

Humans will have a place and roles in a fully-automated world.

Pros	Cons
<p>SUGGESTED PRO</p> <p>Artificial general intelligence (AGI) would be capable enough to provide us options for roles and purposes that we would be able to take in a fully-automated world.</p>	<p>Humans might not have a role. They might become the "useless class"</p>
<p>Be better versions of ourselves (through enhancements)</p>	<p>The activities that humans do for fun might inspire automation. This takes away from automation's autonomy while making what is fun not anymore because it becomes mechanized instead of spontaneous (like the science of play).</p>
<p>Just living, can be by itself a purpose.</p>	<p>Human existence without responsibilities can be detrimental to mental and physical health. Therefore, it is impossible to create a stable society with only leisure and pop corn. If we are to automate everything, humans will have to find meaningful work, possibly to no avail.</p>
<p>Find a way to stay relevant amongst automation and robotics</p>	<p>Robots may automate our lives to the point that we can't function anymore.</p>
<p>Focus on areas that have the potential for automation but are not yet automated (provided the need arises for new robots to keep a fully automated world going).</p>	<p>"We are here on earth to help others. What the others are here for, I've no idea." As such, the role of humans stays the same.</p>
<p>If robots automate our world from afar (like get outsourced to another planet), then humans can continue their existence/purposes as-is, but undisturbed by competing with automation and minus the need for hard labor anymore.</p>	
<p>If humans do not live in the world that is fully automated, then they could have a purpose to the automated world by providing it with what it doesn't have.</p>	
<p>Indulge in the luxury status that automation has brought us</p>
