Content

List of different search engines with 1 pro and 1 con based on typing the word 'meat':

Notes:

- any vegan website - like Beyond Animal - will have vegan search results for their website
- although there are many websites on the list, there isn't any truly vegan search engine that can replace google yet
 - many are bits and pieces

Legend:

- italicized
 - out of service or not a search engine anymore
 - in cons section - not 100% vegan
- the pros and cons are about how vegan the search engines are
 - the notes section explains more about its usability

14 on the list! It's growing from when I first looked!

I'm inspired by the first one - where they donate proceeds to vegan charities.
