### Content

With growing food hydroponically, one of the challenges is dealing with algae. Some hydroponics stores carry algaecides and hydroponics growers will lament about how they have to get rid of algae for their crops. What would be best is if algae gets utilized, especially if it's able to grow on its own in underutilized space in a water tank. Enter in algaeponics - where instead of plants feeding fish, they feed algae instead that's harnessed for food.

Feel free to read about this and other methods here: <https://core.ac.uk/download/pdf/226664221.pdf>
