial China and Beyond
- 148. Historic Lives
- 149. Literati Culture
- 150. The Language of Vernacular Chinese Literature
- 158. The Problem of Love
- 166A. Religion in Chinese Culture
- 166B. Taoist Traditions of China
- 166C. Confucian Traditions: The Classical Period
- 166E. The Flowering of Chinese Buddhism
- 166F. Religious Literature in Chinese: Buddhist Texts

- 166H. Religious Literature in Chinese: Taoist Texts
- 170. New Taiwan Cinema
- 171. Modern China Through Film
- 172. Fiction and Film in Contemporary China
- 173. Contemporary Chinese Culture and Society
- 180AA-ZZ Special Topics in Chinese Studies
- 183B. Religious Practice and the State of China
- 184A-B History of China
- 184T. History of Chinese Thought
- 197. Senior Honors Project
- 198. Readings in Chinese
- 199. Independent Studies in China

**Comparative Literature**

- 173. Life Stories: Biography and Autobiography in a Comparative Context
- 183. The Quest for Narrative in Late Imperial China

**Dramatic Art**

- 165A. Asian Performance Past and Present: East Asia

**East Asian Cultural Studies**

- 130. Tourism in East Asia
- 161B. Buddhist Meditation Traditions
- 164B. Buddhist Traditions in East Asia
- 175. Sacred Geography in China and Japan
- 178. The Body Religious in Chinese Culture
- 180P. Proseminar in East Asian History and Culture
- 181AA-ZZ. Special Topics in East Asian Studies
- 186. The Invention of Tradition in Contemporary East Asia
- 189A. Vietnamese History

**Film Studies**

- 120. Japanese Cinema
- 121. Chinese Cinema

**History**

- 184E. Chinese Archeology
- 185A-B. Modern China
- 185P. Proseminar on Modern China
- 187A. Japan Under the Tokugawa Shoguns
- 187B. Modern Japan
- 187C. Recent Japan
- 187S. The Samurai
- 187P. Proseminar in Japanese History
- 187Q. Samurai Japan
- 188A. History of Women in China: From the Ancient Period to the 19<sup>th</sup> Century
- 188B. History of Women in China: From the 19<sup>th</sup> Century to the Present

**Japanese**

- 110A. Survey of Japanese Literature: Classical
- 110B. Survey of Japanese Literature: Medieval
- 110C. Survey of Japanese Literature: Early Modern
- 111. Japanese Folklore
- 112. Survey of Modern Japanese Literature
- 115. Topics in Twentieth-Century Japanese
- 120A-B-C. Advanced Japanese
- 125. Intermediate Japanese Reading
- 126. Business Japanese
- 130A-B-C. Reading and Composition in Practical Japanese
- 144. Grammar for Advanced Reading
- 145. Readings in Twentieth-Century Japanese Literature
- 146. Advanced Japanese Readings
- 147. Advanced Readings in Japanese texts
- 149. Forms of Japanese Drama
- 155. Genre in the Japanese Verbal Arts

- 159. Japanese Cinema
- 160. Topics in Japanese Culture
- 162. Representation of Sexuality in Modern Japan
- 163. Gender and Sexuality in Cross-cultural Perspective
- 164. Modernity and the Masses of Taisho Japan
- 165. Popular Culture in Japan
- 166. Post/Colonialism and Indigenous Movements in Asia
- 167A-B. Religion in Japanese Culture
- 167D. Shinto
- 169. Seminar in Traditional Japanese Drama
- 180AA-ZZ. Special Topics in Japanese Studies
- 181. Classical Japanese (Bungo)
- 182. Classical Japanese II (Kanbun)
- 183. Special Readings in Prewar Japanese Texts
- 197. Senior Honors Project
- 198. Readings in Japanese
- 199. Independent Studies in Japanese

**Korean**

- 113. Korean Literature Survey
- 120. The New Korean Wave
- 121A-B-C. Advanced Korean
- 127A-B. Business Korean
- 142. Introduction to Popular Korean Melodrama
- 175. Introduction to Popular Culture in Korean Film and TV Dramas
- 181AA-ZZ. Special Topics in Korean Studies
- 182A. Korean History and Civilization: Part I
- 182B. Korean History and Civilization: Part II
- 182P. Proseminar in Korean History
- 199. Independent Studies

**Political Science**

- 135. Government and Politics of Japan
- 136. Government and Politics of China
- 138. Political and Economic Development in Pacific Rim Countries

**Religious Studies**

- 158. Hindu Myth and Image
- 159A-B-C-D-E-F-G-H-I-J-K-L. Religious Literature in Sanskrit
- 160A. Religious Traditions of India
- 161B. Buddhist Meditation Traditions
- 161C. Buddhist Tantric Traditions
- 162A. Indian Philosophy and Religion
- 163. Images of Japan: The Ideology of Representation
- 164A. Buddhist Traditions in South Asia
- 164B. Buddhist Traditions in East Asia
- 165. The Vedic Traditions of India
- 166B. Taoist Traditions of China
- 166C. Buddhist Ethics
- 166E. The Flowering of Chinese Buddhism
- 167A-B. Religion in Japanese Culture
- 169. Hindu Devotional Traditions
- 171-A-B-C-D. The Schools of Tibetan Buddhism
- 183. The Quest for Narrative in Late Imperial China
- 183B. Religious Practice at the State in China
- 184A. The Practice of Tibetan Buddhism
- 184B. Tibetan Buddhist Thought

**Bachelor of Arts—Chinese**

**Preparation for the major.** Students may elect to emphasize either Mandarin or Classical Chinese. The Mandarin concentration requires at least three quarters of Classical Chinese; the Classical concentration requires at least three quarters of Mandarin. Completion of a concen-

tration in either Mandarin or Classical Chinese is voluntary and will not be formally acknowledged on official transcripts or diplomas.

Required: Chinese 1, 2, 3, 4, 5, 6 or 1NH, 2NH, 3NH, 4NH, 5NH (for Mandarin concentration); Chinese 1, 2, 3, or 1NH, 2NH, 3NH, 101A-B-C (for Classical concentration); 8 units of East Asian Cultural Studies 4A-B. Students who have completed a more advanced course in a lower-division language sequence will not be permitted to take for credit a course that is lower in the sequence. Only letter grades are credited to the preparation for the major, with the following exception: a lower-division language course when the final course in the sequence is passed with a C or better.

**Upper-division major.** Students pursuing the Classical Chinese concentration must complete 44 upper-division units, including the following: 20 units of Classical Chinese from 132A, 132B, 133, 134, 136, 142, or appropriate courses by petition. Twenty-four units from Anthropology 138A, 157; Art History 134-B-C-D, 135AA-ZZ, 186R, 186RS; Chinese 166C-F, 184A-B, 184T, 185M; EACS 161B, 164B, 175, 178; History 184E, 185A-B-P, 186D; Political Science 136; Religious Studies 164B, 183; Chinese 106A-B, 112A, 115A, 116, 121, 123, 126A-B, 132B, 139, 148, 150, 158, 166A-B-E-F-H, 170, 171, 172, 173; Comparative Literature 183; Film Studies 121.

Students pursuing the Mandarin concentration must complete 44 upper-division units, including the following: Chinese 101A-B-C, one course from Chinese 132A, 132B, 133, 134, or 142. Twelve units of Mandarin from 102A-B-C, 122A-B-C, 124A-B, 125, 136, 150, 166F; Religious Studies 183B, 166AX. Sixteen units from Anthropology 138A, 157; Art History 134-B-C-D, 135AA-ZZ, 186R, 186RS; EACS 161B, 164B, 175, 178; History 184A-B-P, 185A-B-P, 186D; Comparative Literature 183; Political Science 136. Chinese 104, 105, 106A-B, 112A, 115A, 116, 121, 123, 126A-B, 127A-B-C, 132B, 137, 139, 145, 148, 149, 158, 166A-B-C-E-F-H, 170, 171, 172, 173, 184A-B, 184T, 197, 198, 199; EACS 175; Film Studies 121.

### Senior Honors Program in Chinese

Students may request nomination for the senior honors program in Chinese by filing an application, or they may be nominated by the faculty. The minimum grade-point average for entrance to the program is 3.0 overall and 3.5 in the Chinese major. Candidates for the program must have completed at least 105 units, must expect to graduate within five quarters, and must have completed at least two upper-division courses in Chinese. Students must also complete the Seniors Honors Project (Chinese 197) during their senior year. Applications for the program are available in the department office.

### Minor—Chinese

All courses to be applied to the minor must be completed on a letter-grade basis. This includes both courses offered in Chinese and those offered by other departments and applied to the minor.

**Preparation for the minor.** Chinese 1, 2, 3, 4, 5, 6, or Chinese 1NH, 2NH, 3NH, 4NH, 5NH or equivalent (0-30 units), 8 units of East Asian

Cultural Studies 4A-B.

**Upper-division minor.** Twenty units, distributed as follows: One course (4 units) from Chinese 101A or 122A; Sixteen units of upper-division electives chosen from the following: Anthropology 138A, 157; Art History 134B-C-D-E, 135AA-ZZ, 186R, 186RS; Chinese 101A-B-C, 104, 105, 106A-B, 112A, 115A, 121, 122A-B-C, 123, 124A-B, 125, 126A-B, 127A-B-C, 132A-B, 136, 139, 148, 150, 158, 166A-B-C-E-F-H, 170, 171, 172, 173, 184A-B-T, 186M, 197, 198, 199; EACS 164B, 175, 178, 180A-B-C-P, 185; Comparative Literature 183; History 185A-B-L-P; Political Science 136; Religious Studies 166AX, 183, 183B; Film Studies 121.

*Note: Substitutions and waivers are subject to approval by the chair of the department. Please see page 118 for special conditions governing minors in the College of Letters and Science.*

### Bachelor of Arts—Japanese

**Preparation for the Major.** Required, with an average grade of C or better: Japanese 1, 2, 3, 4, 5, 6, or 7H. In addition, 8 units of East Asian Cultural Studies 4A-B. Students who have completed an advanced course in a lower-division language sequence will not be permitted to take for credit a course that is lower in the sequence. Only courses taken with letter grades are credited to the preparation for the major and a lower-division language course when the final course in the sequence is passed with a C or better.

**Upper-division major.** Forty-four units are required with an average grade of C or better: 12 units from Japanese 120A-BC or 125; 4 units from EACS 180P or History 180P, 187A-B-C-P-Q-S; 4 units from Japanese 121C, 125, 130A-B-C, 144, 145, 146, 147, 181, 182, 183, 198, 199; 24 units from Art History 134F-G-H, 135AA-ZZ, 186RW; Chinese 101A; EACS 161B, 175; Comparative Literature 173; Film 120; Japanese 110A-B-C, 112, 115, 119, 125, 126, 130A-B-C, 144, 145, 146, 147, 149, 155, 159, 160, 162, 164, 165, 167A-B-D, 169, 180AA-ZZ, 181, 182, 183, 197; Political Science 135; Religious Studies 120. For additional study relevant to the major, any of the courses on Japan offered in art history, history, political science, and religious studies are recommended, in addition to courses in Classical Chinese. A course in literary theory and criticism is highly recommended, and may be substituted by arrangement with the major advisor for one of the courses in the major.

**High Proficiency Track.** Students with a sufficiently high score on the placement exam (with speaking, reading, and writing skills roughly equivalent to those of a high school graduate in Japan) must take the High Proficiency Track within the major, which consists of the following:

**Preparation for the major.** East Asian Cultural Studies 4A-B for 8 units.

**Upper-division major:** Forty-four units are required with an average grade of C or better: 4 units from East Asian Cultural Studies 180P, or History 180P, 187 A-B-C-P-Q-S; 8 units from Japanese 147, 181, 182, 183 198; 32 units from Art History 134F-G-H, 135AA-ZZ, 186R, 186RW; Chinese 101A; Comparative Literature

173; EACS 161B, 175; Film 120; Japanese 110A-B-C, 112, 115, 119, 149, 155, 159, 160, 162, 164, 165, 167A-B-D, 169, 180AA-ZZ, 197, 199; Political Science 135. For additional study relevant to the major, any of the courses on Japan offered in art history, history, political science, and religious studies are recommended, in addition to courses in Classical Chinese. A course in literary theory and criticism is highly recommended, and may be substituted by arrangement with the major advisor for one of the courses in the major.

### Senior Honors Program in Japanese

Students may request nomination for the senior honors program in Japanese by filing an application, or they may be nominated by the faculty. The minimum grade-point average for entrance to the program is 3.0 overall and 3.5 in the Japanese major. Candidates for the program must have completed at least two upper-division courses in Japanese. Students must complete the Senior Honors Project (Japan 197) during their senior year. Applications for the program are available in the department office.

### Minor—Japanese

All courses to be applied to the minor must be completed on a letter-grade basis. This includes both courses offered in Japanese and those offered by other departments and applied to the minor.

**Preparation for the minor.** Japanese 1, 2, 3, 4, 5, 6, or 7H or equivalent (0-30 units), 8 units of East Asian Cultural Studies 4A-B.

**Upper-division minor.** Twenty upper-division units, distributed as follows: Japanese 120A; 16 units of upper-division electives chosen from the following: Art History 134F-G-H, 135AA-ZZ, 186R, 186RW; Comparative Literature 173; EACS 161B, 175, 180P, 185; Film Studies 120; History 180P, 187A-B-C-P-Q-S; Japanese 110A-B-C, 112, 115, 119, 120B-C, 121, 124, 125, 126, 130A-B-C, 144, 145, 146, 147, 149, 155, 159, 160, 162, 164, 165, 167A-B-D, 169, 170, 180AA-ZZ, 182, 183, 187L, 197, 198, 199.

**High Proficiency Track.** Students with a sufficiently high score on the placement exam (with speaking, reading, and writing skills roughly equivalent to those of a high school graduate in Japan) must take the High Proficiency Track within the minor, which consists of the following:

**Preparation for the minor.** East Asian Cultural Studies 4A-B for 8 units.

**Upper-division minor:** Twenty-four units are required with an average grade of C or better: 8 units of Japanese 147, 181, 182, 183, 198, 199; 16 units from Art History 134F-G-H, 135AA-ZZ, 186RW; Chinese 101A; Comparative Literature 173; EACS 161B, 175, 180P; Film Studies 120; History 180P, 187A-B-C-P-Q-S; Japanese 110A-B-C, 112, 115, 119, 149, 155, 159, 160, 162, 164, 165, 167A-B-D, 169, 180AA-ZZ, 181, 197, 198, 199; Political Science 135.

*Note: Substitutions and waivers are subject to approval by the chair of the department. Please see page 118 for special conditions governing minors in the College of Letters and Science.*

## Graduate Program

The graduate program is composed of two parts: an M.A./Ph.D. program and an M.A. program. The M.A. program is further subdivided into two components: the M.A. program in Asian Studies, for students with broad interests in Asia or who will pursue a concentration outside of East Asia, and the M.A. program in Asian Studies with a formal emphasis in East Asian Languages and Cultural Studies.

In addition to program requirements, candidates for graduate degrees must meet university degree requirements found in the chapter “Graduate Education at UCSB.”

### Admission

Students with the B.A. degree may apply to either program. Students who already hold the M.A. may also apply to the Ph.D. program.

In addition to departmental requirements for admission, applicants must fulfill university requirements for admission to graduate status described in the chapter “Graduate Education at UCSB.”

### Master of Arts—Asian Studies

The M.A. program is intended to provide broad training in the study of Asia, in both modern and pre-modern times. Graduates of the program pursue a wide variety of careers, generally outside of academia, in business, government, or NGOs, or they combine their degree with other professional training.

Students are expected to complete the M.A. in two years.

### Admission

Applicants for the M.A. in Asian Studies will normally have an undergraduate degree in a relevant discipline as well as courses dealing with Asia. Some training in an Asian language is highly recommended.

### Degree Requirements

Students admitted to the M.A. program may pursue the degree under Plan 1 (thesis) or Plan 2 (comprehensive examination).

**Plan 1.** Plan 1 students must complete 30 units of upper-division and graduate work, fulfill the language requirement, and write a thesis. Degree candidates must complete at least 20 units of graduate courses numbered between 200 and 299 or 596. A maximum of 6 units of 596 coursework may be counted toward the master’s degree. Units earned in courses numbered 501, 502, 597, and 598 do not count toward the 30-unit requirement. Students who choose this plan must satisfy two additional conditions for advancement to candidacy: (1) they must demonstrate the capacity to do some of their thesis research in an Asian language pertaining to their region of interest; and (2) they must submit to the Committee on Asian Studies one research paper, written for any graduate course, as evidence of their capacity to conduct intellectual inquiry and to write competently.

The thesis committee, consisting of the thesis advisor and two additional ladder faculty members, is chosen by the student, nominated by the chair of the Committee on Asian Studies, and appointed by the dean of the Graduate Division. The student’s thesis must be approved by each

member of the thesis committee.

To fulfill the language requirement, courses in one Asian language pertaining to the region of the student’s interest must be taken each quarter for a total of 36 units in one language, including lower-division units. Upper-division language courses may be counted for up to 8 units toward completion of the required units of regular coursework. The language requirement will be waived for a student who enters the program with sufficient competence to use an Asian language in regular coursework, and it will be considered fulfilled at any stage in the program at which the student achieves such competence.

**Plan 2.** Plan 2 students must complete 36 units of upper-division and graduate work, fulfill the same language requirement described in Plan 1 above, and pass a comprehensive examination. Degree candidates must complete at least 24 units of graduate courses numbered between 200 and 299 or 596. A maximum of 9 units of 596 coursework may be counted toward the master’s degree. Units earned in courses 501, 502, 597, and 598 do not count toward the 36-unit requirement.

Students who elect Plan 2 need not have mastered an Asian language to a level at which it can be used for research, but they must demonstrate, by at least a B average in the language courses, that they can deal effectively with the structural and semantic problems of the language and are capable of pursuing this study independently. They must also demonstrate the ability to conduct intellectual inquiry and to write competently by submitting two research papers, written for any graduate course, to the Committee on Asian Studies. After approval, students will be permitted to go on to the comprehensive examination, consisting of two three-hour sessions covering their chosen fields in two disciplines; they will be required to prove both a factual and an interpretive understanding of the region of their interest.

In addition to upper-division courses in the major, graduate students may take courses from the following list. Upper-division and graduate courses outside the list may be substituted on consultation with the advisor. Anthropology 270C-D; Art History 282; Chinese 201, 596, 598; History 200AS, 201AS, 280, 281, 284, 285, 286, 288; Japanese 201, 596, 598; Philosophy 223A-B; Political Science 279, 285, 286; Religious Studies 202, 203, 204, 206, 207, 246, 254, 255, 257, 259, 260.

### Master of Arts—Asian Studies— Emphasis in East Asian Languages and Cultural Studies

The emphasis in East Asian Languages and Cultural Studies provides a course of study with a geographic focus on East Asia (China, Korea, and Japan) and an interdisciplinary approach, concentrating on the humanities. It is assumed that most students will concentrate either upon China or Japan, but that they will also acquire a broad understanding of East Asian cultures. The emphasis stresses advanced language training. Other coursework concentrates on the fields of history, literature, religious studies, and anthropology. Two tracks or plans of study are available, one academic (thesis), and the other (comprehensive examinations) for students who

will go into careers in business or government or combine their M.A. with other professional degrees. Students indicate on their application the plan they intend to pursue. Students are expected to complete the M.A. in two years.

### Admission

Applicants to the M.A. in Asian Studies with an emphasis in East Asian Languages and Cultural Studies are expected to have had a minimum of two years of language training in an East Asian language prior to admission. Most applicants will have majored in Chinese or Japanese in their undergraduate degree.

### Degree Requirements

**Plan 1.** Plan 1 is the academic track. It requires a total of 60 units of coursework in Chinese, Japanese, or East Asian Cultural Studies courses (*consult the department for specifics*) and 12 units of thesis work (598). Students must complete the four core graduate seminars (EACS 212, 215, 218, and Chinese 211 or Japanese 211). They are also required to take 8-12 units of classical language. Forty-five of their primary units must be in upper-division or graduate courses which meet university requirements for eligible units, including at least 24 units of graduate courses numbered between 200 and 299, or 596. A maximum of 12 units of 596 coursework may be counted toward these required 24 graduate units. Units earned in courses 501 and 598 do not count toward the 45-unit requirement. The thesis should demonstrate the student’s ability to do original research using sources in Chinese, Japanese, or Korean.

**Plan 2.** Plan 2 is the track intended for students who will go on to careers in business or government or combine their M.A. with other professional degrees. It requires 64 units of coursework in Chinese, Japanese, or East Asian Cultural Studies courses, and 8 units of 597, Preparation for Comprehensive Examinations (*consult the department for specifics*). Students must complete the four core graduate seminars (EACS 212, 215, 218, and Chinese 211 or Japanese 211). Forty-nine of the 64 units must be in upper-division or graduate courses which meet university requirements for eligible units, including at least 24 units of graduate courses numbered between 200 and 299, or 596. A maximum of 12 units of 596 coursework may be counted toward these required 24 graduate units. Units earned in courses 501 and 597 do not count toward the 49-unit requirement. Under this plan, candidates will take comprehensive examinations in two fields to be determined in consultation with an advisory committee. The 8 units of 597 must be equally divided between the two fields.

### Five-Year Combined Bachelor of Arts/Master of Arts—Chinese or Japanese

The program is designed for students who wish to enhance their undergraduate major in Chinese or Japanese with graduate training at the masters level in East Asian Languages and Cultural Studies. The program will enable students to add a fifth year of advanced language work to the normal undergraduate major, while also giving them opportunity to further

their expertise in Chinese or Japanese studies by doing graduate-level coursework in the discipline(s) of their choice in the humanities and social sciences.

The program allows students to pursue concurrently a bachelor of arts degree in Chinese or Japanese and a master of arts in Asian Studies (with an emphasis in East Asian Languages and Cultural Studies). In their junior year, students must enroll in an EAP Program: China, Japan, Hong Kong, or Taiwan. These degrees already exist as separate entities, the B.A. normally requiring four years and the M.A. normally requiring two years.

### **Doctor of Philosophy— East Asian Language and Cultural Studies**

Students entering the M.A./Ph.D. program are undertaking a challenging course of study that demands advanced language skills in Chinese or Japanese and expertise in the study of East Asia that crosses traditional disciplinary boundaries within the humanities, as well as between the humanities and social sciences. Students entering this program should be aware that they are undertaking not only to deepen their understanding of the cultural traditions of the region but also to explore their potential as scholars, interpreters, and, in most cases, teachers of East Asian history, literatures, religions, and cultural studies. The training students receive in the program is designed to prepare them to become fully participating members of the professional community of scholars.

Students in the M.A./Ph.D. program are expected to complete the Ph.D. in six to seven years. Students who upon admission already have an M.A. degree from another institution will normally complete their Ph.D. in four to five years.

### **Admission**

Students applying to the M.A./Ph.D. program will normally have majored in Chinese or Japanese as an undergraduate or, if not, have already done a substantial amount of academic course work in the field and at least three years of the academic study of Chinese or Japanese.

Although students are admitted into the M.A./Ph.D. program, continuation to the Ph.D. is by no means automatic upon completion of the masters degree. Continuation is subject to the student's academic performance being deemed excellent by all standards that the department uses to assess degree progress including graduate course work and the M.A. thesis, as well as upon positive recommendations by the student's M.A. committee.

### **Degree Requirements**

- In the first two years: complete the course work and thesis for Plan 1 of the M.A. with an emphasis in East Asian Languages and Cultural Studies (72 units), with an expected GPA of 3.75.
- Be invited by the Graduate Program Committee for continuation into the Ph.D. program, based on the criteria specified above.
- Complete 24 units (6 courses) of graduate level work beyond that taken for the M.A. (The total number of courses required in "a" and "b" is 21; the total number of graduate

courses is 12.)

- By the end of the third year, complete course work in 3 graduate program specializations (see below), with a 4th optional. A specialization is fulfilled by taking a minimum of 3 graduate level courses in the course list for the specialization. Thus a minimum of 9 courses (out of 21) are needed to fulfill the 3 specializations. Course work taken in their first two years of study is applied to these requirements for specializations. Note that the core graduate seminars do not count toward any of the specializations.
- Fulfill the language requirement: (1) Students specializing in Chinese must take a minimum of 1 year of Japanese. (2) Students studying Japanese will have taken at least 8 units of Classical Japanese (required for Plan 1 of the M.A.) In addition, all students must pass a reading examination in a European language (normally French or German) relevant to their academic interests. The a European language requirement is widespread in American Ph.D. programs in the East Asia field, allowing access to the centuries old and still thriving traditions of the study of China and Japan in Europe.
- Before the end of spring quarter in the fourth year, submit a dissertation prospectus (15-20 pages), outlining the goals, organization, and sources for the dissertation.
- Before the end of spring quarter in the fourth year, pass field examinations in the 3 specializations, with a 4th optional. The field exams will be written exams, all taken within two weeks. They will be followed by an oral defense, to be held the week after the exams. The oral defense will cover the dissertation prospectus as well as the field exams. Once the student has passed these written and oral qualifying examinations, he or she will be advanced to candidacy for the Ph.D.
- By the end of the seventh year, submit the completed Ph.D. dissertation for acceptance by the student's dissertation committee.
- The normative time for completion of the Ph.D. will be six to seven years, depending on the level of East Asian language training at the time of admission and the need for time spent in East Asia doing dissertation research. We expect that most students will finish their degree within six years, while those admitted with minimal prior foreign language study will need part or all of the seventh year to finish.

**Core graduate seminars.** Chinese 211: Bibliography and Research Methods; Japanese 211: Bibliography and Research Methods; East Asian 212: Canon Formation, Periodization, and Disciplinarity in East Asian Studies; East Asian 215: Topics in Modern East Asian Cultural Studies; East Asian 218: The Art and Theory of Translation.

**Graduate program specializations.** Beyond the core graduate seminars, the Ph.D. degree is structured around numerous subject specializations. Technically, these are departmentally determined "specializations" (rather than "graduate degree emphases"). They reflect both the Department's areas of faculty expertise and student concentrations during their graduate careers. Over time, as faculty personnel change,

the precise number and identity of these specializations will be subject to change.

- Modern East Asian Cultural Studies
- Cinema and Performing Arts
- Taiwan Literature and Cultural Studies
- Religious History and Geography
- Buddhist Studies
- Translation Studies; Language
- Pedagogy and Linguistics
- Literati Culture
- Early Modern Japanese Cultural Studies
- A specialization, defined by the student in consultation with his or her Ph.D. committee

### **Optional Ph.D. Emphasis in East Asian Literatures within the Ph.D. in Comparative Literature**

Students previously admitted to the Ph.D. program in comparative literature may pursue an emphasis in East Asian literatures, aiming toward completion of a dissertation that relies in some significant measure on primary sources in Chinese or Japanese. For details see catalog entry under Department of Comparative Literature.

## *Chinese Courses*

### **LOWER DIVISION**

*Students who have studied Chinese previously must take the placement examination administered by the department to determine proper placement in the department's language program. Any two courses in the series Chinese 1-6 must be taken in sequence and not simultaneously. Students may not enroll in a lower level Chinese course than was previously taken in the Chinese 1-6 series.*

#### **1. Elementary Modern Chinese**

##### **(5) STAFF**

The beginning course in Chinese. The student acquires a basic knowledge of the grammar, a limited general vocabulary, correct pronunciation, and an ability to read and understand simple texts. Weekly laboratory assignments support and enhance classroom learning. (F)

#### **1NH. First Year Chinese Heritage**

##### **(4) STAFF**

*Not open for credit to students who have completed Chinese 1N.*

*Recommended preparation: consent of instructor.*

Intended for Chinese heritage speakers who wish to learn to read and write Chinese. Content is similar to Chinese 1 with less emphasis on developing oral skills.

#### **2. Elementary Modern Chinese**

##### **(5) STAFF**

*Recommended preparation: Chinese 1.*

Continuation of Chinese 1.

#### **2NH. First Year Chinese Heritage**

##### **(4) STAFF**

*Not open for credit to students who have completed Chinese 2N.*

*Recommended preparation: Chinese 1NH.*

Continuation of Chinese 1NH.

#### **3. Elementary Modern Chinese**

##### **(5) STAFF**

*Recommended preparation: Chinese 2.*

Continuation of Chinese 2.

#### **3NH. First Year Chinese Heritage**

##### **(4) STAFF**

*Not open for credit to students who have completed Chinese 3N.*

*Recommended preparation: Chinese 2NH.*

Continuation of Chinese 2NH.

#### 4. Intermediate Modern Chinese

(5) STAFF

*Recommended preparation:* Chinese 3.

Continuation of Chinese 3.

#### 4NH. Second Year Chinese Heritage

(4) STAFF

*Not open for credit to students who have completed Chinese 4N.*

*Recommended preparation:* Chinese 3NH.

Continuation of Chinese 3NH.

#### 5. Intermediate Modern Chinese

(5) STAFF

*Recommended preparation:* Chinese 4.

Continuation of Chinese 4.

#### 5NH. Second Year Chinese Heritage

(4) STAFF

*Not open for credit to students who have completed Chinese 5N.*

*Recommended preparation:* Chinese 4NH.

Continuation of Chinese 4NH.

#### 6. Intermediate Modern Chinese

(5) STAFF

*Recommended preparation:* Chinese 5.

Continuation of Chinese 5.

#### 40. Popular Culture in Modern Chinese Societies

(4) BERRY

Provides an overview of Chinese popular culture in China, Taiwan, and Hong Kong. From fiction to film, music to MTV, and from cartoons to Karaoke, this course probes the popular as it has manifested itself in the modern Chinese societies.

### UPPER DIVISION

#### 101A-B-C. Introduction to Classical Chinese

(4-4-4) EGAN

*Recommended preparation:* Chinese 3.

The grammar and vocabulary of Classical Chinese. Readings concentrate on philosophical and historical works from the pre-Han period, with some selections from later prose and poetry. Students with some familiarity with Chinese characters (through another Asian language) but not modern Chinese will be accommodated.

#### 103. Reading and Writing in Chinese

(4) STAFF

Designed to enhance reading and writing skills in Chinese for students who have finished second year Chinese.

#### 104. The Buddhist Influence on Chinese Language and Culture

(4) YU

*Prerequisites:* Chinese 101C and 122C.

Exploratory study of non-Chinese influences on Chinese language and culture as demonstrated by the language of Buddhist sutras and translated into Chinese.

#### 105. Workshop in Chinese Translation

(4) STAFF

*Prerequisite:* upper-division standing.

Practical work in translation from a variety of Chinese sources depending on need. Emphasis on accuracy and rigor.

#### 106A. Seminar in Chinese Literary Translation

(4-4) TU

*Prerequisites:* upper-division standing; consent of instructor.

Designed to introduce various approaches to translation, especially the techniques of translating literary works from Chinese to English. Published translation texts are provided as the main vehicle for the analysis and discussion of translation problems in order to learn and develop practical skills of translation.

#### 115A. Imagism, Haiku, and Chinese Poetry

(4) TU

*Prerequisite:* upper-division standing.

A comprehensive study of the nature and principles of the haiku and of classical Chinese poetry, their

influence on the western imagists, and the theoretical and experimental achievements of the major imagist poets in the development of modern English poetry. Taught in English.

#### 121. Seminar on Taiwan Literature

(4) TU

*Prerequisites:* Chinese 6; consent of instructor.

Focus on major issues of Taiwan literature from Japanese occupation (1895-1945) to the present with regard to the interaction of Taiwan's native cultures, China's grand tradition, and foreign influences during the historical development.

#### 122A-B-C. Advanced Modern Chinese

(4-4-4) STAFF

*Recommended preparation:* Chinese 6.

Advanced practice in grammar and composition.

#### 124A-B. Readings in Modern Chinese Literature

(4-4) STAFF

*Prerequisite:* upper-division standing.

Advanced readings in the Chinese language in fiction, drama, and poetry after 1919. Designed especially for students who have returned from the Education Abroad Program and students with advanced Chinese background.

#### 125. Business Chinese

(4) STAFF

*Recommended preparation:* Chinese 6.

A course intended to equip the properly qualified student to conduct business in modern Chinese. Emphasis will be placed on using appropriate vocabulary in realistic situations.

#### 126A. Advanced Readings in Taiwan Literature

(4) TU

*Prerequisites:* Chinese 6; consent of instructor.

A selection of texts in Chinese by representative authors; literature during the Japanese rule (1895-1945). Designed for advanced students to gain an overall view of achievements of major writers in different genres.

#### 126B. Advanced Readings in Taiwan Literature

(4) TU

*Prerequisites:* Chinese 6; consent of instructor.

A selection of texts in Chinese by representative authors; works after WWII to the present. Designed for advanced students to gain an overall view of achievements of major writers in different genres.

#### 127A. Fourth Year Chinese

(4) STAFF

*Prerequisite:* Chinese 122C or equivalent.

Course series for students who have completed third year Chinese. Extensive reading and discussion of colloquial versus formal usage of Chinese are the major focus of the course.

#### 127B. Fourth Year Chinese

(4) STAFF

*Prerequisite:* Chinese 127A.

Course series for students who have completed third-year Chinese. Extensive reading and discussion of colloquial versus formal usage of Chinese are the major focus of the course.

#### 127C. Fourth Year Chinese

(4) STAFF

*Prerequisite:* Chinese 127B.

Course series for students who have completed third-year Chinese. Extensive reading and discussion of colloquial versus formal usage of Chinese are the major focus of the course.

#### 132A. Special Topics in Classical Chinese Poetry

(4) TU

*Prerequisites:* upper-division standing.

Topics focus on major themes in classical poetry with emphasis on Buddhist, Taoist, and symbolist poems in pre-modern period. Readings in Chinese, lectures and discussions in English.

#### 133. Advanced Readings in Classical Prose

(2-4) STAFF

*Prerequisites:* upper-division standing.

Readings in various periods and genres (history, philosophy, the essay, prose narrative).

#### 136. Advanced Readings in Vernacular Literature

(2-4) STAFF

*Prerequisites:* upper-division standing.

Readings in novels of the Ming and Ch'ing periods.

#### 140. Spaces in the Chinese City

(4) STAFF

A study of urban culture in selected periods.

Examination of three public centers in Chinese cities: court, temple, and marketplace and representations of these spaces in various genres. Readings include literary and historical writings, paintings, and maps.

#### 143. Urban Legends: Masterworks of Ming-Qing Fiction and Their Afterlives

(4) LI

Masterworks of fiction from the Ming and Qing periods as products of urban culture in late imperial and contemporary China. Stories by Feng Menglong, Li Yu, tales by Pu Songling, and excerpts from classic novels.

#### 144. Women Writers of Late Imperial China

(4) LI

A study of Chinese women writers in the late imperial period (roughly 1500-1900), a newly rediscovered part of China's literary history. Examination of their personal lives and writings in relation to the Chinese literary tradition, women's history and feminist criticism.

#### 146. Poetic Culture in late Imperial China and Beyond

(4) LI

An examination of the role poetry played in both social and individual lives in late imperial China, with particular attention to self-expression and literary community. Relevant practices in later times and in Japan and Korea are also covered.

#### 148. Historic Lives

(4) EGAN

*Prerequisite:* upper-division standing.

A study of selected notable lives from early and middle China for their contributions to Chinese history and literature. Subjects include Confucius, the First Emperor, the recluse Tao Yuanming, the usurper Empress Wu, the Buddhist Sixth Patriarch, the "post-historian" Du Fu, and the female song-lyricist Li Qingzhao.

#### 150. The Language of Vernacular Chinese Literature

(4) YU

*Recommended preparation:* Chinese 122A-B-C or 124.

*May be repeated for credit to a maximum of 8 units.*

Early Mandarin as represented in selections from vernacular Chinese fiction of the 16th through 18th centuries. Primarily concerned with the syntactical and semantic features employed in the reading selections. Also considers the issue of literary expression.

#### 152. Pedagogical Chinese Grammar

(4) YU

*Prerequisite:* Chinese 127C.

An overview of modern Chinese grammatical structures. Goal of the course is to enable students to become familiar with different approaches of teaching grammar in a classroom setting.

#### 153. Introduction to Historical Chinese Syntax

(4) YU

*Prerequisite:* Chinese 101C or equivalent.

*Recommended preparation:* Linguistics 108 and 109.

An introduction to morpho-syntactic change in Chinese language from the late Han period (3rd c. A.D.) to the 19th century.

#### 158. The Problem of Love

(4) EGAN

The dynamics of romantic love in traditional China. Love is viewed against the forces hostile to it. Readings from major literary works to appreciate the allure of love (usually "illicit") in imaginative literature. All readings in English.

**166A. Religion in Chinese Culture****(4) POWELL***Same course as Religious Studies 166A.*

A survey of major periods and themes in the history of the Confucian, Taoist, and Chinese Buddhist traditions, with particular emphasis on the differences and tensions among them and the contributions of each to the formation of the Chinese civilization.

**166C. Confucian Traditions: The Classical Period****(4) POWELL***Same course as Religious Studies 166C.*

A treatment of the origins of Confucianism and of its development through the Han dynasty (to A.D. 200), with special attention to the variety of humane and spiritual disciplines which came to be called "Confucian." Emphasis on the interpretation of primary texts like the *Analecets*, the *Mencius*, the *Hsun Tzu*, etc.

**166E. The Flowering of Chinese Buddhism****(4) POWELL***Same course as Religious Studies 166E.**Recommended preparation: Religious Studies**164B.*

A study of the distinctively Chinese forms of Buddhism which emerged in the sixth and seventh centuries A.D. Emphasis will be on the Hua-yen, T'ien-t'ai, and Ch'an traditions, and on the features of those traditions which distinguish them most clearly from Indian Buddhism.

**166F. Religious Literature in Chinese: Buddhist Texts****(4) POWELL***Prerequisite: consent of instructor.**Same course as Religious Studies 166F.**Recommended preparation: one year of formal study of classical Chinese.*

Selected readings in important Buddhist texts which were either originally written in Chinese or translated into that language. Only texts not available in Western language translation are chosen. Attention not only to content but to the grammatical, syntactical, and terminological peculiarities of Buddhist Chinese.

**166H. Religious Literature in Chinese: Taoist Texts****(4) POWELL***Same course as Religious Studies 166H.**Recommended preparation: one year of formal study of classical Chinese.*

Reading in the Lao Tzu (Tao-te-ching) and the Chuang Tzu and their latter commentaries.

**170. New Taiwan Cinema****(4) BERRY***Prerequisite: upper-division standing.*

A critical survey of the new Taiwan cinema (1982-86) movement and its representative filmmakers Edward Yang and Hou Hsiao-hsien. Works by other contemporary directors such as Tsai Ming-liang, and Chen Kuo-fu are also analyzed.

**171. Modern China Through Film****(4) YANG**

Survey of social change in 20th century China, Hong Kong, Taiwan through representation in film. Topics include: collectivization, gender and the state, revolution and iconoclasm, transnational culture, nationalism, rural-to-urban migration, and consumerism.

**172. Fiction and Film in Contemporary China****(4) BERRY**

Presents a critical historical overview of Chinese literature and film from 1949 to the present. In addition to writers and filmmakers from mainland China such as Mo Yan and Zhang Yimou, course considers literary and cinematic development from Hong Kong, Taiwan, and the Chinese diaspora.

**173. Contemporary Chinese Culture and Society****(4) YANG**

Social transformation in China from the Communist Revolution to socialist collectivization, Cultural Revolution, to the post-Mao era of globalization, market economy, consumerism, and revival of traditional religions.

**180AA-ZZ. Special Topics in Chinese Studies****(4) STAFF**

Special topics in Chinese Studies. Course content varies.

**183B. Religious Practice and the State in China****(4) YANG***Same course as Religious Studies 183B.*

Historical and anthropological approaches to the interaction between religious practice and state forces, with emphasis on popular religion and the decline and revival of religion in Chinese modernity.

**184A-B. History of China****(4-4) STAFF***Prerequisite: History 2A or 2B or 2C or 80, or EACS 80, or upper-division standing.*

*Same course as History 184A-B. Not open for credit to students who have completed Chinese 186A-B or History 186A-B.*

A. Ancient China to 589 CE

B. Sixth to seventeenth centuries

**197. Senior Honors Project****(4-8) STAFF***Prerequisites: open to senior majors only; consent of instructor.*

*Students must have a 3.0 overall grade-point average and a 3.5 grade-point average in the major. May be repeated for a total of 12 units.*

An independent study course (1 to 3 quarters) directed by a faculty member with a carefully chosen topic and bibliography which will result in a documented project or a senior thesis.

**198. Readings in Chinese****(1-4) STAFF***Prerequisites: upper-division standing; completion of two upper-division courses in Chinese.*

*Students must have a minimum 3.0 grade-point average for the preceding three quarters and are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. May be repeated up to 12 units.*

**199. Independent Studies in Chinese****(1-5) STAFF***Prerequisites: upper-division standing; completion of two upper-division courses in Chinese.*

*Students must have a minimum 3.0 grade-point average for the preceding three quarters and are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined.*

Individual investigations in literary fields.

**GRADUATE COURSES****201. Readings in Selected Texts****(2-4) STAFF***Prerequisites: ability to read Chinese at graduate level; consent of instructor. Normally graduate status is required.*

Course will center on readings of Chinese texts; type and period to depend on needs of students and wishes of instructor. Research methods to be taught as appropriate.

**204. The Buddhist Influence on Chinese Language and Culture****(4) YU***Prerequisite: Chinese 101C and 122C.*

Exploratory study of non-Chinese influences on Chinese language and culture as demonstrated by the language of Buddhist sutras translated into Chinese.

**205. Workshop in Chinese Translation****(4) STAFF***Prerequisite: graduate standing.*

Practical work in translation from a variety of Chinese sources depending on need. Emphasis on accuracy and rigor.

**211. Bibliography and Research Methodology****(4) STAFF***Prerequisite: one year of classical Chinese.*

Introduction to the bibliography, reference works, and methodologies of Sinological research.

**231. Imagining Atrocity in Modern Chinese Literature and Film****(4) BERRY**

*Prerequisite: open to graduate students and advanced undergraduates with the instructor's permission. All students should have reading proficiency in Chinese.*

An examination of how atrocity and mass violence have been revisited, reimagined and reconstructed by modern and contemporary writers and filmmakers. Major incidents to be considered include the Nanjing Massacre, the February 28, 1947 incident in Taipei, Taiwan, and the Cultural Revolution.

**241. Issues in Contemporary Chinese Society****(4) YANG***Prerequisite: graduate standing.*

Survey of major issues in study of contemporary China. Topics include: gender and the state, nationalism, "guanxi," media, globalization, religion, and urban and rural cultures.

**246. Poetic Culture in Late Imperial China and Beyond****(4) LI**

An examination of the role poetry played in both social and individual lives in late imperial China. Relevant practices in later times and in Japan and Korea are also covered. Graduate student paper is required.

**249. Literati Culture****(4) EGAN***Prerequisites: Chinese 101A-B or equivalent.*

A study of literati (Wen-ren) culture of the middle period concentrating on the Sung Dynasty. Attention to developments in literature, historiography, the visual arts, and philosophy. Readings (in Chinese and English) from Sudongpo, Li Qingzhao, Sima Guang, and Zhu Xi.

**249A-B. Literati Culture****(4-4) EGAN***Prerequisites: Chinese 101A-B or equivalent; graduate standing.*

Exploration of literati cultures of Tang and Song dynasties. Topical focus varies.

**250. The Language of Vernacular Chinese Literature****(4) YU***Prerequisite: graduate standing.*

Early Mandarin as represented in selections from vernacular Chinese fiction of the sixteenth through eighteenth centuries. Primarily concerned with the syntactical and semantic features employed in the reading selections but will also consider the issue of literary expression.

**251. Chinese Language Pedagogy****(4) YU**

Introduces students to current issues in Chinese language instruction and trains them to become full-fledged Chinese language specialists. Includes introduction to Chinese linguistics and course-related designs involved in language teaching.

**255. The Role of Language Contact in the History of Chinese Language****(4) YU***Recommended preparation: Chinese 253.*

A survey of language contact types and mechanisms and its impact on Chinese language development from the third century to present time.

**268. Religion, the State, and Modernity****(4) YANG***Prerequisite: graduate standing.**Same course as Religious Studies 268.*

Explores how a state that was highly ritualized in late imperial China underwent a radical secularization in semi-colonialism and modernity. Also examines the state campaigns against both religious institutions and popular local religiosities, as well as their contemporary revival.

**501. Apprentice Teaching****(2-4) STAFF**

*Prerequisites: graduate standing and consent of instructor. Employment in this department as teaching assistant or linguistic informant. These units do not count toward the graduate degree.*

This course consists of supervised teaching practice in Chinese language.

### 596. Directed Reading and Research

(2-4) STAFF

*Prerequisite:* graduate standing.

*Letter grade; minimum of 2 units per quarter.*

Individual tutorial. A written proposal for each tutorial must be approved by department chair and filed with Graduate Division.

### 597. Preparation for Comprehensive Examinations.

(1-6) STAFF

*Prerequisite:* consent of graduate advisor.

*No unit credit allowed toward degree.*

Study for master's comprehensive examinations and Ph.D. examinations.

### 598. Master's Thesis Research and Preparation

(1-6) STAFF

*Prerequisites:* graduate standing and consent of instructor.

*Maximum of 12 units total. No unit credit allowed toward master's degree.*

Instructor should be chair of the student's thesis committee.

## East Asian Cultural Studies Courses

### LOWER DIVISION

#### 3. Introduction to Asian Religious Traditions

(4) POWELL

*Same -course as Religious Studies 3.*

An introduction to the basic texts, institutions, and practices of the religious traditions of South Asia and East Asia.

#### 4A. East Asian Traditions: Pre-Modern

(4) STAFF

An introduction to the social structures, institutions, systems of thought and belief, and the arts and entertainments of China and Japan during the pre-modern period.

#### 4B. East Asian Traditions: Modern

(4) STAFF

An introduction to the study of China and Japan in modern times, including the process of modernization, intellectual and political movements, national identity, literature and the arts, and popular culture.

#### 5. Introduction to Buddhism

(4) STAFF

*Same course as Religious Studies 4.*

The historical and cross-cultural exploration of Buddhism through the examination of basic texts, institutions, and practices of diverse Buddhist traditions.

#### 21. Zen

(4) STAFF

*Same course as Religious Studies 21.*

An introduction to the history and texts of major lineages of Ch'an Buddhism in China, and Zen Buddhism in Japan.

#### 80. East Asian Civilization

(4) STAFF

*Same course as History 80.*

A basic introduction to the history of East Asia focusing on the emergence and evolution of Chinese civilization and its impact upon the distinctive indigenous cultures of Japan, Korea, and Vietnam.

### UPPER DIVISION

#### 110. Tibetan Civilization

(4) STAFF

*Not open to students who have completed EACS 180CC*

A broad overview of Tibetan history and culture from the Tibetan imperial period until modern times. The course will also touch upon the Tibetan language, the literary and fine arts, as well as religion.

#### 130. Tourism in East Asia

(4) PAI

Surveys the historical, cultural, and economic significance of tourists destinations in South Korea, China, and Japan. Using case studies ranging from temples, museums, monuments and theme parks, course analyzes how selected "images/myths" of East Asia have been invented, manipulated, and propagated in the commodification of culture and heritage.

#### 161B. Buddhist Meditation Traditions

(4) STAFF

*Same as Religious Studies 161B.*

A consideration of major forms of Buddhist meditation from both the South Asian and the East Asian traditions, with special attention given to determining the nature of meditation as a variety of religious experience.

#### 175. Sacred Geography in China and Japan

(4) POWELL

*Same as Religious Studies 175.*

A consideration of the cultural and cognitive dimensions of East Asian sacred geographies.

#### 178. The Body Religious in Chinese Culture

(4) POWELL

*Same as Religious Studies 178.*

The human body both as constituted by and constitutive of Chinese religion, culture, society, and geography. Neither purely philosophical nor biological, the course explores the understandings of the body as both subject and object of knowledge.

#### 180P. Proseminar in East Asian History and Culture

(4) STAFF

*Prerequisite:* History 80 or 87 or 180A or 180B or 180C, or East Asian Cultural Studies 80 or 180A or 180B or 180C or upper-division standing.

*Same course as History 180P*

Reading and research on selected issues in the history of East Asia with emphasis on the cultural interconnectedness of the region.

#### 181AA-ZZ. Special Topics in East Asian Studies

(4) STAFF

Special topics in East Asian Studies. Course content varies.

#### 186. The Invention of Tradition in Contemporary East Asia

(4) PAI

Analyzes the instructional history, political, and disciplinary backgrounds in the construction of contemporary "Asian" ethnic and cultural identity. Topics include popular media, national monuments, and artistic performance including musicals, theater, drama, film, and tourist sites.

### GRADUATE COURSES

#### 212. Canon Formation, Periodization, and Disciplinary in East Asian Studies

(4) STAFF

An analysis of classical, medieval, and modern sets of "canons" including myth historiography, literature and the arts, with a view to question the way they were mutually distinguished (disciplinary) and changed through time (periodization) recognizing both internal conceptions and external influences.

#### 215. Topics in Modern East Asian Cultural Studies

(4) STAFF

As a forum for the practice of discussion, critique, and writing, this seminar takes up broad topics within the study of modern and contemporary East Asian cultures in an interdisciplinary manner.

#### 218. The Art and Theory of Translation

(4) STAFF

*May be repeated for credit to a maximum of 8 units.*

An introduction to the literature of translation studies and practice in translation from principally, Chinese and Japanese. Students are encouraged to explore the extent to which translation theory can be usefully (artfully?) applied to translations in progress.

#### 257. Seminar in Buddhist Studies

(4) STAFF

*May be repeated for credit.*

Historical, philosophical, methodological, and/or bibliographical analysis of different aspects of Buddhism or of selected areas in the study of Buddhism.

#### 259. Topics in East Asian Buddhist Thought

(4) POWELL

*Prerequisite:* graduate standing.

*Same course as Religious Studies 259.*

A historical and critical analysis of selected issues in the development of buddhist thought in China, Korea and Japan.

## Japanese Courses

### LOWER DIVISION

*Students who have studied Japanese previously must take the placement examination administered by the department to determine proper placement in the department's language program. Any two courses in the series Japanese 1-6 must be taken in sequence and not simultaneously. Students may not enroll in a lower level Japanese course than was previously taken in the Japanese 1-6 series.*

#### 1. First-Year Japanese I

(5) STAFF

An introduction to modern Japanese. Students will develop basic communicative skills based on the fundamentals of grammar, vocabulary, and conversational expressions. Emphasis on both oral-aural proficiency and writing-reading skills. Introduction to Hiragana and Katakana syllabaries, and Kanji.

#### 2. First-Year Japanese II

(5) STAFF

*Prerequisite:* Japanese 1.

Continuation of Japanese 1.

#### 3. First-Year Japanese III

(5) STAFF

*Prerequisite:* Japanese 2.

Continuation of Japanese 2.

#### 4. Second-Year Japanese I

(5) STAFF

*Prerequisite:* Japanese 3.

Continuation of Japanese 3. This course emphasizes the further development of both oral-aural proficiency and reading-writing skills with an intensive review of basic grammar as well as an introduction to more advanced grammar, vocabulary, and Kanji.

#### 5. Second-Year Japanese II

(5) STAFF

*Prerequisite:* Japanese 4.

Continuation of Japanese 4.

#### 6. Second-Year Japanese III

(5) STAFF

*Prerequisite:* Japanese 5.

Continuation of Japanese 5.

#### 7H. Japanese for Heritage Language Speakers

(4) STAFF

*Prerequisite:* consent of instructor.

Designed for speakers of Japanese as a heritage language who need to work on their reading-writing skills. Through intensive training in written Japanese and review of grammar, it prepares students to join second- or third-year Japanese.

#### 25. Violence and the Japanese State

(4) FRUHSTUCK

*Same course as Anthropology 25 and History 25.*

Examines historiographically and sociologically the Japanese State's various engagement in violent acts during war and peace times.

**30. Globalizing Japan: Culture and Society****(4) LEWALLEN**

Explores Japan as a society in transition by examining changes in (un)employment patterns, youth, family, ethnicity, aging, diet, and human-environment relations. Considers the tension between preserving traditional values and yielding to globalization.

**63. Sociology of Japan****(4) FRUHSTUCK**

*Not open for credit to students who have completed Japanese 163.*

Sociological macro- and micro-analysis of Japanese society in the twentieth century.

**UPPER DIVISION****110A. Survey of Japanese Literature: Classical****(4) SALTZMAN-LI**

*Prerequisite: upper-division standing.*

A survey of Japanese literature focusing on the classical period from 800 to 1200. Readings, lectures, and discussions in English.

**110B. Survey of Japanese Literature: Medieval****(4) SALTZMAN-LI**

*Prerequisite: upper-division standing.*

A survey of Japanese literature from 1200 to 1600. Readings, lectures, and discussions in English.

**110C. Survey of Japanese Literature: Early Modern****(4) STAFF**

*Prerequisite: upper-division standing.*

A survey of Japanese literature from the 17th to the 19th centuries. Readings, lectures, and discussions in English.

**111. Japanese Folklore****(4) SALTZMAN-LI**

Introduction to Japanese folklore and folklore studies. Concepts, categories, and methodologies of folklore studies will be applied to the narrative, life cycle, and material forms of Japanese folklore. Course also examines motives and aims of Japanese folklorists over time.

**112. Survey of Modern Japanese Literature****(4) STAFF**

*Prerequisite: upper-division standing.*

A survey of Japanese literature after contact with the West, from 1868 to the present. Readings, lectures, and discussions in English.

**115. Topics in Twentieth-Century Japanese****(4) NATHAN**

*Prerequisites: upper-division standing; Japanese 112.*

*May be repeated for credit to a maximum of 8 units.*

Topics to be considered will include: the Japanese novelist as intellectual and social critic; representations of the "self" and similarities and differences between the shosetsu and the western novel; and Japanese literature in and outside Japan.

**119. Shugendo: Japanese Mountain Religion****(4) STAFF**

*Same course as Religious Studies 120.*

Historical study of texts and practices of Japanese mountain ascetics (Yamabushi), and of their role in the formation of Japanese culture, from 700 to present.

**120A. Third-Year Japanese I****(4) STAFF**

*Prerequisite: Japanese 6.*

Develops an intermediate to advanced level of aural-oral skills to carry on conversations on diverse topics with linguistic accuracy and cultural appropriateness, readings skills to comprehend authentic materials, and writing skills with grammatical accuracy and an increasing number of Kanji.

**120B. Third-Year Japanese II****(4) STAFF**

*Prerequisite: Japanese 120A.*

Continuation of Japanese 120A.

**120C. Third-Year Japanese III****(4) STAFF**

*Prerequisite: Japanese 120B.*

Continuation of Japanese 120B.

**125. Intermediate Japanese Reading****(4) SALTZMAN-LI**

*Prerequisite: Japanese 120A.*

Designed to develop skills in reading through translation for students who have been studying advanced-level Japanese.

**126. Business Japanese****(4) STAFF**

*Prerequisite: Japanese 120A.*

Designed to develop the Japanese language skills necessary for communication in business contexts. Emphasis on verbal, reading, and writing skills.

**144. Advanced Japanese Readings I****(4) STAFF**

*Prerequisite: Japanese 120C or 125.*

Designed to further develop skills in reading by focusing on analysis of Japanese sentence structures.

**145. Advanced Japanese Readings II****(4) STAFF**

*Prerequisite: Japanese 144.*

Introduces advanced students to selected prose and poetry from post-World War II.

**146. Advanced Japanese Readings III****(4) NATHAN**

*Prerequisite: consent of instructor.*

*Recommended preparation: a fourth-year reading level in Japanese.*

A selection of texts, including both fiction and non-fiction, by representative authors from the Meiji period to the present.

**147. Advanced Readings in Japanese Texts****(4) NATHAN**

*Prerequisites: Japanese 144 and 145; or placement exam score of 6.*

Readings in classical and modern texts. The course focuses on nuances of style in Japanese and polished English translations of the texts. Conducted in Japanese.

**149. Traditional Japanese Drama****(4) SALTZMAN-LI**

*Prerequisite: upper-division standing.*

Overview of the major forms of traditional Japanese drama examining their distinctive features and the ways in which they relate to one another and to general features of Japanese culture and literature. Frequent use of films and slides. Lectures and readings in English.

**155. Genre in the Japanese Verbal Arts****(4) SALTZMAN-LI**

*Prerequisite: consent of instructor.*

*Recommended preparation: completion of 8 units from Japanese 110A-B-C and 115.*

Survey of Japanese verbal arts to define important genres, comprehend the process of genre birth and development, and examine attitudes towards the verbal arts as found in Japanese history. Comparison of Western and Japanese aspects of genre.

**159. Japanese Cinema****(4) NATHAN**

*Prerequisite: upper-division standing.*

*Same course as Film Studies 120.*

An introductory scrutiny of major Japanese directors: Mizoguchi, Ozu, Oshima, and Kurosawa. Close attention to their film composition, choices of subject and character, their ideas of the cinematic, and the relationship of cinema to Japanese culture and society.

**160. Topics in Japanese Culture****(4) SALTZMAN-LI**

*Prerequisite: upper-division standing.*

Exploration and definition through reading in English of interesting themes that have persisted in Japanese culture to the present.

**161. Ethnic and Social Diversity in Japan****(4) LEWALLEN**

Examines how difference is conceptualized and camouflaged in Japan despite an ideology of ethnic homogeneity. Considers the history and development

of, and contemporary politics within internal and external minority communities and their diasporas across Japan.

**162. Representations of Sexuality in Modern Japan****(4) FRUHSTUCK**

*Same course as Anthropology 176 and History 188S.*

The main ideologies guiding the establishment of various representations of sexuality from prewar scientific writings to contemporary popular culture.

**163. Gender and Sexuality in Cross-cultural Perspective****(4) LEWALLEN**

Examines how gender and sexuality are made and un-made across cultural contexts. Explores how these ideas are shaped by ethnicity, class, nationality, religion, and popular culture in India, Iraq, Brazil, and Japan.

**164. Modernity and the Masses of Taisho Japan****(4) FRUHSTUCK**

*Same course as History 188T.*

Examines the beginnings of a modern mass culture in early twentieth-century Japan. Central topics are political and social movement, the new woman and the modern girl, westernization, new media and censorship, modernism and nationalism.

**165. Popular Culture in Japan****(4) STAFF**

Examines popular culture in present-day Japan: advertising, music, fashion, television, animation, comics, sports. Integrates visual and acoustic material.

**166. Post/Colonialism and Indigenous Movements in Asia****(4) LEWALLEN**

Examines indigenous peoples as an emergent political community in Asia. Through reading across ethnographic, historical and politico-legal perspectives, explores the material and symbolic benefits of claiming to be indigenous in non-western contexts.

**167A. Religion in Japanese Culture****(4) GRAPARD**

*Same course as Religious Studies 167A.*

A historical analysis of the major components of the classical and medieval religious systems of Japan, through investigation of texts, rituals, and institutions.

**167B. Religion in Japanese Culture****(4) GRAPARD**

*Prerequisite: Japanese 167A or Religious Studies 167A.*

*Same course as Religious Studies 167B.*

A historical analysis of the major components of premodern Japanese ideology through investigation of texts, institutions, and rituals.

**167D. Shinto****(4) GRAPARD**

*Same course as Religious Studies 167D.*

A systematic analysis of the principal institutions, texts, and rituals of the Shinto traditions of Japan, in historical perspective.

**169. Seminar in Traditional Japanese Drama****(4) SALTZMAN-LI**

*Prerequisite: Japanese 149 or upper division standing.*

*Recommended preparation: knowledge of Japanese.*

In-depth examinations of specific selected topics in traditional Japanese drama. Knowledge of Japanese required for readings and research for term papers.

**180AA-ZZ. Special Topics in Japanese Studies****(4) STAFF**

Special topics in Japanese Studies. Course content varies.

**181. Classical Japanese (Bungo)****(4) STAFF**

*Prerequisite: Japanese 120C or 125.*

*Not open for credit to students who have completed Japanese 101A.*

Introduction to classical Japanese which continued to influence modern Japanese texts.

**182. Classical Japanese II (Kanbun)****(4) STAFF***Prerequisite: Japanese 181.**Not open for credit to students who have completed Japanese 101B.*Introduction to *Kanbun*, a hybrid of classical Chinese and Japanese that remained essential in formal writings through World War II.**183. Special Readings in Prewar Japanese Texts****(4) STAFF***Prerequisite: Japanese 181.**Not open for credit to students who have completed Japanese 101C. May be repeated for credit to a maximum of 8 units.*Reviews *Bungo*, followed by readings in the classical, medieval, early modern, and Meiji texts.**197. Senior Honors Project****(4) STAFF***Prerequisites: open to senior majors only; consent of instructor.**Students must have a 3.0 overall grade-point average and a 3.5 in the major. May be repeated for a maximum of 8 units.*

An independent study course (one to three quarters) directed by a faculty member with a carefully chosen topic and bibliography which will result in a documented project or a senior thesis.

**198. Readings in Japanese****(1-5) STAFF***Prerequisites: upper-division standing; completion of two upper-division courses in Japanese; consent of instructor.**Students must have a minimum 3.0 grade-point average for the preceding three quarters and are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. May be repeated up to 12 units.*

Guided reading in Japanese on a subject not covered in the regularly offered courses.

**199. Independent Studies in Japanese****(1-5) STAFF***Prerequisites: upper-division standing; completion of two upper-division courses in Japanese; consent of instructor.**Students must have a minimum 3.0 grade-point average for the preceding three quarters and are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined.*

Individual investigations in literary fields.

**199RA. Independent Research Assistance****(1-5) STAFF***Prerequisites: upper-division standing; completion of two upper-division courses in Japanese or East Asian Studies; consent of instructor and department.**Students must have a minimum 3.0 grade-point average for the preceding three quarters and are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined.*

Faculty supervised research.

**GRADUATE COURSES****201. Readings in Selected Texts****(2-4) STAFF***Prerequisites: ability to read Japanese at graduate level; consent of instructor. Normally graduate status is required.*

Course will center on readings of Japanese texts; type and period to depend on needs of students and wishes of instructor. Research methods to be taught as appropriate.

**211. Bibliography and Research Methodology****(4) SALTZMAN-LI***Prerequisite: graduate standing.*

Introduction to bibliographies, reference works, and methodologies of research in Japanese studies.

**226. Japan Modern****(4) FRUHSTUCK**

Examines Japanese modernity from the mid-nineteenth century to today and analyzes theoretical and methodological approaches to the study of modern Japanese history and society.

**269. Seminar in Traditional Japanese Drama****(4) SALTZMAN-LI***Prerequisites: Japanese 149; graduate standing.*

In-depth examinations of specific selected topics in traditional Japanese drama. Knowledge of Japanese required for readings and research for term papers.

**283. Special Readings in Prewar Japanese Texts****(4) IWASAKI***Prerequisite: graduate standing.*Reviews *Bungo*, followed by readings in the classical, medieval, early modern, and Meiji texts.**501. Apprentice Teaching****(2-4) STAFF***Prerequisites: graduate standing and consent of instructor. Employment in this department as teaching assistant or linguistic informant.**These units do not count toward the graduate degree.*

This course consists of supervised teaching practice in Japanese language.

**596. Directed Reading and Research****(2-4) STAFF***Prerequisite: graduate standing.**Letter grade; minimum of 2 units per quarter.*

Individual tutorial. A written proposal for each tutorial must be approved by department chair and filed with Graduate Division.

**597. Preparation for Comprehensive Examinations****(1-6) STAFF***Prerequisite: consent of graduate advisor.**No unit credit allowed toward degree.*

Study for master's comprehensive examinations and Ph.D. examinations.

**598. Master's Thesis Research and Preparation****(1-6) STAFF***Prerequisite: graduate standing.**S/U grading. No unit credit allowed toward degree.*

For research underlying the thesis, writing the thesis. Instructor should be the chair of the student's thesis committee.

## Korean Courses

**LOWER DIVISION***Students who have studied Korean previously must take the placement examination administered by the department to determine proper placement in the department's language program. Any two courses in the series Korean 1-6 must be taken in sequence and not simultaneously. Students may not enroll in a lower level Korean course than was previously taken in the Korean 1-6 series.***1. First Year Korean****(5) STAFF**

The beginning course in Korean. The student acquires a basic knowledge of the grammar, a limited general vocabulary, correct punctuation, and an ability to read and understand simple texts. Weekly laboratory assignments support and enhance classroom learning.

**1NH. First Year Korean Heritage****(4) STAFF**

Intended for native Korean speakers who wish to learn to read and write Korean. Content is similar to Korean 1 with less emphasis on developing oral skills.

**2. First Year Korean****(5) STAFF***Prerequisite: Korean 1.*

Continuation of Korean 1.

**2NH. First Year Korean Heritage****(4) STAFF***Prerequisite: Korean 1NH.*

Intended for native Korean speakers who wish to learn to read and write Korean. Content is similar to Korean 2 with less emphasis on developing oral skills. Continuation of Korean 1N.

**3. First Year Korean****(5) STAFF***Prerequisite: Korean 2.*

Continuation of Korean 2.

**3NH. First Year Korean Heritage****(4) STAFF***Prerequisite: Korean 2NH.*

Intended for native Korean speakers who wish to learn to read and write Korean. Content is similar to Korean 3 with less emphasis on developing oral skills. Continuation of Korean 2N.

**4. Second Year Korean****(5) STAFF***Prerequisite: Korean 3.*

Continuation of Korean 3.

**4NH. Second Year Korean Heritage****(4) STAFF***Prerequisite: Korean 3NH.*

Continuation of Korean 3NH.

**5. Second Year Korean****(5) STAFF***Prerequisite: Korean 4.*

Continuation of Korean 4.

**5NH. Second Year Korean Heritage****(4) STAFF***Prerequisite: Korean 4NH.*

Continuation of Korean 4NH.

**6. Second Year Korean****(5) STAFF***Prerequisite: Korean 5.*

Continuation of Korean 5.

**6NH. Second Year Korean Heritage****(4) STAFF***Prerequisite: Korean 5NH.*

Continuation of Korean 5NH.

**82. The Anthropology of Korea****(4) PAI***Same course as History 82.*

Introduction to the various features of traditional Korean civilization and society covering its history and topics in anthropology (kinship, inheritance, customs, religion, rice production, and peasant economy).

**UPPER DIVISION****113. Korean Literature Survey****(4) PAI**

A survey of Korean literature from ancient times to the contemporary period covering popular novels, women's literature, and travelogues over the centuries. The present period is covered by film presentations.

**120. The New Korean Wave****(4) PAI**

Critical analysis of contemporary issues related to the "construction" and "transformation" of Korean identity especially focusing on topics such as nationalism, colonialism, and the politics of Korean culture and their influences on heritage management, museum, music, art, and cinema.

**121A-B-C. Advanced Korean****(5-5-5) STAFF***Prerequisite: Korean 6.*

A course designed to develop ability in reading contemporary Korean essays, literary works, magazines, and newspapers. Emphasis on solidifying students' grammatical foundation, mastery of Hanja and vocabulary, and proficiency in writing and oral skills.

**122A-B. Topics in Everyday Korean****(4-4) STAFF***Prerequisite: Korean 6.*

Designed to provide advanced-level Korean language students with an opportunity to improve their speaking and writing skills. Topics focus on cultural themes and social issues reflected in contemporary Korean cinema, TV dramas, magazines, newspapers, and novels.

**127A. Business Korean****(4) JUNG***Prerequisite: upper-division standing.**Not open for credit to students who have completed Korean 127.*

Intended to help students acquire a broad

knowledge of Korean business language and relevant Korean business culture. Focuses on basic terms, phrases, and verbal communication.

#### 127B. Business Korean

(4) JUNG

*Prerequisite:* Korean 5.

*Not open for credit to students who have completed Korean 127.*

Intended to help students acquire a broad knowledge of Korean business language and relevant Korean business culture. Focuses on Korean non-verbal communication including business etiquette.

#### 142. Introduction to Popular Korean Melodrama

(4) JUNG

*Prerequisite:* Korean 5 or equivalent.

A literary survey of popular TV broadcasts focusing on historical dramas, romance, and melodrama based on screenplays, their readings, and translations. Designed for the advanced student interested in how to write scenarios, analyze plots, themes, and characters.

#### 175. Introduction to Popular Culture in Korean Film and TV Dramas

(4) PAI

Surveys the literary, anthropological and cultural background behind the popular Korean media culture focusing on the recent wave of Korean cinema and TV dramas that have made a major cultural impact in neighboring Asia.

#### 181AA-ZZ. Special Topics in Korean Studies

(4) STAFF

Special Topics in Korean Studies. Course content varies.

#### 182A. Korean History and Civilization: Part I

(4) PAI

*Same course as History 182A.*

The history of Korea from prehistory to the rise of states and kinship, Buddhism, Confucianism, cultural interaction with China, Japan, and the Mongols.

#### 182B. Korean History and Civilization: Part II

(4) PAI

*Same course as History 182B.*

Survey of the history of Korea from the Yi dynasty to the present day. Topics include Yangban society, Japanese invasions, the Korean War, and political division.

#### 182P. Proseminar in Korean History

(4) PAI

*Same course as History 182P. May be repeated for credit to a maximum of 8 units.*

Undergraduate research seminar in Korean history.

#### 199. Independent Studies in Korean

(1-5) STAFF

*Prerequisites:* upper-division standing; completion of two upper-division courses in Korean.

*Students must have a minimum 3.0 grade-point average for the preceding three quarters and are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined.*

Individual investigations in literary fields.

Department Chair: Robert Warner

## Faculty

Alice L. Alldredge, Ph.D., UC Davis, Professor (marine biology)

Cherie Briggs, Ph.D., UC Santa Barbara, Professor (theoretical ecology and systems biology)

Mark A. Brzezinski, Ph.D., Oregon State University, Professor (biological oceanography)

Bradley J. Cardinale, Ph.D., University of Maryland, Assistant Professor (community and ecosystems ecology, freshwater biology, biodiversity and ecosystem functioning)

Craig Carlson, Ph.D., University of Maryland, Professor (marine microbial ecology)

David J. Chapman, Ph.D., UC San Diego, Professor (physiology, biochemical evolution)

James J. Childress, Ph.D., Stanford University, Professor (ecological physiology)

Peter M. Collins, Ph.D., University of London, Professor (endocrinology)

Scott D. Cooper, Ph.D., University of Wisconsin, Professor (aquatic ecology and limnology)

Carla D'Antonio, Ph.D., UC Santa Barbara, Professor (plant and ecosystem ecology, invasive species, species effects on ecosystem processes, restoration ecology)

John A. Endler, Ph.D., University of Edinburgh, Professor (population and ecological genetics)

Thomas Even, Ph.D., UC Santa Barbara, Lecturer PSOE (community ecology, aquatic predator-prey interactions, pollution impact studies, aquatic population surveys, habitat assessment and restoration)

Steven D. Gaines, Ph.D., Oregon State University, Professor (marine community ecology, biostatistics)

Scott Hodges, Ph.D., UC Berkeley, Professor (plant evolution)

Gretchen Hofmann, Ph.D., University of Colorado, Associate Professor (marine animal physiology)

Sally J. Holbrook, Ph.D., UC Berkeley, Professor (population ecology)

Robert S. Jacobs, Ph.D., Loyola University, Professor (pharmacology)

Armand M. Kuris, Ph.D., UC Berkeley, Professor (parasitology, marine ecology)

John Latto, Ph.D., Imperial College, London, Lecturer PSOE (population and community ecology)

Jonathan Levine, Ph.D., UC Berkeley, Associate Professor (plant ecology, plant communities and ecosystems)

Sally MacIntyre, Ph.D., Duke University, Professor (physical-biological coupling; physical limnology and oceanography; tropical, temperate and arctic lakes; flow and ecosystem dynamics in kelp forests)

Bruce E. Mahall, Ph.D., UC Berkeley, Professor (plant ecology)

Susan J. Mazer, Ph.D., UC Davis, Professor (plant evolution)

John M. Melack, Ph.D., Duke University, Professor (zoology and limnology)

William W. Murdoch, Ph.D., Oxford University, Professor (population ecology)

Roger M. Nisbet, Ph.D., University of St. Andrews, Professor (theoretical population ecology)

Todd H. Oakley, Ph.D., Duke University, Associate Professor (macroevolutionary biology)

Barbara B. Prezelin, Ph.D., Scripps Institution of Oceanography, Professor (marine biology)

Stephen R. Proulx, Ph.D., University of Utah, Assistant Professor (evolutionary theory)

William Rice, Ph.D., Oregon State University, Professor (evolutionary genetics, biological statistics)

Stephen I. Rothstein, Ph.D., Yale University, Professor (evolutionary biology, ecology, ethology)

Joshua P. Schimel, Ph.D., UC Berkeley, Professor (microbial ecology, soil biology, ecosystem ecology)

Russell J. Schmitt, Ph.D., UC Los Angeles, Professor (marine community ecology and population)

Raul K. Suarez, Ph.D., University of British Columbia, Associate Professor (comparative biochemistry and physiology)

Samuel S. Sweet, Ph.D., UC Berkeley, Professor (vertebrate morphology)

Robert R. Warner, Ph.D., Scripps Institution of Oceanography, Professor (marine ecology)

## Emeriti Faculty

Daniel B. Botkin, Ph.D., Rutgers University, Professor Emeritus (ecology)

James F. Case, Ph.D., Johns Hopkins University, Professor Emeritus (neurobiology)

Joseph H. Connell, Ph.D., Glasgow, Professor Emeritus (population ecology)

Alfred W. Ebeling, Ph.D., UC Los Angeles and Scripps Institution of Oceanography, Professor Emeritus (zoology)

John R. Haller, Ph.D., UC Los Angeles, Professor Emeritus (systematic botany)

Robert W. Holmes, Ph.D., Oslo, Professor Emeritus (aquatic botany)

**W. Neil Holmes**, D.Sc., Ph.D., Liverpool, Professor Emeritus (zoology)

**Dale M. Smith**, Ph.D., Indiana University, Professor Emeritus (systematic botany)

**Allan Stewart-Oaten**, Ph.D., Michigan State University, Professor Emeritus (biology)

**Robert K. Trench**, Ph.D., UC Los Angeles, Professor Emeritus (biology)

**Adrian M. Wenner**, Ph.D., University of Michigan, Professor Emeritus (natural history of arthropods)

### Affiliated Faculty

**Patricia A. Holden**, Ph.D. (Bren School of Environmental Science and Management)

**Stanley M. Awramik**, Ph.D. (Earth Science)

**Bruce E. Kendall**, Ph.D. (Donald Bren School of Environmental Science and Management)

**James P. Kennett**, Ph.D. (Earth Science)

**Bruce Tiffney**, Ph.D. (Earth Science)

**David Valentine**, Ph.D. (Earth Science)

The Department of Ecology, Evolution, and Marine Biology (EEMB) offers the bachelor of science degree in four departmental majors—aquatic biology, ecology and evolution, physiology, and zoology. In addition, it cooperates with the Department of Molecular, Cellular, and Developmental Biology in offering the interdepartmental biological sciences major, with both B.A. and B.S. objectives. The department offers graduate programs leading to the degrees of master of arts and doctor of philosophy, with emphasis in ecology, evolution, and marine biology. In addition, a wide range of courses is available to all undergraduates for elective enrollment or for the support of their preparation for degrees in other departments or programs.

Intensive, quarter-long field courses, including the White Mountain Research Supercourse and the Education Abroad Program's tropical biology program in Costa Rica, are available to selected students. A variety of hands-on work and research experiences are available through internships and directed independent study projects, including research at University of California Natural Reserve System sites throughout California. In addition, students can obtain training in the biological sciences at institutions throughout the world through the Education Abroad Program.

Many students in the Department of Ecology, Evolution, and Marine Biology prepare for entry into graduate or professional schools. Students should become familiar with the requirements of several institutions offering work in the specialty that interests them, and then discuss their programs with their advisor. In general, students preparing for careers in medicine, dentistry, veterinary medicine, pharmacy, and nursing select biological sciences, physiology, or zoology as their major. All of the EEMB majors provide suitable preparation for further study in agriculture, forestry, and wildlife and water management.

Students with a bachelor's degree in any of the EEMB majors who are interested in pursuing a California Teaching Credential should contact the credential advisor in the Graduate School of Education as soon as possible.

The department undergraduate academic advisor is available for counseling on matters such as major requirements, schedule planning, course substitutions, petitions, and career and graduate school information. Three faculty members serve each year as graduate advisors. The graduate program assistant helps graduate students in all matters related to their graduate study. Department publications are available from the undergraduate advisor and the graduate program assistant.

### Senior Honors Program

Students with outstanding academic records in biological sciences are encouraged to apply for the senior honors program early in the fall quarter of the senior year. The honors program centers on an independent research project carried out in one of the departmental research groups (EEMB or MCDB 199), and the preparation of a written report or thesis. Eligibility requirements and applications are available from the undergraduate advisor.

### Undergraduate Program

Students are normally expected to complete all courses required in preparation for the major by the end of their sophomore year, but physics may be delayed until the junior year if necessary. Students with strong high school backgrounds are urged to complete their basic preparation in general chemistry and mathematics during their freshman year. Students with weak Mathematics preparation should make up this deficiency by completing intermediate algebra and trigonometry by correspondence through University Extension, preferably during the summer preceding enrollment at UCSB, or by completing Mathematics 15 at UCSB. As the requirements suggest, each major in the department is designed to emphasize a different area in biology.

Upper-division major courses offered on the P/NP-only basis may be taken for major credit to a maximum of 8 units total in any combination for a B.S. or 4 units for a B.A. All other courses for the major, both preparation and upper-division, must be taken for letter grades.

### Pre-Biology

Students are not admitted directly into the following majors: Biological Sciences B.A. or B.S., Aquatic Biology B.S., Ecology and Evolution B.S., Physiology B.S., and Zoology B.S. Instead, they are first admitted to the pre-biology major, and they may advance to full major standing in one of these majors only after fulfilling the pre-major course and grade requirements listed below.

*Note: Completion of the pre-major does not fully satisfy the preparation for the major requirements for any of the majors.*

Students should review the full requirement sheet for the major they intend to declare and plan their schedules accordingly. Also note that acceptance into the pre-major does not guarantee admission to full major status.

Students may petition for advancement to full major status in any one of the majors as soon as they have completed the required minimum of twelve courses with a 2.0 or higher grade-point average in area B, in area C, and in the courses in areas A and D combined. At

the time of the petition, they must also have a 2.0 or higher grade-point average in all courses attempted toward the major (preparation and upper-division). The P/NP grading option is not allowed for any pre-major course. All must be completed on a letter-grade basis.

*Note: Many upper-division EEMB and all MCDB courses require a C or higher in each of their pre-requisite courses. See General Catalog for details.*

- A. General Chemistry: Chemistry 1A or 2A, 1B or 2B, 1C or 2C. The entire three quarter series and laboratories are required for all EEMB majors.
- B. MCDB 1A, MCDB 1B, EEMB 2, EEMB 3.
- C. MCDB 1AL, either MCDB 1BL or EEMB 2L, and EEMB 3L.
- D. Two courses from the following:
1. Organic Chemistry: Chemistry 109A-B-C. (*Not required for Ecology and Evolution or Zoology. Laboratories are also required for the other majors. Physiology requires 3 quarters of Organic Chemistry. Aquatic Biology and Biological Sciences (B.A. and B.S.) require two quarters of organic chemistry lecture and laboratory.*)
  2. Calculus: Mathematics 3A or 34A, 3B or 34B.
  3. Statistics: EEMB 30 or PSTAT 5A or Mathematics 3C (EEMB 30 or PSTAT 5A strongly recommended for EEMB Majors).
  4. Physics: 6A-B-C (*Biological Sciences B.A. does not require 6C. Laboratories required for all majors.*)

### Bachelor of Arts— Biological Sciences

UCSB offers both a bachelor of arts (B.A.) and a bachelor of science (B.S.) degree in biological sciences. The B.A. degree is intended to provide flexibility in curriculum planning for students interested in obtaining a degree in biology accompanied by a broader background in the liberal arts. Either degree is acceptable to most graduate and professional schools. Students are encouraged to seek advice from biology faculty and academic advisors regarding which degree option is most appropriate to their career goals.

Students are not admitted directly into the biological sciences major. Instead, they are first admitted to the pre-biology major, and they may advance to full major standing only after fulfilling specified pre-major course and grade requirements. See section entitled "Pre-Biology" for details.

*Note: Hyphens indicate that an entire course sequence must be completed as shown to fulfill an area requirement. Note also that a single course, though listed in more than one area, can satisfy only one requirement.*

**Preparation for the major.** MCDB 1A-AL, MCDB 1B, EEMB 2, either MCDB 1BL or EEMB 2L, and EEMB 3-3L; Chemistry 1A-AL-B-BL-C-CL or 2A-AC-AL-B-BC-BL-C-CC-CL, 6AL, BL, (or BH), and 109A-B; Mathematics 3A-B or 34A-B, and one of the following: PSTAT 5A or PSTAT 5LS or Mathematics 3C; Physics 6A-AL-B-BL.

**Upper-division major.** Thirty-six upper-division units in biological sciences, distributed as follows:

*Note: The following courses do not count toward upper-division major credit: EEMB 181, 182, 183, 184, 189, 194MD; MCDB 121, 182, 183, 184, 194KK; MCDB 121, 182, 183, 184. In addition, no more than 4 units of the following courses combined will apply: EEMB 185-199; MCDB 185-199.*

- A. Genetics: MCDB 101A (MCDB 101B strongly recommended for students taking 101A) or EEMB 129.
- B. Physiology: One course or course sequence from MCDB 111, 151; EEMB 141, 143, 151, 154, 156, 157.
- C. Development and Cell Biology or Biochemistry and Molecular Biology: one course or course sequence from MCDB 103, 108A, 110, 112, 118, 133, 134, 135, 151, 152, 153; EEMB 164.
- D. Ecology or Evolution: One course or course sequence from EEMB 102, 108, 109 (or Geology 148), 113-113L, 120, 131 (or Geology 121), 136-136L, 137 (or Geology 141), 138, 139, 140, 142A, 166, 171 (or Environmental Studies 171), 27\*, 128, 131 (or Geology 121), 136-136L, 137-137L (or Geology 141-141L), 138, 139, 140, 142A, 166, 171, (or Environmental Studies 171), either 172 or 179 (but not both), 173.
- E. Diversity of Form and Structure: One course or course sequence from EEMB 106, 107, 111, 112, 113-113L (if not used in D above), 116, 127, 134, 163; MCDB 131, 139.
- F. Electives: Additional upper-division courses offered within the Department of Ecology, Evolution, and Marine Biology and the Department of Molecular, Cellular, and Developmental Biology to bring unit total to 36.

### **Bachelor of Science— Aquatic Biology**

The aquatic biology major provides students with interests in marine biology, biological oceanography, limnology, marine and freshwater ecology, and population biology of aquatic organisms with an opportunity to gain a general background in these subject areas.

Students are not admitted directly into the aquatic biology major. Instead, they are first admitted to the pre-biology major, and they may advance to full major standing only after fulfilling specified pre-major course and grade requirements. See section entitled "Pre-Biology" for details.

*Note: Hyphens indicate that an entire course sequence must be completed as shown to fulfill an area requirement. Note also that a single course, though listed in more than one area, can satisfy only one requirement. Such courses are identified with an asterisk (\*).*

**Preparation for the major.** MCDB 1A-AL, MCDB 1B, EEMB 2, either MCDB 1BL or EEMB 2L, and EEMB 3-3L; Chemistry 1A-AL-B-BL-C-CL or 2A-AC-AL-B-BC-BL-C-CC-CL; Chemistry 6AL, BL, (or BH), and 109A-109B; Mathematics 3A-B or 34A-B, and one of the following: PSTAT 5A or PSTAT 5LS, Mathematics 3C; Physics 6A-AL-B-BL-C-CL.

**Upper-division major.** Forty-eight upper-division units in biological sciences, distributed as follows, with at least 32 in EEMB:

*Note: The following courses do not count toward upper-division major credit: EEMB 182,*

*183, 189; MCDB 121, 182, 183, 184, 182, 183, 189; MCDB 121, 182, 183, 184, 194KK, 194MD. In addition, no more than 8 units of the following courses combined will apply: EEMB 184-199, MCDB 185-199. Finally, a minimum of 32 units must be completed through courses within the EEMB department.*

- A. EEMB 142A-B-C
- B. One course or course sequence from each of the following:
- Genetics: EEMB 129 or MCDB 101A.
  - Ecology: EEMB 120 or 179, either 172 or 179 (but not both).
  - Physiology: EEMB 143\*-143L\*, 154, 156; 157; MCDB 111, 151.
  - Evolution: EEMB 102, 108, 109 (or Geology 148), 113-113L, 131 (or Geology 121), 136-136L (or Geology 111-111L), 138.
- C. Aquatic Biology: Three courses from the following, including at least two laboratory courses (underlined): EEMB 106, 112, 116, 134, 142AL, 142BL, 142CL, 143\*, 143L\*, 144, 144L, 148, 149 (or MCDB 149), 151, 152, (or Environmental Studies 152), 159, 163, 170.
- D. Physical environment: One course from: EEMB 117, Geography 104, 112, 116 (or ENV 168) (or Geology 173), 134, 162A (or Environmental Studies 162A), 163, 165, 168; Geology 162\*, 164A, 164B, 164C, 168, 169 (or ENV 169), 171.
- E. Additional upper-division courses offered within the Department of Ecology, Evolution, and Marine Biology and Department of Molecular, Cellular, and Developmental Biology or from areas B, C, and D above to bring total units to 48.

### **Bachelor of Science— Biological Sciences**

UCSB offers both a bachelor of arts (B.A.) and a bachelor of science (B.S.) degree in biological sciences. The B.S. degree is intended for those students desiring a more focused and intensive curriculum in biology, including the development of laboratory skills. Either degree is acceptable to most graduate and professional schools. Students are encouraged to seek advice from biology faculty and academic advisors regarding which degree option is most appropriate to their career goals.

Students are not admitted directly into the biological sciences major. Instead, they are first admitted to the pre-biology major, and they may advance to full major standing only after fulfilling specified pre-major course and grade requirements. See section entitled "Pre-Biology" for details.

*Note: Hyphens indicate that an entire course sequence must be completed as shown to fulfill an area requirement.*

**Preparation for the major.** MCDB 1A-AL, MCDB 1B, EEMB 2, either MCDB 1BL or EEMB 2L, and EEMB 3-3L; Chemistry 1A-AL-B-BL-C-CL or 2A-AC-AL-B-BC-BL-C-CC-CL, 6AL, BL, (or BH), and 109A-B; Mathematics 3A-B or 34A-B, and one of the following: PSTAT 5A or PSTAT 5LS or Mathematics 3C; Physics 6A-AL-B-BL-C-CL.

**Upper-division major.** Forty-eight units, distributed as follows:

*Note: The following courses do not count toward upper-division major credit: EEMB 181, 182, 183, 184, 189, 194MD; MCDB 121, 182,*

*183, 184, 194KK. In addition, no more than 8 units of the following courses combined will apply: EEMB 185-199, MCDB 185-199.*

- A. Genetics: One course sequence from MCDB 101A-B (MCDB concentration) or EEMB 129 and 130 (EEMB concentration).
- B. One course or course sequence from each of the following. Note: Courses listed in more than one section (noted with an asterisk) can be applied to only one section.
- Physiology: MCDB 111, 126A, 132, 151\*; EEMB 141, 143, 151, 154, 156, 157.
  - Developmental and cell biology: MCDB 103, 112, 118, 133\*, 135, 146, 151\*, 152, 153.
  - Biochemistry and molecular biology: MCDB 108A, 110, 126B, 126C, 133\*, 134; EEMB 164.
  - Ecology: EEMB 119, 120, 128, 138, 139\*, 140, 142A, 148, 159, 166, 171 (or Environmental Studies 171), either 172 or 179 (but not both).
  - Evolution: EEMB 102, 108, 109 (or Geology 148), 113-113L\*, 127\*, 131 (or Geology 121), 136-136L (or Geology 111-111L), 137-137L (or Geology 141-141L), 139\*.
  - Diversity of form and function: EEMB 106, 107, 111, 112, 113-113L\*, 116, 127\*, 134, 144-144L; MCDB 131, 139.
  - Laboratory: Either one of the underlined courses from sections 1-6 above or one of the following: MCDB 101L, 103L, 109L, 112L, 119, 126AL, 126BL, 131L, 132L, 133L, 140L; EEMB 107L, 120AL, 127L, 140L, 143L, 164L, 170.
- C. Electives: Additional upper-division courses offered with the Department of Ecology, Evolution and Marine Biology and the Department of Molecular, Cellular and Developmental Biology to bring the total to 48 units.

### **Bachelor of Science— Ecology and Evolution**

The ecology and evolution major provides a solid foundation in the study of interactions among organisms, and of their relations to the Environmental. Following completion of the core sequence, students may elect either an ecology or evolution concentration, or may devise their own program in consultation with a faculty advisor. This is the appropriate major for the field-oriented biologist and for students interested in graduate work in plant or animal population biology, ecology, or evolutionary biology.

Students are not admitted directly into the ecology and evolution major. Instead, they are first admitted to the pre-biology major, and they may advance to full major standing only after fulfilling specified pre-major course and grade requirements. See section entitled "Pre-Biology" for details.

*Note: Hyphens indicate that an entire course sequence must be completed as shown to fulfill an area requirement. Note also that a single course, though listed in more than one area, can satisfy only one requirement.*

**Preparation for the major.** MCDB 1A-AL, MCDB 1B, EEMB 2, either MCDB 1BL or EEMB 2L, and EEMB 3-3L; Chemistry 1A-AL-B-BL-C-CL or 2A-AC-AL-B-BC-BL-C-CC-CL; Mathematics 3A-3B or 34A-34B and one of the following: PSTAT 5A or PSTAT 5LS (Math-

ematics 3C acceptable but not recommended); Physics 6A-AL-B-BL-C-CL. Note: Organic Chemistry may be required by some graduate or professional schools. Consult with the advisor.

**Upper-division major.** Forty-eight upper-division units are required, distributed as follows, with at least 32 in EEMB:

*Note: The following courses do not count toward upper-division major credit: EEMB 181, 182, 183, 184, 189, MCDB 121, 182, 183, 184, MCDB 194KK, 194MD. In addition, no more than 8 units of the following courses apply: EEMB 185-199, MCDB 185-199. Finally, a minimum of 32 units must be completed through courses within the EEMB department.*

*Note: Courses identified with an asterisk (\*) are listed in more than one area, but they may be applied to only one area.*

- A. Genetics: One course sequence from EEMB 129-130\* or MCDB 101A-B.
- B. Ecology: EEMB 120.
- C. Evolution: EEMB 131 (or Geology 121).
- D. One course from D1 or D2:
  - 1. Ecology concentration: EEMB 119\* (or Environmental Studies 119\*), 125, 128 (or Environmental Studies 128), 140\*, 166\*, 152 (or Environmental Studies 152), 171\* (or Environmental Studies 171\*), either 172 or 179 (but not both).
  - 2. Evolution concentration: EEMB 102, 130\*, 135, or 139.
- E. Physiology: EEMB 124, 141, 143, 154, 156; 157, MCDB 111.
- F. Animal diversity: EEMB 106, 107, 108, 109 (or Geology 148), 111, 112, 113-113L\*, 116, 133 (or Environmental Studies 133)\*, 136-136L (or Geology 111-111L), Geology 144.
- G. Plant diversity: EEMB 103A, 114, 115, 119\* (or Environmental Studies 119\*), 127, 134 133 (or Environmental Studies 133)\*, 137-137L (Geology 141-141L), 140\*, 166\*, 171\* (or Environmental Studies 171\*); Geography 167.
- H. Physical environment: EEMB 117, 142B; Geol 164V, 164C; Geography 104, 110, 112, 114A (or Environmental Studies 114A), 162A (or Environmental Studies 162A); Geology 164A.
- I. A minimum of two lab courses from underlined courses or from the following: EEMB 107L, 120AL, BL, 127L, 135L, 140L, 143L, 142AL, 142BL, 142CL, 144L, 166, 170.
- J. Electives: Additional UD courses offered in EEMB or MCDB or Geography 149 (or Env S 111), or from Areas F, G, or H above to bring the total UD units in the major to 48. Recommended ecology courses: EEMB 117, 144, 146, 149, 152 (or Env S 152) 159, 178, 179. Recommended evolution courses: EEMB 134, 138, 146, 163.

### **Bachelor of Science—Physiology**

Physiology is a branch of biology dealing with the processes, activities, and phenomena characteristic of living organisms. The physiology major is designed to provide an understanding of the integrated functioning of tissues and organs in whole organisms. Regulatory mechanisms are considered at the cellular and molecular level, and in the context of an organism's adaptation and responsiveness to its environment.

Students are not admitted directly into

the physiology major. Instead, they are first admitted to the pre-biology major, and they may advance to full major standing only after fulfilling specified pre-major course and grade requirements. See section entitled "Pre-Biology" for details.

*Note: Hyphens indicate that an entire course sequence must be completed as shown to fulfill an area requirement.*

**Preparation for the major.** MCDB 1A-AL, MCDB 1B, EEMB 2, either MCDB 1BL or EEMB 2L, and EEMB 3-3L; Chemistry 1A-AL-B-BL-C-CL or 2A-AC-AL-B-BC-BL-C-CC-CL; Chemistry 6AL, BL, (or BH), and 109A-B-C; Mathematics 3A-B or 34A-B and one of the following: PSTAT 5A or PSTAT 5LS (Mathematics 3C acceptable but not recommended); Physics 6A-AL-B-BL-C-CL.

**Upper-division major.** Forty-eight upper-division units are required, distributed as follows, with at least 32 in EEMB:

*Note: The following courses do not count toward upper-division major credit: EEMB 181, 182, 183, 184, 189, MCDB 121, 182, 183, 184, 194KK, 194MD. In addition, no more than 8 units of the following courses apply: EEMB 185-199, MCDB 185-199. Finally, a minimum of 32 units must be completed through courses within the EEMB department.*

*Note: Instructor approval is required for admission into any upper-division psychology courses. A maximum of 8 units of psychology courses can be applied.*

- A. Three courses or course combinations from Regulatory Biology: EEMB 143-143L, 154, 156, 157, 165, 175.
- B. Genetics: EEMB 129.
- C. Cell Biology: MCDB 103.
- D. Biochemistry: MCDB 108A-B or Chemistry 142A-B.
- E. One course from Structure and Function: EEMB 106, 108, 111, 112, 116, 127-127L, 131 (or Geology 121), 134.
- F. Two laboratory courses from among those underlined in Areas A and E.
- G. Additional courses offered within the Department of Ecology, Evolution and Marine Biology and the Department of Molecular, Cellular and Developmental Biology or courses from areas A and E above to bring the total units in the upper-division major to 48. The following courses are recommended: EEMB 134, 141, 151, 164-164L; MCDB 151.

### **Bachelor of Science—Zoology**

The zoology major is designed to provide an understanding of animal structure and diversity, evolutionary relationships, functional systems, and environmental relationships, with an option of specialization in either organismal or population biology.

Students are not admitted directly into the zoology major. Instead, they are first admitted to the pre-biology major, and they may advance to full major standing only after fulfilling specified pre-major course and grade requirements. See section entitled "Pre-Biology" for details.

*Note: Hyphens indicate that an entire course sequence must be completed as shown to fulfill an area requirement.*

**Preparation for the major.** MCDB 1A-AL, MCDB 1B, EEMB 2, either MCDB 1BL or

EEMB 2L, and EEMB 3-3L; Chemistry 1A-AL-B-BL-C-CL or 2A-AC-AL-B-BC-BL-C-CC-CL; Mathematics 3A-B or 34A-B and one of the following: PSTAT 5A or PSTAT 5LS (Mathematics 3C acceptable but not recommended); Physics 6A-AL-B-BL-C-CL.

*Note: Courses listed under multiple categories (noted with an asterisk) may only apply to one category. The following courses do not count toward upper-division major credit: EEMB 181, 182, 183, 189, MCDB 121, 182, 183, 184, 194KK, 194MD. In addition, no more than 8 units of the following courses apply: EEMB 184-199, MCDB 185-199. Finally, a minimum of 32 units must be completed through courses within the EEMB department.*

*Note: Organic Chemistry may be required by some graduate or professional schools. Consult with an advisor.*

**Upper-division major.** Forty-eight upper-division units are required, distributed as follows, with at least 32 in EEMB:

- A. Genetics: EEMB 129 or 130\* or MCDB 101A.
- B. One course from Physiology: EEMB 143, 154, 156, 157; MCDB 111, 151.
- C. Two courses from Ecology, Evolution, or Development: EEMB 102, 109 (or Geology 148), 120, 130\*, 131 (or Geology 121), 138, 152 (or Environmental Studies 152), 166, 171 (or Environmental 171); or MCDB 112.
- D. Three courses from Diversity and Systematics: EEMB 106, 107-107L, 108, 111, 112, 113-113L, 116, 147, 163.
- E. Ecology and Evolution Enrichment. One course from the following list or one additional course from area C. EEMB 117, 119\* (or Envs 119\*), 124, 128\* (or Envs 128\*), 136-136L (or Geology 111-111L), 139, 142A, 142B, 142C, 146, 148, 149 (or MCDB 149), 153, 159, either 172 or 179 (but not both).
- F. One course in Plant Biology: EEMB 119\* (or Envs 119\*), 127, 128\* (or Envs 128\*), 134, 140, 141, 166, Geography 167.
- G. Laboratory: an underlined course completed in areas A-F or one of the following: EEMB 140L, 142AL, 142BL, 142CL, 143L, 164L; MCDB 112L.
- H. Electives: Additional upper-division courses offered within the Department of Ecology, Evolution, and Marine Biology or from areas C-G above or from the following list: Chemistry 109A, B, C; Anthropology 105, 121, 121T, 153T; Environmental Studies 110, 111 (or Geog 149); Geography 104; Geology 164A; Linguistics 185; MCDB 101B, 103, 133, 134 to bring the total upper-division units in the major to 48.

### **Graduate Program**

The Department of Ecology, Evolution, and Marine Biology (EEMB) offers graduate studies leading to the master of arts and doctor of philosophy degrees. Candidates for graduate degrees must meet university degree requirements found in the chapter, "Graduate Education at UCSB," as well as departmental requirements.

#### **Admission**

Applicants must fulfill general requirements for admission to graduate status. In addition, the scores of the Graduate Record Examination (GRE) general test are required of all applicants

to the graduate program. Applicants whose native language is not English, are required to take either the Test of English as Foreign Language (TOEFL) or the International English Language Testing System (IELTS) exam. Exemptions to this requirement will be considered for those students who have completed an undergraduate or graduate education at an institution whose primary language of instruction is English. The minimum TOEFL score for consideration is 550 when taking the paper-based test (PBT), or 80 when taking the internet-based test (IBT). The minimum IELTS score for consideration is an Overall Band Score of 7 or higher. TOEFL or IELTS scores must not be more than two years old at the time of application to UCSB.

Applicants to the department must be accepted by a major professor with whom they wish to work. Therefore, applicants are encouraged to contact individual faculty members whose research interests coincide with their own.

Applications are considered for fall admission and must be received with all supporting materials by December 15.

### Requirements for the M.A.

A candidate for the master's degree must fulfill, in addition to general university requirements, the minimum lower- and upper-division requirements or their equivalents for the major in their field of emphasis. Students admitted with deficiencies must rectify them early in their graduate studies.

A major area of study must be selected from the list of specialized areas presented below following the section titled, "Requirements for the Ph.D." A minor area of study may be selected from this list or from an appropriate discipline in another department. Two plans of study are available for the M.A.

**Under Plan 1 (thesis)**, a minimum of 30 units and a thesis are required. The units may be taken in graduate or upper-division courses offered by the department; at least 20 units must be in the 200 and 500 series, excluding 500, 501, 502, 597 and 598. No more than half the graduate-level units may be in 596 courses. Courses outside the department may be substituted upon written approval of the student's advisory committee. No unit credit is allowed for the thesis.

**Under Plan 2 (comprehensive examination)**, a minimum of 36 units of upper-division and graduate courses offered by the department are required, at least 24 of which must be in the 200 and 500 series, excluding 500, 501, 502, 597 and 598. No more than half the graduate-level units may be in 596 courses. Courses outside the department may be substituted upon written approval of the student's advisory committee. The comprehensive examination will cover a major and a minor area of study as described above.

Individuals may apply to an M.A./Ph.D. program. Students in the program may enter the Ph.D. program after their master's-level studies are complete if their M.A. work indicates an ability to conduct research at the Ph.D. level. Entry into the Ph.D. program requires written support by the student's potential Ph.D. advisor. The graduate committee will review each request in consultation with the student's

named potential advisor. If entry into the Ph.D. program is approved, the student should consult with the graduate advisor regarding Ph.D. program requirements.

### Requirements for the Ph.D.

Candidates for the doctor of philosophy degree in EEMB must normally have completed a bachelor's degree in one of the biological sciences, with a preparation deemed equivalent to that required for the bachelor's degree from UCSB. Students who are admitted to graduate standing with deficiencies in preparation will be required to take appropriate undergraduate courses.

All doctoral candidates must qualify for and hold a teaching assistantship for the equivalent of two quarters as part of the preparation for the Ph.D. degree; pass a set of written qualifying examinations administered by the department and the oral qualifying examination administered by the doctoral committee; complete a doctoral dissertation under the general supervision of a committee; and defend their dissertation in a final oral examination. With the approval of the candidate's doctoral committee, a scheduled departmental seminar may be substituted in lieu of the final oral examination.

Doctoral students select, with the approval of their advisory committee, two areas of study. One area of study must be selected from the list below; the other may be selected from the list, or from an appropriate discipline in other departments. Students must then pass a written comprehensive exam in each of the two areas of study. In addition, the oral qualifying examination must be taken before the end of the ninth quarter following matriculation in the Graduate Division.

1. Ecology with Ecosystem, Evolutionary, Physiological, Plant Community, or Population emphases
2. Algal Physiology, Ecology, and Systematics
3. Behavioral Ecology
4. Biology of Arthropods
5. Biology of Deep Sea Animals
6. Biological Oceanography
7. Bioluminescence
8. Ichthyology
9. Invertebrate Biology
10. Limnology
11. Macroevolution
12. Mathematics Biology
13. Parasitology
14. Plant Systematics and Evolution (Biochemistry Systematics, Biosystematics, Taxonomy)
15. Population Genetics
16. Stream Ecology
17. Vertebrate Evolution, Morphology, and Systematics
18. Comparative Physiology
19. Endocrinology
20. Pharmacology
21. Biogeography and Macroecology

### Emphasis in Computational Science and Engineering

The Departments of Chemical Engineering, Computer Science, Earth Science, Ecology, Evolution and Marine Biology, Electrical and Computer Engineering, Mathematics, and Mechanical Engineering offer an interdisciplinary

master's and Ph.D. degree emphasis in Computational Science and Engineering (CSE). The CSE emphasis offers a broad multidisciplinary educational experience with strong foundations in both the technologies of computer science and applied mathematics and in cutting-edge applications to EEMB's disciplines.

All students pursuing an emphasis in CSE must complete the following core classes:

- Numerical Methods: Computer Science 211A-B-C-D (students must take at least three).
- Parallel Computing: Computer Science 240A-B (students must take at least one).
- Applied Mathematics: Math 214A-B or 215A-B or Chemical Engineering 230A-B.

The specific requirements for the M.A. in Ecology, Evolution and Marine Biology (thesis option only) with the CSE emphasis are: (i) completion of all requirements for an M.A. in EEMB; (ii) completion of the core classes in CSE; (iii) a master's thesis in the area of CSE. The thesis must be written under the supervision of a CSE ladder faculty member, and the thesis committee must include a minimum of three permanent ladder faculty members, at least two from EEMB and one from CSE. The CSE faculty member may be from another department.

The specific requirements for the PhD in Ecology, Evolution and Marine Biology with the CSE emphasis are: (i) completion of all requirements for a PhD in EEMB; (ii) completion of the core classes in CSE; (iii) a dissertation written under the supervision of a EEMB ladder faculty member in the CSE program. The doctoral examination committee must include at least one other CSE ladder faculty member and at least one ladder faculty member from another department.

## Ecology, Evolution, and Marine Biology Courses

### LOWER DIVISION

#### 2. Introductory Biology II—Ecology and Evolution

**(2) RICE, MURDOCH**

Prerequisite: MCDB 1A.

Not open for credit to students who have completed Biology 4B or EEMB 4B or 5B or MCDB 4B or 5B. Lecture, 2 hours.

Introduction to population and community ecology, and evolution. (W)

#### 2L. Introductory Biology Laboratory II

**(1) STAFF**

Prerequisites: MCDB 1A; concurrent enrollment in EEMB 2 and MCDB 1B.

Same course as MCDB 1BL. Not open for credit to students who have completed Biology 4B or EEMB 4B or 5B or MCDB 4B or 5B. Laboratory, 3 hours.

Laboratory investigations illustrate basic principles of animal and plant physiology, ecology, and evolution. (W)

#### 2Z. Selected Topics from EEMB 2

**(1) STAFF**

Prerequisite: consent of department.

Not open for credit to students who have completed Biology 4BZ or EEMB 4BZ or 5BZ or MCDB 4BZ or 5BZ. Lecture, 1-4 hours.

Designed for transfer students who have completed part of EEMB 2 through transfer work. Topics will be selected by the department, as appropriate, to fulfill the introductory biology

**112. Invertebrate Zoology****(5) KURIS, HOFMANN***Prerequisites: EEMB 2 and MCDB 1B; and EEMB 3.**Not open for credit to students who have completed Zoology 112A. Lecture, 3 hours; laboratory, 6 hours.*

An introduction to the classification, structure, life histories, and habits of the major phyla of invertebrate animals (excluding annelids and arthropods), with emphasis on the marine fauna of the Santa Barbara area. (F)

**113. Evolution and Ecology of Terrestrial Vertebrates****(2) ROTHSTEIN***Prerequisites: MCDB 1A; and MCDB 1B and EEMB 2; and EEMB 3; and concurrent enrollment in EEMB 113L.**Not open for credit to students who have completed Zoology 113A. Lecture, 2 hours.*

Evolutionary and ecological principles as demonstrated by amphibians, reptiles, birds, and mammals; competition and other species interactions; diversity and systematics with special emphasis on speciation theory. (F)

**113L. Laboratory and Fieldwork in Vertebrate Biology****(2) ROTHSTEIN***Prerequisite: concurrent enrollment in EEMB 113.**Not open for credit to students who have completed Zoology 113AL. Laboratory, 3 hours; field, 3 hours.*

Weekly field trips to numerous locations and laboratory work emphasizing classification, identification, and observation of local terrestrial vertebrates. Introduction to techniques such as trapping and banding to study vertebrates in the field. (F)

**116. Invertebrate Zoology: Higher Invertebrates****(5) KURIS, CARDINALE***Prerequisites: MCDB 1A; and, MCDB 1B and EEMB 2; and EEMB 3.**Not open for credit to students who have completed Zoology 112B. Lecture, 3 hours; laboratory, 6 hours.*

An introduction to the classification, structure, life histories and habits of annelids and arthropods, with emphasis on the aquatic fauna of the Santa Barbara area. (S)

**117. Flow and Aquatic Ecosystems****(3) MACINTYRE***Prerequisites: EEMB 142A-B-C; and, Mathematics 3A-B or 34A-B.**Recommended preparation: Physics 6A-B-C. Lecture, 2 hours; laboratory, 3 hours.*

Introduction to the interaction of hydrodynamics with aquatic organisms and ecosystems and use of quantitative approaches in aquatic ecology. Case studies include examples from lakes, rivers, kelp forests, and coral reefs. (F)

**119. Ecology and Management of California Wildlands****(5) D'ANTONIO***Prerequisites: Environmental Studies 100 or EEMB 120.**Same course as Environmental Studies 119. One weekend fieldtrip is mandatory. Lecture, 3 hours; laboratory, 5 hours.*

Explores ecological processes in California habitats and the challenges of their management through field trips, discussions with land managers, lectures and readings. Focus on regional habitats including specialized habitats such as coastal salt marsh and vernal pools, and more widespread habitats such as oak savanna and chaparral. (F)

**120. Introduction to Ecology****(4) HOLBROOK***Prerequisites: MCDB 1A; and, MCDB 1B and EEMB 2; and EEMB 3.**Letter grade required for majors. Not open for credit to students who have completed Biology 120. Lecture, 3 hours; discussion, 1 hour.*

Major concepts in population and evolutionary ecology. Theoretical, experimental, and field studies pertaining to population growth and regulation,

competition, predation, diversity, adaptation, and life history strategies. (F)

**120AL. Field and Laboratory Studies in Ecology****(3) HOLBROOK***Prerequisite: EEMB 120 (may be taken concurrently).**Not open for credit to students who have completed Biology 120AI-BL. Laboratory, 3 hours; fieldwork, 3 hours.*

Practical studies in ecology in both field and laboratory, emphasizing the design and analysis of experiments. (F)

**120BL. Field and Laboratory Studies in Ecology****(3) HOLBROOK***Prerequisite: EEMB 120AL.**Not open for credit to students who have completed Biology 120AI-BL. Laboratory, 3 hours; fieldwork, 3 hours.*

Practical studies in ecology in both field and laboratory. Individual projects are emphasized. (W)

**124. Biochemical Ecology****(4) CHAPMAN***Prerequisite: MCDB 1A; and, EEMB 2 and MCDB 1B; and, EEMB 3. Lecture, 3 hours; discussion, 1 hour.*

Introduction to natural products. Discussion of the roles and functions of natural products in animal-plant, plant-plant, and plant-microbe interactions. (F)

**125. Dynamics of Ecological Systems****(4) MURDOCH***Prerequisites: EEMB 120; and, Mathematics 3A or 34A. Lecture, 3 hours; laboratory, 3 hours.*

Examines theory in ecology and applications to real systems.

**126MM. Computational Chemistry and Molecular Modeling****(3) AUE, JACOBS***Prerequisite: Chemistry 109A-B.**Same course as Chemistry 126. Lecture, 3 hours; laboratory, 3 hours.*

Introduction to computational chemistry and molecular modeling. Application of molecular mechanics, quantum mechanics, and computer graphical interfaces to problems in chemistry, biochemistry, drug design, and pharmacology. (S)

**127. Plant Biology and Biodiversity****(4) MAZER***Prerequisite: EEMB 3.**Not open for credit to students who have completed Biology 127.*

Introduction to plant biology; the importance of plants to humans; taxonomic and ecological diversity; and evolutionary processes. Will serve as a foundation for all upper-division plant biology courses. Emphasis on life history variation; pollination; reproduction and mating strategies.

**127L. Plant Biology and Biodiversity Lab****(2) MAZER***Prerequisite: EEMB 3 and EEMB 127 (may be taken concurrently).**Not open for credit to students who have completed Biology 127L.*

Computer, lab, greenhouse, and field experience in studies of plant anatomy, physiology, reproduction, pollination, morphology, and adaptation to different environments. Live material and herbarium collections used to demonstrate plant diversity, speciation, and genetic variation. Independent and team projects.

**128. Foundations of Ecosystem Restoration****(4) D'ANTONIO***Prerequisite: Environmental Studies 100 or EEMB 120. Same course as Environmental Studies 128.*

Integrates ecological principles with practical issues involved in ecosystem restoration. Beginning with the challenge of selecting goals and establishing a target trajectory, students evaluate how ecological knowledge can guide restoration and whether sustainable states or trajectories can be achieved.

**129. Introductory Genetics****(4) HODGES, BUSH***Prerequisites: MCDB 1A; and, MCDB 1B and EEMB 2; and EEMB 3 with a grade of C or better.**Not open for credit to students who have completed Biology 130A-B or MCDB 101A-B. Lecture, 3 hours; discussion, 1 hour.*

Introduction to genetics. Mendel's laws, structure, replication and expression of DNA, linkage and chromosomal aberrations, mutation and recombination, concepts of genetic variability, quantitative and population genetics. (W)

**130. Population Genetics****(4) STAFF***Prerequisite: MCDB 1A with a grade of C or better.**Not open for credit to students who have completed Biology 130C.**Recommended preparation: EEMB 129. Lecture, 3 hours; discussion, 1 hour.*

The consequences of Mendelian principles in diploid populations, including quantitative genetics, genetic correlations, gene frequency, change under selection, the effects of mutation on populations, gene interactions in fitness, and ecological genetics. (S)

**131. Principles of Evolution****(4) SWEET***Prerequisites: MCDB 1A; and, EEMB 2 and MCDB 1B, or Geology 2 and 3.**Same course as Geology 121. Not open for credit to students who have completed Biology 131. Lecture, 3 hours; discussion, 1 hour.*

A foundation course concerning the mechanisms of evolution at micro- and macroevolutionary levels, and interpretation of the resulting patterns of adaptation and organic diversity. (W)

**133. Biodiversity and Conservation Biology****(4) STAFF***Prerequisite: EEMB 3.**Same course as Environmental Studies 133. Not open for credit to students who have completed Biology 133. Lecture, 3 hours; discussion, 1 hour.*

Field methods, literature, computer use, and underlying theory important to biodiversity research. Use of preserved and living collections by ecologists, conservation biologists, and evolutionists to detect evolutionary processes and threats to biological communities; to measure ecological processes and biodiversity. Field trips. (W)

**134. Biology of Seaweeds and Phytoplankton****(5) CHAPMAN***Prerequisites: MCDB 1A; and, MCDB 1B and EEMB 2; and EEMB 3.**Not open for credit to students who have completed Biology 134. Lecture, 3 hours; laboratory, 6 hours.*

Overview on the biology of macroalgae and phytoplankton, with emphasis on living and adapting in the various environments. Topics include form-function, ecophysiology, unique aspects of biochemistry, antiherbivore strategies, applied phycology and mariculture. (W)

**136. Principles of Paleontology****(4) TIFFNEY***Prerequisite: upper-division standing.**Same course as Geology 111. Letter grade required for majors. Not open for credit to students who have completed Biology 111.**Recommended preparation: an introductory biology course. Lecture, 3 hours.*

The ecological structure and evolution of the biosphere as illustrated by the fossil record.

**136L. Principles of Paleontology Laboratory****(2) TIFFNEY***Prerequisite: EEMB 136 (may be taken concurrently).**Same course as Geology 111L. Letter grade required for majors. Not open for credit to students who have completed Biology 111L. Laboratory, 6 hours.*

Exercises and projects in the identification and interpretation of fossil taxa and fossil communities. (W)

**137. Plant Paleobiology****(4) TIFFNEY***Prerequisite: upper-division standing.*

Same course as Geology 141. Letter grade required for majors. Not open for credit to students who have completed Botany 110.

Recommended preparation: Geology 111 or EEMB 136. Lecture, 3 hours.

Examination of the history of land plants; the systematics, morphology, and phylogeny of major groups. Major evolution and biogeographic patterns.

### 137L. Plant Paleobiology Laboratory

(1) TIFNEY

Prerequisite: EEMB 137 or Geology 141 (may be taken concurrently).

Same course as Geology 141L. Letter grade required for majors. Not open for credit to students who have completed Botany 110L. Laboratory, 3 hours.

Anatomy, morphology, and systematics of fossil plants from the specimens. (S)

### 138. Ethology and Behavioral Ecology

(5) ROTHSTEIN, WARNER

Prerequisite: EEMB 2 and MCDB 1B.

Not open for credit to students who have completed Zoology 138. Lecture, 3 hours; discussion, 1 hour; laboratory, 3 hours.

Animal behavior and social organization viewed from evolutionary and whole animal perspectives. Specific topics stress environmental influences and natural selection and include: classical ethology, development and learning, communication, foraging, aggression, territoriality, mating systems, parental care, altruism, and sociobiology. (W)

### 139. Sensory Ecology and Evolution

(4) STAFF

Prerequisite: MCDB 1A; EEMB 2 and MCDB 1B, and EEMB 3; and Mathematics 3A-B or 3A-B.

Recommended preparation: Physics 6A-B-C. Lecture, 3 hours; laboratory, 2 hours.

Sensory mechanisms, their ecological/evolutionary consequences, vision and other senses in natural environments, composition of visual backgrounds, perception of pattern, animal communication, predator-prey relationships, detection of prey/territorial neighbors/mates, polymorphism, detecting, measuring, and predicting natural selection, response to changing environments. (W)

### 140. General Plant Ecology

(4) MAHALL

Prerequisites: MCDB 1A; and, MCDB 1B and EEMB 2; and EEMB 3.

Not open for credit to students who have completed Botany 140. Lecture, 3 hours; discussion, 1 hour.

An introduction to the principles of plant ecology. (F)

### 140L. General Plant Ecology Lab

(2) MAHALL

Prerequisites: MCDB 1A; and, MCDB 1B and EEMB 2; and EEMB 3; and EEMB 140 (may be taken concurrently).

Not open for credit to students who have completed Botany 140L. Laboratory and field, 6 hours. Field and laboratory research techniques. (F)

### 141. Physiological Plant Ecology

(6) MAHALL

Prerequisites: MCDB 1A-1B and EEMB 2 and 3; and, MCDB 117 or 118 or EEMB 140. Lecture, 4 hours; laboratory, 3 hours; field 5 hours.

A study of the environmental and physiological parameters of plant distributions and niches. (S)

### 142A. Aquatic Communities

(4) SCHMITT, EVEN

Prerequisites: MCDB 1A, EEMB 2 and MCDB 1B, and EEMB 3.

Not open for credit to students who have completed EEMB 145C.

Recommended preparation: EEMB 120. Lecture, 3 hours; discussion, 1 hour.

A survey of the patterns of distribution, diversity, and abundance of species in marine and freshwater communities, with an emphasis on the dynamic interactions which shape these patterns. Applied aspects: fisheries, mariculture. (F)

### 142AL. Methods of Aquatic Community Ecology

(3) SCHMITT, EVEN

Prerequisite: concurrent enrollment in EEMB 142A.

Not open for credit to students who have completed EEMB 145CL. Laboratory, 6 hours; discussion, 1 hour.

Experience in the field techniques of aquatic community ecology. (F)

### 142B. Environmental Processes in Oceans and Lakes

(4) MACINTYRE, STAFF

Prerequisites: MCDB 1A; and, MCDB 1B and EEMB 2; and EEMB 3.

Not open for credit to students who have completed EEMB 145A. Lecture, 3 hours; discussion, 1 hour.

A discussion of biological, chemical, physical, and optical processes in marine and freshwater environments and the linkage between these processes. Emphasis on primary production, global biogeochemical cycles, nutrient dynamics, and synoptic mapping of biological and physical patterns. (W)

### 142BL. Chemical and Physical Methods of Aquatic Environments

(3) MACINTYRE

Prerequisite: EEMB 142B (may be taken concurrently).

Not open for credit to students who have completed EEMB 145AL. Laboratory, 8 hours; discussion, 1 hour.

A survey of physical and chemical methods used by limnologists and oceanographers supplemented with field observations. (W)

### 142C. Environmental Processes in Oceans and Lakes

(4) BRZEZINSKI, ALLDREDGE

Prerequisite: EEMB 142B.

Not open for credit to students who have completed EEMB 145B. Lecture, 3 hours; discussion, 1 hour.

A continuation of EEMB 142B with emphasis on secondary productivity, ecology of higher trophic levels including zooplankton and fish, food web dynamics, benthic-pelagic coupling, ocean circulation, and biogeographical aspects of pelagic communities. (S)

### 142CL. Methods of Aquatic Biology

(3) BRZEZINSKI, ALLDREDGE

Prerequisite: EEMB 142C (may be taken concurrently).

Not open for credit to students who have completed EEMB 145BL. Laboratory, 6 hours; field, 3 hours.

Laboratory and field techniques used to measure various biological processes including productivity, and to sample, identify, enumerate, and culture marine organisms. (S)

### 143. Ecological Physiology

(3) CHILDRESS

Prerequisites: MCDB 1A; and, MCDB 1B and EEMB 2; and EEMB 3.

Not open for credit to students who have completed Zoology 143. Lecture, 3 hours.

Consideration of the physiological responses and adaptations of animals to their environments. Emphasis on the underlying physiological and biochemical mechanisms. A comparative approach in nature emphasizing aquatic animals. (F)

### 143L. Laboratory in Ecological Physiology

(2) CHILDRESS

Prerequisite: concurrent enrollment in EEMB 143.

Not open for credit to students who have completed Zoology 143L. Laboratory, 6 hours.

Semi-independent study lab to accompany EEMB 143. Study of the physiological responses and adaptations of animals to their environment. Aquatic animals emphasized. (F)

### 144. Marine Microbiology

(4) CARLSON

Prerequisites: MCDB 1A; and, MCDB 1B and EEMB 2; and EEMB 3.

Recommended preparation: EEMB 145A-B or MCDB 131. Lecture, 3 hours; discussion, 1 hour.

Exploration of evolution, ecology, biochemistry, and genetics of marine bacteria. Topics include: historical

perspective, molecular approaches in microbial ecology, trophic interactions/biogeochemistry, physiological adaptations, and biochemistry and genetics of selected systems (bioluminescence, deep-sea adaptations, cell-surface interactions, starvation survival). (W)

### 144L. Marine Microbiology Lab

(2) STAFF

Prerequisites: MCDB 1A; and, MCDB 1B and EEMB 2; and EEMB 3; concurrent enrollment in EEMB 144 or 142B. Laboratory, 6 hours.

A laboratory survey of the diversity, physiology and ecology of marine prokaryotes, and methods used to identify, quantify and measure their activities. (W)

### 146. Biometry

(4) STEWART-OATEN

Prerequisites: Mathematics 3A-B or 3A-B; and, EEMB 30 or PSTAT 5.

Not open for credit to students who have completed Biology 146A or EEMB 146A. Lecture, 3 hours; laboratory, 3 hours.

Linear models and least squares fitting: simple and multiple linear regression; analysis of variance (fixed, random, and mixed models; crossed and nested effects; balanced and unbalanced designs); analysis of covariance, factorial designs; incomplete layouts; use of transformations. (F)

### 148. Ecology of Running Waters

(4) EVEN

Prerequisites: MCDB 1A; and, MCDB 1B and EEMB 2; and EEMB 3.

Not open for credit to students who have completed Biology 148. Lecture, 3 hours; discussion, 1 hour.

Review of literature on the physics, chemistry, and biology of running water ecosystems. (W)

### 149. Mariculture for the 21st Century: Research Frontiers

(4) CHAPMAN, COLLINS

Prerequisite: upper-division standing.

Same course as MCDB 149. Not open for credit to students who have completed Biology 149. Lecture, 3 hours; discussion 1 hour.

Recent progress and new directions in research increasing production of valuable marine animals, plants and microorganisms. Control of reproduction, development, growth and disease in marine species; problems encountered in commercializing production; regional and biological solutions; the role of modern biotechnology. (S)

### 151. Phytoplankton Photoecology

(3) PREZELIN

Prerequisites: MCDB 1A; and, MCDB 1B and EEMB 2; and EEMB 3 and 142B. Lecture, 3 hours.

How sunlight controls all aspects of phytoplankton biology, thus affecting many large scale ocean processes where phytoplankton play a central role; primarily production, biogeochemical cycling, impacts of climate change on oceans due to global warming and ozone depletion. Topics include photosynthesis, photoadaptation, photoinhibition, and photoregulation of metabolism, behavior and survival strategies. The evolutionary similarities and differences between taxonomic grouping of phytoplankton are examined as well as the present photoecology of harmful algal blooms, picophytoplankton and microalgal symbionts of corals and other marine animals. (S)

### 152. Applied Marine Ecology

(5) SCHMITT, STAFF

Prerequisites: Environmental Studies 100, or EEMB 2 and MCDB 1B, or EEMB 3; and, Mathematics 3A or 34A.

Same course as Environmental Studies 152.

Recommended preparation: EEMB 120. Lecture, 3 hours; discussion, 2 hours.

Introduction to the application of ecological principles and methods to environmental problems in marine habitats. Focus on problems that are local, regional, and global in scale. Concepts illustrated with case studies.

### 153. Ecology of Lakes and Wetlands

(3) MELACK

Prerequisites: EEMB 142B; and, EEMB 142A or 120. Lecture, 3 hours.

**230. Population Genetics****(4) STAFF***Prerequisites: MCDB 101A-B.**Not open for credit to students who have completed Biology 230C. Lecture, 3 hours; discussion, 1 hour.*

The consequences of Mendelian principles in diploid populations, including quantitative genetics, genetic correlations, gene frequency, change under selection, the effects of mutation on populations, gene interactions in fitness, and ecological genetics. (S)

**234. Phycology****(5) CHAPMAN***Prerequisites: MCDB 1A-AL; and, MCDB 1B-BL or EEMB 2-2L; and EEMB 3-3L, or equivalents.**Not open for credit to students who have completed Biology 234.*

Overview on the biology of macroalgae and phytoplankton, with emphasis on living and adapting in the various environments. Topics include form-function, ecophysiology, unique aspects of biochemistry, antiherbivore strategies, applied phycology and mariculture. (W)

**235. Current Topics in Phycology****(3) CHAPMAN***Prerequisite: graduate standing. Seminar, 3 hours.*

Discussion of current research on algae and their economic uses. (F)

**243. Biological Oceanography****(3) BRZEZINSKI, ALLDREDGE***Prerequisite: consent of instructor.**Not open for credit to students who have completed Biology 243. Lecture, 3 hours.*

Current concepts in biological oceanography focusing on the coupling of biotic processes to ocean physics, chemistry and sedimentation. Emphasis on areas of active research with critical evaluation of current and seminal literature. (F)

**244. Marine Microbiology****(4) CARLSON***Prerequisites: MCDB 1A-AL; and, MCDB 1B-BL or EEMB 2-2L; and, EEMB 3-3L; and, MCDB 110, 131, EEMB 145A-B-C; and, Chemistry 1A-B-C; or equivalent.**Not open for credit to students who have completed Biology 252. Lecture, 3 hours; discussion, 1 hour.*

Exploration of evolution, ecology, biochemistry, and genetics of marine bacteria. Topics include: historical perspective, molecular approaches in microbial ecology, trophic interactions/biogeochimistry, physiological adaptations, and biochemistry and genetics of selected systems (bioluminescence, deep-sea adaptation, cell-surface interactions, starvation survival). (W)

**244L. Marine Microbiology Laboratory****(2) STAFF***Prerequisites: MCDB 1A-AL; and, MCDB 1B-BL or EEMB 2-2L; and EEMB 3-3L; and, EEMB 144 (may be taken concurrently) or EEMB 145A; consent of instructor.**Not open for credit to students who have completed Biology 252L. Laboratory, 6 hours.*

A laboratory survey of the diversity, physiology and ecology of marine prokaryotes, and methods used to identify, quantify and measure their activities. (S)

**245. Advanced Population Biology****(4) NISBET***Prerequisites: one course in ecology and consent of instructor.**Not open for credit to students who have completed Biology 245. Lecture, 3 hours; discussion, 1 hour.*

An in-depth look at selected aspects of population and community dynamics of organisms. Extensive reading of original papers.

**246. Biometry****(4) STEWART-OATEN***Prerequisites: Mathematics 3A-B or 34A-B or equivalent; and EEMB 30 or equivalent.**Not open for credit to students who have completed Biology 246A or EEMB 246A. Lecture, 3 hours; laboratory, 3 hours.*

Linear models and least squares fitting: simple

and multiple linear regression; analysis of variance (fixed, random and mixed models; crossed and nested effects; balanced and unbalanced designs); analysis of covariance, factorial designs; incomplete layouts; use of transformations. (F)

**248. Ecology of Running Waters****(4) EVEN***Prerequisite: EEMB 145B.**Not open for credit to students who have completed Biology 248. Lecture, 3 hours; discussion 1 hour.*

Review of literature on the physics, chemistry, and biology of running water ecosystems. (W)

**249. Mariculture: Research Frontiers in Farming the Sea****(4) COLLINS, CHAPMAN***Prerequisite: graduate standing.**Same course as MCDB 249. Not open for credit to students who have completed Biology 249. Lecture, 3 hours; discussion, 1 hour.*

Recent progress and new directions in research increasing production of valuable marine animals, plants and microorganisms. Control of reproduction, development, growth and disease in marine species; problems encountered in commercializing production; regional and biological solutions; the role of modern biotechnology. (S)

**251. Phytoplankton Photoecology****(3) PREZELIN***Lecture, 3 hours.*

How sunlight controls all aspects of phytoplankton biology, thus affecting many large scale ocean processes where phytoplankton play a central role; primarily production, biogeochemical cycling, impacts of climate change on oceans due to global warming and ozone depletion. Topics include photosynthesis, photoadaptation, photoinhibition, and photoregulation of metabolism, behavior and survival strategies. The evolutionary similarities and differences between taxonomic grouping of phytoplankton are examined as well as the present photoecology of harmful algal blooms, picophytoplankton and microalgal symbionts of corals and other marine animals. Different criteria and more sophisticated assignments are used for graduate students.

**253. Ecology of Lakes and Wetlands****(4) MELACK***Prerequisite: EEMB 142B; and, EEMB 142A or 120 or equivalent. Lecture, 3 hours; discussion, 1 hour.*

An examination of ecological aspects of lakes, wetlands and their physical coupling and population and community ecology. Applications of remote sensing and ecological models; human-caused impacts and their management. (S)

**259. Tropical Ecology****(4) EVEN***Prerequisite: one course in introductory ecology.**Not open for credit to students who have completed Biology 259. Lecture, 3 hours; discussion 1 hour.*

Examination of ecological processes in terrestrial and aquatic tropical environments. (W)

**264. Marine Pharmacology****(4) JACOBS***Prerequisite: consent of instructor. Lecture, 3 hours; discussion, 1 hour.*

History and scope of the use of natural product probes in biology and their relationship to physiology, chemistry, and biochemistry. (F)

**264L. Marine Pharmacology Laboratory****(4) JACOBS, COLLINS***Prerequisites: consent of instructor. Laboratory, 8 hours; discussion, 1 hour.*

Characterizing physiological pathways in isolated tissues, organs, and intact animal preparations using natural probes. (W)

**265. Field Studies in Marine Ecological Physiology****(4) HOFMANN***Prerequisites: MCDB 1A-B, and EEMB 2 and 3.*

An integration of field and laboratory approaches to questions in marine ecological physiology. Using local coastal field sites, participants conduct a team research project. Participants collect, analyze, and

present the results. Involves occasional field trips and lab work.

**266. Biology of Reproduction****(4) COLLINS***Prerequisites: MCDB 1A-AL; and, MCDB 1B-BL or EEMB 2-2L; and EEMB 3-3L.**Not open for credit to students who have completed Zoology 156 or EEMB 156.*

Examination of hormonal mechanisms regulating initiation/maintenance of reproductive function in vertebrates. Review of regulation of fertilization/pregnancy/parturition. Endocrine aspects do not duplicate topics covered in EEMB 155, and provides background in physiology for MCDB 226B. (S)

**269. Literature in Pharmacology****(1) JACOBS, WILSON***Prerequisite: graduate standing in biological sciences.**Same course as MCDB 269. Not open for credit to students who have completed Biology 269. Seminar, 1 hour.*

Critical reading and presentation of current literature in topics on pharmacology. (F,W,S)

**271. Ecosystem Processes****(4) SCHIMEL***Prerequisite: Environmental Studies 13 or MCDB 1B-BL or EEMB 2-2L.**Not open for credit to students who have completed Biology 271.**Recommended preparation: EEMB 120. Lecture, 3 hours; discussion 1 hour.*

An examination of carbon and nutrient cycling in terrestrial ecosystems. Specific foci will include plant soil linkages including decomposition and nutrient supply, and the role of above- and below-ground community composition on element cycles. (W)

**272. Theoretical Population Ecology****(4) BRIGGS***Recommended Preparation: MCDB 1A-B; and EEMB 2-3; and Math 3A-B or 34A-B*

Examine the ecological theory pertaining to population dynamics, species interactions, and community properties, and explore how mathematical and computer modeling has influenced the development of ecological theory. Includes case studies and computer exercises

**274. Biomechanics****(3) STAFF***Prerequisite: Mathematics 3A-B or 34A-B; and Physics 6A, or equivalents. Lecture, 3 hours.*

Introduction to fluid dynamics, solid mechanics, thermal mechanics, and materials science as they relate to organism form/function and the interaction of plants and animals with their physical surroundings.

**275. Biochemical Adaptation to the Environment****(4) SUAREZ***Prerequisite: consent of instructor. Lecture, 3 hours; discussion, 1 hour.*

Biochemical mechanisms of physiological and evolutionary adaptation to temperature, pressure, diet and food availability, locomotory activity, and oxygen availability. (S)

**275L. Biochemical Adaptation to the Environment Laboratory****(1) SUAREZ***Prerequisite: consent of instructor. Laboratory, 3 hours.*

Laboratory techniques in the study of biochemical adaptation to the environment, including preparation of buffers and reagents, tissue preparation, enzyme assays, and measurement of respiration rates using subcellular preparations and whole animals. Students are required to read the primary literature in the areas covered, present a lecture based on the literature in the specific area, and summarize the talk in a short paper to be submitted at the end of the course. (S)

**276. Advanced Biostatistics****(5) RICE***Prerequisites: concurrent enrollment in EEMB 276L; graduate standing. Lecture, 4 hours; discussion, 1 hour.*

Accelerated overview of parametric and nonparametric statistical techniques that are used in the biological sciences. The course unifies nearly all traditional statistical tests by expressing them all as a

single unified testing protocol.

**276L. Advanced Biostatistics Laboratory**  
(2) RICE

*Prerequisite:* concurrent enrollment in EEMB 276. Laboratory, 3 hours; discussion, 1 hour.

Students use computerized sampling to measure the robustness and power of a wide diversity of parametric vs. nonparametric tests. Students also learn to use computerized software to carry out all the tests described in the lecture class.

**279. Modeling Environmental and Ecological Change**

(4) NISBET

*Prerequisites:* Mathematics 34A-B or 3A-B.

Not open for credit to students who have completed Biology 279.

An introduction to mathematical and computer models in studies of the natural environment with emphasis on population dynamics. Case studies of interacting physical, chemical, and biological phenomena. (F)

**281. Science in the Media**

(2) STAFF

*Recommended Preparation:* One year course in introductory biology

Critical look at science stories in the popular media. Students will learn to read and present scientific papers, write about science, and interpret research.

**288RE. Restoration Ecology Seminar**

(1) THORSCH

Seminar, 1 hour.

Seminar explores current topics in restoration ecology including model projects, techniques, structured research, performance criteria, political and philosophical issues and may include site visits.

**290. Introduction to Faculty Research**

(2) STAFF

*Strongly encouraged for all first year graduate students; open to continuing graduate students; open to undergraduates by consent of instructor. Seminar, 2 hours.*

Presentation and discussion of current EEMB faculty research. Informal discussions follow weekly faculty member research presentations. Exposes graduate students to the breadth of departmental research, facilitates graduate-faculty interaction, and offers an intellectual setting for student interaction.

**292. Advanced Special Topics in Biological Sciences**

(1-4) STAFF

*Prerequisites:* graduate standing and consent of instructor.

*May be repeated for credit in combination with Biology 292. Lecture, 1 to 4 hours.*

Special topics of current importance in biological sciences. Course content will vary. Information on course content may be obtained in the department office.

**295A. Soils and Ecosystems**

(3) CHADWICK, SCHIMEL

*Prerequisite:* graduate standing.

Same course as Geography 295A. Seminar, 3 hours.

Development of the links between the biological and inorganic components of the soil. Water availability and nutrients control plant and soil microbial communities. These in turn affect the soil by enhancing weathering and modifying the local chemical environment. (W)

**500. Teaching Assistant Orientation**

(1) STAFF

*Required of all teaching assistants. No unit credit allowed toward advanced degree. May be repeated for credit in combination with Biology 500. Workshop, 1 hour.*

General orientation regarding the University of California and the Santa Barbara campus; various pertinent regulations, officials and their functions, staff and functions; services available to teaching assistants and to students. Prospective teaching assistants are encouraged to take this course during the fall quarter prior to their employment. (F)

**501. Practicum in Instruction**

(1-4) STAFF

*Prerequisite:* concurrent teaching assistant employment.

*No unit credit allowed toward advanced degree. May be repeated for credit in combination with Biology 501.*

Practical experience in teaching within specified areas of biology. Students will have responsibility for one or more laboratory and/or discussion sections. Staff will periodically observe teaching assistants in actual teaching situations. Evaluation forms will be completed by members of the class sections. (F,W,S)

**502. Techniques of Teaching and Laboratory Class Supervision**

(1-2) EARDLEY, EVEN

*Prerequisite:* concurrent teaching assistant employment.

*Required of all teaching assistants. No unit credit allowed toward advanced degree. May be repeated for credit in combination with Biology 502. Discussion, 1 hour.*

Weekly discussion and readings on techniques of teaching including lecturing, leading discussions, writing and grading exams, student-teacher interactions, classroom dynamics, and teaching philosophy. (F,W)

**503. Research Practicum in Biology**

(1-2) STAFF

*May be repeated for credit in combination with Biology 503. Tutorial, 1-2 hours.*

Basic procedures and methods of research in a specified area as determined by consultation between the supervising faculty member and the research assistant. Includes weekly meetings and consultations, and formal evaluations. (F,W,S)

**508. Levels of Biological Organization I: Individuals and Populations**

(4) STAFF

*Prerequisite:* graduate standing. Lecture, 3 hours; discussion, 1 hour.

This is the first in a set of two advanced courses in ecology and evolution, and includes modules on adaptation and organismal function, life history theory and fitness, and population dynamics. (F)

**509. Levels of Biological Organization II: Communities and Ecosystems**

(4) STAFF

*Prerequisite:* graduate standing.

*Recommended preparation:* EEMB 508. Lecture, 3 hours.

This is the second in a set of advanced courses in ecology and evolution, and includes modules on the origins of diversity, species interactions and coexistence, the causes and consequences of food-web complexity, and ecosystem level processes.

**510. Professional Development for Graduate Students**

(2) HOFMANN

*Prerequisite:* graduate standing. Lecture, 1 hour; other, 1 hour.

Survey of topics significant to graduate student professional development, including CV preparation, grant proposal writing, and publication. Course participants have the opportunity to enhance specific academic skills through interaction with peers and the faculty instructor in a workshop format.

**511. Scientific Writing**

(2) SCHIMEL

*Prerequisite:* consent of instructor. Seminar, 2 hours.

A hands-on workshop to polish writing skills. Modules focus on "story telling" to make ideas compelling, streamlining to make writing compact and effective, and developing flow of ideas and paragraphs. Students work on a chapter, paper, or proposal. (W)

**590. EEMB Colloquium**

(2) STAFF

*Prerequisite:* graduate standing.

*May be repeated for credit in combination with Biology 590.*

Presentation and discussion of recent work in ecology, evolution, behavioral ecology, evolutionary ecology, physiological ecology, and marine biology, by

eminent and nationally and internationally well known biologists. Optional individual discussion in addition to formal lecture.

**595AA-ZZ. Group Studies**

(2) STAFF

*Prerequisite:* consent of instructor.

*Individual letter designations may be repeated for credit to a maximum of 36 units. Seminar, 2 hours.*

A critical review of research in selected fields of biology. Subject matter for those seminars will be selected from the following list:

- A. Ecology and Evolution: Levine, Rice
- AA. Evolutionary Ecology: Staff
- AL. Energetics of Animal Locomotion: Staff
- B. Manipulating Reproduction: Staff
- BN. Behavioral Neurobiology: Staff
- BC. Advanced Community Ecology: Cardinale
- C. Systematics: Staff
- CE. Community Ecology: Staff
- D. Plant Ecology: Staff
- DD. Group Studies: Staff
- DL. Contemporary Approaches to Marine Biology: Staff
- DS. Ecological Data Synthesis: Levine
- EE. Symbiosis: Staff
- EG. Evolutionary Genetics: Staff
- EM. Ecosystem Management: Staff
- EN. Environmental Endocrinology: Staff
- ET. Ecological Toxicology: Staff
- EV. Evolutionary Biology: Staff
- FF. Photosynthesis: Staff
- GC. Global Change and Ecology; Gaines
- GG. Evolutionary Morphology: Staff
- H. Marine Molecular Ecology and Physiology: Hofmann
- J. Evolutionary and Behavioral Ecology of Vertebrates: Staff
- K. Biometry: Staff
- L. Philosophy of Science: Staff
- M. Reproductive Ecology and Evolution: Staff
- MM. Marine Microbial Ecology: Carlson
- MR. Metabolic Regulation: Staff
- MS. Marine Science: Prezelin, Alldredge, Brzezinski
- O. Ecological Genetics: Staff
- P. Advanced Population Ecology: Staff
- Q. Aquatic Biology: Staff
- RR. Research Reviews in Aquatic Ecology: Staff
- S. Plant Systematics and Evolution: Staff
- T. Parasitology: Staff
- TE. Theoretical Ecology and Evolution: Staff
- TP. Terrestrial Plant and Ecosystem Ecology: Staff
- Z. Ecological Physiology: Staff

**596. Directed Reading and Research**

(2-12) STAFF

*Prerequisite:* consent of instructor. *May be repeated for credit in combination with Biology 596 up to half of the graduate units required for the M.A. degree.*

Hours and credit by arrangement with faculty.

**597. Individual Study for Master's Comprehensive Examinations and Ph.D. Examinations**

(1-12) STAFF

*Prerequisites:* graduate standing and consent of instructor. *May be repeated for credit in combination with Biology 597. No unit credit allowed toward advanced degree. Students are limited to 24 units per examination, and 12 units per quarter.*

Individual study for M.A. comprehensive examinations and Ph.D. examinations.

**598. Master's Thesis Research and Preparation**

(1-12) STAFF

*Prerequisites:* M.A. (thesis) candidate and consent of committee chair. *May be repeated for credit in combination with Biology 598 to a maximum of 12 units. No unit credit allowed toward advanced degree.*

For research underlying the thesis and writing of the thesis.

**599. Ph.D. Dissertation Preparation**

(1-12) STAFF

*Prerequisites:* Ph.D. candidate and consent of instructor. *May be repeated for credit in combination with Biology 599 to a maximum of 12 units.*

For writing of the dissertation.

## Faculty

**Robert W. Anderson**, C.P.A., B.A., UC Santa Barbara, Lecturer (accounting)

**Philip Babcock**, Ph.D., UC San Diego, Assistant Professor, (labor economics, human capital, social dynamics, networks)

**Kelly Bedard**, Ph.D., Queen's University, Maxwell C. and Mary Pellish Professor (labor economics, economics of education, health economics)

**Theodore C. Bergstrom**, Ph.D., Stanford University, Aaron and Cherie Raznick Professor (microeconomic theory, public economics, evolutionary economics)

**Javier Arturo Birchenall**, Ph.D., University of Chicago, Assistant Professor (growth and development, population economics, labor economics, economics history)

**Henning Bohn**, Ph.D., Stanford, Professor (macroeconomics, fiscal and monetary policy, public economics, international economics)

**Gary Charness**, Ph.D., UC Berkeley, Professor (experimental and behavioral economics, game theory, labor economics, )

**William S. Comanor**, Ph.D., Harvard University, Professor (industrial organization, applied microeconomics)

**Robert T. Deacon**, Ph.D., University of Washington, Professor (natural resource and environmental economics, public finance)

**Stephen J. DeCanio**, Ph.D., Massachusetts Institute of Technology, Professor (economics of the global environment, economic history, econometrics and statistics, applied microeconomics)

**Olivier Deschenes**, Ph.D., Princeton University, Associate Professor (labor economics, applied econometrics, econometrics)

**H. E. Frech, III**, Ph.D., UC Los Angeles, Professor (industrial organization, economic theory, health economics, law and economics)

**Rodney J. Garratt**, Ph.D., Cornell University, Professor (game theory, experimental economics, consumer choice)

**Zachary Grossman**, Ph.D., UC Berkeley, Assistant Professor (psychology and economics, experimental economics, game theory)

**Coby Harmon**, C.P.A., B.A., UC Santa Barbara, Lecturer (accounting)

**Marek Kapicka**, Ph.D., University of Chicago, Assistant Professor (macroeconomics, dynamic public finance)

**Tee Weeachart Kilenthong**, Ph.D., University of Chicago, Assistant Professor

(macroeconomics, contract theory, developmental economics )

**Charles D. Kolstad**, Ph.D., Stanford University, Professor (environmental and resource-energy economics, industrial organization)

**Peter J. Kuhn**, Ph.D., Harvard University, Professor (labor economics)

**Finn Kydland**, Ph.D., Carnegie Mellon University, Professor and Jeffrey Henley Chairs, Nobel Laureate 2004 (macroeconomics, economic growth, monetary economics, international economics)

**Gary Libecap**, Ph.D., University of Pennsylvania, Professor, (property rights, economics and law, natural resource economics, economic history)

**Lisa Maass**, C.P.A., B.A., UC Santa Barbara, Lecturer (accounting)

**Neeru Mehra**, M.B.A., Columbia University, Lecturer (finance)

**Rajnish Mehra**, Ph.D., Carnegie Mellon University, Professor (capital markets, corporate finance, international finance, capital and growth theory)

**Mary J. Nisbet**, Ph.D., University of Glasgow, Senior Lecturer with Security of Employment (finance, accounting)

**Glenn Owen**, C.P.A., B.A., UC Los Angeles, Lecturer (accounting)

**Cheng-Zhong Qin**, Ph.D., University of Iowa, Professor (microeconomics, game theory)

**Heather Royer**, Ph.D., UC Berkeley, Assistant Professor (labor, health economics)

**Peter Rupert**, Ph.D., University of Rochester, Professor (microeconomic theory, game theory, managerial incentives)

**Henry Sander**, C.P.A., B.A., University of Connecticut, Lecturer (accounting)

**Nicholas J. Schneider**, B.A., J.D., C.P.A., Lecturer (tax, business law)

**Perry Shapiro**, Ph.D., UC Berkeley, Professor (microeconomic theory, public economics, econometrics)

**Jon Sonstelie**, Ph.D., Northwestern University, Professor (urban economics, public finance)

**Douglas Steigerwald**, Ph.D., UC Berkeley, Professor (econometrics, finance, environmental economics)

**Charles Stuart**, Ph.D., University of Lund, Professor (public finance, economic theory, law and economics)

**Richard B. Watson**, Ph.D., UC Santa Barbara, Lecturer (accounting)

## Emeriti Faculty

**Mortimer Andron**, Ph.D., University of Illinois, Professor Emeritus (finance, investments)

**Robert L. Crouch**, Ph.D., University of Essex, Professor Emeritus (economic theory)

**Stephen LeRoy**, Ph.D., University of Pennsylvania, Professor Emeritus (finance)

**Donald R. Loster**, C.P.A., B.S., Woodbury College, Lecturer Emeritus (accounting)

**Clement G. Krouse**, Ph.D., UC Los Angeles, Professor Emeritus (industrial organization, capital theory)

**John Marshall**, Ph.D., Massachusetts Institute of Technology, Professor Emeritus (economic theory, economics of uncertainty)

**Walter J. Mead**, Ph.D., University of Oregon, Professor Emeritus (natural resource economics)

**Lloyd J. Mercer**, Ph.D., University of Washington, Professor Emeritus (economic history, water resource economics, microeconomic theory)

**W. Douglas Morgan**, Ph.D., UC Berkeley, Professor Emeritus (public finance, applied microeconomics, water-resource economics)

**Llad Phillips**, Ph.D., Harvard University, Professor Emeritus (labor economics, econometrics, economics of criminal justice)

**John E. Pippenger**, Ph.D., UC Los Angeles, Professor Emeritus (open economy-macroeconomics, monetary economics)

**Jati K. Sengupta**, Ph.D., Iowa State University, Professor Emeritus (econometrics, operations research, economic development)

**John G. Traller**, C.P.A., M.B.T., University of Southern California, Lecturer Emeritus (accounting)

**Harold L. Votey, Jr.**, Ph.D., UC Berkeley, Professor Emeritus (economics of criminal justice, international trade, economic development)

## Affiliated Faculty

**Dennis Aigner**, Ph.D., UC Berkeley, Professor (econometrics, corporate environmental management); Donald Bren School of Environmental Science and Management

**Benjamin J. Cohen**, Ph.D., Columbia University, Louis G. Lancaster Professor of Political Economy (international relations, international political economy); Political Science Department

**Christopher Costello**, Ph.D., University of California, Berkeley, Assistant Professor of Environmental Science and Management (Natural Resource Economics, Biodiversity, Uncertainty, Dynamics)

**Matthew Kotchen**, Ph.D., University of Michigan, Assistant Professor (Environmental, Public, and Natural Resource Economics); Bren School of Environmental Science and Management

**Svetlozar Rachev**, Ph.D., Steklov Mathematical Institute, Moscow, Professor of Probability and Statistics

The undergraduate programs in business economics, economics, and economics/mathematics are designed to serve several objectives. Completed in combination with other courses in the College of Letters and Science, the majors provide the opportunity for general cultural and intellectual development. They are particularly useful as preparation for professions such as law, journalism, and accounting. The economics and economics/mathematics majors provide a solid foundation for graduate study in economics, administration, and/or management.

Academic counseling is available for undergraduates from undergraduate advisors and peer advisors, and for graduate students from the advisor for graduate affairs.

The Department of Economics encourages majors to participate in the Education Abroad Program (EAP) and the University of California, UCSB Washington Center option. In most cases, EAP courses can be substituted for equivalent offerings of the Department of

Economics to fulfill major requirements.

Students with a bachelor's degree in economics who are interested in pursuing a California Teaching Credential should contact the credential advisor in the Graduate School of Education as soon as possible.

### Senior Honors Program

The senior honors program in the Department of Economics consists of Economics 196A-B. This two-quarter seminar sequence allows a small group of students to work closely with a faculty member, and to do independent research in economics with a culminating project at the end of the second quarter. Access to the 196 series requires the completion of Economics 100A and 100B with a 3.50 average, and an overall grade-point average of at least 3.5. Students in the honors program will be granted access to any master's level course for which they meet the prerequisite, and will be encouraged to take master's level courses in place of undergraduate courses.

Students who earn A grades in the 196 series will graduate with distinction in the major.

### Five-Year Combined Bachelor's/ Master's Program

The Department of Economics offers a program allowing students to earn a combined bachelor of science degree in engineering and a master of arts degree in economics with a business economics emphasis. See the description below under "Graduate Program."

## Undergraduate Program

### Bachelor of Arts— Business Economics

Before admission to the business economics major, students must complete all economics preparation courses for the major with a grade-point average of 2.85 or above; these courses may not be taken on a passed/not passed basis. Students may declare a pre-business economics major after they have completed at least three courses required for the pre-major with at least a 2.85 grade-point average in all pre-major courses completed at that time. Students who declare the pre-major are responsible for satisfying degree requirements in effect at the time they declare the major. Pre-major status does not, however, guarantee admission to full major status. Once in the major, students must maintain a continuous 2.00 grade-point average in all major courses (preparation and upper-division) while attending the University of California. At its discretion, the department may discontinue students from the major who do not maintain the continuous 2.00 grade-point average in all pre-major and major courses. When preparation requirements are satisfied, students must complete a change of major petition, available in the Economics Undergraduate Office.

**Preparation for the major.** To qualify for admission into the business economics major, students must complete Economics 1, 2, 3A, 3B, PSTAT 5E, and Mathematics 34A-B with a GPA of 2.85 or above. No grade lower than C in pre-major courses will be accepted. In addition, Writing 109AC or 109EC or 109SS must be completed with a grade of C or above; the grade

will not be used in computing the pre-major GPA but will apply to the overall major GPA.

**Upper-division major.** Forty upper-division units in economics, including Economics 100A or 104A, 100B or 104B, 101 or 105 and 134A are required. Two upper-division economics elective courses from the following: Economics 100C, 106, 114, 115, 116A-B-C, 117A, 120, 122, 127, 130, 133, 134B, 135, 140A-B-C, 143, 150A-B, 152, 153, 155, 170, 171, 174, 175A-B, 176, 177, 180, 181, 184; Four additional upper-division economic electives from either previous list or from the following: 111, 112A-B, 113A-B, 118, 119, 128, 132A-B, 136A-B-C, 137A-B, 138A-B, 139, 160, 182, 183, 185, 187, 189. The following restrictions apply to the major: Economics 109 may not be used to fulfill upper-division requirements; credit is not allowed for both Economics 100A and 104A, 100B and 104B, or 101 and 105. A maximum of 12 units of Economics 199 will apply to the upper-division major.

#### Note for prospective transfer students:

Transfer students who wish to declare the Economics major, must complete the following four courses with a 2.75 grade-point average before admission to UCSB: one microeconomics course, one macroeconomics course, one calculus course and one statistics course. Once admitted to UCSB, students who have not yet completed all of the pre-major courses must complete the remaining courses with a UC grade-point average of 2.85 or better. Transfer grades from another UC will be used in the 2.85 grade point average calculation. Transfer grades (from a non-UC school) will not be used in 2.85 grade-point average calculation. Transfer grades will only be used as criteria for admission to UCSB in one of the economics majors.

### Emphasis in Accounting

The emphasis will appear on the student's official transcript. The degree is listed as a Bachelor of Arts in Business Economics.

**Preparation for the major.** To qualify for admission into the business economics major, students must complete Economics 1, 2, 3A, 3B, PSTAT 5E, and Mathematics 34A-B with a GPA of 2.85 or above. No grade lower than C in pre-major courses will be accepted. In addition, Writing 109AC or 109EC or 109SS must be completed with a grade of C or above; the grade will not be used in computing the pre-major GPA but will apply to the overall major GPA.

**Upper-division major.** Fifty three upper-division units in economics, including Economics 100A or 104A, 100B or 104B, 101 or 105 and 134A are required. Two upper-division economics elective courses from the following: Economics 100C, 106, 114, 115, 116A-B-C, 117A, 120, 122, 127, 130, 133, 134B, 135, 140A-B-C, 143, 150A-B, 152, 153, 155, 170, 171, 174, 175A-B, 176, 177, 180, 181, 184; In addition, Economics 118, 136A-B-C, and 137A must be taken along with two classes from the following list: 132A-B, 137B, 138A-B, 139, 182, 183, 185, 189.

**Note:** Economics 185 and 189 do not count towards the CPA's required 36 quarter units of accounting related courses. The following restrictions apply to the major: Economics 109 may not be used to fulfill upper-division re-

quirements; credit is not allowed for both Economics 100A and 104A, 100B and 104B, or 101 and 105. A maximum of 12 units of Economics 199 will apply to the upper-division major.

#### Note for prospective transfer students:

Transfer students who wish to declare the Economics major, must complete the following four courses with a 2.75 grade-point average before admission to UCSB: one microeconomics course, one macroeconomics course, one calculus course and one statistics course. Once admitted to UCSB, students who have not yet completed all of the pre-major courses must complete the remaining courses with a UC grade-point average of 2.85 or better. Transfer grades from another UC will be used in the 2.85 grade point average calculation. Transfer grades (from a non-UC school) will not be used in 2.85 grade-point average calculation. Transfer grades will only be used as criteria for admission to UCSB in one of the economics majors.

### Bachelor of Arts—Economics

Before admission to the economics major, students must complete all economics preparation courses for the major with a grade-point average of 2.85 or above; these courses may not be taken on a passed/not passed basis. Students may declare a pre-economics major after they have completed at least three courses required for the pre-major with at least a 2.85 grade-point average in all pre-major courses completed at that time. Students who declare the pre-major are responsible for satisfying degree requirements in effect at the time they declare the major. Pre-major status does not, however, guarantee admission to full major status. Once in the major, students must maintain a continuous 2.00 grade-point average in all major courses (preparation and upper-division) while attending the University of California. At its discretion, the department may discontinue students from the major who do not maintain the continuous 2.00 grade-point average in all pre-major and major courses. When preparation requirements are satisfied, students must complete a change of major petition, available in the Economics Undergraduate Office

**Preparation for the major.** To qualify for admission into the economics major, students must complete Economics 1, 2, PSTAT 120A, and Mathematics 3A-B-C with a GPA of 2.85 or above. No grade lower than C in pre-major courses will be accepted. In addition, Writing 109AC or 109EC or 109SS must be completed with a grade of C or above; the grade will not be used in computing the pre-major GPA but will apply to the overall major GPA.

**Upper-division major.** Forty-four upper-division units in economics, including Economics 100A-B-C, 101 and 140A-B are required. Five upper-division economics elective courses from the following: Economics 106, 111, 112A-B, 113A-B, 114, 115, 116A-B-C, 117A, 119, 120, 122, 127, 128, 130, 133, 134A-B, 135, 140C, 143, 150A-B, 152, 153, 155, 160, 170, 171, 174, 175A-B, 176, 177, 180, 181, 183, 184; One course may be from the following: 111, 112A-B, 113A-B, 119, 128, 160, 183, 187. The following restrictions apply to the major: Economics 109 may not be used to fulfill upper-division

requirements; credit is not allowed for both Economics 100B and 104B, or 101 and 105. A maximum of 12 units of Economics 199 will apply to the upper-division major.

**Note for prospective transfer students:**

Transfer students who wish to declare the Economics major, must complete the following four courses with a 2.75 grade-point average before admission to UCSB: one microeconomics course, one macroeconomics course, and two calculus courses. Once admitted to UCSB, students who have not yet completed all of the pre-major courses must complete the remaining courses with a UC grade-point average of 2.85 or better. Transfer grades from another UC will be used in the 2.85 grade point average calculation. Transfer grades (from a non-UC school) will not be used in 2.85 grade-point average calculation. Transfer grades will only be used as criteria for admission to UCSB in one of the economics majors.

**Bachelor of Arts—  
Economics/Mathematics**

**Preparation for the major.** Before admission to the economics/mathematics major, students must complete all preparation for the major courses with a grade-point average of 2.70 or above; these courses may not be taken on a passed/not passed basis. The following courses are required: Economics 1 and 2; Mathematics 3A-B-C, 5A-B-C, and 8; and PSTAT 120A. No grade lower than C- in pre-major courses will be accepted.

**Upper-division major.** Forty-four upper-division units are required, including the following courses: Economics 104A-B, 101 or 105, Mathematics 108A-B, 117. Students must also complete Economics 140A-B and 12 upper-division economics elective units chosen from the following: Economics 100C, 106, 114, 115, 116A-B-C, 117A, 120, 122, 127, 130, 133, 134A-B, 135, 143, 150A-B, 152, 153, 155, 170, 171, 174, 175A-B, 176, 177, 180, 181, 184. Economics 109 cannot be used to fulfill the upper-division requirements. Students should consult closely with their advisor in the Department of Economics or Mathematics to assure an appropriate program of study. Note: 104A-B and 105 should be taken fall, winter, and spring of junior year.

**Note for prospective transfer students:** Transfer students who wish to declare the Economics/Mathematics major, must complete the following four courses with a 2.75 grade-point average before admission to UCSB: one microeconomics course, one macroeconomics course, and two calculus courses. Once admitted to UCSB, students who have not yet completed all of the pre-major courses must complete the remaining courses with a UC grade-point average of 2.70 or better. Transfer grades from another UC will be used in the 2.70 grade point average calculation. Transfer grades (from a non-UC school) will not be used in 2.70 grade-point average calculation. Transfer grades will only be used as criteria for admission to UCSB in one of the economics majors.

**Graduate Program**

Applicants must fulfill University requirements for admission to graduate status described in

the chapter “Graduate Education at UCSB” in addition to the departmental requirements for admission detailed below.

**Master of Arts—Economics**

**Admission**

Admissions decisions are made by faculty of the Economics Department. Admission to the program is based on intellectual potential, scholarly promise, academic achievement, programmatic fit and available space. A bachelor’s degree in economics is not required for admission to the Masters program, but the department does require that specific courses, particularly economic theory, be passed with distinction (grade B+ or better). Strong mathematical aptitude is needed. At least two quarters of calculus and one basic statistics course are required. One year is recommended.

The Graduate Record Examination (GRE) is required of all applicants to the graduate program. Applicants, whose native language is not English, are required to take either the Test of English as Foreign Language (TOEFL) or the International English Language Testing System (IELTS) exam. The minimum TOEFL score for consideration is 550 when taking the paper-based test (PBT), or 80 when taking the internet-based test (IBT). The minimum IELTS score for consideration is an Overall Band Score of 7 or higher. TOEFL or IELTS scores can be no more than two years old at the time of application to UCSB.

**Degree Requirements**

The M.A. may be obtained under either of the two plans described below, both of which require passing a comprehensive examination. There is no thesis option for the M.A. in economics. There is no language requirement for the M.A. degree. Both Master of Arts programs are designed so that a well-prepared student can obtain the degree in one academic year. Plan A is designed for students who wish specifically to acquire the M.A. degree; Plan B is designed for students in the Ph.D. program who wish to acquire the M.A. degree.

**Plan A:** Thirty-six units of coursework, including 20 units of core courses: Economics 205A-B, 208, and 240A-B, that must be passed with a grade of B or better in each course, along with 16 units of elective field courses. Plan A requires successful completion of a comprehensive examination that covers Microeconomic Theory and Quantitative Methods. (Note: All graduate students who follow the comprehensive exam option are required to complete a minimum of 24 units of graduate-level coursework in courses numbered 200-299 or 596.)

**Plan B:** Thirty-six units of core courses must be completed with a grade of B or better: Economics 204A-B-C, 210A-B-C, 241A-B-C. The Ph.D. preliminary examinations in Microeconomic Theory, Macroeconomic Theory and Econometrics must be passed with an M.A. Pass or better in order to receive a Master of Arts degree.

**Master of Arts—Economics—  
Business Economics Emphasis**

The Master of Arts in Economics with an emphasis in Business Economics (M.A.B.E.)

has the same admission requirements as the M.A. in economics. Well-prepared students can obtain the M.A. in Economics with a Business Economics emphasis in one academic year. There is no language requirement for the M.A.B.E.

Students must complete 36 units of coursework, including 20 units of core courses: Economics 205A-B, 208, and 240A-B, and 16 units of field courses: Economics 234A-B, 240C, and 273A. All courses must be passed with a grade of B or better. Also required is the successful completion of a written comprehensive examination that covers microeconomic theory and quantitative methods.

**Five-Year Combined  
Bachelor of Science Engineering/  
Master of Arts Economics—  
Business Economics Emphasis**

A program which provides an opportunity for outstanding students from any engineering major (including computer science, to earn both a B.S. in engineering and a Master of Arts in Economics with an emphasis in Business Economics degree in five years. Information about these programs is available in the College of Engineering Undergraduate Office or from the Department of Economics Graduate Office. Interested students should inform the Economics Graduate Office of their interest in the program at the end of the sophomore year in order to plan their upper-division classes appropriately.

**Doctor of Philosophy—  
Economics**

**Admission**

Admissions decisions are made by the departmental Graduate Admissions Committee, which is chaired by the Director of Graduate Studies. Admission to the program is based on intellectual potential, scholarly promise, academic achievement and programmatic fit. A bachelor’s degree is required, though not necessarily with a major in economics. The department does require that specific courses, particularly economic theory and econometrics, be passed with distinction. Prospective students are advised to take as much statistics and mathematics as possible: at least one mathematical statistics course, a year of calculus, and a course in matrix algebra are mandatory. An additional year of calculus and some course work in stochastic processes and linear algebra is highly recommended.

The Graduate Record Examination (GRE) is required of all applicants to the graduate program. Applicants, whose native language is not English, are required to take either the Test of English as Foreign Language (TOEFL) or the International English Language Testing System (IELTS) exam. The minimum TOEFL score for consideration is 600 when taking the paper-based test (PBT) or 100 when taking the internet-based test (IBT). Successful applicants typically score above 260 on the paper-based test or 105 when taking the internet-based test. The minimum IELTS score for consideration is an Overall Band Score of 7 or higher. TOEFL or IELTS scores can be no more than two years old at the time of application to UCSB.

## Degree Requirements

Ph.D. students must successfully complete one year of required courses in Microeconomic Theory (Economics 210A-B-C), Macroeconomic Theory (Economics 204A-B-C), and Econometrics (Economics 241A-B-C). The Microeconomic Theory, Macroeconomic Theory and Econometrics courses must be completed with a grade of B or better in each course.

At the end of the first year, students must pass preliminary examinations in Microeconomics, Macroeconomics and Econometrics. Grading categories for the preliminary examinations are Fail, M.A. Pass, Ph.D. Pass, and Ph.D. Pass with Distinction. To proceed in the Ph.D. program, students must receive a Ph.D. Pass or better. Those receiving an M.A. Pass or better on both examinations are entitled to the Master of Arts degree, as long as they fulfill the Plan B requirements for the M.A. degree specified above.

Ph.D. students take eight elective courses during the second and third years. The electives must include specializations in two fields. The fields are: Econometrics, Environmental and Natural Resources, Experimental and Behavioral Economics, Finance and Money, Industrial Organization, International Trade and Finance, Labor Economics, Macroeconomic Theory and Policy, Mathematical Economics, and Public Finance.

In the second year, students begin a research project to launch their dissertation research. When they complete the project and defend proposals for the rest of their dissertation in an oral qualifying examination administered by their doctoral committee, they advance to candidacy for the doctorate. The goal is to reach this important milestone by the end of Fall quarter of the third year. The normal time for completion of the Ph.D. is five years; a few students finish in four years. The Ph.D. is completed by the submission of a dissertation acceptable to the student's committee. Defense of the dissertation is at the discretion of the student's committee.

## Economics Courses

### LOWER DIVISION

#### 1. Principles of Economics—Micro (4) BERGSTROM, SONSTELIE

An introduction to microeconomic analysis. Economic theory related to demand, production, competitive and noncompetitive product markets, input markets, and welfare. Applications of microeconomic theory including its use in evaluating and forming public policy.

#### 2. Principles of Economics—Macro (4) STAFF

*Prerequisite:* Economics 1.  
An introduction to macroeconomic analysis. Analysis of income, employment, and the price level. Applications of macroeconomic theory including its use in evaluating and forming public policy.

#### 3A-B. Financial Accounting (4-4) SANDER, HARMON, ANDERSON

*Prerequisite:* For 3B: Economics 3A.  
*Recommended preparation:* Economics 1 and 2  
A two-quarter series providing an introduction to the purposes, conceptual framework, measurement principles and reporting issues of accounting. Particular emphasis will be placed on the links between accounting, economics, and finance.

#### 3AH. Financial Accounting - Honors (1) STAFF

*Prerequisite:* Concurrent with Econ 3A.

Students receive one unit for the honors seminar. Intended for highly motivated and well prepared students. (F, W, S)

#### 3BH. Financial Accounting - Honors

(1) STAFF

*Prerequisite:* Concurrent with Econ 3B.

Students receive one unit for the honors seminar. Intended for highly motivated and well prepared students. (F, W, S)

### UPPER DIVISION

*Note:* Upper-division courses are open to full majors only.

#### 100A. Intermediate Microeconomic Theory

(4) GARRATT, STUART, BERGSTROM

*Prerequisite:* Economics 1 and 2, or 109; PSTAT 5E or PSTAT 120A; Mathematics 34A-B or 3A-B or equivalent.

*Credit not given for both Economics 100A and 104A.*

Economic theory relating to demand, production, and competitive product markets with emphasis on applications of theory.

#### 100B. Intermediate Microeconomic Theory

(4) STAFF

*Prerequisite:* Economics 100A.

*Credit not given for both 100B and 104B.*

Economic theory relating to imperfectly competitive product markets, input market, and welfare, with emphasis on applications. Includes an introduction to game theory.

#### 100C. Intermediate Microeconomic Theory

(4) BERGSTROM

*Prerequisites:* Economics 100A-B or 104A-B.

Covers topics including externalities, law and economics, information technologies, public goods and asymmetric information. These topics are essential to understanding real markets but are currently not included in the Economics 100A-B sequence.

#### 101. Intermediate Macroeconomic Theory

(4) STAFF

*Prerequisite:* Economics 100A.

*Credit not given for both 101 and 105.*

*Recommended preparation:* Economics 100B.

Contemporary analysis of income, employment, price level, and public policy using static general equilibrium framework with emphasis on applications of theory. Long term economic growth is also covered.

#### 104A. Intermediate Microeconomic Theory

(4) QIN

*Prerequisites:* Economics 1 and Economics 2, or 109; PSTAT 5E or 120A; and Mathematics 3A-B-C.

*Credit not given for both Economics 104A and 100A.*

Economic theory relating to demand, production, and competitive product markets, using techniques from the calculus.

#### 104B. Intermediate Microeconomic Theory

(4) QIN

*Prerequisite:* Economics 104A.

*Credit not given for both Economics 104B and 100B.*

Economic theory relating to imperfectly competitive product markets, input markets, and welfare, using techniques from the calculus. Basic capital theory and game theory are covered.

#### 105. Intermediate Macroeconomic Theory

(4) STAFF

*Prerequisites:* Economics 100A or 104A; and Mathematics 3A-B-C.

*Not open for credit to students who have completed Economics 101.*

Contemporary analysis of income, employment, and price level and public policy using a static general equilibrium framework with emphasis on pure theory and use of techniques from the calculus.

### 106. Managerial Economics

(4) SENGUPTA

*Prerequisites:* Mathematics 3A-B or 34A-B; and, Economics 100A-B or 104A-B.

Economic principles will be applied to practical decision-making situations. Methods of price and output determination, capital budgeting, and choices under uncertainty. Methods of economic analysis and their application will be emphasized.

### 109. Introduction to Economics

(4) WATSON, PHILLIPS

*Course cannot be used to satisfy any economics major requirements. Repeat Comments:* If Economics 109 is completed first, then full credit will be allowed for Economics 1, 2 and 109. Two units of credit will be allowed for Economics 109 if credit has been previously awarded for Economics 1 or 2 or its equivalent. No unit credit will be allowed for Economics 109 if credit has been previously awarded for both Economics 1 and 2 or their equivalents.

A broad survey of economic principles, including both microeconomics and macroeconomics.

### 111. Economic History of Ancient Civilization

(4) STAFF

*Prerequisites:* Economics 1 and 2; or Economics 109.

A survey of the economies of the ancient Near East, Egypt, Greece, and Rome with emphasis on important issues in their economic history.

### 112A. European Economic History to 1850

(4) STAFF

*Prerequisites:* Economics 1 and 2; or Economics 109.

Analysis of the economic development of Europe from the Middle Ages through the English Industrial Revolution.

### 112B. European Economic History Since 1850

(4) STAFF

*Prerequisites:* Economics 1 and 2; or Economics 109.

Analysis of the economic development of Europe since the English Industrial Revolution.

### 113A. Economic History of the United States to 1900

(4) STAFF

*Prerequisites:* Economics 1 and 2; or Economics 109.

Key issues and episodes in American economic history, such as the sources of economic growth, slavery and the nineteenth century southern economy. Populism and the rise of regulation, and macroeconomic history.

### 113B. Twentieth Century United States Economic History

(4) STAFF

*Prerequisites:* Economics 1 and 2; or Economics 109.

A survey of United States economic development in the twentieth century with emphasis on issues related to the growth, instability, and distribution of income. The impact of public policy on economic growth, instability, and income distribution will be an important theme of the course.

### 114. Economic Development

(4) STAFF

*Prerequisites:* Economics 1 and 2; or Economics 109.

*Recommended preparation:* Economics 100A.

Applications of economic theory to the problems of developing nations.

### 115. Environmental Economics

(4) KOLSTAD

*Prerequisite:* Economics 100A-B.

*Same course as Environmental Studies 175.*

Course provides a rigorous treatment of environmental economics. Topics include welfare analysis, ethical dimensions of economic criteria for protecting the environment, measuring the demand for environmental goods, property rights, economic incentives, including marketable permits and emission fees, and regulating risk.

### 116A. Industrial Organization Principles

(4) KROUSE, COMANOR

*Prerequisite:* Economics 100B or 104B.

*Not open for credit to students who have completed Economics 116.*

Analysis of competition, monopolistic competition, oligopoly, and monopoly theories and practices.

**116C. Antitrust Economics****(4) KROUSE, COMANOR***Prerequisite: Economics 100B or 104B.*

The antitrust treatment of monopoly and monopolization, including both horizontal and vertical market arrangements and controls, and in-depth analyses of major antitrust decisions.

**117A. Law and Economics I****(4) FRECH***Prerequisite: Economics 100B or 104B.*

Application of economic analysis to the law. Includes an introduction to common law, constitutional law, and legal processes. Topics may include property law, contract law, and tort law.

**118. Financial Accounting Analysis and Planning****(4) WATSON, LOSTER, MAASS***Prerequisites: Economics 2 or 109; Economics 3B; and PSTAT 5E or PSTAT 120A.*

An economic analysis of financial statements in a macroeconomic environment. Topics include evaluation of short term and long term liquidity, profitability, capital structure and the forecast of earnings and financial position using financial and economic models.

**118H. Financial Accounting Analysis and Planning - Honors****(1) STAFF***Prerequisite: Concurrent enrollment in Econ 118.*

Students receive one unit for the honors seminar. Intended for highly motivated and well prepared students. (F, W, S)

**119. United States Business History****(4) STAFF***Prerequisites: Economics 1 and 2; or Economics 109.*

A survey of the development and change of business organization in the United States in the context of the growth and development of the economy and changes in society. Particular attention is paid to the relationship between business and government.

**120. Urban and Regional Economics****(4) SONSTELIE***Prerequisite: Economics 100B or 104B.*

Economic analysis applied to current urban and regional problems.

**122. Natural Resource Economics****(4) DEACON***Prerequisite: Economics 100B or 104B.**Same course as Environmental Studies 179.*

Microeconomic theory and capital theory applied to problems of conservation and management of natural resources. Analysis of public policy with special emphasis on non-renewable energy resources, management of forests, deforestation and species extinction, and use of fish and game resources.

**128. Literature and Economics****(4) DECANIO***Prerequisite: upper-division standing.*

Issues in history, political economy and social theory as reflected in major works of literature. Content and readings will vary from quarter to quarter. Extensive writing by students will be required.

**130. Public Finance****(4) STUART***Prerequisites: Economics 100B or 104B; and, Economics 101 or 105.*

Fiscal theory and policy. Incidence and effects of taxation, government expenditure programs, and benefit cost analysis.

**132. Auditing****(4) LOSTER***Prerequisite: Economics 118 and 136A-B-C.*

Developing and understanding of concepts and practices for audits of financial statements. Studying professional standards, ethics, and legal liability. The audit process is covered in-depth: planning, internal control, audit risk, materiality, evidence, program design, sampling, completing the audit, and reporting.

**132AH. Auditing - Honors****(1) STAFF***Prerequisite: Concurrent enrollment in Econ 132A.*

Students receive one unit for the honors seminar. Intended for highly motivated and well prepared

(F, W, S)

**132B. Forensic Accounting****(4) LOSTER***Prerequisites: Economics 132 or 132A; open to business economics, economics, and economics math majors only.*

Application of special skills in accounting, auditing, finance, quantitative methods, certain areas of the law, research, and investigative skills for the purpose of resolving financial issues in a manner that meets standards required by courts of law. Topics include accounting and legal fundamentals, tools and techniques, and selected applications: financial statement fraud, fraud against the organization, tax fraud, bankruptcy, divorce, and identity theft, organized crime and terrorism investigation, business valuation, and dispute resolution and litigation services. Case studies and guest speakers are used. (F,W,S,M)

**132BH. Forensic Accounting - Honors****(1) STAFF***Prerequisite: Concurrent enrollment in Econ 132B.*

Students receive one unit for the honors seminar. Intended for highly motivated and well prepared students. (F, W, S)

**133. Topics in Macroeconomic Theory****(4) BOHN***Prerequisite: Economics 101 or 105.*

Topics may include fiscal policy and government budget deficits, monetary policy and inflation, investment and economic growth, theories of the business cycle, rational expectations and the Lucas critique, optimal taxation and the time consistency of government policies. Content may vary from year to year.

**134A. Financial Management****(4) LEROY***Prerequisite: Economics 100B or 104B.*

Discounting of certain future cash flows. Principles of evaluation of investment projects. Demand and supply of investment funds. Risk and the valuation of asset prices. Analysis of a firm's debt and dividend policies; the effect of taxes and inflation on these policies.

**134B. Financial Management****(4) LEROY***Prerequisite: Economics 134A.*

This course is devoted to the testing and application of theories developed in Economics 134A. The specific characteristics and uses of warrants, options, futures, bonds, and stocks are studied. The microcomputer lab may be used for homework projects.

**135. Monetary Economics****(4) BOHN***Prerequisite: Economics 101 or 105.**Recommended preparation: Economics 134A.*

Survey of monetary theory, the banking system and the supply of money, monetary policy, and current issues.

**136A-B-C. Intermediate Accounting****(5-4-4) HARMON, SANDER, MAASS, ANDERSON***Prerequisites: Economics 118 (for 136A); Economics 136A (for 136B); Economics 136A-B (for 136C).*

An in-depth analysis of recognition, measurement, classification, and valuation issues in financial reporting within the framework of generally accepted accounting principles. Case studies and microcomputer analysis software will be integrated into the course.

**136AH. Intermediate Accounting - Honors****(1) STAFF***Prerequisite: Concurrent enrollment in Econ 136A.**Designed for majors.*

Students receive one unit for the honors seminar. Intended for highly motivated and well prepared students. (F, W, S)

**136BH. Intermediate Accounting - Honors****(1) STAFF***Prerequisite: Concurrent enrollment in Econ 136B.**Designed for majors.*

Students receive one unit for the honors seminar. Intended for highly motivated and well prepared students. (F, W, S)

**136CH. Intermediate Accounting - Honors****(1) STAFF***Prerequisite: Concurrent enrollment in Econ 136C.*

Students receive one unit for the honors seminar. Intended for highly motivated and well prepared students. (F, W, S)

**137A-B. Managerial Accounting****(4-4) WATSON, MAASS***Prerequisites: Economics 1, 2, and 3A-B.**Not open for credit for students who have completed Economics 137.*

A two-quarter series covering the theory and application of managerial accounting concepts. The course investigates the interaction between economic theory, financial accounting, and management decision making for planning and control.

**137BH. Managerial Accounting - Honors****(1) STAFF***Prerequisite: Concurrent with Econ 137B.*

Students receive one unit for the honors seminar. Intended for highly motivated and well prepared students. (F, W, S)

**138A-B. Income Taxation****(4-4) SCHNEIDER***Prerequisite: Economics 3A-B (for 138A); Economics 138A (for 138B).*

An introduction to taxation. The basic theories, concepts, and general rules of federal income tax and their interrelationships with personal, business, and financial transactions. The course provides an understanding of tax policies and the interrelationship between tax and financial decisions.

**139. Advanced Accounting****(4) HARMON***Prerequisites: Economics 136A-B.*

Accounting for business combinations and preparation of consolidated financial statements, principles of fund accounting (governmental and non-profit entities), foreign currency translation and transactions, partnership formation, operation, and liquidation.

**139H. Advanced Accounting - Honors****(1) STAFF***Prerequisite: Concurrent with Econ 139.*

Students receive one unit for the honors seminar. Intended for highly motivated and well prepared students. (F, W, S)

**140A. Introduction to Econometrics****(4) STEIGERWALD***Prerequisite: Economics 100B or 104B; and, Economics 101 or 105; and PSTAT 120A.*

Estimation and hypothesis testing in classical linear regression models as well as violations of each classical assumption. Discrete dependent variable models and systems of simultaneous equations are also covered.

**140B. Introduction to Econometrics****(4) DESCHENES***Prerequisite: Economics 140A.*

Time-series econometrics including stationary ARMA models, estimation and hypothesis testing in the presence of unit roots, and financial models with conditional heteroskedasticity.

**140C. Introduction to Econometrics****(4) BEDARD***Prerequisites: Economics 140A-B.*

Applied econometrics. An empirical project forms the basis of the course, designed to build on the principles taught in Economics 140A. Lectures concentrate on tools of applied analysis and may include, limited-dependent variable models, duration analysis, and systems estimation.

**150A. Labor Economics****(4) KUHN, BEDARD, DESCHENES***Prerequisite: Economics 100B or 104B.**Not open for credit to students who have completed Economics 150.*

Analyzes the determinants of labor supply, labor demand, and equilibrium. Topics include the work-incentive effects of income-support programs and the effects of immigration on labor markets.

**150B. Labor Economics****(4) KUHN, BEDARD, DESCHENES***Prerequisite: Economics 100B or 104B.*

Analyzes the structure of wages. Determinants of earnings studied include compensating differentials, human capital in the form of education and training, and immigrant assimilation.

### 152. Personnel Economics

(4) KUHN

*Prerequisite: Economics 100B or 104B.*

Studies the allocation and pricing of labor within firms. Topics covered include employee selection, design of optimal piece rates, advantages and disadvantages of seniority-based pay, tournaments and promotions, and incentives in team production.

### 153. Economics of Education

(4) BEDARD

*Prerequisite: open to business economics, economics and economics math majors only.*

Economic theory, basic econometric techniques as they apply to economics of education. Specific areas of focus include production and financing of education, contribution of education to economic growth and development, organization of education industry, and bias and discrimination in education.

### 155. Economics of Insurance

(4) MARSHALL

*Prerequisite: Economics 100B or 104B.*

Topics may include behavior under uncertainty, markets in contingent claims, insurance law and institutions, insurance as financial management, valuation of insurance companies, regulation of insurance, disaster insurance, health insurance, moral hazard, adverse selection, public policy toward insurance.

### 160. Economics of Crime and Justice

(4) PHILLIPS, VOTEY

*Prerequisites: Economics 1 and 2; or Economics 109.*

Examines social policy to minimize the losses to crime and the costs of crime control. Develops the economics of crime generation, law enforcement, prosecution, corrections, and punishment.

### 170. Health Economics

(4) FRECH

*Prerequisite: Economics 100B or 104B.*

Application of economic and statistical principles to health and health services. Topics may include the determinants of health, demand for health care and health insurance, competition and monopoly in health care and insurance of health care, HMOs and managed care plans, public policy and international comparisons.

### 171. Introduction to Game Theory

(4) CHARNESS

*Prerequisite: Economics 134A or Mathematics 3C.*

A rigorous study of strategic interaction. Topics include normal and extensive form games, existence and uniqueness of equilibrium, randomization, minimax, dynamics and equilibrium selection, auctions and bargaining, principle-agent incentives, voting, private contributions to public goods, oligopoly competition, market entry and burning money, wars of attrition.

### 174. Negotiations

(4) CHARNESS

*Prerequisite: open to business economics, economics and economics math majors only.*

Applied theories as guides to improving negotiations. Develop and sharpen negotiating skills by participating in realistic negotiating simulations. A number of cases will be presented; individuals make choices about actions and tactics within the negotiation.

### 176. Experimental Economics

(4) CHARNESS

*Prerequisite: open to business economics, economics and economics math majors only.*

Introduction to the idea that economics, like all of the natural sciences, can be a laboratory science. Focus on performing and engaging in experiments. Students design experiments and discuss the designs of others.

### 180. International Trade

(4) STAFF

*Prerequisite: Economics 100B or 104B.*

International trade theory and policies with examples from current issues and problems.

### 181. International Finance

(4) STAFF

*Prerequisite: Economics 101 or 105.*

International money and capital markets and their impact on the domestic and world economies; international financial institutions and policies.

### 182. International Accounting and Financial Management

(4) NISBET

*Prerequisites: Economics 118 and 134A.*

Accounting and financial management issues in the multinational enterprise including the global development of accounting and disclosure practice, international reporting and the management of global enterprise resources.

### 183. Economics of Entrepreneurship

(4) STAFF

*Prerequisite: Economics 1 and 2; or Economics 109.*

Study of entrepreneurs as risktakers, innovators, combiners of resources, and managers, and of the legal and institutional environments that encourage (and discourage) such activity.

### 184. Decisions Under Uncertainty

(4) MARSHALL

*Prerequisites: Economics 1 and 2; and, PSTAT 5E or 120A.*

Analysis of decision-making by businesses, consumers and public agencies when conditions are uncertain. Topics include probability, utility, maximization, representation of decision problems in practical applications, updating probabilities in light of new data, and valuation of information.

### 185. Information Systems

(4) OWEN

*Prerequisites: Economics 1 or 109; and Economics 3A-B.*

A study of the analysis, design, and implementation of accounting information systems.

### 187. Corporate Finance

(4) LOWES

*Prerequisites: open to business economics, economics and economics math majors only.*

Financial function organization, management theories, financial careers and cross functional relationships, and issues and challenges for the future. Develop functional organizational awareness, career perspective and jump start effectiveness, leadership, and team management skills and success.

### 189. Business Law and Ethics

(4) SCHNEIDER

*Prerequisites: Economics 1 and 2.*

Course provides a basic understanding of ethics and the legal framework within which U.S. businesses operate. Includes a broad overview of court procedures and in-depth coverage of selected topics including contracts, securities, and property rights.

### 191AA-ZZ. Special Topics in Economics

(4) STAFF

(4) STAFF

*Open to economics majors only. May be repeated for credit to a maximum of 30 units. Up to 8 units may be applied to the major providing letter designations are different.*

Lectures in special areas of interest in economics. Consult the department office regarding proposed course topics.

### 193. Internship in Economics

(1) STAFF

*Prerequisite: open to business economics, business economics with accounting, economics, and economics/mathematics majors only.*

Course enables students to obtain credit for economics-related internship experience. A seven to eight page written report is required for credit.

### 194AA-ZZ. Group Studies

(1-4) STAFF

*Prerequisite: upper-division standing; consent of instructor.*

*Subject to departmental approval, students may repeat this course; however, only four units may count toward major.*

Intensive study and research on a topic in economics selected by the student with the guidance and approval of a faculty member.

### 196A-B. Senior Honors Seminar

(4-4) STAFF

*Prerequisite: admission to Department of Economics senior honors program (for 196A): Economics 196A (for 196B).*

Students undertake independent research project(s) under direction of faculty member. The research results are presented as an honor paper at the end of the second term (196B).

### 199. Independent Studies in Economics

(1-5) STAFF

*Prerequisites: upper-division standing in the major; completion of two upper-division courses in economics; consent of department and instructor.*

*Students must have a minimum 3.0 grade-point average for the preceding three quarters and are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. Only 12 units of Economics 199 may apply toward the major.*

Coursework shall consist of academic research supervised by a faculty member. This course is not intended for internship credit.

### 199RA. Independent Research Assistance in Economics

(1-5) STAFF

*Prerequisites: upper-division standing in the major; completion of two upper-division courses in economics; consent of department and instructor.*

*Students must have a minimum 3.0 grade-point average for the preceding three quarters and are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined.*

Coursework shall consist of faculty supervised research.

## GRADUATE COURSES

### 204A. Macroeconomic Theory

(4) BOHN

*Prerequisite: Economics 210A-B.*

Introduction to modern macroeconomics. Study of economic growth and dynamic optimization. Representative agent, overlapping generations and monetary models will be covered.

### 204B. Macroeconomic Theory

(4) STAFF

*Prerequisite: Economics 204A.*

Modern business cycle analysis, fiscal and monetary policy in a dynamic framework.

### 205A-B. Economic Decisions

(4) COMANOR

*Prerequisite: Knowledge of differential calculus and economic theory. Economics 100A-B, Economics 101 or equivalent courses.*

This course presents the basic concepts of microeconomics by emphasizing their application to actual situations and their use in problem-solving. It covers the theory of choice in the first term and the theories of the firm and of markets in the second.

### 208. Topics in Macroeconomic Theory and Policy

(4) STAFF

(4) STAFF

*Prerequisite: Economics 100A-B and 101, or equivalent.*

Keynesian, New-Classical, and New-Keynesian theory of income determination, and policy prescriptions thereof. Additional topics include rational expectations and policy effectiveness, introduction to the intertemporal approach in macroeconomics, modern business cycle theory, and theory and evidence on economic growth.

### 210A. Theory of Consumption and Production

(4) GARRATT, KOLSTAD, MARSHALL, QIN

*Prerequisites: Mathematics 3A-B-C; and, Economics 104A-B or Economics 205A-B.*

Preferences, revealed preference, utility, constrained optimization, demand, expenditure, indirect utility, cost, production, and profit.

### 210B. Game Theory

(4) GARRATT, QIN

*Prerequisites: Mathematics 3A-B-C; and, Economics 104A-B or Economics 205A-B.*

Risk, expected utility, cooperative games, non-cooperative games, equilibrium, duopoly, oligopoly, bargaining and auctions.

**210C. Markets and Incentives****(4) KOLSTAD, MARSHALL, QIN***Prerequisites: Economics 210A-B.*

Partial equilibrium methods for the analysis of competitive markets, monopoly, externalities and public goods; applications of game theory to oligopoly; topics in asymmetric information, including adverse selection, signaling and screening.

**210D. General Equilibrium and Welfare****(4) MARSHALL***Prerequisite: Economics 210C.*

Existence of general, price-taking equilibrium, welfare theorems, examples, the core, equilibrium in risk markets, and intertemporal equilibrium.

**211A. The Economic Foundations of Human Behavior****(4) STAFF**

Theoretical analysis of human capital accumulation, the allocation of time, household production, and the family as a decision making unit with respect to non-market behavior. Application of the preceding to such topics as fertility, marriage, criminality, health, education, discrimination.

**214A. Economic Development****(4) SENGUPTA**

A study of problems faced by the less developed countries. Elements of new growth theory. Endogenous growth and learning by doing. Topics considered include population growth, labor supply, capital accumulation, openness in trade, and technological change.

**214B. Economic Development****(4) STAFF**

A study of the special problems faced by the less developed countries and the initial conditions and economic mechanisms that must be taken into account in raising living standards. Topics considered include population growth, labor supply, capital accumulation, the use of foreign resources, and effects of technological change.

**216A-B. Organization of Industry****(4-4) COMANOR, FRECH, KROUSE**

Theoretical and empirical analyses of "imperfect" competition. Individual or firm optimization and market equilibrium are considered. Topics include oligopoly, monopolistic competition, information, determinants of market structure, complex pricing, vertical relations. Antitrust, regulatory, and government ownership policies will be examined.

**225. Heterogeneous Agent Macroeconomics****(4) KAPICKA***Prerequisites: open to economics majors only.*

Dynamic general equilibrium models with heterogeneous agents. Covers economies where aggregation is possible, economies with exogenously incomplete markets and economies where the market incompleteness is endogenous due to limited commitment or private information.

**229. Macroeconomics Theory and Policy****(4) BOHN***Prerequisites: Economics 204A and 204B.*

Covers dynamic fiscal policy, including optimal taxation and government debt management, time consistency problems of fiscal and monetary policy, government budget deficits and their effects on the economy, and other advanced topics in macroeconomics.

**230A-B. Public Finance****(4-4) BERGSTROM, SHAPIRO, SONSTELIE, STUART**

A. Public goods, taxation, and expenditure theory.

B. Topics vary: public debt management and fiscal policy; advanced topics in public expenditure and taxation theory; analysis of collective choice, political processes, and group decision-making.

**230C. Public Finance****(4) SONSTELIE***Prerequisites: Economics 230A-B.*

Reading and discussion of selected topics and recent literature in public finance and public economics. Emphasis on the development of dissertation research topics. Student presentations required. Course outline and readings will vary from quarter to quarter.

**234A. Introduction to Finance****(4) MEHRA**

Basic principles of financial management and an introduction to the subjects covered in subsequent courses in the Economics 234 sequence. Topics include financial planning, investment criteria, capital structure, and principles of asset valuation.

**234B. Theory of Finance****(4) STAFF**

Rigorous treatment of asset pricing theory. The economics of intertemporal choice and choice under uncertainty are developed and applied to financial markets. Theories of asset pricing are covered including the capital asset pricing model, arbitrage pricing theory, and option pricing theory.

**235A. Finance****(4) LEROY***Prerequisite: Economics 210A-B or 204A.*

Individuals' optimal consumption/portfolio choice under uncertainty and implied asset valuation. Rigorous treatment of the traditional linear asset pricing relations; mean-variance CAPM and APT, and the equilibrium valuation; consumption-based intertemporal asset pricing models.

**235B. Finance****(4) LEROY, MEHRA***Prerequisites: Economics 210D; and, Economics 204A or 208; and Economics 235A.*

Covers the integration of dynamic capital theory and the theory of finance, multiperiod general equilibrium pricing models and tests of those models.

**237. Financial Management****(4) WATSON***Prerequisite: consent of instructor; not open to UCSB Economics M.A. candidates.*

An introduction to concepts from accounting, economics, and finance crucial to understanding the operation of business firms in a market economy. Topics include costs, profits, supply, demand, inflation, capital markets, present value, risk, debt, equity, balance sheets, and income statements.

**240A. Introduction to Econometrics****(4) PHILLIPS, SHAPIRO***Prerequisite: PSTAT 5E.*

Review of probability and statistics with application to statistical decision theory, inference, interval estimation, and hypothesis testing. Introduction to the linear regression model and analysis of variance with applications to the estimation of applied economic models.

**240B. Econometrics with an Emphasis on Cross Section Analysis****(4) FRECH, SHAPIRO***Prerequisite: Economics 240A.*

Extension to multiple regression analysis. Study of various problems, such as heteroskedasticity, serial correlation, non-orthogonal errors, and nested hypothesis testing. Emphasis on oral and written presentation of research projects.

**240C. Econometrics With an Emphasis on Time Series and Forecasting****(4) PHILLIPS***Prerequisites: Economics 140A, 240B, or 241C.*

Time series econometrics with an emphasis on business forecasting. Study of various methods of econometric forecasting including statistical decision theory, Box-Jenkins, adaptive methods, single and simultaneous structural equation models.

**241A. Econometrics****(4) STIEGERWALD***Prerequisites: Mathematics 3A-B-C.*

Elements of probability and statistics for econometrics. Probability density functions, moment-generating functions, central limit theorems, method of maximum likelihood.

**241B. Econometrics****(4) STEIGERWALD***Prerequisite: Economics 241A.*

The intuition and theory underpinning estimation of single and multiple equation regression models.

**241C. Econometrics****(4) STAFF***Prerequisite: Economics 241B.*

Covers extension of the general linear model,

simultaneous equations estimation, identification, dynamic model structure, and limited dependent variable estimation. Emphasis is given to both theoretical development and applications of the basic theory.

**242. Advanced Game Theory****(4) BERGSTROM, GARRATT, QIN***Prerequisites: Economics 210B-C or Mathematics 118.*

*Not open for credit to students who have completed Economics 244B.*

Cournot-Nash equilibrium, bargaining theory, value, and their modern variations including Bayesian-Nash equilibrium and evolutionary stable strategy. Nonequilibrium solution concepts (dominance and rationalizability). Applications to oligopoly, signaling, principal-agent problem, and organization of firms.

**244. Mathematical Economics****(4) STAFF***Prerequisites: Economics 201A-B-C-D, and 249; and Mathematics 118A-B-C.*

*Not open for credit to students who have completed Economics 244A.*

Topics include bargaining, search, matching, mechanism design, voting, auctions, adaptive control, learning dynamics and recent development in game theory and mathematical economics.

**245A. Econometric Theory****(4) STEIGERWALD***Prerequisite: Economics 241C.*

The logic and structure of empirical work. In order: how to quantify theory; sources of data; methods of estimation; informative reporting of results.

**245B. Econometric Theory****(4) STEIGERWALD***Prerequisite: Economics 245A.*

Specification and estimation of dynamic regression models for conditional location and scale. Topics include trending variables (with attention paid to unit root models) and models of volatility for finance (with attention paid to continuous-time diffusion models).

**245C. Econometric Theory****(4) STAFF***Prerequisite: Economics 245A.*

Specification and estimation of models for cross-section data. Topics include models of individual choice (with attention paid to nonparametric estimators) and models for panel data.

**249. Dynamic Optimization****(4) GARRATT***Prerequisite: Economics 210B or Mathematics 118.*

*Not open for credit to students who have completed Economics 201.*

An introduction to the dynamic optimization techniques of the calculus of variations and optimal control theory. Focus on continuous time planning problems in a deterministic setting. Applications include natural resource extraction, energy production, human capital accumulation, and insurance.

**250A. Labor Economics****(4) BEDARD, DESCHENES, KUHN**

Theory and application of labor supply and demand models. Applications include work incentives of social programs, employment effects of minimum wages, and effects of immigration.

**250B. Wage Structure****(4) BEDARD, DESCHENES, KUHN**

Analysis of wage differentials by education, experience, union status, working conditions, and other factors.

**250C. Current Research Topics in Labor Economics****(4) BEDARD, DESCHENES, KUHN**

Areas covered vary from year to year.

**253A. Job Search Theory****(4) RUPERT***Prerequisites: open to economics majors only.*

Theoretical and quantitative aspects of search theory as it applies to labor markets. Includes topics such as bargaining and models of wage determination, vacancies and unemployment.

**260A. Natural Resources****(4) DEACON, KOLSTAD**

Capital theory and welfare economics applied to

the primarily dynamic questions concerning the use of nonrenewable resources such as minerals, the use of renewable resources such as fisheries and forests, and the preservation of species and natural environments.

#### **260B. Environmental Economics**

(4) KOLSTAD

*Prerequisite: Economics 210A-B*

The primarily static theory of externalities and their correction. Covers basic theory of public goods and externalities, regulation theory related to environmental problems and applications, the valuation of environmental goods, transboundary pollution, and international trade and the environment.

#### **265. Environmental and Natural Resource Economics: Collective Action and Open Access**

(4) LIBECAP

*Prerequisites: open to economics majors only.*

Collective action problems addressing open access losses, including uncertainty, heterogeneous parties, and information costs. Covers timing and nature of regulation and the assignment of property rights. Empirical topics include water, fisheries, air pollution, oil and gas extraction, and global warming.

#### **273A. Managerial Accounting**

(4) NISBET, WATSON

A course concerned with the financial statements that are made available to creditors, stockholders, and other interested parties. The goal is to engender a knowledge of the measurement methods used by accountants and the ability to evaluate these methods.

#### **276. Experimental Economics**

(4) CHARNES

*Prerequisite: open to economics majors only.*

Research in experimental economics. Exposure to basic material with further study in individual areas of interest. Professor to meet individually to discuss designing experiments that address the key questions, with student designing final experiment.

#### **280A. Theory of International Trade**

(4) STAFF

Topics include the sources of gains from trade and comparative advantage, trade under increasing returns to scale and imperfect competition, strategic trade policy, political economy of trade policy, and trade and environment issues.

#### **280B. International Finance**

(4) STAFF

*Prerequisite: Economics 204A.*

Topics include current account dynamics, international risksharing, the transmission of business cycles, the determination of exchange rates, and sovereign debt.

#### **291. Workshop in Economics**

(4) STAFF

Self-taught and self-paced.

#### **292. Field Research in Economics**

(1-12) STAFF

Directed field research on a topic in economics.

#### **293. Third Year Graduate Seminar**

(4) STAFF

Students present and discuss their original research papers.

#### **294. Microeconomics Seminar**

(4) STAFF

Current topics in microeconomics.

#### **297. Seminar on the Teaching of Economics.**

(2) STAFF

*Prerequisite: graduate standing.*

Seminar and laboratory work covering the planning, presenting, and evaluating instruction.

#### **594AA-ZZ. Special Topics in Economics**

(1-5) STAFF

*Prerequisites: graduate standing and consent of instructor.*

Special seminar on research subjects of current interest.

#### **595AA-ZZ. Group Studies in Economics**

(4) STAFF

*Prerequisites: graduate standing and consent of instructor.*

Critical review of research in selected fields.

#### **596. Directed Reading and Research**

(2-4) STAFF

*Prerequisites: graduate standing and consent of instructor.*

Individual tutorial.

#### **597. Individual Study for Master's Comprehensive Examinations and Ph.D. Examinations**

(1-12) STAFF

*Prerequisites: graduate standing and consent of instructor.*

*No unit credit allowed toward advanced degree.*

Instructor should be the student's major professor or chair of the doctoral committee.

#### **598. Master's Thesis Research and Preparation**

(1-12) STAFF

*Prerequisites: graduate standing and consent of instructor.*

*No unit credit allowed toward advanced degree.*

Only for research underlying the thesis, writing the thesis. Instructor should be the chair of the student's thesis committee.

#### **599. Dissertation Research and Preparation**

(1-12) STAFF

*Prerequisites: graduate standing and consent of instructor.*

Only for research underlying the dissertation, writing the dissertation. Instructor should be the chair of the student's doctoral committee.

## English

**Department of English  
Division of Humanities and Fine Arts  
South Hall 2607**

**Telephone: (805) 893-8711**

**E-mail: englishinfo@english.ucsb.edu**

**Website: www.english.ucsb.edu**

**Department Chair: Alan Y. Liu**

### Faculty

**Stephanie L. Batiste**, Ph.D., George Washington University, Assistant Professor (African American literature, black performance studies, black cultural studies)

**Heather Blurton**, Ph.D., Columbia University, Assistant Professor (high middle ages)

**Maurizia Boscagli**, Ph.D., Brown University, Associate Professor (gender studies, modern literature)

**Janice Caldwell**, Ph.D., University of Washington, Seattle, Associate Professor (Victorian literature)

**Julie Carlson**, Ph.D., University of Chicago, Professor (English Romantic literature, feminist theory)

**Elizabeth Heckendorn Cook**, Ph.D., Stanford University, Associate Professor (eighteenth-century literature, literature and the environment)

**Andrew Enda Duffy**, Ph.D., Harvard University, Professor (English literature, post-colonial literature, Irish literature)

**L. O. Aranye Fradenburg**, Ph.D., University of Virginia, Professor (medieval literature)

**Patricia Fumerton**, Ph.D., Stanford University, Professor (Renaissance literature and culture)

**Bishnupriya Ghosh**, Ph.D., Northwestern University, Associate Professor (twentieth-century British literature, South Asian literature, film)

**Giles Gunn**, Ph.D., University of Chicago, Professor (American literature and critical theory)

**Carl Gutierrez-Jones**, Ph.D., Cornell University, Professor (Chicano and American literature)

**Ken Hiltner**, Ph.D., Harvard University, Associate Professor (Renaissance literature, literature and the environment)

**Yunte Huang**, Ph.D., State University of New York, Buffalo, Professor (Asian-American literature, American modernism, twentieth-century American poetry, trans-Pacific literature)

**James Kearney**, Ph.D., University of Pennsylvania, Assistant Professor (Renaissance literature)

**Stephanie LeMenager**, Ph.D., Harvard University, Associate Professor (nineteenth-century American literature, literature and the environment)

**Shirley Geok-Lin Lim**, Ph.D., Brandeis University, Professor (Asian-American literature, post-colonial literature, ethnic and feminist writing)

**Alan Y. Liu**, Ph.D., Stanford University, Professor (Romantic literature, literary theory, literature and information culture)

**David Marshall**, Ph.D., Johns Hopkins University, Professor (eighteenth-century European literature)

**Mark Maslan**, Ph.D., UC Berkeley, Associate Professor (American literature)

**Christopher Newfield**, Ph.D., Cornell University, Professor (American literature)

**Michael O'Connell**, Ph.D., Yale University, Professor (Renaissance poetry and drama)

**Carol Braun Pasternack**, Ph.D., UC Los Angeles, Associate Professor (medieval studies)

**Rita Raley**, Ph.D., UC Santa Barbara, Associate Professor (Digital Humanities, Global English)

**Russell Samolsky**, Ph.D., University of Colorado, Boulder, Assistant Professor (postcolonial literature)

**Theresa Shewry**, Ph.D., Duke University, Assistant Professor (Anglophone literatures, Literature and Environment)

**Candace Waid**, Ph.D., Yale University, Associate Professor (regional American literature)

**William B. Warner**, Ph.D., Johns Hopkins University, Professor (eighteenth-century literature, the novel, history and theory of media, technology and literature)

**Kay Young**, Ph.D., Harvard University, Associate Professor (Victorian literature, the novel)

### Emeriti Faculty

**H. Porter Abbott**, Ph.D., University of Toronto, a Research Professor Emeritus (narrative, autobiography, 19th- and 20th-century literature)

**Steven Allaback**, Ph.D., University of Washington, Professor Emeritus (fiction, American literature, fiction writing)

**Elliott Butler-Evans**, Ph.D., UC Santa Cruz, Associate Professor Emeritus (Marxist cultural theory, gender and sexuality studies, narrative theory, cultural semiotics, African-American literature and culture)

**Robert A. Erickson**, Ph.D., Yale University,

Professor Emeritus (seventeenth- and eighteenth-century English literature)

**Michael A. Fernandez**, M.A., California State University, San Francisco, Lecturer Emeritus

**Donald Guss**, Ph.D., University of Wisconsin, Professor Emeritus (English literature 1500-1660, Italian Petrarchism, Renaissance-literary history)

**Paul Z. Hernadi**, Ph.D., University of Vienna, and Ph.D., Yale University, Professor Emeritus (literary theory, history of criticism, comparative literature, modern drama)

**Edward Loomis**, Ph.D., Stanford University, Professor Emeritus

**William S. Marks III**, Ph.D., Stanford University, Professor Emeritus (19th-century American fiction, modern-British and Continental fiction)

**Patrick J. McCarthy**, Ph.D., Columbia University, Professor Emeritus (Victorian literature)

**Stephen Miko**, Ph.D., Yale University, Professor Emeritus (modern novel)

**Anne Pidgeon**, M.A., University of Michigan, Lecturer with Security of Employment Emerita

**John Ridland**, Ph.D., Claremont Graduate School, Professor Emeritus (writing, poetry, teaching of writing and poetry)

**Mark Rose**, Ph.D., Harvard University, Professor Emeritus (Shakespeare, early modern cultural studies, authorship and intellectual property)

**Logan Speirs**, M.A., Cambridge University, Professor Emeritus (English and comparative literature)

**T.R. Steiner**, Ph.D., Columbia University, Professor Emeritus (18th-century literature, criticism and theory, detective fiction)

**Alan Stephens**, Ph.D., University of Missouri, Professor Emeritus

**Garth St. Omer**, M.F.A., Columbia University, Ph.D., Princeton University, Professor (modern fiction and the writing of fiction)

**Homer Swander**, Ph.D., University of Michigan, Professor Emeritus

### Affiliated Faculty

**Sheridan Blau**, Ph.D., Brandeis University, Senior Lecturer with Security of Employment (English education, seventeenth-century literature)

**Susan Derwin**, Ph.D. (Germanic, Slavic, and Semitic Studies)

**Jody Enders**, Ph.D. (French and Italian)

**James Lee**, Ph.D. (Asian American Studies)

**George Lipsitz**, Ph.D. (Black Studies)

**Constance Penley**, Ph.D. (Film and Media Studies)

**Chéla Sandoval**, Ph.D. (Chicana and Chicano Studies)

**Barbara Tomlinson**, Ph.D. (Feminist studies)

**W**hat does it mean to study English today? The English department engages that question by offering its students the opportunity to explore Old English texts, Internet texts, American novels, minority writing, Anglo-Irish literature, queer textuality, science fiction, women's literature, literature of the body, modern poetry, post-colonial texts, Shakespeare, etc.—all kinds

of “literatures” written in English. We study the complex interactions between literature, culture, and history. At the heart of literary study lies the simple yet striking recognition that language is both a technology of thought and a constituent of human reality. The major in English transforms this recognition into a program of study that develops the critical skills required to negotiate complicated literary and cultural texts. Together, we spend time working on questions like these: How do historical and cultural contexts lend written texts their intelligibility and convey their strange power? How do gender and minority discourses inform our understanding of literature? How does the study of English engage the public sphere in its intersection with other fields, such as cognitive science, social science, and information science?

What can one “do” with a degree in English? Graduate and professional schools and employers seek people who can read, write, speak, and analyze—the basic skills acquired by our English majors. Students who study English learn how to think, and to think independently. They are trained to read a variety of literary and cultural works from across centuries and continents, to write proficiently, and to make lively arguments. English majors learn about how the past informs the present, become “keepers” of past works and present cultures, and leave college thinking and feeling more deeply about life and how to live it.

Current and prospective English majors are urged to consult the departmental undergraduate advisor for assistance in preparing programs of study. Students may also consult faculty advisors about academic and career aspects of their studies. Students should check the English department website at [www.english.ucsb.edu](http://www.english.ucsb.edu) for up-to-date information on the department.

English majors are also encouraged to explore the opportunities for study abroad provided by the University of California's Education Abroad Program. Students may fulfill both major requirements and electives through exchanges with universities in the United Kingdom, Ireland, Australia, and New Zealand. At most European universities and in Israel, students may fulfill elective requirements while taking courses in a foreign language. Because all courses taken through EAP are accepted as UC courses, students may spend a year of study in a foreign university with no loss of time in completing their degrees. The departmental advisor for the Education Abroad Program can assist in the choice of programs and courses that will best meet the goals of the major.

The Writing Program offers required and elective courses at freshman and advanced levels. Specifically, Writing 1, 2, 50, and 109AA-ZZ are offered through the Writing Program. See the Writing Program listing in this catalog for information about these courses.

Students with a bachelor's degree in English who are interested in pursuing a California Teaching Credential should contact the credential advisor in the Graduate School of Education as soon as possible.

## Undergraduate Program

### Bachelor of Arts—English

All courses to be applied to the major require-

ments must be completed on a letter-grade basis. Requires 56 units in English, at least 44 of which must be upper-division units.

**Preparation for the major.** Required, with a grade-point average of 2.0 or higher: a choice from either English 10, 10AC, 10EM or 10LC, in addition to English 15; one optional lower-division elective English course (4 units). Students entering the major with upper-division standing may substitute English 105A or 105B for the English 15 requirement. Students electing this option may not apply their English 15 substitute toward the minimum 44 upper-division units also.

**Foreign language requirement.** Students must complete either Option 1 or Option 2 below. Option 1 is recommended. Election to Phi Beta Kappa requires Option 1. Students who contemplate graduate study should consult their prospective graduate schools to determine if specific languages are required.

**Option 1:** Completion of the fifth quarter or its equivalent in any foreign language currently taught at UCSB.

**Option 2:** Complete A and B, as follows: (A) Quarter three or equivalent of any foreign language currently taught at UCSB. (B) Three upper-division foreign language literature in translation courses (see department advisor for list of options).

**Upper-division major.** At least 44-48 units, including 20 units in the following courses: English 101, 102, 103A or 103B, 104A or 104B and 197. Twenty-eight upper-division units of electives required if no lower-division elective English course is completed; 24 units required if a lower-division elective English course is completed.

**Specializations.** The English department offers students the opportunity to specialize in one of five areas: 1. American Cultures and Global Contexts, 2. Early Modern Studies, 3. Literature and the Culture of Information, 4. Literature and the Environment, and, 5. Literature and the Mind. Students also have the opportunity to fashion their own specialization, working in concert with a faculty mentor. Material describing these areas of specialization is available in the English department and at: [www.english.ucsb.edu](http://www.english.ucsb.edu).

For the content of any particular English course, refer to the website at [www.english.ucsb.edu](http://www.english.ucsb.edu).

### Special Opportunities, Programs, and Awards

**Honors Program.** The honors program in English provides the opportunity for qualified majors to pursue advanced literary research and writing.

Application to the program is normally in Fall of the junior year. To qualify for the program, students must maintain a grade-point average of 3.5 (overall and/or in the major). The honors program consists of 2 quarters of the honors seminar (198A & 198B, each for 2 units) taken winter and spring of the junior year and a 4-unit independent study (196) taken fall of the senior year during which the senior thesis is written. Successful completion of the honors program merits the award of Distinction in the Major at graduation. For information on appli-

cation to the honors program, students should consult the English Department.

Students are also encouraged to apply for admission to the College of Letters and Science Honors Program as early as possible in their college careers.

**Supplemental Seminars.** Students may take advantage of honors seminars that are sometimes offered in conjunction with large lecture courses. These seminars provide an opportunity for motivated students to work closely with faculty members while enriching their large lecture experience.

**Research Assistant Program.** By application, qualified upper-division students may gain experience in academic research, while earning academic credit, as research assistants to the English faculty.

**Awards.** The William Frost Award is given annually to a senior or upper-division English major and carries a substantial stipend. Entrants are judged on their academic records, as well as on a critical essay which represents the student's best work. The Kieth E. Vineyard Honorary Scholarship is awarded annually to an undergraduate in recognition of outstanding skills in creative writing. Entry dates are announced during the winter quarter.

In recent years the department has sponsored several other awards and contests, some that recognize excellence in creative writing, both poetry and fiction, and others that honor academic excellence in combination with financial need.

**English Club.** The English Club, a student-organized group, arranges programs of interest for all English undergraduates throughout the academic year. The English department undergraduate listserv disseminates information for and about the English Club and other topics of interest to English majors. To subscribe to the listserv, refer to the website at: [www.english.ucsb.edu](http://www.english.ucsb.edu).

### Minor—English

The English Department offers two alternative plans for a minor. Students may choose from plans 1 and 2 below. In either plan, all courses to be applied to the minor must be completed on a letter-grade basis, including courses offered in the English Department as well as those offered by other departments and applied to the minor. (Only one course substitution outside the department of English can be petitioned.)

#### Plan 1—Core Plan:

Twenty units, distributed as follows:

**Preparation for the minor.** Four lower-division units in English. May include English 10 but not courses in English composition.

**Upper-division minor.** Twenty units, distributed as follows:

- A. Four units of literature pre-1700, selected from the following courses: English 101, 105A-B-C, 110A, 110B, 115, 119, 119X, 144, 152A, 157, 162.
- B. Four units of literature from the 1700s to the 1900s, selected from the following courses: English 102, 103A, 103B, 126B, 126C, 137A, 169, 172, 179, 180.
- C. Twelve units of English electives.

Depending on course content, the following courses may apply to Area A or Area B of the upper-division minor: English 114AA-ZZ, 128AA-ZZ, 131AA-ZZ, 133AA-ZZ, 134AA-ZZ, 146AA-ZZ, 147AA-ZZ, 148AA-ZZ, 151AA-ZZ, 165AA-ZZ. Any of these courses apply automatically to Area C. Contact the department to see which courses will apply to Areas A and B in a given quarter. Information can also be obtained at [www.english.ucsb.edu](http://www.english.ucsb.edu).

*Note: Substitutions and waivers are subject to approval by the chair of the department. Please see "Academic Minors" for special conditions governing minors in the College of Letters and Science.*

#### Plan 2—Thematic Plan:

**Preparation for the minor.** Four lower-division units in English. May include English 10 but not courses in English composition.

**Upper-division minor.** Twenty units, chosen according to an interest or theme designed by the individual student. One course among these twenty units may be an independent study with a faculty instructor resulting in some variety of research project (e.g., essay, online project, etc.). Students must meet with a faculty member to choose a topic and a plan of study. Final approval of the student plan by the faculty undergraduate committee is required.

*Note: Substitutions and waivers are subject to approval by the chair of the department. Please see page 118 for special conditions governing minors in the College of Letters and Science.*

## Graduate Program

The Department of English offers two closely related graduate programs: an M.A./Ph.D. program for students who have completed the B.A., and a Ph.D. program for those who come to UCSB with an M.A. from another institution. Both programs include extensive coursework in English and American literature, two qualifying examinations (the first of which also serves as the M.A. examination), and a doctoral dissertation. The M.A./Ph.D. is normally a five-year program. The Ph.D. program for students who enter with an M.A. is designed as a four- or five-year program. In addition to departmental requirements, candidates for graduate degrees must meet university degree requirements found in the chapter "Graduate Education at UCSB."

Students entering either the M.A./Ph.D. or the Ph.D. program should be aware that they are undertaking not only to deepen their enjoyment and understanding of major literary texts, modes, and movements, but also to explore their potential as interpreters, scholars, and in most cases, teachers of literature and language. They are embarking on a systematic course of study designed to ensure an understanding of literary history and its major achievements and to make them fully participating members of a professional community of scholars.

### Admission

In addition to departmental requirements for admission, applicants must also meet the university requirements for admission described in the chapter "Graduate Education at UCSB." Students admitted to the M.A./Ph.D. program will normally have completed an undergraduate

major in English or have done extensive undergraduate work in English. For admission to the Ph.D. program applicants must have completed an M.A. in English or a closely related field. Admission to both programs is based on five criteria: (1) transcripts; (2) letters of recommendation; (3) scores on the Graduate Record Examination (GRE) general test and subject test in English literature; (4) a writing sample; (5) a statement of purpose. The writing sample should normally be a substantial paper written in an upper-division or graduate English literature course.

### Awards

The Yvonne Gartrell Memorial Scholarship is awarded on an annual basis to a deserving incoming graduate student. The William and Marjorie Frost Award for Scholarly Writing by a Graduate Student is given each year to one graduate student in the English department for a scholarly essay. The Pearl Butler Evans Memorial Award is made annually for outstanding writing by a graduate student on any aspect of African-American literature. The Donald Pearce award is given annually to one outstanding graduate student in support of dissertation work. The Outstanding Teaching Assistant in English Award is given annually to three English graduate teaching assistants. In addition to these awards, the department and graduate division make a number of fellowships available to incoming students on a competitive basis. Continuing students may compete for other graduate division fellowships as well.

## Master of Arts—English

### Degree Requirements

Requirements for the M.A. include the successful completion of (1) 36 units of graduate coursework; (2) an examination or coursework in one foreign language; (3) a comprehensive first qualifying examination. Only those students who complete their graduate coursework and the first qualifying examination with sufficient distinction will be invited to continue working toward the Ph.D.

## Doctor of Philosophy—English

### Degree Requirements

Requirements for the Ph.D. include (1) 12 units of graduate coursework beyond the M.A. (from UCSB), or 36 units of graduate coursework for students entering with the M.A. from another institution; (2) an examination or coursework in one foreign language for students entering with the M.A. from another institution; (3) a second qualifying examination; (4) the dissertation. Students entering the Ph.D. program directly with an M.A. from another institution must also take the first qualifying examination no later than their sixth quarter of residence.

Additional information concerning both the M.A./Ph.D. program and the Ph.D. program can be found in the English Department's graduate brochure and handbook, and on the website at [www.english.ucsb.edu](http://www.english.ucsb.edu).

### Optional Ph.D. Emphasis in Global Studies

Students pursuing a Ph.D. in certain departments may petition to add an emphasis in

global studies. The departments for which the emphasis is available include anthropology, English, history, political science, religious studies, and sociology. To be eligible for admission to the Ph.D. emphasis, students must be admitted to the Ph.D. program in one of the departments choosing to offer this emphasis with their existing Ph.D. program and petition successfully to add the optional emphasis.

The student's dissertation committee must have one member from a participating department other than the student's own department. The student may also elect a global emphasis for his or her department field/area/specialization exam, if such an emphasis is offered within the department. The chair of the Coordinating Committee will determine when the student has successfully completed all of the requirements for the emphasis.

By "global" we refer to transnational economic, political, environmental, social, and cultural interactions and flows that operate at a global (i.e., trans-continental) scale. "Global studies" views the world as comprised of increasingly interdependent processes, rather than as shaped exclusively or even primarily by the interplay of discrete nation-states.

Petitions for adding the emphasis can be made at any time in a student's graduate career, but typically will be made after at least one successful year of study in the home department. Work completed prior to admission in the emphasis that meets emphasis requirements (as determined by the Ph.D. Emphasis Coordinating Committee) may be counted towards completion.

To satisfy the Ph.D. emphasis in global studies, students are required to take four one-quarter graduate-level courses. One course is Global 201, the introductory gateway seminar, offered by the Global and International Studies Program. Three additional courses must be chosen from among qualifying global theory and global issues courses offered by participating departments. These courses will be selected from an approved list of global theory and global issues graduate courses prepared by the Ph.D. Emphasis Coordinating Committee each spring, for the following academic year. At least one of these three courses must be a global theory course, and at least one must be a global issues course. Courses will typically be taken for a letter grade.

At least one of these three courses will be taken from the student's home department, and at least two must be taken from the six other participating departments or the Global and International Studies Program. No more than one of the three seminars (excluding Global 201) can be taken from a single instructor.

For additional information, please contact the graduate advisor in one of the participating departments or global studies.

### ***Optional Ph.D. Emphasis in Women's Studies***

The Department of Feminist Studies, with almost fifty core and affiliated faculty members in over nineteen disciplines, serves as a model of interdisciplinary work and scholarly collaboration at UCSB. Women's Studies doctoral emphasis students are required to successfully complete four seminars that will enhance their

understanding of feminist pedagogy, feminist theory, and topics relevant to the study of women, gender and/or sexuality. Women's Studies as an inter-departmental set of conversations and intellectual questions supports a multifaceted undergraduate curriculum at UCSB. Doctoral emphasis students are encouraged to apply to teach Feminist Studies courses as teaching assistants and associates as part of their Feminist Studies training.

Applicants must first be admitted to, or currently enrolled in, a UCSB Ph.D. program participating in the Women's Studies graduate emphasis. Anthropology; Comparative Literature; Counseling, Clinical, and School Psychology; English; French and Italian; Germanic, Slavic and Semitic Studies; History; History of Art and Architecture; Linguistics; Political Science; Religious Studies; Sociology; Spanish and Portuguese; or Theater and Dance. Candidates complete four graduate courses and select a member of the Feminist Studies faculty or affiliated faculty to serve on their dissertation committees. Applications to the Women's Studies Doctoral Emphasis may be submitted at any stage of Ph.D. work, and applications will be considered throughout the year.

### ***Doctoral Emphasis Coursework***

Students pursuing the emphasis in Women's Studies will successfully complete four graduate courses that have been approved by the Doctoral Emphasis advisor.

1. **Feminist Theories.** A one quarter graduate seminar in interdisciplinary feminist theory offered by any department, including Feminist Studies 250 AA-ZZ.
2. **Issues in Feminist Epistemology and Pedagogy** (Feminist Studies 270). A one quarter seminar that considers Feminist Studies as a distinct field. It offers an interdisciplinary exploration of feminist theories of knowledge production and teaching practices. Readings cover past and present critical debates and provide theoretical approaches through which to analyze interdisciplinary epistemological and pedagogical issues.
3. **Graduate Seminar in Feminist Studies** (Feminist Studies 200-290 or 594 AA-ZZ). A one quarter seminar offered by a Feminist Studies faculty member on topics of central concern to the field.  
Or,  
**Research Practicum** (Feminist Studies 280). A cross-disciplinary seminar in which fundamental questions in contemporary feminist research practice are considered in light of students' own graduate projects.
4. **Topical Seminar.** A one quarter graduate seminar that addresses topics relevant to the study of women, gender, and/or sexuality. This seminar must be taken outside the student's home department; it may be fulfilled either by another graduate seminar in Feminist Studies or a seminar in another department.

### ***Optional Ph.D. Emphasis in European Medieval Studies***

The Medieval Studies Program offers an interdisciplinary doctoral emphasis to students previously admitted to a Ph.D. program in the Departments of Theater and Dance, English,

French and Italian, History, History of Art and Architecture, Music, Religious Studies, and Spanish and Portuguese. Students pursuing the emphasis in European medieval studies must receive a grade of B or better in each of the following: Medieval Latin (Latin 103); one course in a vernacular, western European or Middle Eastern medieval language (English 205, English 230, French 206, Spanish 222A, Spanish 222B, Portuguese 222, Religious Studies 148A, Religious Studies 148 B, Religious Studies 210); Paleography and/or Diplomatics (History 215S, History 215T); Medieval Studies 200A-B-C; and 8 additional units in graduate courses on medieval topics. Students may petition to have appropriate courses from other institutions, or independent study, substituted for these requirements. Medieval Studies 200A-B-C is the program's colloquium series; graduate students in the emphasis attend the series and write brief papers on each colloquium (one per term), to be reviewed by the chair of the program (2 units). To qualify for the emphasis, at least one member of a Ph.D. candidate's dissertation committee must be an affiliated faculty member of the European Medieval Studies Program. Contact the European Medieval Studies Program for additional information on faculty interests, course offerings, and program requirements, or visit our website at [www.medievalstudies.ucsb.edu](http://www.medievalstudies.ucsb.edu).

### ***Optional Ph.D. Emphasis in Technology and Society***

Students pursuing a Ph.D. in this department may petition to add an emphasis in technology and society. The emphasis brings together doctoral students in engineering, social sciences, and the humanities to engage in multidisciplinary coursework and research into the cultural and societal changes resulting from the use of new information technologies. The emphasis features a structured set of courses that may be taught individually and collaboratively by faculty across disciplines: Anthropology, Communication, Computer Science, English, History, Media Arts and Technology, Political Science, and Sociology.

To be eligible for admission to the emphasis, students must be enrolled in good standing in the department. Petitions for adding the emphasis can be made at any time in a student's graduate career, but typically will be made after at least one successful year of study in the home department. Work completed prior to admission that meets emphasis requirements (as determined by the Ph.D. Emphasis Faculty Executive Steering Committee) may be counted towards its completion.

Requirements for completing the optional emphasis in technology and society include:

1. **Gateway Technology and Society Colloquium.** Students must complete a 1-unit colloquium that brings together students and faculty from multiple disciplines to explore various approaches to studying technology and society. In addition to helping students understand similarities and differences in conceptualization and knowledge production across disciplines, the seminar promotes interaction among students from different departments.

**2. Graduate Coursework.** Students must complete four 4-unit courses with a grade of B or better, two each from Area 1 (Culture and History) and Area 2 (Society and Behavior). Area 1 courses explore the humanistic study of cultures, histories and meanings as they intersect with technology. Area 2 investigates the social scientific study of technology in relationship to human behavior, organizations, and social structures.

One course from the student's home department can be applied toward meeting this requirement. Students can petition to substitute a non-listed course, subject to approval by the Technology and Society Faculty Executive Committee.

**3. Dissertation.** A student's dissertation must have relevance to at least one of the two Emphasis areas. In addition, the student's dissertation committee must include a member from another department participating in the emphasis. Exceptions are subject to approval by the Technology and Society Faculty Executive Committee.

For additional information and a current list of courses, please contact the graduate advisor or visit [www.technology-society.ucsb.edu](http://www.technology-society.ucsb.edu)

## English Courses

Detailed descriptions of English courses for the next quarter may be found in the *Course Outline Booklet* available in the department office prior to registration and on the departmental Web site at [www.english.ucsb.edu](http://www.english.ucsb.edu).

### LOWER DIVISION

#### 10. Introduction to Literary Study

(4) STAFF

Prerequisite: Writing 2.

Course recommended as alternative to Writing 50 or 109 for students who plan to major in English or literary study. Not open for credit to students who have completed English 10AC, 10EM, or 10LC.

Acquaints students with purposes and tools of literary interpretation. Introduces techniques and vocabulary of analytic discussion and critical writing. Some emphasis on poetry with attention also to drama, essay, and the novel.

#### 10AC. Introduction to Literary Study - Exploring American Cultures

(4) STAFF

Prerequisite: Writing 2.

Course recommended as alternative to Writing 50 or 109 for students who plan to major in English or literary study. Not open for credit to students who have completed English 10, 10EM, or 10LC.

Acquaints students with purposes and tools of literary interpretation. Introduces techniques and vocabulary of analytic discussion and critical writing. Emphasis is on American identities and global crisis. The class introduces students to the American Cultures and Global Contexts Center located within the English Department.

#### 10EM. Introduction to Literary Study - Exploring Early Modern Studies

(4) STAFF

Prerequisite: Writing 2.

Course recommended as alternative to Writing 50 or 109 for students who plan to major in English or literary study. Not open for credit to students who have completed English 10, 10AC, or 10LC.

Acquaints students with purposes and tools of literary interpretation. Introduces techniques and vocabulary of analytic discussion and critical writing. Emphasis is on early modern studies. The class also introduces students to the Early Modern Center located within the English Department.

#### 10LC. Introduction to Literary Study - Exploring Literature and the Culture of Information

(4) STAFF

Prerequisite: Writing 2.

Course recommended as alternative to Writing 50 or 109 for students who plan to major in English or literary study. Not open for credit to students who have completed English 10, 10AC, or 10EM.

Acquaints students with purposes and tools of literary interpretation. Introduces techniques and vocabulary of analytic discussion and critical writing. Emphasis is on literature and the culture of information. Introduces students to the Transcriptions Project located within the English Department.

#### 15. Introduction to Shakespeare

(4) STAFF

Introduction to Shakespeare in which a number of major plays are read with close attention to language, dramatic structure and historical context.

#### 15S. Seminar on Shakespeare

(1) STAFF

Prerequisites: concurrent enrollment in English 15; consent of instructor.

A seminar course for a select number of students enrolled in English 15 designed to enrich the large lecture experience for the motivated student. Course includes either supplementary readings or more intensive study of the English 15 reading list, as well as supplemental writing.

#### 25. Introduction to Literature and the Culture of Information

(4) STAFF

Introduction to the age of information in its relation to history, society, and the arts. Topics include the history of information, hypertext, virtual reality, cyberspace, and the role of literature and literacy in the digital age. Introduction of practical skills and technologies associated with the digital age.

#### 30. Introduction to American Literature

(4) STAFF

Introduction to major works and themes of American literature designed for lower-division students and non-majors. Topics vary from one quarter to another.

#### 38A. Introduction to African-American Literature (Part I)

(4) BATISTE, J. STEWART, STRONGMAN

African-American literature from colonial times through the Harlem Renaissance.

#### 38AS. Seminar on African-American Literature (Part I)

(1) BATISTE

Prerequisite: Concurrent enrollment in English 38A; consent of instructor

Seminar course for a select group of students enrolled in English 38A designed to enrich the large lecture experience for the motivated student. Course includes supplementary readings or more intensive study of the English 38A reading list, and supplemental writing.

#### 38B. Introduction to African-American Literature (Part II)

(4) BATISTE, J. STEWART, STRONGMAN

African-American literature from the 1930s to the present.

#### 38BS. Seminar on African-American Literature (Part II)

(1) BATISTE

Prerequisite: Concurrent enrollment in English 38B; consent of instructor.

Seminar course for a select group of students enrolled in English 38B designed to enrich the large lecture experience for the motivated student. Course includes supplementary readings or more intensive study of the ENGL 38B reading list, and supplemental writing.

#### 50. Introduction to U.S. Minority Literature

(4) LIM

An introduction providing historical and cultural contexts to one or more American minority literatures usually taken to signify writing from an ethnic community: African American, Asian American,

Chicano/a, and Native American.

#### 50S. Seminar on U.S. Minority Literature

(1) LIM

Prerequisites: concurrent enrollment in English 50; consent of instructor.

A seminar course for a select number of students enrolled in English 50 designed to enrich the large lecture experience for the motivated student. Course includes either supplementary readings or more intensive study of the English 50 reading list, as well as supplemental writing.

#### 65AA-ZZ. Topics in Literature

(4) STAFF

Prerequisite: Writing 2 or its equivalent.

*Prerequisite: a prior course in English 146AA-ZZ or 147AA-ZZ or 148AA-ZZ series. (If you have taken lower-division courses in the Literature and Culture of Information specialization, including English 10LCI and English 25, and would like to use those as your prerequisite, please consult the instructor.)*

*Repeat Comments: May be repeated for credit to a maximum of 12 units provided letter designations are different.*

Team based independent research under the supervision of a faculty member on issues related to contemporary or historical cultures of technology, media, and information including the topics covered in English 146AA-ZZ, 147AA-ZZ, and 148AA-ZZ. Student teams choose topics and conduct research using methods that include online and library research, interviews with experts, field visits, etc. Results are put online in an online research magazine managed by the English department.

### 195I. Internship in English

(1-4) STAFF

*Prerequisites: upper-division standing; consent of department; English majors only.*

*Students must have a minimum 3.0 GPA. May be repeated for credit to a maximum of 8 units but only 4 units can be applied to the major.*

Under supervision of English department faculty, English majors may obtain credit for work without pay in publishing, editing, journalism, or other employment related to English literature. Required are works hours, weekly meeting with the professor, and a final paper or journal.

### 196. Honors English Senior Thesis

(4) STAFF

*Prerequisite: Writing 2 or upper-division standing; consent of department; successful completion of English 198A and 198B.*

For students in the English department's honors program only. English 196, which is taken after English 198A and 198B in the honors program, focuses on the writing of a 35+ page senior thesis.

### 197. Upper-Division Seminar

(4) STAFF

*Prerequisites: Writing 2 or 50 or 109AA-ZZ or English 10 or upper-division standing.*

Content will vary with each instructor. Students will be asked to do a project that acquaints them with some of the resources of the library and results in their reading beyond the primary course materials.

### 198A. Honors English Senior Thesis Preparation

(2) STAFF

*Prerequisite: Writing 2 or upper-division standing; consent of department.*

Focus on the aims, norms, methods, professional

goals, and purposes of advanced literary study. In consultation with their faculty mentor, students begin preparatory research, draft the proposal, and create initial bibliographies for their honors thesis.

### 198B. Honors English Senior Thesis Preparation

(2) STAFF

*Prerequisite:* Successful completion of English 198A.

Students will research their honors thesis, presenting materials to the class and also meeting individually with their mentors.

### 199. Independent Studies in English

(1-5) STAFF

*Prerequisites:* upper-division standing; completion of two upper-division courses in English; consent of instructor and department.

Students must have a minimum 3.0 grade-point average for the preceding 3 quarters and are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. Students may apply a maximum of 8 units of 199/199AA-ZZ course work toward the English major.

Reading and conference for students with upper-division standing.

### 199RA. Independent Research Assistance in English

(1-5) STAFF

*Prerequisites:* upper-division standing; completion of two upper-division courses in English; consent of instructor and department.

Students must have a minimum 3.0 grade-point average for the preceding 3 quarters and are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. Students may apply a maximum of 8 units of 199/199AA-ZZ course work toward the English major.

Coursework shall consist of faculty supervised research assistance.

## GRADUATE COURSES

### 200AA-ZZ. Methods of Literary Study

(4) STAFF

*Prerequisite:* graduate standing.

Providing that letter designations are different, the course may be repeated for credit with the consent of the graduate advisor.

Course on literary theory and critical methods required for all graduate students in the department. Specific authors and topics vary from class to class.

### 205A. Old English

(4) STAFF

*Prerequisite:* graduate standing.

Introduction to the language, prose, and shorter poems.

### 205B. Old English

(4) STAFF

*Prerequisite:* Graduate standing; English 205a.

Beowulf.

### 205C. Old English

(4) STAFF

*Prerequisites:* 205A; graduate standing.

May be repeated for credit with consent of the chair of the department graduate committee.

Topics in Old English literature.

### 225. The Arts of Writing: Theories, Pedagogies, and Practices for Creative Writing

(4) STAFF

*Prerequisite:* graduate standing.

Examines theories of creativity and linkages between philosophical, rhetorical, and psychoanalytical concepts and current creative writing pedagogies. Experiments with classroom practices, with focus on the participants' own creative work.

*Contents of "studies" courses listed below will vary from quarter to quarter, therefore; these may be repeated for credit with the consent of the chair of the department graduate committee.*

### 230. Studies in Medieval Literature

(4) STAFF

### 231. Studies in Renaissance Literature

(4) STAFF

### 232. Studies in Restoration and Eighteenth Century Literature

(4) STAFF

### 233. Studies in Nineteenth Century Literature

(4) STAFF

### 234. Studies in Twentieth Century Literature

(4) STAFF

### 235. Studies in American Literature

(4) STAFF

### 236. Studies in Literary Criticism and Theory

(4) STAFF

### 265. Seminar in Special Topics

(4) STAFF

*Prerequisite:* Graduate standing.

Content of course will vary from quarter to quarter and may be repeated for credit with the consent of the chair of the departmental graduate committee.

Topics vary.

### 274A-B-C. American Cultures and Global Contexts

(1-1-2) GUNN

*Prerequisite:* graduate standing.

A 3-quarter in-progress course with final grade assigned after completion of English 274C.

Explores connections between theorizations of the nature and history of globalization and recent reconceptualizations of American literary and cultural studies and explores issues for future research into potentially productive intersections. Includes readings in the latest research, student presentations, and a research paper.

### 297. Graduate Studies

(4) STAFF

*Prerequisite:* graduate standing.

Maximum of 4 units will count towards M.A. degree with consent of the graduate advisor. No unit credit allowed toward Ph.D. degree.

Graduate tutorial involving regular conferences with instructor and directed research toward seminar paper(s). Attendance at relevant upper-division lectures also required.

### 500. Directed Teaching

(4) STAFF

*Prerequisite:* appointment as a teaching assistant.

No unit credit allowed toward advanced degrees.

Supervision and instruction of teaching assistants. Teaching assistants must register for this course.

### 591. Doctoral Colloquium

(1) STAFF

*Prerequisite:* graduate standing.

Course provides support for graduate students when developing their dissertation ideas. Focus on research in the humanities at a practical level.

### 592. Transcriptions Colloquium

(1) STAFF

*Prerequisite:* graduate standing.

Provides graduate students: a) introduction to the hardware and software used in advanced webpage design; b) an overview of the intellectual issues of "digital culture;" c) a context for developing a web-authoring project.

### 593. Graduate Technology Colloquium

(1) STAFF

*Prerequisite:* graduate standing.

No unit credit allowed toward advanced degrees.

Provides guidance, training, a forum, and a common center for the various technical research endeavors engaged in by student assistants.

### 594. American Cultures and Global Contexts Center (ACGCC) Colloquium

(1) STAFF

*Prerequisite:* graduate standing.

Explores connections between theorizations of the nature and history of globalization and recent reconceptualizations of American literary and cultural studies with an eye to exploring issues for future research into potentially productive intersections.

### 595. Early Modern Center (EMC) Colloquium

(1) STAFF

*Prerequisite:* Graduate standing.

No unit credit toward advanced degrees allowed.

Trains students in the use of EMC databases and courses; webpage design; colloquia and conference organization. Includes an exploration of research facilities both on and off campus.

### 596. Directed Reading and Research

(1-4) STAFF

*Prerequisite:* graduate standing.

Individual tutorial. A written proposal for each tutorial must be approved by the graduate advisor.

### 597. Individual Study for Master's Comprehensive Examinations and Ph.D. Examinations

(1-12) STAFF

Maximum of 12 units per quarter. S/U grade.

Enrollment limited to 24 units per examination. No unit credit allowed toward advanced degree(s).

Instructor should be the student's major professor or the chair of the doctoral committee.

### 599. Dissertation Research and Preparation

(1-12) STAFF

Only for research underlying the dissertation, writing the dissertation.

## Related Courses in Other Departments

Director: Jan Frodesen

## Faculty

Jan M. Frodesen, Ph.D., UC Los Angeles, Senior Lecturer with Security of Employment

Roberta L. Gilman, M.A., UC Santa Barbara, Lecturer

Jeff M. Hanson, M.A., UC Santa Barbara, Lecturer

Randall S. Rightmire, M.A., California State University, Dominguez Hills, Lecturer

## ESL Advisory Committee

Dorothy M. Chun, Ph.D. (Germanic, Slavic, and Semitic Studies)

Carol Dixon, Ph.D. (Graduate School of Education)

Jan M. Frodesen, Ph.D., (English as a Second Language)

Joao Hespanha, Ph.D. (Electrical and Computer Engineering)

Karen J. Lunsford, Ph.D., (Writing Program)

Arthur Schwartz, Ph.D. (Linguistics)

The English as a Second Language (ESL) Program offers courses for undergraduate and

graduate students for whom English is not the first language. The primary goal of the ESL program is to prepare students for participation in an American academic community. All incoming graduate students whose first language is not English are required to take the written and oral English Language Placement Examination (ELPE). Placement in ESL courses is based on students' performance on these examinations. In addition, all prospective teaching assistants are required to take the TA Language Evaluation in order to be certified for sole classroom teaching responsibility.

New undergraduates whose first language is not English may be required to enroll in ESL courses as determined by their performance on the Analytical Writing Placement Exam. Students placed in these ESL courses must successfully complete them before they can enroll in the required freshman writing sequence.

See the Department of Linguistics entry in this catalog for a listing of courses. Contact the ESL program or visit our website: [www.esl.ucsb.edu](http://www.esl.ucsb.edu) for course descriptions, schedule of classes, examination dates, and further information.

# Environmental Studies

**Environmental Studies Program**  
**Division of Mathematical, Life, and Physical Sciences**  
**Bren 4312**

**Telephone: (805) 893-2968**  
**E-mail: [esprogram@es.ucsb.edu](mailto:esprogram@es.ucsb.edu)**

**Website: [www.es.ucsb.edu](http://www.es.ucsb.edu)**

**Program Chair: Joshua P. Schimel**

## Faculty

**Peter S. Alagona**, Ph.D., UC Los Angeles, Assistant Professor (science and technology in American environmental politics, political history of species conservation)

**Oliver A. Chadwick**, Ph.D., University of Arizona, Professor (soil sciences, soil genesis and classification, advanced pedology, and soil geomorphology)

**Jordan F. Clark**, Ph.D., Columbia University, Associate Professor (geochemistry, hydrologic sciences, and environmental geology)

**David A. Cleveland**, Ph.D., University of Arizona, Professor (diversity and sustainability in agricultural systems, human population and the environment)

**Matthea H. Cremers**, Ph.D., UC Santa Barbara, Lecturer (tourism, gender and environment)

**Carla M. D'Antonio**, Ph.D., UC Santa Barbara, Schuyler Professor of Environmental Studies (plant biology, restoration ecology)

**William R. Freudenburg**, Ph.D., Yale University, Dehlsen Professor of Environmental Studies (environmental sociology)

**Gregory R. Graves**, Ph.D., UC Santa Barbara, Lecturer (environmental history)

**Edward A. Keller**, Ph.D., Purdue University, Professor (environmental and engineering geology, geomorphology)

**Bridget A. Lewin**, M.A., UC Santa Barbara, Lecturer (environmental education and instruction and the use of technology in education)

**Melvyn S. Manalis**, Ph.D., UC Santa Barbara, Senior Lecturer (renewable and solar energy)

**Michael A. Osborne**, Ph.D., University of Wisconsin, Professor (history of biological sciences)

**Simone Pulver**, Ph.D., UC Berkeley, Assistant Professor (global environmental politics, sociology of development, dynamics of social movements)

**Joshua P. Schimel**, Ph.D., UC Berkeley, Professor (terrestrial ecosystem ecology)

**Susan C. Stonich**, Ph.D., University of Kentucky, Professor (ecological anthropology and Third World environmental problems)

**Paul Wack**, M.P.A., University of Southern California, Lecturer (environmental planning)

**Robert C. Wilkinson**, Ph.D., UC Santa Barbara, Senior Lecturer (water policy, climate change, and issues of environmental policy and sustainability)

## Emeriti Faculty

**Daniel B. Botkin**, Ph.D., Rutgers University, Professor Emeritus (ecology)

**David Brokensha**, Ph.D., Oxford University, Professor Emeritus (cultural ecology, modernization)

**J. Marc McGinnes**, J.D., UC Berkeley, Senior Lecturer Emeritus (environmental law, policy, and dispute resolution)

**Roderick F. Nash**, Ph.D., University of Wisconsin, Professor Emeritus (environmental history)

**Arent H. Schuyler, Jr.**, Ph.D., UC Los Angeles, Lecturer Emeritus (energy policy)

## Affiliated Faculty

**Robert T. Deacon**, Ph.D. (Economics)

**Steven D. Gaines**, Ph.D. (Ecology, Evolution, and Marine Biology)

**Charles D. Kolstad**, Ph.D. (Economics)

**Stephanie LeMenager**, Ph.D. (English)

**Hugo A. Loaiciga**, Ph.D. (Geography)

**Russell J. Schmitt**, Ph.D. (Ecology, Evolution, and Marine Biology)

**Jo-Ann Shelton**, Ph.D. (Classics)

**Eric R.A.N. Smith**, Ph.D. (Political Science)

(In addition to the listed faculty, community professionals not listed in the catalog teach courses in the Environmental Studies Program.)

**T**he Environmental Studies Program at UCSB was established as an academic program more than 39 years ago. It was one of the first such programs in the country and remains one of the strongest in terms of student demand and national reputation, with over 4,500 alumni.

Today, the Environmental Studies Program has approximately 475 students and employs 13 tenured faculty, 9 affiliated faculty, and several outside professionals who teach courses in their field of expertise. The Environmental Studies

Program offers three undergraduate degrees, two of which encourage an interdisciplinary approach to environmental studies: (1) The bachelor of arts degree in environmental studies provides a breadth of social science, natural science, and humanities courses necessary to understand the many facets of our environment. (2) The bachelor of science degree in environmental studies also emphasizes the importance of an interdisciplinary approach; however, it also provides a strong introduction to the role that the natural and physical sciences play in environmental problems. (3) The Environmental Studies Program is also home to one of the first academic programs on the West Coast to offer a bachelor of science degree in hydrologic sciences and policy. This degree is specifically designed to study the significant role water plays in our environment.

## Majoring in Environmental Studies

The environmental studies curriculum is designed to provide students with the scholarly background and intellectual skills necessary to understand complex environmental problems and formulate ecologically sound solutions. The curriculum is interdisciplinary, drawing upon not only environmental studies faculty, but also the resources of a variety of environmentally related departments and disciplines at UCSB as well as the local Santa Barbara community. Although the program offers two environmental degrees, both majors recognize and emphasize the interrelationships between the humanities, social sciences, and natural sciences.

The bachelor of arts degree in environmental studies addresses these interdisciplinary relationships by providing the flexibility necessary for students to explore the social, cultural, and scientific issues pertaining to the environment. For their major preparation, students in the B.A. degree program enroll in a variety of introductory social science, humanities, and natural science courses. At the upper-division level, depending on their own area of interest, students may pursue either a specific or multidisciplinary environmental emphasis by choosing a combination of elective courses from within the Environmental Studies Program. The last part of the major is a 20-unit upper-division outside concentration where students complete courses from one or more UCSB departments or programs relating to their emphasis. Approximately one-third of all environmental studies B.A. majors elect to use this section to complete either a double major or minor, or to participate in a field studies or study abroad program.

The goal of the bachelor of science degree in environmental studies is to train students to become proficient in the natural and physical sciences, as well as to be aware of social and cultural influences upon environmental problems facing society today. The B.S. degree follows a curriculum design similar to the B.A. degree in environmental studies. However, in addition to introductory social science courses, the bachelor of science preparation requires a full year of introductory biology, chemistry, physics, and calculus. The upper-division and outside concentration, while still interdisciplinary and flexible, limit the number of social science and humanities courses a student may take. The majority of environmental studies electives, as

well as the outside concentration, are restricted to physical and natural science disciplines.

Upon completion of an undergraduate degree, over one half of all environmental studies graduates go on to conduct research or attend graduate school for further study of the environment. The range of programs attended varies widely depending on a student's choice of degree and emphasis; students are often qualified to pursue disciplines such as public policy/administration, city or regional planning, Geographic Information Systems (GIS), environmental health, environmental engineering, waste management, environmental law, education, natural resource management, forestry, or physical, chemical and biological sciences.

The two degrees in environmental studies have also prepared graduates for positions in diverse occupations including environmental consulting and impact analysis, the National Park Service, the U.S. Forest Service, the Environmental Protection Agency, "green" business, toxicology, the U.S. Department of Energy, public-interest lobbying, water conservation, local and federal government, outdoor recreation, industrial hygiene, the Peace Corps, environmental education, mineral and resource management, and recycling and hazardous waste management. Employment opportunities are enhanced through a synthesis of coursework and faculty-supervised internships in a chosen career field.

In addition to the Environmental Studies Internship Program, other student opportunities include the Environmental Studies Senior Honors Program, a senior thesis course (Environmental Studies 197), and the opportunity to conduct independent research or serve as a research assistant with an environmental studies faculty member (Environmental Studies 199 or 199RA). Specialized writing classes, designed to increase a student's ability to produce comprehensive papers, are linked to some departmental courses. The Environmental Studies Program is also affiliated with study abroad programs and field research schools which provide students the opportunity to receive academic credit while conducting environmental research in places such as Nepal, Africa, Australia, South America, Hawaii, Alaska, and Montana. Students may also conduct independent research at any of the 30 California natural reserves managed by the UC Reserve system.

For more information about these and other opportunities, please contact the program's academic advisor at (805) 893-3185, stop by the Environmental Studies Program main office, or e-mail your inquiries to: [esprogram@es.ucsb.edu](mailto:esprogram@es.ucsb.edu).

The Environmental Studies Program welcomes transfer and continuing students.

### ***Majoring in Hydrologic Sciences and Policy***

Hydrology is a science dealing with the occurrence, circulation, distribution, and properties of the waters of the solid earth and its atmosphere. Many of the significant environmental problems that society is facing today are related to hydrologic or water issues. These include the hydrologic impact of climate change; the transportation of hazardous materials in both

ground and surface water; the maintenance of high quality water for human consumption, industry, irrigation, recreation, energy generation, and agriculture; the understanding of geological hazards; and the management of important aquatic environments. Because water is important to and affected by physical, chemical, and biological principles, the curriculum of the B.S. degree in hydrologic sciences is multidisciplinary.

The main focus of the hydrologic sciences and policy program and major is to provide students with the scientific training needed to understand and solve complex hydrologic problems at local, regional, and global levels. The goal of the hydrologic sciences curriculum is to provide a rigorous framework for students to examine the hydrologic process in our environment. Although the program is housed within the Environmental Studies Program, the curriculum for this degree is offered cooperatively by the departments of Ecology, Evolution, and Marine Biology; Chemistry and Biochemistry; Geography; and Earth Science. Lower-division courses concentrate on the physical and natural sciences. In the upper division, students complete a core group of hydrology courses and then select one of the following three emphases: biology and ecology, physical and chemical sciences, or policy.

Students who graduate with a B.S. degree in hydrologic sciences and policy are prepared to do graduate work in such fields as environmental science, biology, ecology, chemistry, geography, geology, environmental engineering, and a variety of specialty programs in hydrology.

Hydrologic sciences and policy students are also often qualified for positions in environmental consulting and planning, water quality analysis, aquatic resource management, waste water treatment, as well as a variety of jobs with state and federal agencies. Students who are interested in pursuing a career in the hydrologic sciences are encouraged to visit the environmental studies peer advisor's office for additional information pertaining to jobs and careers in the hydrology field.

Students in hydrologic sciences and policy have the opportunity to conduct academic internships. Through the Environmental Studies Internship Program, a student majoring in hydrologic sciences can obtain valuable hands-on experience while earning academic credit towards major requirements. Students majoring in hydrologic sciences and policy may also conduct independent research or serve as a research assistant with faculty members (Environmental Studies 199 or 199RA). In addition, the Environmental Studies Program offers a senior honors program for all qualified hydrologic sciences majors in which a student can receive a "Distinction in the Major" award upon successful completion of the program. The hydrologic sciences program is also affiliated with numerous study abroad programs and schools, which provide students the opportunity to receive academic credit while conducting hydrological research around the world.

The hydrologic sciences and policy major welcomes transfer and continuing students.

### ***Internship Program***

Students majoring in either environmental

studies or hydrologic sciences may choose to complete an internship from the Environmental Studies Internship Program (ESIP). Managed by the environmental studies internship coordinator, this academic program was initiated in 1973 to provide students with experience in their field of interest and to tie classroom learning to practical field applications.

Internships are considered an integral part of the environmental studies and hydrologic sciences curriculum and are fully supported by the faculty. Between 90 and 100 students are placed in internships locally, statewide, nationally, and internationally each year. Positions are available year round and the internship coordinator is available to assist students in selecting appropriate internships to meet their learning objectives. Academic credit (Environmental Studies 192) is awarded to junior and senior level students who successfully complete an internship position. An extensive internship database as well as general information regarding the Environmental Studies Internship Program is available on the Environmental Studies Program's webpage.

### ***Field Studies, Study Abroad, and Research Opportunities***

The Environmental Studies Program strongly encourages its students to participate in experiential elective courses, study abroad programs, or any other academic opportunities which enhance their environmental education. The environmental studies curriculum has a number of special courses which allow students to conduct independent research projects (Environmental Studies 199), work as a research assistant for one of its faculty members (Environmental Studies 199RA), or pursue a senior thesis on a topic of their choice (Environmental Studies 197).

Additionally, through the outside concentration requirement, environmental studies students may earn academic credit towards their major requirements while conducting field research in the outdoors with faculty from all over the globe. Field studies opportunities are available through the program's affiliations with a number of field studies and research programs. Similar opportunities at other institutions offer excellent first-hand experiences, and interested students should consult the Environmental Studies Program advisor for additional information.

Furthermore, the flexibility of the environmental studies curriculum permits students the opportunity to pursue study abroad through the UC Education Abroad Program. Past environmental studies majors have studied up to one full year at universities located in countries such as New Zealand, Ecuador, England, Scandinavia, and the University of Virginia's Semester at Sea. Depending on the coursework taken, academic credit may be petitioned to substitute for a number of units in the environmental studies or hydrologic sciences majors.

Approximately one-half of all environmental studies majors complete at least one field studies or study abroad program before graduating. Additional information about affiliated environmental field studies programs and study abroad programs is available from the environmental studies academic advisor.

### Scholarships and Awards

Each year, undergraduate scholarships and awards are available to students majoring in the Environmental Studies Program. They include the UCSB Foundation's Pearl Chase Scholarship, which awards one or two \$1,500 scholarships recognizing academic excellence within environmental studies; the Environmental Studies Associate's Tom Rogers Scholarship awards up to \$5,000 a year to students who embody the ideals of civic responsibility and leadership; the Mathew Charles Decker Memorial Scholarship annually awards \$1,000 a year to assist a student in participating in an environmental field studies program; the Coeta Barker Scholarship awards money to students who are in good academic standing and participate in an unpaid academic internship; and the J. Marc McGinnes Environmental Advocacy Award. Environmental Studies scholarship and award information is available on the Environmental Studies Program's webpage.

### The Senior Honors Program

Qualified majors are eligible to participate in the Environmental Studies Senior Honors Program, which offers the opportunity to work closely with a faculty advisor to complete a senior thesis. Requirements include senior standing, completion of at least 20 upper-division major units, minimum grade-point average of 3.0, and enrollment in Environmental Studies 197. Students who successfully complete the program and obtain a minimum overall grade-point average set each spring, are eligible for graduation with "Distinction in the Environmental Studies Major."

It is highly recommended that lower-division students interested in participating in the senior honors program should enroll in the honors discussion sections offered with Environmental Studies 1, 2, and 3. Interested students may obtain additional information regarding the senior honors program from the Environmental Studies undergraduate advisor.

## Undergraduate Program

### Bachelor of Arts— Environmental Studies

The major is divided into three parts: preparation for the major, upper-division requirements within environmental studies, and outside concentration in related areas.

**Preparation for the major.** Required: Environmental Studies 1, 2, and 3; MCDB 20 or both MCDB 1A-AL and EEMB 2; Economics 1 or 2 or 109; one course from Geology 1, 2, 4, 20, Geography 3A or 3B; Mathematics 34A or 3A, and one course from Mathematics 3B or 34B or Environmental Studies 25; one course from PSTAT 5A, 5E, 5LS; either Chemistry 1A-AL and Environmental Studies 15 or Chemistry 1A-AL, 1B-BL, 1C-CL. Also required, any two courses from: Anthropology 2; Communication 1; Geography 5; Global Studies 1, 2; History 7; Political Science 1, 6, 7, 12; Religious Studies 1, 14; Sociology 1. Finally, one course from the following list: Philosophy 3, 4, or 6.

**Upper-division requirements within environmental studies.** All environmental studies majors pursuing a bachelor of arts degree must

complete 13 required units and 28 elective units for a total of 41 units within environmental studies. Required upper-division units are: Environmental Studies 100, 115, 190 and either Environmental Studies 106 or 188. Students should select the 28 units of elective courses in consultation with the undergraduate advisor to constitute a plan of study in a variety of areas such as, but not limited to: environmental planning, natural resource management, environmental law, energy, and Third World studies. No more than 4 units each from Environmental Studies 192, 194, 199, and 199RA will apply, and no more than 8 units of these courses combined will be accepted toward the major.

**Outside concentration.** Environmental studies majors must complete an outside concentration consisting of 20 upper-division units of classes taken in another department or undergraduate program within the College of Letters and Science (a double major will satisfy this requirement). Alternatively, students may propose an interdisciplinary concentration, combining 20 upper-division units taken outside the Environmental Studies Program. A plan of study listing the 20 units to be taken must be petitioned and approved by the environmental studies academic advisor or program chair prior to beginning this option. To be approved, the plan must demonstrate a coherent environmental focus. Although a list of UCSB courses most often used to create interdisciplinary emphases is available from the program office, students are welcome to use courses not on the list as long as they form a coherent environmental focus (UC-acceptable upper-division transfer, field studies, or study abroad units may be considered). Note that any course cross-listed with environmental studies and another department found on the outside concentration list may only apply to one required area, not simultaneously to both the elective area and the outside concentration.

### Bachelor of Science— Environmental Studies

The major is divided into three parts: preparation for the major, upper-division requirements within environmental studies, and outside concentration in related areas.

**Preparation for the major.** Required: Environmental Studies 1, 2, 3; Economics 1 or 2 or 109; Geology 1 or 2 or 4 or 20 or Geography 3A or 3B; Mathematics 3A-B-C; Physics 1, 2, 3-L or 6A-AL-B-BL-C-CL; Chemistry 1A-AL-B-BL-C-CL; MCDB 1A-AL and 1B, EEMB 2 and 3-3L, and either MCDB 1BL or EEMB 2L; one course from PSTAT 5AA-ZZ, 133A, or EEMB 30. Also required, one course from: Anthropology 2; Communication 1; Geography 5; Global Studies 1, 2; History 7; Political Science 1, 6, 7, 12; Religious Studies 1, 14; Sociology 1. And one course from the following list: Philosophy 3 or 4 or 6.

#### Upper-division requirements.

**Area A.** All environmental studies majors pursuing the bachelor of science degree must complete 17-18 units in required courses: Geography 172 or PSTAT 120A or 133B or EEMB 146 or 179; Environmental Studies 100 or EEMB 120; 115, 190; one course from: Environmental Studies 106 or 188.

**Area B.** Students pursuing the bachelor of sci-

ence degree must also complete an additional 48 units, 32 of which are selected from upper-division environmental studies courses and the remaining 16 forming an outside concentration of upper-division units of coursework in related natural science departments. The 32 upper-division environmental studies units are split into two sections. In section B1, students must complete 20 units from the following list: Environmental Studies 105, 111, 114A, 114B, 119, 120, 128, 134, 140, 144, 147, 148, 149, 152, 158ES, 162A, 166BT, 166FP, 167, 168, 169, 171 and 197. The remaining 12 units (Section B2) may be satisfied by completing any environmental studies courses number 101-199, excluding the first 20 units used to satisfy Section B1. No more than 4 units each from Environmental Studies 192, 194, 199, and 199RA will apply, and no more than 8 units of these courses combined will be accepted toward the major.

**Outside concentration.** The outside concentration may be composed of 16 upper-division units from one of the following science departments (completion of a double major from one of the following departments will satisfy): molecular, cellular, and developmental biology (MCDB); ecology, evolution, and marine biology (EEMB); chemistry and biochemistry; geography; earth science; mathematics; physics; probability and statistics; or courses listed under the biopsychology major. Note: Geology 101 and Mathematics 100A-B will not apply. Alternatively, students may propose an interdisciplinary outside concentration by combining 16 upper-division units from any of the departments listed above. A plan of study listing the 16 units to be taken must be petitioned and approved by the Environmental Studies academic advisor or program chair prior to beginning this option. To be approved, the plan must demonstrate a coherent environmental focus. Although a list of UCSB courses most often used to create interdisciplinary emphases is available from the program office, students are welcome to use courses not on the list as long as they form a coherent environmental emphasis (UC-acceptable upper-division transfer, field studies, or abroad units may be considered).

Any course cross-listed with environmental studies and another department found on the outside concentrations list may only apply to one required area, not simultaneously to both the elective area and the outside concentration.

### Bachelor of Science— Hydrologic Sciences and Policy

The major is divided into three parts: preparation for the major, upper-division core requirements, and one of three emphases.

**Preparation for the major.** Required: Economics 1 or 109; Mathematics 3A-B-C and 5A; Environmental Studies 3 or Political Science 12; History 7; Chemistry 1A-AL-B-BL-C-CL; Physics 1, 2, 3-3L (highly recommended), or 6A-AL-B-BL-C-CL; Geology 1 or 2; MCDB 1A-AL and 1B, EEMB 2 and 3-3L, and either MCDB 1BL or EEMB 2L; Geography 3B; PSTAT 5A or 5LS.

**Upper-division requirements.** All hydrologic sciences majors must take 25 required units and complete 31 units from one of three emphases. Required upper-division units are Geography 112 and 116; Environmental Studies 144; EEMB

120 or Environmental Studies 100; Environmental Studies 176A; and Geology 168 or 169.

**Emphases.** Majors must complete all required courses of one of the following three emphases. The emphasis will appear on the student's official transcript.

- 1. Biology and Ecology Emphasis.** Required courses: EEMB 128, 148; and 171 (12 units required). 19 elective units from: Geology 114A, 114B, 117, 168, 169; EEMB 117, 119, 120AL-BL, 142B, 142BL, 142C, 142CL, 153, 173, 186; Environmental Studies 149, 176B, 192, 197, 199, 199RA; Geography 114A-B, 162A, 176A, 176B-BL, 176C-CL.
- 2. Physical and Chemical Sciences Emphasis.** Required courses: Geography 114A, 162A; Geology 114A, 117, (17 units required). 14 elective units from: Chemistry 109A-B-C, 113A-AL, 113B-C, 123, 150; EEMB 142B, 142BL; Environmental Studies 119, 128, 149, 176B, 192, 197, 199, 199RA; Geography 110, 114B, 134, 166, 176A, 176B-BL, 176C-CL; Geology 102A-AL-B-BL-C-CL, 103, 104A, 113, 122, 124AA-ZZ, 130, 168, 169, 173-173L.
- 3. Policy Emphasis.** Required courses: Environmental Studies 106, 174; History 173T; Political Science 175 (16 units required). 15 elective units from: EEMB 142B, 142BL, 186; Environmental Studies 119, 128, 149, 176B, 192, 197, 199, 199RA; Geography 135, 135S, 162A, 176A, 176B-BL-C-CL; History 172A-B, 176A-B; 177.

## Environmental Studies Courses

### LOWER DIVISION

#### 1. Introduction to Environmental Studies

(4) FREUDENBURG

"Environmental Studies" requires insights from many disciplines, including the social as well as biophysical sciences and the humanities. This introduction offers an overview of the field, examining both our planet and the ways in which we humans depend on it. (F)

#### 2. Introduction to Environmental Science

(4) MANALIS, KELLER

Not open for credit to students who have completed *Environmental Studies 12*.

Provides integration of fundamental science with environmental topics. Includes impacts of human population increase; principles of systems and change, biogeochemical cycles, ecosystems and global climate; energy and laws of thermodynamics; water supply and pollution; toxicology and risk analysis; air pollution and stratospheric ozone depletion. (W)

#### 3. Introduction to the Social and Cultural Environment

(4) GRAVES

Not open for credit to students who have completed *Environmental Studies 11*.

An introduction to the relationship of societies and the environment from prehistorical times to the present. The course is global in perspective, and includes history, literature, philosophy, economics, science, and culture as evidence for examining the human social environment. (S)

#### 15. Chemistry of the Environment

(4) CLARK

Prerequisite: *Chemistry 1A*.

Application of chemical principles such as kinetics, equilibria, radioactive decay, and thermodynamics to environmental problems. Environmental problems discussed include global cycles, carbonate chemistry, ozone formation, the structure of the atmosphere, and water pollution. The interactions and consequences of

human actions on the chemistry of the environment will be emphasized.

#### 20. Introduction to Shoreline and Watershed Issues, Policy, and Research

(4) STAFF

Students are introduced to shoreline and watershed issues facing the local community by meeting with scholars, researchers, activists, and artists who study coastal preservation, restoration, and related environmental issues. Course includes local field trips, in-class discussions, and elective short-research project. (F)

#### 25. Quantitative Thinking in Environmental Studies

(4) MANALIS

Improve students' ability to deal with quantitative aspects of environmental topics by developing skills in algebra, computer use (Excel), graphing, and processing and conceptualizing environmental data by using numerical modeling. Collaborative learning is emphasized.

### UPPER DIVISION

#### 100. Environmental Ecology

(4) SCHIMEL

Prerequisites: *Environmental Studies 2*; and, *Environmental Studies 1* or *3*; and, *EEMB 20* or *MCDB 20* or, *MCDB 1A-AL* and *EEMB 2*.

A study of principles of ecology and their implications for analyzing environmental problems. Focus on understanding the processes controlling the dynamics of populations, communities and ecosystems. Specific examples emphasize the application of these concepts to the management of natural resources. (F)

#### 103S. History of Surfing

(4) STAFF

Same course as *Environmental Studies 103S*.

The history of surfing from its Polynesian origins to today's global, commercial, and cultural force, with perspectives from history of politics; economics; science and technology; the developing world; sex, ethnicity, gender; popular culture; and special focus on the environment.

#### 104. People, Poverty, and Environment in Central America

(4) STONICH

Prerequisite: *Environmental Studies 1* or *3* or *Anthropology 2*.

Same course as *Anthropology 104H*.

Analysis of the interrelated social, demographic, economic, political, and environmental crises occurring in Central America from an anthropological perspective. Emphasis on the evolution of contemporary problems, current conditions, and future prospects for the region.

#### 105. Solar and Renewable Energy

(4) MANALIS

Prerequisite: *upper-division standing*.

Recommended preparation: *Environmental Studies 1, 2, and 3*.

How solar and renewable energy fits with environmental-energy options in both developed and developing nations. Technologies are studied in terms of their effects on the physical, social, and biological environment. Demonstrations, field trips, and guest lecturers. (S)

#### 106. Critical Thinking About Human-Environmental Problems and Solutions

(4) FREUDENBURG

Prerequisites: *Environmental Studies 1* and *3*.

Recommended preparation: *Environmental Studies 2* and *upper-division standing*.

Focus on two interrelated aspects of human-environment interactions where shortfalls in critical thinking are important - our thinking about human-related "problems and causes" and potential "solutions." Gain feel for seductiveness of common misconceptions and learn why to move beyond them.

#### 107C. The Darwinian Revolution and Modern Biology

(4) OSBORNE

Prerequisite: *History 4B* or *4C* or *17B* or *17C* or *Environmental Studies 1* or *2* or *3* or *Philosophy 1*

or *3* (any course may be taken concurrently), or upper-division standing.

Same course as *History 107C*.

Examines the social and scientific impacts of evolutionary ideas from around 1800 through Charles Darwin, the modern evolutionary synthesis, the birth of ecology, and molecular biology. Focus is on America and Western Europe.

#### 107E. History of Animal Use in Science

(4) GUERRINI

Prerequisites: *Environmental Studies 1* and *3*, or *History 4A* or *4B* or *4C* or *17A* or *17B* or *17C*.

Same course as *History 107E*.

Examines history of scientific uses of animals from antiquity to the present. Topics include vivisection, field trials, and the use the development of drugs and vaccines. Changing ethical ideas about animals, including the relationship between animal rights and environmental ethics, is also considered.

#### 107R. History and Ecological Restoration

(4) GUERRINI

Prerequisite: *upper-division standing*.

Same course as *History 107R*.

An examination through case studies of ecological restoration from a historical perspective, featuring the intersection between the historian and the restoration process. Consideration of the definitions of natural and cultural resources and historical artifacts.

#### 108A. The Origins of Western Science, Antiquity to 1500

(4) OSBORNE

Prerequisite: *History 4A* or *4B* or *Environmental Studies 1* or *2* or *3* or *Philosophy 1*

or *3* (any course may be taken concurrently), or upper-division standing.

Same course as *History 106A*.

Examines the emergence and development of science through an examination of ancient cosmology, medicine, natural history, philosophy, and environmental ideas.

#### 110. Disease and the Environment

(4) GUERRINI

Prerequisite: *Environmental Studies 1* or *3*.

The interaction of human and animal disease and the environment through case studies, from the Black Death of 1300's to asthma, AIDS and the Ebola virus. "Environment" is broadly defined to include both natural and built environments. (W)

#### 111. The California Channel Islands

(4) STAFF

Prerequisites: *MCDB 1A-1AL* and *EEMB 2*; or, *MCDB 20* or *EEMB 20* or *Geography 3A* or *3B* or *Geology 2* or *Environmental Studies 2*.

Same course as *Geography 149*.

Recommended preparation: *introductory chemistry*.

Discussion of biological, geological, ecological, anthropological, and oceanographic characteristics of the Channel Islands area as well as the management and human uses of this region. Emphasis on islands and ocean waters off Southern California. (S)

#### 112. World Population, Policies, and the Environment

(4) STAFF

Prerequisite: *upper-division standing*.

History of global population growth, with emphasis on developing nations. Its socioeconomic effects on a society and factors behind migration. Different views of Malthus, Marx, Boserup, and others and governmental policies to check rapid population growth are also discussed.

#### 114A. Soil Science

(5) CHADWICK

Prerequisites: *Chemistry 1A-B*; and, *Geography 3B* or *Geology 2*.

Same course as *Geography 114A*.

Introduction to the chemical, hydrological, and biological characteristics of soils, their global distribution, and their response to management. Field and laboratory projects are designed to provide an understanding of soil-landscape distribution, soil morphology, and the physical and chemical properties that influence management decisions. (F)

**114B. Soil Genesis and Classification****(5) CHADWICK***Prerequisites: Environmental Studies 114A.**Same course as Geography 114B.*

Introduction to the chemical, physical, and biological processes that produce soil and influence their management. The morphology, genesis, classification, and global distribution of soil will be emphasized. Labs cover field site selection, soil description, sampling, laboratory preparation of soil samples and selected chemical and physical analyses.

**115. Energy and the Environment****(4) MANALIS***Prerequisites: Environmental Studies 2; and, Environmental Studies 25 or Mathematics 3A or 34A or Chemistry 1A.*

Focus on learning how to use energy efficiently in accordance with the laws of thermodynamics and in harmony with the environment. Topics include the nature of energy and the fundamentals for a sustainable environmental energy policy.

**116. Building Sustainable Communities****(4) WILKINSON***Recommended preparation: Environmental Studies 1 or 2 or 3 or Geography 5.*

Examines sustainability, communities, and urban systems in a global context. Covers impacts cities have on the environmental systems that support them, and explores ways to improve urban systems through technology, policy, and design. (F)

**117. Science and Policy Dimensions of Climate Change****(4) STAFF***Prerequisite: upper-division standing.*

Climate change and variability due to global warming is a critical environmental, social, and economic issue. Course reviews the scientific basis of our understanding of climate change and policy responses to the problem including "no regrets" and multiple-benefits responses.

**118. Industrial Ecology: Designing for the Environment****(4) MANALIS***Prerequisite: upper-division standing.**Recommended preparation: Environmental Studies 1, 2, and 3.*

Not open for credit to students who have completed *Environmental Studies 193IE*.

Industrial ecology is a philosophical and methodical framework interwoven with concepts in ecology and economics used to aid in understanding how industrial systems interact with the environment. Capital, energy, and material flows are examined and viewed in cultural context.

**119. Ecology and Management of California Wildlands****(5) D'ANTONIO***Prerequisites: Environmental Studies 100 or EEMB 120.**Same course as EEMB 119. One weekend fieldtrip is mandatory. Lecture, 3 hours; laboratory, 5 hours.*

Explore ecological processes in California habitats and the challenges of their management through field trips, discussions with land managers, lectures and readings. Focus on regional habitats including specialized habitats such as coastal salt marsh and vernal pools, and more widespread such as oak savanna and chaparral.

**120. Toxics in the Environment****(4) STAFF***Prerequisites: Environmental Studies 2; EEMB 20 or MCDB 1A-AL and EEMB 2; and, Chemistry 1A-B or Environmental Studies 15.**Recommended preparation: Chemistry 1B-C and a course in introductory statistics.*

Effects and implications for the future of introducing toxins into the biosphere. Examination of physiological and biochemical effects and the mechanisms of action of potential toxins. Discussion of methodological approaches and legal ramifications of studies in environmental toxicology.

**122LE. Cultural Representations: Literature and the Environment****(4) HILTNER***Prerequisite: Writing 2 or upper-division standing.*

Environmental survey of Western literature that

explores the often-ignored literary history of the natural world.

**122NE. Cultural Representations: Nature and the Environment****(4) STAFF***Prerequisites: Writing 2 or 50 or 109AA-ZZ (one course from series) or English 10 or upper-division standing.**Same course as English 122NE.*

Perceptions of nature have changed throughout the history and vary across cultures. Course explores changing expressions of our changing relations to the world we live in, with emphasis on cultural movements (films, literature, newspapers, etc.) that have affected contemporary American experience.

**123. Coastal and Ocean Law and Policy****(4) STAFF***Prerequisite: upper-division standing.*

Explores both the governance of human uses of coastal, marine, and ocean areas and the complex laws, practices, and policies employed to resolve conflicts among competing users. Examines interactions among local, state, federal, and international laws with emphasis on the California coast.

**124. Environmental Dispute Resolution****(4) STAFF***Prerequisites: Environmental Studies 1 or 2 or 3; and upper-division standing.*

An examination of the various formal and informal conflict resolution tools, such as litigation, arbitration, negotiation and mediation, which are utilized in approaching and resolving environmental disputes of all kinds.

**125A. Principles of Environmental Law****(4) STAFF***Prerequisites: Environmental Studies 1 or 2 or 3; and upper-division standing.*

An introduction to the history and methodology of law as it relates to human use of the environment. Case studies are used to examine common law, constitutional and modern environmental laws, with an emphasis on current theories and principles. (W)

**125B. Land Use and Planning Law****(4) STAFF***Prerequisite: Environmental Studies 125A.*

An examination of local, state, and federal laws regulating land use and development. Selected problems analyzed through case studies.

**127. Concepts of Environmental Education and Practicum****(4) LEWIN***Prerequisites: Environmental Studies 1 or 2 or 3; upper-division standing.**Recommended preparation: Environmental Studies 1, 2 and 3.*

Conceptual introduction to Environmental Education (EE) through study and research of EE history, learner characteristics, models of excellence, and professional networks. Students utilize sound educational principles and hands-on experiences to plan, implement, and evaluate a quality EE experience for others. (S)

**128. Foundations of Ecosystem Restoration****(4) D'ANTONIO***Prerequisite: Environmental Studies 100 or EEMB 120.**Same course as EEMB 128.*

Integrates ecological principles with practical issues involved in ecosystem restoration. Beginning with the challenge of selecting goals and establishing a target trajectory, students evaluate how ecological knowledge can guide restoration and whether sustainable states or trajectories can be achieved.

**129. Ecopsychology****(4) STAFF***Prerequisites: Environmental Studies 1 or 2 or 3.*

Course explores the theories and practices of psychologists, educators, and others whose work is focused on the connection between "inner" human nature and "outer" nature within which humans experience themselves and the rest of the world.

**130A. Third World Environments: Problems and Prospects****(4) STONICH***Prerequisite: Environmental Studies 1 or 3 or**Anthropology 2.**Same course as Anthropology 130A.*

Examination of the human dimensions of globalization/global environmental change from the Third World. Emphasis on the sociocultural context of environmental destruction, environmental justice, and interdisciplinary approaches. (F)

**130B. Third World Environments: Conservation and Sustainable Development****(4) STONICH***Prerequisite: Environmental Studies 1 or 3 or**Anthropology 2.**Same course as Anthropology 130B.**Recommended preparation: Environmental Studies 130A or Anthropology 130A.*

Focus on conservation and sustainable development. Includes examination of contending views of sustainable development. Special emphasis on tourism, agricultural, fisheries, and aqua-cultural development in the Third World. (W)

**130C. Third World Environments: Response and Resistance****(4) STONICH***Prerequisites: Environmental Studies 1 or 3 or Anthropology 2.**Same course as Anthropology 130C.*

Concerned with response and resistance to economic globalization, impoverishment, and environmental degradation: household economic strategies; migration, urbanization; social conflict; environmental movements of the poor; the information revolution; and alternative development strategies. (S)

**131. International Environmental Law and Politics****(4) PULVER***Prerequisite: Environmental Studies 1 or 2 or 3.*

An examination of the actors and institutions of international environmental law and politics, with an emphasis on explaining patterns of success and failure in addressing global environmental problems.

**132. Human Behavior and Global Environment****(4) STAFF**

Study of global environmental impacts of major human technological innovations, including the use of fire, development of agricultural tools, and the process of industrialization. Evaluation of prospects for altering human behavior to encourage sustainable development is included.

**134. Coastal Processes and Management****(4) STAFF***Prerequisites: Environmental Studies 2; Mathematics 3A or 34A or Environmental Studies 25; and, Geology 1 or 2 or 4 or 20 or Geography 3A or 3B.**Recommended preparation: introductory biology.*

Using representative coastal regimes, students study the major processes at work in our nation's coastal zones and examine the nature and efficacy of the planning and management programs that have been put in place in these areas.

**135A. Principles of Environmental Planning****(4) WACK***Prerequisite: upper-division standing.*

Introduction to the history, theory, and trends of urban, regional, and environmental planning in both California and the United States. Field trips to local urban areas. (W)

**135B. Advanced Environmental Planning****(4) WACK***Prerequisite: Environmental Studies 135A.*

Advanced seminar applying principles presented in Environmental Studies 135A to regional and local government planning processes. Field analysis of local planning issues. (S)

**144. Form, Process, and Human Use of Rivers****(4) KELLER***Prerequisites: Mathematics 3A-B or 34A-B.**Same course as Geography 144.**Recommended preparation: Physics 1 or 6A/AL or Geological Sciences 117.*

Basic understanding of fluvial (river) hydrology. In-depth evaluation of channel form and fluvial processes and impact of human use on rivers.

#### **146. Animals in Human Society: Ethical Issues of Animal Use**

(4) SHELTON

*Prerequisite:* upper-division standing.

*Recommended preparation:* *Environmental Studies 1 or 3.*

An exploration of the ethical issues which arise when humans interact with other animals, and an examination of conflicting attitudes toward the value of animal life in such specific areas as food production, recreational activities, research and environmental protection.

#### **147. Air Quality and the Environment**

(4) CLARK

*Prerequisites:* *Mathematics 3A or 34A or Environmental Studies 25; and, Chemistry 1A-B or Environmental Studies 15.*

Types, sources, effects, and control of air pollution. Topics include gaseous pollutants particulates, toxic contaminants, atmospheric dispersion, photochemical smog, acid rain control measures, the Clean Air Act and regulatory trends, indoor air.

#### **149. World Agriculture, Food, and Population**

(4) CLEVELAND

*Prerequisite:* upper-division standing.

*Same course as Anthropology 149 and Geography 161.*

Evolution, current status, and alternative futures of agriculture, food, and population worldwide. Achieving environmentally, socially and economically sustainable food systems; soil, water, crops, energy and labor; diversity, stability and ecosystems management; farmer and scientist knowledge and collaboration; common property management.

#### **152. Applied Marine Ecology**

(5) SCHMITT, GAINES

*Prerequisites:* *Environmental Studies 100; or EEMB 2 and MCDB 1B; or EEMB 3; and, Mathematics 3A or 34A.*

*Same course as EEMB 152.*

*Recommended preparation:* *EEMB 120.*

Introduction to the application of ecological principles and methods to environmental problems in marine habitats. Focus on problems that are local, regional, and global in scale. Concepts illustrated with case studies.

#### **158. Cultural and Biological Diversity of Food Plants**

(4) CLEVELAND

*Prerequisite:* upper-division standing.

*Same course as Anthropology 158 and Geography 169.*

*Recommended preparation:* *Environmental Studies 149 or Anthropology 149 or Geography 161.*

The evolution of food plants from domestication to genetic engineering. Patterns of diversity around the world in small-scale, traditionally-based and industrial communities. Class participation in project on local olive diversity includes field work.

#### **160. American Environmental Literature**

(4) STAFF

*Prerequisites:* *Environmental Studies 1 or 3; and Writing 2.*

*Not open for credit to students who have completed Environmental Studies 193EL.*

Assesses contributions of literary texts to American environmental movements. Examines influences of writers such as Thoreau, Rachel Carson, and Edward Abbey upon environmental perceptions, values, and attitudes in American cultural history and upon rhetorics and politics of contemporary environmental debates.

#### **162A. Environmental Water Quality**

(4) LOAICIGA

*Same course as Geography 162A.*

*Recommended preparation:* *Geography 3B, lower-division biology, and chemistry.*

Study of the physico-chemical and biological characteristics of natural waters, analysis of water pollution and treatment, water-quality regulations:

The laboratory; independent research and supervised research of water pollutants and water treatment, quantitative analysis of water-quality data and one-day field work.

#### **165A. Environmental Impact Analysis**

(4) ALMY

*Prerequisites:* upper-division standing.

*Recommended preparation:* *Environmental Studies 116 or 135A.*

Analyzes the historical and theoretical approaches to environmental assessment methodology and procedures for preparing and reviewing environmental impact reports. Explores strengths and weaknesses of current approaches in current public policy context. (F)

#### **165B. Advanced Environmental Impact Analysis**

(4) STAFF

*Prerequisites:* *Environmental Studies 165A; consent of department.*

*Other course work and/or experience may be substituted for Environmental Studies 165A, with the consent of the instructor(s).*

Advanced seminar during which students prepare their own focused environmental impact report on a specific development project. Includes in-depth discussion of baseline, mitigation, impacts, and public comments. Assignments based on research and fieldwork provide reality professional environmental planning experience.

#### **166BT. Biotechnology, Food, and Agriculture**

(4) CLEVELAND

*Prerequisite:* upper-division standing.

*Same course as Anthropology 166BT and Geography 171BT. Course offered every other year.*

*Recommended preparation:* *Environmental Studies 149 or Anthropology 149 or Geography 161. Letter grade only.*

Social, cultural, ethical, biological, and environmental issues surrounding biotechnology (BT) and the food system. Includes theory and method of BT; scientific, social and political control of BT; effect of BT on genetic diversity, small-scale farmers, the environment, food supply, consumer health.

#### **166FP. Small-Scale Food Production**

(5) CLEVELAND

*Prerequisites:* *Environmental Studies 149 or Anthropology 149 or Geography 161.*

*Same course as Anthropology 166FP and Geography 171FP.*

Biological, ecological, social, and economic principles of small food production and their practical application. Includes each student cultivating a garden plot; lab exercises, field trips to local farms and gardens. (S)

#### **167. Biogeography: The Study of Plant and Animal Distributions**

(4) STILL

*Prerequisites:* *Geography 3A or 3B or Environmental Studies 2 or EEMB 2 or Geology 2.*

*Same course as Geography 167.*

Basic processes governing geographic distribution patterns of biota, including migration, evolution, isolation, and endemism. Biogeographic regions and their histories and an introduction to island biogeography. Emphasis on plants and plant geography. One all-day field trip.

#### **168. Aqueous Transport of Pollutants**

(4) CLARK

*Prerequisites:* *Mathematics 3B and Chemistry 1A-B-C. Same course as Geological Sciences 168.*

*Recommended preparation:* *Geology 113 or 173-173L or Geography 116-116L or 144 or Environmental Studies 144.*

Focus on the behavior of dissolved species in rivers. Examination of the basic advection-diffusion model. Particular emphasis on field data. (F)

#### **169. Tracer Hydrology**

(4) CLARK

*Prerequisites:* *Mathematics 3B and Chemistry 1A-B-C.*

*Same course as Geological Sciences 169.*

*Recommended preparation:* *Geology 113 or 173-173L or Geography 116-116L or 144 or Environmental*

*Studies 144.*

Introduction to principles of chemical and isotope tracer hydrology. Emphasis on methods of groundwater dating, the use of tracers as management tools, and contaminate plume monitoring.

#### **171. Ecosystem Processes**

(4) SCHIMEL

*Prerequisite:* *Environmental Studies 100 or EEMB 2 or MCDB 1B.*

*Same course as EEMB 171.*

*Recommended preparation:* *EEMB 120.*

An examination of the key processes that regulate ecosystem productivity and function in terrestrial ecosystems. Specific foci include: plant-soil linkages including decomposition and nutrient supply, and the role of above- and below-ground community composition on element cycles. (W)

#### **172. Integrated Materials and Waste Management**

(4) STAFF

*Prerequisites:* *Environmental Studies 1 or 2 or 3.*

*Recommended preparation:* *introductory chemistry and economics; electives in biology and natural resources.*

Addresses how waste has been regarded and managed through the ages to the present. Emphasis on the technological, policy, and economic dimensions of modern materials and waste management, such as landfill, conservation technologies, waste reduction, recycling and composting.

#### **173. American Environmental History**

(4) GRAVES

*Same course as History 173T.*

Traces the history of American attitudes and behavior toward nature. Focus on wilderness, the conservation movement, and modern forms of environmentalism.

#### **174. Environmental Policy and Economics**

(4) DECANIO

*Prerequisite:* *Economics 1 or 2 or 109.*

Introductory course on economic analysis of environmental policy. Topics include incentives and regulation, protection of the stratospheric ozone layer, global climate change, and equity issues.

#### **175. Environmental Economics**

(4) KOLSTAD

*Prerequisite:* *Economics 100B or 104B.*

*Same course as Economics 115.*

Course provides a rigorous treatment of environmental economics. Topics include welfare analysis, ethical dimensions of economic criteria for protecting the environment, measuring the demand for environmental goods, property rights, economic incentives, including marketable permits and emission fees, and regulating risk.

#### **176A. Water Policy in the West: Linking Science with Environmental and Economic Values**

(4) STAFF

*Recommended preparation:* *Environmental Studies 1 or 2 or 3.*

Examines water supply and use, the science of water systems and watersheds, key concepts in water policy, and the basics of water law as a fundamental element of the history and context for water policy in the West.

#### **176B. Advanced Study of Water Policy**

(4) STAFF

*Prerequisite:* *Environmental Studies 176A.*

Students are in the field full-time for approximately two weeks to study watersheds and water systems including Yosemite/Hetch Hetchy, Mono Lake, and the state and federal water systems in California.

#### **178. Politics of the Environment**

(4) SMITH

*Prerequisites:* *Political Science 12 or Environmental Studies 3; upper-division standing.*

*Same course as Political Science 175.*

Analysis of environmental policy issues and their treatment in the political process. Discussion of the interplay of substantive issues, ideology, institutions, and private groups in the development, management, protection, and preservation of natural resources and the natural environment.

**179. Natural Resource Economics****(4) DEACON***Prerequisite: Economics 100B or 104B.**Same course as Economics 122.*

Microeconomic theory and capital theory applied to problems of conservation and management of natural resources. Analysis of public policy with special emphasis on nonrenewable energy resources, management of forests, deforestation and species extinction, and use of fish and game resources.

**183. Films of the Natural and Human Environment****(4) WACK***Prerequisite: upper-division standing.**Same course as Film Studies 183.**Recommended preparation: Environmental Studies 1 or 2 or 3; and Film Studies 46.*

Course presents a series of popular films and professional documentaries representing a range of trends, images, and issues associated with the natural and human environments. Visual images and critical thinking skills are combined to enhance understanding of environmental issues presented by the media. (W)

**184. Gender and the Environment****(4) STAFF***Prerequisite: upper-division standing.**Recommended preparation: Environmental Studies 1 or Anthropology 2.*

A philosophical, evolutionary, and cross-cultural analysis of the ways women and men may relate differently to their environment resulting in the design of gender-sensitive and sustainable policies for planning and development in both the developing and the developed world.

**185. Human Environmental Rights****(4) STONICH***Prerequisite: Environmental Studies 1 or 3 or Anthropology 2.**Same course as Anthropology 185.*

Introduction to human environmental rights. Examines the expansion of human rights to include human environmental rights, abuses of human environmental rights, associated social conflicts, and emergent social movements including environmental justice and transnational advocacy networks.

**188. The Ethics of Human-Environment Relations****(4) STAFF***Prerequisite: Geography 5 or Environmental Studies 1 or 3.*

Survey of contemporary environmental ethics, focusing on both philosophical and applied issues. Topics include anthropocentrism and its alternatives, the role of science and aesthetics, multicultural perspectives and the problem of relativism, and the conflict between radical and reformist environmentalism. (F)

**189. Religion and Ecology in the Americas****(4) TALAMANTEZ***Same course as Religious Studies 193.*

An overview of the growing field of religion and ecology in the Americas. Focus on spiritual traditions and land-based knowledge indigenous to the Western Hemisphere.

**190. Colloquium on Current Topics in Environmental Studies****(1) STAFF***This course is required by majors for graduation. May be repeated for credit to a maximum of 3 units.*

Required attendance at six public lectures dealing with environmental topics. Weekly discussion sections on the lectures and brief written evaluations of six lectures. Open to all students. (F,W,S)

**192. Internship in Environmental Studies****(1-12) STAFF***Prerequisites: upper-division status; environmental studies majors only; consent of department.*

*Students must have a 3.0 overall grade-point average. May be repeated for credit to a maximum of 12 units but only 4 units count toward the major; offered P/NP only.*

Opportunities to learn about practical approaches to environmental problem solving by working under faculty direction as interns with local, state, and federal agencies concerned with the environment

or with private research and business organizations. Periodic and final reports will be part of the internship. (F,W,S,SS)

**193AA-ZZ. Special Topics in Environmental Studies****(1-5) STAFF***Prerequisite: upper-division standing.*

*May be repeated for credit up to a maximum of 16 units provided letter designations are different, but only 8 units may be applied to the major.*

One-time courses taught by lecturers or guest professors on a special area of interest in environmental studies. Specific course titles and topics to be announced by the Environmental Studies Program each quarter.

**194AA-ZZ. Group Study****(1-5) STAFF***Prerequisites: upper-division standing; consent of instructor.*

*May be repeated for credit up to a maximum of 15 units, but only 4 units may be applied toward the major.*

Directed group reading, study, and research on specific subjects for environmental studies majors. Admission by specific arrangement with the environmental studies chair.

**196. Introduction to Teaching in Environmental Studies****(2-4) STAFF***Prerequisites: upper-division standing; consent of instructor and department.*

*May be repeated for credit up to a maximum of 8 units, but only 4 units may be applied toward the major.*

Students assist instructor in teaching course in which the student previously received a grade of A- or better. Activities determined in consultation with the instructor and may include assisting in laboratories, tutorials, discussion sections and field trips.

**197. Senior Thesis****(6) GRAVES***Prerequisites: upper-division standing; consent of instructor.*

*Students must have an overall grade-point average of 3.0 or higher. Course normally taken fall quarter of the senior year and is required for students completing the environmental studies senior honors program.*

Under the guidance of the instructor, students select a topic and advisor in an environmental field of their choice and develop, write and present a thesis.

**199. Independent Investigation in Environmental Studies****(1-5) STAFF***Prerequisites: upper-division standing; completion of two upper-division courses in environmental studies; consent of instructor and department.*

*Students must have a minimum 3.0 grade-point average for the preceding three quarters and are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. No more than 4 units may be counted toward the major.*

Independent research under the guidance of a faculty member in the department. Course offers qualified students the opportunity to undertake research or work in a topic related to the characteristics and problems in the environment. (F,W,S)

**199RA. Independent Research Assistance in Environmental Studies****(1-5) STAFF***Prerequisites: upper-division standing; completion of two upper-division courses in environmental studies; consent of instructor and department.*

*Students must have a minimum 3.0 grade-point average for the preceding three quarters and are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. No more than 4 units may be counted toward the major.*

Faculty supervised research assistance. (F,W,S)

**500. Teaching Assistant Training****(1) STAFF***May be repeated for credit.*

Examines effective teaching methods and professional conduct and responsibilities. Emphasis on teaching aids, examination preparation, and grading.

Includes general orientation regarding the University of California and UCSB campus; various pertinent regulations; and services available to teaching assistants and to students. (F)

**501. Teaching Assistant Practicum****(4) STAFF***May be repeated for credit.*

Students gain practical experience in teaching while coordinating one or more discussion/lab sections. Responsibilities include analyses of course texts/materials, discussion/lab sections, and formulation of topics/questions for papers and examinations. Evaluation is completed by members of the class sections. (F,W,S)

**596. Directed Reading and Research****(2-8) STAFF***May be repeated for credit.*

Individual tutorial. Hours and credit by arrangement with an individual faculty member in environmental studies. Written proposal for each tutorial must be approved by the instructor and the department chair. (F,W,S)

## Faculty

**Peter T. Aguilar**, M.A., San Diego State University, Lecturer (Applied Kinesiology, Human Physiology, Anatomy of Muscular System)

**Mircea Badulescu**, M.A., Institute of Physical Education and Sport, Bucharest, Romania, Lecturer (intercollegiate gymnastics)

**Robert Brontsema**, M.A., Azusa Pacific University, Azusa, Lecturer (baseball, softball, weight training)

**Susan Ceriale**, M.A., California State University, San Diego, Lecturer (first aid/CPR, exercise physiology, wellness/fitness administration)

**Judith E. Dale**, M.A., UC Santa Barbara, Lecturer (recreation administration, officiating, sports sociology)

**Alfred J. Ferrer**, M.A., California State University, Chico, Lecturer (athletic administration, baseball, sport management, athletic coaching minor)

**Art R. Gilbert**, M.A., UC Santa Barbara, Lecturer (nutrition, exercise physiology, wellness and fitness administration, exercise and health science minor)

**Kathleen M. Gregory**, B.A., California State University, Los Angeles, Lecturer (badminton, volleyball)

**Bobbi L. Houghton**, M.S., UC Los Angeles, Lecturer (first aid/CPR, lifeguarding, Water Safety Instructor)

**Amy E. Jamieson**, M.S., California University of Pennsylvania, Lecturer (methods and principles of fitness/muscular fitness instruction, fitness instruction minor)

**Peter A. Kirkwood**, B.A., California State University, Bakersfield, Lecturer (tennis, weight training)

**Paul K. Lee**, B.A., California State University, Fresno, Lecturer (recreational sports administration)

**Debra Miles-Dutton**, B.A., UC Santa Barbara, Lecturer (aqua aerobics, aquatics administration)

**Richard C. Powell**, M.S., California State University, San Diego, Lecturer (first aid/CPR, substance abuse, tennis, triathlon)

**James A. Romeo**, M.Ed., Springfield College, Lecturer (applied kinesiology, medical aspects, sport management minor)

**Jon A. Spaventa**, M.Ed., Springfield College, Lecturer (administration, movement education, sport psychology)

**Gregg Wilson**, M.A., UC Berkeley, Lecturer (aquatics, swimming)

### Emeriti Faculty

**Arthur J. Aldritt**, M.A., UC Berkeley, Supervisor Emeritus

**Newell D. Breyfogle**, M.A., University of Iowa, Supervisor Emeritus

**Mayville S. Kelliher**, Ed.D., University of Oregon, Supervisor Emeritus

The Department of Exercise & Sport Studies offers a program of basic instruction consisting of 1/2 unit courses and an Exercise & Sport Studies minor with emphases in athletic coaching, fitness instruction, exercise and health science, and sport management.

Basic instruction ("1-" Exercise & Sport Studies courses) is offered at the elementary, intermediate and advanced levels. Courses range in scope from a fitness related emphasis— aerobic, jogging, swimming and weight training—to individual and team sports such as basketball, golf, tennis and volleyball. Courses in the "1-" series with the "Intercollegiate" designation in the title may be repeated up to 12 times for a total of 6 units. No more than 6 units of "1-" courses may be counted toward degree requirements.

A physical examination performed by a private physician is recommended for any student intending to enroll in Exercise & Sport Studies courses.

Fines are imposed by the department for failure to return equipment or clothing on or before the date posted for such return at the end of each quarter, and for failure to close out lockers at the end of each quarter.

The minor in Exercise & Sport Studies features four individual program tracks each consisting of a varying amount of upper-division coursework. The program prepares students for advanced studies in related disciplines as well as career opportunities in the expanding fields of athletic coaching, exercise and health science, fitness instruction and sport management.

Students interested in a Exercise & Sport Studies minor should consult the appropriate advisor by contacting the Exercise & Sport Studies Department Office.

## Undergraduate Program

### Minor— Exercise & Sport Studies—

### Athletic Coaching

The athletic coaching minor is designed for students who wish to coach at the elementary, secondary, collegiate, or club level. The curriculum includes the scientific, social, and technical aspects of the profession. The minor offers students a diversity of coaching opportunities and options.

All courses to be applied to the minor must be completed on a letter-grade basis. This includes both courses offered in Exercise & Sport Studies and those offered by other departments and applied to the minor.

**Preparation for the minor.** ESS 47 and ESS 40.

**Upper-division minor.** Twenty-six units, distributed as follows: Advanced Exercise & Sport Studies 101, 130, 131, 149, 150, 180; one course from the Advanced ESS 170 series (3 units).

*Note: Substitutions and waivers are subject to approval by the chair of the department. Please see page 118 for special conditions governing minors in the College of Letters and Science.*

### Minor—Exercise & Sport Studies—Fitness Instruction

The fitness instruction minor is for students who wish to become personal trainers or group fitness instructors. This comprehensive program includes theoretical, training, and practical components. Students elect to pursue either a personal training emphasis, a group instruction emphasis, or both. Students completing the minor will be prepared to lead exercise in a range of health and fitness settings working with individual clients or a group.

All courses to be applied to the minor must be completed on a letter-grade basis. Students must complete all core classes and courses in the chosen emphasis. This stipulation includes courses for the minor offered in both Exercise & Sport Studies and other departments. Upper-division units total 21 for the group emphasis and 23 for the personal training emphasis.

**Preparation for the minor.** *Group Instruction.* Advanced ESS 3, ES 1-10, ES 1-43, ESS 40, ESS 47.

**Upper-division minor.** Twenty-one units, distributed among the following: Advanced ESS 101, 149, 150, 175A, 176, 181.

**Preparation for the minor.** *Personal Training.* Advanced ESS 3, ES 1-43, ESS 40, ESS 47.

**Upper-division minor.** Twenty-three units, distributed among the following: Advanced Exercise & Sport Studies 101, 101L, 131, 149, 150, 176, 184.

*Note: Substitutions and waivers are subject to approval by the chair of the department. Please see page 118 for special conditions governing minors in the College of Letters and Science.*

*Current CPR certification required upon completion.*

### Minor— Exercise & Sport Studies— Exercise & Health Science

The exercise and health science minor explores the physiological changes produced by exercise and the ways in which they contribute to health and the reduction of disease and stress. This

minor is for individuals interested in corporate wellness, health promotion, and fitness.

All courses to be applied to the minor must be completed on a letter-grade basis.

**Preparation for the minor.** Advanced ESS 3 and 4A, ESS 40, ESS 47.

**Upper-division minor.** Twenty-units, distributed as follows: Advanced Exercise & Sport Studies 100, 101, 101L, 149, 150, 182.

*Note: Substitutions and waivers are subject to approval by the chair of the department. Please see page 118 for special conditions governing minors in the College of Letters and Science.*

*Current CPR certification required upon completion.*

### Minor—Exercise & Sport Studies—Sport Management

The sport management minor provides students with the administrative and managerial theory and skills preparing them for either graduate study or entry into the workplace. Coursework includes but is not limited to the study of current issues and future trends in the field.

All courses to be applied to the minor must be completed on a letter-grade basis.

**Preparation for the minor.** Communication 1, or Sociology 1, or Psychology 1 and Economics 3A, and one course from the following: Communication 87, PSTAT 5A, or Psychology 5.

**Upper-division minor.** Twenty units, distributed as follows: Advanced ESS 100\*, 130, 131\*, 132\*, 140, 160. (Recommended: Advanced Exercise & Sport Studies 183.) \* Must choose two of the three marked by asterisk.

*Note: Substitutions and waivers are subject to approval by the chair of the department. Please see page 118 for special conditions governing minors in the College of Letters and Science.*

## Exercise & Sport Studies Courses

### LOWER DIVISION

The half-unit courses listed below are designed to provide a basic instructional program from which students may acquire elementary, intermediate, and advanced level skills, improve physical conditioning, and develop an appreciation for the rules, strategies and principles of a variety of sports related activities.

Courses with a \$ prefix have a required fee.

Course Overviews:

- A level courses cover elementary skills and strategies and provide basic information.
- B level courses cover intermediate skills and strategies and provide more detailed information.
- C level courses cover advanced skills, strategies, and concepts.

#### 1-2. Intercollegiate Baseball (1/2) STAFF

*Prerequisite: consent of coach.*

*May be repeated to a maximum of 6 units.*

#### 1-4A-B. Badminton (1/2-1/2) STAFF

A. Elementary

B. Intermediate

**1-5B. Baseball**

(1/2) STAFF  
Intermediate baseball.

**1-5C. Advanced Baseball**

(1/2) STAFF  
Provides students with the opportunity to improve their basic physical condition, secure useful neuromuscular development, and gain recreation skills.

**1-6A-B. Basketball**

(1/2-1/2) STAFF  
A. Elementary  
B. Intermediate

**1-6C. Advanced Basketball**

(1/2) STAFF  
Provides students with the opportunity to improve their basic physical condition, secure useful neuromuscular development, and gain recreation skills.

**\$ 1-7A-B. Boating and Sailing**

(1/2-1/2) STAFF  
A. Elementary  
B. Intermediate

**\$ 1-9A. Bowling**

(1/2) STAFF  
Elementary bowling.

**\$ 1-9B. Intermediate Bowling**

(1/2) STAFF  
Provides students with the opportunity to improve their basic physical condition, secure useful neuromuscular development, and gain recreation skills.

**1-10A. Elementary Aerobic and Fitness Conditioning**

(1/2) STAFF  
Introduction to a variety of fitness training techniques that address aerobic conditioning, muscular endurance, muscular strength and flexibility.

**1-10B. Intermediate Aerobic and Fitness Conditioning**

(1/2) STAFF  
Presentation and practice of a variety of fitness training techniques (high/low impact, step and resistance training) addressing aerobic conditioning, muscular strength and muscular endurance.

**1-10C. Advanced Aerobic and Fitness Conditioning**

(1/2) STAFF  
An advanced level course including high/low impact, step, resistance and anaerobic training techniques. Cross-training, injury prevention and body alignment principles will be accentuated.

**1-11. Intercollegiate Basketball**

(1/2) STAFF  
*Prerequisite: consent of coach.*  
*May be repeated to a maximum of 6 units.*

**1-12. Indoor Cycling**

(1/2) STAFF  
Introduction to the basic concepts of indoor cycling. The relationship between indoor cycling and cardiovascular fitness is explored. Appropriate for individuals of all levels of fitness and experience. (F,W,S)

**1-12A. Elementary Cycling**

(1/2) JAMIESON  
Designed to give the student a basic understanding of the principles of cycling, including pedal cadence, shifting, gear ratios, training, safety, and maintenance.

**\$ 1-13A. Fencing**

(1/2) STAFF  
Elementary fencing.

**\$ 1-13B. Intermediate Fencing**

(1/2) STAFF  
Students obtain the basic techniques and theory fundamental to fencing. Satisfactory progress allows advancement to the advanced class.

**\$ 1-13C. Advanced Fencing**

(1/2) STAFF  
Utilized basic fundamental and techniques in acquiring advanced skills of fencing.

**1-14. Intercollegiate Cross Country**

(1/2) STAFF  
*Prerequisite: consent of coach.*  
*May be repeated to a maximum of 6 units.*

**1-16A Elementary Ballroom Dance**

(1/2) STAFF  
Introduction to a variety of movement skills and sequences necessary to perform the foxtrot, swing, tango, waltz, mambo, salsa, and other popular social dances.

**1-16B. Intermediate Ballroom Dance**

(1/2) STAFF  
Provides students with the opportunity to improve upon the variety and sequences necessary to perform the foxtrot, swing, tango, waltz, mambo, salsa, and other popular social dances.

**1-16C. Advanced Ballroom Dance**

(1/2) STAFF  
Provides students with the opportunity to improve upon the variety and sequences necessary to perform the foxtrot, swing, tango, waltz, mambo, salsa, and other popular social dances.

**1-22. Intercollegiate Golf**

(1/2) STAFF  
*Prerequisite: consent of coach.*  
*May be repeated to a maximum of 6 units.*

**1-23. Intercollegiate Gymnastics**

(1/2) STAFF  
*Prerequisite: consent of coach.*  
*May be repeated to a maximum of 6 units.*

**\$ 1-24A-B. Golf**

(1/2-1/2) STAFF  
A. Elementary  
B. Intermediate

**1-25A-B. Tumbling and Free Exercise**

(1/2-1/2) STAFF  
A. Elementary  
B. Intermediate

**1-25C. Advanced Tumbling and Free Exercise**

(1/2) STAFF  
Affords a working knowledge of tumbling skills at an advanced level.

**1-26A-B. Gymnastics Apparatus**

(1/2-1/2) STAFF  
A. Elementary  
B. Intermediate

**\$ 1-29A-B. Racquetball**

(1/2-1/2) STAFF  
A. Elementary  
B. Intermediate

**\$ 1-29C. Advanced Racquetball**

(1/2) STAFF  
Provides student the opportunity to compete in advanced racquetball, improve their physical condition, and refine their skills through vigorous training and neuromuscular development.

**1-30A-B. Soccer**

(1/2-1/2) STAFF  
A. Elementary  
B. Intermediate

**1-31A-B. Softball**

(1/2-1/2) STAFF  
A. Elementary  
B. Intermediate

**1-31C. Advanced Softball**

(1/2) STAFF  
Provides students with the opportunity to improve their basic physical condition, secure useful neuromuscular development, and gain recreation skills.

**1-32. Intercollegiate Softball**

(1/2) STAFF  
*Prerequisite: consent of coach.*  
*May be repeated to a maximum of 6 units.*

**1-33. Intercollegiate Swimming**

(1/2) STAFF  
*Prerequisite: consent of coach.*  
*May be repeated to a maximum of 6 units.*

**1-34A-B. Swimming**

(1/2-1/2) STAFF  
A. Elementary  
B. Intermediate

**1-35A. Elementary Synchronized**

**Swimming**  
(1/2) STAFF

This course provides students the opportunity to learn the skills essential to the successful completion of a synchronized swimming routine. Introduction to routine composition, music selection principles and governing body rules and regulations.

**1-36. Jogging Fitness**

(1/2) STAFF

**1-37. Intercollegiate Tennis**

(1/2) STAFF

*Prerequisite: consent of coach.*  
*May be repeated to a maximum of 6 units.*

**\$ 1-38A-B. Tennis**

(1/2-1/2-1/2) STAFF  
A. Elementary  
B. Intermediate

**\$ 1-38C. Advanced Tennis**

(1/2) STAFF  
Provides students with the opportunity to improve their basic physical condition, secure useful neuromuscular development, and gain recreation skills.

**\$ 1-38D. Tournament Tennis**

(1/2) STAFF

*May be repeated for credit up to 6 units.*  
Emphasizes the development of advanced skills and strategies in singles, doubles, and mixed doubles tournament competitions.

**1-40A-B-C. Volleyball**

(1/2-1/2-1/2) STAFF  
A. Elementary  
B. Intermediate  
C. Advanced

**1-41A-B. Water Polo**

(1/2-1/2) STAFF  
A. Elementary  
B. Intermediate

**1-41C. Advanced Water Polo**

(1/2) STAFF

Provides students with the opportunity to improve their basic physical condition, secure useful neuromuscular development, and gain recreation skills.

**1-42. Intercollegiate Track and Field**

(1/2) STAFF

*Prerequisite: consent of coach.*  
*May be repeated to a maximum of 6 units.*

**1-43A. Beginning Weight Training**

(1/2) STAFF

A course designed for the general college population introducing and supporting concepts, principles and proper techniques of conditioning with an emphasis on strength training.

**1-43B. Intermediate Weight Training**

(1/2) STAFF

A course emphasizing advanced concepts, principles and proper techniques of conditioning with an emphasis on strength training.

**1-43D. Conditioning/Weight Training**

(1/2) STAFF

*May be repeated to a maximum of 6 units.*  
Designed for members of intercollegiate teams who wish to develop and maintain a base level of physical fitness particular to their activity.

**1-43E. Weight Training for Women**

(1/2) STAFF

Designed to improve women's muscular endurance and strength through proper utilization of strength training equipment and other forms of resistance training. Emphasis on anatomical considerations, physical capabilities and individual goals.

**1-43F. Group Strength Training**

(0.5) STAFF

*The student can take 1-43F only once for credit, but may repeat the class up to 11 more times under the 1-99 course for max credits of 6.*

Instructor-led course will focus on muscle and endurance training, using equipment such as free weights, tubes, body bars, core boards, Swiss balls and other types of resistance tools. All exercises are designed and performed in a group format.

**1-45. Intercollegiate Water Polo**

(1/2) STAFF

*Prerequisite: consent of coach.*  
*May be repeated to a maximum of 6 units.*

**1-47. Intercollegiate Volleyball****(1/2) STAFF**

*Prerequisite: consent of coach.  
May be repeated to a maximum of 6 units.*

**1-48. Intercollegiate Soccer****(1/2) STAFF**

*Prerequisite: consent of coach.  
May be repeated to a maximum of 6 units.*

**1-49A. Springboard Diving****(1/2) STAFF**

*Prerequisite: consent of instructor.  
Elementary.*

**1-57A. "Touch" Rugby****(1/2-1/2-1/2) STAFF**

Elementary.

**1-59A-B. Aqua Aerobics****(1/2) STAFF**

A. Elementary  
B. Intermediate

**1-99. Lifetime Activities Interest Class****(1/2) STAFF**

*Prerequisite: consent of instructor.  
Enrollment not to exceed two sections of 1-99 per quarter. May be repeated to maximum of 6 units. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined.*

This class makes it possible for a student to take instruction beyond the elementary, intermediate, and advanced levels of any Exercise & Sport Studies 1-class.

## Advanced Exercise & Sport Studies Courses

**LOWER DIVISION****2. Substance Abuse****(3) POWELL**

Introduces the most widely used abusive drugs: alcohol, nicotine, cannabis, hallucinogens, stimulants and performance enhancing substances. Theories of addiction, pharmacokinetics and pharmacodynamics are also explored.

**3. Nutrition for Health****(3) GILBERT**

An examination of the interdependent relationships between diet, health and disease. Basic nutrition principles, food selection, proper diet and lifetime health habits are emphasized.

**4A. Life Fitness****(2) GILBERT, POWELL, BEAINY**

A progressive series of classes designed to provide a basic understanding of health and fitness. Theoretical frameworks and fitness related activities are pursued at each course level.

**\$ 5A. First Aid and Cardiopulmonary Resuscitation****(3) POWELL, CERIALE, HOUGHTON**

The course develops the knowledge for prevention and the skills necessary for administering immediate care to victims of accidents or sudden illness occurring in home and outdoor environments. Cardiopulmonary resuscitation and personal safety are emphasized. Successful completion may lead to standard first aid and personal safety and CPR certification.

**6A-B. Personal Defense****(2-2) STAFF***Prerequisite: ESS 6A (for ESS 6B).*

A course designed primarily for but not limited to women. Emphasis will be placed on self defense techniques, skills, and "rules of avoidance and safety."

**7. Leadership and Team Building: Theory and Practice****(2) TUCKNOTT**

Introduction to experimental education using a traditional ropes challenge course and group initiatives as the medium. Team building, personal awareness and goal setting skills are developed; overcoming fears, mutual support, and trust are fostered through a supportive yet challenging environment.

**8. Multi-Event Endurance Training: Theory and Practice****(2) POWELL**

*Recommended preparation: students must have ability to swim, bike, and run.*

An opportunity to learn theory and practice methods required of a competitive triathlete. Emphasis on training techniques, injury prevention and mental preparation for competition.

**9. Principles of Health Promotion****(2) STAFF**

Examines lifestyle factors and influences which decrease the possibility of premature disease and death and promote a longer and healthier life. Emphasis is placed on understanding the practices which have the most profound impact on health.

**30A-B-C. Appreciation of Sports****(2-2-2) DALE**

Lecture, demonstrations, and selected learning experiences for the general university student leading to an understanding and appreciation of athletics and recreational sports.

**32E. Principles of Officiating****(2) STAFF**

Focuses on the principles, standards, techniques, and rules of officiating intramural sports. Successful completion may lead to certification for officiating UCSB intramurals.

**32F. Principles of Officiating****(2) STONEY**

*Not open for credit to students who have completed Advanced Physical Activities 32A.*

The principles, standards, techniques, and rules for officiating team and individual sports popular in the fall.

**32W. Principles of Officiating****(2) STONEY**

The principles, standards, techniques, and rules for officiating team and individual sports popular in the fall.

**40. Human Physiology****(3) GILBERT**

Integrated survey of human physiology that includes the skeletal, muscular, nervous, endocrine, respiratory, circulatory, digestive and urinary systems and how they function in homeostasis and human health.

**\$ 41. Fitness, Wellness, and Optimal Performance****(3) STAFF**

Utilizing information from the fields of exercise physiology and nutrition, this course enables students to develop a plan for achieving the mental and physical health necessary for optimal fitness and wellness and an enhanced quality of life.

**47. Anatomy of the Musculoskeletal System****(4) STAFF**

The study of the structure and function of the musculoskeletal system. Focuses on identifying specific structures and their characteristics within the musculoskeletal system as well as providing an overview of connective tissue and the articular system.

**\$ 48. Lifeguard Training and Basic Rescue/Water Safety****(2) HOUGHTON***Prerequisite: Advanced Swimming Proficiency Test.*

Successful completion of the course may lead to the American Red Cross Lifeguard Certificate.

**\$ 49. Water Safety Instruction and Introduction to Health Services Education****(3) HOUGHTON**

Includes analysis and performance of swimming skills related to personal and small craft safety; theory and application of methods for organizing and presenting aquatic materials. Satisfactory completion of the course may lead to American Red Cross Water Safety Instructor's Certificate.

**\$ 50L. Care and Prevention of Athletic Injuries Lab****(1) STAFF**

Students examine basic concepts and practical techniques of athletic taping, as well as various

treatment modalities related to athletic injuries.

**51. Introduction to Exercise Science and Sport****(3) STAFF**

Introduction to the field of sport and exercise science. Philosophical and historical foundations are presented. An overview of current and future trends as well as subdisciplines within the field is examined.

**96. Fieldwork in Exercise Science, Physical Education, and Sport****(1-4) JAMIESON***Prerequisite: consent of instructor.*

*Students must have a minimum 2.5 GPA and have completed 30 units. May be repeated for credit to a maximum of 8 units. Pass/No Pass grading.*

Designed to provide students with the opportunity to obtain practical experience in the field. Fieldwork may be completed in public or private agencies whose focus is exercise science, physical education, or sport.

**98. Readings: Exercise Science, Physical Education, and Sport****(1-4) JAMIESON***Prerequisite: consent of instructor.*

*Students must have a minimum 2.5 GPA and have completed 30 units. Optional grading. May be repeated for credit to a maximum of 8 units. Students are limited to 4 units per quarter and 30 units total in all 98/99/185/193/198/199/199AA-ZZ courses combined.*

Critical review and discussions of selected subjects within exercise science, physical education, and sport.

**99. Introduction to Research****(1-4) JAMIESON***Prerequisite: consent of instructor.*

*Students must have a minimum 3.0 grade-point average. May be repeated for credit to a maximum of 8 units. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined.*

Directed study, oriented towards research to be arranged with individual faculty members. Course offers exceptional students an opportunity to participate in a research or laboratory project on an individual or group basis.

**UPPER DIVISION****100. Research and Inquiry in Exercise Science and Sport****(4) STAFF**

Designed for students wishing to pursue a graduate degree in any of the sport or exercise sciences. Field specific qualitative and quantitative methods are introduced. The class culminates with students applying these methods in small group research projects.

**101. Physiology of Exercise****(4) CERIALE, GILBERT***Prerequisites: ESS 40; upper-division standing.*

Exploration of acute and chronic human physiological adaptations resulting from exposure to exercise. Examination of the theoretical bases and methodology for creating physiological changes in light of current training methods.

**101L Exercise Physiology Laboratory****(1) GILBERT, CERIALE***Prerequisites: ESS 40 and 101.*

A series of laboratory experiments demonstrating the principles of physiological adaptations to exercise. Instruction in exercise stress testing techniques, body composition, pulmonary functions, electrocardiography, and data analysis.

**102. Sport Media Production****(3) STAFF**

Introduces students to the principles and practices of sport media production. Sport writing, sportscasting, camera production, editing, and interviewing are emphasized. Students develop audition tapes and gain experience producing weekly televised shows.

**103. Exercise Programming for Special Populations****(4) AGUILAR***Prerequisite: ESS 101*

Provides understanding of disease and dysfunction

and influence on exercise prescription. Specific analysis and exercise prescription for metabolic, pulmonary, cardiovascular, orthopedic, and immunological disease and dysfunction will be included. Exercise for youth, the elderly, and pregnancy are also discussed.

### 110. Foundations of Strength and Conditioning

(4) AGUILAR

*Prerequisites:* ESS 101 and 149.

Provides a framework of knowledge in athletic conditioning. Examination of exercise technique, program design, periodization, and the development of biomotor abilities. Instruction methods for speed, agility, flexibility, plyometrics, and Olympic lifting are also included.

### 130. Sport Administration

(4) FERRER

*Prerequisite:* upper-division standing.

An introduction to the basic principles and problems of administering (planning, organizing, leading, and evaluating) athletic and recreational sports programs at the community, high school, collegiate, and professional levels.

### 131. Sport and Exercise Psychology

(4) SPAVENTA

*Prerequisite:* upper-division standing.

The scientific study of people and their behavior in sport and exercise settings. Examination of individual and group performance enhancement strategies through application of data, knowledge and skills from psychology and related fields. An overview of the evolving field of sport and exercise psychology is presented.

### 132. Sport Sociology

(4) DALE

*Prerequisite:* upper-division standing.

Examination of the issues and impact of sport in various cultures and subcultures within the context of sociology. Study of sport relevant to how it is influenced by and influences the basic institutions of society: family, economics, politics, religion, and education.

### 136. Movement Education in the Elementary School

(3) SPAVENTA

*Prerequisite:* upper-division standing.

An analysis and study of the principles and practices of movement education with emphasis on the development of basic movement skills, sport skills, and games. The course also includes examination and construction of curriculum for grades K-6.

### 140. Sport Management

(4) FERRER

An overview of professional sport management in North America. The political, historical, social, economic, and cultural impacts are explored. Topics include team management, organizational administration, legal issues, public relations, and facility management.

### 146AA-ZZ. Special Topics in Health and Sport

(1-4) STAFF

*Prerequisite:* upper-division standing.

May be repeated for credit to a maximum of 16 units provided that the letter designations are different.

### 149. Applied Kinesiology

(4) ROMEO

*Prerequisites:* ESS 47; upper-division standing.

Examination of the fundamentals of human movement relevant to sport, exercise and aging. Includes the study of connective tissue, skeletal muscle and the structure and function of major articulations within the body.

### 150. Care and Prevention of Athletic Injuries

(4) ROMEO

*Prerequisite:* ESS 149.

A comprehensive overview of the basic concepts and principles associated with prevention, evaluation, treatment and rehabilitation of athletic injuries within the musculoskeletal system. Particular attention is given to the inflammation response, as well as cryotherapy techniques.

### 151. Advanced Athletic Training

(4) STAFF

*Prerequisite:* ESS 150.

Preparation for advancement in the field of athletic training. Emphasis on the theoretical and clinical application of therapeutic modalities and rehabilitation as applied to athletic injuries. Administrative responsibilities of the athletic trainer is addressed.

### 160. Current Issues in Sport Management

(4) ROMEO

*Prerequisite:* upper-division standing.

Investigates contemporary sport management issues with emphasis on the administrative principles of planning, organizing, leading and evaluating. Facilities construction and maintenance, financial concerns and the structure and function of the NCAA are studied.

### 170A-Q. Techniques and Advanced Analysis of Team Sports

(3) STAFF

*Prerequisite:* upper-division standing.

The technique of teaching individual and team skills of a variety of team sports and advanced analysis of that sport which is essential to a coach of competitive teams at the interscholastic and college level.

- A. Football
- B. Basketball
- C. Baseball
- D. Track and Field
- E. Water Polo
- F. Swimming and Diving
- G. Soccer
- H. Gymnastics
- I. Volleyball
- J. Softball
- K. Wrestling
- L. Racquet Sports
- M. Golf
- N. Lacrosse
- P. Rowing
- Q. Rugby

### 175A. Methods and Principles of Fitness Instruction

(3) JAMIESON

*Prerequisite:* ESS 47; Exercise Studies 1-10A or 1-10B or 1-10C; and ESS 101 and 149.

Training course for students to become qualified fitness instructors. Students analyze, practice, and apply skills necessary for leading individual and group exercise.

### 176. Methods and Principles of Muscular Fitness Instruction

(3) JAMIESON

*Prerequisite:* ESS 47; ESS 101 and 149; Exercise Studies 1-43A or 1-43B or 1-43E.

Training to teach muscular strength, muscular endurance, and flexibility classes. Skills and knowledge are applied to the use of free weights, machines, stability balls, bands, gravity, or other resistive equipment. Focus on isolated muscular contraction and extension.

### 180. Practicum in Athletic Coaching

(3) FERRER

*Prerequisites:* consent of instructor; open only to Exercise & Sport Studies Athletic Coaching minors.

Required for Physical Education minors in the athletic coaching track. Conducting activity classes or coaching athletic teams, under supervision of an experienced instructor or coach.

### 181. Practicum in Fitness Instruction-Group Training

(3) JAMIESON

*Prerequisite:* ESS 175A.

Final preparation for students pursuing a fitness instruction minor with a group fitness emphasis. Students are involved in supervised internships at clubs, exercise facilities, high schools, and colleges.

### 182. Practicum in Exercise and Health Science

(3) GILBERT

*Prerequisites:* ESS 101 and 101L.

Examination of theoretical knowledge and information applied to the field of health promotion and disease prevention. Introduction to applied

techniques and procedures involved in health and fitness testing.

### 184. Practicum in Fitness Instruction—Personal Training

(3) JAMIESON

*Prerequisite:* ESS 176.

Final preparation for Fitness Instruction Minors pursuing a Personal Training emphasis.

### 185. Introduction to Teaching in Exercise Science, Physical Education, and Sports

(1-4) STAFF

*Prerequisites:* upper-division standing; consent of instructor.

Students must have completed 84 undergraduate units, have completed the selected class with a B or better, and have the consent of the instructor.

Under the direction of selected instructors, students assist in teaching a course in which the student has received a B grade or better. Activities determined by the instructor and may include leading discussions, labs, and research or grading assignments.

### 193. Internship in Exercise Science, Physical Education, and Sport

(1-4) JAMIESON

*Prerequisites:* upper-division standing; consent of instructor.

Students must have completed 84 undergraduate units, have a 3.0 GPA for each of the preceding quarters, and be enrolled in one of the Exercise Studies minors. May be repeated for credit to a maximum of 8 units. Pass/No pass grading.

Designed to provide students in the minor with practical experience by working under expert supervision in the field. Internships may be completed in public or private agencies whose focus is exercise, physical education, or sport.

### 199. Independent Studies in Exercise Science, Physical Education, and Sport

(1-4) JAMIESON

*Prerequisites:* upper-division standing; consent of instructor; completion of 2 upper-division courses in Exercise Studies.

Students must have completed 84 undergraduate units, have a 3.0 GPA for each of the preceding quarters, and be enrolled in one of the Exercise Studies minors. Letter grade only. Course may be repeated for credit to a maximum of 10 units. Students are limited to 5 units per quarter and 30 units total in all 98/99/185/193/198/199/199AA-ZZ courses combined.

Provides an opportunity for students in the minor to pursue a particular area of interest under the guidance of a selected faculty member. Course culminates in a report summarizing the inquiry.

# Feminist Studies

(formerly Women's Studies)

Department of Feminist Studies  
Division of Social Sciences  
South Hall 4631

Telephone: (805) 893-4330

E-mail: [femst@femst.ucsb.edu](mailto:femst@femst.ucsb.edu)

Website: [www.femst.ucsb.edu](http://www.femst.ucsb.edu)

Department Chair: Eileen Boris

## Faculty

Jacqueline Bobo, Ph.D., University of Oregon, Professor (film/television, cultural studies, Black feminist cultural theory)

Eileen Boris, Ph.D., Brown University, Hull Professor of Feminist Studies (gender, race, and class; labor studies; social politics; women, work, and welfare; women and gender history)

**Grace Chang**, Ph.D., UC Berkeley, Associate Professor (women of color, immigrant women; globalization studies, social justice movements for immigrant and welfare rights)

**Ellie Hernández**, Ph.D., UC Berkeley, Associate Professor (Chicana/o and Latina/o cultural production, queer theory, 20th century American literature, and transnational gender culture)

**Barbara Herr Harthorn**, Ph.D., UCLA, Associate Professor (gender, race, and health inequalities; social construction of risk; science and new technologies; geographies in inequality)

**Mireille Miller-Young**, Ph.D., New York University, Assistant Professor (black feminist theory, black sexual politics, the racialized political economy of sex work, and American film and visual cultures)

**Laury Oaks**, Ph.D., Johns Hopkins University, Associate Professor (reproductive politics, anthropology of health, medicine, and science)

**Leila J. Rupp**, Ph.D., Bryn Mawr College, Professor (feminist movements, sexuality, gay/lesbian history, feminist history)

**Barbara Tomlinson**, Ph.D., UC Riverside, Associate Professor (feminist theory and inquiry, rhetoric and feminist politics, cultural studies)

### Emeriti Faculty

**Ursula R. Mahlendorf**, Ph.D., Brown University, Professor Emerita (expressionism, contemporary German literature, feminist theory and inquiry)

### Affiliated Faculty

**Paul Amar**, Ph.D., (Law and Society)

**Ingrid Banks**, Ph.D. (Black Studies)

**Edwina Barvosa-Carter**, Ph.D. (Chicana and Chicano Studies)

**Aaron Belkin**, Ph.D. (Political Science)

**Ann Bermingham**, Ph.D. (Art History)

**Silvia Bermúdez**, Ph.D. (Spanish and Portuguese)

**Kum-Kum Bhavnani**, Ph.D. (Sociology)

**Gayle Binion**, Ph.D. (Political Science)

**Maurizia Boscagli**, Ph.D. (English)

**Mary Bucholtz**, Ph.D. (Linguistics)

**Julie Carlson**, Ph.D. (English)

**Sarah Cline**, Ph.D. (History)

**Patricia Cline Cohen**, Ph.D. (History)

**Sharon A. Farmer**, Ph.D. (History)

**Sarah Fenstermaker**, Ph.D. (Sociology)

**L. O. Aranye Fradenburg**, Ph.D. (English)

**Nancy E. Gallagher**, Ph.D. (History)

**Bishnupriya Ghosh**, Ph.D. (English)

**Avery Gordon**, Ph.D. (Sociology)

**Mary Hancock**, Ph.D. (Anthropology)

**Tania Israel**, Ph.D. (Counseling, Clinical, School Psychology)

**Scott Marcus**, Ph.D. (Music)

**Claudine Michel**, Ph.D. (Black Studies)

**Stephan Miescher**, Ph.D. (History)

**Catherine Nesci**, Ph.D. (French and Italian)

**Christopher Newfield**, Ph.D. (English)

**Lisa Parks**, Ph.D. (Film Studies)

**Constance Penley**, Ph.D. (Film Studies)

**Ann Plane**, Ph.D. (History)

**Erika Rappaport**, Ph.D. (History)

**Horacio Roque Ramirez**, Ph.D. (Chicana and Chicano Studies)

**Chela Sandoval**, Ph.D. (Chicana and Chicano Studies)

**Beth Schneider**, Ph.D. (Sociology)

**Denise Segura**, Ph.D. (Sociology)

**Celine Parreñas Shimizu**, Ph.D., (Asian American Studies)

**Abigail Solomon-Godeau**, Ph.D. (Art History)

**Inés Talamantez**, Ph.D. (Religious Studies)

**Verta Taylor**, Ph.D. (Sociology)

**F. Winddance Twine**, Ph.D. (Sociology)

**Janet Walker**, Ph.D. (Film Studies)

**Xiaojian Zhao**, Ph.D. (Asian American Studies)

**F**eminist Studies is an interdisciplinary department and major that explores the ways that gender, intersecting with race, class, ethnicity, sexuality, nationality, and other differences, shapes and is shaped by social, economic, political, and cultural forces and institutions. The Feminist Studies major is designed to provide the student with the opportunity to understand the dynamics of gender, sexuality, race, class, and other markers of identity; social and political movements for change; and individual and social transformations around the globe. The Feminist Studies curriculum is composed of its own core interdisciplinary courses as well as a variety of courses selected from disciplines within the humanities and social sciences.

The Feminist Studies major can form the core of an excellent liberal arts education. It can also be used as preparation for careers in law, social service, public policy, the arts, publishing, and teaching, and as preparation for graduate study in the social sciences or humanities generally or Feminist Studies in particular.

Students pursuing a bachelor's degree in Feminist Studies who are interested in a California Teaching Credential should contact the credential advisor in the Graduate School of Education as soon as possible.

Incoming students and prospective majors are invited to consult the Feminist Studies faculty and staff advisors. Further descriptions of the Feminist Studies curriculum and of major requirements are available in the department office.

### Honors Program

The Honors Program in Feminist Studies provides the opportunity for qualified undergraduates to undertake advanced research and work individually with a Feminist Studies faculty mentor. To apply to the program, students must have a grade-point of 3.5 in the Feminist Studies major (3.0 overall) and have completed at least two quarters of the junior year. Candidates apply to the Honors Program by submitting to the undergraduate advisor an application form, a proposal for an undergraduate thesis project, and a letter of recommendation from a Feminist Studies faculty member. Interested students should make contact with the undergraduate advisor during the spring prior to their proposed enrollment. The deadline to submit application materials is September 25, 2010.

The Honors Program requires completion of a substantial research project and the sequence of departmental honors courses. In the fall students participate in the Honors Seminar (Feminist Studies 195HA), followed by independent study with the faculty mentor in the winter and spring quarters (Feminist Studies 195HB and 195HC). The Program culminates in a presentation of research at a symposium in the spring. Honors projects are due on the last day of classes in the spring quarter. Successful completion of the research project carries the designation of "Distinction in the Major" at graduation if a student's project is accepted by the faculty mentor and the student maintains a GPA of 3.5 in the Feminist Studies Honors courses and major.

Students enroll for 4 to 8 units of academic credit in the Feminist Studies 195H series.

### Undergraduate Program

All courses to be applied to the major and the minor must be completed on a letter-grade basis, including courses offered in Feminist Studies and those offered by other departments and applied to the major/minor.

### Bachelor of Arts— Feminist Studies

**Preparation for the major.** Fifteen units in lower-division courses are required. Students select 15 units from course offerings in areas A, B, and C.

**Area A: Introduction to Feminist Studies.** One course required, selected from Feminist Studies 20 and 40.

**Area B: Intersectionalities.** One course required, selected from Feminist Studies 60 and 80.

**Area C: Global Feminism.** One course required, selected from Feminist Studies 30 and 50.

**Upper-division major.** Forty-four upper-division units are required, distributed as follows.

**Area A: Tool Kit Courses:** Twelve units required from Feminist Studies 180, 181, 182.

**Area B: Feminist Studies Electives:** Sixteen units of upper-division electives selected only from the Feminist Studies Department: 120, 130, 131, 132, 136AA-ZZ, 138, 139, 142, 143, 144, 146, 150, 151AA-ZZ, 160, 162, 185AA-ZZ, 186AA-ZZ, 190, 195HC, 198, 199.

**Area C: Upper Division Electives:** Sixteen units of upper-division electives selected from the Feminist Studies Electives above or from this additional list: Anthropology 102A-B, 111, 116, 125, 142B, 172, 176; Art History 111E, 143B-C; Asian American Studies 112, 122, 128, 131, 132, 134, 135, 136, 138, 146; Black Studies 106, 122, 125, 127, 133, 136, 138; Chicana/o Studies 112, 114, 147, 148, 149, 151, 153, 154F, 155W, 167, 184A, 189B; Classics 110; Communication 124, 126; Comparative Literature 104; Dance 145W; English 114AA-ZZ, 129; Education 171A; Environmental Studies 184; Film Studies 150PG, 163; French 148A-B, 151B, 153C, 154D, 155A-B-C-D German 164G, 170; Global Studies 180A-B; History 117C-D-Q, 124A-B, 146PW, 146W, 147G, 147Q, 159B-C-P-Q, 163A-B-P, 175D, 188A-B-S; Interdisciplinary 100WS; Italian 142X, 143X, 144AX-ZX; Japanese 162;

Law & Society 140, 141, 155, 166; Linguistics 132; Political Science 106WP, 159; Religious Studies 103B, 114D, 192; Slavic 164C; Sociology 118G-L, 134, 140, 144, 144S, 151, 153, 154A-F, 155A-B-M-T-W, 156A-B, 159LG, 159S, 176A, 185G, 185GT; Spanish 194; Theater 180F-G, 187FG; Feminist Studies 100WS, 115, 117C, 124A, 147G, 147Q, 153, 154A, 155A-B, 159B-C, 159LG, 163A, 167, 171CN; Writing 109WS. (Feminist Studies 136AA-ZZ, 151AA-ZZ, 185AA-ZZ, 186AA-ZZ, 190, 198, and 199 may be repeated for credit. See individual course listings for limitations.)

Special Topics may fulfill Area B or Selected Topics courses outside the department may fulfill Area C, depending on course content and contingent upon Feminist Studies Department approval.

Feminist Studies majors are strongly urged to fulfill the second part of the Area A General Education requirement by taking Writing 109WS. Transfer students are urged to take Writing 109WS, even if they have already fulfilled the Writing 50 requirement. Those majors who are unable to take Writing 109WS are urged to take Writing 109SS, Writing for the Social Sciences.

### Minor—Feminist Studies

All courses to be applied to the minor must be completed on a letter-grade basis, including both courses offered in Feminist Studies and those offered by other departments and applied to the minor.

**Preparation for the minor.** Fifteen units in lower-division courses are required. Students select 15 units from course offerings in areas A, B, and C.

**Area A:** Introduction to Feminist Studies. One course required, selected from Feminist Studies 20 and 40.

**Area B:** Intersectionalities. One course required, selected from Feminist Studies 60 and 80.

**Area C:** Global Feminism. One course required, selected from Feminist Studies 30 and 50.

**Upper-division minor.** Twenty upper-division units, distributed as follows.

**Area A: Tool Kit courses:** Eight units from required courses: Feminist Studies 180 and 181.

**Area B: Feminist Studies electives:** Four units required from the Feminist Studies Department: Feminist Studies 120, 130, 131, 132, 136AA-ZZ, 138, 139, 142, 143, 144, 146, 150, 151AA-ZZ, 160, 162, 185AA-ZZ, 186AA-ZZ, 190, 195HC, 198, 199.

**Area C: Upper Division electives:** Twelve units of upper-division electives selected from the Feminist Studies electives above or from this additional list: Anthropology 102A-B, 111, 116, 125, 142B, 172, 176; Art History 111E, 143B-C; Asian American Studies 112, 122, 128, 131, 132, 134, 135, 136, 138, 146; Black Studies 106, 122, 125, 127, 133, 136, 138; Chicana/o Studies 112, 114, 147, 148, 149, 151, 153, 154F, 155W, 167, 184A, 189B; Classics 110; Communication 124, 126; Comparative Literature 104; Dance 145W; English 114AA-ZZ, 129; Education 171A; Environmental Studies 184; Film Studies 150PG, 163; French 148A-B, 151B, 153C, 154D, 155A-B-C-D German 164G, 170; Global Studies 180A-B; History 117C-D-Q, 124A-B, 146PW, 146W,

147G, 147Q, 159B-C-P-Q, 163A-B-P, 175D, 188A-B-S; Interdisciplinary 100WS; Italian 142X, 143X, 144AX-ZX; Japanese 162; Law & Society 140, 141, 155, 166; Linguistics 132; Political Science 106WP, 159; Religious Studies 103B, 114D, 192; Slavic 164C; Sociology 118G-L, 134, 140, 144, 144S, 151, 153, 154A-F, 155A-B-M-T-W, 156A-B, 159LG, 159S, 176A, 185G, 185GT; Spanish 194; Theater 180F-G, 187FG; Feminist Studies 100WS, 115, 117C, 124A, 147G, 147Q, 153, 154A, 155A-B, 159B-C, 159LG, 163A, 167, 171CN; Writing 109WS. (Feminist Studies 136AA-ZZ, 151AA-ZZ, 185AA-ZZ, 186AA-ZZ, 190, 198, and 199 may be repeated for credit. See individual course listings for limitations.)

*Note: A combined maximum of 8 units of independent studies, Feminist Studies 190, 198, and 199 may be applied to the minor.*

*Note: Substitutions and waivers are subject to approval by the chair of the department. Please see page 118 for special conditions governing minors in the College of Letters and Science.*

### Minor—Lesbian, Gay, Bisexual, Transgender, and Queer Studies

All courses to be applied to the minor must be completed on a letter-grade basis, including both courses offered in Feminist Studies and those offered by other departments and applied to the minor.

Preparation for the minor. Feminist Studies 80.

**Upper-division minor.** Twenty-four upper-division units, distributed as follows:

**Area A:** Feminist Studies 162.

**Area B:** Courses on general LGBTQ Topics. Twelve units (three courses) from the following: Asian American Studies 135; Black Studies 125; Chicana/o Studies 151, 153; English 129, 134LG; Feminist Studies 159LG, 160; History 101G; Political Science 159; Sociology 159LG, 176A.

**Area C:** Courses on Sexuality. Eight units (two courses) from Area B above or this additional list: Anthropology 176; Asian American Studies 112, 122, 134, 138; Black Studies 133; Chicana/o Studies 149; Feminist Studies 124A, 150, 151AA-ZZ; French 151B; History 124A, 188S; Japanese 162; Political Science 159; Sociology 144S, 159S.

## Graduate Program

The M.A./Ph.D. in the Department of Feminist Studies brings together social science and humanities approaches to interrogating the ways that relations of gender, intersecting with race, class, ethnicity, sexuality, age, nationality, religion, ability, and other differences, are embedded in social, political, and cultural formations. The program's three broad areas of concentration are race and nation; genders and sexualities; and productive and reproductive labors. The Department offers an independent M.A. for teachers and those seeking careers in the public sector or non-governmental organizations and joins a select group of universities offering a Ph.D. in this field for those interested in research and teaching at the university level.

### Admission

Students applying to the graduate program must possess a B.A. or B.S. degree from an accredited institution or equivalent and have

major or minored in feminist, women's or gender studies or have basic coursework in gender or sexuality in a disciplinary department or in ethnic studies. Applicants must submit an official transcript, GRE scores (verbal, quantitative, and analytical), personal statement, writing sample, and three letters of recommendation. Candidates should have at least a 3.3 grade point average. International applicants must provide evidence of sufficient English language ability as required by the Graduate Division.

Areas of concentration:

1. "Race and Nation" centers the experiences of African American, Latina, Asian American, Native American, and Arab American women—"the Third World within"—in a global context, attending to both the centrality of race and ethnicity and the inextricability of race and ethnicity (including whiteness) from all other categories of identity and difference.
2. "Genders and Sexualities" concentrates on an interdisciplinary exploration of the historical and global processes by which desires, sexual acts, relationships, gender and sexual identities, communities, and movements have been constructed, transformed, and challenged. A number of our affiliated faculty members specialize in masculinities and queer sexualities, which are part of this concentration.
3. "Productive and Reproductive Labors" focuses on the economic (both paid and unpaid) and reproductive roles and experiences of diverse groups of women globally and historically and the complex relationship between employment and child-bearing and child-rearing.

### Master of Arts—Feminist Studies

The normative time for the M.A. is two years. Students in the M.A./Ph.D. program must first complete the following requirements for the M.A. before continuing toward the doctorate: a) A total of 40 units of coursework, including 20 units of core courses, 12 units of electives, and 8 units of thesis research and preparation. All should be at the 200-level or above, although 100-level courses may be approved by exception. No more than 6 units of 596 may be used to meet the M.A. requirements. At least 24 units must be in Feminist Studies courses. b) Submit a research thesis, under the guidance of a thesis committee; c) pass an oral thesis defense.

Students in the independent M.A. program must complete the following requirements: a) A total of 40 units of coursework, including 20 units of core courses. Independent M.A. students then take a variety of topical courses depending on their interests. b) Submit a research thesis or final project such as a policy paper of curriculum development plan; c) Pass an oral thesis/project defense.

**Core Courses.** Both the independent M.A. and the PhD begin with a core of courses that ground students in the theoretical, methodological, epistemological, and pedagogical traditions of Feminist Studies. The core consists of the following courses: Feminist Epistemologies and Pedagogy, Feminist Theories, Feminist Approaches to Methodology, and the two-quarter Research Seminar.

## Doctor of Philosophy— Feminist Studies

The normative time for the Ph.D. is six years, or five if the student has entered the program with a Master's degree. Ph.D. students concentrate in one of three thematic fields while taking some coursework in all three, thus gaining broad expertise. Students also take a cluster of courses in an outside disciplinary or other interdisciplinary field to complement their work in Feminist Studies. In addition, they engage in extensive original research, both in research seminars and in the completion of a dissertation. Ph.D. students must satisfy the following departmental requirements in order to advance to candidacy:

- A total of 40 units of coursework, including 20 units of core courses. All should be at the 200-level or above, although 100-level courses may be approved by exception. At least 24 units must be in Feminist Studies courses.
- Pass an oral and written qualifying examination;
- Demonstrate reading proficiency in at least one foreign language.
- Serve as a teaching assistant in Feminist Studies courses for at least three quarters. Following advancement to candidacy, students will complete a dissertation based on original research and pass a dissertation defense. In addition to program requirements, candidates for graduate degrees must meet the university degree requirements described in the chapter "Graduate Education at UCSB."

### Optional Ph.D. Emphasis in Women's Studies

The Department of Feminist Studies, with almost fifty core and affiliated faculty members in over nineteen disciplines, serves as a model of interdisciplinary work and scholarly collaboration at UCSB. Women's Studies doctoral emphasis students are required to successfully complete four seminars that will enhance their understanding of feminist pedagogy, feminist theory, and topics relevant to the study of women, gender and/or sexuality. Women's Studies as an inter-departmental set of conversations and intellectual questions supports a multifaceted undergraduate curriculum at UCSB. Doctoral emphasis students are encouraged to apply to teach Feminist Studies courses as teaching assistants and associates as part of their Feminist Studies training.

Applicants must first be admitted to, or currently enrolled in, a UCSB Ph.D. program participating in the Women's Studies graduate emphasis. Anthropology; Comparative Literature; Counseling, Clinical, and School Psychology; English; French and Italian; Germanic, Slavic and Semitic Studies; History; History of Art and Architecture; Linguistics; Political Science; Religious Studies; Sociology; Spanish and Portuguese; or Theater and Dance. Candidates complete four graduate courses and select a member of the Feminist Studies faculty or affiliated faculty to serve on their dissertation committees. Applications to the Women's Studies Doctoral Emphasis may be submitted at any stage of Ph.D. work, and applications will be considered throughout the year.

### Doctoral Emphasis Coursework

Students pursuing the emphasis in Women's Studies will successfully complete four graduate courses that have been approved by the Doc-

toral Emphasis advisor.

- Feminist Theories.** A one quarter graduate seminar in interdisciplinary feminist theory offered by any department, including Feminist Studies 250 AA-ZZ.
- Issues in Feminist Epistemology and Pedagogy** (Feminist Studies 270). A one quarter seminar that considers Feminist Studies as a distinct field. It offers an interdisciplinary exploration of feminist theories of knowledge production and teaching practices. Readings cover past and present critical debates and provide theoretical approaches through which to analyze interdisciplinary epistemological and pedagogical issues.
- Graduate Seminar in Feminist Studies** (Feminist Studies 200-290 or 594 AA-ZZ). A one quarter seminar offered by a Feminist Studies faculty member on topics of central concern to the field.  
Or,  
**Research Practicum** (Feminist Studies 280). A cross-disciplinary seminar in which fundamental questions in contemporary feminist research practice are considered in light of students' own graduate projects.
- Topical Seminar.** A one quarter graduate seminar that addresses topics relevant to the study of women, gender, and/or sexuality. This seminar must be taken outside the student's home department; it may be fulfilled either by another graduate seminar in Feminist Studies or a seminar in another department.

## Feminist Studies Courses

*A list of Feminist Studies courses with descriptions will be available before the beginning of each quarter, as close to the start of registration as possible. Students are urged to consult this list before registering.*

### LOWER DIVISION

#### 20. Women, Society, and Culture

(4) BORIS, OAKS, RUPP

*Not open for credit to students who have completed Women's Studies 20H.*

Introduction to central concepts and issues in women's studies from the perspective of the social sciences. Explores the construction of gender and sexuality and the lives of diverse groups of women in the contemporary U.S. within a global context.

#### 20H. Women, Society, and Culture Honors

(5) BORIS, OAKS, RUPP, WILLIAMS

*Prerequisite: consent of instructor.*

*Not open for credit to students who have completed Women's Studies 20.*

Lecture is concurrent with Women's Studies 20, along with a weekly honors seminar, requiring additional assignments and intensive discussion of the readings. Intended for highly motivated and well prepared students.

#### 30. Women, Development and Globalization

(4) CHANG, HERNÁNDEZ

*Not open for credit to students who have completed Women's Studies 30H.*

Examines the impact of development, policy, and globalization on women's lives. Emphasis is placed on women's activism and feminist critiques of neo-liberal measures intended to rid the third world of poverty.

#### 30H. Women, Development and Globalization Honors

(5) CHANG, HERNÁNDEZ

*Prerequisite: consent of instructor.*

*Not open for credit to students who have completed Women's Studies 30.*

Lecture is concurrent with Women's Studies 30, along with a weekly honors seminar, requiring additional assignments and intensive discussion of the readings. Intended for highly motivated and well prepared students.

#### 40. Women, Representation, and Cultural Production

(4) BOBO, HERNÁNDEZ, OAKS

*Not open for credit to students who have completed Women's Studies 40H.*

This introductory course examines cultural representations of diverse women's lives from a humanities perspective. The focus is on women as cultural producers, subjects, and critics in literature, film, the visual arts, and music.

#### 40H. Women, Representation, and Cultural Production Honors

(5) BOBO, HERNÁNDEZ, OAKS

*Prerequisite: consent of instructor.*

*Not open for credit to students who have completed Women's Studies 40.*

Lecture is concurrent with Women's Studies 40, along with a weekly honors seminar, requiring additional assignments and intensive discussion of the readings. Intended for highly motivated and well prepared students.

#### 50. Global Feminisms and Social Justice

(4) CHANG, OAKS, BORIS

*Not open for credit to students who have completed Women's Studies 50H.*

Historical and contemporary examination of women's activism around the globe in a variety of struggles, including self-named feminist movements and other movements for social justice.

#### 50H. Global Feminisms and Social Justice Honors

(5) BORIS, CHANG, OAKS

*Prerequisite: consent of instructor.*

*Not open for credit to students who have completed Women's Studies 50.*

Lecture is concurrent with Women's Studies 50, along with a weekly honors seminar, requiring additional assignments and intensive discussion of the readings. Intended for highly motivated and well prepared students.

#### 60. Women of Color: Race, Class, and Ethnicity

(4) CHANG, MILLER-YOUNG

*Repeat Comments: Not open for credit to students who have completed Women's Studies 60H.*

Examination of the interlocking dynamics and politics of gender, race, sexuality, class, and culture in the experience of U.S. women of color. Readings focus on oppositional consciousness and resistance to oppression in the scholarship and literature by women of color.

#### 60H. Women of Color: Race, Class, and Ethnicity Honors

(5) CHANG, MILLER-YOUNG

*Prerequisite: consent of instructor.*

*Not open for credit to students who have completed Women's Studies 60.*

Lecture is concurrent with Women's Studies 60, along with a weekly honors seminar, requiring additional assignments and intensive discussion of the readings. Intended for highly motivated and well prepared students.

#### 80. Introduction to LGBTQ Studies

(4) HERNÁNDEZ

*Not open for credit to students who have completed Women's Studies 80H.*

Examines LGBTQ studies from an interdisciplinary perspective. Along with historical, social, cultural, political, artistic, and literary rise to prominence of sexual minorities, the goal of the course is to integrate a discussion of the continuum of LGBTQ identities within their respective social contexts and communities.

**80H. Introduction to LGBTQ Studies Honors****(5) HERNÁNDEZ***Prerequisite: consent of instructor.**Not open for credit to students who have completed Women's Studies 80.*

Lecture is concurrent with Women's Studies 80, along with a weekly honors seminar, requiring additional assignments and intensive discussion of the readings. Intended for highly motivated and well prepared students.

**99. Independent Studies****(1-4) STAFF***Prerequisites: Women's Studies 20 or 40; consent of instructor and department.*

*Students must have a minimum 3.0 cumulative grade-point average. May be repeated for credit to a maximum of 8 units. Students are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ course combined. No unit credit allowed toward the major.*

Research under the direction of a faculty member. Students are offered an opportunity to conduct independent or collaborative research or to act as interns for faculty-directed research projects.

**UPPER DIVISION****115. Marriage in the Ancient World****(4) STAFF***Same course as Classics 115 and Religious Studies 103B.*

Examines marriage customs and rituals in Archaic and Classical Greece, Ptolemaic Egypt, and in the Roman Republic and Imperial Periods within the context of social history, literary, historical, and epigraphic sources.

**117C. Women, the Family, and Sexuality in the Middle Ages****(4) FARMER***Prerequisite: History 4B or upper-division standing.**Same course as History 117C. Not open for credit to students who have completed History 117.*

Family structure; perceptions and ideals of intimate and familial relations; status, perceptions, and experiences of women in western Europe circa 400-1400 A.D. Special attention on social, political, and religious contexts.

**120. Women's Labors****(4) BORIS**

*Recommended Preparation: Upper-division standing or one prior course in feminist studies. Not open for credit to students who have completed Feminist Studies 186EB. Letter grade required for majors and minors.*

What is women's work? How has it changed over time? How is it valued? Explores wage-earning, caregiving, sex work, housework, double days, glass ceilings, and strategies of survival and resistance among American women from various demographic, racial, and ethnic groups.

**124A. Women, Gender, and Sexuality in Europe, 1750-1914****(4) RAPPAPORT***Prerequisite: History 4C.**Same course as History 124A.*

The roles of women, gender, and sexuality in eighteenth and nineteenth century Europe. Exploration of the nature of women and revolution: religious, legal, scientific, and popular conceptions of gender and sexuality; industrialization and family life, the rise of organized feminism.

**130. Perspectives on Women's Health****(4) OAKS***Prerequisite: upper-division standing.*

Investigation of the power that medicine has in shaping health experts' and lay individuals' understandings of health and health practices. Particular attention is paid to how women's health issues come to be seen as "social problems," past and present.

**131. The Politics of Women's Choices: Reproduction and Reproductive Technologies****(4) OAKS***Prerequisite: upper-division standing.*

Exploration of theoretical, popular, and political debates over reproductive technologies in terms of women's power and choices. Investigation of how cultural and historical changes in reproductive practices influence ideas about nature, society, and progress. Examination of case studies on current controversies.

**132. Gender, Science, and Technology****(4) HARTHORN***Prerequisite: upper division standing**Repeat Comments: Same course as Women's Studies 186BH, cannot be taken for repeat credit.*

Examines the role of women in science, feminist critiques of science, gendered construction of technology and technological construction of gender, cross-cultural analysis of emerging technologies, and intersections of gender, ethnicity, class, and sexuality.

**136AA-ZZ. Cultural Analysis of Reproduction and Science****(4) TOMLINSON***Prerequisite: upper-division standing**Repeat Comments: May be repeated for a maximum of 8 units provided letter designations are different, with instructor permission.*

Develop tools to analyze cultural productions, narratives, images, and arguments about women, gender, reproduction, and science. Topics may vary.

**142. Black Women Filmmakers****(4) BOBO***Not open for credit to students who have completed Women's Studies 186JB. Letter grade required for majors and minors.**Recommended preparation: upper-division standing or a prior women's studies course.*

An opportunity to view films (animation, documentary, experimental and narrative), examine the specifics of media production, compare the various works produced by black women, and acquire the skills necessary for media criticism.

**143. Women's Film Narratives****(4) BOBO***Letter grade required for majors and minors. Not open for credit to students who have completed Women's Studies 186JC.*

Examination of the dynamics of family, race, sexuality, resistance, and cultural transformation through women's novels and film adaptations, and other films which have had significant impact on the national consciousness.

**144. Representation and Activism****(4) BOBO***Prerequisite: upper-division standing.**Not open for credit to students who have completed Women's Studies 186JB. Letter grade required for majors and minors.*

Exploration of the strategies by which social groups resist systems of oppression through readings and works from independent filmmakers.

**146. Women of Color Resisting Violence****(4) CHANG***Recommended preparation: upper-division standing or one prior course in women's studies. Letter grade required for majors and minors.*

This is a study of women of color and other marginalized women's experiences of psychological, sexual, physical, social, economic and legal violence, and our personal and collective resistance to these forms of violence in intimate relationships and in broader society.

**147G. Gender and Power in Modern African History****(4) MIESCHER***Prerequisite: History 49 or 49B or 147A or 147B or 147Q or Women's Studies 147Q or upper-division standing.**Same course as History 147G.*

Examination of gender, power, and authority among and between men and women in response to socioeconomic transformations in nineteenth- and twentieth-century Africa. Themes include interpretations of gender, organization of labor, the missionary project, the state and colonial rule.

**147Q. Readings on African History****(4) MIESCHER***Prerequisite: History 49 or 49B or 147A or 147B.*

*May be repeated for credit to a maximum of 8 units. Same course as History 147Q.*

A discussion and reading seminar on selected topics in African history.

**150. Sex, Love, and Romance****(4) RUPP***Not open for credit to students who have completed Women's Studies 150H.*

An examination from historical and global perspectives of sex, love, desire, and intimate relationships in diverse cultures in the contemporary U.S.

**150H. Sex, Love, and Romance Honors****(5) RUPP***Prerequisite: consent of instructor.**Not open for credit to students who have completed Women's Studies 150.*

Lecture is concurrent with Women's Studies 150, along with a weekly honors seminar, requiring additional assignments and intensive discussion of the readings. Intended for highly motivated and well prepared students.

**151AA-ZZ. Sexual Cultures****(4) MILLER-YOUNG***Prerequisite: upper-division standing Repeat**Comments:*

*May be repeated for a maximum of 8 units provided letter designations are different, with instructor permission.*

Seminars focus on the political, social, and cultural dynamics of sexuality in modern society. Offerings may explore sexual representations, economies, laws, identities, performances, literatures, technologies, relationships, communities, and customs in the United States or abroad. Topics may vary.

**153. Women and Work****(4) FENSTERMAKER, SEGURA***Prerequisite: upper-division standing.**Same course as Sociology 153.*

The course will begin with readings and discussion of the sociological features of work in society. The role of women in the labor market will be explored, as well as their lives as unpaid workers in their own homes. Finally, more global issues of sexual inequality and social change will be discussed.

**154A. Sociology of the Family****(4) STAFF***Prerequisite: upper-division standing.**Same course as Sociology 154A.*

A lecture course on family and household organization, past and present. Attention to contemporary issues in the family focusing on gender, class, and cultural variation.

**155A. Women in American Society****(4) FENSTERMAKER***Prerequisite: upper-division standing.**Same course as Sociology 155A.*

The roles and life styles of women in various American subcultures and the ideologies developing around them.

**155B. Sociological Perspectives on Women****(4) FENSTERMAKER, SCHNEIDER***Recommended preparation: Women's Studies 155A.*

Advanced study in the sociology of women. Course format (seminar or lecture) and topics vary year to year. Topics may include: analysis of the status of women in the labor force; women's class position; theoretical and practical aspects of patriarchy.

**159B. Women in American History****(4) COHEN***Prerequisites: two quarters from History 17A-B-C or upper-division standing.**Same course as History 159B.*

Social history of women in America from 1800 to 1900. Changing marriage, reproduction and work patterns, and cultural values about the female role. Attention to racial, class, and ethnic differences. Analysis of feminist thought and the several women's movements.

**159C. Women in Twentieth-Century American History****(4) DEHART, COHEN***Same course as History 159C.*

A continuation of Women's Studies 159A-B from 1900 to the present.

**159LG. Sociology of Lesbian and Gay Communities**  
(4) SCHNEIDER

*Prerequisite:* upper-division standing.

*Same course as Sociology 159LG. Not open for credit to students who have completed Sociology 146.*

Origins and transformation of lesbian and gay communities and social movements, with special attention to ideological development, major social problems, cultural production, race, ethnic and gender differences, organization formation, and political conflict.

**160. Sapphistries**

(4) RUPP

A global exploration of female same-sex sexuality, from the historical Sappho through sapphists, roaring girls, romantic friends, and female husbands, to contemporary lesbians. Considers diverse lives and representations of women who desire and love other women.

**162. Critical LGBTQ Studies**

(4) HERNÁNDEZ

*May be repeated for credit to a maximum of 8 units, but only 4 units can be applied to the major.*

Examines the dynamics of the juridical, social, political, cultural representations of LGBTQ identities. Examines legal cases, policy issues, social matters as well as representations therein in literary and cultural expression in order to study the LGBTQ people in active resistance against dominant power structure.

**171CN. Citoyennes! Women and Politics in Modern France**

(4) NESCI

*Same course as French 155D.*

Focuses on women's fights for the rights of equality and liberty, their exclusion from the public sphere and their access to citizenship (1789-2001). Women's evolving personal and collective aspirations, and the creation of a republican womanhood in modern culture. Taught in English.

**180. Feminist Analysis**

(4) HERNÁNDEZ, TOMLINSON, WILLIAMS

*Prerequisite:* Upper-division standing; open to Women's Studies majors and minors only.

*Letter grade required for majors and minors.*

Methods and tools for analyzing feminist theory and argument.

**181. Feminist Theories**

(4) BORIS, HERNÁNDEZ, TOMLINSON

*Prerequisite:* Upper-division standing; open to Women's Studies majors and minors only.

*Recommended Preparation:* Completion of Women's Studies 180 recommended.

Letter grade required for majors and minors. Introduction to feminist theorizing about gender, race, and sexuality. Focus on key thinkers, traditions, or selected theoretical frameworks.

**182. Feminist Methodologies**

(4) HARTHORN, MILLER-YOUNG, OAKS

*Prerequisite:* upper-division standing; open to Women's Studies majors only.

*Recommended Preparation:* Completion of Women's Studies 180 and 181 recommended.

*Open to Women's Studies minors with consent of instructor. Letter grade required for majors and minors.*

Methods of feminist textual, theoretical, and empirical analysis, including the principles of research design.

**183A. Senior Research Seminar**

(4) STAFF

*Prerequisites:* Women's Studies 180, 181 and 182.

Develops advanced tools of feminist research, theory, and argument. Offers participants the opportunity to complete a project of textual, theoretical, or empirical research. Women's Studies 183A allows students to extend or re-envision the project originating in Women's Studies 182.

**183B. Senior Topics Seminar**

(4) STAFF

*Recommended preparation:* Women's Studies 180, 181 and 182.

Develops advanced tools of feminist research,

theory, and argument. Offers participants the opportunity to complete a project of textual, theoretical, or empirical research. Focuses on different topics each year to allow students to develop a related research project.

**185AA-ZZ. Gender and Culture**

(4) STAFF

*Prerequisite:* upper-division standing.

*May be repeated for credit to a maximum of 12 units provided letter designations are different. Letter grade required for majors and minors.*

Seminar on selected topics in women's studies, with a humanities emphasis.

**186AA-ZZ. Gender and Society**

(4) STAFF

*Prerequisite:* upper-division standing.

*May be repeated for credit to a maximum of 12 units provided letter designations are different. Letter grade required for majors and minors.*

Seminar on selected topics in women's studies, with a social studies emphasis.

**190. Women's Community Organization**

(2-4) STAFF

*Prerequisites:* upper-division standing; open to women's studies majors only.

*May be repeated for credit to a maximum of 8 units, but only 4 units may be applied toward the major.*

Combines independent service in a community organization involved with issues relevant to women's studies with reflection and analysis under the supervision of a faculty member.

**195HA. Senior Honors Project**

(2-4) STAFF

*Prerequisite:* upper-division standing.

*Students must have a minimum 3.0 university GPA and a minimum 3.5 departmental GPA; 4 to 8 units required in honors sequence; minimum of 2 units per quarter.*

Students design, research, write, and present original work on a topic of choice under supervision of a women's studies faculty mentor. Emphasis is placed on project design and initial research.

**195HB. Senior Honors Project**

(2-4) STAFF

*Prerequisites:* Women's Studies 195HA; upper-division standing.

*Students must have a minimum 3.0 university GPA and a minimum 3.5 departmental GPA; 4 to 8 units required in honors sequence; minimum of 2 units per quarter.*

Students design, research, write, and present original work on a topic of choice under supervision of a women's studies faculty mentor. Emphasis is on data gathering and organization.

**195HC. Senior Honors Project**

(2-4) STAFF

*Prerequisites:* Women's Studies 195HA or 195HB; upper-division standing.

*Students must have a minimum 3.0 university GPA and a minimum 3.5 departmental GPA; 4 to 8 units required in honors sequence; minimum of 2 units per quarter.*

Students design, research, write, and present original work on a topic of choice under supervision of a women's studies faculty mentor. Emphasis on writing thesis and preparation for presenting results to an audience of women's studies peers and faculty members.

**198. Readings in Women's Studies**

(1-4) STAFF

*Prerequisites:* upper-division standing; completion of two upper-division courses in women's studies.

*Students must have a minimum 3.0 grade-point average for the preceding three quarters and are limited to 5 units per quarter and 30 units total in all 98/99/198/199/199AA-ZZ courses combined. Students may apply a maximum of 4 units of Women's Studies 198/199 courses combined to the major. Women's Studies 198 may be repeated for credit to a maximum of 12 units, but only 4 units may be applied toward the major.*

Directed readings in women's studies under the guidance of a faculty member in the program.

Students wishing to enroll should prepare a short written plan of study.

**199. Independent Studies in Women's Studies**  
(1-4) STAFF

*Prerequisite:* Upper-division standing; completion of 2 upper-division courses in Feminist Studies.

*Up to 8 units of 199 may be applied to the major, and only a combined total of 8 units of 190, 198, 199 may be applied to the major. Open to Feminist Studies majors/minors and LGBTQ Studies minors with departmental approval. May be repeated for credit for a maximum of 12 units.*

Independent research and writing under the guidance of a faculty member in the program. Students wishing to enroll should prepare a short written plan of study.

**GRADUATE COURSES**

**210. Labors**

(4) BORIS

*Prerequisite:* graduate standing.

*May be repeated with different instructor and topic.*

An intensive reading course on diverse forms of labor, both productive and reproductive, in different times and places with a focus on the intersections among gender, race, class, ethnicity, life cycle, abilities, and social and political actions.

**215. Intersectional Perspectives on Gender, Social Politics, and Public Policy**  
(4) BORIS

Intersectional perspectives on the making and implementation of law and social policy in the United States, historically and comparatively. Includes feminist theories of the state and may cover issues of citizenship, immigration, sexuality, reproduction, health, work, welfare, anti-discrimination, marriage, family.

**220. Genders and Sexualities**

(4) RUPP, MILLER-YOUNG

*Prerequisite:* graduate standing.

*May be repeated with different instructor and topic.*

An intensive reading course on diverse sexualities and genders in different times and places with a focus on the interconnections among race, ethnicity, class, gender identities, and sexual desires and acts.

**230. Race and Nation**

(4) CHANG

*Prerequisite:* graduate standing.

*May be repeated with different instructor and topic.*

An intensive readings course on the experiences of women of color, both within the US and globally, with interlocking systems of racism, classism, sexism, homophobia/transphobia, ableism, and colonialism.

**240. Transnational Feminisms**

(4) RUPP

*Prerequisite:* graduate standing.

An intensive reading course on diverse manifestations of feminism and women's movements around the globe.

**250AA-ZZ. Feminist Theories**

(4) BORIS, HERNANDEZ, TOMLINSON

*May be repeated for a maximum of 12 units provided letter designations are different, with instructor permission.*

An intensive reading course in feminist theories. Topics may vary.

**260. Feminist Research Methods**

(4) HARTHORN, OAKS

Examines feminist methodologies for knowledge construction and interdisciplinary social research. Includes practicum on central feminist methods such as ethnography, interviewing, focus groups and oral histories. Considers usefulness of quantitative tools. Develops research proposals for students' own graduate research projects.

**270. Feminist Epistemologies and Pedagogy**

(4) BORIS, OAKS

Acquaints students with the scope and range of

feminist epistemological critiques across disciplines and pursues issues relevant to problematizing of knowledge seeking, such as theories of agency rooted in gender, race, class, and sexuality.

### 280. Research Practicum

#### (4) STAFF

A cross-disciplinary seminar in which fundamental questions in contemporary feminist research practice are considered in light of students own graduate projects.

### 501. Apprentice Teaching in Women's Studies

#### (4) STAFF

*Prerequisite: teaching assistant.*

*May be repeated for credit.*

Students will receive faculty supervision as they lead discussion sections, assist in the preparation and evaluation of exams, and advise on written assignments. Attention will be given to the challenges posed by multidisciplinary materials and perspectives. Weekly meetings with instructor required.

### 594AA-ZZ. Special Topics in Women's Studies

#### (4) STAFF

Special seminar on research topics of current interest.

### 596AA-ZZ. Directed Readings and Research

#### (2-8) STAFF

*Prerequisites: consent of instructor, current graduate enrollment.*

*May be repeated for credit with approval of program chair.*

Individual tutorial relevant to M.A. or Ph.D. projects. Plan of study must be approved by program chair.

# Film and Media Studies

Department of Film and Media Studies  
Division of Humanities and Fine Arts  
Social Sciences & Media Studies 2129

Department Chair: *Lisa Parks*

## Faculty

**Allison Anders**, B.A., UC Los Angeles, Professor, independent filmmaker

**Jackie Apodaca**, M.F.A., National Theatre Conservatory, Lecturer (film and media production and technology, acting and directing)

**Peter Bloom**, Ph.D, UC Los Angeles, Associate Professor (pre-cinema, film history, post-colonial francophone, African studies)

**Edward Branigan**, Ph.D., J.D., University of Wisconsin, Madison, Professor (film theory, aesthetics, narrative, point-of-view, analysis)

**Anna Brusutti**, Laurea, University of Padua, Italy, Lecturer (Italian cinema)

**Michael Curtin**, Ph.D., University of Wisconsin, Madison, (global studies, media industries, cultural studies)

**Dana Driskel**, M.F.A., University of Southern California, Studio Professor (film production, animation)

**Anna Everett**, Ph.D., University of Southern California, Professor (film and television history and theory, black film, digital media technologies)

**Cynthia Felando**, Ph.D., UC Los Angeles, Continuing Lecturer (youth culture and film, media violence, film history, contemporary trends in international cinema)

**Richard Hebdige**, M.A., Center for Contemporary Cultural Studies, University of Birmingham, U.K., Professor (film, cultural, and media studies)

**Jennifer Holt**, Ph.D., UC Los Angeles, Assistant Professor (media industries, television studies, regulation and policy, film history)

**Nancy Kawalek**, B.S., Northwestern University, Studio Professor; Director, Professional Artists Lab, the *STAGE* International Script Competition, and the STAGE Project (creating and performing for stage and screen)

**Lisa Parks**, Ph.D., University of Wisconsin, Madison, Associate Professor (global media and broadcast history, cultural studies)

**Constance Penley**, Ph.D., UC Berkeley, Professor (film history and theory, media studies, literary and rhetorical studies, cultural studies, feminist theory, science and technology studies, contemporary art)

**Paul Portuges**, Ph.D., UC Berkeley, Lecturer (screenwriting)

**Bhaskar Sarkar**, Ph.D., University of Southern California, Associate Professor (globalization and culture, post-colonial media theory, Indian cinema, Chinese cinema, social trauma and film)

**Greg Siegel**, Ph.D., University of North Carolina, Chapel Hill, Assistant Professor (media studies, cultural studies, science and technology studies)

**Melinda Szaloky**, M.A., Acting Assistant Professor (European film, media theories and practices, philosophy and aesthetics, feminist studies)

**Cristina Venegas**, Ph.D, University of Southern California, Assistant Professor, (Latin American and Latino media, international cinema, and digital media technologies)

**Janet Walker**, Ph.D., UC Los Angeles, Professor (documentary, historiography, trauma studies, women and film)

**Charles Wolfe**, Ph.D., Columbia University, Professor (international film history, American film and cultural history, comedy, documentary, film and media archives)

## Emeriti Faculty

**Naomi Greene**, Ph.D., New York University, Professor Emerita (French and Italian film)

**Alexander Sesonke**, Ph.D., UC Los Angeles, Professor Emeritus (silent comedy, Russian cinema, Jean Renoir)

## Affiliated Faculty

**Michael Berry**, Ph.D. (East Asian Languages & Cultural Studies)

**Denise Bielby**, Ph.D. (Sociology)

**Jacqueline Bobo**, Ph.D. (Feminist studies)

**Kip Fulbeck**, M.F.A. (Art)

**Colin Gardner**, Ph.D. (Art)

**Suzanne Jill Levine**, Ph.D. (Spanish and Portuguese)

**George Lipsitz**, Ph.D. (Black Studies and

Sociology)

**Laurence A. Rickels**, Ph.D. (Germanic, Slavic, and Semitic Studies)

**Celine Shimizu**, Ph.D. (Asian American Studies)

**William B. Warner**, Ph.D. (English)

The Department of Film and Media Studies is a vibrant, rapidly growing department whose faculty members include specialists from across the field of contemporary media studies. The department's strengths are fiction and nonfiction film history and theory, television and broadcasting, digital media, the Internet, video art and activism, cultural studies, political economies, and media globalization. Interdisciplinarity is encouraged by coordinating courses and program research projects with other departments such as Art, Communication, Environmental Studies, Sociology, Black Studies, Feminist studies, and Anthropology, History, History of Art and Architecture, Comparative Literature. Production is not emphasized, but all majors become familiar with the basic tools of filmmaking. Interested students may also take courses in screenwriting and advanced film production.

With a strong base in the liberal arts, the film and media studies major is designed to prepare students for careers in the media industry and media education, as well as archival preservation and research, entertainment law, publishing, and journalism.

Additional language courses are recommended for students interested in spending their junior or senior year with the Education Abroad Program. Students may consider studies from more than 150 programs in 33 countries.

Beyond the core requirements of the film and media studies major, the student may develop an individual program centered around special interests and goals. Students who wish to know more about the film and media studies major are invited to talk with an advisor in the film and media studies office.

Students with a bachelor's degree in film and media studies who are interested in pursuing a California Teaching Credential should contact the credential advisor in the Graduate School of Education as soon as possible.

## Grants, Awards, Prizes

Several universitywide fellowships, awards, and prizes are available to the undergraduate film and media studies major: the President's Undergraduate Fellowship, the May Company Fellowship, the Samuel Goldwyn Writing Awards, UCSB Foundation Honors Awards, and Genesis Research Awards provide grants for students working on projects with anticipated expenses in excess of \$300.

Students are also eligible for department-sponsored awards. The Paul N. and Elinor T. Lazarus Endowed Scholarship in Film Studies is awarded annually to a film and media studies major of exceptional enthusiasm, dedication, accomplishment, and demonstrated talent and promise in film or television writing covering partial registration fees. The Alexander Sesonke Prize is given annually for the best scholarly essays on film and media history, criticism, or theory, with prizes up to \$1,000. The Dorothy and Sherrill C. Corwin Awards are given annu-

ally for best screenplay short film in awards up to \$1,300. The David F. Siegel Award is made annually to a film and media studies major who has demonstrated drive, tenacity, and courage in the face of adversity, in the amount of \$1500. The Dorothy and Sherrill C. Corwin Screenwriting Award for Best Short Screenplay is given annually, with prizes up to \$500.

### **Graduation with Distinction in Film and Media Studies (The Senior Honors Program)**

The honors program in film and media studies provides the opportunity for qualified majors to undertake advanced film research or creative written work. Through successful completion of the honors program, a student will achieve the degree award of Distinction in the Major.
