Discussion Title

Should we create and adopt a universal currency?

72

Background

The close trade relationships and connectedness of the economies in Europe led to the introduction of a single currency, the Euro, in order to facilitate smoother and more frictionless trade. Now, through a process of globalization, the economies of the entire world are more interconnected than ever before. Societal progress has led many countries' economies to unify their currencies for more frictionless trade, as seen with the Euro in Europe and XOF in West Africa. In the 1944 Bretton Woods Agreement the US dollar replaced gold as the world's global currency. Now, with our fast-paced, post-global era and with space colonization on the horizon, should we pursue a universal currency to facilitate global and inter-celestial exchange?

Note: A universal currency may be used alongside individual or national currencies, for example for carrying out trade or banking, or it may replace national currencies altogether. Also, individual countries can create (like print) money of a universal currency (especially (but not required) when given
