Pros	Cons
<p><b>SUGGESTED PRO</b></p> <p>Artificial general intelligence (AGI) would be capable enough to provide us options for roles and purposes that we would be able to take in a fully-automated world.</p> <p>Accept Reply</p> <p>Live in virtual worlds</p> <p>Individually tailor our own world by being prosumers (producer-consumers)</p> <p>Colonize other celestial objects in the universe</p> <p>Focus on leisurely development of oneself's skills</p> <p>Be better versions of ourselves (through <b>enhancements</b>)</p> <p>Socialize more</p> <p>At all times in all places, life has not involved strenuous upkeep. Humans, a distinct breed always responsible for inventing the purpose of his own existence.</p> <p>Just living, can be by itself a purpose.</p> <p>Find a way to stay relevant amongst automation and robotics</p> <p>Newfound freedom given by robots to humans will allow humans to pursue what they weren't able to before, thus allowing them to find purpose in what they weren't able to explore before.</p> <p>Focus on areas that have the potential for automation but are not yet automated (provided the need arises for new robots to keep a fully automated world going).</p> <p>If robots automate our world from afar (like get outsourced to another planet), then humans can continue their existence/purposes as-is, but undisturbed by competing with automation and minus the need for hard labor anymore.</p> <p>If humans do not live in the world that is fully automated, then they could have a purpose to the automated world by providing it with what it doesn't have.</p> <p>Indulge in the luxury status that automation has brought us</p> <p>Be productive by letting robots help with minute-to-minute tasks</p>	<p>Humans might not have a role. They might become the "useless class"</p> <p>The activities that humans do for fun might inspire automation. This takes away from automation's autonomy while making what is fun not anymore because it becomes mechanized instead of spontaneous (like the science of play).</p> <p>Human existence without responsibilities can be detrimental to mental and physical health. Therefore, it is impossible to create a stable society with only leisure and pop com. If we are to automate everything, humans will have to find meaningful work, possibly to no avail.</p> <p>Robots may automate our lives to the point that we can't function anymore.</p> <p>"If <b>We are here on earth to help others. What the others are here for, I've no idea.</b>" As such, the role of humans stays the same.</p> <p>The only role that humans in future is what they accomplished in the past (a.k.a. setting up complete automation)</p> <p>Find a way to stay relevant amongst automation and robotics</p> <p>If humans do not live in the world that is fully automated, then they could have a purpose to the automated world by providing it with what it doesn't have.</p> <p>It would make everything easy and make life boring.</p> <p>People will have less skills and thus be less capable of tasks once automation takes over</p>
