Comments for Public Posting: The climate crises is by far the biggest, most important issue in our lifetime. We need to do all we can to protect our planet. Acting now to mitigate the effects of climate change will save countless lives and money as apposed to trying to adapt to ever worsening disasters. Endorsing the Plant Based Treaty is a relatively easy act to take and shows that you are genuinely trying to do all you can to tackle this global disaster head on.

Comments for Public Posting: LA is such a famous city. It would be amazing to see the City be a pioneer in addressing climate change and set an example for cities around the world. By endorsing the Plant Based Treaty you show that you care about the planet and look for solutions that are better for the planet and the animals.

Comments for Public Posting: We are in a climate emergency, and urgent steps need to be taken to address this. We have so many tools available to tackle the crisis; as well as reducing our reliance on fossil fuels, we must address the huge impact our food systems have on ecosystems and the climate. Animal agriculture is the leading cause of methane emissions, deforestation, land use change, biodiversity loss and land degradation. The Plant Based Treaty is an initiative that LA should wholeheartedly support; it brings the core issues of land use, air and water pollution, food security, biodiversity loss and much more to the table. Even if we ended all fossil fuel use tomorrow, we would still drastically exceed 1.5C of warming due to our food emissions. LA holds a global influence and should be at the forefront of tackling the climate crisis. Help every citizen build a food system that is stable, nutritious, and that enhances - rather than diminishes - the environment.

Comments for Public Posting: It is crucial that governments take immediate action to curb climate change. Animal agriculture is one of the leading causes of climate change but moving toward a plant based diet is action we can take today, right now to help avoid catastrophe.

Comments for Public Posting: Hi time to make all public meals plant based, meals vegan, local, organic. And force all restaurants to offer subsidised vegan meals.

Comments for Public Posting: Please follow the IPCC science and endorse the Plant Based Treaty. LA can be a world leader in addressing food-related emissions and inspire cities worldwide to develop their own plant-based food strategies. Animal agriculture is draining our resources and is the leading cause of deforestation globally. To protect our forests and carbon sinks we have to shift to plant-based diets as well as restore deforested lands to draw down carbon. If we shift to a plant-based food system we will reduce our water use, air and water pollution and it will positively impact human health. Our best chance of preventing temperatures from rising above 1.5C is to cut methane emissions this decade by 45%. We can only do this by shifting our diets because a third of human-caused methane comes from meat, dairy and eggs. By endorsing the Plant Based Treaty you are leading by example and safeguarding the future of our beautiful planet.
