Content

I wrote it in a document, as it's too large for the post to handle. It can be updated with time. I feel the list is incomplete, but I'm posting for now, for everyone to see - as I continue to work on it. Bear with me as there is likely a lot of repetition on here until it can be refined better.

If there's any I miss, please write them down in the comments. I won't add them to the list, because then it would mix with my work and can have issues with crediting (even if I give credit), so separating gives people more notoriety, which is preferred. It's also less work on me.

Feel free to write down your specific reasons for society below, even if it repeats mine, and maybe even preferable, to show what we all agree on.

warnings:

- This is just a list of points that fit on the list. It's important not to conflate these reasons with the points below, as this list isn't about that - it's about society as a whole, not the individual:
 - the reasons being right and wrong themselves, which they might be
 - as a judgment or criticism on what people do. But if it is, think about why and maybe try to do better - it's a gift, not a curse.
 - telling people what to do and what's right and wrong
 - some of this content may be triggering, so if you feel like you may be personally insulted by the content, this is content best to be avoided - as that's not its intentions
 - just because someone has some trait on this list doesn't automatically make them a bad person - it can be circumstantial or something to work on
- this list is to be a list of every single reason out there for/against veganism - not leaving anything out.
- reasons within reasons are in bold
- discussions on kialo already exist, but they includes details in addition to reasons, hence the need for this list. These are also the reasons that should be highlighted and said that haven't been said yet.
