"Raising animals for food accelerates global warming, depletes our water resources, poisons our waterways, and destroys forests and other wildlife habitats. In an environmentally sustainable world, we must replace meat and dairy products in our diet with vegetables, fruits, and grains, just as we replace fossil fuels with wind, solar, and other renewable energy sources.

If you are interested in our message and wish to contribute, we welcome you to **Join The Action**! Each year we are asking people to help us spread this important message and turn Earth Day into Vegan Earth Day."
