Discussion Title

All Humans Should Be Vegan.

83

Background ⓘ

intended as something to be applied to our world based on this discussion alone. For instance, if a claim says global veganism would decrease healthcare costs, it is not suggesting we should all immediately become vegan to decrease our healthcare costs. The debate explores what could/can happen, what is possible.

For those who want to write their personal experience out for all to see: the comments section under the thesis is where it should go instead of as a claim. Claims are for sub-arguments, however, it does maintain a semi-level of privacy if that's what's desired.

Editor's note: this is a very mature debate with more than 2200 claims. Before suggesting claims please explore all of the claims under the top-level Pros and Cons. The broad argument in your suggestion has almost certainly been discussed already and so contributions to that argument need to be located in relation to that existing discussion — not at the top level.
