SUGGESTED THESIS 16

We won't achieve longer lifespans because the quality of life after about 100 will be too low (loss of mental capacity, incontinence, limited mobility, poor eyesight, poor hearing, pain, death of all our friends etc) and we will choose to die.

[Accept](#) [Reply](#)

There will be more elders than children since humans achieve longer lifespans.

People may be more educated, as they have more time to learn subjects.

People will make important decisions later in life things like choosing a job, getting married, and having kids, as they have more time to plan them out.

The world would be less livable.

Humans will become more like gods (see traits [here](#)).

There would be more aversion to dying.

They may have [lower morbidity](#) levels.
