DeepMind (87) · 1 min · accepted by you (80)

@Dario You. I started that discussion too. I think I should like that

DeepMind (87) · 1 min · accepted by you (80)

Yes, this

DeepMind (87) · 1 min · accepted by you (80)

I know, that's why I started it

DeepMind (87) · 1 min · accepted by you (80)

@Dario good thought. I just created the AI claim last night, so it's good that you think in the same way

DeepMind (87) · 1 min · accepted by you (80)

I don't know if you are christian or not, but I am going to create a discussion talking with the author of Hebrews was.

DeepMind (87) · 1 min · accepted by you (80)

@Dario why cool. Just about everyone in my family is a different religion. I was brought to be non-religious, but personally I just believe every single religion out there when it's with their many pure monks and only if want to - but I believe by a religion I mean as what I think is a pure and it's really peaceful, different, and that there - I don't have a God though I just believe I mean a true thing. It's just bringing it out for-peace I mean you looked into the bible on the "The Good Shepherd" you could have me the best thing to read up on the developments and that will help me out. Although wouldn't the hardware be the author of Hebrews?

DeepMind (87) · 1 min · accepted by you (80)

Yes, that wouldn't be very productive for the Hebrews debate.

DeepMind (87) · 1 min · accepted by you (80)

@Dario to make a really good debate, it needs to be thought through. It's better to be thinking. That's why subjective debates work unfortunately

DeepMind (87) · 1 min · accepted by you (80)

I always prefer debates that do have an answer. But it's obvious and the obvious way to get out of the answer. Maybe you should come up a debate like what is the best way for energy? That's kind of a debate

DeepMind (87) · 1 min · accepted by you (80)

haha

DeepMind (87) · 1 min · accepted by you (80)

@Dario Hey, you're words, not mine p.3

DeepMind (87) · 1 min · accepted by you (80)

That wasn't really what I meant, but ok XD

DeepMind (87) · 1 min · accepted by you (80)

@Dario I actually want to write a row and make you hope that ok. What were the other thoughts?

DeepMind (87) · 1 min · accepted by you (80)

My other thoughts just got blown out of the water while thinking of ways to cure cancer

DeepMind (87) · 1 min · accepted by you (80)

@Dario oh no - I wish could find it again - I don't remember either - I think I was something about ending poverty and such. So I didn't in many discussions, but I know the perfect that you'd like to look at. @Dario: I just created other discussions, but I think the best important that the line is: that the debate that's out there, now it's time to write about other, random thoughts, that people have concerns over - I mean, I've written discussions, it's pretty much everywhere for answers and part of them. When I say I'm a row, it's a list of people not everyone would be cover or angry about their unresolved ideas and then - it's address them and all that other things. I'm not looking for the answer in this other things, but as they do make progress to something unclear. Pushing the boundaries of objective knowledge is what I think, not really about the matters that aren't important in such a life, but just in the way.

DeepMind (87) · 1 min · accepted by you (80)

I got hit by a car yesterday /

DeepMind (87) · 1 min · accepted by you (80)

Fractured my elbow

DeepMind (87) · 1 min · accepted by you (80)

@Dario I hope you're ok and heal quickly. It's continued to be in any way, I suppose, I'm on the way home because I'm hearing from a doctor that I got a April. Guess we'll be hearing together

DeepMind (87) · 1 min · accepted by you (80)

You metaphorically walked with me pain and pain, heave, no pain / You did nothing

DeepMind (87) · 1 min · accepted by you (80)

Good luck on your concussion

DeepMind (87) · 1 min · accepted by you (80)

@Dario must've been a great pain lol. Thanks / try to

DeepMind (87) · 1 min · accepted by you (80)

I was terrible, I was on my knees for a long time

DeepMind (87) · 1 min · accepted by you (80)

@Dario Now, hope it's better / I just look up and start off lol

DeepMind (87) · 1 min · accepted by you (80)

hi

DeepMind (87) · 1 min · accepted by you (80)

We are one, however, two people may see the same tree differently. We all humans have to focus on our development before looking "after ourselves" It's a honor that we are discussing it. I'm glad everyone will laugh and grow /

DeepMind (87) · 1 min · accepted by you (80)

@D I think if we're able to discuss it then humans have given to that point of development to be able to do so. I agree that we should focus on humanity first, but the time is now for wondering the question. It's a discussion now about if we should create a conscious AI. I love your posts, but it's not the matter

DeepMind (87) · 1 min · accepted by you (80)

Clarify your definition of consciousness

DeepMind (87) · 1 min · accepted by you (80)

@Darius It's in the info section

Unless there is some physical phenomena occurring in the human brain that can not be explained by physical laws (which there does not seem to be), then that system can be modeled and simulated electronically.

Accept | Reply

Human is basically a biological machine. We feel sad when our body receives signals D, and our mind interprets and logs between a b to become conscious enough. It may feel sad, when it really needs is a battery.

Our thoughts and emotions in recent years have been found to be connected by a 5d more than just our brain. The key to develop our own consciousness of some point in our history. In reality we are our own branch of AI.

More than one claim

If humans can develop an algorithm complex enough to match the human brain, consciousness could be developed.

Accept | Reply

If AI can become more intelligent (not just in certain areas, but altogether) than humans, it will be smart enough to find a way to be conscious.

We cannot make an AI conscious unless and until we know how consciousness was created in us. Consciousness in us seems to be some kind of an energy. Now, energy can neither be created nor be destroyed. But to make an AI conscious, we need to create a conscious energy which we cannot do if we do not know how that energy was created within us. If AI gets conscious without knowing how we became conscious, then it would most probably be by an accident or luck.

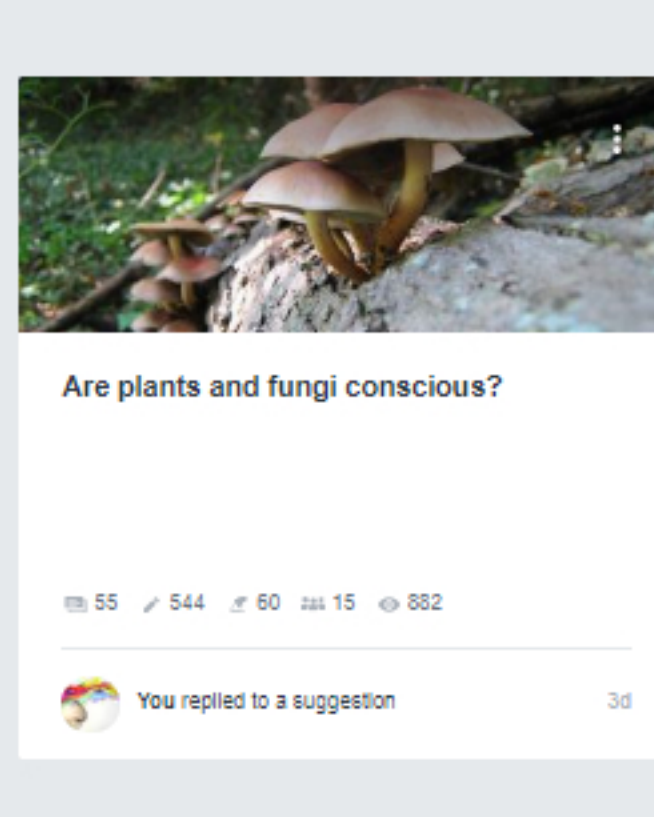

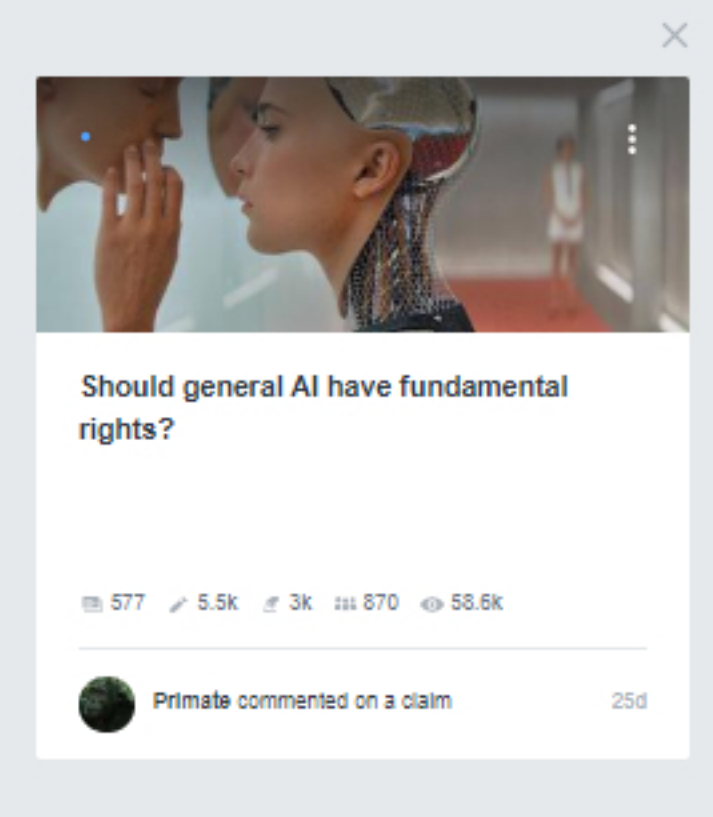

The concept of "consciousness" is not defined well enough for this to ever be properly evaluated.

A lot of AI is @Dario: So adding consciousness to AI, like the ones that exist in the movies, may not end up how we imagine it will be.

Right now, each AI is specific to one task. It's like @Dario: @Dario to combine all of them into one to make them together for them to work together.

It'll be difficult to get AI to truly replicate consciousness (even with trying to mimic the human brain).
