We don't see evidence for a 'nested' universes, so those multiverses don't exist.

The idea of a 'nested' universes version of a multiverse is **fundamentally untestable**, as it requires looking for evidence of something that exists outside our visible universe and leaves no trace within it.

@vegforlife Hey! I really love this debate and I'd be happy to help with any spelling or claim fix, but I can't seem to edit myself?? Any chance I could get editing access for the debate?

jm_dav (1.3k) · 1y

@jm_dav definitely! Didn't know you didn't have it. Hmm... shouldn't I just make you admin in most of my newer debates anyway - as you're pretty good at it (I'm glad you're here to help, as you're one of the few I rely on :)). I mean, you don't have to actually admin here, but it's just giving you privileges for when you show up and are ready to go

You (8.8k) · 1y · edited 1y

@vegforlife that would be wonderful actually! I think I'm much better at helping people with their debates than setting up my own so I'm always happy to help admin if you need me. I really like the debates you are running - though I'm not as experienced in science this is definitely a cool starter debate for those that are less knowledgeable (ie me!)

jm_dav (1.3k) · 1y

@vegforlife I wonder if we added another 2 tags - something specific - we might be able to attract more debaters. Any ideas?

jm_dav (1.3k) · 1y

@jm_dav good thoughts. You're right in that they're hard and out of knowledge ranges - even for me too. I have limits in admin abilities, in which it's awesome you're here to fill in. I added some tags, but since not much scientific work's been done, I'dk really what to write.

@jm_dav I wonder, based on the simulation hypothesis, whether if we live in a simulation, that there could just be multiple worlds in a really small place, like a computer? I really don't know how to write this into a claim without veering off-topic. Any ideas?

You (8.8k) · 1y

@jm_dav I really like 'juicy' ideas, so I guess I'm pretty good at making discussions. I just take an idea that's too big and needs external help and make it public/archivable.

You (8.8k) · 1y

@vegforlife Hmm I think you could take that idea in two ways - so 1. if the simulation hypothesis is true and we all live in a simulation, that would mean that there are multiple worlds in a really small place too, for example a computer, which is extreme. Or you could take the claim in a more positive direction so 2. If the simulation hypothesis is true and we all live in a simulation, that would completely change our understanding of our world. It would mean that there are multiple worlds in a really small place too, for example a computer

jm_dav (1.3k) · 1y

@vegforlife Would that work?

jm_dav (1.3k) · 1y

@jm_dav It might be a discussion of its own one day, but I wrote this for now. [Maybe we can't see it...](#)

You (8.8k) · 1y · edited 1y

@jm_dav I invited you to the private discussion of it, as I'dk if I can turn it into one

You (8.8k) · 1y

@vegforlife Yep I got an email about it! you can actually link debates as claims in another debate. So it'll come up as a claim in this debate with a link attached and when people click the link in the claim it'll send them straight to the debate

jm_dav (1.3k) · 1y

@jm_dav neat! Didn't know that. I'll add it in.

You (8.8k) · 1y

@jm_dav I'm going to delete the private discussion. Nothing there to say
