Virtual reality (VR) is the best format for online education.
SUGGESTED CON
nope. maybe for others it is just cheap to have vr box but for someone who can't afford it it is very expensive.

3mo ago contra55 (4)

Virtual reality (VR) is the best format for online education.
SUGGESTED CON
would require a lot of techno. advancement to reach the level where VR classes could really show its efficiency

8mo ago PhoenixWrightAceAttorney (4)

VR provides another option to people who learn better in it than school, as there is not a one-size-fits-all method to teaching/learning.
SUGGESTED PRO
Some people learn better with hands on and VR can provide that.

8mo ago BoyanMan (2)

People can learn by practicing on simulations without risking a being's safety.
SUGGESTED CON
You are assuming all of education is practical, also the tension of not making a mistake is usually what makes you make one.

10mo ago omniface (37)

Virtual reality (VR) is the best format for online education.
SUGGESTED CON
No virtual reality are for games an entertainment only. Putting online education into the mix, would just confuse the students. You can only learn by a real experience/real experiment rather (technically and/or sufficiently) and not to mention virtual reality wouldn't have the proper tools to conduct online education.

11mo ago Ghanny (1)

Virtual reality (VR) is the best format for online education.
SUGGESTED CON
VR could deprive pupils of using imaginations. People talk of VR as a means of firing pupils imagination, but what is a pupil to imagine if you are already showing him. You don't need to imagine it, let's show you. You know how you sometimes get disappointed when your favorite novel is turned into a movie, like that's not how you pictured it.

A VR headset is really all that's needed to turn a smartphone into a VR device (which is much cheaper than physically going to school in the long run).
SUGGESTED CON
Not all families can afford smartphones with data service or internet if they don't have them already or are high-powered, never to meet the requirements needed to run VR. In order for VRedu to be accessible to all students, there would need to be a way to fund a education specific kit and the data service needed for all students. With a standard issued kit and data, I feel that VRedu would help children who live in isolated areas and don't have access to education.

11mo ago jarrah02 (4)

VR allows students and teachers to meet in circumstances otherwise not possible.
SUGGESTED PRO
others include transport and location as well as cost of high quality education.

1y ago justanotheropinion37 (24)

Students could attend courses taught by eminent researchers instead of underfunded high-school teachers.
SUGGESTED PRO
Researchers can record their portion of the lecture once and it can be repeated ad infinitum

1y ago justanotheropinion37 (24)

VR makes getting an education more accessible.
SUGGESTED CON
Is the education on par with receiving a degree from an "Accredited" source?

1y ago ACleverUsernameGoesHere (5)

Virtual reality (VR) is the best format for online education.
SUGGESTED PRO
Using a VR-based classroom setting would allow students to get one-on-one time with their teacher if they need it.

1y ago ACleverUsernameGoesHere (5)

Resources for VR may not be available to students all the time or divided equally.
SUGGESTED CON
As stated in a different part of this debate, the only necessity would be a headset to turn a phone into a functioning VR headset.

Virtual reality (VR) is the best format for online education.
