"*E. coli* is a large and diverse group of bacteria that come from the escherichia coli bacteria family. It is most often found in the environment, foods, and in the intestines of humans and animals"

"*E. coli* is spread through tiny amounts of feces, usually, from an animal or human, that has found its way into food."

just the context for "**CDC Warns a 7 State E. Coli Outbreak May Be Linked to Baby Spinach**"
