Colony collapse disorder impacts crops, but may also be caused by created by the production of them too.

List: <http://www.curiousread.com/2008/07/honey-bee-crisis-could-push-food-prices.html>

80% of the world's almonds are produced in California. Commercial pollination of almond trees takes place over a span of 22 days in February. This is an impossible task for local bees to complete: there are too many trees to pollinate and too few bees. To pollinate the trees...
