

Humanity **should** colonize Mars.

Pros	Cons
<p>23 ago Bradley_Barker (4) Invite</p> <p>SUGGESTED PRO 👇</p> <p>Colonizing Mars would have the human race in two locations limiting the potential for humans to be completely "ripped out" due to an on-planet event.</p> <p>Accept Reply</p>	<p>21m ago Jigardiner (8) Invite</p> <p>SUGGESTED CON 👇</p> <p>There is a cost to every challenge, and "cost and risk" vs "reward" analysis is still too tilted against a plan that depends upon our current technology.</p> <p>Accept Reply</p>
<p>1mo ago Amazulu (2) Invite</p> <p>SUGGESTED PRO 👇</p> <p>Colonizing Mars allows us to begin the process of preserving the only known occurrence of life: intelligent life, beyond the bounds of just one planet. Anything ranging from war (genetically engineered biological warfare) to comets, cosmic radiation, or even climate change could trigger mass extinctions. Human beings represent the first time in the planet's history any organism has the capability to safeguard the existence of all life. I contend this is our natural telos.</p> <p>Accept Reply</p>	<p>23 ago KDavidMR (3) Invite</p> <p>SUGGESTED CON 👇</p> <p>Mars seems to have been covered by dinitrogen tetroxide which would explain its brownish-red coloration. Its dried-up riverbeds and to why they can only find like 4% of water under the surface. So I would have to say it's too toxic to be colonised.</p> <p>Accept Reply</p>
<p>8mo ago JoshuaDeLarosa (2) Invite</p> <p>SUGGESTED PRO 👇</p> <p>People should colonize mars, because the Earth is being overpopulated. Also when we colonize mars we will have a boost in technological advancements as well as a deeper understanding of space travel.</p> <p>Accept Reply</p>	<p>23 ago Blendezer (1) Invite</p> <p>SUGGESTED CON 👇</p> <p>So like, doesn't anyone think about space illness? Like the ones we have yet to discover? Even if u want take your suit off, you still can get various radiation doses, or even psychological ones. And doesn't mars has ground activities aswell? Like earthquakes and various storms, including solar waves? A lot to cover</p> <p>Accept Reply</p>
<p>23 ago PauPetha (1) Invite</p> <p>SUGGESTED PRO 👇</p> <p>because it might be the sole way to prevent human extinction</p> <p>Accept Reply</p>	<p>23 ago deactivated-emcaugan (1) Invite</p> <p>SUGGESTED CON 👇</p> <p>This is a good proof some people know this planet won't last very long, and we'll need another one quickly. When you own a car, crash it, take another one, crash it, etc., everybody will stop you from driving!! We are crashing our planet, and happy to buy another one. Luckily, there is nobody on the moon to steal their land from, this time I wish some other people will come and stop us before wasting another planet...</p> <p>Accept Reply</p>
<p>23 ago TheParadox (1) Invite</p> <p>SUGGESTED PRO 👇</p> <p>Colonising Mars will aide the human race's long-term survival</p> <p>Accept Reply</p>	<p>23 ago GirryKund (1) Invite</p> <p>SUGGESTED CON 👇</p> <p>Not enough is known about encapsulated populations/cultures to ensure success with a distant target like Mars, a closer settlement that could receive aid relatively quickly would be more prudent. It would allow for us to develop the space based industry and culture in close proximity for support and safety.</p> <p>Accept Reply</p>
<p>23 ago RossBest (1) Invite</p> <p>SUGGESTED PRO 👇</p> <p>Earth will slowly lose resources but Mars will have more vital resources for humanity. Global warming will eat away at life on Earth but on Mars we could thrive.</p> <p>Accept Reply</p>	<p>23 ago rightcelebrator (1) Invite</p> <p>SUGGESTED CON 👇</p> <p>First all the troubles on the earth should be solved. Only successful companies are expanding. We should not expand until the earths life is in perfect condition.</p> <p>Accept Reply</p>
<p>23 ago Morganism41 (1) Invite</p> <p>SUGGESTED PRO 👇</p> <p>Mars has only had the surface probes and the have already found sources of aluminum, magnesium, titanium and iron. imagine what we would find under the surface. If we colonised mars its a stepping stone to solving our need for materials that we are running out of on earth.</p> <p>Accept Reply</p>	<p>Other contenders are better/enough for us to not need Mars.</p> <p>Colonising Mars will take an unbelievable amount of natural resources from Earth.</p> <p>Mars is not suitable for habitation.</p> <p>People create devastation wherever they go. Martian colonization should not start or continue this process.</p> <p>If Elon Musk shows that the voyage to Mars alone is too riddled with difficulties currently that moving there might not be worth the effort.</p>
<p>23 ago Hakhan (3) Invite</p> <p>SUGGESTED PRO 👇</p> <p>It is vital to Human survival to colonize other planets. Mars is an excellent candidate for it.</p> <p>Accept Reply</p>	
<p>23 ago Babobis (1) Invite</p> <p>SUGGESTED PRO 👇</p> <p>Exploring the planet Mars is a great and big dream of humanity since the beginning of time (we were, we are and we will be always curious). Realizing this dream will be a feat and a proof that we are, as human beings, an intelligent civilization despite our unbearable defects. This dream, if it is realized, will allow us to understand many things about ourselves, about life, about our planet and our solar system.</p> <p>Accept Reply</p>	
<p>23 ago mrguen (2) Invite</p> <p>SUGGESTED PRO 👇</p> <p>Humans should establish a colony on the moon first to learn how to build a big city there and then will be able to move to another planet or satellite. Also I think we will send advanced humanoid robots to Mars, who will perform better than humans, and without all the logistics needed for humans.</p> <p>Accept Reply</p>	
<p>23 ago koocman (1) Invite</p> <p>SUGGESTED PRO 👇</p> <p>Space program itself brought us a lot of new technologies. Imagine what new observations will be found while establishing self-sustaining eco-system on a fairly hostile planet.</p> <p>Accept Reply</p>	
<p>Colonization would benefit Earthlings to do so.</p> <p>Mars would lead to an explosion of scientific development. The results would lead to longer lives, more fulfillment, and more jobs.</p> <p>Colonizing another planet is in line with the human spirit of exploration.</p> <p>Mars has benefits not found on Earth.</p> <p>Space colonization's the new space race.</p> <p>Colonizing Mars provides an opportunity to test out various utopian ideals.</p>	

Moment captured
We have a moral duty to send our people to a homelands in which we can thrive. Thank to who are thinking solutions.
