Edited

Can virtual public schools ~~should~~ replace physical ones?

Edited

Virtual public schools should replace physical ones.

Edited

Online schooling can replace brick-and-mortar education should be done online.

Edited

All institutionalized education should be done online.

Edited

All institutionalized education should be done onlinego fully digital.

Edited

All institutionalized education should go fullycompulsively digital.

Edited

All institutionalized education should go completely digital/virtual.

Pros **Cons**

Virtual schooling has specific benefits not seen in traditional settings.

Online courses have more permanence that lets them be a online resource after a course is over.

Digital education addresses problems that regular schools cause.

Gives our current, widespread technological infrastructure and capabilities for digital adoption, this may be the solution to global educational challenges of access, equity and quality.

It's an easier format for the student to work with.

Transitioning to virtual education is not difficult.

It will provide more jobs for teaching subjects (i.e. niche- or expert-level) outside of a general education requirements.

Most classes have some online component now, so the switch may not be too hard these days.

It's harder to fail a course online.

Online education is set up to where people can focus on what they're more interested in, due to not having to be consumed by the courses that they're less interested in (due to factors not related to learning, like costs, getting a bad grade, and logistics like not being able to drop the course once enrolled).

It's more similar to learning in the "real world", where people don't get punished for failing (as students don't have a failed online college course on their records online, nor pay for it either).

It's much cheaper for everyone.

In some ways, it's very similar to brick-and-mortar.

It will provide more employment to teachers living in remote areas.

There's **are** more choices in this format.

It allows for larger numbers of students to attend.

It's better for the environment.

It's more convenient.

It's Digital education is more flexible.

Online education introduces students to continuous technological capabilities, which can inspire them and help them learn valuable technological skills.

SUGGESTED CON

No todos tienen la posibilidad de contar con un equipo electrónico.

SUGGESTED CON

Not entirely. Why does it have to be either or? Why not a hybrid? Not everything is learnable virtually. What is best taught virtually should be offered that way. It is not difficult to determine what can be taught best virtually and what cannot. Small, classes for students to learn how to resolve conflict, share, collaborate, and love each other well are likely all that needs to happen in most space.

SUGGESTED CON

There would be a significant loss of jobs.

A lack of privacy would become a larger issue.

Fully digital education might lead to physical inactivity of students.

It doesn't allow for diverse social interaction.

It requires electronic equipment, of which students may not have. This would make going virtual infeasible.

The family has to be deeply involved every step of the way.

Virtual education has less retention.

The credits are not accepted as much as brick-and-mortar.

Job security would become an issue.
