Although animals that are not remains in limestone never knew what veganism was, and the idea wasn't around back then, using limestone is still exploitation of animals. The animals were alive, and pulverizing it will cause the loss of their info and existence to the world (i.e. we can't learn from their fossils if they're not around). The rock (its minerals, formation, etc.) can also not be utilized by animals that live by them either.

Limestone is made from "corals, shellfish, algae, etc.": <https://geology.com/rocks/limestone.shtml>

Marble is the metamorphic version of limestone: <https://geology.com/rocks/marble.shtml>
