

Science should get more governmental funding

Pros Cons

1mo ago **Sal_Duhes**(1) Invite

SUGGESTED PRO 1 1

Government should provide more money to science departments because science is an expensive as well as expensive. The expensive part of science should be taken care by large organizations such as a government of state etc while the inexpensive part of science can be dealt by smaller organizations or individuals. Both of this parts are equally important because both of this parts in the course of history provided many advancements, discoveries, etc.

SUGGESTED PRO 1 1

More funding from government could encourage/lead to reduced university tuition fees for students; this could lead to a more socio-economically diverse range of students being able to engage and progress in science. This could have wide ranging positive impacts across a variety of sectors, including the fight for wider industry in science and indeed society as a whole.

SUGGESTED PRO 1 1

While scientific funding has been covered by many industries, there are many areas that go untouched whether it be that it's unprofitable or too vast of a subject. Space exploration for example has been able to advance so far thanks to government funding for it. There is a near infinite amount of work that could be done in the field of science, better funding only yields better results.

SUGGESTED PRO 1 1

It should because the only way to save our planet is to is with science not gonons so we need people who can act on facts not greed to work with money people who actually know what's best for this planet.

SUGGESTED PRO 1 1

Scientific advances make it possible to improve everyone's lives, in contrast to some public funding given to areas other than science.

SUGGESTED PRO 1 1

With government funding we could advance our knowledge and in turn use that knowledge in the future to keep the human race going.

SUGGESTED PRO 1 1

Only if ALL the data, paid for by the People's taxes, also comes freely available to the People via internet. And not commercialized by a few big companies that make the People pay through their noses for the products that are made because of that data.

SUGGESTED PRO 1 1

Scientific Research needs to be done in order to provide understanding and with this comes more areas of research as we learn more.

SUGGESTED PRO 1 1

Yes they could've solved 50 000 or probably a lot more problems that could've been solved 10+ years ago. Fund as much science as you can. They will eventually get rid of all problems on earth. As long as it's done correctly. This may be difficult for them, but the more funding you give them the more likelihood with more resources the scientific community is likely to solve. Just make sure it doesn't end up in the wrong hands but don't let that stop you from advancing/funding them.

SUGGESTED PRO 1 1

There should be more funding of the education of the theory of science, so more people become aware of the limitations of science in guiding their thoughts. Sleepers awake

SUGGESTED PRO 1 1

Government funding for science has resulted in technology that would otherwise not have gotten off the ground. Most of the private sector is not willing to take risks on projects that may take time to develop, or which may not work. Government funding allows for the development and implementation of ideas that may not have otherwise been entertained. There is the potential for bias considering the political climate but overall, government funding can be useful.

Accept Reply

Public supports the increase in spending on scientific research.

More government funding would lead to more societal advancement through science.

An increase in state funding secures the independence of science from commercial interests.

Government funding can improve the quality of basic research more than the private sector can.
