It's helpful to be helpful to people when they're asking a question. It's important to be helpful to people when they're asking a question. It's important to be helpful to people when they're asking a question.

EnginPrincess001 (1)

There's 3 methods. So people just be the method they're referring to in their claim.

You@BQ (1)

@EnginPrincess001 (1) **Reply**

But isn't that pretty unhelpful as people will inevitably ask just each other?

EnginPrincess001 (1)

EnginPrincess001 (1) **Reply**

But the idea's there, at the moment can be answered with "yes" or "no", whereas the multiple branches of this debate seem to serve just to different claims of teleportation. That looks like a distraction to me.

EnginPrincess001 (1)

EnginPrincess001 (1) **Reply**

I'll edit the intro, it should be about whether teleportation would be beneficial based on the method. Like it should be for the 1st but not the 2nd or 3rd. See?

You@BQ (1)

EnginPrincess001 (1) **Reply**

So you want to add the debate to focus on one mechanism through which teleportation could work?

EnginPrincess001 (1)

EnginPrincess001 (1) **Reply**

I'm starting to realize I missed up the debate by putting in methods. Which method would you say's the best one to use for this discussion? Maybe there would be 2 debates on the future on each, but we'll start here with 1. I'm guessing it's not method 1 - just teleporting information.

You@BQ (1)

EnginPrincess001 (1) **Reply**

I put it back, I'm not really able to merge the discussion much anymore. I figured the only up-to-date one is information, so the other two could merge as one.

You@BQ (1)

EnginPrincess001 (1) **Reply**

You mean you want to abandon the discussion? You mean you're defining the particular idea of teleportation in the discussion and focusing on another?

EnginPrincess001 (1)

EnginPrincess001 (1) **Reply**

Just that I'm not going to actively look at the discussion for continuous improvements. I still have things to do. It would be nice to have someone who can advise where I can't go so this discussion can improve. There isn't one at the moment. It seems the best I have are okay, as they're related. I just add what we don't talk about here, so it helps.

You@BQ (1) - **edit**

Using method 1-teleporting information Teleportation would be beneficial if it exists

You@BQ (1)

EnginPrincess001 (1) **Reply**

If you want, I can have a shot at improving the debate as editor or admin.

EnginPrincess001 (1)

EnginPrincess001 (1) **Reply**

Let's improve the discussion!

You@BQ (1)

EnginPrincess001 (1) **Reply**

Shall we decide on one of the teleportation modes outlined in the discussion page?

EnginPrincess001 (1)

EnginPrincess001 (1) **Reply**

If you see in the intro, I picked 2. The reason is that people can talk about either, because they are similar - machine-based teleportation. So I guess, if you want to clarify it down to 1 type, we can say machine-based, and that has some methods that can be used in the present, reconstruction, and teleportation. Your thoughts?

You@BQ (1) - **edit**

EnginPrincess001 (1) **Reply**

But why not cut all the other information that's not necessary than from the description?

EnginPrincess001 (1)

Price **Cons**

It would allow others to travel much more quickly

Accept Reply

It would be beneficial and will open many opportunities to explore. Teleportation might decrease business of vehicles and other transportation businesses, but many new jobs would replace what is lost. A lot of "negative" issues depend on how the teleportation works (is it a machine? or does it biologically allow you to move at incredible speeds?) but if teleportation did exist, the pros definitely outweigh the cons.

Accept Reply

One could accidentally teleport to a place that is not safe, for example a place where currently a natural disaster is happening, or a crime is taking place. It is nearly impossible to regulate the areas where one can teleport freely to.

Accept Reply

New rules and regulations would be required for teleportation along with appointed authorities to enforce these rules and keep track of whether the rules are being followed.

Accept Reply

A lot of people could be paranoid of the use of teleportation as when you teleport, you are being disintegrated and reassembled (lined and cloned) the idea of that is too scary for people to use

Accept Reply

It would be a detriment to vehicle businesses. For example, train or bus transport industries would be destroyed. The car industry might also be negatively affected.

Accept Reply

If someone goes somewhere and the teleporter stops working, then a person can be stuck there.

Accept Reply

Sure, teleportation might be beneficial if it exists, but it won't only do us good. For example drug dealing or weapon dealing. People could just send those things around the world without crossing any country borders. It would be something else if the government keeps the blueprints a secret from public. But if everyone has access to them, then who knows what's gonna happen to this world.

More than one claim

Teleportation is a factor in social mobility, so the teleportation improvement could create/increase the anti-social effects of it

But if everyone has access to them, then who knows what's gonna happen to this world.

Accept Reply

Social mobility creates of **social** which increases mental health issues involving an anti-social component, like **of social** and **of social**.

Accept Reply

It would be majority socially awkward if someone could just up and teleport out of a conversation

Accept Reply

Using portals would help with theft, as one could move material through portals pretty easily.

Accept Reply

Since it's really hard to imagine the physics behind creating BIL, it may be hard to fit in emergency situations.

Accept Reply

The associated personal cost of world-changing technologies could generate significant economic disparities between rich and poor. If the technology is only affordable to a small number, it could exacerbate class divisions, which is detrimental to e.g. social mobility.

Accept Reply

Teleportation can be dangerous.

Accept Reply

Teleportation would eliminate the concept of a private space, as anyone could teleport to it.

Accept Reply

A teleporter might be killing you and creating a copy at the destination, which would leave a vast death toll if teleportation became a common mode of transport.

Accept Reply

People might feel like teleportation solves more than it does, so it may not people up for future.

Accept Reply

Criminals might be able to get away with crimes more easily.
