Synesthesia (1.5k)

For instance, a person can't get hurt or feel pain in VR. The have no real desires because they can access whatever it is that they want. This is likely to be accompanied by an intensified belief in the meaninglessness of existence.

SUGGESTED CON

Virtual reality can most definitely simulate a sense of pain or inflict damage (although it seems undesirable). The most obvious case being plugging in to the brain directly.

Doobjo (627)

Virtual reality (VR) spaces should be created for everyone to live in.

SUGGESTED CON

VR is technology created by humans who make mistakes, therefore it is dangerous to subject someone to neurological adapters (assuming they can feel objects in the VR world).

NoFreeWillMurad (65)

Virtual reality (VR) spaces should be created for everyone to live in.

SUGGESTED PRO

Considering that VR world will support a good "life" for everyone, people should voluntarily be able to choose in VR world without the everyday problems they have in the real world.

bowtiesarecool (2.4k)

A lot of people already think life on Earth is meaningless (like not knowing the meaning of life, why they're alive, or why they are where they are at), in VR, this may become more complex.

SUGGESTED PRO

A lot of people believe there is no grand design and that nothing they do really matters. VR worlds are likely to entrench this belief by giving them access and control over something that feels as real as their own lives, but is in actuality made up by people.

toosoo (2.2k)

Just because something outside of our control is taking place, doesn't mean we should or are able to now move forward. It's less of a priority, possibly even extraneous, than whether or not it is the right to do so.

SUGGESTED PRO

Just because something is happening does not answer the question whether or not it is the right thing to do.

Virtual reality (VR) spaces should be created for everyone to live in.
