...The next big thing in vegetable technology is coming soon to a countertop near you.

We're all familiar with pod coffee machines that dot offices and homes across America. But instead of coffee, imagine if those pods were packed with an edible plant that has more protein than soy.

GreenOnyx is a new food machine from Israel that manufactures tiny, vitamin-packed plants called khai-nam that you eat or drink. GreenOnyx is based on hydroponics, which is a method of growing food without soil...
